Move your data with confidence

# Fujitsu Enterprise Postgres

## Data Migration Services

### Move your data with confidence

Manage a streamlined process when migrating from your current database management system to Fujitsu Enterprise Postgres with our Migration Assessment and Data Migration services.

Fujitsu Enterprise Postgres is a reliable and robust relational database based on and fully compatible with PostgreSQL. It contains a range of enhanced features for enterprises, such as Transparent Data Encryption, Data Masking, and the ability to execute Hybrid Transactional/ Analytical Processing (HTAP) workloads.

Only professional planning reduces the inherent risk of data loss and business disruption when migrating data from one platform to another. Our team of experts are ready to help you organise and deliver a seamless migration from most popular database platforms to Fujitsu Enterprise Postgres.

#### Mitigate the risk factors for success

Fujitsu Enterprise Postgres has a distinguished reputation worldwide for reliability, data integrity, and cost-effectiveness. Deploying this database management platform is an excellent choice. Now you can select Fujitsu, a company experienced in PostgreSQL development and support, to migrate the data from your existing database system.

Our team will help you examine the key issues that can otherwise potentially derail a data migration project. These include workload assessments against your teams' current responsibilities and skills availability against that which is required to deliver on time and without interference.

We'll also identify potential technical issues that can surprise if not addressed early, especially when associated with new features, hardware, load requirements, or security policies. From there, we will deploy with you.

#### Why choose FUJITSU for Data Migration?

- Fujitsu has the database experts, tools, and processes to ensure your data is moved quickly and efficiently, minimising the impact to your daily operations.
- We provide a comprehensive Migration Assessment to determine the feasibility of the transfer. Based on the results, we can then work with your organisation to develop an appropriate migration strategy.
- The final step is the actual Database Migration, which includes verification that all data has been successfully transferred to your new database.
- Our team works with a highly refined service delivery model developed over years of experience with large platform providers, enterprises and governments around the world.
- Fujitsu has supported the PostgreSQL community for 20+ years, was a founding member of the PostgreSQL Enterprise Consortium (PGECons) in Japan, and is an active sponsor and participant of PG Conf.dev and many other Postgres conferences and PG Days in the US, Europe, and Asia, as well as supporting opensource technology summits and conventions.

# Mitigate the risk with a Data Migration assessment

## Make the move with our Data Migration service

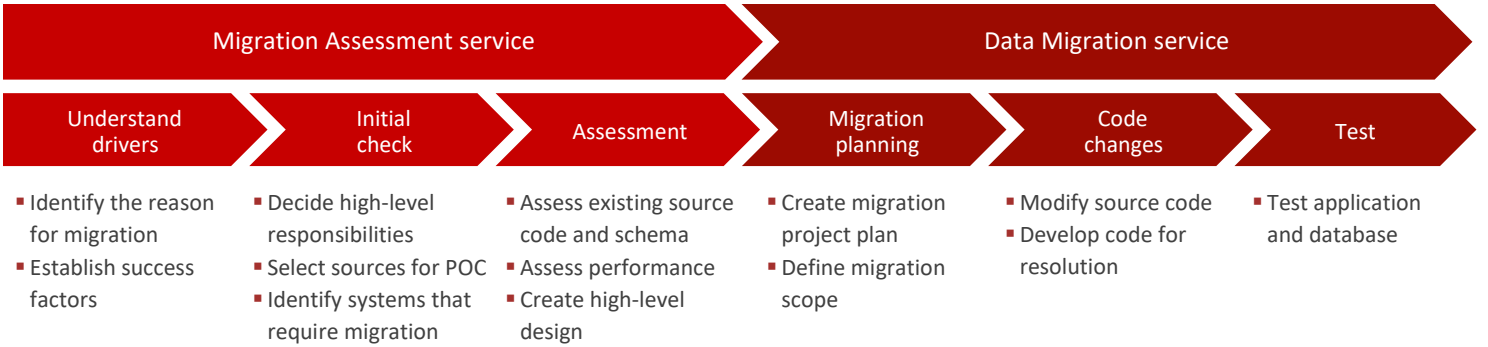

There are various stages to migrating a database, each of which requires extensive experience. We offer two services to help you migrate to the critical stages.

### Migration Assessment service

A Fujitsu Migration Assessment Service will determine a clear strategy for migrating your current database to Fujitsu Enterprise Postgres. Complete your assessment in days for a clear picture as to your best approach. Also, the Migration Assessment Service will identify any compatibility issues or customisation requirements to migrate your data in a way that helps you streamline database administration and optimise system resources from day one.

### Data Migration service

A Fujitsu Data Migration Service will provide help for a more efficient process, reduced costs, and fewer issues for data migration and to manage the transfer of both data and knowledge to complete your project on time by engaging the experience of our PostgreSQL experts. Work with our data experts to get the most from your data migration process and deliver real outcomes such as faster processing times, more load capacity, reduced cost of ownership and more.

### Migrate to Fujitsu Enterprise Postgres

Migrate to Fujitsu Enterprise Postgres for high performance, reduced costs, and compatibility with most major proprietary database systems used by large enterprises and government organisations today.

### Combine with our support services

Maintain ongoing care post your migration with our 24/7 support services including 15- minute response times for severity 1 cases.

### Contact us

Please contact us to discuss the migration of your database to Fujitsu Enterprise Postgres.
