

# FUJITSU Cloud Native Service Delivery Platform

## The partner for your cloud native journey

Organizations are under extreme pressure to reduce costs and support faster transformation to new business models as market disruption, innovation, and regulatory change accelerates.

Establish an **open source ecosystem** to drive innovation

**Enhance** infrastructure strategy with a cloud-agnostic approach

Flexible **support** models delivered as-a-platform or managed service

An **enterprise platform** that is easy to integrate with current environments

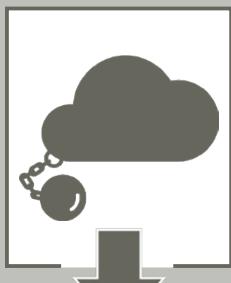

**Leadership** to provide the foundations for digital business

Realign IT investment to **reduce legacy overheads** and the cost of rip-and-replace

Providing **people** with the right skills to simplify your digital evolution

**Agility** to accelerate business value with reduced risk

shaping tomorrow with you

## CIOs face new challenges in an ever-changing digital landscape

- CIOs now find themselves in a world where the role of information and technology is to deliver business and operating model transformation at scale in ever decreasing timeframes
- It's very difficult to create a "digital factory" to bring ideas to market in established ecosystems
- To rebalance IT investment to strengthen current strategic platforms and avoid the cost and time of rip-and-replace whilst building secure scalable cloud-agnostic digital business foundations using containers, service meshes, micro services and APIs

## Shape your tomorrow with Fujitsu

We've made it simpler to build your cloud native digital muscles and get yourself into this race. The FUJITSU Cloud Native Service Delivery Platform provides the enterprise level container "as-a-Platform" and "as-a-Managed-Service" to accelerate the adoption of a cloud native approach so you can:

- Deliver value early and often: Frequent releases utilizing agile software delivery
- Capitalize on the Cloud: Adopt a Hybrid IT / Multi Cloud strategy and extract the greatest value from cloud services
- Build apps to exploit the cloud: Different from building apps that just "run in the cloud"
- Co-creation framework: Integrate existing technologies and future-proof your tomorrow

*A true cloud native platform to support your digital endeavors for digital business*

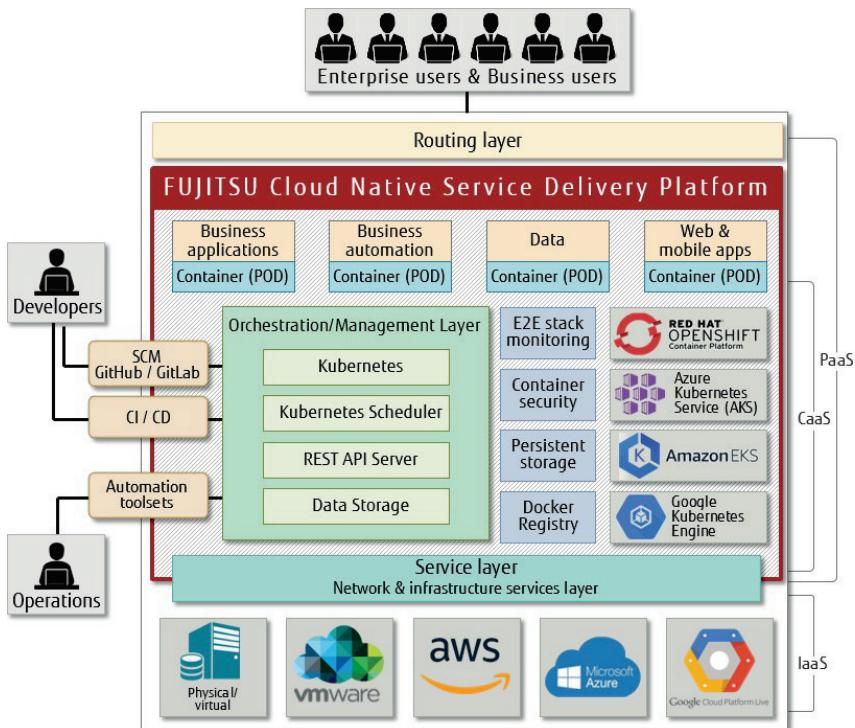

# FUJITSU Cloud Native Service Delivery Platform

## What is it?

- CNSDP is a framework for innovation and the foundation for your Digital Factory.
- Includes integration of cloud-agnostic technologies and software solutions for a pluggable architecture to build a cloud-native delivery practice
  - Pre-integrated modular components:
    - CI/CD Automation
    - Application Performance Management
    - Container Management Platform options
    - Security and Certificate Management
    - Cloud Native Storage solutions
  - Integration with existing software delivery toolsets to maximize the potential of your existing investments
  - Supports legacy applications in cloud native environments.

CNSDP enables your team to focus on delivering business outcomes and run scalable applications in a modern dynamic environment.
