

Fujitsu Enterprise Postgres 15

Community Edition -

Installation in Silent Mode

Windows/Linux

Preface

Purpose of this document

This document explains how to install and uninstall Fujitsu Enterprise Postgres Community Edition in silent mode.

Structure of this document

This document is structured as follows:

[Chapter 1 Installation and Uninstallation in Silent Mode](#)

Describes how to install and uninstall Fujitsu Enterprise Postgres in silent mode.

[Chapter 2 Installation in Silent Mode \(Parameters and Messages\)](#)

Provides specifications for installation in silent mode.

Export restrictions

Exportation/release of this document may require necessary procedures in accordance with the regulations of your resident country and/or US export control laws.

Issue date and version

Edition 1.0: April 2023

Chapter 1 Installation and Uninstallation in Silent Mode

This chapter describes how to install and uninstall Fujitsu Enterprise Postgres in silent mode.

Point

Note that "*xSPz*" in window examples indicates the version and level of the product and "<*x*>" in paths indicates the product version.

See

Refer to the Fujitsu Enterprise Postgres Community Edition User's Guide for information on pre-installation tasks.

1.1 Linux Server

1.1.1 Installation in Silent Mode

Installation in silent mode can be performed only when the installation method is one of the following:

- New installation
- Multi-version installation

The installation procedure is described below.

1. Mount the DVD drive

Insert the server program DVD into the DVD drive, and run the command given below.

Example

```
# mount -t iso9660 -r -o loop /dev/dvd /media/dvd
```

Here /dev/dvd is the device name for the DVD drive (which may vary depending on your environment), and /media/dvd is the mount point (which may need to be created before calling the command).

Note

If the DVD was mounted automatically using the automatic mount daemon (autofs), "noexec" is set as the mount option, so the installer may fail to start. In this case, use the mount command to remount the DVD correctly, and then run the installation. Note that the mount options of a mounted DVD can be checked by executing the mount command without any arguments.

2. Create an installation parameters CSV file

Consider the features that will be required for system operations, and then create an installation parameters CSV file that uses the following specification format.

```
sectionName, parameterName, value  
sectionName, parameterName, value  
:
```

Refer to "[Chapter 2 Installation in Silent Mode \(Parameters and Messages\)](#)" for information on installation parameters CSV files.

Information

The template for the installation parameters CSV file is "*mountPoint/sample/sample.csv*".

3. Run the installation

Execute the following command:

Example

```
# cd /media/dvd
# ./silent.sh /home/work/inspara.csv
```

In the example above, /media/dvd is the DVD mount point, and /home/work/inspara.csv is the installation parameter CSV.

If the installer ends in an error, a message is output to the log file and return values are returned. Refer to "[Chapter 2 Installation in Silent Mode \(Parameters and Messages\)](#)" for details.

1.1.2 Uninstallation in Silent Mode

Uninstall according to the following procedure:

Note

On SLES, before uninstalling the product, install Oracle JRE 8 and set the JAVA_HOME environment variable.

See

Refer to "[1.3.2 Uninstallation in Silent Mode](#)" when uninstalling the Fujitsu Enterprise Postgres client feature.

1. Stop applications and the client program

Before starting the uninstallation, stop the following:

- Applications that use the product
- Instance

Execute the pg_ctl command with the stop mode option specified.

```
$ /opt/fsepv<x>server64/bin/pg_ctl stop -D /database/inst1
```

2. Run the uninstallation

Execute the command below.

The installation directory may remain after uninstallation. If it is not required, delete it.

Example

```
# /opt/fsepv<x>server64/setup/suninst.sh
```

In the example above, /opt/fsepv<x>server64 is the name of the installation directory in which the server product is installed.

3. Check the results

The uninstaller result is output to the log file.

Log file

In "xyz" below, "x" is the product version, "z" is the product level, and for this release, "y" is 0.

Server product

```
/var/log/fsep_SERVER64_xyz_uninstall.log
```

Return values

The following return values are output:

Return values	Meaning
0	Uninstallation was successful.
13	Processing was interrupted.
15	The resources required for uninstallation do not exist.
19	A process is running.
60	An error occurred in Uninstall (middleware).
62	Uninstall (middleware) was started.
63	Uninstall (middleware) has not been installed, or there are no execution privileges.
83	Failed to delete the information from FJQSS.
99	A system error occurred.
100	The command argument is invalid.
106	The command was not executed with administrator privileges.
200	Failed to uninstall of package.

1.2 Windows Server

Refer to the Fujitsu Enterprise Postgres Community Edition User's Guide for notes on installation.

1.2.1 Installation in Silent Mode

Installation in silent mode can be performed only when the installation method is one of the following:

- New installation
- Multi-version installation

The installation procedure is described below.

1. Insert the DVD

Insert the "server program" DVD into the DVD drive.

The [Install Menu] window will be displayed automatically. Click [Finish].

2. Create an installation parameters CSV file

Consider the features that will be required for system operations, and then create an installation parameters CSV file that uses the following specification format.

```
sectionName, parameterName, value
sectionName, parameterName, value
:
```

Refer to "[Chapter 2 Installation in Silent Mode \(Parameters and Messages\)](#)" for information on installation parameters CSV files.

Information

The template for the installation parameters CSV file is "Z:\sample\sample.csv" (Z is the drive into which the DVD is inserted).

3. Start the command prompt

In Windows, right-click [Command Prompt] and then select [Run as administrator].

4. Run the installation

Execute the command below.

```
Z:\>silent.bat c:\temp\inspara.csv
```

Z: The drive into which the DVD is inserted.

c:\temp\inspara.csv: The installation parameter CSV file name.

If the installer ends in an error, a message is output to the log file and return values are returned. Refer to "[Chapter 2 Installation in Silent Mode \(Parameters and Messages\)](#)" for details.

1.2.2 Uninstallation in Silent Mode

The uninstallation procedure is described below.

See

Refer to "[1.4.2 Uninstallation in Silent Mode](#)" when uninstalling the Fujitsu Enterprise Postgres client feature.

1. Stop applications and the client program

Before starting the uninstallation, stop the following:

- Applications that use the product

2. Stop all instances

Stop all instances that are using the product to be uninstalled.

Use the following procedure to stop a service:

- a. Display the [Services] window.

In Windows, select [Administrative Tools], and then click [Services].

- b. Stop the service

Select the instance name that you wish to stop from the services list, and click [Stop Service]. If you stop a service while applications and commands are running, Fujitsu Enterprise Postgres will force those applications and commands to close and will stop normally.

You can also stop a service by specifying the service name in the net stop command or sc stop command.

3. Unregister Windows services

Perform this step if the instance was created with the `initdb` command.

Unregister the instance registered as a Windows service.

Use the `unregister` mode of the `pg_ctl` command to specify the registered service name and unregister the instance as a Windows service.

Example

The following is an example showing execution of this command for the registered service name "inst1".

```
> pg_ctl unregister -N "inst1"
```

Note

- You should unregister services before uninstalling Fujitsu Enterprise Postgres. If you uninstall Fujitsu Enterprise Postgres while services are running, several files will remain after the uninstallation.
If you have carried out the uninstallation without unregistering services beforehand, use the server command `sc delete` to unregister the services.
- This command must be executed by an instance administrator user with administrator privileges. Execute the command from the [Administrator: Command Prompt] window. Right-click [Command Prompt], and then select [Run as administrator] from the menu to display the [Administrator: Command Prompt] window.

4. Delete registrations related to the event log

If you are outputting to the event log, a DLL registration has been performed.

To prevent unnecessary issues from occurring, you should delete this registration. Refer to "Server Setup and Operation", "Registering Event Log on Windows" in the PostgreSQL Documentation for details.

The following is an example showing deletion of the DLL registration for a 64-bit product under the default event source name.

```
> regsvr32 /u "c:\Program Files\Fujitsu\fsepv<x>server64\lib\pgevent.dll"
```

If using multiple instances

DLL registration is performed so that you can output messages corresponding to the event source name assigned by the user, allowing you to identify messages output to the event log by instance.

Since it is necessary to delete the DLL registration for each instance, delete the DLL registration by event source name.

The following is an example showing deletion of the DLL of a 64-bit product registered under the event source name "Enterprise Postgres inst1".

```
> regsvr32 /u /i:"Enterprise Postgres inst1" "c:\Program Files\Fujitsu\nsepv<x>server64\lib\pgevent.dll"
```

If installing multiple versions

If the instances you created using this package have been set to output error logs to the event log, use the DLL path name that you took note of previously as explained in "Preparing for Output to the Event Log" in the Fujitsu Enterprise Postgres Community Edition User's Guide to reregister the default event source name.

Note

Ensure to delete DLLs before the uninstallation. If you perform the uninstallation without doing so, you may not be able to delete the DLLs at a later time.

5. Start the command prompt

In Windows, right-click [Command Prompt] and then select [Run as administrator].

6. Run the uninstaller

Execute the command below.

The installation directory may remain after uninstallation. If it is not required, delete it.

Example

```
X:> installFolder\suninst.bat
```

X: Drive on which the product is installed

7. Check the results

Uninstaller results will be output to the log file.

Log file

In "xyz" below, "x" is the product version, "z" is the product level, and for this release, "y" is 0.

Server product

```
%TEMP%\fsep_SERVER64_xyz_uninstall.log
```

Note

Directories under the TEMP environment variable may be deleted when the operating system is restarted. Therefore, ensure that you browse or save the file before restarting the operating system.

Return values

The following return values are output:

Return value	Description
0	Uninstallation was successful.
64	Failed to install because "Uninstall (middleware)" is running.
74	Failed to write product information (updating registry).
79	Failed to read product information (viewing registry).
83	Failed to delete the information from FJQSS.
144	Not executed with administrator privileges.
200	Failed to uninstall of package.
251	An error occurred when running a system function.
255	An internal inconsistency occurred.

1.3 Linux Client

See

Refer to the Fujitsu Enterprise Postgres Community Edition User's Guide for notes on uninstallation.

1.3.1 Installation in Silent Mode

Installation in silent mode can be performed only when the installation method is one of the following:

- New installation

The installation procedure is described below.

1. Mount the DVD drive

Insert the client program DVD into the DVD drive, and then execute the following command:

Example

```
# mount -t iso9660 -r -o loop /dev/dvd /media/dvd
```

`/dev/dvd` is the DVD drive device, and `/media/dvd` is the mount point (which must already exist before calling the command).

.....
If the DVD was mounted automatically using the automatic mount daemon (autofs), "noexec" is set as the mount option, so the installer may fail to start. In this case, use the mount command to remount the DVD correctly, and then run the installation. Note that the mount options of a mounted DVD can be checked by executing the mount command without any arguments.
.....

2. Create an installation parameters CSV file

Consider the features that will be required for system operations, and then create an installation parameters CSV file that uses the following specification format.

```
sectionName, parameterName, value  
sectionName, parameterName, value  
:
```

Refer to "[Chapter 2 Installation in Silent Mode \(Parameters and Messages\)](#)" for information on the installation parameters CSV file.

.....
The templates for the installation parameters CSV file is "`mountPoint/sample/sample_linux.csv`"
.....

3. Run the installation

Execute the following command:

Example

```
# cd /media/dvd  
# ./silent.sh /home/work/inspara.csv
```

In the example above, `/media/dvd` is the DVD mount point, and `/home/work/inspara.csv` is the installation parameter CSV.

If the silent installer ends in an error, a message is output to the log file and return values are returned. Refer to "[Chapter 2 Installation in Silent Mode \(Parameters and Messages\)](#)" for details.

1.3.2 Uninstallation in Silent Mode

Uninstall according to the following procedure:

1. Stop applications and the client program

Before starting the uninstallation, stop the following:

- Applications that use the product

2. Run the uninstallation

Execute the following command:

The installation directory may remain after uninstallation. If it is not required, delete it.

Example

```
# /opt/fsepv<x>client64/setup/suninst.sh
```

In the example above, /opt/fsepv<x>client64 is the installation directory, and "<x>" indicates the product version.

3. Check the uninstallation results

The uninstaller result is output to the log file.

Log file

In "xyz" below, "x" is the product version, "z" is the product level, and for this release, "y" is 0.

```
/var/log/fsep_CLIENT64_xyz_uninstall.log
```

Return values

The following return values are output:

Return value	Meaning
0	Completed successfully.
13	Processing was interrupted.
15	The resources required for uninstallation do not exist.
19	A process is running.
60	An error occurred in Uninstall (middleware).
62	Uninstall (middleware) was started.
63	Uninstall (middleware) has not been installed, or there are no execution privileges.
99	A system error has occurred.
100	The command argument is invalid.
106	The command was not executed with administrator privileges.
200	Failed to uninstall of package.

1.4 Windows Client

See

- Refer to the Fujitsu Enterprise Postgres Community Edition User's Guide for notes on pre-installation tasks.
- Refer to the Fujitsu Enterprise Postgres Community Edition User's Guide for notes on uninstallation.

1.4.1 Installation in Silent Mode

Installation in silent mode can be performed only when the installation method is one of the following:

- New installation

The installation procedure is described below.

1. Insert the DVD

Insert the client program DVD into the DVD drive.

The [Install Menu] window is displayed. Click [Finish].

2. Create an installation parameters CSV file

Consider the server type or features that will be required for system operations, and then create an installation parameters CSV file that uses the following specification format.

```
sectionName, parameterName, value
sectionName, parameterName, value
:
```

Refer to "[Chapter 2 Installation in Silent Mode \(Parameters and Messages\)](#)" for information on section names, parameter names, and values that can be specified.

The template for the installation parameters CSV file is "Z:\sample\sample_windows.csv (Z is the drive into which the DVD is inserted.).

3. Start the command prompt

In Windows, right-click [Command Prompt] and then select [Run as administrator].

4. Run the installation

Execute the following command:

```
Z:\>silent.bat c:\temp\inspara.csv
```

Z: The drive into which the DVD is inserted.

c:\temp\inspara.csv: The installation parameter CSV file name.

If the silent installer ends in an error, a message is output to the log file and return values are returned. Refer to "[Chapter 2 Installation in Silent Mode \(Parameters and Messages\)](#)" for details.

1.4.2 Uninstallation in Silent Mode

The uninstallation procedure is described below.

1. Stop applications and the client program

Before starting the uninstallation, stop the following:

- Applications that use the product

2. Start the command prompt

In Windows, right-click [Command Prompt] and then select [Run as administrator].

3. Start the uninstaller

Execute the command below.

The installation folder may remain after uninstallation. If it is not required, delete it.

Example

```
X:> installationFolder\suninst.bat
```

X: Drive where the product is installed

4. Check the uninstallation results

The uninstaller result is output to the log file.

Log file

In "xyz" below, "x" is the product version, "z" is the product level, and for this release, "y" is 0.

```
%TEMP%\fsep_CLIENT64_xyz_uninstall.log
```

Note

Directories under the TEMP environment variable may be deleted when the operating system is restarted. Therefore, ensure that you browse or save the file before restarting the operating system.

Return values

The following return values are returned:

Return values	Meaning
0	Uninstallation completed successfully.
64	Uninstallation failed because Uninstall (middleware) is running.
74	Failed to write product information (updating the registry).
79	Failed to read product information (viewing the registry).
144	The command was not executed with administrator privileges.
200	Failed to uninstall of package.
251	An error occurred when running a system function.
255	An internal inconsistency occurred.

1.5 Linux Client and Windows Client

1.5.1 Specification Format

The installation parameters CSV file, which is specified as the argument for the silent installer, has three columns per line in CSV format.

```
sectionName, parameterName, value  
sectionName, parameterName, value  
:
```

Enter the following settings in respective columns.

Item	Settings	Optional
<i>sectionName</i>	Specify the section name. There are two types of section names: "installInfo": Set the product information. "parameters": Set the parameter information for this product.	Mandatory
<i>parameterName</i>	Specify the parameter name. Each section has a valid parameter.	Mandatory

Item	Settings	Optional
<i>value</i>	Specify the value.	Optional

Note

- Blank lines cannot be included.
- Section names and parameter names cannot be omitted.
- Undefined parameters cannot be set in lines where the section name is "installInfo". Also, note that the same parameter cannot be specified multiple times.
- Specify at least one line with the section name "parameters".
- Undefined parameters specified in lines within the "parameters" section will be ignored during execution. Note that when the same parameter is specified multiple times, the settings in the lowest line will be valid.
- The setting values for lines where the section name is "installInfo" may contain alphanumeric characters (at least one), and symbols, excluding double quotation marks (") and commas (,).
- Do not use the following halfwidth characters in the setting values for lines with the section name "parameters".

W

Windows: # \$ & ' = ^ ~ | @ ` [] ; < > / tab

L

Linux: " # \$ & = ' () ^ ~ \ | @ ` [] { } ; : < > tab

Information

The templates for the installation parameters CSV file are as follows:

W

- Windows client: *Z:\sample\sample_windows.csv* (*Z* is the drive into which the DVD is inserted.)

L

- Linux client: *mountPoint/sample/sample_linux.csv*

1.5.2 List of Parameters

This section describes the parameters that can be set for each section.

installInfo section

The parameters that can be set in the installInfo section are shown below.

No.	Type	Parameter		Description
1	Software ID	Parameter name	Name	Mandatory. Specify the software identifier. For this software, specify the following value: "Fujitsu Enterprise Postgres"
		Value/Range	String	
		Default value	None	

Information

- In addition to "Name", the following parameters can be used in the "installInfo" section.
 - softwareName
 - OS

- Version
- Edition
- Note that specifying a parameter name other than "Name" and the parameters listed above will result in an error.
- The values set in these parameters do not affect silent installation.

Example

```
installInfo,Name,Fujitsu Enterprise Postgres
```

parameters section

The parameters that can be set in the parameters section are shown below.

Note that "<x>" in paths indicates the product version.

No.	Type	Parameter		Description
1	Whether to install the client (32-bit)	Parameter name	Client32InstallExecute	Optional. Specify whether to run the installation of the client (32-bit). Y: Install N: Do not install W This parameter is ignored on 64-bit operating systems. L This parameter is ignored on Linux.
		Value/Range	Y or N	
		Default value	Y	
2	Installation destination of the client (32-bit)	Parameter name	Client32InstallPath	Optional. Specify the installation destination of the client (32-bit). W This parameter is ignored on 64-bit operating systems. A root folder (such as C:\) cannot be specified. L This parameter is ignored on Linux.
		Value/Range	Path name	
		Default value	W Windows(32-bit) %ProgramFiles%\Fujitsu\fssepv<x>clientx32 L Linux None.	
3	Whether to install the client (64-bit)	Parameter name	Client64InstallExecute	Optional. Specify whether to run the installation of the client (64-bit). Y: Install N: Do not install This parameter is ignored on 32-bit operating systems.
		Value/Range	Y or N	
		Default value	Y	
4	Installation destination of the client (64-bit)	Parameter name	Client64InstallPath	Optional. Specify the installation destination of the client (64-bit). This parameter is ignored on 32-bit operating systems.
		Value/Range	Path name	
		Default value	W Windows(64-bit) %ProgramFiles%\Fujitsu\fssepv<x>client64	

No.	Type	Parameter	Description
		L Linux /opt/fsepv<x>client64	W A root folder (such as C:\) cannot be specified. L A root directory cannot be specified.

Example

```
parameters,Client32InstallExecute,Y
parameters,Client32InstallPath,
parameters,Client64InstallExecute,Y
parameters,Client64InstallPath,
```

1.5.3 Messages and Return Values

Messages are output when errors are detected during parametric analysis.

If an error occurs during installation of the product, a message is output to the log.

Log file

In ".xyz" below, "x" is the product version, "z" is the product level, and for this release, "y" is 0.

Windows

```
%TEMP%\fsep_CLIENT_media_xyz.log
```

Note

Directories under the TEMP environment variable may be deleted when the operating system is restarted. Therefore, ensure that you browse or save the file before restarting the operating system.

Linux

```
/var/log/fsep_CLIENT_media_xyz_install.log
```

Messages and return values

CSV file errors

The following messages are output if errors are detected while parsing CSV files.

Return value	Message	Explanation and actions
4	CSV file error:code = 1, Invalid CSV error.	There is an error in the specification format of the CSV file.
4	CSV file error:code = 2, installInfo/Name is required.	There is an error in the specification format of the CSV file.
4	CSV file error:code = 3, Invalid installInfo key.	There is an error in the installInfo specification. Or the section name is invalid.
4	CSV file error:code = 4, Duplicated installInfo key.	The same parameter has been defined more than once in installInfo.
4	CSV file error:code = 5, Invalid character length.	No setting value has been specified, or the specified string is too long.
4	CSV file error:code = 6, Invalid character format or encoding.	An invalid character has been specified in the installation parameters CSV file.

Return value	Message	Explanation and actions
4	CSV file error:code = 8, Parameter is required.	The "parameters" section has no lines.
20	The input file does not exist.	The input file does not exist.
21	The value of @1@ is incorrect,the value is @2@.	The value is incorrect. Specify the correct value. The parameter name is displayed in @1@. The specified value is displayed in @2@.
22	The value same at @1@ and @2@ is specified.	The same value is specified in different parameters. Specify different values. The parameter name is displayed in @1@ and @2@.
23	The @2@ of @1@ already exists.	The path already exists. Specify a different path. The parameter name is displayed in @1@. The specified value is displayed in @2@.
24	Drive @2@ of @1@ does not exist.	The drive does not exist. Specify an existing drive. The parameter name is displayed in @1@. The specified value is displayed in @2@.
28	There is no product for installation.	There is no product to be installed. Specify "Y" for at least one of the following parameters: W Windows - Client32InstallExecute - Client64InstallExecute L Linux Client64InstallExecute
29	W Windows USAGE : silent.bat inputfile L Linux USAGE : silent.sh inputfile	The argument specified in the command is incorrect. Specify the correct argument.

Product installer errors

The following return values are returned when errors occur while the product installer is running.

Windows

Return value	Explanation
0	Completed successfully.
14	The resources required for installation do not exist on the media.
32	The same version of the same product is already installed.
60	An error occurred in Uninstall (middleware).
61	Failed to install Uninstall (middleware).
62	Uninstall (middleware) was started.
74	Failed to write to the registry.

Return value	Explanation
79	Failed to load the registry.
84	The same edition of different generations is installed.
85	Different editions of the same generation are installed.
86	A newer version of the product is already installed.
129	The operating system is not supported.
142	Insufficient disk space at the installation destination.
144	The command was not executed with administrator privileges.
200	Failed to install of package.
201	A conflicting package is installed.
220	Failed to create a folder in the installation folder.
221	Failed to create files in the installation folder.
251	An error occurred when running a system function.
255	An internal inconsistency occurred.

Linux

Return value	Explanation
0	Completed successfully.
13	Processing was interrupted.
14	The resources required for installation do not exist on the media.
15	The resources required for installation do not exist.
16	Unable to change the permission because the directory does not exist.
17	Failed to install because a required package is missing.
19	A process is running.
30	Failed to copy the installation resources.
32	The same version of the same product is already installed.
60	An error occurred in Uninstall (middleware).
61	Failed to install Uninstall (middleware).
62	Uninstall (middleware) was started.
63	The uninstallation cannot be performed either because Uninstall (middleware) does not exist or because there are no execution privileges.
84	The same edition of different generations is installed.
85	Different editions of the same generation are installed.
86	A newer version of the product is already installed.
99	A system error occurred.
106	The command was not executed with administrator privileges.
129	Unsupported operating system.
200	Failed to install of package.
201	A conflicting package is installed.

1.6 CSV File Format

The format of CSV files is based on RFC4180, with the following specifications.

Records

- Separate each record with a "CRLF" newline (operation is not guaranteed with only a "CR" or "LF" newline).
- Specify a newline at the end of a file.
- Separate each field within a record with a halfwidth comma ",".

Format	Record		
aaa,bbb,ccc	aaa	bbb	ccc

- If several commas are entered in succession, or if a comma precedes a newline, the data following the comma is regarded as empty.

Format	Record		
aaa,,ccc	aaa		ccc
aaa,bbb,	aaa	bbb	

- You cannot specify a header.

Format	Record		
	field1	field2	field 3
aaa,bbb,ccc	aaa	bbb	ccc

Double quotation marks

- Enclose fields that contain newlines, double quotation marks, or commas in double quotation marks.

Format	Record		
"aaa","bb b","ccc"	aaa	bb b	ccc
"aaa","bb,b","ccc"	aaa	bb,b	ccc

- If a double quotation mark is used in a field enclosed with double quotation marks, the first double quotation mark is regarded as an escape character.

Format	Record		
"aaa","bb""b","ccc"	aaa	bb"b	ccc

Note

An error occurs in the following cases:

- Each space, tab, or whitespace character is recognized as one character, and will cause a parameter error.
- A space is entered before or after a field enclosed with double quotation marks.

"zzz ", "yyy ", " xxx "

- The number of fields differs between records.

```
aaa,bbb  
aaa,bbb,ccc  
aaa,bbb,ccc,ddd
```

- Fields enclosed with double quotation marks and fields not enclosed with double quotation marks are both used.

```
aaa,"bbb",ccc  
"xxx",yy,"zzz"
```

- The double quotation escape characters are not positioned correctly.

```
"aaa","bb""b","ccc"
```

- Double quotation marks enclose the entire field.

```
"aaa,bbb,ccc"
```

Chapter 2 Installation in Silent Mode (Parameters and Messages)

This chapter provides specifications for installation in silent mode.

2.1 Linux Server and Windows Server

2.1.1 Specification Format

The installation parameters CSV file, which is specified as the argument for the silent installer, has three columns per line in CSV format.

```
sectionName, parameterName, value
sectionName, parameterName, value
:
```

Enter the following settings in respective columns.

Item	Settings	Optional
<i>sectionName</i>	Specify the section name. There are two types of section names: "installinfo": Set the product information. "parameters": Set the parameter information for this product.	Mandatory
<i>parameterName</i>	Specify the parameter name. Each section has a valid parameter.	Mandatory
<i>value</i>	Specify the value.	Optional

Note

- Blank lines cannot be included.
- Section names and parameter names cannot be omitted.
- Undefined parameters cannot be set in lines where the section name is "installInfo". Also, note that the same parameter cannot be specified multiple times.
- Specify at least one line with the section name "parameters".
- Undefined parameters specified in lines within the "parameters" section will be ignored during execution. Note that when the same parameter is specified multiple times, the settings in the lowest line will be valid.
- The setting values for lines where the section name is "installInfo" may contain alphanumeric characters (at least one), and symbols, excluding double quotation marks (") and commas (,).

W

Specify values up to 32 bytes.

- The following characters can be used in the setting for rows with the section name "parameters":

L

Alphanumeric characters, hyphens, commas and forward slashes

W

[a-zA-Z0-9], halfwidth space, hyphen (-), backslash (\), and comma (,)
For path names, specify up to 160 bytes.

Information

L

The template for the installation parameters CSV file is "*mountPoint/sample/sample.csv*".

The template for the installation parameters CSV file is "*dvdDrive*\sample\sample.csv".

2.1.2 List of Parameters

This section describes the parameters that can be set for each section.

installInfo section

The parameters that can be set in the installInfo section are shown below.

No.	Type	Parameter		Description
1	Software ID	Parameter name	Name	Mandatory. Specify the software identifier. For this software, specify the following value: "Fujitsu Enterprise Postgres"
		Value/Range	String	
		Default value	None	

Information

- In addition to "Name", the following parameters can be used in the "installInfo" section.
 - softwareName
 - OS
 - Version
 - Edition
- Note that specifying a parameter name other than "Name" and the parameters listed above will result in an error.
- The values set in these parameters do not affect silent installation.

Example

```
installInfo,Name,Fujitsu Enterprise Postgres
```

parameters section

The parameters that can be set in the parameters section are shown below.

Note that "<x>" indicates the product version.

No.	Type	Parameter		Description
1	Whether to install the server	Parameter name	ServerInstallExecute	Optional. Specify whether to run the installation of the server. Y: Install No: Do not install
		Value/Range	Y or N	
		Default value	Y	
2	Installation destination of the server	Parameter name	ServerInstallPath	Optional. Specify the installation destination of the software. L The root directory (/) cannot be specified.
		Value/Range	Path name	
		Default value	L /opt/ fsepv<x>server64	

No.	Type	Parameter		Description
			<p>W C:\Program Files \Fujitsu \fsepv<x>server64</p>	<p>W The root folder (such as C:\) cannot be specified.</p>
3	Whether to install the client (32-bit)	Parameter name	Client32InstallExecute	<p>Optional.</p> <p>Specify whether to run the installation of the client (32-bit).</p> <p>Y: Install</p> <p>N: Do not install</p> <p>L This parameter is ignored on Linux.</p> <p>W This parameter is ignored on 64-bit operating systems.</p>
		Value/Range	Y or N	
		Default value	Y	
4	Installation destination of the client (32-bit)	Parameter name	Client32InstallPath	<p>Optional.</p> <p>Specify the installation destination of the client (32-bit).</p> <p>L This parameter is ignored on Linux.</p> <p>W This parameter is ignored on 64-bit operating systems.</p> <p>The root folder (such as C:\) cannot be specified.</p>
		Value/Range	Path name	
		Default value	<p>L /opt/ fsepv<x>client32</p> <p>W C:\Program Files \Fujitsu \fsepv<x>client32</p>	
5	Whether to install the client (64-bit)	Parameter name	Client64InstallExecute	<p>Optional.</p> <p>Specify whether to run the installation of the client (64-bit).</p> <p>Y: Install</p> <p>N: Do not install</p> <p>This parameter is ignored on 32-bit operating systems.</p>
		Value/Range	Y or N	
		Default value	Y	
6	Installation destination of the client (64-bit)	Parameter name	Client64InstallPath	<p>Optional.</p> <p>Specify the installation destination of the client (64-bit).</p> <p>This parameter is ignored on 32-bit operating systems.</p> <p>L The root directory (/) cannot be specified.</p> <p>W The root folder (such as C:\) cannot be specified.</p>
		Value/Range	Path name	
		Default value	<p>L /opt/ fsepv<x>client64</p> <p>W C:\Program Files \Fujitsu \fsepv<x>client64</p>	

Example

```
installInfo,Name,Fujitsu Enterprise Postgres
parameters,ServerInstallExecute,Y
parameters,ServerInstallPath,
parameters,Client32InstallExecute,Y
parameters,Client32InstallPath,
parameters,Client64InstallExecute,Y
parameters,Client64InstallPath,
```

2.1.3 Messages and Return Values

Messages are output when errors are detected during parametric analysis.

If an error is detected during installation of the product, a message is output to the log:

Log file

In ".xyz" below, "x" is the product version, "z" is the product level, and for this release, "y" is 0.

64-bit product

```
var/log/fsep_SERVER64_media_xyz_install.log
```

```
%TEMP%\fsep_SERVER64_media_xyz_install.log
```

Directories under the TEMP environment variable may be deleted when the operating system is restarted. Therefore, ensure that you browse or save the file before restarting the operating system.

Messages and return values

CSV file errors

The following messages are output if errors are detected while parsing CSV files.

Linux

Return value	Message	Explanation and actions
4	CSV file error:code = 1, Invalid CSV error.	There is an error in the specification format of the CSV file.
4	CSV file error:code = 2, installInfo/Name is required.	Either installInfo or the Name parameter has not been specified.
4	CSV file error:code = 3, Invalid installInfo key.	There is an error in the installInfo specification. Or the section name is invalid.
4	CSV file error:code = 4, Duplicated installInfo key.	The same parameter has been defined more than once in installInfo.
4	CSV file error:code = 5, Invalid character length.	No setting value is specified, or the specified string is too long.
4	CSV file error:code = 6, Invalid character format or encoding.	An invalid character has been specified in the installation parameters CSV file.
4	CSV file error:code = 8, Parameter is required.	There is no line in the "parameters" section.
20	The input file does not exist.	The input file does not exist.
21	The value of @1@ is incorrect, the value is @2@.	The value is incorrect. Specify the correct value. The parameter name is displayed in @1@. The specified parameter is displayed in @2@.
22	The value same at @1@ and @2@ is specified.	The same value is specified in different parameters. Specify different values. The parameter name is displayed in @1@ and @2@.

Return value	Message	Explanation and actions
23	The @2@ of @1@ already exists.	The path already exists. Specify a different path. The parameter name is displayed in @1@. The specified value is displayed in @2@.
26	Port number @1@ is already used in the service file(/etc/services).	The port number is already being used. Specify an unused port number. The port number is displayed in @1@
28	There is no product for installation.	No product was specified for installation. Specify "Y" for at least one of the following parameters: - ServerInstallExecute - Client64InstallExecute
29	USAGE : silent.sh inputfile	The argument specified in the command is incorrect. Specify the correct argument.

W

Windows

Return value	Message	Explanation and actions
4	CSV file error:code = 1, Invalid CSV error.	There is an error in the specification format of the CSV file.
4	CSV file error:code = 2, installInfo/Name is required.	Either installInfo or the Name parameter has not been specified.
4	CSV file error:code = 3, Invalid installInfo key.	There is an error in the installInfo specification. Or the section name is invalid.
4	CSV file error:code = 4, Duplicated installInfo key.	The same parameter has been defined more than once in installInfo.
4	CSV file error:code = 5, Invalid character length.	No setting value is specified, or the specified string is too long.
4	CSV file error:code = 6, Invalid character format or encoding.	An invalid format or character set is being used for the character string.
4	CSV file error:code = 8, Parameter is required.	There is no line in the "parameters" section.
20	The input file does not exist.	The input file does not exist.
21	The value of @1@ is incorrect,the value is @2@.	The value is incorrect. Specify the correct value. The parameter name is displayed in @1@. The specified parameter is displayed in @2@.
22	The value same at @1@ and @2@ is specified.	The same value is specified in different parameters. Specify different values. The parameter name is displayed in @1@ and @2@.
23	The @2@ of @1@ already exists.	The path already exists. Specify a different path. The parameter name is displayed in @1@. The specified value is displayed in @2@.

Return value	Message	Explanation and actions
24	Drive @2@ of @1@ does not exist.	The drive does not exist. Specify an existing drive. The parameter name is displayed in @1@. The specified value is displayed in @2@.
26	Port number @1@ is already used in the service file.	The port number is already being used. Specify an unused port number. The port number is displayed in @1@
28	There is no product for installation.	No product was specified for installation. Specify "Y" for at least one of the following parameters: - ServerInstallExecute - Client32InstallExecute - Client64InstallExecute
29	USAGE : silent.bat inputfile	The argument specified in the command is incorrect. Specify the correct argument.

Product installer errors

The following return values are returned when errors occur while the product installer is running.

Linux

Return value	Explanation
0	Completed successfully.
13	Processing was interrupted.
14	The resources required for installation do not exist on the media.
15	The resources required for installation do not exist.
16	Unable to change the permission because the directory does not exist.
17	Failed to install because a required package is missing.
19	A process is running.
30	Failed to copy the installation material.
32	The same version of the same product is already installed.
60	An error occurred in Uninstall (middleware).
61	Failed to install Uninstall (middleware).
62	Uninstall (middleware) was started.
63	The uninstallation cannot be performed either because Uninstall (middleware) does not exist or because there are no execution privileges.
83	Failed to install FJQSS or register information.
85	Different editions of the same generation are installed.
86	A newer version of the product is already installed.
99	A system error occurred.
106	The command was not executed with administrator privileges.
129	Unsupported operating system.

Return value	Explanation
200	Failed to install of package.
201	A conflicting package is installed.

W

Windows

Return value	Explanation
0	Completed successfully.
14	The resources required for installation do not exist on the media.
32	The same version of the same product is already installed.
60	An error occurred in Uninstall (middleware).
61	Failed to install Uninstall (middleware).
62	Uninstall (middleware) was started.
74	Failed to write to the registry.
79	Failed to read the registry.
83	Failed to install FJQSS or register information.
85	Different editions of the same generation are installed.
86	A newer version of the product is already installed.
129	Unsupported operating system.
142	The installation destination has insufficient disk capacity.
144	The command was not executed with administrator privileges.
200	Failed to install of package.
201	A conflicting package is installed.
220	Failed to create a directory in the installation directory.
221	Failed to create files in the installation directory.
251	An error occurred when running a system function.
255	An internal inconsistency occurred.
