This recovery procedure is the same as the procedure for setting up the standby server.
Refer to "2.5.2 Creating, Setting, and Registering the Standby Server Instance", and then perform the recovery.

4.1.2.2 Rebuild the Standby Server
Start the Mirroring Controller and the instance of the standby server, and rebuild the standby server.

Enabling automatic switch/disconnection
As the instance administrator user, execute the mc_ctl command in start mode.

Example:

```
$ mc_ctl start -M /mcdir/inst1
```

Disabling automatic switch/disconnection
As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.

Example:

```
$ mc_ctl start -M /mcdir/inst1 -F
```

Point
After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

4.1.3 Addressing Errors During Degrading Operation
This section explains how to address errors that may occur on the server on which operation is continuing during degrading operation triggered by a switch or disconnection.

If needing to recover from backup data
If it is necessary to recover the database using backup data due to data becoming corrupted from disk failure or user operation error, refer to the following for information on recovery to database multiplexing mode:
- Action Required when All Database Servers or Instances Stopped
- Recovering from an Incorrect User Operation

If a temporary error occurs
If a temporary error occurs, such as due to a high load on the server or insufficient system resources, remove the cause of the error and restart Mirroring Controller, and then refer to the following for details on recovery to database multiplexing mode:

- Operations when the Server has Started Degrading after a Switch has Occurred
- Operations when the Server has Started Degrading after a Disconnection has Occurred

4.2 Action Required when Automatic Switch Fails
If the system behavior is unstable, for example there are insufficient temporary system resources, the Mirroring Controller automatic switch may fail.

Perform the switch manually using one of the following methods:

- Refer to the procedures in "3.4 Manually Switching the Primary Server".
- In the standby server, execute the mc_ctl command in switch mode with the -force option specified to forcibly perform the switch.
  Example)

  ```
  $ mc_ctl switch -M /mcdir/inst1 --force
  ```

Point
- Even if connection cannot be established between database servers, it is possible to fence the primary server and forcibly switch by executing the mc_ctl command in switch mode with the --force option specified.
- The primary server is not fenced in the cases below, so stop Mirroring Controller and instances of the primary server database in advance:
  - The --no-fencing option is specified when performing forced switch.
  - The heartbeat_error_action parameter in serverIdentifier.conf is set to "message" and the fencing command is not configured to be used (the fencing_command parameter is omitted in serverIdentifier.conf).
  - The heartbeat_error_action parameter in serverIdentifier.conf is set to "fallback".

See
Recovery to database multiplexing mode
Refer to "4.1.1.2 Rebuild the Standby Server" and "4.1.1.3 Failback of the Primary Server" for information on recovery to database multiplexing mode.

4.3 Action Required when Automatic Disconnection Fails
If the system behavior is unstable, for example there are insufficient system resources such as available memory or free disk space, automatic disconnection using Mirroring Controller may not be possible.

Perform the disconnection manually using one of the following methods:

- Refer to the procedures in "3.5 Manually Disconnecting the Standby Server".
- In the primary server, execute the mc_ctl command in detach mode to perform forced disconnection.
  Example)
$ mc_ctl detach -M /mcdir/inst1

**Point**

- Even if connection cannot be established between database servers, it is possible to fence the standby server and forcibly disconnect by executing the mc_ctl command in detach mode.

- In the cases below, stop Mirroring Controller and instances of the standby server database in advance so that the standby server is not fenced:
  - The --no-fencing option is specified when performing forced disconnection.
  - The heartbeat_error_action parameter in serverIdentifer.conf is set to "message" and the fencing command is not configured to be used (the fencing_command parameter is omitted in serverIdentifer.conf).
  - The heartbeat_error_action parameter in serverIdentifer.conf is set to “fallback”.

**See**

Recovery to database multiplexing mode

Refer to "4.1.2.2 Rebuild the Standby Server" for information on recovery to database multiplexing mode.

### 4.4 Action Required when All Database Servers or Instances Stopped

This section explains what happens when all database servers or instances on the database server have stopped, so jobs cannot continue.

**See**

Recovery to database multiplexing mode

Refer to "4.1.1.2 Rebuild the Standby Server" and "4.1.1.3 Failback of the Primary Server" for information on recovery to database multiplexing mode.

The flow of these recovery operations is shown in the figure below.
Perform the following procedure:

1. Stop the applications
   Stop the applications from running.
2. Identify the primary server

Use one of the following methods to identify the primary server that was running before the servers or instances stopped:

- Refer to the system log on each server and identify the server where the following message was output.

  **Message:**
  
  MirroringControllerOpen[30017]: LOG: promotion processing completed (MCA00062)

- On each server, execute the mc_ctl command in status mode to search the servers for which "none(inactivated primary)" is displayed.

3. Stop Mirroring Controller on the primary server

Execute the mc_ctl command in stop mode on the primary server.

**Example:**

```
$ mc_ctl stop -M /mcdir/inst1
```

**Note**

**Forcibly stopping Mirroring Controller**

If Mirroring Controller does not stop, specify the -e option in the stop mode of the mc_ctl command and then execute the command.

**Example:**

```
$ mc_ctl stop -M /mcdir/inst1 -e
```

4. Recover the primary server

First, refer to "Actions when an Error Occurs" in the Operation Guide, and then identify the cause of the error and perform recovery.

Next, recover the primary server using the recovery method that uses the pgx_rcvall command based on the backup data.

If the backup operation was performed using the pgx_dmpall command based on the instructions in "2.14.2 Database Backup Operation", perform the following procedure for the recovery:

a. Perform the following operations on both the primary server and the standby server, and check the server containing the backup data and the archive log that show the latest date.

   - Execute the pgx_rcvall command with the -l option specified and identify the backup data that shows the latest date.
   - Identify the archive log that shows the latest date, as shown below.

   **Example:**
   
   ```
   $ ls -ltr backupDataStorageDir/*_wal
   ```

b. If the latest backup data exists on the standby server, copy (*1) the backup data and overwrite (*2) it to each backup storage destination directory on the primary server.

c. If the latest archive log and transaction log file exist on the standby server, copy (*1) the archive log and overwrite (*2) it to the backup storage destination directory on the primary server.

d. Execute the pgx_rcvall command on the primary server, specifying the backup storage destination directory you used in step 3.

**Note**

*1: The backup data may contain a symbolic link, so copy the backup data so that the symbolic link is not converted to an ordinary file (with the tar command, for example).
5. Recover the Mirroring Controller management directory

Copy the files in the Mirroring Controller management directory from the backup data, and then perform the recovery.

6. Start the primary server instance and Mirroring Controller

**Enabling automatic switch/disconnection**

As the instance administrator user, execute the mc_ctl command in start mode.

**Example**

```
$ mc_ctl start -M /mcdir/inst1
```

**Disabling automatic switch/disconnection**

As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.

**Example**

```
$ mc_ctl start -M /mcdir/inst1 -F
```

**Point**

After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

7. Resume applications

Resume the applications.

8. Stop Mirroring Controller on the standby server

Execute the mc_ctl command in stop mode on the standby server.

**Example**

```
$ mc_ctl stop -M /mcdir/inst1
```

9. Recover the standby server

Refer to "2.5.2 Creating, Setting, and Registering the Standby Server Instance", and then recover (set up) the standby server from the primary server.

10. Rebuild the standby server

On the standby server, start Mirroring Controller and the instance.

**Enabling automatic switch/disconnection**

As the instance administrator user, execute the mc_ctl command in start mode.

**Example**

```
$ mc_ctl start -M /mcdir/inst1
```

**Disabling automatic switch/disconnection**

As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.
**Point**

After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

---

### 4.5 Recovering from an Incorrect User Operation

This section describes how to recover an instance when data has been corrupted due to incorrect user operation.

For example, when data has been corrupted due to incorrect user operation, such as data being unintentionally changed or deleted by an application or command, it is necessary to restore the original data on the primary server and resynchronize with the standby server.

Use the following procedure to perform recovery.

1. **Identify the primary server**
   
   Execute the `mc_ctl` command in status mode on each server, and search for a server for which "primary" or "none(inactivated primary)" is displayed.

2. **Stop the applications and commands that caused the incorrect operation to occur**
   
   Stop applications and commands that are running on the primary server. This will minimize the impact caused by the incorrect data.
   
   Also, if any applications used for reference by the standby server are running, stop them too.

3. **Stop the instance and Mirroring Controller**
   
   Stop the instance and Mirroring Controller on both the primary server and standby server.

   **Example**
   
   ```
   $ mc_ctl stop -a -M /mcdir/inst1
   ```

4. **Recover the database on the primary server**
   
   Recover the database using the recovery method in which the `pgx_rcvall` command uses the backup data to recover the database to a restore point prior to the time when the incorrect operation was performed.

   **See**
   
   Refer to "Recovering from an Incorrect User Operation" in the Operation Guide for information on using the `pgx_rcvall` command to recover the database to a restore point, and then perform only the database recovery procedure while the instance is in a stop state.

5. **Start the instance and Mirroring Controller**
   
   Start the instance and Mirroring Controller on the primary server.

   **Enabling automatic switch/disconnection**
   
   As the instance administrator user, execute the `mc_ctl` command in start mode.

   **Example**
   
   ```
   $ mc_ctl start -M /mcdir/inst1
   ```

   **Disabling automatic switch/disconnection**
   
   As the instance administrator user, execute the `mc_ctl` command in start mode with the `-F` option specified.

   **Example**
   
   ```
   $ mc_ctl start -F -M /mcdir/inst1
   ```
After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

6. Build the new standby server

Refer to “2.5 Setting Up the Standby Server” for information on building (setting up) a standby server from the primary server.
Chapter 5 Managing Mirroring Controller Using WebAdmin

This chapter describes how to set up and manage Mirroring Controller in a streaming replication cluster using WebAdmin.

Mirroring Controller can be used to monitor a streaming replication cluster and perform automatic switching or disconnect synchronous replication when there is an error.

WebAdmin can be used to set up Mirroring Controller in an existing replication cluster having master and synchronous standby instances.

The configuration of the database multiplexing system built using WebAdmin is shown below:

Figure 5.1 Configuration of database multiplexing operation system using WebAdmin

Point

- If Mirroring Controller is set up to the replication cluster using WebAdmin, the network with the host name (or IP address) specified in [Host name] will be used as the admin network and the log transfer network.
- To use a network other than the job network as the log transfer network, before building the replication cluster specify a host name other than the job network one in [Host name].

5.1 Mirroring Controller Setup

Perform the following procedure to setup Mirroring Controller in a streaming replication cluster. The option for this setup is accessible only in synchronous standby instance.

1. In the [Instances] tab, select the synchronous standby instance on which Mirroring Controller needs to be set up.

2. Click
3. Enter the information for the Mirroring Controller to be setup.

In the example below, Mirroring Controller is being setup for the replication cluster having master instance “inst1” and standby instance “inst1s”.

The instance name, host address and port of the master and standby instances are displayed for easy reference.

Enter the following items on master instance and on standby instance fields for Mirroring Controller setup, as shown in the above screenshot:

- **Enable automatic switch over**: Toggles the automatic switch/disconnection functionality. Select “Yes”. The default is “No”.
- **Mirroring Controller port**: Port number of Mirroring Controller. Note that if the Windows firewall feature is enabled, you must enable the port number of Mirroring Controller. Refer to “E.2 Windows Firewall Settings” for details.
- **Mirroring Controller management directory**: Directory where the Mirroring Controller configuration files will be stored.
- **Heartbeat interval (milliseconds)**: Number of milliseconds between two consecutive heartbeat checks. The default is “800”.
- **Heartbeat timeout (seconds)**: Number of seconds for the heartbeat timeout. The default is “1”.
- **Heartbeat retry**: Number of retries for heartbeat monitoring, before failover occurs. The default is “2”.

The instance name, host address and port of the master and standby instances are displayed for easy reference.
4. Click ☑ to setup Mirroring Controller.

5. Upon successful completion, Mirroring Controller will be started on master and standby instances.

In the [Instances] tab, select standby instance. The page below is displayed, in which you can check the Mirroring Controller status. In the example below, standby instance “inst1s” is used.

---

**5.2 Stopping Mirroring Controller**

Mirroring Controller can be stopped either in master instance or in standby instance using WebAdmin. Perform the following procedure to stop Mirroring Controller.

1. In the [Instances] tab, select the instance where to stop Mirroring Controller.

2. Click .

3. In the confirmation dialog box, click [Yes].

Mirroring Controller will be stopped on the selected instance. The Mirroring Controller status will be updated, and a confirmation message entry will be displayed in the [Message] section.

---

**5.3 Starting Mirroring Controller**

Mirroring Controller can be started either in master instance or in standby instance using WebAdmin. Perform the following procedure to start Mirroring Controller.

1. In the [Instances] tab, select the instance where to start Mirroring Controller.
2. Click 

3. In the confirmation dialog box, select the desired failover mode, and then click [Yes]. 

Mirroring Controller will be started on the selected instance. The Mirroring Controller status will be updated, and a confirmation message entry will be displayed in the [Message] section.

### 5.4 Disabling Failover Mode

Disabling failover mode in Mirroring Controller disables automatic switch/disconnection between master and standby instances.

Perform the following procedure to disable failover mode.

1. In the [Instances] tab, select the instance.

2. Click 

3. In the confirmation dialog box, click [Yes]. 

Failover mode will be disabled in Mirroring Controller. The Mirroring Controller status will be updated and a confirmation message entry will be displayed in the [Message] section.

### 5.5 Enabling Failover Mode

Enabling failover mode in Mirroring Controller enables automatic switch/disconnection between master and standby instances.

Perform the following procedure to enable failover.

1. In the [Instances] tab, select the instance.

2. Click 

3. In the confirmation dialog box, click [Yes].

Failover mode will be enabled in Mirroring Controller. The Mirroring Controller status will be updated and a confirmation message entry will be displayed in the [Message] section.

### 5.6 Deleting Mirroring Controller Setup

Deleting Mirroring Controller setup removes its setup from master and standby instances.

1. In the [Instances] tab, select the instance.

2. Click 

3. In the confirmation dialog box, click [Yes].

Mirroring Controller setup will be removed from the cluster. The cluster status will be updated and a confirmation message entry will be displayed in the [Message] section.

### 5.7 Status Update after Failover

When Mirroring Controller performs a failover, standby instance will be promoted to standalone instance. The Mirroring Controller setup will be removed from both standby and master instances.

The following scenario describes one of the ways in which failover can be triggered, and the results achieved by the use of Mirroring Controller in WebAdmin.

1. In the [Instances] tab, select the master instance "inst1".

2. Click 

- 94 -
3. In the confirmation dialog box, the warning "This instance is being monitored by Mirroring Controller. Stopping the instance may result in cluster failover." is displayed.

4. Choose the stop mode and click [Yes].

   In the server, the following takes place:
   
a. The master instance is stopped.
b. Failover is triggered in Mirroring Controller.
c. The Mirroring Controller setup is removed from both master and standby instances
d. Standby instance is promoted to standalone.

5. When the instance is refreshed in WebAdmin, the latest status of the instances will be displayed.

---

**Note**

When failover is performed, the Mirroring Controller setup is removed from both master and standby instances. Therefore, to manage the Mirroring Controller using WebAdmin again, create the standby instance and set up Mirroring Controller.

Refer to "Creating a Standby Instance" in the Operation Guide for details.

Refer to "5.1 Mirroring Controller Setup" for details.

---

**5.8 Action Required when an Error Occurs in the Combined Admin Network and Log Transfer Network**

Communication errors may temporarily occur in the network used as the admin network and log transfer network due to reasons such as high load on the server or insufficient system resources. Because of this, there is a risk of causing a split-brain situation by mistake even though the server has no issues.

Split brain refers to a situation where data update is performed on both servers because they both work as a primary server temporarily.

**How to detect split brain using WebAdmin**

If the conditions below are met, split brain may occur. Refer to "Split-brain detection method" and "How to recover from a split-brain" in "Appendix D Notes on Performing Automatic Degradation Immediately after a Heartbeat Abnormality" and take the actions described.

1. A standby instance is selected in the [Instances] tab, and
2. "Standalone" is displayed in [Instance type], and
3. A primary instance is selected in the [Instances] tab, and
4. "Standalone" is displayed in [Instance type].

---

**Note**

The admin network is important because Mirroring Controllers use it to confirm the status of each server.

The log transfer network is also important to maintain the data freshness.

Therefore, use network configurations resistant to faults for these networks by using the network redundancy channel bonding feature provided by the operating system or network driver vendor.
5.9 Performing Automatic Degradation Using the Arbitration Server

If database multiplexing is performed using WebAdmin, it is also possible to perform automatic degradation using the arbitration server. In such cases, it is necessary to perform tasks on the database server and the arbitration server after setting up Mirroring Controller in WebAdmin.

**Tasks on the arbitration server**

Perform setup of the arbitration server using Mirroring Controller commands.

1. Set up the arbitration server.
   
   Refer to "2.3 Setting Up the Arbitration Server" in "Chapter 2 Setting Up Database Multiplexing Mode" for information on how to set up the arbitration server.

**Tasks on the database server**

Change some of the settings after setting up Mirroring Controller in WebAdmin.

1. Set up Mirroring Controller in WebAdmin.
   
   Refer to "5.1 Mirroring Controller Setup" for details.

2. Use WebAdmin to stop Mirroring Controller on the master and standby instances.
   
   Refer to "5.2 Stopping Mirroring Controller" for details.

3. Edit the network configuration file of the master and standby instances, and add the arbitration server information.

   The network configuration file is network.conf, which exists in the Mirroring Controller management directory specified during Mirroring Controller setup. Refer to "A.3 Network Configuration File" for details.

   A definition example of network.conf is shown below.

   **Example:**
   
   The port number of the database server to be used as the arbitration network is set to "27541". The ID of the server of the Mirroring Controller arbitration process is set to "arbiter", and its port number is set to "27541".

   ```
   dbsvm27500 192.0.2.100,192.0.3.100 27540,27541 server
dbsvs27500 192.0.2.110,192.0.3.110 27540,27541 server
   arbiter 192.0.3.120 27541 arbiter
   ```

   **Note**
   
   - Ensure that the port numbers set for the database server and the arbitration server do not conflict with other software. In addition, do not configure the same segment for the admin network and the arbitration network.
   - If the server type is "server", two IP addresses or host names, and two port numbers need to be specified in the following order:
     - IP address or host name of the database server used as the admin network
     - IP address or host name of the database server used as the arbitration network
     - Port number of the database server used as the admin network
     - Port number of the database server used as the arbitration network
   - If the server type is "arbiter", specify the IP address or host name set for the my_address parameter and the port number set for the port parameter in arbitration.conf of the arbitration server.
4. Edit the server configuration file of the master and standby instances, and add the parameters required for automatic degradation using the arbitration server.

   The server configuration file is `instanceName.conf` or `instancePort.conf`, which exists in the Mirroring Controller management directory specified during Mirroring Controller setup.

   To perform automatic degradation using the arbitration server, set the `heartbeat_error_action` parameter to "arbitration".

   Refer to "A.4.1 Server Configuration File for the Database Servers" for information on other parameters.

5. Use WebAdmin to start Mirroring Controller on the master and standby instances.

   Refer to "5.3 Starting Mirroring Controller" for details.

Common tasks

1. Use the Mirroring Controller command to check the connection status from the database server or the arbitration server.

   Refer to "2.8 Checking the Connection Status" for information on how to check the connection status.
Appendix A Parameters

This appendix describes the configuration files and parameters required by the database multiplexing mode.

See

Refer to "Server Configuration" in the PostgreSQL Documentation for information on the postgresql.conf file.

A.1 Parameters Set on the Primary Server

The content for the parameters set in the postgresql.conf file of the primary server is shown in the table below.

Table A.1 postgresql.conf file

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value set</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>wal_level</td>
<td>replica</td>
<td>Specify the output level for the transaction log. Specify &quot;replica&quot; or &quot;logical&quot;.</td>
</tr>
<tr>
<td>max_wal_senders</td>
<td>2 or more</td>
<td>Specify &quot;2&quot; when building a Mirroring Controller cluster system. When additionally connecting asynchronous standby servers to the cluster system, add the number of simultaneous connections from these standby servers.</td>
</tr>
<tr>
<td>synchronous_standby_names</td>
<td>'standbyServerName'</td>
<td>Use single quotation marks (') to enclose the name that will identify the standby server. Any name can be specified. Do not change this parameter while Mirroring Controller is running. Do not specify multiple names to this parameter as there is only one standby server.</td>
</tr>
<tr>
<td>hot_standby</td>
<td>on</td>
<td>Specify whether queries can be run on the standby server. Specify &quot;on&quot;.</td>
</tr>
<tr>
<td>wal_keep_segments</td>
<td>Number of file segments</td>
<td>If a delay exceeding the value set in this parameter occurs, the WAL segment required later by the primary server may be deleted. Additionally, if you stop a standby server (for maintenance, for example), consider the stop time and set a value that will not cause the WAL segment to be deleted. Refer to &quot;Estimating Transaction Log Space Requirements&quot; in the Installation and Setup Guide for Server for information on estimating the WAL segment.</td>
</tr>
<tr>
<td>wal_log_hints</td>
<td>on</td>
<td>When using the pg_rewind command to recover a standby server, specify this parameter or enable checksums when executing the initdb command.</td>
</tr>
<tr>
<td>wal_sender_timeout</td>
<td>Timeout (milliseconds)</td>
<td>Specify the time period after which it is determined that the receiver process (walreceiver) of the transaction log is in an abnormal state on the primary server. The specified value must be larger than the value set for the wal_receiver_status_interval parameter set in the postgresql.conf file of the standby server.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Value set</td>
<td>Explanation</td>
</tr>
<tr>
<td>---------------------------</td>
<td>-------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>wal_receiver_timeout</td>
<td>Timeout (milliseconds)</td>
<td>Specify the time period after which it is determined that an error has occurred when the transaction log was received on the standby server. By aligning this value with the value for the database process heartbeat monitoring time, you can unify the time after which it is determined that an error has occurred.</td>
</tr>
<tr>
<td>archive_mode</td>
<td>on</td>
<td>Specify the archive log mode.</td>
</tr>
<tr>
<td>archive_command</td>
<td>'installDir/bin/pgx_walcopy.cmd &quot;%p&quot; &quot;backupDataStorageDestinationDirectory/archived_wal/%f&quot;'</td>
<td>Specify the command and storage destination to save the transaction log.</td>
</tr>
<tr>
<td>backup_destination</td>
<td>Backup data storage destination directory</td>
<td>Specify the name of directory where to store the backup data. Set the permissions so that only the instance administrator user can access the specified directory. Specify the same full path on all servers, so that the backup data of other servers can be used to perform recovery.</td>
</tr>
<tr>
<td>listen_addresses</td>
<td>Primary server IP address, host name, or &quot;*&quot;</td>
<td>Specify the IP address or host name of the primary server. Specify the IP address or corresponding host name that will be used to connect to the log transfer network. The content specified is also used to allow connections from client applications. To receive the connection and the transaction log from any client or standby server, specify &quot;*&quot;. Refer to &quot;Connections and Authentication&quot; in the PostgreSQL Documentation for details.</td>
</tr>
<tr>
<td>max_connections</td>
<td>Value of max_wal_senders + number of simultaneous client connections to the instance + superuser_reserved_connections value</td>
<td>The value specified is also used to restrict the number of connections from client applications and the number of connections for the management of instances. Refer to &quot;When an Instance was Created with the initdb Command&quot; in the Installation and Setup Guide for Server, and &quot;Connections and Authentication&quot; in the PostgreSQL Documentation, for details.</td>
</tr>
<tr>
<td>superuser_reserved_connection_s</td>
<td>Add the number of simultaneous executions of mc_ctl status (*1) + 2</td>
<td>Specify the number of connections reserved for connections from database superusers. Add the number of connections from Mirroring Controller processes. Also reflect the added value in the max_connections parameter.</td>
</tr>
<tr>
<td>restart_after_crash</td>
<td>off</td>
<td>If &quot;on&quot; is specified, or the default value is used for this parameter, behavior equivalent to restarting FUJITSU Enterprise Postgres, including crash recovery, will be performed when some server processes end abnormally. However, when database multiplexing monitoring is used, a failover will occur after an error is detected when some server processes end abnormally, and the restart of those server processes is forcibly stopped. Specify &quot;off&quot; to</td>
</tr>
<tr>
<td>Parameter</td>
<td>Value set</td>
<td>Explanation</td>
</tr>
<tr>
<td>----------------------------</td>
<td>--------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>prevent behavior such as</td>
<td>for no</td>
<td>this from occurring for no apparent reason.</td>
</tr>
<tr>
<td>synchronous_commit</td>
<td>on or remote_apply</td>
<td>Specify up to what position WAL send is to be performed before transaction commit processing returns a normal termination response to a client.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The recommended value is &quot;on&quot; or &quot;remote_apply&quot; to prevent data loss caused by the node switch or a node shutdown immediately after the switch.</td>
</tr>
</tbody>
</table>

*1: Number of simultaneous executions of the mc_ctl command in the status mode.

## A.2 Parameters Set on the Standby Server

This section explains the content of the file and parameters set on the standby server. After editing `postgresql.conf` file, start the instance.

The content for the parameters specified in `postgresql.conf` file is shown in the table below.

### Table A.2 postgresql.conf file

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value set</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>wal_level</td>
<td>replica</td>
<td>Specify the output level for the transaction log. Specify &quot;replica&quot; or &quot;logical&quot;.</td>
</tr>
<tr>
<td>max_wal_senders</td>
<td>2 or more</td>
<td>Specify &quot;2&quot; when building a Mirroring Controller cluster system. When additionally connecting asynchronous standby servers to the cluster system, add the number of simultaneous connections from these standby servers.</td>
</tr>
<tr>
<td>synchronous_standby_names</td>
<td>'primaryServerName'</td>
<td>Use single quotation marks (') to enclose the name that will identify the primary server. Any name can be specified. This name will be required to rebuild the original primary server as the new standby server after the primary server was switched. Do not change this parameter while Mirroring Controller is running. Do not specify multiple names to this parameter as there is only one standby server.</td>
</tr>
<tr>
<td>hot_standby</td>
<td>on</td>
<td>Specify whether queries can be run on the standby server. Specify &quot;on&quot;.</td>
</tr>
<tr>
<td>wal_keep_segments</td>
<td>Number of file segments</td>
<td>If a delay exceeding the value set in this parameter occurs, the WAL segment required later by the standby server may be deleted by the primary server. Additionally, if you stop a standby server (for maintenance, for example), consider the stop time and set a value that will not cause the WAL segment to be deleted. Refer to &quot;Estimating Transaction Log Space Requirements&quot; in the Installation and Setup Guide for Server for information on estimating the WAL segment.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Value set</td>
<td>Explanation</td>
</tr>
<tr>
<td>-------------------</td>
<td>--------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>wal_log_hints</td>
<td>on</td>
<td>When using the pg_rewind command to recover a standby server, specify this parameter or enable checksums when executing the initdb command.</td>
</tr>
<tr>
<td>wal_sender_timeout</td>
<td>Timeout (milliseconds)</td>
<td>Specify the time period after which it is determined that the receiver process (walreceiver) of the transaction log is in an abnormal state on the primary server. The specified value must be larger than the value set for the wal_receiver_status_interval parameter set in the postgresql.conf file of the standby server. By aligning this value with the value for the database process heartbeat monitoring time, you can unify the time after which it is determined that an error has occurred.</td>
</tr>
<tr>
<td>wal_receiver_timeout</td>
<td>Timeout (milliseconds)</td>
<td>Specify the time period after which it is determined that an error has occurred when the transaction log was received on the standby server. By aligning this value with the value for the database process heartbeat monitoring time, you can unify the time after which it is determined that an error has occurred.</td>
</tr>
<tr>
<td>backup_destination</td>
<td>Backup data storage destination directory</td>
<td>Specify the name of the backup data storage directory. Set the permissions so that only the instance administrator user can access the specified directory. Specify the same full path on all servers so that the backup data of other servers can be used to perform recovery.</td>
</tr>
<tr>
<td>archive_mode</td>
<td>on</td>
<td>Specify the archive log mode.</td>
</tr>
<tr>
<td>archive_command</td>
<td>'installDir/bin/pgx_walcopy.cmd &quot;%p&quot; &quot;backupDataStorageDestinationDirectory/archived_wal/%f&quot;'</td>
<td>Specify the command and storage destination to save the transaction log.</td>
</tr>
<tr>
<td>listen_addresses</td>
<td>Standby server IP address, host name, or &quot;*&quot;</td>
<td>Specify the IP address or host name of the standby server. Specify the IP address or corresponding host name that will be used to connect to the log transfer network. The content specified is also used to allow connections from client applications. To receive the connection and the transaction log from any client or standby server, specify &quot;*&quot;. Refer to &quot;Connections and Authentication&quot; in the PostgreSQL Documentation for details.</td>
</tr>
<tr>
<td>max_connections</td>
<td>Value of max_wal_senders + number of simultaneous client connections to the instance + superuser_reserved_connections value</td>
<td>The value specified is also used to restrict the number of connections from client applications and the number of connections for the management of instances. Refer to &quot;When an Instance was Created with the initdb Command&quot; in the Installation and Setup Guide for Server, and &quot;Connections and Authentication&quot; in the PostgreSQL Documentation, for details.</td>
</tr>
</tbody>
</table>
### Parameter Value set Explanation

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value set</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>superuser_reserved_connections</td>
<td>Add the number of simultaneous executions of mc_ctl status (+1) + 2</td>
<td>Specify the number of connections reserved for connections from database superusers. Add the number of connections from Mirroring Controller processes. Also reflect the added value in the <code>max_connections</code> parameter.</td>
</tr>
<tr>
<td>restart_after_crash</td>
<td>off</td>
<td>If “on” is specified, or the default value is used for this parameter, behavior equivalent to restarting FUJITSU Enterprise PostgreSQL, including crash recovery, will be performed when some server processes end abnormally. However, when database multiplexing monitoring is used, a failover will occur after an error is detected when some server processes end abnormally, and the restart of those server processes is forcibly stopped. Specify “off” to prevent behavior such as this from occurring for no apparent reason.</td>
</tr>
<tr>
<td>synchronous_commit</td>
<td>on or remote_apply</td>
<td>Specify up to what position WAL send is to be performed before transaction commit processing returns a normal termination response to a client. The recommended value is “on” or “remote_apply” to prevent data loss caused by the node switch or a node shutdown immediately after the switch.</td>
</tr>
</tbody>
</table>

---

**A.3 Network Configuration File**

This section explains the network configuration file (network.conf) to be defined individually for the database servers and the arbitration server. Define the same content on the primary server and standby server.

For database multiplexing mode, define the network configuration for the following in network.conf.

- Integration between Mirroring Controller processes
- Integration between a Mirroring Controller process and the Mirroring Controller arbitration process

**Items to be defined in network.conf**

Format:

```
serverIdentifier hostName[,hostName] portNum[,portNum] [serverType]  
Or,  
serverIdentifier ipAddr[,ipAddr] portNum[,portNum] [serverType]  
```

Specify the server identifier, IP address or host name, port number, and server type, using a space as the delimiter.

The items are explained in the table below.

**Table A.3 network.conf file**

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverIdentifier</td>
<td>Specify any identifier for the server. The maximum length is 64 bytes. Use ASCII characters excluding spaces and number signs (#) to specify this parameter.</td>
</tr>
</tbody>
</table>
| ipAddrOrHostName      | Specify the IP address or its corresponding host name that will connect to the admin network that performs communication between the database servers, and to the arbitration network that performs communication between a database server and the arbitration server.  
When specifying two IP addresses or host names delimited by a comma, do not insert a space after the comma.  
Use ASCII characters excluding spaces to specify the host name. |
<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>portNum</td>
<td>A port number cannot be specified if it exceeds the range 0 to 65535. Ensure that the port number does not conflict with other software. Do not specify an ephemeral port that may temporarily be assigned by another program. Note that the value specified in this parameter must also be set in the services file. When specifying two port numbers delimited by a comma, do not insert a space after the comma.</td>
</tr>
<tr>
<td>serverType</td>
<td>Specify &quot;server&quot; for a database server (&quot;server&quot; can be omitted), or &quot;arbiter&quot; for the arbitration server.</td>
</tr>
</tbody>
</table>

**Content to be defined on the database servers**

This section explains the network.conf content to be defined on the database servers.

The content to be defined depends on the operation settings at the time a heartbeat abnormality is detected.

**When automatic degradation by the arbitration server is selected**

- Specify definitions related to the admin network and arbitration network.
- Specify the IP address or host name and port number according to the server type (database server or arbitration server) as shown in the table below.

<table>
<thead>
<tr>
<th>Server type</th>
<th>IP address or host name</th>
<th>Port number</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>First</td>
<td>Second</td>
</tr>
<tr>
<td>server</td>
<td>IP address or host name used as the admin network</td>
<td>IP address or host name used as the arbitration network (*1)</td>
</tr>
<tr>
<td>arbiter</td>
<td>IP address or host name of the arbitration server  Specify the same value as that specified in the my_address parameter of arbitration.conf on the arbitration server.</td>
<td>Not required</td>
</tr>
</tbody>
</table>

*1: This value can be omitted from definitions not related to the local node. If it is omitted, network.conf must be created on both the primary server and standby server.

**Example)**

IPv4

server1 192.0.2.100,192.0.3.100 27540,27541 server
server2 192.0.2.110,192.0.3.110 27540,27541 server
arbiter 192.0.3.120 27541 arbiter

IPv6

When operation other than automatic degradation by the arbitration server is selected

- Specify definitions related to the admin network.
- Define the same content on the primary server and standby server.
- Define lines for database servers only.
- Specify only one IP address or host name and port number.

<table>
<thead>
<tr>
<th>IP address or host name to be used as the admin network</th>
<th>Port number used as the admin network</th>
</tr>
</thead>
<tbody>
<tr>
<td>First</td>
<td>Second</td>
</tr>
<tr>
<td>First</td>
<td>Second</td>
</tr>
</tbody>
</table>

IP address or host name | Port number
---|---
IPv4
server1 192.0.2.100 27540
server2 192.0.2.110 27540
IPv6
server1 2001:258:8404:1217:250::56ff:feaa7:559f 27540
server2 2001:258:8404:1217:250::56ff:feaa7:55a0 27540

Example)
The literal space represents a space.

IPv4

<table>
<thead>
<tr>
<th>server1 192.0.2.100 27540</th>
</tr>
</thead>
<tbody>
<tr>
<td>server2 192.0.2.110 27540</td>
</tr>
</tbody>
</table>

IPv6

<table>
<thead>
<tr>
<th>server1 2001:258:8404:1217:250::56ff:feaa7:559f 27540</th>
</tr>
</thead>
<tbody>
<tr>
<td>server2 2001:258:8404:1217:250::56ff:feaa7:55a0 27540</td>
</tr>
</tbody>
</table>

Content to be defined on the arbitration server

This section explains the network.conf content to be defined on the arbitration server.

- Specify definitions related to the arbitration network.
- Define lines for database servers only.
- For the IP address or host name, specify the same value as the second IP address or host name specified in the database server line in network.conf of the database server.
- For the port number, specify the same value as the second port number specified in the database server line in network.conf of the database server.

Example)
The literal space represents a space.

IPv4

<table>
<thead>
<tr>
<th>server1 192.0.3.100 27541</th>
</tr>
</thead>
<tbody>
<tr>
<td>server2 192.0.3.110 27541</td>
</tr>
</tbody>
</table>

IPv6

<table>
<thead>
<tr>
<th>server1 2001:258:8404:1217:250::56ff:feaa8:559f 27541</th>
</tr>
</thead>
<tbody>
<tr>
<td>server2 2001:258:8404:1217:250::56ff:feaa8:55a0 27541</td>
</tr>
</tbody>
</table>
Relationship between network-related definitions

Refer to the diagram below for the relationship between the host names and IP addresses or port numbers specified in the network configuration file (network.conf) and arbitration configuration file (arbitration.conf).

A.4 Server Configuration File

A.4.1 Server Configuration File for the Database Servers

Define the information related to Mirroring Controller monitoring and control in the serverIdentifier.conf file. The maximum length of the server identifier is 64 bytes. Use ASCII characters excluding spaces to specify this parameter.

If the primary server and standby server environments are different, define content that is different, according to the environment.

Table A.4 serverIdentifier.conf file

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value set</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>db_instance</td>
<td>'dataStorageDestinationDir'</td>
<td>Specify using single quotation marks (') to enclose the data storage destination directory used to identify the monitoring target instance.</td>
</tr>
<tr>
<td>target_db</td>
<td>postgres or template1</td>
<td>Specify the name of the database to be connected to the database instance.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The default is &quot;postgres&quot;.</td>
</tr>
<tr>
<td>db_instance_username</td>
<td>'usernameToConnectToDbInstance'</td>
<td>Specify the username to connect to the database instance.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Use ASCII characters to specify this parameter.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Specify this parameter if the database administrator user is different from the operating system user who starts Mirroring Controller.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Value set</td>
<td>Explanation</td>
</tr>
<tr>
<td>--------------------</td>
<td>------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>db_instance_password</td>
<td>'passwordOfInstanceAdminUser'</td>
<td>Specify the password used when Mirroring Controller connects to a database instance, enclosed in single quotation marks ('). Use ASCII characters to specify this parameter. If password authentication is performed, you must specify this parameter in the settings used when Mirroring Controller connects to a database instance. If you specify this parameter when password authentication is not performed, the parameter will be ignored.</td>
</tr>
<tr>
<td>core_file_path</td>
<td>'coreFileOutputDir'</td>
<td>Specify the directory to which the core file is to be output, enclosed in single quotation marks ('). Use ASCII characters to specify this parameter. If this parameter is omitted, it will be assumed that the Mirroring Controller management directory was specified.</td>
</tr>
<tr>
<td>syslog_facility</td>
<td></td>
<td>When the import of logs to the syslog is enabled, the value of this parameter will be used for &quot;facility&quot; of the syslog. The default is &quot;LOCAL0&quot;.</td>
</tr>
<tr>
<td>syslog_ident (*1)</td>
<td>'programName'</td>
<td>Specify using single quotation marks ('') to enclose the program name used to identify the Mirroring Controller message in the system log. Use ASCII characters excluding spaces to specify this parameter. The default is 'MirroringControllerOpen'.</td>
</tr>
<tr>
<td>remote_call_timeout</td>
<td>Admin communication timeout</td>
<td>Specify the timeout value (milliseconds) of the Mirroring Controller agent process for communication between servers. Specify a value between 0 and 2147483647. The value 0 indicates that there is no timeout limit. The default is 70000 milliseconds (70 seconds).</td>
</tr>
<tr>
<td>agent_alive_timeout</td>
<td>Timeout for Mirroring Controller process heartbeat monitoring (seconds)</td>
<td>If there is no response for at least the number of seconds specified, the Mirroring Controller process is restarted. Specify 0 or a value between 2 and 2147483647. The value 0 indicates that there is no timeout limit. The default is 0 seconds.</td>
</tr>
<tr>
<td>heartbeat_error_action</td>
<td>Operation when a heartbeat abnormality is detected using operating system or server heartbeat monitoring</td>
<td>arbitration: Perform automatic degradation using the arbitration server. command: Call a user exit to determine degradation, and perform automatic degradation if required. message: Notify messages.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Value set</td>
<td>Explanation</td>
</tr>
<tr>
<td>--------------------------</td>
<td>---------------------------------------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>fallback</td>
<td>fallback: Perform automatic degradation unconditionally. The default is &quot;arbitration&quot;. Set the same value on the primary server and standby server.</td>
<td></td>
</tr>
<tr>
<td>heartbeat_interval</td>
<td>Interval time for abnormality monitoring during heartbeat monitoring of the operating system or server (milliseconds)</td>
<td>Abnormality monitoring of the operating system or server is performed at the interval specified in heartbeat_interval. If an error is detected, operation will conform to the value specified for heartbeat_error_action. If &quot;arbitration&quot; is specified in heartbeat_error_action, the error detection time during monitoring of the operating system or server becomes longer than when the arbitration server is not used, by up to the value specified for arbitration_timeout. Specify a value between 1 and 2147483647. The specified value is used as the default for db_instance_check_interval and disk_check_interval. The default is 800 milliseconds.</td>
</tr>
<tr>
<td>heartbeat_timeout</td>
<td>Timeout for abnormality monitoring during heartbeat monitoring of the operating system or server (seconds)</td>
<td>If there is no response for at least the number of seconds specified, it will be assumed that an error has occurred that requires the primary server to be switched, or the standby server to be disconnected. If an error is detected, operation will conform to the value specified for heartbeat_error_action. If &quot;arbitration&quot; is specified in heartbeat_error_action, the error detection time during monitoring of the operating system or server becomes longer than when the arbitration server is not used, by up to the value specified for arbitration_timeout. Specify a value between 1 and 2147483647. The specified value is used as the default for db_instance_check_timeout. The default is 1 second.</td>
</tr>
<tr>
<td>heartbeat_retry</td>
<td>Number of retries for abnormality monitoring during heartbeat monitoring of the operating system or server (number of times)</td>
<td>Specify the number of retries to be performed when an error has been detected that requires the primary server to be switched, or the standby server to be disconnected. If an error is detected in succession more than the specified number of times, switch or disconnection will be performed. If an error is detected, operation will conform to the value specified for heartbeat_error_action. If &quot;arbitration&quot; is specified in heartbeat_error_action, the error detection time during monitoring of the operating system or server becomes longer than when the arbitration server is not used, by up to the value specified for arbitration_timeout. Specify a value between 0 and 2147483647. The specified value is used as the default for db_instance_check_retry and disk_check_retry. The default is 2 times.</td>
</tr>
<tr>
<td>db_instance_check_interval</td>
<td>Database process heartbeat monitoring interval (milliseconds)</td>
<td>Heartbeat monitoring of the database process is performed at the interval specified in db_instance_check_interval.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Value set</td>
<td>Explanation</td>
</tr>
<tr>
<td>-----------</td>
<td>-----------</td>
<td>-------------</td>

<td></td>
<td>[Setting example]</td>
<td>arbitration_command = <code>/mc/arbitration_dir/execute_arbitration_command.sh</code></td>
</tr>
<tr>
<td></td>
<td></td>
<td>This parameter must be specified when &quot;command&quot; is set for heartbeat_error_action.</td>
</tr>
<tr>
<td>arbitration_command_time</td>
<td></td>
<td>If the arbitration command does not respond within the specified number of seconds, it is determined that execution of the arbitration command has failed and a signal (SIGTERM) is sent to the arbitration command execution process.</td>
</tr>
<tr>
<td>out</td>
<td></td>
<td>Specify a value between 1 and 2147483647.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The default is 30 seconds.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>This parameter can be specified only when &quot;command&quot; is set for heartbeat_error_action.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Value set</td>
<td>Explanation</td>
</tr>
<tr>
<td>------------------------------------------------</td>
<td>-------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>shutdown_detached_synchronous_standby</td>
<td>on or off</td>
<td>Specify whether to forcibly stop the instance on the standby server when the standby server is disconnected.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>on: Stop the instance.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>off: Do not stop the instance.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>If &quot;on&quot; is specified and the pre-detach command was created, the pre-detach command is executed and then the instance is stopped.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The default is &quot;off&quot;.</td>
</tr>
<tr>
<td>post_promote_command</td>
<td><code>postPromoteCmdFilePath</code></td>
<td>Specify the full path of the command to be called by Mirroring Controller after a new primary server is promoted during a failover of the primary server.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Enclose the path in single quotation marks (').</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Specify the path using less than 1024 bytes.</td>
</tr>
<tr>
<td>post_attach_command</td>
<td><code>postAttachCmdFilePath</code></td>
<td>Specify the full path of the command to be called by Mirroring Controller after the standby server is attached to the cluster system.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Enclose the path in single quotation marks (').</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Specify the path using less than 1024 bytes.</td>
</tr>
<tr>
<td>pre_detach_command</td>
<td><code>preDetachCmdFilePath</code></td>
<td>Specify the full path of the command to be called by Mirroring Controller before the standby server is disconnected from the cluster system.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Enclose the path in single quotation marks (').</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Specify the path using less than 1024 bytes.</td>
</tr>
<tr>
<td>status_change_command_timeout</td>
<td>State transition command timeout (seconds)</td>
<td>Specify the timeout value of the post-promote command, post-attach command, and pre-detach command. If the command does not respond within the specified number of seconds, a signal (SIGTERM) is sent to the execution process of the status change command. Specify a timeout between 1 and 2147483647. The default is 20 seconds.</td>
</tr>
<tr>
<td>check_synchronous_standby_names_validation</td>
<td>on or off</td>
<td>Specify whether Mirroring Controller is to periodically check during operations whether the synchronous_standby_names parameter in postgresql.conf was changed by an incorrect user operation. However, it is not recommended to enable this parameter, because performing this check causes Mirroring Controller to use the CPU of the database server redundantly and execute SQL statements at high frequency. This parameter is compatible with operations in FUJITSU Enterprise Postgres 9.6 or earlier. The default is &quot;off&quot;.</td>
</tr>
</tbody>
</table>

*1: By specifying the syslog_ident parameter of the postgresql.conf file, the Mirroring Controller output content can be referenced transparently, so log reference is easy.

The availability of some parameters depends on the value set for the heartbeat_error_action parameter that sets the operation to be performed if heartbeat monitoring of the operating system or server detects a heartbeat abnormality.
Table A.5 Parameter availability depending on the value set for the heartbeat_error_action parameter

<table>

N: Cannot be specified

A.4.2 Arbitration Configuration File

In arbitration.conf, define the information related to arbitration and control of the Mirroring Controller arbitration process.

Linux

Table A.6 arbitration.conf file (Linux)

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value set</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>port</td>
<td>Port number of the Mirroring Controller arbitration process</td>
<td>The specified value must not exceed the range 0 to 65535. Ensure that the port number does not conflict with other software. Do not specify an ephemeral port that may temporarily be assigned by another program. For the port number of the arbitration server to be specified in network.conf on the database server, specify the same value as the port number specified in this parameter.</td>
</tr>
<tr>
<td>my_address</td>
<td>'ipAddrOrHostNameThatAcceptsConnectionFromMirroringControllerProcessSoNDbServer'</td>
<td>For the IP address or host name of the arbitration server to be specified in network.conf on the database server, specify the same value as the IP address or host name specified in this parameter. IPv4 and IPv6 addresses can be specified. Specify the IP address or host name, enclosed in single quotation marks (').</td>
</tr>
<tr>
<td>core_file_path</td>
<td>'coreFileOutputDir'</td>
<td>Specify the directory to which the core file is to be output, enclosed in single quotation marks ('). Use ASCII characters to specify this parameter.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Value set</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------</td>
<td>-----------------------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>syslog_facility</td>
<td>Specify LOCAL0, LOCAL1, LOCAL2, LOCAL3, LOCAL4, LOCAL5, LOCAL6, or LOCAL7.</td>
<td>When the import of logs to the syslog is enabled, the value of this parameter will be used for “facility” of the syslog. The default is &quot;LOCAL0&quot;.</td>
</tr>
<tr>
<td>syslog_ident</td>
<td>'programName'</td>
<td>Specify using single quotation marks (') to enclose the program name used to identify the Mirroring Controller arbitration process message in the system log. Use ASCII characters excluding spaces to specify this parameter. The default is 'MirroringControllerArbiter'.</td>
</tr>
<tr>
<td>fencing_command</td>
<td>'fencingCmdFilePath'</td>
<td>Specify the full path of the fencing command that fences a database server where an error is determined to have occurred. Enclose the path in single quotation marks ('). Specify the path using less than 1024 bytes.</td>
</tr>
<tr>
<td>fencing_command_timeout</td>
<td>Fencing command timeout (seconds)</td>
<td>If the command does not respond within the specified number of seconds, fencing is determined to have failed and a signal (SIGTERM) is sent to the fencing command execution process. Specify a value between 1 and 2147483647. The default is 20 seconds.</td>
</tr>
<tr>
<td>heartbeat_interval</td>
<td>Interval time for heartbeat check of the operating system or server (milliseconds)</td>
<td>When an arbitration request is received from a database server, the heartbeat of the database server is checked at the specified interval and arbitration is performed. Specify a value between 1 and 2147483647. The default is the value specified in serverIdentifier.conf of the database server. Specify this parameter to perform optimization taking into account differences in the line load to the admin network and the reduction in the time it takes to degrade.</td>
</tr>
<tr>
<td>heartbeat_timeout</td>
<td>Timeout for heartbeat check of the operating system or server (seconds)</td>
<td>If there is no response for at least the number of seconds specified, it will be assumed that an error has occurred that requires the primary server or standby server to be fenced. Specify a value between 1 and 2147483647. The default is the value specified in serverIdentifier.conf of the database server. Specify this parameter to perform optimization taking into account differences in the line load to the admin network and the reduction in the time it takes to degrade.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Value set</td>
<td>Description</td>
</tr>
<tr>
<td>----------------</td>
<td>---------------------------------------------------------------------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>heartbeat_retry</td>
<td>Number of retries for heartbeat monitoring of the operating system or server (number of times)</td>
<td>Specify the number of retries to be performed when an error has been detected that requires the primary server or standby server to be fenced. If an error is detected in succession more than the specified number of times, fencing will be performed. Specify a value between 0 and 2147483647. The default is the value specified in serverIdentifiers.conf of the database server. Specify this parameter to perform optimization taking into account differences in the line load to the admin network and the reduction in the time it takes to degrade.</td>
</tr>
</tbody>
</table>

### Windows

#### Table A.7 arbitration.conf file (Windows)

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value set</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>port</td>
<td>Port number of the Mirroring Controller arbitration process</td>
<td>The specified value must not exceed the range 0 to 65535. Ensure that the port number does not conflict with other software. Do not specify an ephemeral port that may temporarily be assigned by another program. For the port number of the arbitration server to be specified in network.conf on the database server, specify the same value as the port number specified in this parameter.</td>
</tr>
<tr>
<td>my_address</td>
<td>'ipAddrOrHostNameThatAcceptsConnectionFromMirroringControllerProcessOnDbServer'</td>
<td>For the IP address or host name of the arbitration server to be specified in network.conf on the database server, specify the same value as the IP address or host name specified in this parameter. IPv4 and IPv6 addresses can be specified. Specify the IP address or host name, enclosed in single quotation marks (').</td>
</tr>
<tr>
<td>core_file_path</td>
<td>'coreFileOutputDir'</td>
<td>Specify the directory to which the core file is to be output, enclosed in single quotation marks ('). Use ASCII characters, and specify &quot;&quot; as the path delimiter. If this parameter is omitted, it will be assumed that the Mirroring Controller arbitration process management directory was specified.</td>
</tr>
<tr>
<td>service_name</td>
<td>'registeredServiceNameOfMirroringControllerArbitrationProcess'</td>
<td>Specify the Mirroring Controller arbitration process service name to be registered as a Windows service, enclosed in single quotation marks ('). Use ASCII characters excluding forward slash (/) and backslash () to specify this parameter. The service name is up to 124 bytes. The default is 'MirroringControllerArbiter'.</td>

</tbody>
</table>
Appendix B Supplementary Information on Building the Primary Server and Standby Server on the Same Server

The primary server and standby server can be pseudo-configured on the same server for system testing, for example. Out of consideration for performance and reliability, do not use this type of configuration for any other purposes. For this reason, do not use this type of configuration in a production environment.

Note that the setup and operations is the same as if the primary and standby servers are built on different servers.

This appendix provides supplementary information explaining how to configure the primary server and standby server on the same server.

Note

Even if automatic degradation by an arbitration server is set when the primary server and standby server are configured on the same server, there will be no effect of it.

B.1 Backup Data Storage Destination Directory

It is not a problem if the same backup data storage destination directory is used on the primary server and standby server.

B.2 How to Execute the mc_ctl Command

When executing the mc_ctl command, specify the server identifier in the --local-server option in order to identify the operation destination server.

Below is an example of starting Mirroring Controller of the server "server1" defined in the network.conf file. For mc_ctl command operations using another mode, also specify the --local-server option.

Define two server identifiers for the same IP address with different port numbers in the network.conf file.

Example)

<table>
<thead>
<tr>
<th>server1</th>
<th>192.0.2.100</th>
<th>27540</th>
</tr>
</thead>
<tbody>
<tr>
<td>server2</td>
<td>192.0.2.100</td>
<td>27541</td>
</tr>
</tbody>
</table>

Ensure that the port numbers of both primary server and standby server do not conflict with any other software.

Enabling automatic switch/disconnection

Start Mirroring Controller of the server "server1":

Example)

$ mc_ctl start -M /mcdir/inst1 --local-server server1

Stop Mirroring Controller of the server "server1":

Example)

$ mc_ctl stop -M /mcdir/inst1 --local-server server1

Disabling automatic switch/disconnection

Start Mirroring Controller of the server "server1":

Example)

$ mc_ctl start -M /mcdir/inst1 -F --local-server server1
Stop Mirroring Controller of the server "server1":

Example)

```bash
$ mc_ctl stop -M /mcdir/inst1 --local-server server1
```

**Note**

If using an rc script

Append the `--local-server` option to the `mc_ctl` command call defined in the automatic start shell script.

If using systemd

Add the `--local-server` option to the `mc_ctl` option specification for `ExecStart` and `ExecStop` of the unit file for systemd.

Refer to "2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances" for details.
Appendix C  User Commands

This appendix describes three categories of commands:

- Fencing command
- Arbitration command
- State transition commands

This appendix describes each category of user command.

C.1 Fencing Command

Format

The syntax for calling the fencing command from the Mirroring Controller process or the Mirroring Controller arbitration process is described below.

Fencing command of the database server

```
fencingCmd executionMode mcDegradationOper cmdServerId targetServerId
```

Fencing command of the arbitration server

```
fencingCmd executionMode mcDegradationOper targetServerId
```

Input

Fencing command of the database server

Execution mode

- monitor: Detect issues via automatic monitoring of the Mirroring Controller process
- command: Mirroring Controller command execution (switch mode or detach mode of the mc_ctl command)

Degradation operation to be performed by Mirroring Controller

- switch: Switch
- detach: Disconnect

`cmdServerId`

ID of the database server that called the command

`targetServerId`

ID of the database server to be fenced

Fencing command of the arbitration server

Execution mode

- monitor: Detect issues via automatic monitoring of the Mirroring Controller process
- command: Mirroring Controller command execution (switch mode or detach mode of the mc_ctl command)

Degradation operation to be performed by Mirroring Controller

- switch: Switch
- detach: Disconnect

`targetServerId`

ID of the database server to be fenced
Output

Return value

0: Mirroring Controller will continue the degradation process.
Other than 0: Mirroring Controller will cancel the degradation process.

Description

Identifies the database server targeted for fencing based on the input server identifier, and implements the process that isolates it from the cluster system.

Notes

- The command is executed by the operating system user who started Mirroring Controller or the Mirroring Controller arbitration process. Therefore, if the command is to be executed by a specific operating system user, change the executing user of the command accordingly.
- The operating system user who started Mirroring Controller or the Mirroring Controller arbitration process must have execution privileges to the command. Otherwise, the degradation process will be canceled.
- From a security point of view, set the access privileges as necessary so that the fencing command is not overwritten and unauthorized operations are not performed by unintended operating system users.
- If the fencing command returns a value other than 0, Mirroring Controller will cancel the degradation process, so it is necessary for the user to check the status of the server, and switch or disconnect it manually.
- Before executing the fencing command, check if the server is already fenced, to avoid the command terminating abnormally.
- If the command times out, Mirroring Controller will stop the command, output an error message, and cancel the degradation process.

Information

The fencing command can be implemented by simply stopping the operating system or server. For example, if stopping the power for the database server, it is possible to use a utility to control the hardware control board in environments equipped with boards compatible with IPMI hardware standard.

Linux

Below is a sample script of a fencing command that powers off the database server using the IPMI tool.

Path of the sample shell script

`/installDir/share/mcarb_execute_fencing.sh.sample`

Windows

Below is a sample script of a fencing command that powers off the database server using IPMIUTIL.

Path of the sample shell script

`installDir\share\mcarb_execute_fencing.bat.sample`

C.2 Arbitration Command

Format

The syntax for calling the arbitration command from the Mirroring Controller process is described below.

```
arbitrationCmd cmdServerId targetServerId
```
Input

\textit{cmdServerId}

ID of the database server that called the command

\textit{targetServerId}

ID of the database server to arbitrate

Output

Return value

0: The database server to arbitrate has an issue, and Mirroring Controller will continue the degradation process.

Other than 0: The database server to arbitrate is normal, and Mirroring Controller will cancel the degradation process.

Description

Identifies the database server to arbitrate based on the input server identifier, and checks the status of the server.

Notes

- The command is executed by the operating system user who started Mirroring Controller.
- The operating system user who started Mirroring Controller must have execution privileges to the command. Otherwise, the command will not be called, and the degradation process will be canceled.
- If the command times out, Mirroring Controller will stop the command, output an error message, and cancel the degradation process.

C.3 State Transition Commands

State transition commands include the three types of user commands below. Any of the commands can be implemented by Mirroring Controller in conjunction with database server status transitions.

- Post-promote command
- Pre-detach command
- Post-attach command

C.3.1 Post-promote Command

Format

The syntax for calling the post-promote command from the Mirroring Controller process is described below.

\texttt{postpromoteCmd serverId}

Input

\textit{serverId}

ID of the database server (new primary server) that was promoted

Output

Return value

None

Notes

- The command is executed by the operating system user who started Mirroring Controller.
- The operating system user who started Mirroring Controller must have execution privileges to the command. Otherwise, the command will not be called.
- If the command times out, Mirroring Controller will stop the command, output an error message, and cancel the process.

C.3.2 Pre-detach Command

Format
The syntax for calling the pre-detach command from the Mirroring Controller process is described below.

```
predetachCmd cmdServerId serverRole targetServerId
```

Input
- `cmdServerId`
  ID of the database server that called the command
- `serverRole`
  Role of the database server that called the command
  primary: Primary
  standby: Standby
- `targetServerId`
  ID of the standby server to be disconnected from the cluster system

Output
- Return value
  None

Notes
- The command is executed by the operating system user who started Mirroring Controller.
- The operating system user who started Mirroring Controller must have execution privileges to the command. Otherwise, the command will not be called, however, Mirroring Controller will output an error message and continue the process.
- If the command times out, Mirroring Controller will stop the command, output an error message, and cancel the process.

C.3.3 Post-attach Command

Format
The syntax for calling the post-attach command from the Mirroring Controller process is described below.

```
postattachCmd cmdServerId serverRole targetServerId
```

Input
- `cmdServerId`
  ID of the database server that called the command
- `serverRole`
  Role of the database server that called the command
  primary: Primary
  standby: Standby
targetServerId

ID of the standby server to be attached to the cluster system

**Output**

Return value

None

**Notes**

- The command is executed by the operating system user who started Mirroring Controller.
- The operating system user who started Mirroring Controller must have execution privileges to the command. Otherwise, the command will not be called.
- If the command times out, Mirroring Controller will stop the command, output an error message, and cancel the process.
Appendix D Notes on Performing Automatic Degradation Immediately after a Heartbeat Abnormality

The type of issue below occurs if automatic degradation is performed unconditionally after an issue is detected during heartbeat monitoring of an operating system or server, and heartbeat monitoring was not properly tuned.

- If the timeout time is too short

![Diagram showing the process of automatic degradation and issues related to heartbeat monitoring.]

1. Identified as no response due to the timeout time being too short (Identified as an error even if the primary server is in a sound state)
2. Promoted to primary server
3. A split-brain occurs (Data can be updated for both servers)
Notes on monitoring when the operating system or server crashes or is unresponsive

As illustrated in the diagram above, timeout is used to monitor whether the operating system or server crashes or is unresponsive. Therefore, if tuning has not been performed correctly, there is a risk of a split-brain mistakenly occurring even if the server is in a sound state.

Split-brain is a phenomenon in which both servers temporarily operate as primary servers, causing data updates to be performed on both servers.

Split-brain detection method

It can be confirmed that split-brain occurs under the following conditions:

1. When the mc_ctl command is executed in status mode on both servers, the "host_role" of both servers is output as "primary", and
2. The following message is output to the system log of one of the servers:

```
promotion processing completed (MCA00062)
```

How to recover from a split-brain

Use the procedure described below. Note that the new primary server is the server that was confirmed in step 2 of the aforementioned detection method.

1. Stop all applications that are running on the old and new primary servers.
2. Investigate and recover the database. Investigate the update results that have not been reflected to the new primary server from the database of the old primary server, and apply to the new primary server as necessary.
3. Stop the old primary server instance and the Mirroring Controller.
4. Resume the applications that were stopped in step 1.

5. Recover the old primary server.
   While referring to "2.5 Setting Up the Standby Server", build (set up) the old primary server as the new standby server, from the new primary server.
Appendix E  Supplementary Procedure on Configuring for Operation in Database Multiplexing Mode

This appendix explains a supplementary procedure on the configuration required for operation in database multiplexing mode.

E.1  Security Policy Settings

This section explains how to configure the security settings to enable an operating system user account designated as an instance administrator user to log on as a service.

1. Displaying the [Local Security Policy] window

   In Windows, select [Administrative Tools], and then click [Local Security Policy].

2. Setting up security

   1. In the [Local Security Policy] window, select [Security Settings], select [Local Policies], and then click [User Rights Assignment].

   3. In the [Log on as a service Properties] window, set the following:

      b. On the [Local Security Setting] tab, click [Add User or Group].

      c. In the [Select Users or Groups] window, enter the operating system user account of the instance administrator user in [Enter the object names to select].

      d. Click [OK].

   4. In the [Log on as a service Properties] window, click [OK].

   5. From the [Local Security Policy] tree, click [Local Policies], and then double-click [Security Options].

   6. Scroll down and double-click [User Account Control: Behavior of the elevation prompt for administrators in Admin Approval Mode].

   7. From the drop-down menu, select the "Elevate without prompting" in the [Local Security Setting] tab.

   8. Click [OK].

E.2  Windows Firewall Settings

This section explains how to enable the port number used by Mirroring Controller, if the Windows firewall feature is enabled.

Windows Server(R) 2008:

1. In the [Start] menu, click [Control Panel].

2. Click [Security] and then click [Windows Firewall].

3. In the [Windows Firewall] window, click [Change settings].

4. On the [Exceptions] tab, click [Add port].

5. In the [Add a Port] window, set the following:

   a. In [Name], specify any name.

   b. In [Port number], specify the port number defined in the network definition file.

   c. Select [TCP].

6. Click [OK].

7. On the [Exceptions] tab, in the [Program or port] list, check if the added port is enabled.
8. In the [Windows Firewall] window, click [OK].

**Windows Server (R) 2008 R2:**

1. In the [Start] menu, click [Control Panel].
2. Click [System and Security], and then click [Windows Firewall].
5. Click [New Rule] on the right side of the window.
6. In the [New Inbound Rule Wizard] window, select [Port], and then click [Next].
7. Select [TCP] and [Specific local ports], then specify the port number defined in the network definition file, and then click [Next].
8. Select [Allow the connection], and then click [Next].
9. Select the profiles for which this rule applies, and then click [Next].
10. In [Name], specify any name, and then click [Finish].
11. In the [Windows Firewall with Advanced Security] window, check if the added rule is enabled under [Inbound Rules] in the center of the window.

**Windows Server(R) 2012 or Windows Server(R) 2012 R2:**

1. In the [Start] screen, click [Control Panel].
2. Click [System and Security], and then click [Windows Firewall].
4. In the [Windows Firewall with Advanced Security] window, in the left pane, click [Inbound Rules].
5. In the right pane, click [New Rule].
6. In the [New Inbound Rule Wizard] window, select [Port], and then click [Next].
7. Select [TCP] and [Specific local ports], then specify the port number defined in the network definition file, and then click [Next].
8. Select [Allow the connection], and then click [Next].
9. Select the profiles for which this rule applies, and then click [Next].
10. In [Name], specify any name, and then click [Finish].
11. In the [Windows Firewall with Advanced Security] window, in the center pane, check if the added rule is enabled under [Inbound Rules].

**Windows Server(R) 2016:**

1. In the [Start] menu, click [Control Panel].
2. Click [System and Security], and then click [Windows Firewall].
4. In the [Windows Firewall with Advanced Security] window, in the left pane, click [Inbound Rules].
5. In the right pane, click [New Rule].
6. In the [New Inbound Rule Wizard] window, select [Port], and then click [Next].
7. Select [TCP] and [Specific local ports], then specify the port number of Mirroring Controller that you specified in the network definition file, and click [Next].
8. Select [Allow the connection], and then click [Next].
9. Select the profiles for which this rule applies, and then click [Next].
10. In [Name], specify the desired name, and then click [Finish].

11. In the [Windows Firewall with Advanced Security] window, in the center pane, check if the added rule is enabled under [Inbound Rules].

Cluster Operation Guide
Database Multiplexing (Windows)
Purpose of this document

This document describes the tasks required for using the database multiplexing feature of FUJITSU Enterprise Postgres.

Intended readers

This document is intended for those who set up and use the database multiplexing feature.

Readers of this document are also assumed to have general knowledge of:
- PostgreSQL
- SQL
- Windows

Structure of this document

This document is structured as follows:

- **Chapter 1 Overview of Database Multiplexing Mode**
  - Provides an overview of database multiplexing mode.
- **Chapter 2 Setting Up Database Multiplexing Mode**
  - Describes how to set up database multiplexing mode.
- **Chapter 3 Operations in Database Multiplexing Mode**
  - Explains periodic database multiplexing mode.
- **Chapter 4 Action Required when an Error Occurs in Database Multiplexing Mode**
  - Explains the action required when an error occurs during a database multiplexing mode.
- **Chapter 5 Managing Mirroring Controller Using WebAdmin**
  - Explains how to set up and manage Mirroring Controller in a streaming replication cluster using WebAdmin.
- **Appendix A Parameters**
  - Explains the configuration files and parameters required for database multiplexing mode.
- **Appendix B Supplementary Information on Building the Primary Server and Standby Server on the Same Server**
  - Explains supplementary information on building the primary server and standby server on the same server.
- **Appendix C User Commands**
  - Explains the user commands.
- **Appendix D Notes on Performing Automatic Degradation Immediately after a Heartbeat Abnormality**
  - Provides notes on automatic degradation after a heartbeat abnormality.
- **Appendix E Supplementary Procedure on Configuring for Operation in Database Multiplexing Mode**
  - Explains the configuration procedure for operation in database multiplexing mode.

Export restrictions

Exportation/release of this document may require necessary procedures in accordance with the regulations of your resident country and/or US export control laws.

Issue date and version

*Edition 1.0: September 2018*
Chapter 1 Overview of Database Multiplexing Mode

This chapter provides an overview of database multiplexing mode.

**Point**

In this and subsequent chapters, the word "Mirroring Controller" may be used in the process or management directory name or explanation.

### 1.1 What is Database Multiplexing Mode

Database multiplexing mode is an operation mode (log shipping mode) based on PostgreSQL streaming replication. Other software such as cluster software is not required.

This mode replicates the database on all servers that comprise the cluster system. It achieves this by transferring the updated transaction logs of the database from the server that receives the updates (primary server) to another server (standby server), and then reflecting them on the standby server. The client driver automatically distinguishes between the primary and standby servers, so applications can be connected transparently regardless of the physical server.

It consists of a feature that detects faults in the elements that are essential for the continuity of the database operation (such as the database process, disk, and network), as well as simplified switchover and standby server disconnection features. Furthermore, referencing can be performed on the standby server. The database will be copied in synchronous mode.

**Note**

If using WebAdmin or Mirroring Controller, FUJITSU Enterprise Postgres supports cluster systems comprising one primary server and one standby server.

- Although it is possible to connect an asynchronous standby server to the cluster system as an additional server, the standby server cannot be included in the cluster system.

- A synchronous standby server cannot be connected to the cluster system as an additional server.

**See**

The streaming replication feature is not described in this manual.

Refer to "High Availability, Load Balancing, and Replication" in the PostgreSQL Documentation for information on the streaming replication feature.
1.1.1 Monitoring Using Database Multiplexing Mode

In database multiplexing mode, perform the monitoring below.

- Operating system or server failures, and no-response state

By generating a heartbeat between Mirroring Controller on each server, operating system or server errors are detected and acknowledged between the relevant servers.
The optimal operating method for environments where database multiplexing mode is performed can be selected from the following:

- Use the arbitration server to perform automatic degradation (switch/disconnect)
  
  This is the default method.
  
  The arbitration server objectively determines the status of database servers, then isolates and degrades from the cluster system the ones with an unstable status.
  
  Refer to "Database degradation using the arbitration server" for details.

- Call the user exit (user command) that will perform the degradation decision, and perform automatic degradation
  
  If the arbitration server cannot be installed, select if arbitration processing can be performed by the user instead.
  
  Mirroring Controller queries the user exit on whether to degrade. The user exit determines the status of the database server, and notifies Mirroring Controller whether to perform degradation.
  
  Refer to "Database degradation using the arbitration command" for details.

- Notification messages
  
  Use this method if using a two-database server configuration.
  
  Mirroring Controller outputs messages to the event log when an abnormality is detected. This ensures that a split brain will not occur due to a heartbeat abnormality - however, automatic switching will not be performed if the primary server operating system or server fails or becomes unresponsive.

- Perform automatic degradation unconditionally after a heartbeat abnormality
  
  This method is handled as in FUJITSU Enterprise Postgres 9.6 or earlier versions.
  
  This method is not recommended, because Mirroring Controller unconditionally will perform automatic degradation after heartbeat abnormalities.

- Database process failures, and no-response state
  
  Mirroring Controller periodically accesses the database processes and checks the status. A process error is detected by monitoring whether an access timeout occurs.

- Disk failure
  
  Mirroring Controller periodically creates files on the data storage destination disk below. A disk error is detected when an I/O error occurs.
  
  - Data storage destination disk
  
  - Transaction log storage destination disk
  
  - Tablespace storage destination disk
  
  Failures that can be detected are those that physically affect the entire system, such as disk header or device power failures.

- Streaming replication issue
  
  Mirroring Controller detects streaming replication issues (log transfer network and WAL send/receive processes) by periodically accessing the PostgreSQL system views.

- Mirroring Controller process failure and no response
  
  In order to continue the monitoring process on Mirroring Controller, Mirroring Controller process failures and no responses are also monitored.
  
  The Mirroring Controller monitoring process detects Mirroring Controller process failures and no responses by periodically querying the Mirroring Controller process. If an issue is detected, Mirroring Controller is automatically restarted by the Mirroring Controller monitoring process.

---

**Point**

- If output of messages is selected as the operation to be performed when a heartbeat abnormality is detected during heartbeat monitoring of the operating system or server, automatic degradation will not be performed.
However, if an issue in the WAL send process is detected on the primary server, then the standby server will be disconnected, and as a result an automatic disconnection may be performed even if the standby server operating system or server fails or becomes unresponsive.

- You can select in the parameters if the primary server will be switched if a database process is unresponsive or if tablespace storage destination disk failure is detected. Refer to "Appendix A Parameters" for details.

- If the standby server was disconnected, Mirroring Controller will automatically comment out the synchronous_standby_names parameter in the postgresql.conf file of the primary server. Accordingly, you can prevent the application processing for the primary server being stopped.

Note

If the role of primary server was switched to another server and then starts degrading, the original primary server will not become the standby server automatically. Remove the cause of the error, and then change the role of the original primary server to the server currently acting as standby server. Refer to "4.1 Action Required when Server Degradation Occurs" for details.

Database degradation using the arbitration server

For database degradation using the arbitration server, if the database servers are unable to check their mutual statuses (due to a network error between database servers or server instability), then the arbitration server rechecks the statuses of the database servers using heartbeats. If it is determined based on the heartbeat result that the status is unstable, the applicable database server will be isolated from the cluster system (fencing).

The fencing process can be customized according to the environment where Mirroring Controller is used.

Additionally, the database servers are always performing their heartbeats for the arbitration server so that it can perform check requests any time.
Figure 1.3 Database degradation using the arbitration server

Failover

FUJITSU Enterprise Postgres

Database

Database server 2
Standby server

Issue detected

Note

Install the arbitration server on a server that will not be impacted by software and hardware failures resulting in operation stoppage on the database servers where the cluster system is configured. Otherwise, automatic switch using Mirroring Controller will not be possible when failures occur on the database server.

For example, install the arbitration server on a different physical server to that of the database server.

Database degradation using the arbitration command

The arbitration command is a user command that performs arbitration processing in lieu of the arbitration server. If an arbitration server cannot be deployed, arbitration of the database server can be performed using the arbitration command.
1. Referencing on the Standby Server

1.1.2.1 If Prioritizing the Main Job on the Primary Server

If a reference job is performed on the standby server and the primary server is switched, this may impact the main job from the point of view of load and conflict. This is because, on the new primary server (that is, the original standby server), both the main job that was being executed on the original primary server and the reference job that was being continued on the original standby server will be processed. Therefore, to degrade the reference job (so that the impact on the main job is reduced), you can select the user exit below to disconnect the reference job that was performed on the original standby server.

- Post-promote command

Note

If continuing with the referencing job after switching the primary server, give careful consideration to the server resource estimates, and the likely impact on performance.

1.1.2.2 If Performing the Referencing Job on the Synchronous Standby Server

If an issue such as a log transfer network failure obstructs the continuation of a job on the primary server, the standby server may be automatically disconnected from the cluster system. Therefore, if operating the reference job on the assumption that the connection destination is the synchronous standby server, you can select to temporarily stop the job by using the user exit or the feature below, so that unexpected referencing of past data does not occur as a result of the disconnection.

- Pre-detach command

- Forced stoppage of the standby server instance on disconnection (specify in the parameter of the server configuration file)
Additionally, if the standby server is incorporated into the cluster system, reference jobs can be started or resumed by using the user exit below.

- Post-attach command

**See**

- Refer to "2.6 Creating a User Exit for a Database Server" or "Appendix C User Commands" for information on each user exit.
- Refer to "A.4.1 Server Configuration File for the Database Servers" for information on the server configuration file of the database server.

**Point**

Mirroring Controller will continue processing regardless of the processing result of the above user exits and features.

### 1.2 System Configuration for Database Multiplexing Mode

This section explains the products, features, and networks that are part of a database multiplexing system.

The following table shows the network types used by database multiplexing systems.

<table>
<thead>
<tr>
<th>Network type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Job network</td>
<td>Network between the application that accesses the database, and the database server.</td>
</tr>
<tr>
<td>Arbitration network</td>
<td>Network used by the arbitration server to check the status of the primary server and standby server, and communicate with Mirroring Controller of the database servers. Additionally, if the job network is disconnected from outside, it can also be used as the arbitration network. Refer to &quot;1.4 Security in Database Multiplexing&quot; for details on network security.</td>
</tr>
<tr>
<td>Admin network</td>
<td>Network used by the primary server and the standby server to monitor each other using Mirroring Controller, and to control Mirroring Controller of other servers.</td>
</tr>
<tr>
<td>Log transfer network</td>
<td>Network used to transfer the transaction logs of the database, which is part of database multiplexing.</td>
</tr>
</tbody>
</table>
The arbitration server is installed to check the database server status as a third party, and to perform fencing. Therefore, to obtain the intended benefits, consider the following.

- Install the arbitration server on a different server to that of the database server.
- For the arbitration network, use a network that will not be impacted by line faults or the load on the admin network or log transfer network. This is necessary to correctly determine issues on the admin network or log transfer network.

**Point**

- The arbitration server can also be used as an application server. However, consider the server load.
- It is recommended to link the arbitration server with other cluster systems, in order to provide redundancy.
- Use the arbitration server in combination with the same version of FUJITSU Enterprise Postgres as that of the primary server and standby server.

- The arbitration server can be built on a different platform to that of the database server.

Note

Because the ping command of the operating system is used for heartbeat monitoring of the database server, configure the network so that ICMP can be used on the admin network and the arbitration network.

1.2.1 Mirroring Controller Resources

This section describes the database server and arbitration server resources of Mirroring Controller.

1.2.1.1 Database Server Resources

The only Mirroring Controller resource is the Mirroring Controller management directory, which stores the files that define the Mirroring Controller behavior, and the temporary files that are created when Mirroring Controller is active.

Note

- Do not create the Mirroring Controller management directory in a directory managed by FUJITSU Enterprise Postgres, otherwise it may be deleted by mistake or may cause unexpected problems when FUJITSU Enterprise Postgres recovery is performed (such as old version of files being restored).
  

- The backup methods described in "Backing Up the Database" in the Operation Guide cannot be used to back up the Mirroring Controller resources. Therefore, users must obtain their own backup of Mirroring Controller resources, in addition to FUJITSU Enterprise Postgres server resources. Retrieve backups after stopping Mirroring Controller.

- If the automatic switch/disconnection is enabled, do not edit synchronous_standby_names for the Mirroring Controller monitoring target instance. Otherwise, if Mirroring Controller is switched after editing, data may be lost or SQL access may stop.

The content on the primary server will be backed up. You cannot tell which server is the primary server to be backed up, because switching and failback may be performed between the servers. It is also impossible to tell which server is to be restored using the backed up data. Accordingly, ensure that you create a backup of each server when it is working as the primary server.
1.2.1.2 Arbitration Server Resources

The only arbitration server resource is the Mirroring Controller arbitration process management directory. This directory stores the files that define the Mirroring Controller arbitration process behavior and the temporary files created when Mirroring Controller is active.

1.2.2 Mirroring Controller Processes

This section describes the database server and arbitration server processes of Mirroring Controller.

1.2.2.1 Database Server Processes

The database server processes comprise the Mirroring Controller process and Mirroring Controller monitoring process.

<table>
<thead>
<tr>
<th>Process type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mirroring Controller process</td>
<td>Performs operating system/server and process heartbeat monitoring and disk abnormality monitoring between database servers. Additionally, it issues arbitration requests to the arbitration server.</td>
</tr>
<tr>
<td>Mirroring Controller monitoring process</td>
<td>Performs heartbeat monitoring of the Mirroring Controller process. If the Mirroring Controller process returns no response or is down, the monitoring process is restarted automatically.</td>
</tr>
</tbody>
</table>

1.2.2.2 Arbitration Server Process

The only arbitration process is the Mirroring Controller arbitration process.
<table>
<thead>
<tr>
<th>Process type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mirroring Controller arbitration process</td>
<td>Performs rechecks for issues detected on the primary server or the standby server. Additionally, this process performs fencing if it determines that there is an issue on the primary server or the standby server.</td>
</tr>
</tbody>
</table>

**1.2.3 Redundancy of the Admin and Log Transfer Networks**

The admin network is an important one, because it is used by Mirroring Controller to check the status of each server. Additionally, the log transfer network is an important one, because it is necessary to ensure data freshness. Accordingly, configure a failure-resistant network by implementing network redundancy via the NIC teaming feature provided by the operating system or network driver vendor.

**Information**

**NIC teaming feature**

In Windows Server(R) 2012 or later, the NIC teaming feature is provided by the operating system by default, and in Windows Server(R) 2008 R2 or earlier, it is provided by the network driver vendor.

**1.2.4 Notes on CPU Architecture and Products**

Use the same CPU architecture (endian) for the primary server, standby server, and the arbitration server.

A server using only PostgreSQL streaming replication cannot be specified as the database multiplexing system log transfer destination.

**1.3 Deciding on Operation when a Heartbeat Abnormality is Detected**

The operation to be performed when a heartbeat abnormality is detected using operating system/server heartbeat monitoring is decided on according to the environment where database multiplexing mode is performed or the operating method.

It is possible to select from the four operations below, and specify this in the parameters of Mirroring Controller:

- Use the arbitration server to perform automatic degradation (switch/disconnect)
- Call the user exit (user command) that will perform the degradation decision, and perform automatic degradation
- Notification messages
- Perform automatic degradation unconditionally (switch/disconnect)

The table below shows if jobs can be continued on the primary server when an issue is detected by heartbeat monitoring of the operating system/server.

**Continuation of jobs on the primary server when an issue is detected by heartbeat monitoring of the operating system/server**

<table>
<thead>
<tr>
<th>Operation</th>
<th>Abnormal event</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Server/operating system failures or no responses</td>
</tr>
<tr>
<td></td>
<td>Primary server Standby server</td>

<td>Y (disconnect)</td>
</tr>
</tbody>
</table>

**Y:** Job can be continued  
**N:** Job cannot be continued

### 1.4 Security in Database Multiplexing

The database server replicates the database on all servers that comprise the cluster system. It achieves this by transferring and reflecting the updated transaction logs of the database from the primary server to the standby server.

To safeguard the database against unauthorized access and preserve data confidentiality in transaction log transfers, carefully consider security and take note of the following when performing database multiplexing:

- Do not use trust authentication when using replication connection.
- Configure the admin network and the log transfer network so that they cannot be connected from the outside, as shown in Figure 1.7 Security.

Additionally, for the line on which Mirroring Controller connects from the database server to the arbitration server, take note of the following points and consider security carefully.

- Build a network with the arbitration server disconnected from outside, as shown in Figure 1.7 Security.
However, it may not always be possible to adopt the configuration mentioned above. For example, you may want to place the servers in a nearby/neighborhood office to minimize network delays.

In this case, combine the following features to enhance security:

- Authentication of the Standby Server
- Encryption of Transaction Logs Transferred to the Standby Server

When these features are combined, security will be achieved as shown below.

**Point**

If the job network is disconnected from outside, it can be used as the arbitration network. However, if a network is to be used as both a job network and arbitration network, consider the load on the network.

**Note**

If a port is blocked (access permission has not been granted) by a firewall, etc., enable use of the target port by granting access. Refer to the vendor document for information on how to open (grant access permission to) a port. Consider the security risks carefully when opening ports.
1.4.1 Authentication of the Standby Server

You can prevent spoofing connections from an external server purporting to be the standby server by using authentication with a user name and password.

Configure the setting in the primary server pg_hba.conf file so that authentication is performed for connections from the standby server in the same way as for connections from the client.

Refer to “Client Authentication” in the PostgreSQL Documentation for information on content that can be configured in pg_hba.conf.
1.4.2 Encryption of Transaction Logs Transferred to the Standby Server

In case the authentication of the standby server is breached so that a malicious user purporting to be the standby server can spoof data, the transaction log data can be encrypted to prevent it from being deciphered. The transparent data encryption feature is used to encrypt the data.

See

Refer to "Protecting Storage Data Using Transparent Data Encryption" in the Operation Guide for details.
Chapter 2 Setting Up Database Multiplexing Mode

This chapter describes how to set up database multiplexing mode, and how to check it.

Users who perform setup and operations on the database server

Setup and operations of the database server must be performed by the instance administrator user with administrator privileges (operating system user ID belonging to the Administrators group). The instance administrator user must be assigned the "Log on as a service" user right.

Users who perform setup and operations on the arbitration server

The following users may perform setup and operations on the arbitration server when it is used for automatic degradation.

Any operating system user.

Windows

Any user with administrator privileges. This user must be assigned the "Log on as a service" user right.

Point

- Mirroring Controller selects a database superuser as the user who will connect to the database instance. This enables instance administrator users and database superusers who operate the Mirroring Controller commands to run database multiplexing mode in different environments.
- The application name for connecting to the database instance is "mc_agent".

Matching the system times

Before starting the setup, ensure that the times in the primary server, standby server and arbitration server match, by using the operating system time synchronization feature, for example.

The tolerated difference is approximately one second.

If the system times are not synchronized (because the tolerated difference is exceeded, for example), problem investigation may be affected.

Configuring ICMP

Because the ping command of the operating system is used for heartbeat monitoring of the database server, configure the network so that ICMP can be used on the admin network and the arbitration network. Refer to the relevant operating system procedure for details.

Setup

The setup procedure is shown in the table below. However, the procedure on the arbitration server should be performed only when the arbitration server is used for automatic degradation. A distinction is made between the procedures on the primary server and standby server according to whether the arbitration server is used.

</tbody>
</table>

Explanations for each step are provided below.

**Information**

- The setup procedure is also the same when changing the mode on a single server to database multiplexing mode. In this case, omit the installation of FUJITSU Enterprise Postgres and the creation of the instance.

Refer to "3.9.2 Changing from Single Server Mode to Database Multiplexing Mode" for details.

- The primary and standby server can be pseudo-configured on the same server for system testing, for example. In this case, the setup can be performed using the same procedure, however there will be some supplementary steps.

Before performing the setup, refer to "Appendix B Supplementary Information on Building the Primary Server and Standby Server on the Same Server".

**2.1 Installation**

Refer to the manuals of each product, and then install the product.
Do not use the arbitration server also as a database server. The purpose of the arbitration server is to objectively check the status of the database servers and to perform fencing. Using the arbitration server also as a database server nullifies the effectiveness of the arbitration server.

See

- Refer to the Installation and Setup Guide for Server for details on how to install FUJITSU Enterprise Postgres.
- Refer to the Installation and Setup Guide for Server Assistant for information on installing FUJITSU Enterprise Postgres on the arbitration server.

2.2 Preparing for Setup

This section describes the preparation required before setting up Mirroring Controller.

2.2.1 Preparing the Database Server

2.2.1.1 Preparing the Backup Disk

In Mirroring Controller, by performing a backup, recovery is possible even if all server disks are corrupted.

The content on the primary server should be backed up. However, through switching and failback, the standby server may also become the primary server. Accordingly, prepare each of the backup disk devices for the primary and standby servers. Perform backup on the primary server used at the time of the backup.

2.2.1.2 Preparatory Tasks for the Output of Error Logs to the Event Log

This section explains the preparatory tasks required to output error logs to the event log.

Note

If you do not register an event source name, the message content output to the event log may be incomplete.

Setting each server

You should register this default event source name beforehand because the default event source name "MirroringControllerOpen" may be output to the event log when Mirroring Controller commands on the database server are used.

Example)

The following is an example in which the DLL of a 64-bit product is registered under the default event source name. Note that "<x>" indicates the product version.

```
> regsvr32 "c:\Program Files\Fujitsu\fsepv<x>server64\lib\mcevent.dll"
```

Setting each instance

You can output messages to any event source named by the user, so that messages output to the event log can be identified by each instance.

Example)

The following is an example in which the DLL of a 64-bit product is registered under the event source name "Mirroring Controller inst1". Note that "<x>" indicates the product version.
The parameter must be edited for each instance. Refer to "A.4.1 Server Configuration File for the Database Servers" to set the event_source parameter.

If installing multiple versions

If FUJITSU Enterprise Postgres is already installed on the same machine, search for the key below in a registry editor, and make a note of the path of the registered DLL. Afterwards, register a new DLL using the default event source name.

Use the DLL path that you made a note of in the above step when re-registering the default event source name during uninstallation.

2.2.1.3 Security Policy Settings

Security settings that allow logon as a service are required in Mirroring Controller for the operating system user account of the instance administrator user in order to start and stop Mirroring Controller and an instance using a Windows service.

If the security settings have not been configured, refer to "E.1 Security Policy Settings" for information on configuring the settings.

2.2.2 Preparing the Arbitration Server

2.2.2.1 Preparing to Output Error Logs to the Event Log (Windows)

This section explains the preparatory tasks for outputting error logs to the event log.

Note

If no event source name is registered, messages output to the event log may be incomplete.

Configuring each server

Event logs for the Mirroring Controller commands on the arbitration server may be output with the default event source name "MirroringControllerArbiter". Therefore, register this default event source name beforehand.

Example)
The following is an example in which the DLL of a 64-bit product is registered under the default event source name. Note that "<xx>" indicates the product version.

> regsvr32 "c:\Program Files\Fujitsu\fsepv<xx>assistant64\lib\mcarbevent.dll"

Setting each instance

You can output messages to any event source named by the user, so that messages output to the event log can be identified by each instance.

Example)
The following is an example in which the DLL of a 64-bit product is registered under the event source name "Mirroring Controller arbiter<xx>". Note that "<xx>" indicates the product version.

> regsvr32 /n /i:"Mirroring Controller arbiter<xx>" "c:\Program Files\Fujitsu\fsepv<xx>assistant64\lib\mcarbevent.dll"

The parameter must be edited for each instance. Refer to "A.4.2 Arbitration Configuration File" and set the event_source parameter.
If installing multiple versions

If FUJITSU Enterprise Postgres is already installed on the same machine, search for the key below in Registry Editor, and make a note of the path of the registered DLL. Afterwards, register a new DLL using the default event source name.

Use the DLL path that you made a note of in the above step when re-registering the default event source name during uninstallation.

MirroringControllerArbiter

2.2.2.2 Security Policy Settings (Windows)

On the arbitration server, operating system user accounts that operate the Mirroring Controller arbitration process must be assigned the "Log on as a service" user right in order to use Windows Services to start and stop the Mirroring Controller arbitration process.

If the security settings to enable this have not been configured, refer to "E.1 Security Policy Settings" and configure the settings.

2.3 Setting Up the Arbitration Server

This section explains how to set up the arbitration server.

2.3.1 Configuring the Arbitration Server

This section explains how to set up database multiplexing mode on the arbitration server.

In database multiplexing mode, the files that are required for operations are managed in the Mirroring Controller arbitration process management directory.

There is one Mirroring Controller arbitration process management directory for each arbitration process.

Point

The arbitration process for each database multiplexing system can be started on a single arbitration server.

See

- Refer to the Reference for information on the mc_arb command.
- Refer to "Appendix A Parameters" for information on the parameters to be edited for the setup.

Perform the following procedure:

Windows

1. On the arbitration server, log in as any operating system user who starts and stops the arbitration process.
2. Configure the environment variables.
   Set the following environment variable:
   - PATH
     Add the installation folders "bin" and "lib".

Example

The following example configures environment variables when the installation directory is "c:\Program Files\Fujitsu\fsepv<x>assistant64".

Note that "<x>" indicates the product version.

> SET PATH=c:\Program Files\Fujitsu\fsepv<x>assistant64\bin;c:\Program Files\Fujitsu\fsepv<x>assistant64\lib;PATH"
3. Create the Mirroring Controller arbitration process management directory that will store the files required by the arbitration server. Use ASCII characters in the Mirroring Controller arbitration process management directory.

4. In the network configuration file (network.conf), define the Mirroring Controller network configuration that will be managed by the Mirroring Controller arbitration process.

Create network.conf in the Mirroring Controller arbitration process management directory, based on the sample file.

**Path of the sample file**

```
installDir\share\mcarb_network.conf.sample
```

In network.conf, specify the IP address or host name and port number of the primary server and standby server, and define the Mirroring Controller network configuration that will be managed by the Mirroring Controller arbitration process.

Refer to "A.3 Network Configuration File" for details.

A definition example is shown below.

**Example**
The IDs of the servers are set to "server1" and "server2", and their port numbers are set to "27541".

```
server1 192.0.3.100 27541
server2 192.0.3.110 27541
```

5. Change the access permissions for network.conf.

For network.conf, set read and write permissions only for the operating system user who starts and stops the arbitration process in step 1. If users other than this are granted access permissions, the mc_arb command will not work. Accordingly, users other than the operating system user who starts and stops the arbitration process in step 1 are prevented from operating the Mirroring Controller arbitration process.

**Example**
The following is an execution example, in which the operating system user who starts and stops the arbitration process in step 1 is granted full access permissions as the owner when the user is "fsepuser". The following procedure applies when the user is logged in to the Windows server as "fsepuser".

```
> takeown /f network.conf
> icacls network.conf /reset
> icacls network.conf /inheritance:r
> icacls network.conf /grant fsepuser:F
```

6. In the arbitration configuration file (arbitration.conf), define the information related to control of the Mirroring Controller arbitration process.

Create arbitration.conf in the Mirroring Controller arbitration process management directory, based on the sample file.

**Path of the sample file**

```
installDir\share\mcarb_arbitration.conf.sample
```

Set the parameters shown in the table below in arbitration.conf.

**Table 2.1 Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Content specified</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>port</td>
<td>Port number of the Mirroring Controller arbitration process</td>
<td>The port number must be 0 to 65535. Ensure that the port number does not conflict with other software. Do not specify an ephemeral port that may temporarily be assigned by another program.</td>

</tr>
</tbody>
</table>
| service_name       | `registeredServiceNameOfArbitrationProcessInWindowsServices`                                            | Use ASCII characters excluding forward slash (/) and backslash (\) to specify this parameter.  
|                    |                                                                                                       | Enclose the parameter value in single quotation marks ('').                                     |
|                    |                                                                                                       | The maximum length of the service name is 124 bytes.                                              |
| event_source       | `eventSourceNameUsedToIdentifyArbitrationProcessMsgInEventLog`                                         | Use ASCII characters excluding spaces to specify this parameter.                                 |
|                    |                                                                                                       | Enclose the parameter value in single quotation marks ('').                                     |
|                    |                                                                                                       | The maximum length of the event source name is 255 bytes.                                        |
| fencing_command    | `fencingCmdFilePath`                                                                                    | Specify the full path of the fencing command that fences a database server where it is determined that an error has occurred.  
|                    |                                                                                                       | Specify "\" as the delimiter.                                                                   |
|                    |                                                                                                       | Enclose the path in single quotation marks ('').                                                 |
|                    |                                                                                                       | Specify the path using less than 260 bytes.                                                     |
|                    |                                                                                                       | Any multibyte characters must use the same encoding as the operating system.                    |
| fencing_command_time_out | Timeout for fencing command (seconds)                                                                 | If the command does not respond within the specified number of seconds, it is determined that fencing has failed and a signal (SIGTERM) is sent to the fencing command execution process.  
|                    |                                                                                                       | Specify a value between 1 and 2147483647.                                                        |
|                    |                                                                                                       | The default is 20 seconds.                                                                      |

**Information**

Refer to "A.4.2 Arbitration Configuration File" for information on the parameters and for other parameters.

7. Change the access permissions for arbitration.conf.

For arbitration.conf, set read and write permissions only for the operating system user who starts and stops the arbitration process in step 1. If users other than this are granted access permissions, the mc_arb command will not work.

Example) The following is an execution example, in which the operating system user who starts and stops the arbitration process in step 1 is granted full access permissions as the owner when the user is "fsepuser". The following procedure applies when the user is logged in to the Windows server as "fsepuser".

---

- 22 -
8. Configure Windows Firewall.

If Windows Firewall is used, enable the port number of Mirroring Controller specified in the network configuration file in step 3. Refer to "E.2 Windows Firewall Settings" for details.

9. Register the Mirroring Controller arbitration process as a Windows service.

Execute the mc_arb command in register mode.

For the -P option of the mc_arb command, specify the password of the operating system user who executes the command.

Example)

```bash
> mc_arb register -M D:\mcarb_dir\arbiter1 -P ********
```

**Note**

When specifying the password in the -P option of the mc_arb command, for security reasons, you should be careful not to allow other users to access it.

**Information**

Use the mc_arb command with the -S option to specify automatic start and stop of the Mirroring Controller arbitration process. Refer to "2.13 Setting Automatic Start and Stop of the Mirroring Controller Arbitration Process" for details.

The Mirroring Controller arbitration process is registered as a Windows service using the service name specified in the service_name parameter of arbitration.conf in step 6.

You can execute the sc qc command to check the registration status.

### 2.3.2 Creating a User Exit for the Arbitration Server

The only user exit for the arbitration server is the fencing command.

The fencing command is a user command that is called by the Mirroring Controller arbitration process if Mirroring Controller performs arbitration processing and determines that a database server is unstable.

In the fencing command, the user implements a process that isolates a database server from a cluster system by, for example, stopping the target operating system or server. The fencing command that was created is to be specified for the parameter in the arbitration configuration file. Refer to "A.4.2 Arbitration Configuration File" for information on the parameters.

- Fencing the primary server during the switch
  - Prevent the Mirroring Controller management process on the primary server from communicating with the Mirroring Controller management process on the other server.
  - Prevent applications from connecting to the primary server instance.

- Fencing the standby server during disconnection
  - Prevent the Mirroring Controller management process on the standby server from communicating with the Mirroring Controller management process on the other server.
  - Prevent applications from connecting to the standby server instance.
  - Prevent the standby server from continuing streaming replication.
2.3.3 Starting the Mirroring Controller Arbitration Process

This section explains how to start the Mirroring Controller arbitration process.

An operating system user who has logged in to the arbitration server can start the Mirroring Controller arbitration process by executing the `mc_arb` command in start mode.

**Windows**

Example)

```
> mc_arb start -M D:\mcarb_dir\arbiter1
```

2.4 Setting Up the Primary Server

This section explains how to set up the primary server.

2.4.1 Setting Up Database Multiplexing Mode on the Primary Server

This section explains how to set up database multiplexing mode on the primary server.

In database multiplexing, the files that are required for operations are managed in the Mirroring Controller management directory.

There is one Mirroring Controller management directory for each instance.

**Note**

- Do not place the Mirroring Controller management directory in a directory managed by FUJITSU Enterprise Postgres, otherwise it may be deleted by mistake with the directories managed by FUJITSU Enterprise Postgres, and an old version of files may be restored.

**See**

- Refer to "Preparing Directories for Resource Deployment" in the Installation and Setup Guide for Server for details on the directories that are managed by FUJITSU Enterprise Postgres.
- Refer to "mc_ctl" in Reference for information on the command.
- Refer to "Appendix A Parameters" for details on each parameter to be edited for the setup.

Perform the following procedure:

1. Log in to the primary server.
2. Create the Mirroring Controller management directory that will store the files required by database multiplexing.
   
   Use ASCII characters in the Mirroring Controller management directory.
   
   Additionally, grant "Write" permission to the instance administrator user for the Mirroring Controller management directory.
3. In the network configuration file (network.conf), define the network configuration that will link between the Mirroring Controller processes.
   
   Create the network.conf file in the Mirroring Controller management directory, based on the sample file.

**Path of the sample file**
In network.conf, specify the IP address or host name and port number of the primary server and standby server, and define the network configuration that will link between the Mirroring Controller processes, and between Mirroring Controller processes and the Mirroring Controller arbitration process.

Refer to "A.3 Network Configuration File" for details.

A definition example is shown below.

The content to be defined depends on the operation settings at the time a heartbeat abnormality is detected.

**When automatic degradation by the arbitration server is selected**

Example)  
The IDs of the primary server and standby server are set to "server1" and "server2", and their port numbers are set to "27540" and "27541". The ID of the server of the Mirroring Controller arbitration process is set to "arbiter", and its port number is set to "27541".

```
server1 192.0.2.100,192.0.3.100 27540,27541 server
server2 192.0.2.110,192.0.3.110 27540,27541 server
arbiter 192.0.3.120 27541 arbiter
```

Ensure that the port numbers set for the primary server, standby server, and arbitration server do not conflict with other software. In addition, when the arbitration server is used for automatic degradation, use a network in which the arbitration network is not affected by a line failure in the admin network.

When the server type is "server", two IP addresses or host names, and two port numbers need to be specified in the following order:

- IP address or host name of the database server used as the admin network
- IP address or host name of the database server used as the arbitration network
- Port number of the database server used as the admin network
- Port number of the database server used as the arbitration network

If the server type is "arbiter", specify the IP address or host name set for the my_address parameter and the port number set for the port parameter in arbitration.conf of the arbitration server.

**When operation other than automatic degradation by the arbitration server is selected**

Example)  
The IDs of the servers are set to "server1" and "server2", and their port numbers are set to "27540".

```
server1 192.0.2.100 27540
server2 192.0.2.110 27540
```

Ensure that the port numbers for the primary and standby server do not conflict with other software.

Register the port number of the primary server in the services file, because there are programs, such as WebAdmin, that search an available port number using the services file.

Register any name as the service name.

4. Change the access permissions for the network.conf file.

For network.conf, set read and write permissions for the instance administrator user only.

If users other than the instance administrator user are granted access permissions, the mc_ctl command will not work. Accordingly, users other than the instance administrator user are prevented from operating Mirroring Controller.

Example)  
The following is an execution example, in which the instance administrator user is granted full access permissions as the owner when the operating system user name of the instance administrator user is "fsepuser". The following procedure applies when the user is logged in to the Windows server as "fsepuser":

```
5. Define the information related to Mirroring Controller monitoring and control in the `serverIdentifier.conf` file.

Create the `serverIdentifier.conf` file in the Mirroring Controller management directory, based on the sample file.

As the file name for the `serverIdentifier.conf` file, use the server identifier name that was specified in the `network.conf` file in step 3.

**Path of the sample file**

```
installDir\share\mc_server.conf.sample
```

Set the parameters shown in the table below in the `serverIdentifier.conf` file.

### Table 2.2 Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Content specified</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>db_instance</code></td>
<td>&quot;dataStorageDestinationDir&quot;</td>
<td>Use ASCII characters, and specify &quot;&quot; as the path delimiter. Enclose the parameter value in single quotation marks (').</td>
</tr>
<tr>
<td><code>db_instance_service_name</code></td>
<td>'registeredServiceNameOfFujitsuEnterprisePostgresInstance'</td>
<td>Specify the registered service name of the FUJITSU Enterprise Postgres instance in the Windows service. Use ASCII characters, enclosed in single quotation marks (').</td>
</tr>
<tr>
<td><code>db_instance_password</code></td>
<td>'passwordOfInstanceAdminUser'</td>
<td>If password authentication is performed, specify this parameter in the settings used when Mirroring Controller connects to a database instance. Use ASCII characters, enclosed in single quotation marks (').</td>
</tr>
<tr>
<td><code>mc_service_name</code></td>
<td>'registeredServiceNameOfMirroringController'</td>
<td>Specify the Mirroring Controller service name registered in the Windows service. Use ASCII characters excluding forward slash (/) and backslash () to specify this parameter. The service name is up to 124 bytes.</td>
</tr>
<tr>
<td><code>event_source</code></td>
<td>'eventSourceName'</td>
<td>Specify the event source name to be used to identify the Mirroring Controller message in the event log. Use ASCII characters to specify this parameter. The maximum length of the event source name is 255 bytes. By using a similar event source name as the postgresql.conf file parameter, the Mirroring Controller output content can be referenced transparently, so log reference is easy.</td>
</tr>
<tr>
<td><code>heartbeat_error_action</code></td>
<td>Operation when a heartbeat abnormality is detected using operating system or server heartbeat monitoring</td>
<td>Abnormality monitoring of the operating system or server is performed at the interval (milliseconds) specified in <code>heartbeat_interval</code>. This parameter setting is used as the default for database process heartbeat monitoring, streaming replication abnormality monitoring, and disk abnormality monitoring.</td>
</tr>
<tr>
<td><code>heartbeat_interval</code></td>
<td>Interval time for abnormality monitoring during heartbeat monitoring</td>
<td>Operation when a heartbeat abnormality is detected using operating system or server heartbeat monitoring</td>
</tr>
</tbody>
</table>

- 26 -
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Content specified</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>heartbeat_timeout</td>
<td>Timeout for abnormality monitoring during heartbeat monitoring of the operating system or server (seconds)</td>
<td>When setting the monitoring time, there are some considerations to take into account to optimize degradation using abnormality monitoring. Refer to &quot;2.11.4 Tuning for Optimization of Degradation Using Abnormality Monitoring&quot; for details.</td>
</tr>
<tr>
<td>heartbeat_retry</td>
<td>Number of retries for abnormality monitoring during heartbeat monitoring of the operating system or server (number of times)</td>
<td></td>
</tr>
<tr>
<td>fencing_command</td>
<td>'fencingCmdFilePath'</td>
<td>Specify the full path of the fencing command that fences a database server where an error is determined to have occurred. Enclose the path in single quotation marks ('). Any multibyte characters must use the same encoding as the operating system. This parameter must be specified when &quot;command&quot; is set for heartbeat_error_action. Specify the path using less than 260 bytes.</td>
</tr>
<tr>
<td>fencing_command_time</td>
<td>Fencing command timeout (seconds)</td>
<td>If the command does not respond within the specified number of seconds, fencing is determined to have failed and a signal (SIGTERM) is sent to the fencing command execution process. Specify a value between 1 and 2147483647. The default is 20 seconds.</td>
</tr>
<tr>
<td>arbitration_timeout</td>
<td>Timeout for arbitration processing in the Mirroring Controller arbitration process (seconds)</td>
<td>The specified value must be at least equal to the heartbeat monitoring time of the operating system or server + fencing_command_timeout in the arbitration configuration file. If there is no response for at least the number of seconds specified, the primary server will not be switched and the standby server will not be disconnected. Therefore, perform degradation manually. Specify a value between 1 and 2147483647. This parameter does not need to be set for operation that does not use the arbitration server.</td>
</tr>
<tr>
<td>arbitration_command</td>
<td>'ArbitrationCmdFilePath'</td>
<td>Specify the full path of the arbitration command to be executed when an abnormality is detected during heartbeat monitoring of the operating system or server. Enclose the path in single quotation marks ('). Any multibyte characters must use the same encoding as the operating system. This parameter must be specified when &quot;command&quot; is set for heartbeat_error_action. Specify the path using less than 260 bytes.</td>
</tr>
<tr>
<td>arbitration_command_timeout</td>
<td>Timeout for arbitration command (seconds)</td>
<td>If the command does not respond within the specified number of seconds, it is determined that execution of the arbitration command has failed and a signal (SIGTERM) is sent to the arbitration command execution process. Specify a value between 1 and 2147483647.</td>
</tr>
</tbody>
</table>
### 2.4.2 Creating, Setting, and Registering the Primary Server Instance

This section explains how to create, set, and register the primary server instance.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Content specified</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>This parameter can be specified only when &quot;command&quot; is set for heartbeat_error_action.</td>
</tr>
</tbody>
</table>

---

**Information**

Refer to "A.4.1 Server Configuration File for the Database Servers" for information on the parameters and for other parameters.

6. Change the access permissions for the `serverIdentifier.conf` file.

   For `serverIdentifier.conf`, set read and write permissions for the instance administrator user only. If users other than the instance administrator user are granted access permissions, the `mc_ctl` command will not work.

   **Example**
   
   The following is an execution example, in which the instance administrator user is granted full access permissions when the operating system user name of the instance administrator user is "fsepuser". The following procedure applies when the user is logged in to the Windows server as "fsepuser":

   ```
   > takeown /f serverIdentifier.conf
   > icacls serverIdentifier.conf /reset
   > icacls serverIdentifier.conf /inheritance:r
   > icacls serverIdentifier.conf /grant fsepuser:F
   ```

7. Configure the Windows firewall.

   If the Windows firewall feature is to be enabled, you should enable the port number of Mirroring Controller that you specified in the network definition file in step 3. Refer to "E.2 Windows Firewall Settings" for details.

8. Register Mirroring Controller to the Windows service.

   Execute the `mc_ctl` command in the register mode.

   For the `-P` option of the `mc_ctl` command, specify the password of the operating system user who executes the command.

   **Example**

   ```
   > mc_ctl register -M D:\mcdir\inst1 -P ********
   ```

**Note**

When specifying the password in the `-P` option of the `mc_ctl` command, for security reasons, you should be careful not to allow other users to access it.

---

**Information**

You can use the `mc_ctl` command with the `-S` option to specify automatic start and stop of Mirroring Controller. Refer to "2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances" for details.

Using the service name specified in the `mc_service_name` parameter of `serverIdentifier.conf` in step 5, Mirroring Controller is registered to the Windows service.

You can execute the `sc qc` command to check the registration status.
Perform the following procedure:

1. Refer to "Setup" in the Installation and Setup Guide for Server, and then perform the FUJITSU Enterprise Postgres setup and create the FUJITSU Enterprise Postgres instance.
   - Use ASCII characters in the data storage destination directory.
   - When registering an instance to the Windows service, perform the settings required to enable Mirroring Controller to start and stop the instance. Execute the `pg_ctl` command with the following specified for the register mode:
     - For the service name of the `-N` option, specify the name set for the `db_instance_service_name` parameter in the server definition file
     - Specify "demand" for the `-S` option, so that the service does not start automatically on startup of the system

   **Note**
   Do not configure the Windows service of a multiplexed instance to perform automatic start, as it is started by Mirroring Controller.

2. When using transparent data encryption, configure the encryption settings for the storage data.
   Create the keystore file.
   Refer to "Database Multiplexing Mode" in the Operation Guide for details, and then configure the settings.

3. Add the following entry to the `pg_hba.conf` file to authenticate connections from the standby server.
   Copy the file to the standby server later.

<table>
<thead>
<tr>
<th># TYPE</th>
<th>DATABASE</th>
<th>USER</th>
<th>ADDRESS</th>
<th>METHOD</th>
</tr>
</thead>
<tbody>
<tr>
<td>host</td>
<td>replication</td>
<td>fsep</td>
<td>standbyServerAddress</td>
<td>authenticationMethod</td>
</tr>
<tr>
<td>host</td>
<td>replication</td>
<td>fsep</td>
<td>primaryServerAddress</td>
<td>authenticationMethod</td>
</tr>
</tbody>
</table>

   For the primary and standby server addresses, specify the IP address that will connect to the log transfer network.

   Additionally, all servers can be used as the primary server or the standby server, so add entries for the addresses of all servers that comprise the database multiplexing system.
Setting an authentication method other than trust authentication

If the primary server becomes the standby server, to perform automatic authentication of connections to the primary server, create a password file (%APPDATA%\postgresql\pgpass.conf), and then specify a password for the replication database. Accordingly, the instance administrator operating system user and the user registered in the database will be the same, so you can verify that the connection was not made by an unspecified user. Additionally, the password that was set beforehand will be used in the authentication, so that the connection will be automatic.

Note

If trust authentication is set, all OS users who can log in to the primary server will be able to connect, and if one of these is a malicious user, then that user can corrupt the standby server data, or cause the job system to fail, by sending an erroneous transaction log. Therefore, decide on the authentication method according to the security requirements of the system using database multiplexing mode.

Refer to "Authentication Methods" in the PostgreSQL Documentation for details on the authentication methods that can be set.

4. Configure this setting to enable the instance administrator user of the primary server to connect as a database application.

This setting enables the connection to the instance using the user name of the instance administrator user, so that Mirroring Controller can monitor instance errors. Configure this setting to enable the connection to the postgres database.

- If password authentication is used

  In the db_instance_password parameter of the serverIdentifier.conf file, specify the password for the instance administrator user. This password is used to connect to the database instance. If a password is not specified in the db_instance_password parameter, the connection to the database instance from Mirroring Controller will fail, and it will not be possible to perform the process monitoring of the instance.

- If password authentication is not used

  There is no need to specify the password in the db_instance_password parameter.

  Even if the password for the instance administrator user is specified in the db_instance_password parameter, it will be ignored.

An example of setting the authentication method is shown below.

<table>
<thead>
<tr>
<th>#</th>
<th>TYPE</th>
<th>DATABASE</th>
<th>USER</th>
<th>ADDRESS</th>
<th>METHOD</th>
</tr>
</thead>
<tbody>
<tr>
<td>host</td>
<td>postgres</td>
<td>fsep</td>
<td>127.0.0.1/32</td>
<td>authenticationMethod</td>
<td></td>
</tr>
</tbody>
</table>

Note

Mirroring Controller uses the PostgreSQL JDBC 4.2 driver to connect to the database instance. Therefore, for the authentication method, specify a method supported by the JDBC driver. If an authentication method not supported by the JDBC driver is specified, Mirroring Controller will fail to start. Refer to the PostgreSQL JDBC Driver Documentation for information on authentication methods supported by the JDBC driver.

5. To use database multiplexing mode, specify the parameters shown in the table below in the postgresql.conf file.

The postgresql.conf file is copied when the standby server instance is created. Accordingly, set the required parameters in the standby server.

To use database multiplexing mode, specify the parameters shown in the table below in the postgresql.conf file. After editing the postgresql.conf file, restart the instance.

Table 2.3 Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Content specified</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>wal_level</td>
<td>replica or logical</td>
<td>Specify “logical” when logical decoding is also to be used.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Content specified</td>
<td>Remarks</td>
</tr>
<tr>
<td>----------------------------</td>
<td>-------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>max_wal_senders</td>
<td>2 or more</td>
<td>Specify &quot;2&quot; when building a Mirroring Controller cluster system. When additionally connecting asynchronous standby servers to the cluster system, add the number of simultaneous connections from these standby servers.</td>
</tr>
<tr>
<td>synchronous_standby_names</td>
<td>'standbyServerName'</td>
<td>Specify the name that will identify the standby server. Enclose the name in single quotation marks ('). Do not change this parameter while Mirroring Controller is running. Do not specify multiple names to this parameter as there is only one standby server.</td>
</tr>
<tr>
<td>hot_standby</td>
<td>on</td>
<td>Specify this to execute reference jobs on the standby server.</td>
</tr>
<tr>
<td>wal_keep_segments</td>
<td>Number of file segments</td>
<td>If a delay exceeding the value set in this parameter occurs, the WAL segment required later by the primary server may be deleted. Additionally, if you stop a standby server (for maintenance, for example), consider the stop time and set a value that will not cause the WAL segment to be deleted. Refer to &quot;Estimating Transaction Log Space Requirements&quot; in the Installation and Setup Guide for Server for information on estimating the WAL segment.</td>
</tr>
<tr>
<td>wal_log_hints</td>
<td>on</td>
<td>When using the pg_rewind command to recover a standby server, specify this parameter or enable checksums when executing the initdb command.</td>
</tr>
<tr>
<td>wal_sender_timeout</td>
<td>Timeout (milliseconds)</td>
<td>Specify the time period after which it is determined that an error has occurred in the transaction log transfer on the primary server. By aligning this value with the value for the database process heartbeat monitoring time, you can unify the time after which it is determined that an error has occurred.</td>
</tr>
<tr>
<td>archive_mode</td>
<td>on</td>
<td>Specify the archive log mode.</td>
</tr>
<tr>
<td>archive_command</td>
<td>'cmd /c &quot;&quot;installDir\bin\pgx_walcopy.cmd&quot; &quot;%p&quot; &quot;backupDataStorageDestinationDir\archived_wal\ %f&quot;&quot;'</td>
<td>Specify the command and storage destination to save the transaction log.</td>
</tr>
<tr>
<td>backup_destination</td>
<td>Backup data storage destination directory</td>
<td>Specify the name of directory where to store the backup data. Set the permissions so that only the instance administrator user can access the specified directory. Specify the same full path on all servers, so that the backup data of other servers can be used to perform recovery.</td>
</tr>
<tr>
<td>max_connections</td>
<td>Value of max_wal_senders + number of simultaneous client connections to the instance + superuser_reserved_connections</td>
<td>The value specified is also used to restrict the number of connections from client applications and the number of connections for the management of instances. Refer to &quot;When an Instance was Created with the initdb Command&quot; in the Installation and Setup Guide for Server,</td>
</tr>
</tbody>
</table>
### Parameter
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Content specified</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>superuser_reserved_connections</td>
<td>Add the number of simultaneous executions of mc_ctl status (*1) + 2</td>
<td>Specify the number of connections reserved for connections from database superusers. Add the number of connections from Mirroring Controller processes. Also reflect the added value in the max_connections parameter.</td>
</tr>
<tr>
<td>wal_receiver_timeout</td>
<td>Timeout (milliseconds)</td>
<td>Specify the time period after which it is determined that an error has occurred when the transaction log was received on the standby server. By aligning this value with the value for the heartbeat monitoring time of the database process, you can unify the time after which it is determined that an error has occurred.</td>
</tr>
<tr>
<td>restart_after_crash</td>
<td>off</td>
<td>If “on” is specified, or the default value is used for this parameter, behavior equivalent to restarting FUJITSU Enterprise Postgres, including crash recovery, will be performed when some server processes end abnormally. However, when database multiplexing monitoring is used, a failover will occur after an error is detected when some server processes end abnormally, and the restart of those server processes is forcibly stopped. Specify “off” to prevent behavior such as this from occurring for no apparent reason.</td>
</tr>
<tr>
<td>synchronous_commit</td>
<td>on or remote_apply</td>
<td>Specify up to what position WAL send is to be performed before transaction commit processing returns a normal termination response to a client. The recommended value is on or remote_apply to prevent data loss caused by the node switch or a node shutdown immediately after the switch.</td>
</tr>
</tbody>
</table>

*1: Number of simultaneous executions of the mc_ctl command in the status mode.

### 2.4.3 Starting Mirroring Controller on the Primary Server

This section explains how to start Mirroring Controller on the primary server.

When the arbitration server is used for automatic degradation, start the Mirroring Controller arbitration process on the arbitration server in advance.

1. Start the Mirroring Controller process.

   **Enabling automatic switch/disconnection**
   
   As the instance administrator user, execute the mc_ctl command in start mode.
   
   Example)
   
   ```
   > mc_ctl start -M D:\mcdir\inst1
   ```

   **Disabling automatic switch/disconnection**
   
   As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.
   
   Example)
   
   ```
   > mc_ctl start -M D:\mcdir\inst1 -F
   ```
Note
- When the arbitration server is used for automatic degradation, the database server must connect to the arbitration server, and as a result, Mirroring Controller startup may take longer than when the arbitration server is not used.
- If the heartbeat_error_action parameter in serverIdentifier.conf is set to "message", even if automatic switch/disconnection is enabled and Mirroring Controller is started, only message output is performed when a heartbeat abnormality is detected during heartbeat monitoring of operating systems and servers - switch/disconnection is not performed.
- Mirroring Controller startup usually fails if the standby server is mistakenly started as the primary server or if the old primary server is not recovered after the switch and is then mistakenly started as the primary server. However, if the admin network is disconnected, then startup does not fail, and both servers may become primary servers. Therefore ensure that the admin network is connected before starting Mirroring Controller.

Point
- The mc_ctl command fails if the Mirroring Controller arbitration process has not been started on the arbitration server when the arbitration server is used for automatic degradation. However, if the Mirroring Controller arbitration process cannot be started in advance, it can be started by specifying the --async-connect-arbiter option in the mc_ctl command.
- After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

2. Obtain the backup.
Use the pgx_dmpall command to collect the backup.

2.5 Setting Up the Standby Server
This section explains how to set up the standby server.

2.5.1 Setting Up Database Multiplexing Mode on the Standby Server
This section explains how to set up database multiplexing mode on the standby server.

In database multiplexing, the files that are required for operations are managed in the Mirroring Controller management directory.

There is one Mirroring Controller management directory for each instance.

Note
- Do not place the Mirroring Controller management directory in a directory managed by FUJITSU Enterprise Postgres, otherwise it may be deleted by mistake with the directories managed by FUJITSU Enterprise Postgres, and an old version of files may be restored.
- When creating a standby server for a large database, stop job system operations, specify a large value for the wal_keep_segments parameter, or use replication slots.
  This is because WALs generated after the standby server is built using the pg_basebackup command, but before it is started, need to be retained. However, the number of WAL segments that can be retained is constrained by the wal_keep_segments parameter.
  Additionally, setting the wal_keep_segments parameter requires consideration regarding stabilization of the database multiplexing mode (refer to "2.11.1 Tuning to Stabilize the Database Multiplexing Mode" for details).

See
- Refer to "Preparing Directories for Resource Deployment" in the Installation and Setup Guide for Server for details on the directories that are managed by FUJITSU Enterprise Postgres.
- Refer to "pg_basebackup" in "Reference" in the PostgreSQL Documentation for information on the pg_basebackup command.
Perform the following procedure:

1. Log in to the standby server.

2. Create the Mirroring Controller management directory that will store the files required by database multiplexing.
   - Use ASCII characters in the Mirroring Controller management directory.
   - Additionally, grant "Write" permission to the instance administrator user for the Mirroring Controller management directory.

3. Copy, and then deploy, the network.conf file of the primary server.
   - Copy the network.conf file that was defined in the primary server setup, and deploy it to the Mirroring Controller management directory of the standby server.
   - Register the port number of the standby server that was specified in the network.conf file in the services file, because there are programs, such as WebAdmin, that search an available port number using the services file.
   - Register any name as the service name.

4. Change the access permissions for the network.conf file.
   - Set read and write permissions for the instance administrator user only. If users other than the instance administrator user are granted access permissions, the mc_ctl command will not work. Accordingly, users other than the instance administrator user are prevented from operating Mirroring Controller.

   Example)
   The following is an execution example, in which the instance administrator user is granted full access permissions as the owner when the operating system user name of the instance administrator user is "fsepuser". The following procedure applies when the user is logged in to the Windows server as "fsepuser".

   ```
   > takeown /f network.conf
   > icacls network.conf /reset
   > icacls network.conf /inheritance:r
   > icacls network.conf /grant fsepuser:F
   ```

5. Copy, and then deploy, the serverIdentifier.conf file of the primary server.
   - Copy the serverIdentifier.conf file that was defined in the primary server setup, and deploy it to the Mirroring Controller management directory of the standby server.

   Note
   If the primary server and standby server are to be built within the same server, change the following parameters in the serverIdentifier.conf file, ensuring that the names are not duplicated with those on the primary server:
   - db_instance_service_name (registered service name of the FUJITSU Enterprise Postgres instance)
   - mc_service_name (registered service name of Mirroring Controller)
   - event_source (event source name)

6. Change the access permissions for the serverIdentifier.conf file.
   - Set read and write permissions for the instance administrator user only. If users other than the instance administrator user are granted access permissions, the mc_ctl command will not work.

   Example)
   The following is an execution example, in which the instance administrator user is granted full access permissions as the owner when the operating system user name of the instance administrator
user is "fsepuser". The following procedure applies when the user is logged in to the Windows server as "fsepuser":

```bash
> takeown /f serverIdentifier.conf
> icacls serverIdentifier.conf /reset
> icacls serverIdentifier.conf /inheritance:r
> icacls serverIdentifier.conf /grant fsepuser:F
```

7. Configure the Windows firewall.
   If the Windows firewall feature is to be enabled, you should enable the port number of Mirroring Controller that you specified in the network definition file in step 3. Refer to "E.2 Windows Firewall Settings" for details.

8. Register Mirroring Controller to the Windows service.
   Execute the mc_ctl command in the register mode.
   For the -P option of the mc_ctl command, specify the password of the operating system user who executes the command.
   Example:

   ```bash
   > mc_ctl register -M D:\mcdir\inst1 -P ********
   ```

**Note**

When specifying the password in the -P option of the mc_ctl command, for security reasons, you should be careful not to allow other users to access it.

**Information**

You can use the mc_ctl command with the -S option to specify automatic start and stop of Mirroring Controller. Refer to "2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances" for details.

Using the service name specified in the mc_service_name parameter of serverIdentifier.conf in step 5, Mirroring Controller is registered to the Windows service.

You can execute the sc qc command to check the registration status.

### 2.5.2 Creating, Setting, and Registering the Standby Server Instance

This section explains how to create, set, and register the standby server instance.

**Note**

Mirroring Controller supports instances that are registered in the Windows service.

**See**

- Refer to "Appendix A Parameters" for details on each parameter.
- Refer to "mc_ctl" in Reference for information on the command.

Perform the following procedure:

1. Prepare for setup.
   Refer to "Preparations for Setup" in the Installation and Setup Guide for Server for information on the preparatory tasks to be performed before creating an instance on the standby server.
If the primary server and standby server are to be built within the same server, perform preparation to ensure that the event source names of FUJITSU Enterprise Postgres are not duplicated with that of the primary server.

2. When using transparent data encryption, configure the encryption settings for the storage data.
   - Deploy a copy of the keystore file of the primary server on the standby server.
   - Refer to "Database Multiplexing Mode" in the Operation Guide for details.

3. Execute the `pg_basebackup` command to create a copy of the primary server instance on the standby server.

   ```
   > pg_basebackup -D D:\database\inst1 -X fetch --waldir=E:\transaction\inst1 --progress --verbose 
   -R --dbname="application_name=standbyServerName" -h primaryServerIpAddress -p 
   primaryServerPortNumber
   ```

   - **Note**: If using a method that requires password authentication for connections to the primary server, you will need to ensure that authentication is performed automatically.

   If the `-R` option is specified for the `pg_basebackup` command and the password parameter is specified for the `--dbname` option, the `pg_basebackup` command will set the password in recovery.conf file, enabling connections to be performed automatically.

   If a password is not set in recovery.conf, it will be necessary to create a password file (%APPDATA%/postgresql/pgpass.conf), and then specify a password for the replication database.

   - When executing the `pg_basebackup` command, consider the following for collection of transaction logs.
     - When "fetch" is specified for the `-X` option of the command
     - Transaction logs are collected at the end of the backup, so it is necessary to ensure that transaction logs that occur during backup are not deleted from the primary server. Therefore, allow for a sufficient value for the `wal_keep_segments` parameter in `postgresql.conf`.
     - When the `-X` option is omitted or "stream" is specified for the `-X` option of the command
     - Transaction logs are streamed, so when Mirroring Controller is running on the primary server, the connection is changed to a synchronous standby server on detection of a streaming replication connection using this command. Therefore, if a job has started on the primary server, the primary server will be impacted, therefore execute this command after stopping only the Mirroring Controller process on the primary server.

4. Set the parameters shown in the table below in the `postgresql.conf` file.

   **Table 2.4 Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Content specified</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>synchronous_standby_names</td>
<td>'primaryServerName'</td>
<td>Required after switching the primary server and then changing the original primary server to the new standby server. Enclose the name in single quotation marks ('). Do not change this parameter while Mirroring Controller is running. Do not specify multiple names to this parameter as there is only one standby server.</td>
</tr>
</tbody>
</table>

---

- 36 -
5. Register an instance to the Windows service.

Refer to "Creating an Instance" in the Installation and Setup Guide for Server for information on how to register an instance to the Windows service. Note that you should execute the `pg_ctl` command with the following specified for the register mode to enable Mirroring Controller to start and stop an instance:

- For the service name of the `-N` option, specify the name set for the `db_instance_service_name` parameter in the server definition file
- Specify "demand" for the `-S` option, so that the service does not start automatically on startup of the system

**Note**

- Do not configure the Windows service of a multiplexed instance to perform automatic start, as it is started by Mirroring Controller.
- If the primary server and standby server are to be built within the same server, ensure that the registered service name of the FUJITSU Enterprise Postgres instance is not duplicated with that of the primary server.

### 2.5.3 Starting Mirroring Controller on the Standby Server

This section explains how to start Mirroring Controller on the standby server.

When the arbitration server is used for automatic degradation, start the Mirroring Controller arbitration process on the arbitration server in advance.

1. After ensuring that the Mirroring Controller process of the primary server has started, start Mirroring Controller on the standby server.

   **Enabling automatic switch/disconnection**

   As the instance administrator user, execute the `mc_ctl` command in start mode with the `-f` option specified. This action enables automatic switch/disconnection.

   If you start Mirroring Controller and the instance without specifying the `-f` option, automatic switch/disconnection will not be enabled. To enable both, start Mirroring Controller and then execute the `mc_ctl` command in enable-failover mode or restart Mirroring Controller with the `-f` option specified.

   **Example**

   ```
   > mc_ctl start -M D:\mcdir\inst1
   ```

   **Disabling automatic switch/disconnection**

   As the instance administrator user, execute the `mc_ctl` command in start mode with the `-F` option specified.

   **Example**

   ```
   > mc_ctl start -M D:\mcdir\inst1 -F
   ```

2. Check the status of the Mirroring Controller process.

   As the instance administrator user, execute the `mc_ctl` command in status mode. Ensure that "mirroring status" is switchable.

   **Example**

   ```
   > mc_ctl status -M D:\mcdir\inst1
   ```

**Note**

- When the arbitration server is used for automatic degradation, the time required for the database server to connect to the arbitration server is added on. Therefore, Mirroring Controller startup may take longer than when the arbitration server is not used.
- If the heartbeat_error_action parameter in serverIdentifier.conf is set to "message", even if automatic switch/disconnection is enabled and Mirroring Controller is started, only message output is performed when a heartbeat abnormality is detected during heartbeat monitoring of operating systems and servers - switch/disconnection is not performed.

- Mirroring Controller startup usually fails if the standby server is mistakenly started as the primary server or if the old primary server is not recovered after the switch and is then mistakenly started as the primary server. However, if the admin network is disconnected, then startup does not fail, and both servers may become primary servers. Therefore, ensure that the admin network is connected before starting Mirroring Controller.

---

**Point**

- The mc_ctl command fails if the Mirroring Controller arbitration process has not been started on the arbitration server when the arbitration server is used for automatic degradation. However, if the Mirroring Controller arbitration process cannot be started in advance, it can be started by specifying the --async-connect-arbiter option in the mc_ctl command.

- After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

---

### 2.6 Creating a User Exit for a Database Server

This section explains how to create a user exit for a database server.

The user command types explained below can be used as user exits. These commands are called by Mirroring Controller management processes.

The user can create user exits as required.

Specify the user commands that were created for the parameters in the server configuration file of the database server. Refer to "A.4.1 Server Configuration File for the Database Servers" for information on these parameters.

**User command types**

- **Fencing command**
  
  This user command performs fencing if Mirroring Controller performs arbitration processing and determines that a database server is unstable.

- **Arbitration command**

  This user command performs arbitration processing in lieu of the arbitration server when there is no arbitration server.

- **State transition commands**

  These user commands are called when Mirroring Controller performs state transition of a database server.

  It includes the following types:

  - **Post-promote command**

    This user command is called after a promotion from standby server to primary server.

  - **Pre-detach command**

    This user command is called before the standby server is disconnected from a cluster system.

    If the pre-detach command is specified on both the primary server and standby server, it is called first on the standby server and then on the primary server.

    If the settings are configured to forcibly stop the instance on the standby server when the standby server is disconnected, the pre-detach command is called on the standby server and then the instance on the standby server is stopped.

  - **Post-attach command**

    This user command is called after the standby server has been attached to a cluster system.

    If the post-attach command is specified on both the primary server and standby server, it is called first on the primary server and then on the standby server.
When the arbitration server is used for automatic degradation and the requirements can be satisfied using the fencing command on the arbitration server only, the fencing command on the database server is not required. In addition, if the requirements can be satisfied using the fencing command on the database server only, create a fencing command on the arbitration server for termination processing only (without implementation).

### Table 2.5 Availability of user commands, and database server calling the command

<table>
<thead>
<tr>
<th>User command</th>
<th>Operation when a heartbeat abnormality is detected using operating system or server heartbeat monitoring</th>
<th>Database server calling the command</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Message output</td>
<td>Automatic degradation by arbitration server</td>
</tr>
<tr>
<td>Fencing command</td>
<td>Y (*1)</td>
<td>Y (*2)</td>
</tr>
<tr>
<td>Arbitration command</td>
<td>N</td>
<td>N</td>
</tr>
<tr>
<td>Post-promote command</td>
<td>Y</td>
<td>Y</td>
</tr>
<tr>
<td>Pre-detach command</td>
<td>Y</td>
<td>Y</td>
</tr>
<tr>
<td>Post-attach command</td>
<td>Y</td>
<td>Y</td>
</tr>
</tbody>
</table>

R: Required
Y: Can be used
N: Cannot be used

*1: Called only when the mc_ctl command is used to execute forced switching or forced disconnection.
*2: Creation of a fencing command on a database server is optional, but it must be created on the arbitration server.
*3: If message output or unconditional automatic degradation is selected, this command is called only from the primary server.

See
Refer to "Appendix C User Commands" for information on the interface for each user command.

## 2.7 Confirming the Streaming Replication Status

Before performing the setup of the database multiplexing mode, ensure that the prerequisite streaming replication feature has been set up correctly.

Perform the following procedure:

1. On the primary server, ensure that single-row searches can be performed using the pg_stat_replication statistics view.

   An example output of the psql command is shown below.

   **Example**

   ```
   postgres=# select * from pg_stat_replication;
   -[ RECORD 1 ]-----------------------------------------------
   pid          | 10651
   usesysid     | 10
   usename      | fsep
   application_name | standby
   ```
2. Confirm the search results of step 1.

Ensure that the connection established with the intended standby server is in synchronous mode.

### Table 2.6 Items to be checked

<table>
<thead>
<tr>
<th>Item</th>
<th>Required value</th>
</tr>
</thead>
<tbody>
<tr>
<td>application_name</td>
<td>Value specified for synchronous_standby_names parameter in the postgresql.conf file of the primary server.</td>
</tr>
<tr>
<td>client_addr</td>
<td>IP address of the standby server.</td>
</tr>
<tr>
<td>state</td>
<td>“streaming”.</td>
</tr>
<tr>
<td>sync_state</td>
<td>“sync”.</td>
</tr>
</tbody>
</table>

**See**

- Refer to "The Statistics Collector" in "Server Administration" in the PostgreSQL Documentation for information on the pg_stat_replication statistics view.
- Note that the pg_stat_replication statistics view may change in the future.

### 2.8 Checking the Connection Status

This section explains how to check the connection status from a database server or the arbitration server.

#### 2.8.1 Checking the Connection Status on a Database Server

This section explains how to use a database server to check the connection status of the Mirroring Controller arbitration process and the Mirroring Controller process on the primary server and standby server.

Perform the following procedure:

1. On the primary server and standby server, execute the mc_ctl command in status mode with the --arbiter option specified.

   **Example**

   ```
   > mc_ctl status --arbiter -M D:\mcdir\inst1
   arbiter_id  host        status
   -----------------------------------
   arbiter     192.0.3.120   online
   ```
2. On the primary server and standby server, check the result displayed by executing the mc_ctl command in status mode in step 1.

   **Items to be checked**

   Check that the output status is "online".

---

### See

Refer to the Reference for information on the mc_ctl command.

---

#### 2.8.2 Checking the Connection Status on the Arbitration Server

This section explains how to use the arbitration server to check the connection status of the Mirroring Controller arbitration process and the Mirroring Controller process on the primary server and standby server.

Perform the following procedure:

1. Execute the mc_arb command in status mode on the arbitration server.

   The example below executes the mc_arb command, and shows the status.

   **Example**)

   ```
   $ mc_arb status -M /mcarb_dir/arbiter1
   server_id    host            status
   ---------------------------------------
   server1      192.0.3.100     online
   server2      192.0.3.110     online
   ```

   **Windows**

   **Example**)

   ```
   > mc_arb status -M D:\mcarb_dir\arbiter1
   server_id    host            status
   ---------------------------------------
   server1      192.0.3.100     online
   server2      192.0.3.110     online
   ```

2. Check the result displayed by executing the mc_arb command in step 1.

   **Items to be checked**

   Check that the output status is "online" on both lines.

---

### See

Refer to the Reference for information on the mc_arb command.

---

#### 2.9 Creating Applications

This section explains how to create applications using database multiplexing, and points that should be noted when you create the applications.

##### 2.9.1 Application Connection Server Settings

If database multiplexing is used and a failover occurs, it will be necessary to switch the application connection server. Accordingly, use the application connection switch feature to create applications.
2.10 Checking the Behavior

To check if the environment setup was performed correctly, start the application and then check the behavior of the switch and rebuild.

2.11 Tuning

This section explains how to tune database multiplexing mode.

2.11.1 Tuning to Stabilize the Database Multiplexing Mode

When large amounts of data are updated, the write-to load for the database will become great, and the multiplexing state may become unstable.

Accordingly, by editing the parameters below in the postgresql.conf file, a stable multiplexing state can be maintained. Refer to "Estimating Transaction Log Space Requirements" in the Installation and Setup Guide for Server for information on transaction log space requirements.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>wal_keep_segments</td>
<td>Refer to &quot;2.4.2 Creating, Setting, and Registering the Primary Server Instance&quot; for details.</td>
</tr>
<tr>
<td>max_wal_size</td>
<td>The transaction log is written out according to the checkpoint trigger. If a transaction log with the capacity of the value specified in this parameter is generated, the checkpoint will be executed. If a large value is specified in this parameter, the time required for crash recovery will increase. If a small value is specified in this parameter, many checkpoints will be generated, which will affect the performance of the applications that connect to the primary server.</td>
</tr>
</tbody>
</table>

2.11.2 Tuning to Stabilize Queries on the Standby Server

Queries made using reference jobs on the standby server may be canceled by jobs executed on the primary server.

To reduce the possibility of a job being canceled, specify as large a value as possible for the max_standby_archive_delay parameter in the postgresql.conf file.

- Refer to "Handling Query Conflicts" in the PostgreSQL Documentation for details.
- Refer to “Standby Servers” in the PostgreSQL Documentation for details on the max_standby_archive_delay parameter.

2.11.3 Tuning to Stabilize Queries on the Standby Server (when Performing Frequent Updates on the Primary Server)

If jobs are updated on the primary server regularly and frequently, it will be easy for the query made by the reference job on the standby server to be canceled. In this case, edit one of the postgresql.conf file parameters shown in the table below.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>hot_standby_feedback</td>
<td>When &quot;on&quot; is set, the deletion (vacuum) of the data area that was deleted or updated on the primary server is suppressed.</td>
</tr>
</tbody>
</table>
Accordingly, the query on the standby server will not be canceled. (*1)

vacuum_defer_cleanup_age  
The deletion (vacuum) of the data area that was deleted or updated on the primary server is delayed until the specified number of transactions is processed. Accordingly, the probability that the query on the standby server will be canceled decreases.

*1: Because the vacuum is delayed, the data storage destination disk space of the primary server comes under pressure. Additionally, if there is conflict between accesses and queries executed on the standby server, transaction logs indicating this conflict will be transferred. Accordingly, specify as large a value as possible for the max_standby_archive_delay parameter so that access conflicts do not occur.

See
- Refer to "Standby Servers" in the PostgreSQL Documentation for details on the hot_standby_feedback parameter.
- Refer to "Master Server" in the PostgreSQL Documentation for details on the vacuum_defer_cleanup_age parameter.

### 2.11.4 Tuning for Optimization of Degradation Using Abnormality Monitoring

Mirroring Controller uses a monitoring method that outputs an error if the timeout or number of retries is exceeded when accessing resources targeted for monitoring. Setting inappropriate values in these settings may lead to misdetection or a delay in automatic degradation, so you must design these values appropriately.

For example, the following type of issue occurs if the tuning related to abnormality monitoring is not performed appropriately.

- If the timeout is too short
  Results in redundant degradation and availability falls.
- If the timeout is too long
  It takes longer for automatic degradation to be performed even when an error affecting operational continuity occurs, potentially causing downtime.

You can optimize degrading operation by editing the values for the following parameters in the server definition file in accordance with the system. Refer to "A.4 Server Configuration File" for information on how to edit these parameters.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abnormality monitoring interval (heartbeat_interval)</td>
<td>Mirroring Controller is configured so that abnormality monitoring does not place a load on the system. This parameter does not normally need to be set. (The default is 800 milliseconds.)</td>
</tr>
<tr>
<td>Abnormality monitoring timeout (heartbeat_timeout)</td>
<td>Take into account the time during which a load is placed continuously on the server or admin network performance. For example, it is envisaged that this parameter will be used in situations such as when performing high-load batch jobs or when a large number of online jobs occur continuously and concurrently. (The default is 1 second.)</td>
</tr>
<tr>
<td>Abnormality monitoring retries (heartbeat_retry)</td>
<td>This parameter can be set when needing a safety value for situations in which the value specified for heartbeat_timeout is exceeded, for example, when using systems with fluctuating loads, however, this parameter does not normally need to be set. (The default is 2 times.)</td>
</tr>
</tbody>
</table>
The expression for calculating the time required to detect an abnormality is shown below.

\[
\text{Abnormality detection time} = \left( \text{heartbeat\_timeout} (\text{seconds}) + \frac{\text{heartbeat\_interval} (\text{milliseconds})}{1000} \right) \times (\text{heartbeat\_retry} (\text{number of times}) + 1)
\]

The abnormality detection time when the default value is used is shown below.

\[
\text{Abnormality detection time} = \left( 1 + \frac{800}{1000} \right) \times (2 + 1) = 5.4 (\text{seconds})
\]

**Note**

When the arbitration server is used for automatic degradation, use the values of the parameters for abnormality monitoring of the operating system and nodes specified in the arbitration configuration file on the arbitration server as the operating system/server heartbeat monitoring time to be calculated for setting the arbitration processing timeout in the Mirroring Controller arbitration process.

#### Table 2.10 Parameters for abnormality monitoring of database processes

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abnormality monitoring interval (db_instance_check_interval)</td>
<td>Abnormality monitoring by Mirroring Controller is set so as not to place load on the system, but normally it does not need to be set. (The default is the value set in heartbeat_interval.) (milliseconds)</td>
</tr>
<tr>
<td>Timeout for abnormality monitoring of database processes (db_instance_check_timeout)</td>
<td>Take into account the time during which a load is placed continuously on the database. For example, it is envisaged that this parameter will be used in situations such as when performing high-load batch jobs or when a large number of online jobs occur continuously and concurrently. (The default is the value set in heartbeat_timeout.) (seconds)</td>
</tr>
<tr>
<td>Abnormality monitoring retries (db_instance_check_retry)</td>
<td>This parameter can be set when needing a safety value for situations in which the value specified for db_instance_check_timeout is exceeded, for example, when using systems with fluctuating loads, however, this parameter does not normally need to be set. (The default is the value set in heartbeat_retry.) (number of times)</td>
</tr>
</tbody>
</table>
The expression for calculating the time required to detect an abnormality is shown below.

\[
\text{Abnormality detection time} = \left( \frac{db\_instance\_check\_timeout}{1000} \right) \times \left( db\_instance\_check\_retry + 1 \right)
\]

The abnormality detection time when the default value is used is shown below.

\[
\text{Abnormality detection time} = \left( 1 + \frac{800}{1000} \right) \times (2 + 1) = 5.4 \text{ (seconds)}
\]

**Note**

If the `db_instance_timeout_action` parameter in `serverIdentifier.conf` is set to "message", and the `db_instance_check_timeout` parameter is set to a short value, a crash of the database process will be detected as "no response", and it may take time for automatic degradation to occur. Therefore, specify an appropriate timeout for `db_instance_check_timeout`.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abnormality monitoring interval (db_instance_check_interval)</td>
<td>Abnormality monitoring by Mirroring Controller is set so as not to place load on the system, but normally it does not need to be set. (The default is the value set in heartbeat_interval.) (milliseconds)</td>
</tr>
<tr>
<td>Abnormality monitoring retries (db_instance_check_retry)</td>
<td>This parameter can be set when needing a safety value, such as when it is anticipated that a temporary log transfer LAN error may occur, but it does not normally need to be set. (The default is the value set in heartbeat_retry.) (number of times)</td>
</tr>
<tr>
<td>Parameter Description</td>
<td></td>
</tr>
<tr>
<td>--------------------------------------------------------------------------------------</td>
<td></td>
</tr>
<tr>
<td>Timeout for abnormality monitoring of streaming replication (wal_sender_timeout and</td>
<td></td>
</tr>
<tr>
<td>wal_receiver_timeout in postgresql.conf)</td>
<td></td>
</tr>
<tr>
<td>Take into account the capacity and load of the log transfer network and the time</td>
<td></td>
</tr>
<tr>
<td>during which a load is placed continuously on the database. For example, if there is</td>
<td></td>
</tr>
<tr>
<td>a succession of data update jobs that generate a high WAL volume, you must configure</td>
<td></td>
</tr>
<tr>
<td>the settings to avoid misdetection. (The default is 60 seconds.)</td>
<td></td>
</tr>
</tbody>
</table>

The expression for calculating the time required to detect an abnormality is shown below.

\[
\text{Abnormality detection time} = (\text{wal_sender_timeout (seconds)} + \\
\text{db_instance_check_interval (milliseconds)} / 1000 \times (\text{disk_check_retry (number of times)} + 1) ) \quad \text{Or,} \\
= (\text{wal_receiver_timeout (seconds)} + \text{db_instance_check_interval (milliseconds)} / 1000 \times \\
\text{disk_check_retry (number of times)} + 1) )
\]

The abnormality detection time when the default value is used is shown below.
Abnormality detection time = 60 + (800 / 1000 x (2 + 1))
= 62.4(seconds)

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abnormality monitoring interval (disk_check_interval)</td>
<td>Abnormality monitoring by Mirroring Controller is set so as not to place load on the system, but normally it does not need to be set. (The default is the value set in heartbeat_interval.) (milliseconds)</td>
</tr>
<tr>
<td>Abnormality monitoring retries (disk_check_retry)</td>
<td>This parameter can be set when needing a safety value, such as when it is anticipated that a temporary disk input/output error may occur, but normally it does not need to be set. (The default is the value set in heartbeat_retry.) (number of times)</td>
</tr>
</tbody>
</table>

The expression for calculating the time required to detect an abnormality is shown below.

\[
\text{Abnormality detection time} = \frac{\text{disk_check_interval} \text{ (milliseconds)}}{1000} \times \left( \text{disk_check_retry} \text{ (number of times)} + 1 \right)
\]

The abnormality detection time when the default value is used is shown below.

\[
\text{Abnormality detection time} = \frac{800}{1000} \times (2 + 1)
= 2.4\text{(seconds)}
\]
**Note**

- The tuning described above impacts on the time taken from detection of a timeout until switching the primary server. Therefore, modify the values while taking into account the switch/disconnection time, using a design for which misdetection does not occur.

- Immediately selecting automatic degradation when a heartbeat abnormality occurs in operating system or server heartbeat monitoring risks causing split brain. Refer to "Appendix D Notes on Performing Automatic Degradation Immediately after a Heartbeat Abnormality" for details.

---

**Information**

Mirroring Controller uses connections to database instances and SQL access to monitor abnormality in some resources targeted for monitoring. The connection destination database names and connection user names used for abnormality monitoring conform to the parameters in the server configuration file. The application name is “mc_agent”.

---

### 2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances

Multiplexed instances and Mirroring Controller can be started and stopped automatically in line with the starting and stopping of the operating system of the database server.

However, to stop the operating system on the primary server, it is necessary to stop the operating system on the standby server so that no unnecessary automatic switching or errors occur.

**Note**

To guarantee the startup sequence of Mirroring Controller on the primary and standby servers, first confirm that the primary server has started, and then start the standby servers in sequence.

The startup sequence of the Mirroring Controller process on the database server and the Mirroring Controller arbitration process on the arbitration server is not guaranteed. If the arbitration server cannot be started first, execute the mcCtl command in start mode with the --async-connect-arbiter option specified to start the Mirroring Controller process.

You can configure the Windows service to perform automatic start and stop of Mirroring Controller.

**Setting automatic start and stop of a multiplexed instance**

No settings are required for Mirroring Controller to start and stop an instance.

**Note**

Do not configure the Windows service of a multiplexed instance to perform automatic start.

**Configuring automatic start and stop for database multiplexing mode**

**Configuring during setup**

When registering Mirroring Controller to the Windows service in "2.4.1 Setting Up Database Multiplexing Mode on the Primary Server" and "2.5.1 Setting Up Database Multiplexing Mode on the Standby Server", specify "auto" for the -S option of the register mode used with the mcCtl command.

**Example**

```
> mc_ctl register -M D:\mcdir\inst1 -P ******** -S auto
```
Changing the configuration after setup

Use the sc config command to change the configuration of the Windows service of Mirroring Controller.

Example:
The following is an example using the registered service name "Mirroring_Controller_inst1".

> sc config "Mirroring_Controller_inst1" start= auto

See

Refer to documentation such as Windows Help and Support for the sc command for information on how to configure the service.

Information

You can check the registration status in the Windows service window or by using the sc qc command.

2.13 Setting Automatic Start and Stop of the Mirroring Controller Arbitration Process

You can automatically start or stop the Mirroring Controller arbitration process when the operating system on the arbitration server is started or stopped.

Linux

If using an rc script

Perform the following procedure:

1. Set the operating system user.
   Configure the environment variables required for starting the Mirroring Controller arbitration process.

2. Edit the shell script.
   Copy the sample shell script, and edit the environment variables in the shell script to suit the environment.
   Path of the sample shell script

   `/installDir/share/rc_mcarboi.sample`

3. Copy the revised shell script and set access permissions.
   Copy the revised shell script to `/etc/rc.d/init.d`, and then set and register the access rights.
   Example:
   In the following example, the shell script was created as "rc_mcarb_arbiter1".

   ```
   # cp rc_mcarb_arbiter1 /etc/rc.d/init.d/
   # chmod 755 /etc/rc.d/init.d/rc_mcarb_arbiter1
   ```

4. Register and enable automatic start and stop.
   As the operating system superuser, execute the chkconfig command to register and enable the script. To register and enable the script, specify the options shown in the table below.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>--add</td>
<td>Registers the shell script as the startup script.</td>
</tr>
<tr>
<td>--level</td>
<td>Sets and enables the startup script for each run level.</td>
</tr>
</tbody>
</table>
Example)
In the following example, the shell script is registered, and then enabled for run levels 3 and 5.

```bash
# chkconfig --add rc_mcarb_arbiter1
# chkconfig --level 35 rc_mcarb_arbiter1 on
```

If using systemd
Perform the following procedure:

1. Create a unit file.

Copy the unit file sample stored in the directory below, and revise it to match the target instance.

Path of the sample file

```
/installDir/share/mcarboi.service.sample
```

Example)
In the following example, the installation directory is "/opt/fsepv<x>assistant", and the identifier of the arbitration process is "arbiter1". Note that "<x>" indicates the product version.

```bash
# cp /opt/fsepv<x>assistant/share/mcarboi.service.sample /usr/lib/systemd/system/mcarboi_arbiter1.service
```

Revising the underlined portions of the options below in the unit file.

<table>
<thead>
<tr>
<th>Section</th>
<th>Option</th>
<th>Specified value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unit</td>
<td>Description</td>
<td>FUJITSU Enterprise Postgres Mirroring Controller Arbitration &lt;arbitrationProcessId&gt;</td>
<td>Specifies the feature overview. Specifies the identifier of the targeted arbitration process. (*1)</td>
</tr>
<tr>
<td>Service</td>
<td>ExecStart</td>
<td><code>/bin/bash -c 'installDir/bin/mc_arb_std start installDir mirroringControllerArbitrationProcessMgmtDir mc_arbOption'</code></td>
<td>Command to be executed when the service is started. Specify the option you want to add when the mc_arb command is executed without the -M option in the mc_arb option. Note that the content specified in this mc_arb option is carried over from the mc_arb_std command in &quot;Specified value&quot; to the mc_arb command.</td>
</tr>
<tr>
<td></td>
<td>ExecStop</td>
<td><code>/bin/bash -c 'installDir/bin/mc_arb_std stop installDir mirroringControllerArbitrationProcessMgmtDir mc_arbOption'</code></td>
<td>Command to be executed when the service is stopped. Specify the option you want to add when the mc_arb command is stopped.</td>
</tr>
</tbody>
</table>

- 50 -
### User

Specify the account of the operating system user.

### Group

Specify the group to which the user belongs.

---

*1: The arbitration process identifier used here is a name for identifying the Mirroring Controller arbitration process.

The naming conventions for identifying the Mirroring Controller arbitration process are as follows:

- Up to 16 bytes
- The first character must be an ASCII alphabetic character
- The other characters must be ASCII alphanumeric characters

2. **Enable automatic start and stop.**

As the operating system superuser, use the systemctl command to enable automatic start and stop.

Example)

```bash
# systemctl enable mcarboi_arbiter1.service
```

**Windows**

You can configure the Windows service to perform automatic start and stop.

#### Configuring during setup

When registering the Mirroring Controller arbitration process as a Windows service in "2.3.1 Configuring the Arbitration Server", specify "auto" for the -S option of the register mode used with the mc_arb command.

Example)

```bash
> mc_arb register -M D:\mcdir\inst1 -P ******** -S auto
```

#### Changing the configuration after setup

Use the sc config command to change the configuration of the Windows service of the Mirroring Controller arbitration process.

Example)

The configuration of the registered service name "Mirroring_Controller_Arbiter1" is changed.

```bash
> sc config "Mirroring_Controller_Arbiter1" start= auto
```

See

Refer to sc command help for information on how to configure the service.
Information

You can check the registration status in the Windows service window or by using the `sc qc` command.

2.14 Backup Operation

This section explains the backup operation for database multiplexing mode.

2.14.1 Backing up Database Multiplexing Mode Information

When changing the Mirroring Controller settings, in addition to backing up the database, back up the configuration file in the Mirroring Controller management directory so that the Mirroring Controller settings are not lost.

When the arbitration server is used for automatic degradation, also back up the configuration file in the Mirroring Controller arbitration process management directory.

2.14.2 Database Backup Operation

Using database multiplexing mode is the same as obtaining the backup data on the standby server as a safeguard against a disk failure. Note that all server disks may be corrupted due to some cause.

As a safeguard against this type of case, execute the `pgx_dmpall` command on the primary server to create the backup data.

However, it is not definite as to which server runs as the primary server, so ensure that the `pgx_dmpall` command is executed periodically on all servers, so that the backup data will be obtained. For example, create a script to obtain the backup data, and set it in the operation management software.

Point

When the `pgx_dmpall` command is executed on the standby server, it will not match the statuses, however the error message shown below will be output and return the value "1".

If a script that ignores only this type of error is executed on all servers, the backup data of the primary server can be obtained.

Error message

```
ERROR:recovery is in progress (10095)
```

Note

- Consider the possibility that the server that runs as the primary server may be destroyed alongside the backup data, so it is recommended to promote another server to become the primary server, and then back up the data on the new primary server without waiting for the next scheduled backup.

- Specify the same backup directory name for the primary and standby servers. If different backup directory names are specified, and recovery is performed using the backup data of the other server, the recovery cannot be performed correctly.

See

- Period backups allow shorter recovery time and reduction in disk usage. Refer to "Backing Up the Database" in the Operation Guide for details on the backup operation.

- Refer to "Chapter 4 Action Required when an Error Occurs in Database Multiplexing Mode" for details on recovery based on the backup data that was obtained using the `pgx_dmpall` command.
Chapter 3 Operations in Database Multiplexing Mode

This chapter describes the periodic operations that are performed when running database multiplexing mode. The periodic operations are the same as the operations on a single server.

See

Refer to "Periodic Operations" in the Operation Guide for information on the periodic operations.

3.1 Starting and Stopping the Mirroring Controller Arbitration Process

This section describes how to start and stop the Mirroring Controller arbitration process.

3.1.1 Starting the Mirroring Controller Arbitration Process

Windows

The Mirroring Controller arbitration process can be started using one of the following options:

- Using the mc_arb command
- Starting the service on system startup

Using the mc_arb command

While the Mirroring Controller arbitration process is in a stopped state, execute the mc_arb command from the command prompt to start the Mirroring Controller arbitration process.

Example)

> mc_arb start -M D:\mcarb_dir\arbiter1

Starting the service on system startup

Specify automatic start when registering the Mirroring Controller arbitration process to the Windows service during setup of database multiplexing mode. Accordingly, the Mirroring Controller arbitration process service will start on startup of the operating system.

See

Refer to the Reference for information on how to specify the mc_arb command.

3.1.2 Stopping the Mirroring Controller Arbitration Process

Windows

The Mirroring Controller arbitration process can be stopped using one of the following options:

- Using the mc_arb command
- Stopping the service

Using the mc_arb command

While the Mirroring Controller arbitration process is running, execute the mc_arb command in stop mode from the command prompt to stop the Mirroring Controller arbitration process.

Example)
Stopping the service

Select [Administrative Tools], then [Services] to open the [Services] window, and then select the Mirroring Controller service and click the [Stop] menu.

See

Refer to the Reference for information on how to specify the mc_arb command.

Note

- The arbitration server will be forcibly stopped when the service is stopped.
- Before shutting down the operating system on the arbitration server, either stop the Mirroring Controller on the primary server or standby server or shut down the operating system on the primary server or standby server.

3.2 Starting and Stopping Mirroring Controller

3.2.1 Starting Mirroring Controller

Mirroring Controller can be started using one of the following:

- Using the mc_ctl command
- Starting a service on system startup

Note

Mirroring Controller must be started by a user with administrator privileges (user ID belonging to the Administrators group).

Using the mc_ctl command

While Mirroring Controller is in a stopped state, execute the mc_ctl command from the command prompt to start the instance and Mirroring Controller.

Enabling automatic switch/disconnection

Execute the mc_ctl command in start mode.

Example)

> mc_ctl start -M D:\mcdir\inst1

Disabling automatic switch/disconnection

Execute the mc_ctl command in start mode with the -F option specified.

Example)

> mc_ctl start -M D:\mcdir\inst1 -F

Point

- To start the Mirroring Controller process only, execute the mc_ctl command in start mode with the --mc-only option specified.
After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

When the arbitration server is used for automatic degradation, the Mirroring Controller process startup fails on the database server if the Mirroring Controller arbitration process has not been started on the arbitration server in advance. However, if the Mirroring Controller arbitration process cannot be started in advance, it can be started by specifying the --async-connect-arbiter option in the mc_ctl command.

Refer to the Command Reference for information on how to specify the mc_ctl command.

Starting a service on system startup

Specify automatic start when registering Mirroring Controller to the Windows service during setup of database multiplexing mode. Accordingly, the Mirroring Controller service will start on startup of the operating system.

Refer to "2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances" for details.

Note

- Mirroring Controller startup usually fails if the standby server is mistakenly started as the primary server or if the old primary server is not recovered after the switch and is then mistakenly started as the primary server. However, if the admin network is disconnected, then startup does not fail, and both servers may become primary servers. Therefore, ensure that the admin network is connected before starting Mirroring Controller.

- When only the instance is started without starting Mirroring Controller, the impact will be as follows:
  - Enabling automatic switch/disconnection
    Features such as automatic switch and automatic disconnection will not work until Mirroring Controller is started.
  - Disabling automatic switch/disconnection
    Errors indicated in "1.1 What is Database Multiplexing Mode" will not be detected until Mirroring Controller is started.

3.2.2 Stopping Mirroring Controller

Mirroring Controller can be stopped using one of the following ways:

- Using the mc_ctl command
- Stopping the service

Note

Mirroring Controller must be stopped by a user with administrator privileges (user ID belonging to the Administrators group).

Using the mc_ctl command

While Mirroring Controller is running, execute the mc_ctl command from the command prompt in stop mode to stop Mirroring Controller.

Example)

```
> mc_ctl stop -M D:\medir\inst1
```
To stop the Mirroring Controller process only, execute the mc_ctl command in stop mode with the --mc-only option specified.

Refer to the Command Reference for information on how to specify the mc_ctl command.

Stopping the service

Select [Administrative Tools], then [Services] to open the [Services] window, and then select the Mirroring Controller service and click the [Stop] menu.

Note

- To prevent an unintended automatic switch, before shutting down the operating system on the primary server, you must stop the Mirroring Controller, or shut down the operating system on the standby server.
- If you stop the Mirroring Controller by stopping the service, you must firstly exit all applications or programs that are using the instance that is to be stopped.
- When only the instance is stopped without stopping Mirroring Controller, the impact will be as follows:
  - Enabling automatic switch/disconnection
    Mirroring Controller determines that an error has occurred in the instance, and performs an unnecessary automatic switch. Automatic switch may also stop working correctly in some cases.
  - Disabling automatic switch/disconnection
    Mirroring Controller determines that an error has occurred in the instance, and outputs an error to the event log.

3.3 Checking the Database Multiplexing Mode Status

3.3.1 Checking the Status of the Database Server

This section describes how to check the status of the database server.

Check the multiplexed database status by executing the mc_ctl command in status mode.

Additionally, errors can be detected by monitoring the Mirroring Controller messages. If the status or messages are monitored periodically, you can react quickly following an automatic switch failure.

Checking the status of the multiplexing database

When the mc_ctl command is executed, the details of the multiplexing configuration, information about whether switch is possible following the error, and location and details of the error that caused the switch or disconnection are displayed.

After starting database multiplexing mode, execute the mc_ctl command in status mode to check the multiplexing status.

An example of the status displayed when the mc_ctl command is executed is shown below.

Example)

```
> mc_ctl status -M D:\mcdir\inst1
mirroring status
----------
switchable
server_id host_role host host_status db_proc_status disk_status
```
Checking the status of connection to the Mirroring Controller arbitration process

When the arbitration server is used for automatic degradation, the status of the connection to the Mirroring Controller arbitration process can be checked by specifying the --arbiter option. If the output status is "online", it indicates that an arbitration request can be made from the database server to the arbitration server. When the arbitration server is used for automatic degradation, regularly execute the command in status mode with the --arbiter option specified and check that the output status is "online".

Example)
The mc_ctl command is executed with the --arbiter option specified, and the status is output.

```
> mc_ctl status --arbiter -M D:\mcdir\inst1
arbiter_id   host            status
---------------------------------------
arbiter      192.0.3.120     online
```

Checking the status of data synchronization

Additionally, by referencing the pg_stat_replication statistics view on the primary server, the data synchronization status can be confirmed. However, when creating the monitoring program, note that the content of pg_stat_replication may be changed in the future.

The following example shows that the locations of the transaction log after it is sent and received (sent_lsn, replay_lsn) match, and that they are fully synchronized.

Example)
```
postgres=# select * from pg_stat_replication;
- [ RECORD 1 ]-+-----------------------------
  pid            | 10651
  usesysid       | 10
  usename        | fsep
  application_name | standby
  client_addr    | 192.0.2.210
  client_hostname | 
  client_port    | 55098
  backend_start  | 2017-10-13 17:05:44.185872+09
  backend_xmin   | 
  state          | streaming
  sent_lsn       | 0/3000060
  write_lsn      | 0/3000060
  flush_lsn      | 0/3000060
  replay_lsn     | 0/3000060
  write_lag      | 
  flush_lag      | 
  replay_lag     | 
  sync_priority  | 1
  sync_state     | sync
```

See
- Refer to "mc_ctl" in Reference for information on the command.
- Refer to "Notes on Application Compatibility" in the Application Development Guide for information on retaining application compatibility.
- Refer to "The Statistics Collector" in "Server Administration" in the PostgreSQL Documentation for details on pg_stat_replication.
3.3.2 Checking the Status of the Arbitration Server

This section describes how to check the status of the arbitration server.

The status of the connection between the Mirroring Controller arbitration process and primary server/standby server can be checked by executing the mc_arb command in status mode.

The example below executes the mc_arb command, and shows the status.

**Windows**

Example)

```plaintext
> mc_arb status -M D:\mcarb_dir\arbiter1

server_id host      status
--------------------
server1 192.0.3.100 online
server2 192.0.3.110 online
```

3.4 Manually Switching the Primary Server

The primary server cannot be switched automatically in the following case:

- If automatic switch/disconnection is disabled
- If output of messages is selected for heartbeat abnormalities during heartbeat monitoring of the operating system or server and the operating system/server crashes or becomes unresponsive

In this case, to manually switch the primary server, execute the mc_ctl command in switch mode on either the primary server or the standby server.

Example)

```plaintext
> mc_ctl switch -M D:\mcdir\inst1
```

**Point**

If automatic switch/disconnection is enabled, it is possible to perform switch of primary server at any time.

3.5 Manually Disconnecting the Standby Server

The procedure to perform disconnection of the standby server differs depending on whether the automatic switch/disconnection is enabled or disabled.

If automatic switch/disconnection is enabled

Execute the mc_ctl in stop mode on the standby server.

Example)

```plaintext
> mc_ctl stop -M D:\mcdir\inst1
```

If automatic switch/disconnection is disabled

1. Execute the mc_ctl in stop mode on the standby server.

   Example)

   ```plaintext
   > mc_ctl stop -M D:\mcdir\inst1
   ```

2. Comment out the synchronous_standby_names parameter in the postgresql.conf file on the primary server.
3. Execute the pg_ctl command in reload mode on the primary server.

Example)

```bash
> pg_ctl reload -D D:\database\inst1
```

### 3.6 Action Required when a Heartbeat Abnormality is Detected

The message below is output when a heartbeat abnormality is detected during heartbeat monitoring of operating systems or servers:

```
detected an error on the monitored object "server(server identifier name)": no response:ping timeout (MCA00019)
```

If the heartbeat_error_action parameter in serverIdentifier.conf is set to "message", even if automatic switch/disconnection is enabled and Mirroring Controller is started, automatic switch/disconnection is not performed when a heartbeat abnormality is detected. Therefore, user action will be necessary.

This section explains the action required when the heartbeat_error_action parameter is set to "message" and a heartbeat abnormality is detected.

1. Identify the cause of the heartbeat abnormality. The possible causes are below:
   - The remote operating system or server crashed or is unresponsive
   - An admin network issue occurred

2. Address the cause identified in step 1.
   - The remote operating system or server crashed or is unresponsive
     Manually perform switch or disconnection using the mc_ctl command.
   - An admin network issue occurred
     Refer to "Chapter 4 Action Required when an Error Occurs in Database Multiplexing Mode", and recover the database multiplexing system.

### 3.7 Monitoring Mirroring Controller Messages

The messages that are output by Mirroring Controller are output to both the database server and the arbitration server. If the automatic switch fails, for example, an important message related to the continuation of the operation may be output, so ensure that the system log messages are monitored.

If the arbitration server is used for automatic degradation, monitor messages on both the database server and the arbitration server.

**Message output destination on the database server**

Messages are output to the event log.

**Message output destination on the arbitration server**

Messages are output to the system log.

**Windows**

Messages are output to the event log.

**Point**

- To monitor message types considered to be important, an operating system setting must be configured beforehand. Refer to the operating system manuals, check if the message is of a message type that is monitored to be output to the system log, and configure the setting if required.

- If the heartbeat_error_action parameter in serverIdentifier.conf is set to "message", only message output is performed when a heartbeat abnormality is detected during heartbeat monitoring of operating systems and servers - automatic switch/disconnection is not
performed. Therefore users need to monitor the messages. Refer to "3.6 Action Required when a Heartbeat Abnormality is Detected" for details.

Display format on the database server

```
eventSourceName[processId]: messageType: messageContent (messageNumber)
```

Specify the event source name in the event_source parameter of the serverIdentifier.conf file of the database server.

The message types output by Mirroring Controller, their severity, and their corresponding value in the event log are shown in the table below.

<table>
<thead>
<tr>
<th>Message type</th>
<th>Severity</th>
<th>Meaning</th>
<th>Event log</th>
</tr>
</thead>
<tbody>
<tr>
<td>INFO</td>
<td>Information</td>
<td>Provides information that does not fall under LOG or NOTICE.</td>
<td>INFORMATION</td>
</tr>
<tr>
<td>LOG</td>
<td>LOG</td>
<td>Provides information recognized as a particularly important event in tracing the operation history. (Example: Automatic switch is complete)</td>
<td></td>
</tr>
<tr>
<td>NOTICE</td>
<td>Notice</td>
<td>Outputs information that takes into account the user instructions within the program in response to an executed or automatically executed process.</td>
<td>WARNING</td>
</tr>
<tr>
<td>WARNING</td>
<td>Warning</td>
<td>Provides a warning, for example it will soon be impossible to maintain multiplexing capabilities.</td>
<td></td>
</tr>
<tr>
<td>ERROR</td>
<td>Error</td>
<td>Reports that an error other than FATAL or PANIC has occurred.</td>
<td>ERROR</td>
</tr>
<tr>
<td>FATAL</td>
<td></td>
<td>Reports that an abnormality was detected in the multiplexed database systems requiring recovery of the system, and also the content and cause of the abnormality.</td>
<td></td>
</tr>
<tr>
<td>PANIC</td>
<td></td>
<td>Reports that an abnormality was detected in all multiplexed database systems requiring immediate recovery of the system, and also the content and cause of the abnormality.</td>
<td></td>
</tr>
</tbody>
</table>

The message severity has the following meanings:

- Information
  
  Informational status. A message that was reported by the system is displayed. No action is required.

- Notice
  
  Informational status, but a message that should be noted is displayed. If necessary, take the actions described in the "Action" section of the message.

- Warning
  
  No error has occurred, but the user is requested to check, and take action. Take the actions described in the "Action" section of the message.

- Error
  
  An error has occurred. Take the actions described in the "Action" section of the message.

Display format on the arbitration server

```
programName[processId]: messageType: messageText (messageNumber)
```

Specify the program name in the syslog_ident parameter of the arbitration.conf file of the arbitration server.
Specify the event source name in the event_source parameter of the arbitration.conf file of the arbitration server.

The message types output by Mirroring Controller, their severity, and their corresponding value in the output destination log are shown in the table below.

**Table 3.2 Message type, severity, and corresponding value in the output destination log**

<table>
<thead>
<tr>
<th>Message type</th>
<th>Severity</th>
<th>Meaning</th>
<th>System log</th>
<th>Event log (Windows)</th>
</tr>
</thead>
<tbody>
<tr>
<td>INFO</td>
<td>Information</td>
<td>Provides information not categorized as LOG or NOTICE.</td>
<td>INFO</td>
<td>INFORMATION</td>
</tr>
<tr>
<td>LOG</td>
<td>Notice</td>
<td>Provides information recognized as a particularly important event in tracing the operation history. (Example: Automatic switch is complete)</td>
<td>NOTICE</td>
<td></td>
</tr>
<tr>
<td>NOTICE</td>
<td>Warning</td>
<td>Outputs information that takes into account the user instructions within the program in response to an executed or automatically executed process.</td>
<td>WARNING</td>
<td></td>
</tr>
<tr>
<td>WARNING</td>
<td>Error</td>
<td>Provides a warning, for example it will soon be impossible to perform the arbitration process.</td>
<td>WARNING</td>
<td></td>
</tr>
<tr>
<td>ERROR</td>
<td>Error</td>
<td>Reports that an error other than FATAL or PANIC has occurred.</td>
<td>ERROR</td>
<td></td>
</tr>
<tr>
<td>FATAL</td>
<td>Error</td>
<td>Reports that an abnormality was detected in the arbitration server requiring recovery of the system, and also the content and cause of the abnormality.</td>
<td>CRIT</td>
<td></td>
</tr>
<tr>
<td>PANIC</td>
<td>Error</td>
<td>Reports that an abnormality was detected in the arbitration server requiring immediate recovery of the system, and also the content and cause of the abnormality.</td>
<td>ALERT</td>
<td></td>
</tr>
</tbody>
</table>

The message severity has the following meanings:

- **Information**
  - Informational status. A message that was reported by the system is displayed. No action is required.

- **Notice**
  - Informational status, but a message that should be noted is displayed. If necessary, take the actions described in the "Action" section of the message.

- **Warning**
  - No error has occurred, but the user is requested to check, and take action. Take the actions described in the "Action" section of the message.

- **Error**
  - An error has occurred. Take the actions described in the "Action" section of the message.

**3.8 Server Maintenance**

To perform maintenance tasks such as periodic server inspections and the application of updates for software products including the operating system, you must perform a planned stop of the server, and then perform the maintenance.
3.8.1 Rolling Updates

In database multiplexing mode, rolling updates, that perform the maintenance for the servers that comprise the cluster system, can be performed while jobs continue.

First, perform the maintenance for the standby server, and then switch the standby server to the primary server. Then, perform the maintenance for the original primary server that was switched to the standby server. This enables maintenance to be performed while jobs continue.

Note that arbitration server maintenance can be performed without affecting database server operation, so it is not necessary to consider rolling update.

If the downtime due to the maintenance of the standby server is expected to be long, refer to "Standby server downtime" in "3.9.1 Changes Required when the Standby Server is Stopped".

The flow of a rolling update is shown below.
Perform the following procedure as shown in the above figure:

**Standby server maintenance tasks**

1. To perform the maintenance on the standby server, stop Mirroring Controller.
   
   Example:
   
   ```
   > mc_ctl stop -M D:\mcdir\inst1
   ```
2. Ensure that Mirroring Controller has completely stopped.

If the multiplexed instances and Mirroring Controller have been configured on the standby server to start and stop automatically when the operating system of the database server is started or stopped, cancel the setting to start and stop automatically.

See

Refer to "2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances" for information on how to configure the multiplexed instances and Mirroring Controller to start and stop automatically when the operating system of the database server starts and stops.

This task should be performed by the instance administrator user with administrator privileges.

Use the `sc config` command to disable automatic start of multiplexed instances and Mirroring Controller from the Windows service.

Example)

The following is an example using the registered service name "Mirroring_Controller_inst1".

```
> sc config "Mirroring_Controller_inst1" start= demand
```

Information

You can use the `sc qc` command to check the registration status.

Refer to documentation such as Windows Help and Support for the `sc` command for information on registry content.

3. Perform maintenance tasks.

4. Create a copy of the primary server instance on the standby server.

Execute the `pg_basebackup` command to create data in the standby server by synchronizing with the primary server.

Example)

```
> pg_basebackup -D D:\database\inst1 -X fetch --waldir=E:\transaction\inst1 --progress --verbose
-R --dbname="application_name=standbyServerName" -h primaryServerHostName -p primaryServerPortNumber
```

See

The procedure for copying the primary server instance to the standby server is the same as the procedure for setting up the standby server.

Refer to "2.5.2 Creating, Setting, and Registering the Standby Server Instance", and then perform the recovery.

5. Check the settings for automatic start and stop of the multiplexed instances and Mirroring Controller.

If the multiplexed instances and Mirroring Controller were configured in step 2 to not start and stop automatically when the operating system of the database server starts and stops, then change the settings back. This step can be skipped if automatic start and stop are not required.

This task should be performed by an instance administrator user with administrator privileges.

Use the `sc config` command to enable automatic start of multiplexed instances and Mirroring Controller from the Windows service.

Example)

The following is an example using the registered service name "Mirroring_Controller_inst1".

```
> sc config "Mirroring_Controller_inst1" start= auto
```
Information

You can use the sc qc command to check the registration status. Refer to documentation such as Windows Help and Support for the sc command for information on registry content.

This operation is required when determining the maintenance tasks on the standby server.

Enabling automatic switch/disconnection

As the instance administrator user, execute the mc_ctl command in start mode.

Example)

> mc_ctl start -M D:\mcdir\inst1

Disabling automatic switch/disconnection

As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.

Example)

> mc_ctl start -M D:\mcdir\inst1 -F

Point

After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

Switching to the primary server

To perform the maintenance on the primary server, execute the mc_ctl command in the switch mode on the primary server or the standby server.

Example)

> mc_ctl switch -M D:\mcdir\inst1

When the switch is complete, the synchronous_standby_names parameter in the postgresql.conf file of the new primary server will be commented as follows:

Example)

#synchronous_standby_names = 'primary'

New standby server maintenance tasks

1. Stop the Mirroring Controller.

On the new standby server (the primary server before the switch), execute the mc_ctl command in stop mode.

Example)

> mc_ctl stop -M D:\mcdir\inst1

2. Ensure that Mirroring Controller has completely stopped.

If the multiplexed instances and Mirroring Controller have been configured on the new standby server to start and stop automatically when the operating system of the database server is started or stopped, cancel the setting to start and stop automatically now.
2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances

Refer to “2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances” for information on how to configure the multiplexed instances and Mirroring Controller to start and stop automatically when the operating system of the database server starts and stops.

This task should be performed by an instance administrator user with administrator privileges.

Use the `sc config` command to disable automatic start of multiplexed instances and Mirroring Controller from the Windows service.

Example)
The following is an example using the registered service name "Mirroring_Controller_inst1".

```bash
> sc config "Mirroring_Controller_inst1" start= demand
```

Information

You can use the `sc qc` command to check the registration status.

Refer to documentation such as Windows Help and Support for the `sc` command information on registry content.

3. Perform the maintenance on the new standby server that was stopped.

4. Create a copy of the new primary server instance on the new standby server.

Execute the `pg_basebackup` command to create data in the new standby server by synchronizing with the new primary server.

Example)

```bash
> pg_basebackup -D D:\database\inst1 -X fetch --waldir=\transaction\inst1 --progress --verbose -R --dbname="application_name=standbyServerName" -h primaryServerHostName -p primaryServerPortNumber
```

See

The procedure for copying the primary server instance to the standby server is the same as the procedure for setting up the standby server.

Refer to “2.5.2 Creating, Setting, and Registering the Standby Server Instance”, and then perform the recovery.

5. Check the settings for automatic start and stop of the multiplexed instances and Mirroring Controller.

If the multiplexed instances and Mirroring Controller were configured in step 2 to not start and stop automatically when the operating system of the database server starts and stops, then change the settings back. This step can be skipped if automatic start and stop are not required.

This task should be performed by an instance administrator user with administrator privileges.

Use the `sc config` command to enable automatic start of multiplexed instances and Mirroring Controller from the Windows service.

Example)
The following is an example using the registered service name "Mirroring_Controller_inst1".

```bash
> sc config "Mirroring_Controller_inst1" start= auto
```

Information

You can use the `sc qc` command to check the registration status.

Refer to the document such as Windows Help and Support for the `sc` command information on registry content.
6. After the maintenance is complete, edit the following parameters in the postgresql.conf file of the standby server as required.

   Copying an instance results in the value of the synchronous_standby_names parameter becoming the specified value on the primary server. Therefore, correct it to the specified value on the standby server. If the parameter was commented out, then you must uncomment it.

7. On the standby server, start (rebuild) Mirroring Controller.

   Enabling automatic switch/disconnection
   As the instance administrator user, execute the mc_ctl command in start mode.
   
   Example)
   
   > mc_ctl start -M D:\mcdir\inst1

   Disabling automatic switch/disconnection
   As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.
   
   Example)
   
   > mc_ctl start -M D:\mcdir\inst1 -F

   **Point**
   After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

---

**Failback of the Primary Server**

Revert the primary server and standby server to the original server configuration. Do this to execute the main job on the previous primary server. Refer to "4.1.1.3 Failback of the Primary Server" for details.

**Note**

Obtain a backup as soon as this task is complete.

---

### 3.8.2 Stopping for Maintenance

Perform this procedure to stop all servers for periodic inspections, for example. On the server on which Mirroring Controller is running, execute the mc_ctl command in stop mode to stop the instance and Mirroring Controller.

After that, on the server where the Mirroring Controller arbitration process is running, execute the mc_arb command in stop mode to stop the Mirroring Controller arbitration process.

**Stopping Mirroring Controller**

Example)

> mc_ctl stop -M D:\mcdir\inst1 -a

**Stopping the Mirroring Controller arbitration process**

Example)

$ mc_arb stop -M /mcarb_dir/arbiter1

**Windows**

Example)
3.8.3 Arbitration Server Maintenance

Arbitration server maintenance can be performed without affecting database server operation.

Follow the procedure below to perform arbitration server maintenance.

1. Execute the mc_arb command in stop mode to forcibly stop the Mirroring Controller arbitration process.

   Example)
   
   $ mc_arb stop -M /mcarb_dir/arbiter1 -e
   
   Windows
   
   Example)
   
   > mc_arb stop -M D:\mcarb_dir\arbiter1 -e

2. Perform maintenance tasks.

3. Execute the mc_arb command in start mode to restart the Mirroring Controller arbitration process.

   Example)
   
   $ mc_arb start -M /mcarb_dir/arbiter1
   
   Windows
   
   Example)
   
   > mc_arb start -M D:\mcarb_dir\arbiter1

4. Execute the mc_arb command in status mode to check that the arbitration server is connected to the database server.

   The example below executes the mc_arb command, and shows the status.

   Example)
   
   $ mc_arb status -M /mcarb_dir/arbiter1
   server_id  host            status
   ---------------------------------------
   server1    192.0.3.100     online
   server2    192.0.3.110     online
   
   Windows
   
   Example)
   
   > mc_arb status -M D:\mcarb_dir\arbiter1
   server_id  host            status
   ---------------------------------------
   server1    192.0.3.100     online
   server2    192.0.3.110     online

5. Check the command output.

   Items to be checked
   
   Check that the output status is "online" on both lines.
3.9 Changes in Operation

The following changes in operation may be required:
- Changes required when the standby server is stopped
- Changing from single server mode to database multiplexing mode
- Changing from database multiplexing mode to single server mode
- Changing to database multiplexing mode when the arbitration server is used for automatic degradation
- Changing parameters
- Uninstalling in the database multiplexing mode

3.9.1 Changes Required when the Standby Server is Stopped

Operation when the standby server is stopped

Before performing maintenance for the primary server instance when the standby server has been stopped, stop Mirroring Controller on the primary server, comment out the synchronous_standby_names parameter in the postgresql.conf file of the primary server, and then execute the pg_ctl command in reload mode.

If this operation is not performed, operations performed on the primary server for the instance will remain in a wait state.

See

Refer to "pg_ctl" in Reference for information on the command.

Standby server downtime

If you specified the synchronous_standby_names parameter of the postgresql.conf file and then the standby server instance is stopped, consider the points below.

- The wal_sender_timeout parameter in the postgresql.conf file
  If the standby server is stopped after the timeout time set in this parameter was exceeded, an error stating that the transaction log could not be received may be output to the primary server event log, and all transaction logs that should be transferred to the standby server are accumulated.

- The wal_keep_segments parameter in the postgresql.conf file
  If a transaction log that exceeds the value set in this parameter was generated while the standby server was stopped, the transaction log may be deleted.

  Additionally, setting this parameter requires consideration regarding stabilization of the database multiplexing mode. Refer to "2.11.1 Tuning to Stabilize the Database Multiplexing Mode" for details.

Note

The standby server must be rebuilt if the pending transaction log to be transferred to the standby server is lost when the standby server is started after the maintenance task is complete.

Take the action advised in the recovery operation that starts from "4.1.1.1.3 Identify cause of error and perform recovery" through to "4.1.1.2 Rebuild the Standby Server".

3.9.2 Changing from Single Server Mode to Database Multiplexing Mode

The procedure for switching single server mode to database multiplexing mode for the purposes of high reliability and load distribution of the system is explained below.

This procedure is equivalent to the setup procedure explained in "Chapter 2 Setting Up Database Multiplexing Mode".
**Note**

If the data storage destination directory name is not comprised of ASCII characters

Stop the application job and then perform the following procedure to migrate to a directory with a name that uses only ASCII characters:

1. Stop the database instance on the primary server.
2. Change the name of the data storage destination directory to one that uses only ASCII characters.
   For example, do not perform operations that will cause the symbolic link contained in the data storage destination directory to become lost, such as moving data to another drive.

---

**See**

When encrypting the storage data, refer to "Database Multiplexing Mode" in the Operation Guide, and then perform the setup for encryption on the primary and standby servers.

1. Install on the arbitration server
   Perform this step only if the arbitration server is used for automatic degradation.
   Install FUJITSU Enterprise Postgres on the server where the Mirroring Controller arbitration process is started.
   Refer to "Installation" in the Installation and Setup Guide for Server Assistant for information on how to install FUJITSU Enterprise Postgres.
2. Install on the standby server
   Install FUJITSU Enterprise Postgres on the server to be started as the standby server.
   Refer to "Installation" in the Installation and Setup Guide for Server for information on how to install FUJITSU Enterprise Postgres.
   Use ASCII characters in the data storage destination directory.
3. Stop the application jobs
   Stop the application jobs to be connected to the primary server.
4. Change the primary server settings
   To allow connections from the server to be started as the standby server, configure the settings in step 2 and thereafter of "2.4.2 Creating, Setting, and Registering the Primary Server Instance" on the primary server.
5. Set up the arbitration server
   Refer to "2.3 Setting Up the Arbitration Server" for details.
   Perform this step only if the arbitration server is used for automatic degradation.
6. Set up database multiplexing mode on the primary server
   Refer to "2.4.1 Setting Up Database Multiplexing Mode on the Primary Server" for details.
7. Set up database multiplexing mode on the standby server
   Refer to "2.5.1 Setting Up Database Multiplexing Mode on the Standby Server" for details.
8. Create the standby server instance and start it
   Refer to "2.5.2 Creating, Setting, and Registering the Standby Server Instance" for details.

After the above steps are completed, refer to the remaining explanations in "Chapter 2 Setting Up Database Multiplexing Mode" and ensure that the required settings and operations are completed.

### 3.9.3 Changing from Database Multiplexing Mode to Single Server Mode

The procedure for stopping database multiplexing mode and changing to single server mode is explained below.
Some tasks must be performed on the database server, and others must be performed on the arbitration server.
The tasks on the arbitration server are required only if the arbitration server is used for automatic degradation.

**Tasks on the database server**

1. Determine the server for which the instance is to be stopped, and switch this server
   
   Determine the server that is to be excluded as the database multiplexing mode target, and for which the instance is to be stopped.
   
   If the server for which the instance is to be stopped is the primary server, execute the mc_ctl command in the switch mode to switch the standby server to the primary server.
   
   The standby server after the switch is complete will be the server for which the instance is to be stopped.
   
   If the server for which the instance is to be stopped is the standby server, there is no need to perform the switch operation.
   
   **Example**
   
   ```
   > mc_ctl switch -M D:\mcdir\inst1
   ```

2. Stop Mirroring Controller and the instance.
   
   On the server that was determined in step 1, execute the mc_ctl command in the stop mode to stop Mirroring Controller and the instance.
   
   **Example**
   
   ```
   > mc_ctl stop -M D:\mcdir\inst1
   ```

3. Unregister Mirroring Controller from the Windows service.
   
   Execute the mc_ctl command in unregister mode to unregister Mirroring Controller from the Windows service.
   
   **Example**
   
   ```
   > mc_ctl unregister -M D:\mcdir\inst1
   ```

4. Delete registries related to the event log
   
   If error logs are output to the event log in "2.2.1.2 Preparatory Tasks for the Output of Error Logs to the Event Log", delete the registered event source name for each instance.
   
   **Example**
   
   ```
   > regsvr32 /u /i:"Mirroring Controller inst1" "c:\Program Files\Fujitsu\fsepv<x>server64\lib\mcevent.dll"
   ```

   Note that "<x>" indicates the product version.

5. Delete the file resources
   
   Delete the following file resources:
   
   - Data storage destination directory
   - Mirroring Controller management directory
   
   **Example**
   
   ```
   > rmdir /S /Q D:\database\inst1
   > rmdir /S /Q D:\mcdir\inst1
   ```

See

Refer "Security-Related Notes" in the Operation Guide for information on deleting the data securely.
6. Stop the application jobs
   Stop the application jobs to be connected to the primary server.

7. Stop Mirroring Controller and the instance on the primary server
   Execute the mc_ctl command in stop mode on the primary server.
   
   Example)
   
   > mc_ctl stop -M D:\mcdir\inst1

8. Unregister Mirroring Controller from the Windows service on the primary server
   Execute the mc_ctl command in unregister mode to unregister Mirroring Controller from the Windows service.
   
   Example)
   
   > mc_ctl unregister -M D:\mcdir\inst1

9. Delete registries related to the event log on the primary server
   If error logs are output to the event log in “2.2.1.2 Preparatory Tasks for the Output of Error Logs to the Event Log”, delete the registered event source name for each instance.
   
   Example)
   
   > regsvr32 /u /i:"Mirroring Controller inst1" "c:\Program Files\Fujitsu\fsepv<x>server64\lib\mcevent.dll"

   Note that "<x>" indicates the product version.

10. Delete the database multiplexing mode settings that were configured for the primary server instance.
    Take the appropriate action for each parameter and resource by editing postgresql.conf as shown below. Also, delete recovery.conf or change its name to recovery.done for example. Delete the file resources from the Mirroring Controller management directory.

<table>
<thead>
<tr>
<th>File</th>
<th>Parameter</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>postgresql.conf</td>
<td>wal_level</td>
<td>Revert the value to the one set before the database multiplexing mode was set, or delete the &quot;replica&quot; or &quot;logical&quot; value that was specified. (*1)</td>
</tr>
<tr>
<td></td>
<td>max_wal_senders</td>
<td>Revert the value to the one set before database multiplexing mode was set.</td>
</tr>
<tr>
<td></td>
<td>synchronous_standby_names</td>
<td>Delete. (*1)</td>
</tr>
<tr>
<td></td>
<td>wal_log_hints</td>
<td></td>
</tr>
<tr>
<td></td>
<td>wal_sender_timeout</td>
<td></td>
</tr>
<tr>
<td></td>
<td>wal_receiver_timeout</td>
<td></td>
</tr>
<tr>
<td></td>
<td>listen_addresses</td>
<td></td>
</tr>
<tr>
<td></td>
<td>max_connections</td>
<td></td>
</tr>
<tr>
<td></td>
<td>superuser_reserved_connections</td>
<td></td>
</tr>
<tr>
<td></td>
<td>hot_standby</td>
<td>Delete. (*1)</td>
</tr>
<tr>
<td></td>
<td>synchronous_commit</td>
<td>Revert the value to the one set before the database multiplexing mode was set.</td>
</tr>
</tbody>
</table>

*1: No action is required if there is no change to the setting before the start of the database multiplexing mode.

Additionally, if the backup operation was performed, delete the following resources:
- Mirroring Controller management directory backup data obtained in database multiplexing mode
Instance backup data obtained in database multiplexing mode

After these actions are performed, ensure that the backup data is collected when starting the single operation.

See

- Refer to “Security-Related Notes” in the Operation Guide for details on deleting the data securely.
- Refer to "2.14 Backup Operation" for details on the backup operation.
- Refer to "Appendix A Parameters" for details on the postgresql.conf file parameters.

Point

In the above procedure, if the postgresql.conf file of the single primary server can be changed by reloading the file, the operation mode can be changed without stopping the application job.

In that case, execute the mc_ctl command in stop mode with the --mc-only option specified to stop only Mirroring Controller in relation to stopping the primary server.

Tasks on the arbitration server

Windows

1. Execute the mc_arb command in stop mode to stop the Mirroring Controller arbitration process.

   Example)

   ```
   > mc_arb stop -M D:\mcarb_dir\arbiter1
   ```

2. Unregister the Mirroring Controller arbitration process from the Windows service.

   Execute the mc_arb command in unregister mode to unregister the Mirroring Controller arbitration process from the Windows service.

   Example)

   ```
   > mc_arb unregister -M D:\mcarb_dir\arbiter1
   ```

3. Delete registrations related to the event log

   If error logs are output to the event log in "2.2.2.1 Preparing to Output Error Logs to the Event Log (Windows)", delete the registered event source name for each instance.

   Example)

   ```
   > regsvr32 /u /i:"Mirroring Controller arbtier1" "c:\Program Files\Fujitsu\fsepv<x>assistant64\lib\mcarbevent.dll"
   ```

   Note that "<x>" indicates the product version.

4. Delete the Mirroring Controller arbitration process management directory.

   Example)

   ```
   > rmdir /S /Q D:\mcarb_dir\arbiter1
   ```
3.9.4 Changing to Database Multiplexing Mode when the Arbitration Server is Used for Automatic Degradation

This section provides the procedure to change to database multiplexing mode using the Mirroring Controller only on the database server when the arbitration server is used for automatic degradation.

Some tasks must be performed on the database server, and others must be performed on the arbitration server.

Tasks on the arbitration server

1. Set up the arbitration server.

   Refer to "2.3 Setting Up the Arbitration Server" for information on how to set up the arbitration server.

Tasks on the database server

1. On the server where Mirroring Controller is running, execute the mc_ctl command in stop mode to stop Mirroring Controller on the primary server and standby server.

   Example)
   ```
   > mc_ctl stop -M D:\mcdir\inst1 -a --mc-only
   ```

2. Edit the network.conf file of the primary server and standby server to add the information of the arbitration server.

   Refer to "A.3 Network Configuration File" for details.

   The definition example of the network.conf file of the primary server is shown below:

   ```
   server1 192.0.2.100,192.0.3.100 27540,27541 server
   server2 192.0.2.110,192.0.3.110 27540,27541 server
   arbiter 192.0.3.120 27541 arbiter
   ```

   Note

   - Ensure that the port numbers set for the primary server, standby server, and arbitration server do not conflict with other software. Also do not configure the same segment for the admin network and arbitration network.

   - If the server type is "server", two IP addresses or host names, and two port numbers need to be specified in the following order:
     - IP address or host name of the database server used as the admin network
     - IP address or host name of the database server used as the arbitration network
     - Port number of the database server used as the admin network
     - Port number of the database server used as the arbitration network

   - If the server type is "arbiter", specify the IP address or host name set for the my_address parameter and the port number set for the port parameter in arbitration.conf.

3. Edit the serverIdentifier.conf file of the primary server and standby server to add parameters required for the operation where the arbitration server is used for automatic degradation.

   Refer to "A.4.1 Server Configuration File for the Database Servers" for information on the parameters required when the arbitration server is used for automatic degradation.

4. On the primary server and standby server, execute the mc_ctl command in start mode to start the Mirroring Controller process.

   Example)
Common tasks

1. Check the connection status from the database server or arbitration server.
   Refer to “2.8 Checking the Connection Status” for details.

### 3.9.5 Changing Parameters

Stop Mirroring Controller before editing the Mirroring Controller server configuration file and network configuration file.

If the Mirroring Controller process crashes or becomes unresponsive, restart is performed automatically by the Mirroring Controller monitoring process, and the configuration file is reloaded. Therefore, if the configuration file was being edited, unintended behavior will occur.

### 3.9.6 Uninstalling in Database Multiplexing Mode

This section explains how to uninstall FUJITSU Enterprise Postgres on a server using database multiplexing mode.

Some tasks must be performed on the database server, and others must be performed on the arbitration server.

The tasks on the arbitration server are required only if the arbitration server is used for automatic degradation.

#### Tasks on the database server

1. Stop the multiplexed instances and Mirroring Controller
   Refer to “3.2 Starting and Stopping Mirroring Controller” for information on how to stop the instance.

2. Unregister Mirroring Controller from the Windows service
   Execute the mc_ctl command in unregister mode to unregister Mirroring Controller from the Windows service.
   Example)
   ```
   > mc_ctl unregister -M D:\mcdir\inst1
   ```

3. Delete registries related to the event log
   If messages are output to the event log, DLLs are registered in accordance with “2.2.1.2 Preparatory Tasks for the Output of Error Logs to the Event Log”. Delete these registries so that no unnecessary issues occur.
   Example)
   The following is an example in which the DLL of a 64-bit product that is registered under the default event source name is deleted. Note that "<x>" indicates the product version.
   ```
   > regsvr32 /u "c:\Program Files\Fujitsu\fsepv<x>server64\lib\mcevent.dll"
   ```
   - Delete the registered DLL for each instance
   
   DLL registration is performed so that messages output to the event log are identified by each instance, and are output to any event source named by the user.
   
   Accordingly, it is necessary to delete the DLL registry for each instance. Delete the DLL registry for each event source name.
   
   Example)
   The following is an example in which the DLL of a 64-bit product that is registered under the event source name "Mirroring Controller inst1" is deleted. Note that "<x>" indicates the product version.
   ```
   > regsvr32 /u /i:"Mirroring Controller inst1" "c:\Program Files\Fujitsu\fsepv<x>server64\lib \mcevent.dll"
   ```
- If installing multiple versions

If the database multiplexing system you set up using the FUJITSU Enterprise Postgres package has been set to output error logs to the event log, use the DLL path name that you took note of previously as explained in "2.2.1.2 Preparatory Tasks for the Output of Error Logs to the Event Log" to reregister the default event source name.

Note

Ensure that you delete the DLLs before the uninstallation. If you perform the uninstallation without doing so, you may not be able to delete the DLLs at a later time.

4. Uninstall FUJITSU Enterprise Postgres

Refer to "Uninstallation" in the Installation and Setup Guide for Server Assistant for information on how to uninstall FUJITSU Enterprise Postgres.

Tasks on the arbitration server

Refer to "Uninstallation" in the Installation and Setup Guide for Server Assistant, and uninstall FUJITSU Enterprise Postgres.
Chapter 4 Action Required when an Error Occurs in Database Multiplexing Mode

This chapter describes the action required if an error occurs in database multiplexing mode.

In database multiplexing mode, when an error is detected, the switch or disconnection of the standby server is performed automatically, so that only the primary server starts degrading. In this case, the recovery tasks will be required for the standby server on which the switch or disconnection was performed.

Other possible cases are as follows:
- When automatic switch fails
- When automatic disconnection fails
- When all servers or instances were stopped

4.1 Action Required when Server Degradation Occurs

If the server has started degrading, the recovery tasks will vary depending on whether the cause was the switch (failover or switchover), or the disconnection.

Execute the mc_ctl command in status mode, or refer to the event log, and check if the cause of the server to start degrading was the switch or the disconnection.

In the example below, the mc_ctl command is executed in status mode.

If a switch has occurred, "switched" (the switch is complete and the server is in a degrading state) is displayed for "mirroring status".

Example)

```bash
> mc_ctl status -M D:\mcdir\inst1
  mirroring status
  ----------------
  switched

```

If a disconnection has occurred, "not-switchable" (disconnection was performed so the server cannot be switched) is displayed for "mirroring status".

Example)

```bash
> mc_ctl status -M D:\mcdir\inst1
  mirroring status
  ----------------
  not-switchable

```

Note

If Mirroring Controller detects any errors on the server on which operations are continuing during recovery to database multiplexing mode from a degrading operation state, perform the procedure in "4.1.3 Addressing Errors During Degrading Operation", and then recover to database multiplexing mode.

4.1.1 Operations when the Server has Started Degrading after a Switch has Occurred

This section explains the operations when the server has started degrading after a switch has occurred.
Note

- After a switch has occurred as a result of an abnormality on the primary server, the database will not have a multiplexed configuration until the standby server is rebuilt. Remove the cause of the error as quickly as possible, and then rebuild the standby server.

- If the reference job was executed on the standby server, and the servers are switched because an error occurred on the primary server, the load is concentrated on the new primary server. Accordingly, pause the reference job on the original standby server, rebuild the original primary server as the new standby server, and then resume the reference job for the new standby server.

- If the instance on the new primary server is stopped before the original primary server where the error occurred is rebuilt as the new standby server, a split brain occurs at startup from the instance on the original primary server. Therefore, start the instance on the new primary server before rebuilding the standby server.

If the switch occurred and the server has started degrading, perform the following operations to recover the standby server and revert it to its original state:

- Identify Cause of Error and Restore the Standby Server
- Rebuild the Standby Server
- Failback of the Primary Server (only if required)

The flow of these operations is shown in the figure below.
4.1.1.1 Identify Cause of Error and Restore the Standby Server

Perform the recovery according to the following procedure:

1. Stop Mirroring Controller
2. Recovery of the Mirroring Controller management directory
3. Identify cause of error and perform recovery

4.1.1.1.1 Stop Mirroring Controller

Execute the mc_ctl command in stop mode for the original primary server on which the error occurred.

Example)
> mc_ctl stop -M D:\mcdir\inst1

This also stops the instance that is required to perform the recovery.

**Note**

If the instance does not stop, refer to "Actions in Response to Failure to Stop an Instance" in the Operation Guide, and then stop the instance. Then, specify the -e option in the above command to forcibly stop Mirroring Controller.

### 4.1.1.1.2 Recovery of the Mirroring Controller management directory

Copy the files in the Mirroring Controller management directory from the backup data, and then perform the recovery.

### 4.1.1.1.3 Identify cause of error and perform recovery

Refer to the event log of the primary server and the standby server to identify the cause of the error, and then perform recovery.

The following commands can be used to recover a standby server:

- **pg_basebackup**

  Creates a copy of all resources of the primary server instance. This command is used for example when creating the first instance on the standby server.

- **pg_rewind**

  Creates a copy of only the updated files on the new primary server. For this reason, if this command is used to incorporate a new standby server, recovery time can be shortened. To use this command to build the original primary server as a new standby server, at least one of the following must be met:
  a. Checksums were enabled when an instance was created and the original primary server was stopped normally, or
  b. The original primary server was stopped normally and the wal_log_hints parameter of postgresql.conf was enabled when an instance was started.

Additionally, full_page_writes must be enabled, which is its default value.

If it is required to start the original primary server again to then stop it normally, both servers will temporarily operate as primary servers. If data is updated on the original primary server, data corruption will occur, so take measures such as changing settings in pg_hba.conf to disallow client connections.

When executing the pg_rewind command, the timeline ID of the source server and the target server must be different. However, immediately after promotion of the new primary server, it may not be possible to execute the pg_rewind command due to the application processing of unapplied update transaction logs and subsequent update processing of timeline IDs using checkpoint processing not being completed. Therefore, execute the pg_rewind command after unapplied update transaction logs are no longer on the new primary server and updating of timeline IDs is complete.

**See**

- Refer to "pg_basebackup" in "Reference" in the PostgreSQL Documentation for information on the pg_basebackup command.

- Refer to "pg_rewind" in "Reference" in the PostgreSQL Documentation for information on the pg_rewind command.

The example below executes the pg_rewind command to perform recovery by synchronizing data on the original primary server with the new primary server.

1. Use the pg_ctl command to start the original primary server instance.

   Example:

   ```
   > pg_ctl start -D D:\database\inst1
   ```
2. Use the `pg_ctl` command to stop the original primary server instance.

   Example)

   ```
   > pg_ctl stop -D D:\database\inst1
   ```

3. Wait for the application of unapplied update transaction logs on the new primary server.

   Execute the SQL below on the new primary server, and wait until the result is false.

   ```
   # select pg_is_in_recovery();
   ```

   Any database can be connected to.

   **Note**

   If the `pg_rewind` command is executed immediately after promotion of the new primary server, the processing in steps 3 and 4 is required. If update-type SQL can be executed on the new primary server and checkpoint processing is executed after promotion, the processing in steps 3 and 4 will not be necessary.

4. Update the timeline ID.

   Execute checkpoint processing, and update the timeline ID.

   Any database can be connected to.

5. Create a copy of the new primary server instance in the original primary server (new standby server).

   Execute the `pg_rewind` command to synchronize the new standby server data with the new primary server.

   Example)

   ```
   > pg_rewind -D D:\database\inst1 --source-server="user=userName host=newPrimaryServerHostName port=newPrimaryServerPortNumber dbname=dbName"
   ```

6. Specify parameters in the `postgresql.conf` file of the original primary server (new standby server).

   Set the parameters required for the standby server in `postgresql.conf`.

   Refer to "Table 2.4 Parameters" for information on the parameters to set in `postgresql.conf`.

7. Create the `recovery.conf` file on the original primary server (new standby server).

   The file will be used to connect to the new primary server for streaming replication.

   **See**

   Refer to "Recovery Configuration" in "Server Administration" in the PostgreSQL Documentation for details.

   **Note**

   A new timeline is branched for the new primary server due to promotion, so 'latest' needs to be specified for the `recovery_target_timeline` parameter so that the old primary server (new standby server) follows the new primary server.

4.1.1.2 Rebuild the Standby Server

The starting of the recovered original primary server as the standby server is referred to as the "standby server rebuild".

On the original primary server, start Mirroring Controller and the instance.

**Enabling automatic switch/disconnection**

As the instance administrator user, execute the `mc_ctl` command in start mode.
Example)
> mc_ctl start -M D:\mcdir\inst1

Disabling automatic switch/disconnection
As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.
Example)
> mc_ctl start -M D:\mcdir\inst1 -F

Point
After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

4.1.1.3 Failback of the Primary Server
To revert the primary server and standby server to the original server configuration after rebuilding the standby server, perform failback for the primary server.

Do this to execute the main job on the previous primary server.

Perform the following procedure:

1. Failback of the primary server
   Execute the mc_ctl command in switch mode on the primary server or the standby server.
   Example)
   > mc_ctl switch -M D:\mcdir\inst1
   After executing the mc_ctl command in switch mode, the status will be as follows:
   Example)
   > mc_ctl status -M D:\mcdir\inst1
   mirroring status
   _________________________________
   switched
   server_id host_role host host_status db_proc_status disk_status
   _________________________________
   server1 primary 192.0.2.100 normal abnormal(postmaster) normal
   server2 none(inactivated primary) 192.0.2.110 normal abnormal(postmaster) normal

2. Stop the original primary server
   On the original primary server, execute the mc_ctl command in stop mode to stop Mirroring Controller and the instance.
   Example)
   > mc_ctl stop -M D:\mcdir\inst1

3. Create a copy of the new primary server instance in the original primary server (new standby server)
   Execute the pg_basebackup command to create data in the new standby server by synchronizing with the new primary server.
   Example)
   > pg_basebackup -D D:\database\inst1 -X fetch --waldir=E:\transaction\inst1 --progress --verbose --R --dbname="application_name=standByServerName" --h primaryServerHostName --p primaryServerPortNumber
See

The procedure for copying the new primary server instance to the new standby server is the same as the procedure for setting up the new standby server.

Refer to "2.5.2 Creating, Setting, and Registering the Standby Server Instance", and then perform the recovery.

4. Rebuild the standby server

On the standby server, start Mirroring Controller and the instance.

Enabling automatic switch/disconnection

As the instance administrator user, execute the mc_ctl command in start mode.

Example:

```
> mc_ctl start -M D:\mcdir\inst1
```

Disabling automatic switch/disconnection

As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.

Example:

```
> mc_ctl start -M D:\mcdir\inst1 -F
```

Point

After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

4.1.2 Operations when the Server has Started Degrading after a Disconnection has Occurred

This section explains the operations when the server has started degrading after a disconnection has occurred.

Note

After a disconnection has occurred as a result of an abnormality on the standby server, the database will not have a multiplexed configuration until the standby server is rebuilt. Remove the cause of the error as quickly as possible, and then rebuild the standby server.

If the disconnection occurred and the server has started degrading, perform the following operations to recover the standby server and revert it to its original state:

- Identify Cause of Error and Restore the Standby Server
- Rebuild the Standby Server

The flow of these operations is shown in the figure below.
4.1.2.1 Identify Cause of Error and Restore the Standby Server

Perform the recovery according to the following procedure:

1. **Stop Mirroring Controller**

2. **Recovery of the Mirroring Controller management directory**

3. **Identify cause of error and perform recovery**

**4.1.2.1.1 Stop Mirroring Controller**

Execute the `mc_ctl` command in stop mode for the standby server on which the error occurred.

**Example**

```bash
> mc_ctl stop -M D:\mcdir\inst1
```

This also stops the instance that is required to perform the recovery.
Note

If the instance does not stop, refer to "Actions in Response to Failure to Stop an Instance" in the Operation Guide, and then stop the instance. Then, specify the -e option in the above command to forcibly stop Mirroring Controller.

4.1.2.1.2 Recovery of the Mirroring Controller management directory

Copy the files in the Mirroring Controller management directory from the backup data, and then perform the recovery.

4.1.2.1.3 Identify cause of error and perform recovery

Refer to the event log of the primary server and the standby server to identify the cause of the error, and then perform recovery.

Execute the pg_basebackup command to perform recovery by synchronizing data in the primary server with the standby server.

Example)

```bash
> pg_basebackup -D D:\database\inst1 -X fetch --waldir=E:\transaction\inst1 --progress --verbose -R --
dbname="application_name=standbyServerName" -h primaryServerHostName -p primaryServerPortNumber
```

See

This recovery procedure is the same as the procedure for setting up the standby server. Refer to "2.5.2 Creating, Setting, and Registering the Standby Server Instance", and then perform the recovery.

4.1.2.2 Rebuild the Standby Server

Start the Mirroring Controller and the instance of the standby server, and rebuild the standby server.

Enabling automatic switch/disconnection

As the instance administrator user, execute the mc_ctl command in start mode.

Example)

```bash
> mc_ctl start -M D:\mcdir\inst1
```

Disabling automatic switch/disconnection

As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.

Example)

```bash
> mc_ctl start -M D:\mcdir\inst1 -F
```

Point

After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

4.1.3 Addressing Errors During Degrading Operation

This section explains how to address errors that may occur on the server on which operation is continuing during degrading operation triggered by a switch or disconnection.

If needing to recover from backup data

If it is necessary to recover the database using backup data due to data becoming corrupted from disk failure or user operation error, refer to the following for information on recovery to database multiplexing mode:
If a temporary error occurs

If a temporary error occurs, such as due to a high load on the server or insufficient system resources, remove the cause of the error and restart Mirroring Controller, and then refer to the following for details on recovery to database multiplexing mode:

- Operations when the Server has Started Degrading after a Switch has Occurred
- Operations when the Server has Started Degrading after a Disconnection has Occurred

See

Refer to "3.2.1 Starting Mirroring Controller" and "3.2.2 Stopping Mirroring Controller" for information on restarting Mirroring Controller.

4.2 Action Required when Automatic Switch Fails

If the system behavior is unstable, for example there are insufficient temporary system resources, the Mirroring Controller automatic switch may fail.

Perform the switch manually using one of the following methods:

- Refer to the procedures in "3.4 Manually Switching the Primary Server".
- In the standby server, execute the mc_ctl command in switch mode with the -force option specified to forcibly perform the switch.

Example)

```
> mc_ctl switch -M D:\mcdir\inst1 --force
```

Point

- Even if connection cannot be established between database servers, it is possible to fence the primary server and forcibly switch by executing the mc_ctl command in switch mode with the --force option specified.
- The primary server is not fenced in the cases below, so stop Mirroring Controller and instances of the primary server database in advance:
  - The --no-fencing option is specified when performing forced switch.
  - The heartbeat_error_action parameter in serverIdentifier.conf is set to "message" and the fencing command is not configured to be used (the fencing_command parameter is omitted in serverIdentifier.conf).
  - The heartbeat_error_action parameter in serverIdentifier.conf is set to "fallback".

See

Recovery to database multiplexing mode

Refer to "4.1.1.2 Rebuild the Standby Server" and "4.1.1.3 Failback of the Primary Server" for information on recovery to database multiplexing mode.

4.3 Action Required when Automatic Disconnection Fails

If the system behavior is unstable, for example there are insufficient system resources such as available memory or free disk space, automatic disconnection using Mirroring Controller may not be possible.

Perform the disconnection manually using one of the following methods:
- Refer to the procedures in "3.5 Manually Disconnecting the Standby Server".
- In the primary server, execute the mc_ctl command in detach mode to perform forced disconnection.

Example)

```bash
> mc_ctl detach -M D:\mcdir\inst1
```

**Point**

- Even if connection cannot be established between database servers, it is possible to fence the standby server and forcibly disconnect by executing the mc_ctl command in detach mode.
- In the cases below, stop Mirroring Controller and instances of the standby server database in advance so that the standby server is not fenced:
  - The --no-fencing option is specified when performing forced disconnection.
  - The heartbeat_error_action parameter in serveridentifier.conf is set to "message" and the fencing command is not configured to be used (the fencing_command parameter is omitted in serveridentifier.conf).
  - The heartbeat_error_action parameter in serveridentifier.conf is set to "fallback".

**See**

Recovery to database multiplexing mode
Refer to "4.1.2.2 Rebuild the Standby Server" for information on recovery to database multiplexing mode.

### 4.4 Action Required when All Database Servers or Instances Stopped

This section explains what happens when all database servers or instances on the database server have stopped, so jobs cannot continue.

**See**

Recovery to database multiplexing mode
Refer to "4.1.1.2 Rebuild the Standby Server" and "4.1.1.3 Failback of the Primary Server" for information on recovery to database multiplexing mode.

**Overview of recovery operations**

After recovering the database to the state immediately prior to the failure on a specific server comprising the database multiplexing system, restore the system.

In other words, after specifying the server on which the database is to be recovered and then recovering it as the new primary server, configure all other servers as new standby servers.

The flow of these recovery operations is shown in the figure below.
Perform the following procedure.

1. Stop applications
   
   Stop running applications.
2. Stop Mirroring Controller

Execute the mc_ctl command in stop mode on all servers that comprise the database multiplexing system.

Example:

```
> mc_ctl stop -M D:\mcdir\inst1
```

**Note**

Forcibly stop Mirroring Controller

If Mirroring Controller does not stop, execute the mc_ctl command in stop mode with the -e option specified.

Example:

```
> mc_ctl stop -M D:\mcdir\inst1 -e
```

3. Perform prerequisite tasks before recovering the database

First, refer to "Actions when an Error Occurs" in the Operation Guide, and then identify the cause of the error and perform recovery of the disk on which the failure occurred, etc.

4. Identify the new primary server

Perform the following operations on all servers comprising the database multiplexing system, and check the server containing the backup data that shows the latest date. This server will become the new primary server, on which the database is to be recovered.

Example:

In the example below, the pgx_rcvall command is executed with the -l option specified and the backup data that shows the latest date is identified.

```
> pgx_rcvall -l -D D:\database\inst1
```

<table>
<thead>
<tr>
<th>Date</th>
<th>Status</th>
<th>Dir</th>
</tr>
</thead>
</table>

5. Recover the database on the new primary server

Recover the database using the recovery method that uses the pgx_rcvall command based on the backup data.

a. Perform the following operations on all servers comprising the database multiplexing system, and check the server containing the archive log and mirrored transaction log that show the latest date.

Example:

In the example below, the archive log and mirrored transaction log that show the latest date are identified.

```
> dir /OD <backupDataStorageDir>\*_wal
```

b. If the server containing the latest archive log and mirrored transaction log is different to the new primary server identified in step 4, all files and directories under the directory shown below are copied and written to the backup storage destination directory on the new primary server.

Deployment destination directory of the archive log and mirrored transaction log

```
<backupDataStorageDir>\*_wal
```

c. Execute the pgx_rcvall command on the new primary server, specifying the backup storage destination directory you used in step b.

Example:

In the example below, the pgx_rcvall command is executed with the -B option specified.

```
> pgx_rcvall -B E:\backup\inst1 -D D:\database\inst1
```
6. Recover the Mirroring Controller management directory

Copy the files in the Mirroring Controller management directory from the backup data on the new primary server, and then perform the recovery.

7. Start the instance and Mirroring Controller

Start the instance and Mirroring Controller on the new primary server.

- **Enabling automatic switch/disconnection**
  
  As the instance administrator user, execute the mc_ctl command in start mode.
  
  Example)
  
  ```
  > mc_ctl start -M D:\mcdir\inst1
  ```

- **Disabling automatic switch/disconnection**
  
  As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.
  
  Example)
  
  ```
  > mc_ctl start -M D:\mcdir\inst1 -F
  ```

- **Point**
  
  After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

8. Resume applications

Resume execution of applications.

9. Build the new standby server

Refer to "2.5 Setting Up the Standby Server" for information on building (setting up) a standby server from the primary server.

- **Point**
  
  It is not necessary to repeat steps that have already been performed, such as registering to Windows services.

**4.5 Recovering from an Incorrect User Operation**

This section describes how to recover an instance when data has been corrupted due to incorrect user operation.

For example, when data has been corrupted due to incorrect user operation, such as data being unintentionally changed or deleted by an application or command, it is necessary to restore the original data on the primary server and resynchronize with the standby server.

Use the following procedure to perform recovery.

1. Identify the primary server
   
   Execute the mc_ctl command in status mode on each server, and search for a server for which "primary" or "none(inactivated primary)" is displayed.

2. Stop the applications and commands that caused the incorrect operation to occur
   
   Stop applications and commands that are running on the primary server. This will minimize the impact caused by the incorrect data.
Also, if any applications used for reference by the standby server are running, stop them too.

3. Stop the instance and Mirroring Controller
   Stop the instance and Mirroring Controller on both the primary server and standby server.
   Example)
   
   $ mc_ctl stop -a -M D:\mcdir\inst1

4. Recover the database on the primary server
   Recover the database using the recovery method in which the pgx_rcvall command uses the backup data to recover the database to a restore point prior to the time when the incorrect operation was performed.

   See
   
   Refer to "Recovering from an Incorrect User Operation" in the Operation Guide for information on using the pgx_rcvall command to recover the database to a restore point, and then perform only the database recovery procedure while the instance is in a stop state.

5. Start the instance and Mirroring Controller
   Start the instance and Mirroring Controller on the primary server.

   Enabling automatic switch/disconnection
   As the instance administrator user, execute the mc_ctl command in start mode.
   Example)
   
   > mc_ctl start -M D:\mcdir\inst1

   Disabling automatic switch/disconnection
   As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.
   Example)
   
   > mc_ctl start -M D:\mcdir\inst1 -F

   Point
   After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

6. Build the new standby server
   Refer to "2.5 Setting Up the Standby Server" for information on building (setting up) a standby server from the primary server.

   Point
   It is not necessary to repeat steps that have already been performed, such as registering to Windows services.
Chapter 5 Managing Mirroring Controller Using WebAdmin

This chapter describes how to set up and manage Mirroring Controller in a streaming replication cluster using WebAdmin. Mirroring Controller can be used to monitor a streaming replication cluster and perform automatic switching or disconnect synchronous replication when there is an error. WebAdmin can be used to set up Mirroring Controller in an existing replication cluster having master and synchronous standby instances. The configuration of the database multiplexing system built using WebAdmin is shown below:

Figure 5.1 Configuration of database multiplexing operation system using WebAdmin

![Diagram](image)

**Point**

- If Mirroring Controller is set up to the replication cluster using WebAdmin, the network with the host name (or IP address) specified in [Host name] will be used as the admin network and the log transfer network.
- To use a network other than the job network as the log transfer network, before building the replication cluster specify a host name other than the job network one in [Host name].

### 5.1 Mirroring Controller Setup

Perform the following procedure to setup Mirroring Controller in a streaming replication cluster. The option for this setup is accessible only in synchronous standby instance.

1. In the [Instances] tab, select the synchronous standby instance on which Mirroring Controller needs to be set up.
2. Click ""
3. Enter the information for the Mirroring Controller to be setup.

In the example below, Mirroring Controller is being setup for the replication cluster having master instance “inst1” and standby instance “inst1s”.

The instance name, host address and port of the master and standby instances are displayed for easy reference.

Enter the following items on master instance and on standby instance fields for Mirroring Controller setup, as shown in the above screenshot:

- [Enable automatic switch over]: Toggles the automatic switch/disconnection functionality. Select "Yes". The default is "No".
- [Mirroring Controller port]: Port number of Mirroring Controller. Note that if the Windows firewall feature is enabled, you must enable the port number of Mirroring Controller. Refer to "E.2 Windows Firewall Settings" for details.
- [Mirroring Controller management directory]: Directory where the Mirroring Controller configuration files will be stored.
- [Heartbeat interval (milliseconds)]: Number of milliseconds between two consecutive heartbeat checks. The default is “800”.
- [Heartbeat timeout (seconds)]: Number of seconds for the heartbeat timeout. The default is "1".
- [Heartbeat retry]: Number of retries for heartbeat monitoring, before failover occurs. The default is "2".

4. Click to setup Mirroring Controller.
5. Upon successful completion, Mirroring Controller will be started on master and standby instances. In the [Instances] tab, select standby instance. The page below is displayed, in which you can check the Mirroring Controller status. In the example below, standby instance “inst1s” is used.

5.2 Stopping Mirroring Controller

Mirroring Controller can be stopped either in master instance or in standby instance using WebAdmin. Perform the following procedure to stop Mirroring Controller.

1. In the [Instances] tab, select the instance where to stop Mirroring Controller.

2. Click [Stop].

3. In the confirmation dialog box, click [Yes].

Mirroring Controller will be stopped on the selected instance. The Mirroring Controller status will be updated, and a confirmation message entry will be displayed in the [Message] section.

5.3 Starting Mirroring Controller

Mirroring Controller can be started either in master instance or in standby instance using WebAdmin. Perform the following procedure to start Mirroring Controller.

1. In the [Instances] tab, select the instance where to start Mirroring Controller.

2. Click [Start].

3. In the confirmation dialog box, select the desired failover mode, and then click [Yes].

Mirroring Controller will be started on the selected instance. The Mirroring Controller status will be updated, and a confirmation message entry will be displayed in the [Message] section.

5.4 Disabling Failover Mode

Disabling failover mode in Mirroring Controller disables automatic switch/disconnection between master and standby instances.
Perform the following procedure to disable failover mode.

1. In the [Instances] tab, select the instance.
2. Click 🔄.
3. In the confirmation dialog box, click [Yes].

Failover mode will be disabled in Mirroring Controller. The Mirroring Controller status will be updated and a confirmation message entry will be displayed in the [Message] section.

### 5.5 Enabling Failover Mode

Enabling failover mode in Mirroring Controller enables automatic switch/disconnection between master and standby instances.

Perform the following procedure to enable failover.

1. In the [Instances] tab, select the instance.
2. Click 🔄.
3. In the confirmation dialog box, click [Yes].

Failover mode will be enabled in Mirroring Controller. The Mirroring Controller status will be updated and a confirmation message entry will be displayed in the [Message] section.

### 5.6 Deleting Mirroring Controller Setup

Deleting Mirroring Controller setup removes its setup from master and standby instances.

1. In the [Instances] tab, select the instance.
2. Click 🔄.
3. In the confirmation dialog box, click [Yes].

Mirroring Controller setup will be removed from the cluster. The cluster status will be updated and a confirmation message entry will be displayed in the [Message] section.

### 5.7 Status Update after Failover

When Mirroring Controller performs a failover, standby instance will be promoted to standalone instance. The Mirroring Controller setup will be removed from both standby and master instances.

The following scenario describes one of the ways in which failover can be triggered, and the results achieved by the use of Mirroring Controller in WebAdmin.

1. In the [Instances] tab, select the master instance "inst1".
2. Click 🔄.
3. In the confirmation dialog box, the warning "This instance is being monitored by Mirroring Controller. Stopping the instance may result in cluster failover." is displayed.
4. Choose the stop mode and click [Yes].

   In the server, the following takes place:
   a. The master instance is stopped.
   b. Failover is triggered in Mirroring Controller.
   c. The Mirroring Controller setup is removed from both master and standby instances.
   d. Standby instance is promoted to standalone.
5. When the instance is refreshed in WebAdmin, the latest status of the instances will be displayed.

**Note**

When failover is performed, the Mirroring Controller setup is removed from both master and standby instances. Therefore, to manage the Mirroring Controller using WebAdmin again, create the standby instance and set up Mirroring Controller.

Refer to "Creating a Standby Instance" in the Operation Guide for details.

Refer to "5.1 Mirroring Controller Setup" for details.

---

### 5.8 Action Required when an Error Occurs in the Combined Admin Network and Log Transfer Network

Communication errors may temporarily occur in the network used as the admin network and log transfer network due to reasons such as high load on the server or insufficient system resources. Because of this, there is a risk of causing a split-brain situation by mistake even though the server has no issues.

Split brain refers to a situation where data update is performed on both servers because they both work as a primary server temporarily.

**How to detect split brain using WebAdmin**

If the conditions below are met, split brain may occur. Refer to "Split-brain detection method" and "How to recover from a split-brain" in "Appendix D Notes on Performing Automatic Degradation Immediately after a Heartbeat Abnormality" and take the actions described.

1. A standby instance is selected in the [Instances] tab, and
2. "Standalone" is displayed in [Instance type], and
3. A primary instance is selected in the [Instances] tab, and
4. "Standalone" is displayed in [Instance type].

**Note**

The admin network is important because Mirroring Controllers use it to confirm the status of each server.

The log transfer network is also important to maintain the data freshness.

Therefore, use network configurations resistant to faults for these networks by using the network redundancy channel bonding feature provided by the operating system or network driver vendor.

---

### 5.9 Performing Automatic Degradation Using the Arbitration Server

If database multiplexing is performed using WebAdmin, it is also possible to perform automatic degradation using the arbitration server. In such cases, it is necessary to perform tasks on the database server and the arbitration server after setting up Mirroring Controller in WebAdmin.

**Tasks on the arbitration server**

Perform setup of the arbitration server using Mirroring Controller commands.

1. Set up the arbitration server.
   
   Refer to "2.3 Setting Up the Arbitration Server" in "Chapter 2 Setting Up Database Multiplexing Mode" for information on how to set up the arbitration server.
Tasks on the database server

Change some of the settings after setting up Mirroring Controller in WebAdmin.

1. Set up Mirroring Controller in WebAdmin.
   Refer to "5.1 Mirroring Controller Setup" for details.

2. Use WebAdmin to stop Mirroring Controller on the master and standby instances.
   Refer to "5.2 Stopping Mirroring Controller" for details.

3. Edit the network configuration file of the master and standby instances, and add the arbitration server information.
   The network configuration file is network.conf, which exists in the Mirroring Controller management directory specified during Mirroring Controller setup. Refer to "A.3 Network Configuration File" for details.
   A definition example of network.conf is shown below.

   Example:
   The port number of the database server to be used as the arbitration network is set to "27541". The ID of the server of the Mirroring Controller arbitration process is set to "arbiter", and its port number is set to "27541".

<table>
<thead>
<tr>
<th>Server</th>
<th>IP Address</th>
<th>Port Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>dbsvm27500</td>
<td>192.0.2.100, 192.0.3.100</td>
<td>27540, 27541 server</td>
</tr>
<tr>
<td>dbsvs27500</td>
<td>192.0.2.110, 192.0.3.110</td>
<td>27540, 27541 server</td>
</tr>
<tr>
<td>arbiter</td>
<td>192.0.3.120</td>
<td>27541 arbiter</td>
</tr>
</tbody>
</table>

   Note
   - Ensure that the port numbers set for the database server and the arbitration server do not conflict with other software. In addition, do not configure the same segment for the admin network and the arbitration network.
   - If the server type is "server", two IP addresses or host names, and two port numbers need to be specified in the following order:
     - IP address or host name of the database server used as the admin network
     - IP address or host name of the database server used as the arbitration network
     - Port number of the database server used as the admin network
     - Port number of the database server used as the arbitration network
   - If the server type is "arbiter", specify the IP address or host name set for the my_address parameter and the port number set for the port parameter in arbitration.conf of the arbitration server.

4. Edit the server configuration file of the master and standby instances, and add the parameters required for automatic degradation using the arbitration server.
   The server configuration file is instanceName.conf or instancePort.conf, which exists in the Mirroring Controller management directory specified during Mirroring Controller setup.
   To perform automatic degradation using the arbitration server, set the heartbeat_error_action parameter to "arbitration".
   Refer to "A.4.1 Server Configuration File for the Database Servers" for information on other parameters.

5. Use WebAdmin to start Mirroring Controller on the master and standby instances.
   Refer to "5.3 Starting Mirroring Controller" for details.

Common tasks

1. Use the Mirroring Controller command to check the connection status from the database server or the arbitration server.
   Refer to "2.8 Checking the Connection Status" for information on how to check the connection status.
Appendix A Parameters

This appendix describes the configuration files and parameters required by the database multiplexing mode.

See

Refer to "Server Configuration" in the PostgreSQL Documentation for information on the postgresql.conf file.

A.1 Parameters Set on the Primary Server

The content for the parameters set in the postgresql.conf file of the primary server is shown in the table below.

Table A.1 postgresql.conf file

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value set</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>wal_level</td>
<td>replica or logical</td>
<td>Specify the output level for the transaction log.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Specify &quot;logical&quot; when logical decoding is also to be used.</td>
</tr>
<tr>
<td>max_wal_senders</td>
<td>2 or more</td>
<td>Specify &quot;2&quot; when building a Mirroring Controller cluster system.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>When additionally connecting asynchronous standby servers to the cluster system, add the number of simultaneous connections from these standby servers.</td>
</tr>
<tr>
<td>synchronous_standby_names</td>
<td>'standbyServerName'</td>
<td>Use single quotation marks (') to enclose the name that will identify the standby server. Any name can be specified.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Do not change this parameter while Mirroring Controller is running.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Do not specify multiple names to this parameter as there is only one standby server.</td>
</tr>
<tr>
<td>hot_standby</td>
<td>on</td>
<td>Specify whether queries can be run on the standby server.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Specify this to execute reference jobs on the standby server.</td>
</tr>
<tr>
<td>wal_keep_segments</td>
<td>Number of file segments</td>
<td>If a delay exceeding the value set in this parameter occurs, the WAL segment required later by the primary server may be deleted.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Additionally, if you stop a standby server (for maintenance, for example), consider the stop time and set a value that will not cause the WAL segment to be deleted.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Refer to &quot;Estimating Transaction Log Space Requirements&quot; in the Installation and Setup Guide for Server for information on estimating the WAL segment.</td>
</tr>
<tr>
<td>wal_log_hints</td>
<td>on</td>
<td>When using the pg_rewind command to recover a standby server, specify this parameter or enable checksums when executing the initdb command.</td>
</tr>
<tr>
<td>wal_sender_timeout</td>
<td>Timeout (milliseconds)</td>
<td>Specify the time period after which it is determined that the receiver process (walreceiver) of the transaction log is in an abnormal state on the primary server.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The specified value must be larger than the value set for the wal_receiver_status_interval parameter set in the postgresql.conf file of the standby server.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Value set</td>
<td>Explanation</td>
</tr>
<tr>
<td>------------------------</td>
<td>-----------------------------------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>wal_receiver_timeout</td>
<td>Timeout (milliseconds)</td>
<td>Specify the time period after which it is determined that an error has occurred when the transaction log was received on the standby server. By aligning this value with the value for the database process heartbeat monitoring time, you can unify the time after which it is determined that an error has occurred.</td>
</tr>
<tr>
<td>archive_mode</td>
<td>on</td>
<td>Specify the archive log mode.</td>
</tr>
<tr>
<td>archive_command</td>
<td>'cmd /c &quot;&quot;installDir\bin\pgx_walcopy.cmd&quot; &quot;%p&quot; &quot;backupDataStorageDestinationDir \archived_wal%f&quot;'''</td>
<td>Specify the command and storage destination to save the transaction log.</td>
</tr>
<tr>
<td>backup_destination</td>
<td>Backup data storage destination directory</td>
<td>Specify the name of directory where to store the backup data. Set the permissions so that only the instance administrator user can access the specified directory. Specify the same full path on all servers, so that the backup data of other servers can be used to perform recovery.</td>
</tr>
<tr>
<td>listen_addresses</td>
<td>Primary server IP address, host name, or &quot;*&quot;</td>
<td>Specify the IP address or host name of the primary server. Specify the IP address or corresponding host name that will be used to connect to the log transfer network. The content specified is also used to allow connections from client applications. To receive the connection and the transaction log from any client or standby server, specify &quot;*&quot;. Refer to &quot;Connections and Authentication&quot; in the PostgreSQL Documentation for details.</td>
</tr>
<tr>
<td>max_connections</td>
<td>Value of max_wal_senders + number of simultaneous client connections to the instance + superuser_reserved_connections value</td>
<td>The value specified is also used to restrict the number of connections from client applications and the number of connections for the management of instances. Refer to &quot;When an Instance was Created with the initdb Command&quot; in the Installation and Setup Guide for Server, and &quot;Connections and Authentication&quot; in the PostgreSQL Documentation, for details.</td>
</tr>
<tr>
<td>superuser_reserved_connections</td>
<td>Add the number of simultaneous executions of mc_ctl status (+1) + 2</td>
<td>Specify the number of connections reserved for connections from database superusers. Add the number of connections from Mirroring Controller processes. Also reflect the added value in the max_connections parameter.</td>
</tr>
<tr>
<td>restart_after_crash</td>
<td>off</td>
<td>If &quot;on&quot; is specified, or the default value is used for this parameter, behavior equivalent to restarting FUJITSU Enterprise Postgres, including crash recovery, will be performed when some server processes end abnormally. However, when database multiplexing monitoring is used, a failover will occur after an error is detected when some server processes end abnormally, and the restart of those server processes is forcibly stopped. Specify &quot;off&quot; to</td>
</tr>
</tbody>
</table>
A.2 Parameters Set on the Standby Server

This section explains the content of the file and parameters set on the standby server. After editing postgresql.conf file, start the instance.

The content for the parameters specified in postgresql.conf file is shown in the table below.

Table A.2 postgresql.conf file

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value set</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>wal_level</td>
<td>replica or logical</td>
<td>Specify the output level for the transaction log. Specify &quot;logical&quot; when logical decoding is also to be used.</td>

<tr>
<td>restart_after_crash</td>
<td>off</td>
<td>If &quot;on&quot; is specified, or the default value is used for this parameter, behavior equivalent to restarting FUJITSU Enterprise Postgres, including crash recovery, will be performed when some server processes end abnormally. However, when database multiplexing monitoring is used, a failover will occur after an error is detected when some server processes end abnormally, and the restart of those server processes is forcibly stopped. Specify &quot;off&quot; to prevent behavior such as this from occurring for no apparent reason.</td>
</tr>
<tr>
<td>synchronous_commit</td>
<td>on or remote_apply</td>
<td>Specify up to what position WAL send is to be performed before transaction commit processing returns a normal termination response to a client. The recommended value is &quot;on&quot; or &quot;remote_apply&quot; to prevent data loss caused by the node switch or a node shutdown immediately after the switch.</td>
</tr>
</tbody>
</table>

A.3 Network Configuration File

This section explains the network configuration file (network.conf) to be defined individually for the database servers and the arbitration server. Define the same content on the primary server and standby server.

For database multiplexing mode, define the network configuration for the following in network.conf.

- Integration between Mirroring Controller processes
- Integration between a Mirroring Controller process and the Mirroring Controller arbitration process

**Items to be defined in network.conf**

Format:

```
serverIdentifier hostName[,hostName] portNum[,portNum] [serverType]
Or,
serverIdentifier ipAddr[,ipAddr] portNum[,portNum] [serverType]
```

Specify the server identifier, IP address or host name, port number, and server type, using a space as the delimiter.

The items are explained in the table below.

**Table A.3 network.conf file**

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverIdentifier</td>
<td>Specify any identifier for the server. The maximum length is 64 bytes. Use ASCII characters excluding spaces and number signs (#) to specify this parameter.</td>
</tr>
<tr>
<td>ipAddrOrHostName</td>
<td>Specify the IP address or its corresponding host name that will connect to the admin network that performs communication between the database servers, and to the arbitration network that performs communication between a database server and the arbitration server.</td>
</tr>
</tbody>
</table>
When specifying two IP addresses or host names delimited by a comma, do not insert a space after the comma.
Use ASCII characters excluding spaces to specify the host name.

A port number cannot be specified if it exceeds the range 0 to 65535. Ensure that the port number does not conflict with other software. Do not specify an ephemeral port that may temporarily be assigned by another program. Note that the value specified in this parameter must also be set in the services file.

When specifying two port numbers delimited by a comma, do not insert a space after the comma.

Specify "server" for a database server ("server" can be omitted), or "arbiter" for the arbitration server.

**Content to be defined on the database servers**

This section explains the network.conf content to be defined on the database servers.

The content to be defined depends on the operation settings at the time a heartbeat abnormality is detected.

**When automatic degradation by the arbitration server is selected**

- Specify definitions related to the admin network and arbitration network.
- Specify the IP address or host name and port number according to the server type (database server or arbitration server) as shown in the table below.

<table>
<thead>
<tr>
<th>Server type</th>
<th>IP address or host name</th>
<th>Port number</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>First</td>
<td>Second</td>
</tr>
<tr>
<td>server</td>
<td>IP address or host name used as the admin network</td>
<td>IP address or host name used as the arbitration network (*1)</td>
</tr>
<tr>
<td>arbiter</td>
<td>IP address or host name of the arbitration server Specify the same value as that specified in the my_address parameter of arbitration.conf on the arbitration server.</td>
<td>Not required</td>
</tr>
</tbody>
</table>

*1: This value can be omitted from definitions not related to the local node. If it is omitted, network.conf must be created on both the primary server and standby server.

**Example**

**IPv4**

```
server1 192.0.2.100,192.0.3.100 27540,27541 server
server2 192.0.2.110,192.0.3.110 27540,27541 server
arbiter 192.0.3.120 27541 arbiter
```

**IPv6**

```
```
When operation other than automatic degradation by the arbitration server is selected

- Specify definitions related to the admin network.
- Define the same content on the primary server and standby server.
- Define lines for database servers only.
- Specify only one IP address or host name and port number.

<table>
<thead>
<tr>
<th>IP address or host name to be used as the admin network</th>
<th>Port number used as the admin network</th>
<th>Not required</th>
</tr>
</thead>
<tbody>
<tr>
<td>IP address or host name</td>
<td>First</td>
<td>Second</td>
</tr>
<tr>
<td>IP address or host name</td>
<td>Not required</td>
<td>Port number</td>
</tr>
<tr>
<td>Port number</td>
<td>First</td>
<td>Second</td>
</tr>
</tbody>
</table>

Example)

The literal space represents a space.

IPv4

| server1 192.0.2.100 27540
| server2 192.0.2.110 27540 |

IPv6

Content to be defined on the arbitration server

This section explains the network.conf content to be defined on the arbitration server.

- Specify definitions related to the arbitration network.
- Define lines for database servers only.
- For the IP address or host name, specify the same value as the second IP address or host name specified in the database server line in network.conf of the database server.
- For the port number, specify the same value as the second port number specified in the database server line in network.conf of the database server.

Example)

The literal space represents a space.

IPv4

| server1 192.0.3.100 27541
| server2 192.0.3.110 27541 |

IPv6

| server1 2001:258:8404:1217:250:56ff:fea8:559f 27541
Relationship between network-related definitions

Refer to the diagram below for the relationship between the host names and IP addresses or port numbers specified in the network configuration file (network.conf) and arbitration configuration file (arbitration.conf).

A.4 Server Configuration File

A.4.1 Server Configuration File for the Database Servers

Define the information related to Mirroring Controller monitoring and control in the serverIdentifier.conf file. The maximum length of the server identifier is 64 bytes. Use ASCII characters excluding spaces to specify this parameter.

If the primary server and standby server environments are different, define content that is different, according to the environment.

Table A.4 serverIdentifier.conf file

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value set</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>db_instance</td>
<td>‘dataStorageDestinationDir’</td>
<td>Use halfwidth single quotation marks (‘’) to enclose the data storage destination directory that will identify the monitoring target instance. Use ASCII characters, and specify &quot;&quot; as the path delimiter.</td>
</tr>
<tr>
<td></td>
<td>[Example]</td>
<td><code>db_instance = 'D:\database1\inst1'</code></td>
</tr>
<tr>
<td>target_db</td>
<td>postgres or template1</td>
<td>Specify the name of the database to be connected to the database instance. The default is &quot;postgres&quot;.</td>
</tr>
<tr>
<td>db_instance_username</td>
<td><code>usernameToConnectToDbInstance</code></td>
<td>Specify the username to connect to the database instance. Use ASCII characters to specify this parameter. Specify this parameter if the database administrator user is different from the operating system user who starts Mirroring Controller.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Value set</td>
<td>Explanation</td>
</tr>
<tr>
<td>-------------------------</td>
<td>------------------------------------------------</td>
<td>------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>db_instance_password</td>
<td>'passwordOfInstanceAdminUser'</td>
<td>Specify the password used when Mirroring Controller connects to a database instance, enclosed in single quotation marks ('). Use ASCII characters to specify this parameter. If password authentication is performed, you must specify this parameter in the settings used when Mirroring Controller connects to a database instance. If you specify this parameter when password authentication is not performed, the parameter will be ignored.</td>
</tr>
<tr>
<td>core_file_path</td>
<td>'coreFileOutputDir'</td>
<td>Specify the directory to which the core file is to be output, enclosed in single quotation marks ('). Use ASCII characters, and specify &quot;&quot; as the path delimiter. If this parameter is omitted, it will be assumed that the Mirroring Controller management directory was specified.</td>
</tr>
<tr>
<td>db_instance_service_name</td>
<td>'registeredServiceNameOfFujitsuEnterprisePostgresInstance'</td>
<td>Specify the registered service name of the FUJITSU Enterprise Postgres instance in the Windows service. Use ASCII characters to specify this parameter, enclosed in single quotation marks (').</td>
</tr>
<tr>
<td>mc_service_name</td>
<td>'registeredServiceNameOfMirroringController'</td>
<td>Specify the Mirroring Controller service name registered in the Windows service. Use ASCII characters excluding forward slash (/) and backslash () to specify this parameter, enclosed in single quotation marks ('). The maximum length of the service name is 124 bytes. The default is 'MirroringControllerOpen'.</td>
</tr>
<tr>
<td>event_source(*1)</td>
<td>'eventSourceName'</td>
<td>Specify the event source name to be used to identify the Mirroring Controller message in the event log, enclosed in single quotation marks ('). Use ASCII characters to specify this parameter. The maximum length of the event source name is 255 bytes. The default is 'MirroringControllerOpen'.</td>
</tr>
<tr>
<td>remote_call_timeout</td>
<td>Admin communication timeout</td>
<td>Specify the timeout value (milliseconds) of the Mirroring Controller agent process for communication between servers. Specify a value between 0 and 2147483647. The value 0 indicates that there is no timeout limit. The default is 70000 milliseconds (70 seconds).</td>
</tr>
<tr>
<td>agent_alive_timeout</td>
<td>Timeout for Mirroring Controller process heartbeat monitoring (seconds)</td>
<td>If there is no response for at least the number of seconds specified, the Mirroring Controller process is restarted. Specify 0 or a value between 2 and 2147483647. The value 0 indicates that there is no timeout limit.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Value set</td>
<td>Explanation</td>
</tr>
<tr>
<td>---------------------------</td>
<td>---------------------------------------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------</td>

</tbody>
</table>
| heartbeat_error_action    | Operation when a heartbeat abnormality is detected using operating system or server heartbeat monitoring | The default is arbitration: Perform automatic degradation using the arbitration server.  
command: Call a user exit to determine degradation, and perform automatic degradation if required.  
message: Notify messages.  
fallback: Perform automatic degradation unconditionally.  
The default is "arbitration".  
Set the same value on the primary server and standby server. |
| heartbeat_interval        | Interval time for abnormality monitoring during heartbeat monitoring of the operating system or server (milliseconds) | Abnormality monitoring of the operating system or server is performed at the interval specified in heartbeat_interval.  
If an error is detected, operation will conform to the value specified for heartbeat_error_action. If "arbitration" is specified in heartbeat_error_action, the error detection time during monitoring of the operating system or server becomes longer than when the arbitration server is not used, by up to the value specified for arbitration_timeout.  
Specify a value between 1 and 2147483647.  
The specified value is used as the default for db_instance_check_interval and disk_check_interval.  
The default is 800 milliseconds. |
| heartbeat_timeout         | Timeout for abnormality monitoring during heartbeat monitoring of the operating system or server (seconds) | If there is no response for at least the number of seconds specified, it will be assumed that an error has occurred that requires the primary server to be switched, or the standby server to be disconnected.  
If an error is detected, operation will conform to the value specified for heartbeat_error_action. If "arbitration" is specified in heartbeat_error_action, the error detection time during monitoring of the operating system or server becomes longer than when the arbitration server is not used, by up to the value specified for arbitration_timeout.  
Specify a value between 1 and 2147483647.  
The specified value is used as the default for db_instance_check_timeout.  
The default is 1 second. |
| heartbeat_retry           | Number of retries for abnormality monitoring during heartbeat monitoring of the operating system or server (number of times) | Specify the number of retries to be performed when an error has been detected that requires the primary server to be switched, or the standby server to be disconnected. If an error is detected in succession more than the specified number of times, switch or disconnection will be performed.  
If an error is detected, operation will conform to the value specified for heartbeat_error_action. If "arbitration" is specified in heartbeat_error_action, the error detection time during monitoring of the operating system or server becomes longer than when the arbitration server is not used, by up to the value specified for arbitration_timeout. |

</tr>
<tr>
<td>status_change_command_timeout</td>
<td>State transition command timeout (seconds)</td>
<td>Specify the timeout value of the post-promote command, post-attach command, and pre-detach command. If the command does not respond within the specified number of seconds, a signal (SIGTERM) is sent to the execution process of the status change command. Specify a timeout between 1 and 2147483647. The default is 20 seconds.</td>
</tr>
</tbody>
</table>
Parameter | Value set | Explanation
--- | --- | ---
check_synchronous_standby_names_validation | on or off | Specify whether Mirroring Controller is to periodically check during operations whether the synchronous_standby_names parameter in postgresql.conf was changed by an incorrect user operation. However, it is not recommended to enable this parameter, because performing this check causes Mirroring Controller to use the CPU of the database server redundantly and execute SQL statements at high frequency. This parameter is compatible with operations in FUJITSU Enterprise Postgres 9.6 or earlier. The default is "off".

*1: By using an event source name that is similar to the specified event_source parameter of the postgresql.conf file, the Mirroring Controller output content can be referenced transparently, so log reference is easy.

The availability of some parameters depends on the value set for the heartbeat_error_action parameter that sets the operation to be performed if heartbeat monitoring of the operating system or server detects a heartbeat abnormality.

### Table A.5 Parameter availability depending on the value set for the heartbeat_error_action parameter

</tr>
<tr>
<td>heartbeat_interval</td>
<td>Interval time for heartbeat check of the operating system or server (milliseconds)</td>
<td>When an arbitration request is received from a database server, the heartbeat of the database server is checked at the specified interval and arbitration is performed. Specify a value between 1 and 2147483647. The default is the value specified in serverIdentifier.conf of the database server. Specify this parameter to perform optimization taking into account differences in the line load to the admin network and the reduction in the time it takes to degrade.</td>
</tr>
<tr>
<td>heartbeat_timeout</td>
<td>Timeout for heartbeat check of the operating system or server (seconds)</td>
<td>If there is no response for at least the number of seconds specified, it will be assumed that an error has occurred that requires the primary server or standby server to be fenced. Specify a value between 1 and 2147483647. The default is the value specified in serverIdentifier.conf of the database server. Specify this parameter to perform optimization taking into account differences in the line load to the admin network and the reduction in the time it takes to degrade.</td>
</tr>
<tr>
<td>heartbeat_retry</td>
<td>Number of retries for heartbeat monitoring of the operating system or server (number of times)</td>
<td>Specify the number of retries to be performed when an error has been detected that requires the primary server or standby server to be fenced. If an error is detected in succession more than the specified number of times, fencing will be performed. Specify a value between 0 and 2147483647. The default is the value specified in serverIdentifier.conf of the database server. Specify this parameter to perform optimization taking into account differences in the line load to the admin network and the reduction in the time it takes to degrade.</td>
</tr>
</tbody>
</table>
Appendix B Supplementary Information on Building the Primary Server and Standby Server on the Same Server

The primary server and standby server can be pseudo-configured on the same server for system testing, for example. Out of consideration for performance and reliability, do not use this type of configuration for any other purposes. For this reason, do not use this type of configuration in a production environment.

Note that the setup and operations is the same as if the primary and standby servers are built on different servers.

This appendix provides supplementary information explaining how to configure the primary server and standby server on the same server.

Note

Even if automatic degradation by an arbitration server is set when the primary server and standby server are configured on the same server, there will be no effect of it.

B.1 Backup Data Storage Destination Directory

It is not a problem if the same backup data storage destination directory is used on the primary server and standby server.

B.2 Registering Service Names and Event Source Names in the Windows Service

Ensure that the following names of resources to be registered on the operating system by FUJITSU Enterprise Postgres and Mirroring Controller are not duplicated between the primary server and standby server:

- Service name registered in the Windows service
- Event source name

B.3 How to Execute the mc_ctl Command

When executing the mc_ctl command, specify the server identifier in the --local-server option in order to identify the operation destination server.

Below is an example of starting Mirroring Controller of the server "server1" defined in the network.conf file. For mc_ctl command operations using another mode, also specify the --local-server option.

Define two server identifiers for the same IP address with different port numbers in the network.conf file.

Example)

server1 192.0.2.100 27540
server2 192.0.2.100 27541

Ensure that the port numbers of both primary server and standby server do not conflict with any other software.

Enabling automatic switch/disconnection

Start Mirroring Controller of the server "server1":

Example)

> mc_ctl start -M D:\mcdir\inst1 --local-server server1

Stop Mirroring Controller of the server "server1":

- 115 -
Example)

>`mc_ctl stop -M D:\mcdir\instl --local-server server1`

**Disabling automatic switch/disconnection**

Start Mirroring Controller of the server "server1":

Example)

>`mc_ctl start -M D:\mcdir\instl -F --local-server server1`

Stop Mirroring Controller of the server "server1":

Example)

>`mc_ctl stop -M D:\mcdir\instl --local-server server1`

---

**Note**

To specify the `mc_ctl` command with register mode, for registering to the Windows service, and the `mc_ctl` command with unregister mode, for unregistering from the Windows service, add the `--local-server` option.
Appendix C User Commands

This appendix describes three categories of commands:
- Fencing command
- Arbitration command
- State transition commands

This appendix describes each category of user command.

C.1 Fencing Command

Format
The syntax for calling the fencing command from the Mirroring Controller process or the Mirroring Controller arbitration process is described below.

Fencing command of the database server

```
fencingCmd executionMode mcDegradationOper cmdServerId targetServerId
```

Fencing command of the arbitration server

```
fencingCmd executionMode mcDegradationOper targetServerId
```

Input
Fencing command of the database server

Execution mode

- monitor: Detect issues via automatic monitoring of the Mirroring Controller process
- command: Mirroring Controller command execution (switch mode or detach mode of the mc_ctl command)

Degradation operation to be performed by Mirroring Controller

- switch: Switch
- detach: Disconnect

```
cmdServerId
```

ID of the database server that called the command

```
targetServerId
```

ID of the database server to be fenced

Fencing command of the arbitration server

Execution mode

- monitor: Detect issues via automatic monitoring of the Mirroring Controller process
- command: Mirroring Controller command execution (switch mode or detach mode of the mc_ctl command)

Degradation operation to be performed by Mirroring Controller

- switch: Switch
- detach: Disconnect

```
targetServerId
```

ID of the database server to be fenced
Output

Return value

0: Mirroring Controller will continue the degradation process.

Other than 0: Mirroring Controller will cancel the degradation process.

Description

Identifies the database server targeted for fencing based on the input server identifier, and implements the process that isolates it from the cluster system.

Notes

- The command is executed by the operating system user who started Mirroring Controller or the Mirroring Controller arbitration process. Therefore, if the command is to be executed by a specific operating system user, change the executing user of the command accordingly.

- The operating system user who started Mirroring Controller or the Mirroring Controller arbitration process must have execution privileges to the command. Otherwise, the degradation process will be canceled.

- From a security point of view, set the access privileges as necessary so that the fencing command is not overwritten and unauthorized operations are not performed by unintended operating system users.

- If the fencing command returns a value other than 0, Mirroring Controller will cancel the degradation process, so it is necessary for the user to check the status of the server, and switch or disconnect it manually.

- Before executing the fencing command, check if the server is already fenced, to avoid the command terminating abnormally.

- If the command times out, Mirroring Controller will stop the command, output an error message, and cancel the degradation process.

Information

The fencing command can be implemented by simply stopping the operating system or server. For example, if stopping the power for the database server, it is possible to use a utility to control the hardware control board in environments equipped with boards compatible with IPMI hardware standard.

Below is a sample script of a fencing command that powers off the database server using the IPMI tool.

Path of the sample shell script

/installDir/share/mcarb_execute_fencing.sh.sample

Windows

Below is a sample script of a fencing command that powers off the database server using IPMIUTIL.

Path of the sample shell script

installDir\share\mcarb_execute_fencing.bat.sample

C.2 Arbitration Command

Format

The syntax for calling the arbitration command from the Mirroring Controller process is described below.

```
arbitrationCmd cmdServerId targetServerId
```

Input

```
cmdServerId
```

ID of the database server that called the command
**targetServerId**

ID of the database server to arbitrate

**Output**

**Return value**

0: The database server to arbitrate has an issue, and Mirroring Controller will continue the degradation process.

Other than 0: The database server to arbitrate is normal, and Mirroring Controller will cancel the degradation process.

**Description**

Identifies the database server to arbitrate based on the input server identifier, and checks the status of the server.

**Notes**

- The command is executed by the operating system user who started Mirroring Controller.
- The operating system user who started Mirroring Controller must have execution privileges to the command. Otherwise, the command will not be called, and the degradation process will be canceled.
- If the command times out, Mirroring Controller will stop the command, output an error message, and cancel the degradation process.

### C.3 State Transition Commands

State transition commands include the three types of user commands below. Any of the commands can be implemented by Mirroring Controller in conjunction with database server status transitions.

- Post-promote command
- Pre-detach command
- Post-attach command

#### C.3.1 Post-promote Command

**Format**

The syntax for calling the post-promote command from the Mirroring Controller process is described below.

```
promoteCmd serverIdentifier
```

**Input**

**serverIdentifier**

ID of the database server (new primary server) that was promoted

**Output**

**Return value**

None

**Notes**

- The command is executed by the operating system user who started Mirroring Controller.
- The operating system user who started Mirroring Controller must have execution privileges to the command. Otherwise, the command will not be called.
- If the command times out, Mirroring Controller will stop the command, output an error message, and cancel the process.
C.3.2 Pre-detach Command

Format
The syntax for calling the pre-detach command from the Mirroring Controller process is described below.

```
predetachCmd cmdServerId serverRole targetServerId
```

Input
- `cmdServerId` ID of the database server that called the command
- `serverRole` Role of the database server that called the command
  - `primary`: Primary
  - `standby`: Standby
- `targetServerId` ID of the standby server to be disconnected from the cluster system

Output
- `Return value` None

Notes
- The command is executed by the operating system user who started Mirroring Controller.
- The operating system user who started Mirroring Controller must have execution privileges to the command. Otherwise, the command will not be called, however, Mirroring Controller will output an error message and continue the process.
- If the command times out, Mirroring Controller will stop the command, output an error message, and cancel the process.

C.3.3 Post-attach Command

Format
The syntax for calling the post-attach command from the Mirroring Controller process is described below.

```
postattachCmd cmdServerId serverRole targetServerId
```

Input
- `cmdServerId` ID of the database server that called the command
- `serverRole` Role of the database server that called the command
  - `primary`: Primary
  - `standby`: Standby
- `targetServerId` ID of the standby server to be attached to the cluster system
Output

Return value

None

Notes

- The command is executed by the operating system user who started Mirroring Controller.

- The operating system user who started Mirroring Controller must have execution privileges to the command. Otherwise, the command will not be called.

- If the command times out, Mirroring Controller will stop the command, output an error message, and cancel the process.
Appendix D Notes on Performing Automatic Degradation Immediately after a Heartbeat Abnormality

The type of issue below occurs if automatic degradation is performed unconditionally after an issue is detected during heartbeat monitoring of an operating system or server, and heartbeat monitoring was not properly tuned.

- If the timeout time is too short

![Diagram showing the process of automatic degradation after a heartbeat abnormality.](image-url)

1. Identified as no response due to the timeout time being too short (Identified as an error even if the primary server is in a sound state)
2. Promoted to primary server
3. A split-brain occurs (Data can be updated for both servers)
Notes on monitoring when the operating system or server crashes or is unresponsive

As illustrated in the diagram above, timeout is used to monitor whether the operating system or server crashes or is unresponsive. Therefore, if tuning has not been performed correctly, there is a risk of a split-brain mistakenly occurring even if the server is in a sound state.

Split-brain is a phenomenon in which both servers temporarily operate as primary servers, causing data updates to be performed on both servers.

Split-brain detection method

It can be confirmed that split-brain occurs under the following conditions:

1. When the mc_ctl command is executed in status mode on both servers, the "host_role" of both servers is output as "primary", and

2. The following message is output to the system log of one of the servers:

   promotion processing completed (MCA00062)

How to recover from a split-brain

Use the procedure described below. Note that the new primary server is the server that was confirmed in step 2 of the aforementioned detection method.

1. Stop all applications that are running on the old and new primary servers.

2. Investigate and recover the database.
   Investigate the update results that have not been reflected to the new primary server from the database of the old primary server, and apply to the new primary server as necessary.

3. Stop the old primary server instance and the Mirroring Controller.
4. Resume the applications that were stopped in step 1.

5. Recover the old primary server.
   While referring to "2.5 Setting Up the Standby Server", build (set up) the old primary server as the new standby server, from the new primary server.
Appendix E Supplementary Procedure on Configuring for Operation in Database Multiplexing Mode

This appendix explains a supplementary procedure on the configuration required for operation in database multiplexing mode.

E.1 Security Policy Settings

This section explains how to configure the security settings to enable an operating system user account designated as an instance administrator user to log on as a service.

1. Displaying the [Local Security Policy] window
   In Windows, select [Administrative Tools], and then click [Local Security Policy].

2. Setting up security
   1. In the [Local Security Policy] window, select [Security Settings], select [Local Policies], and then click [User Rights Assignment].
   3. In the [Log on as a service Properties] window, set the following:
      b. On the [Local Security Setting] tab, click [Add User or Group].
      c. In the [Select Users or Groups] window, enter the operating system user account of the instance administrator user in [Enter the object names to select].
      d. Click [OK].
   4. In the [Log on as a service Properties] window, click [OK].
   5. From the [Local Security Policy] tree, click [Local Policies], and then double-click [Security Options].
   6. Scroll down and double-click [User Account Control: Behavior of the elevation prompt for administrators in Admin Approval Mode].
   7. From the drop-down menu, select the "Elevate without prompting” in the [Local Security Setting] tab.
   8. Click [OK].

E.2 Windows Firewall Settings

This section explains how to enable the port number used by Mirroring Controller, if the Windows firewall feature is enabled.

Windows Server(R) 2008:

1. In the [Start] menu, click [Control Panel].
2. Click [Security] and then click [Windows Firewall].
3. In the [Windows Firewall] window, click [Change settings].
4. On the [Exceptions] tab, click [Add port].
5. In the [Add a Port] window, set the following:
   a. In [Name], specify any name.
   b. In [Port number], specify the port number defined in the network definition file.
   c. Select [TCP].
6. Click [OK].
7. On the [Exceptions] tab, in the [Program or port] list, check if the added port is enabled.
8. In the [Windows Firewall] window, click [OK].

**Windows Server (R) 2008 R2:**

1. In the [Start] menu, click [Control Panel].
2. Click [System and Security], and then click [Windows Firewall].
5. Click [New Rule] on the right side of the window.
6. In the [New Inbound Rule Wizard] window, select [Port], and then click [Next].
7. Select [TCP] and [Specific local ports], then specify the port number defined in the network definition file, and then click [Next].
8. Select [Allow the connection], and then click [Next].
9. Select the profiles for which this rule applies, and then click [Next].
10. In [Name], specify any name, and then click [Finish].
11. In the [Windows Firewall with Advanced Security] window, check if the added rule is enabled under [Inbound Rules] in the center of the window.

**Windows Server(R) 2012 or Windows Server(R) 2012 R2:**

1. In the [Start] screen, click [Control Panel].
2. Click [System and Security], and then click [Windows Firewall].
4. In the [Windows Firewall with Advanced Security] window, in the left pane, click [Inbound Rules].
5. In the right pane, click [New Rule].
6. In the [New Inbound Rule Wizard] window, select [Port], and then click [Next].
7. Select [TCP] and [Specific local ports], then specify the port number defined in the network definition file, and then click [Next].
8. Select [Allow the connection], and then click [Next].
9. Select the profiles for which this rule applies, and then click [Next].
10. In [Name], specify any name, and then click [Finish].
11. In the [Windows Firewall with Advanced Security] window, in the center pane, check if the added rule is enabled under [Inbound Rules].

**Windows Server(R) 2016:**

1. In the [Start] menu, click [Control Panel].
2. Click [System and Security], and then click [Windows Firewall].
4. In the [Windows Firewall with Advanced Security] window, in the left pane, click [Inbound Rules].
5. In the right pane, click [New Rule].
6. In the [New Inbound Rule Wizard] window, select [Port], and then click [Next].
7. Select [TCP] and [Specific local ports], then specify the port number of Mirroring Controller that you specified in the network definition file, and click [Next].
8. Select [Allow the connection], and then click [Next].
9. Select the profiles for which this rule applies, and then click [Next].
10. In [Name], specify the desired name, and then click [Finish].

11. In the [Windows Firewall with Advanced Security] window, in the center pane, check if the added rule is enabled under [Inbound Rules].

Cluster Operation Guide
PRIMECLUSTER
Preface

Purpose of this document
This document explains the items required to operate FUJITSU Enterprise Postgres on a cluster system that uses PRIMECLUSTER.

Intended readers
This document is aimed at people who install and operate FUJITSU Enterprise Postgres on a cluster system that uses PRIMECLUSTER. Readers of this document are also assumed to have general knowledge of:
- PRIMECLUSTER
- PostgreSQL
- SQL
- Linux

Structure of this document
This document is structured as follows:

Chapter 1 Overview of Failover Operation
Provides an overview of failover operation.

Chapter 2 Setting Up Failover Operation
Explains how to set up failover operation.

Chapter 3 Failover Operation
Explains the procedures involved in failover operation.

Chapter 4 Procedures Required after a Failover Error
Explains the procedures required after an abnormality occurs during failover operation.

Appendix A Creating Resources and Creating/Modifying Cluster Applications
Explains how to create and modify cluster applications that include FUJITSU Enterprise Postgres resources.

Appendix B Command Reference
Explains for details in command.

Export restrictions
Exportation/release of this document may require necessary procedures in accordance with the regulations of your resident country and/or US export control laws.

1.1 Definition of Failover Operation

When an abnormality occurs on any of the multiple server devices that make up the cluster system (hereafter referred to as “nodes”), the failover feature transfers a job operating on such a node to another one. Failover can reduce the time for which jobs are stopped when an abnormality occurs, and allows jobs to continue while the node on which the abnormality occurred is recovered.

In FUJITSU Enterprise Postgres, failover can be integrated with PRIMECLUSTER. In such a configuration, the shared disk (GDS) provided by PRIMECLUSTER is used. A server in the cluster system receives the application processing, acting as the active server (active node).

For example, if the active node fails, another server (standby node) inherits the shared disk content and becomes the active node. Using the PRIMECLUSTER feature, the applications to be run on the active node for the database can also be linked with the database and switched. Therefore, jobs can be continued even during recovery of a node where an abnormality has occurred. There is also no need to send the updated content of the database on the active node to the standby node, so the processing performance will be the same as that of a non-cluster system.

Note

When failover operation is integrated with PRIMECLUSTER, the disk is not referenced by the standby node, and therefore failover operation cannot be used for load distribution.

In addition, failover operation cannot be performed concurrently with database multiplexing.

Hereinafter, failover operation integrated with PRIMECLUSTER is referred to as “failover operation”.

Figure 1.1 Concept of failover

Feature of failover operation

Failover operation in Symfoware Server supports the standby feature.

When an abnormality occurs on a node, the standby feature activates the instance that is the standby system at the time of the switch, and transfers the job to it.
**Operation mode of failover operation**

The operation mode supported in failover operation in Symfoware Server is 1:1 standby. 1:1 standby is a mode in which one active system or standby system operates on one node. Because failover allows jobs to continue when an abnormality occurs in the active system, this mode allows highly reliable systems to be constructed.

1.2 System Configuration of Failover Operation

In the illustration below, the file system is on a GDS volume (shared disk), mounted on node 1 only. The following FUJITSU Enterprise Postgres resources are located in this file system:

- Data storage destination directory
- Tablespaces
- Backup data storage destination directory
- Transaction log storage destination directory

A FUJITSU Enterprise Postgres process waits for connections of user applications that access the database, on a logical IP address activated on node 1 only or on a takeover IP address.
When an error is detected on node 1, PRIMECLUSTER mounts the file system on node 2, and activates the logical IP address or the takeover IP address on it. The FUJITSU Enterprise Postgres process is also started on node 2. Since the logical IP address or the takeover IP address remains unchanged, the user application can access FUJITSU Enterprise Postgres process on node 2 simply by re-establishing the database connection.

*1: Some settings and operations must also be performed on the standby node. Refer to the relevant sections for details.

Note: GDS: PRIMECLUSTER GD

The sections that follow explain each step.
2.1 Installing PRIMECLUSTER and FUJITSU Enterprise Postgres
Refer to the manual for each product, and then install each product.

- Refer to the PRIMECLUSTER Installation and Administration Guide for information on how to install PRIMECLUSTER.
- Refer to the Installation and Setup Guide for Server for information on how to install FUJITSU Enterprise Postgres.

2.2 Configuring PRIMECLUSTER
Configure the initial settings for the cluster.
If using PRIMECLUSTER GL (hereafter referred to as "GLS"), configure the GLS settings.

- Refer to the PRIMECLUSTER Installation and Administration Guide for information on steps required before setup.

2.3 Creating a GDS Volume
Each of the following FUJITSU Enterprise Postgres resources must be located in a file system on a shared disk:
- Data storage destination directory
- Tablespaces
- Backup data storage destination directory
- Transaction log storage destination directory

Note
- Store data storage destination directories or tablespaces and backup data storage destination directories for these in different GDS classes to guard against file system corruption and the MONITORONLY attribute settings at the time of the Gds resource and Fsystem resource creation.
- It is also recommended that database storage destination directories and transaction log storage destination directories be placed in different groups or different single disks, so that the I/O load is distributed.
- Create a directory for each resource on each node. Ensure that the directories to be mounted have the same path on all nodes.

- Refer to the PRIMECLUSTER Installation and Administration Guide for information on GDS volume creation.
- Refer to "Preparing Directories to Deploy Resources" in the Installation and Setup Guide for Server for information on how to create directories.

2.4 Creating a File System
Create a file system.
2.4.1 Creating a File System

Use the operating system or file system command to create a file system on the GDS volume.

Example)

The example below creates a file system using ext4.

```
# mkfs -t ext4 /dev/sfdsk/class0001/dsk/volume0001
```

2.4.2 Editing Configuration Files

Edit `/etc/fstab` and `/etc/fstab.pcl` on each node.

- `/etc/fstab`

Comment out each line below by prepending it with "#".

```
#/dev/sfdsk/class0001/dsk/volume0001 /mnt/swdsk1 ext4 noauto 0 0
#/dev/sfdsk/class0001/dsk/volume0002 /mnt/swdsk2 ext4 noauto 0 0
```

- `/etc/fstab.pcl`

Copy the entries above, and then replace "#" in each line with "#RMS#", as follows:

```
#RMS#/dev/sfdsk/class0001/dsk/volume0001 /mnt/swdsk1 ext4 noauto 0 0
#RMS#/dev/sfdsk/class0001/dsk/volume0002 /mnt/swdsk2 ext4 noauto 0 0
```

Note

Different files are specified depending on the version of the PRIMECLUSTER. Check the version of PRIMECLUSTER being used and edit appropriate files. Refer to the PRIMECLUSTER Installation and Administration Guide for details.

2.4.3 Checking

Start the GDS volume, and ensure that each file system can be mounted on each node.

```
# mount -t ext4 /dev/sfdsk/class0001/dsk/volume0001 /mnt/swdsk1
# mount -t ext4 /dev/sfdsk/class0001/dsk/volume0002 /mnt/swdsk2
# umount /mnt/swdsk1
# umount /mnt/swdsk2
```

2.5 Creating an Operating System User to Start FUJITSU Enterprise Postgres

Create an operating system user (an OS user that will become the instance administrator) who is to start FUJITSU Enterprise Postgres.

Note

Ensure that the name, UID, and GID of the operating system user (an OS user that will become the instance administrator) who is to start FUJITSU Enterprise Postgres match on all nodes that make up the cluster system.
2.6 Mounting the File System

1. Start the GDS volume if it has not already started.

2. Mount all file systems containing the resources required to create database clusters, such as for the data storage destination directory, as shown below:

   ```
   # mount -t ext4 /dev/sfdsk/class0001/dsk/volume0001 /mnt/swdsk1
   ```

---

**Note**

Create directories in the file system for storing each resource. Each directory must meet certain conditions to be able to create the FUJITSU Enterprise Postgres database cluster. Check the notes in “Preparing Directories to Deploy Resources” in the Installation and Setup Guide for Server.

---

2.7 Creating a Symfoware Database Cluster

1. Create the database cluster.

   **Note**

   - If the configuration requires password authentication, create a .pgpass file in the home directory of the operating system user who is to start FUJITSU Enterprise Postgres, and then specify a password for the template1 database as this is required. This will be used when PRIMECLUSTER checks the operation of the FUJITSU Enterprise Postgres database server. If authentication fails, a fault will be assumed to have occurred in the database server.

   - The value specified for the port parameter in postgresql.conf needs to be set in the /etc/services files on all nodes.

   - Since postgresql.conf is stored in the data directory, it becomes a common configuration file for each node in the shared disk. Therefore, it must be taken into account that the path set for postgresql.conf must be valid for the FUJITSU Enterprise Postgres server processes started on each node. For example, if a local directory is specified in the core_directory parameter, that local directory must have been created on all nodes.

   - To execute the FUJITSU Enterprise Postgres commands, you must configure the environment variables on each node.

   - Use the initdb command to create a database cluster.

   - Specify "off" for the restart_after_crash parameter in postgresql.conf. If "on" is specified, or the default value is used for the restart_after_crash parameter, behaviors equivalent to restarting the FUJITSU Enterprise Postgres, including crash recovery, will be performed when some server processes go down. When linking with PRIMECLUSTER, however, a failover will occur after an error is detected as soon as some server processes go down, and server processes restarting will be forced to stop. This is to inhibit complex behaviors such as processes being canceled in the middle of restarting for no particular meaningful purpose.

2. Check starting, connection, and stopping at each node. The procedure is as follows.

   **Note**

   Queries are issued to monitor the FUJITSU Enterprise Postgres from PRIMECLUSTER. With this connection process, if a password is requested, the monitoring process cannot be continued. For this reason, when checking the connection, ensure that connections can be made without entering a password.

   **Point**

   When monitoring FUJITSU Enterprise Postgres from PRIMECLUSTER, the name of the application that connects to instances is "pgx_wch_svprocess".
1. Check the starting, connection, and stopping at node 1.

   Use the pg_ctl command to start and stop the node.

   For connection, execute the following to ensure that connections can be made without entering a password:

   ```
su - OsUser
psql -d template1 -p portNum [ -U dbUser]
```

   **OsUser**: Operating system user to start the FUJITSU Enterprise Postgres
   **portNum**: Port number specified when the database cluster was created
   **dbUser**: Database superuser

   If the database superuser is specified at the time of executing the initdb command, or if the database superuser has been changed after the initdb command was executed, specify the user for the -U option. If the database superuser is not specified or changed, omit this.

2. Unmount all file systems containing the resources required to create database clusters (such as the data storage destination directory) on node 1, and stop the GDS volume.

3. Start the GDS volume on node 2, and mount all file systems containing the resources required to create database clusters (such as the data storage destination directory).

4. Check starting, connection, and stopping at node 2.
   Perform the same check as step 1.

5. Unmount all file systems containing the resources required to create database clusters (such as the data storage destination directory) on node 2, and stop the GDS volume.

6. Start the GDS volume on node 1, and mount all file systems containing the resources required to create database clusters (such as the data storage destination directory).

---

**2.8 Registering Resource Information for the FUJITSU Enterprise Postgres Database Cluster**

1. Use the pgx_pclrsc command to register the database cluster in PRIMECLUSTER - the following is the simplest execution example:

   The database cluster does not need to be started when executing the command:

   ```
   # pgx_pclrsc -a -c databaseClusterName -u OsUser -D pgData -w workDir -n memberNodes
   ```

   **Item** | **Explanation**
   --- | ---
   **databaseClusterName** | Specify the FUJITSU Enterprise Postgres database cluster name.
   The database cluster name is case-sensitive.
   The database cluster name must be as follows:
   - Up to 16 bytes, and
   - The first byte must be an ASCII letter, and
   - The other bytes must be ASCII alphanumeric characters, or underscores (_).
<table>
<thead>
<tr>
<th>Item</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>OsUser</strong></td>
<td>Specify the operating system user (an OS user that will become the instance administrator) who can start the FUJITSU Enterprise Postgres database server.</td>
</tr>
<tr>
<td><strong>pgData</strong></td>
<td>Specify the absolute path of the data storage destination directory specified during database cluster creation.</td>
</tr>
<tr>
<td><strong>workDir</strong></td>
<td>Specify the directory for storing the temporary files required for FUJITSU Enterprise Postgres resource monitoring and state transition, and for storing the trace logs required in case of problems. If a directory that does not exist is specified, create the directory. The newly created directory path assumes the <strong>OsUser</strong> specified with the -u option as the owner, and 0700 as the privilege. Required directory size is twice the size that is specified in the --trace-max-file-size option. If the default value is specified in the --trace-max-file-size option, 10240 KB x 2 is required for the directory size.</td>
</tr>
<tr>
<td><strong>memberNodes</strong></td>
<td>Specify the names of all nodes that make up the cluster system. Use a comma (,) to separate each node name. Suffix each cluster node name with the literal &quot;RMS&quot;. Specification example: -n node1RMS,node2RMS</td>
</tr>
</tbody>
</table>

Other than the above, the following options can be specified:

<table>
<thead>
<tr>
<th>Option</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>--db-user=name</td>
<td>Specify the FUJITSU Enterprise Postgres database superuser. The user specified in the -u option is the default.</td>
</tr>
<tr>
<td>--response-timeout=seconds</td>
<td>In cluster operations, queries are regularly issued to the server to perform error detection and state monitoring.</td>
</tr>
<tr>
<td></td>
<td>Specify a timeout time for queries issued for the heartbeat monitoring of the FUJITSU Enterprise Postgres database server.</td>
</tr>
<tr>
<td></td>
<td>For queries, &quot;SELECT 1&quot; for the database &quot;template1&quot; is used. If 0 is specified, queries will not time out. The default is 0.</td>
</tr>
<tr>
<td>--timeout-retry-count=count</td>
<td>Specify the upper limit for the number of retries when queries for monitoring time out.</td>
</tr>
<tr>
<td></td>
<td>The default is 6 times.</td>
</tr>
<tr>
<td>--trace-max-file-size</td>
<td>Specify the maximum size of the trace file. The default is 10240 KB.</td>
</tr>
<tr>
<td>Option</td>
<td>Explanation</td>
</tr>
<tr>
<td>--------------------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>--watch-interval=seconds</td>
<td>Specify the monitoring interval (the interval with which the queries are issued to the server) for a monitoring program to monitor the FUJITSU Enterprise Postgres database server. The default is 3 seconds.</td>
</tr>
</tbody>
</table>

2.9 Configuring Storage Data Protection Using Transparent Data Encryption

If using transparent data encryption, refer to "Protecting Storage Data Using Transparent Data Encryption" in the Operation Guide to configure it. Take note on the following when configuring it:

Location of the keystore file

Do not specify a shared disk for the keystore_location parameter in postgresql.conf. Instead, specify a local directory with the same path on all nodes that comprise the cluster application.

If a shared disk is specified, startup from the cluster application will fail. This is because the keystore.aks file, which is generated when automatic opening of the keystore is enabled, is obfuscated so that it can only be read on the node where it was generated, and therefore it cannot be shared across the shared disk.

Distribution of the keystore file

The master encryption key settings must be common across all nodes. For this reason, configure the master encryption key settings on one node, and then copy the keystore file to each node. Also, if the master encryption key or passphrase is changed, you must also copy the keystore file to each node.

Enabling automatic opening of the keystore

Automatic opening of the keystore must be enabled in all nodes that comprise the cluster application. Note that, when enabling the automatic opening of the keystore, only the directory in which the keystore file is stored will be referenced, therefore tasks such as starting and stopping the GDS volume are not required.

If it is not enabled, then startup from the cluster application will fail. This is because the startup process will not finish, since it waits for the manual input of the passphrase that opens the keystore.

2.10 Unmounting the File System

1.Unmount all file systems containing the resources required to create database clusters (such as the data storage destination directory).

   # umount /mnt/swdsk1

2. Stop the GDS volume.

2.11 Creating a Cluster Application

Refer to "Appendix A Creating Resources and Creating/Modifying Cluster Applications".

2.12 Application Development

This section explains points to consider when creating applications during cluster operations.
2.12.1 Precautions when Developing Applications

To specify the IP address specified by the application, specify the IP address specified when creating the Gls resource or creating the
takeover network resource. When state transition occurred, the operation can continue only by re-execute without changing the application.
Refer to "A.1.5 Creating Gls or Takeover Network Resources" for details.

2.12.2 Corrective Action with Application when State Transition Occurs

When the application running on the another node such as an application server, access the Symfoware Server, the following describes the
error information to be returned when an abnormality or the like occurs in the node where FUJITSU Enterprise Postgres operates, and the
actions.

**JDBC driver**

<table>
<thead>
<tr>
<th>State</th>
<th>Error information(*1)</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Node failure or FUJITSU Enterprise Postgres system failure</td>
<td>Failure occurs during access 57P01 08006</td>
<td>After the switch is complete, reestablish the connection, or re-execute the application.</td>
</tr>
<tr>
<td></td>
<td>Accessed during node/system failure 08001</td>
<td></td>
</tr>
<tr>
<td>Switch to the standby node</td>
<td>Switched during access 57P01 08006</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Accessed during switch 08001</td>
<td></td>
</tr>
</tbody>
</table>

*1: Return value of the getSQLState() of SQLException.

**ODBC driver**

<table>
<thead>
<tr>
<th>State</th>
<th>Error information(*1)</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Node failure or FUJITSU Enterprise Postgres system failure</td>
<td>Failure occurs during access 57P01 08S01</td>
<td>After the switch is complete, reestablish the connection, or re-execute the application.</td>
</tr>
<tr>
<td></td>
<td>Accessed during node/system failure 08001</td>
<td></td>
</tr>
<tr>
<td>Switch to the standby node</td>
<td>Switched during access 57P01 08S01</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Accessed during switch 08001</td>
<td></td>
</tr>
</tbody>
</table>

*1: Return value of SQLSTATE.

**.NET Data Provider**

<table>
<thead>
<tr>
<th>State</th>
<th>Error information</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Node failure or FUJITSU Enterprise Postgres system failure</td>
<td>Failure occurs during access 57P01 (*1) Empty string (*1)</td>

</tr>
</tbody>
</table>
### State Error information Action

<table>
<thead>
<tr>
<th>State</th>
<th>Error information</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>FUJITSU Enterprise Postgres system failure</td>
<td>NullReferenceException is generated.</td>
<td>connection, or re-execute the application.</td>
</tr>
<tr>
<td>Accessed during node/system failure</td>
<td>Empty string (*1)</td>
<td></td>
</tr>
<tr>
<td>Switch to the standby node</td>
<td>57P01 (*1)</td>
<td></td>
</tr>
<tr>
<td>Accessed during access</td>
<td>Empty string (*1)</td>
<td></td>
</tr>
<tr>
<td></td>
<td>NullReferenceException is generated.</td>
<td></td>
</tr>
<tr>
<td>Accessed during switch</td>
<td>Empty string (*1)</td>
<td></td>
</tr>
</tbody>
</table>

*1: This is the return value of the NpgsqlException attribute Code.

### C library(libpq)

<table>
<thead>
<tr>
<th>State</th>
<th>Error information</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Node failure or FUJITSU Enterprise Postgres system failure</td>
<td>Failure occurs during access: PGRES_FATAL_ERROR(*1) 57P01(*2) NULL(*2)</td>
<td>After the switch is complete, reestablish the connection, or re-execute the application.</td>
</tr>
<tr>
<td>Accessed during node/system failure</td>
<td>CONNECTION_BAD(*3)</td>
<td></td>
</tr>
<tr>
<td>Switch to the standby node</td>
<td>Switched during access: PGRES_FATAL_ERROR(*1) 57P01(*2) NULL(*2)</td>
<td></td>
</tr>
<tr>
<td>Accessed during switch</td>
<td>CONNECTION_BAD(*3)</td>
<td></td>
</tr>
</tbody>
</table>

*1: Return value of PQresultStatus().

*2: Return value of PQresultErrorField() PG_DIAG_SQLSTATE.

*3: Return value of PQstatus().

### Embedded SQL in C

<table>
<thead>
<tr>
<th>State</th>
<th>Error information(*1)</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Node failure or FUJITSU Enterprise Postgres system failure</td>
<td>Failure occurs during access: 57P01 57P02 YE000 26000 40001</td>
<td>After the switch is complete, reestablish the connection, or re-execute the application.</td>
</tr>
<tr>
<td>Accessed during node/system failure</td>
<td>08001</td>
<td></td>
</tr>
<tr>
<td>State</td>
<td>Error information(*1)</td>
<td>Action</td>
</tr>
<tr>
<td>-------------------------------------</td>
<td>-----------------------</td>
<td>------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Switch to the standby node</td>
<td></td>
<td>Switched during access 57P01, 57P02, YE000, 26000, 40001</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Accessed during switch 08001</td>
</tr>
</tbody>
</table>

*1: Return value of SQLSTATE

### Embedded SQL in COBOL

<table>
<thead>
<tr>
<th>State</th>
<th>Error information(*1)</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Node failure or FUJITSU Enterprise Postgres system failure</td>
<td></td>
<td>57P01, 57P02, YE000, 26000, 40001</td>
</tr>
<tr>
<td>Failure occurs during access</td>
<td></td>
<td>After the switch is complete, reestablish the connection, or re-execute the application.</td>
</tr>
<tr>
<td>Accessed during node/system failure</td>
<td>08001</td>
<td></td>
</tr>
<tr>
<td>Switch to the standby node</td>
<td></td>
<td>57P01, 57P02, YE000, 26000, 40001</td>
</tr>
<tr>
<td>Switched during access</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Accessed during switch</td>
<td>08001</td>
<td></td>
</tr>
</tbody>
</table>

*1: Return value of SQLSTATE.

### 2.13 Checking Operation

To ensure that the environment settings have been configured correctly, start, switch, and stop from Web-Based Admin View, and check the behavior.

To do a failover test, follow the procedure below.

1. Stop the FUJITSU Enterprise Postgres server processes by `pg_ctl` command with immediate mode.

   ```
   # pg_ctl stop -m immediate
   ```

2. Check whether switching was done correctly.
Note

FUJITSU Enterprise Postgres uses the su(1) command to periodically monitor its resources. Therefore, in a RHEL environment, after a cluster system is built, messages relating to the su(1) command will be periodically output to /var/log/messages during cluster system operation.

Example message output:

```
Jul 5 14:00:42 node1 su: (to fsepuser) root on none
Jul 5 14:00:42 node1 systemd: Started Session c119 of user fsepuser.
Jul 5 14:00:42 node1 systemd: Starting Session c119 of user fsepuser.
```

These messages can be controlled using the rsyslog feature.

Below is an example of the setting for controlling messages.

1. Create ignore_su_messages.conf in /etc/rsyslog.d.
   
   Example:

   ```
   # cd /etc/rsyslog.d
   # touch ignore_su_messages.conf
   # chmod 600 ignore_su_messages.conf
   ```

2. Describe the content below in ignore_su_messages.conf.
   
   Example: When the operating system user who becomes the instance administrator is "fsepuser"

   ```
   :msg, regex, "\(to fsepuser\) root on none" ~
   :msg, regex, "Start.* Session .* of user fsepuser." ~
   ```

3. Restart rsyslogd.
   
   ```
   # systemctl restart rsyslog
   ```

Refer to the pages of the manual for rsyslogd(8) and rsyslog.conf(5) for information on how to configure the settings.
Chapter 3 Failover Operation

This chapter explains the procedures involved in failover operation.

3.1 Adding Tablespaces

This section explains how to add tablespaces to a new file system.

This procedure is not required when you are adding tablespaces to an existing file system.

Perform the following steps when using a new shared disk class:

- Stop RMS on all nodes.
- Perform setup as described from "2.3 Creating a GDS Volume" to "2.4 Creating a File System".
- Modify the cluster application (refer to "A.2 Modifying Cluster Applications" for details).

Perform the following steps when using a new shared disk class:

- Stop RMS on all nodes.
- Perform the setup as described in "2.4 Creating a File System".
  If a new GDS volume is to be used, the GDS volume must be created in advance.
- Modify the cluster application (refer to "A.2 Modifying Cluster Applications" for details).

3.2 Modifying Database Cluster Resources

This section explains the following operations:
- Displaying database cluster resource information
- Modifying database cluster resource content
- Deleting a database cluster resource

Displaying database cluster resource information

Execute the pgx_pclrsc command as shown below (note that if -c is not specified, the command lists all registered database cluster names):

```
# pgx_pclrsc -p -c databaseClusterName
```

Modifying database cluster resource content

1. Stop RMS.
2. Execute the pgx_pclrsc command as shown below (this is the simplest example):

```
# pgx_pclrsc -d -c databaseClusterName
# pgx_pclrsc -a -c databaseClusterName -u OsUser -D pgData -w workDir -n memberNodes
```

Note

If you are modifying resource content, first delete the FUJITSU Enterprise Postgres resource from the cluster application, and then re-create it.

See

Refer to "B.1 pgx_pclrsc" for information on the pgx_pclrsc command.
Deleting a database cluster resource

1. Stop RMS.
2. Delete the FUJITSU Enterprise Postgres resource from the cluster application.
3. Execute the `pgx_pclrsc` command as shown below:

   ```bash
   # pgx_pclrsc -d -c databaseClusterName
   ```

**Note**

The directory specified in the `-w` option of the `pgx_pclrsc` command during registration will not be deleted. Use operating system commands to delete it if necessary.

### 3.3 Operations under Normal Circumstances

**Starting and stopping**

For cluster operations, perform starting and stopping from the cluster application. If starting and stopping are performed by using the `pg_ctl` command or WebAdmin during failover operation, the cluster application will misjudge that services have gone down, resulting in unexpected behaviors.

**Switching**

There are two ways to switch between the active node and the standby node, as shown below.

Under normal circumstances, switch using mutual switch. In an emergency, for example when there is no response from the active node, perform forced switch. Forced switch should only be used in emergency scenarios because the differences in FUJITSU Enterprise Postgres stop modes when the active node is offline will cause the statistics to be initialized, and the load will increase as crash recovery is performed after the switch.

- **Mutual switch**
  
  Refer to "3.5.2.4 Mutual Switch".

  FUJITSU Enterprise Postgres is stopped with the “fast” mode of the `pg_ctl` command.

- **Forced switch**
  
  Right-click the cluster application object, and select [Switch] from the menu. From the switchable nodes displayed in the drop-down menu, select a target node, and switch the cluster application to that node.

  FUJITSU Enterprise Postgres is stopped with the “immediate” mode of the `pg_ctl` command.

### 3.4 Operation at State Transition

The workflow for operation at state transition is shown below.

The activation operation during failover operation will be performed automatically by the Online script.
Non-transferrable feature
- All transactions being processed by the cluster application on the active system will be rolled back.
- The statistics FUJITSU Enterprise Postgres has collected will be initialized.

The statistics will be initialized in any of the following cases. Refer to the notes outlined in “Starting and Stopping an Instance” in the Operation Guide for details.
- When the node goes down because of a kernel panic, for example
- When forced switch is performed

Statistics are initialized because the “immediate” mode of the pg_ctl command is used to stop FUJITSU Enterprise Postgres. Refer to “3.3 Operations under Normal Circumstances” for details.
- When an error occurs in the cluster application resources

Statistics are initialized because the “immediate” mode of the pg_ctl command is used to stop FUJITSU Enterprise Postgres to perform an immediate switch.

Errors during state transition
If an error occurs in a FUJITSU Enterprise Postgres script during cluster application state transition, the following message will be displayed in the switchlog of Cluster Admin (the registered database cluster name will be displayed in the inst1 part shown below):

```
```

To display the switchlog, select [Tools] >> [View switchlog] in the [Cluster Admin] window.
If the resource displayed in the error message is a FUJITSU Enterprise Postgres resource name, a message indicating the cause will be output either before the message above or to the system log.

3.5 Maintenance Tasks
When you need to perform tasks such as configuration changes, patch application, and hardware parts replacement that may require restarting, there are two ways of node maintenance. Performing maintenance on both nodes by stopping both active and standby nodes, and performing maintenance on one node at a time by leaving the active node running to perform maintenance on the standby node first, and then switch the active node to perform maintenance on the other node. In this section, the former is referred to as simultaneous stopped node maintenance, whereas the latter is referred to as mutual switch maintenance.

Refer to the tasks outlined below in either “Figure 3.1 Workflow for simultaneous stopped node maintenance” or “Figure 3.2 Workflow for mutual switch maintenance”, and perform your maintenance tasks accordingly.
3.5.1 Simultaneous Stopped Node Maintenance

This section explains the procedure to perform maintenance on both active and standby nodes simultaneously.

3.5.1.1 Stopping the Cluster Applications on Both Nodes for Node Maintenance

Follow the steps shown below to stop the cluster application on the active and standby nodes:

1. Start the [Cluster Admin] window.
2. Stop the cluster application.

   On the RMS tree in the [Cluster Admin] window, right-click the standby cluster application to be stopped, and select [Offline] from the pop-up menu to stop it.

   Stop the cluster application on both the active and standby nodes.
3. Stop RMS.

On the RMS tree in the [Cluster Admin] window, right-click the system node where the cluster application to be stopped exists, and select [Shutdown RMS] from the pop-up menu to stop RMS. To perform maintenance without stopping RMS, execute the hvutil -m on command to change the cluster application to maintenance mode.

**Note**

- If applying the FUJITSU Enterprise Postgres update patches, RMS on the node (onto which the patches are applied) must be stopped. This is because the FUJITSU Enterprise Postgres monitoring process that runs when linked with PRIMECLUSTER must be stopped.
- By stopping RMS, all cluster applications on the system node where RMS is stopped will stop. When you have multiple cluster applications configured, ensure that stopping all other cluster applications will not cause any problems, before stopping RMS.

### 3.5.1.2 Maintenance Tasks on Both Nodes

Perform maintenance tasks such as configuration changes, patch application, hardware and parts replacement that may require restarting.

### 3.5.1.3 Restarting the Cluster Applications Stopped on Both Nodes for Node Maintenance

Follow the steps shown below to restart the cluster application on the active and standby nodes.

1. Start the [Cluster Admin] window.
2. If RMS has not been started, select [Tools] >> [Start RMS] in the [Cluster Admin] window, and select the node to be started and click [Ok].
   
   Note that if the cluster applications were stopped for node maintenance using the hvutil -m on command, execute the hvutil -m off command instead of starting RMS.
3. Start the cluster application.

   On the RMS tree in the [Cluster Admin] window, right-click the standby cluster application, and from the pop-up menu, if you are starting the node as the active node, select [Online], or if you are starting it as the standby node, select [Standby]. If the state is [Fault], then select [Clear fault].

   This operation is not required if the cluster application has been configured to start automatically when RMS is started.

### 3.5.2 Mutual Switch Maintenance

This section explains the procedure to perform maintenance on the standby node while running the active node at the same time.

### 3.5.2.1 Stopping the Cluster Applications on the Standby Node for Node Maintenance

Follow the steps shown below to stop the cluster application on the standby node only:

1. Edit the `/opt/SMAW/SMAWRms/bin/hvenv.local` file, and add "export HV_RCSTART=0". If the hvenv.local file does not exist, then create it.

   ```
   # vi /opt/SMAW/SMAWRms/bin/hvenv.local
   Add export HV_RCSTART=0
   ```

2. On the RMS tree in the [Cluster Admin] window, right-click the cluster application on the standby node to be stopped, and select [Offline] from the pop-up menu to stop it.
3. On the RMS tree in the [Cluster Admin] window, right-click the system node (where the cluster application on the standby node that was stopped exists), and select [Shutdown RMS]. At this stage, select [Stop all Apps] as the option, and stop RMS.
Note

- Ensure that the steps up to step 3 have been completed properly before performing the maintenance tasks. If the active node goes down at the point when steps 1 and 2 have been completed, FUJITSU Enterprise Postgres will be started on the supposedly stopped standby node, and it becomes the active node instead. As a result, this will compete with the maintenance tasks and unexpected behavior may occur.

- If applying the FUJITSU Enterprise Postgres update patches, RMS on the node (onto which the patches are applied) must be stopped. This is because the FUJITSU Enterprise Postgres monitoring process that runs when linked with PRIMECLUSTER must be stopped.

- By stopping RMS, all cluster applications on the system node where RMS is stopped will stop. When you have multiple cluster applications configured, ensure that stopping all other cluster applications will not cause any problems, before stopping RMS.

3.5.2.2 Standby Node Maintenance

Perform maintenance tasks such as patch application and hardware parts replacement.

3.5.2.3 Restarting the Cluster Applications Stopped on the Standby Node for Node Maintenance

Follow the steps shown below to restart the cluster application on the standby node only (that was stopped for maintenance):

1. Edit the /opt/SMAW/SMAWRrms/bin/hvenv.local file, and delete "export HV_RCSTART=0".
   
   # vi /opt/SMAW/SMAWRrms/bin/hvenv.local
   Delete export HV_RCSTART=0

2. Select [Tools]-[Start RMS] in the [Cluster Admin] window, and select the node to be started and click [Ok].

3. On the RMS tree in the [Cluster Admin] window, right-click the cluster application to be started as the standby node, and select [Standby] from the pop-up menu to start it. If the state is [Fault], then select [Clear fault].

3.5.2.4 Mutual Switch

To perform mutual switch between the active and standby nodes, perform the steps shown below:

1. Select and right-click the cluster application on the active node, and select [Offline] from the pop-up menu to stop it.

2. Select and right-click the cluster application on the standby node, and select [Online] from the pop-up menu to start it.

3. Select and right-click the cluster application that was previously on the active node, and select [Standby] from the pop-up menu to start it as standby.

3.5.2.5 Standby Node Maintenance after the Mutual Switch

To perform maintenance tasks on the new standby node after mutual switch, perform the steps from "3.5.2.1 Stopping the Cluster Applications on the Standby Node for Node Maintenance" to "3.5.2.3 Restarting the Cluster Applications Stopped on the Standby Node for Node Maintenance".
Chapter 4 Procedures Required after a Failover Error

This chapter explains how to perform recovery when an abnormality occurs during failover operation.

When an error occurs during failover operation, refer to the system log to identify the cause and stop the RMS to perform recovery, separately from the RMS management. Normal operations can be resumed by restarting the RMS once the recovery is completed.

Note that the database cluster may be started or stopped without using cluster applications when performing recovery.

Refer to the tasks outlined below in Figure 4.1 Operation flow when a failover error occurs, and perform recovery.

Figure 4.1 Operation flow when a failover error occurs

Error occurs

→ Refer to 4.1

Identify the cause of the error

→ Refer to 4.2

Stopping the cluster applications for node maintenance (*1)

→ Refer to 5.1

Starting the database cluster (*2)

→ Refer to 5.2

Recovery tasks

→ Refer to 5.3

Stopping the database cluster (*2)

→ Refer to 5.4

Restarting the cluster applications stopped for node maintenance

→ Refer to 5.5

Resume operation

→ Refer to 5.6

*1) If the machine is already stopped when the error occurred, this step is not necessary.

*2) Depending on the recovery tasks, start or stop the database cluster as required.

4.1 Identifying the Cause of an Error

When an error occurs during failover operation, refer to the system log to identify the cause. When cluster applications fail to start, refer to the server.log file to identify the cause.

The server.log file is a file created under the directory specified in the -w option when executing the pgx_pclrsc command. This file has almost the same content as the file specified in the -l option when executing the pg_ctl command to start the database cluster, and errors that are not output to the system log are output to these files, including startup errors.

4.2 Stopping the Cluster Applications for Node Maintenance

When an error occurs during failover operation, stop the RMS to perform recovery, separately from the RMS management. Refer to “3.5 Maintenance Tasks” for information on how to stop cluster applications for node maintenance.

Note that this task is not required in cases such as when the RMS is stopped because the machine is stopped due to an error.
4.3 Starting the Database Cluster

To perform recovery when an error occurs, it is necessary to start the database cluster without using cluster applications. Follow the procedure below to start the database cluster if required.

Check if the database cluster needs to be started by referring to the recovery tasks written in "Actions When an Error Occurs" in the Operation Guide.

1. Start the GDS volume.
2. Mount the necessary file systems such as those where the data storage destination directory is placed.
3. Start the database cluster by using the pg_ctl command. Refer to "Using Server Commands" in "Starting an Instance and Creating a Database" in the Operation Guide for information on how to start the database cluster.

4.4 Recovery Tasks

Refer to "Actions When an Error Occurs" in the Operation Guide for information on how to perform recovery. If there are two ways available to perform recovery; using WebAdmin or commands, use commands.

4.5 Stopping the Database Cluster

If a database cluster is started, stop the database cluster.

1. Stop the database cluster using the pg_ctl command. Refer to "Using Server Commands" in "Starting an Instance and Creating a Database" in the Operation Guide for information on how to stop the database cluster.
2. Unmount the file systems such as those where the data storage destination directory is placed.
3. Stop the GDS volume.

4.6 Restarting the Cluster Applications Stopped for Node Maintenance

Refer to "3.5 Maintenance Tasks" to restart the cluster applications stopped for node maintenance.
Appendix A  Creating Resources and Creating/Modifying Cluster Applications

This appendix explains how to create and modify cluster applications that include FUJITSU Enterprise Postgres resources in PRIMECLUSTER.

A.1 Creating Resources and Cluster Applications

Use the following procedure to create resources and a cluster application:

1. Preparing for Creation  ⇒ Refer to A.1.1
2. Creating a Cluster Application and Configuring Its Attributes  ⇒ Refer to A.1.2
3. Create Gds Resources  ⇒ Refer to A.1.3
4. Creating FUJITSU Enterprise Postgres Resources  ⇒ Refer to A.1.4
5. Creating Gls or Takeover Network Resources  ⇒ Refer to A.1.5
6. Creating Fsystem Resources  ⇒ Refer to A.1.6
7. Creating Resources and Finalizing Cluster Application Creation  ⇒ Refer to A.1.7

A.1.1 Preparing for Creation

1. Execute the hvgdsetup command for all shared disk classes to be used by all file systems to be registered in the cluster application.
   
   # /opt/SMAW/SMAWRrms/bin/hvgdsetup -a class0001

2. From the Web-Based Admin View, stop RMS on all nodes.

3. Execute the hvw command.
   
   # /opt/SMAW/SMAWRrms/bin/hvw

See

Refer to the PRIMECLUSTER Installation and Administration Guide for information on the hvgdsetup command.

A.1.2 Creating a Cluster Application and Configuring Its Attributes

1. Select [Application-Create].
2) QUIT                                11) Configuration-Freeze
3) Application-Create                  12) Configuration-Thaw
4) Application-Edit                    13) Configuration-Edit-Global-Settings
5) Application-Remove                  14) Configuration-Consistency-Report
6) Application-Clone                   15) Configuration-ScriptExecution
7) Configuration-Generate              16) RMS-CreateMachine
8) Configuration-Activate              17) RMS-RemoveMachine
9) Configuration-Copy

Choose an action: 3

2.
Select [STANDBY].

Creation: Application type selection menu:
1) HELP                                 7) SCALABLE
2) QUIT                                 8) STANDBY
3) RETURN
4) OPTIONS
5) DEMO
6) GENERIC
Application Type: 8

3.
Select [Machines+Basics].

Settings of turnkey wizard "STANDBY" (APP1:not yet consistent)
1) HELP                                 4) REMOVE+EXIT
2) NO-SAVE+EXIT                         5) ApplicationName=APP1
3) SAVE+EXIT                            6) Machines+Basics(-)
Choose the setting to process: 6

Note

Although ApplicationName can be set to any name within the range of constraints of PRIMECLUSTER, do not set it to the database cluster name specified when registering a database cluster to PRIMECLUSTER using the pxd_pclrsc command. If the same name is set, RMS will fail to start.

4.
Select [AdditionalMachine].

Machines+Basics (app1:consistent)
1) HELP                                 14) (AutoStartUp=no)
2) -                                   15) (AutoSwitchOver=No)
3) SAVE+EXIT                           16) (PreserveState=no)
4) REMOVE+EXIT                         17) (PersistentFault=0)
5) AdditionalMachine                   18) (ShutdownPriority=)
6) AdditionalConsole                   19) (OnlinePriority=)
7) Machines[0]=pcl-vm13RMS             20) (StandbyTransitions=)
8) (PreCheckScript=)                   21) (LicenseToKill=no)
9) (PreOnlineScript=)                  22) (AutoBreak=yes)
10) (PostOnlineScript=)                23) (AutoBreakMaintMode=no)
11) (PreOfflineScript=)                24) (HaltFlag=no)
12) (OfflineDoneScript=)               25) (PartialICluster=0)
13) (FaultScript=)                     26) (ScriptTimeout=)
Choose the setting to process: 5

5.
Select a standby node.

1) HELP
2) RETURN
3) pcl-vm13RMS
4) pcl-vm14RMS
Choose a machine for this application: 4
6. Ensure that all nodes that make up the cluster application are displayed in [Machines]. Note that the item displayed in Machines[0] needs to be the active node, and Machines[1] to be the standby node. If these are not set correctly, modify the setting.

<table>
<thead>
<tr>
<th>Machines+Basics (app1:consistent)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1) HELP</td>

<tr>
<td>27) (ScriptTimeout=)</td>
</tr>
</tbody>
</table>

Choose the setting to process:

7. Configure attributes for cluster applications from step 8.

Refer to the PRIMECLUSTER Installation and Administration Guide for information on the attributes for cluster applications.

Configure the attributes as shown below:

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>AutoStartUp</td>
<td>Yes</td>
</tr>
<tr>
<td>(Automatically starts cluster applications when the RMS is started.)</td>
<td></td>
</tr>
<tr>
<td>AutoSwitchOver</td>
<td>- HostFailure</td>
</tr>
<tr>
<td>(Automatically switches nodes when a fault occurs in cluster applications.)</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- ResourceFailure</td>
</tr>
<tr>
<td></td>
<td>- ShutDown</td>
</tr>
<tr>
<td>PersistentFault</td>
<td>0 or 1</td>
</tr>
<tr>
<td>(Selects whether to keep the Faulted state of the cluster application after restarting the RMS.) (*1)</td>
<td></td>
</tr>
<tr>
<td>OnlinePriority</td>
<td>0 or 1</td>
</tr>
<tr>
<td>(Selects whether to use the same online nodes as those used before all clusters were restarted or follow the configured order for nodes, when all clusters were restarted.) (*2)</td>
<td></td>
</tr>
<tr>
<td>StandbyTransitions</td>
<td>- ClearFaultRequest</td>
</tr>
<tr>
<td>(Timing to perform standby state transition.)</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- StartUp</td>
</tr>
<tr>
<td></td>
<td>- SwitchRequest</td>
</tr>
<tr>
<td>HaltFlag</td>
<td>Yes</td>
</tr>
<tr>
<td>(Selects whether to terminate the node forcibly when another error occurs during the Fault process.)</td>
<td></td>
</tr>
</tbody>
</table>

*1: If 0 is specified, the Faulted state is automatically canceled when the RMS is started. If 1 is specified, the Faulted state is kept.

*2: If 0 is specified, cluster applications will become Online in accordance with the node setting order when all clusters are restarted. If 1 is specified, cluster applications will become Online on nodes where the cluster applications were Online before the restart.
8. Select [AutoStartUp].

9) Procedure:BasicApplication(-)
Choose the setting to process:17

2. Select [AdditionalDiskClass].

Volume management (Gds_APP1:not yet consistent)
1) HELP                  4) REMOVE+EXIT            7) (StandbySupport=no)
2) -                      5) AdditionalDiskClass    8) (AutoRecover=no)
3) SAVE+EXIT              6) (ClassNameFilter=)     9) (Timeout=1800)
Choose the setting to process: 5

3. Select a class.

1) HELP
2) RETURN
3) FREECHOICE
4) class0001
Choose the disk class: 4

4. Follow the steps above for all shared disk classes to be used by all file systems to be registered in the cluster application. When doing so, configure the MONITORONLY attribute as shown in the following table:

<table>
<thead>
<tr>
<th>Purpose of file system</th>
<th>MONITORONLY attribute</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data storage destination directory</td>
<td>No</td>
</tr>
<tr>
<td>Backup data storage destination</td>
<td>Yes</td>
</tr>
<tr>
<td>directory</td>
<td></td>
</tr>
<tr>
<td>Table space</td>
<td>No</td>
</tr>
<tr>
<td>Transaction log storage destination</td>
<td>No</td>
</tr>
<tr>
<td>directory</td>
<td></td>
</tr>
</tbody>
</table>

To set the MONITORONLY attribute to "Yes", select "MONITORONLY".

Set a flag for the disk class: class0001
Currently set:
1) HELP                                5) MONITORONLY (M)
2) -                                   6) (ClassNameFilter=)
3) SAVE+RETURN
4) DEFAULT
Choose additionally one of the flags:

5. To configure the disk class, select [StandbySupport] and specify "no" - this means that upon failure, the disk will switch according to the purpose of the class.

Volume management (Gds_APP1:consistent)
1) HELP                                6) DiskClasses[0]=class0001
2) -                                    7) (ClassNameFilter=)
3) SAVE+EXIT                            8) (StandbySupport=no)
4) REMOVE+EXIT                          9) (AutoRecover=no)
5) AdditionalDiskClass                 10) (Timeout=1800)
Choose the setting to process: 8

6. Select [SAVE+EXIT].

Volume management (Gds_APP1:consistent)
1) HELP                                6) DiskClasses[0]=class0001
2) -                                    7) (ClassNameFilter=)
3) SAVE+EXIT                            8) (StandbySupport=no)
4) REMOVE+EXIT                          9) (AutoRecover=no)
5) AdditionalDiskClass                 10) (Timeout=1800)
Choose the setting to process: 3

A.1.4 Creating FUJITSU Enterprise Postgres Resources

1. Select [Enterprise-Postgres].

Settings of turnkey wizard *STANDBY* (APP1:consistent)
1) HELP                                10) Enterprise-Postgres(-)
2) -                                    11) Symfoware(-)
3) SAVE+EXIT                            12) Procedure:SystemState3(-)
4) -                                    13) Procedure:SystemState2(-)
5) ApplicationName=APP1                14) Gls:Global-Link-Services(-)
6) Machines+Basics(app1)               15) IpAddresses(-)
7) CommandLines(-)                     16) LocalFileSystems(-)
8) Procedure:Application(-)            17) Gds:Global-Disk-Services(Gds_APP1)
9) Procedure:BasicApplication(-)
Choose the setting to process:10

2. Select [AdditionalResource].

Resource (Fsep_APP1:not yet consistent)
1) HELP                                4) REMOVE+EXIT
2) -                                    5) AdditionalResource
3) SAVE+EXIT
Choose the setting to process: 5

3. Select the database cluster name specified in the pgx_pclrsc command in "2.8 Registering Resource Information for the FUJITSU Enterprise Postgres Database Cluster”.

1) HELP
2) RETURN
3) FREECHOICE
4) inst1
Choose the resource: 4

4. Select [SAVE+EXIT].

Resource (Fsep_APP1:consistent)
1) HELP                                6) ResourceName[0]=inst1
2) -                                    7) Flags[0]=T900
A.1.5 Creating Gls or Takeover Network Resources

Create Gls or takeover network resources to use takeover network resources. This section provides an example for configuring GI resources.

See

- Refer to the PRIMECLUSTER Installation and Administration Guide for information on creating takeover network resources.
- Refer to the PRIMECLUSTER Installation and Administration Guide for information on creating GI resources.

1. Select [Gls:Global-Link-Services].

2. Select [AdditionalTakeoverIpaddress].

3. Select a takeover IP.

4. Select [SAVE+RETURN].

5. Select [SAVE+EXIT].
4) REMOVE+EXIT
Choose the setting to process: 3

A.1.6 Creating Fs system Resources

1. Select [LocalFileSystem].

2. Select [AdditionalMountPoint].

3. Select the mount point of the file system.

   For all mount points assigned to the data storage destination directory, the backup data storage destination directory, the tablespace directory, and the transaction log storage destination directory, repeat Steps 3 to 5. Additionally, to register multiple file systems for monitoring, repeat Steps 3 to 5 before proceeding to configure settings for file systems used for the job.

4. Configure the MONITORONLY attribute.

<table>
<thead>
<tr>
<th>Purpose of the file system</th>
<th>MONITORONLY attribute</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data storage destination directory</td>
<td>No</td>
</tr>
<tr>
<td>Backup data storage destination directory</td>
<td>Yes</td>
</tr>
<tr>
<td>Table space</td>
<td>No</td>
</tr>
<tr>
<td>Transaction log storage destination directory</td>
<td>No</td>
</tr>
</tbody>
</table>

Select MONITORONLY to specify Yes to the MONITORONLY attribute.
5. Select [SAVE+RETURN].

Set flags for mount point: /mnt/swdsk1 Currently set:
LOCAL,AUTORECOVER, MONITORONLY (LAM)
1) HELP                    4) DEFAULT               7) SHARE(S)
2) -                       5) SYNC(Y)                8) NOT:MONITORONLY(M)
3) SAVE+RETURN             6) NOT:AUTORECOVER(A)
Choose one of the flags: 3

6. After configuring all mount points, select [SAVE+EXIT].

File systems (Lfs_APP1:consistent)
1) HELP                    6) MountPoints[0]=LA:/mnt/monitor1
2) -                       7) MountPoints[1]=LA:/mnt/monitor2
3) SAVE+EXIT               8) (Filter=)
4) REMOVE+EXIT             9) (Timeout=180)
5) AdditionalMountPoint
Choose the setting to process: 3

7. Select [SAVE+EXIT].

Settings of turnkey wizard "STANDBY" (APP1:consistent)
1) HELP                                10) Enterprise-Postgres(Fsep_APP1)
2) -                                   11) Symfoware(-)
3) SAVE+EXIT                            12) Procedure:SystemState3(-)
4) -                                   13) Procedure:BasicApplication(-)
5) ApplicationName=APP1                14) Gls:Global-Link-Services(Gls_APP1)
6) Machines+Basics(appl)               15) IpAddresses(-)
7) CommandLines(-)                     16) LocalFileSystems(Lfs_APP1)
8) Procedure:Application(-)            17) Gds:Global-Disk-Services(Gds_APP1)
9) Procedure:BasicApplication(-)
Choose the setting to process:3

See

Refer to the PRIMECLUSTER Installation and Administration Guide for information on creating Fsystem resources.

A.1.7 Creating Resources and Finalizing Cluster Application Creation

1. Select [Configuration-Generate].

pcl-vm13: Main configuration menu, current configuration: config
No RMS active in the cluster
1) HELP                                10) Configuration-Remove
2) QUIT                                 11) Configuration-Freeze
3) Application-Create                   12) Configuration-Thaw
4) Application-Edit                     13) Configuration-Edit-Global-Settings
5) Application-Remove                   14) Configuration-Consistency-Report
6) Application-Clone                    15) Configuration-ScriptExecution
7) Configuration-Generate                16) RMS-CreateMachine
8) Configuration-Activate               17) RMS-RemoveMachine
9) Configuration-Copy
Choose an action: 7

2. Select [Configuration-Activate].

If processing is successful, "The activation has finished successfully." will be displayed. If this message is not displayed, there is an issue with the information or configuration that was set. In such a case, review the changed information.

pcl-vm13: Main configuration menu, current configuration: config
No RMS active in the cluster
1) HELP                                10) Configuration-Remove
2) QUIT                                11) Configuration-Freeze
3) Application-Create                  12) Configuration-Thaw
4) Application-Edit                    13) Configuration-Edit-Global-Settings
5) Application-Remove                  14) Configuration-Consistency-Report
6) Application-Clone                   15) Configuration-ScriptExecution
7) Configuration-Generate              16) RMS-CreateMachine
8) Configuration-Activate              17) RMS-RemoveMachine
9) Configuration-Copy
Choose an action: 8

Choose an action: 2

A.2 Modifying Cluster Applications

Follow the steps shown below to add a new file system to a cluster application. Refer to the PRIMECLUSTER Installation and Administration Guide for information on other modifications on cluster applications. Stop the RMS on all nodes when modifying cluster applications.

A.2.1 Moving to the Cluster Application Edit Window

1. Execute the hvw command.

```bash
# /opt/SMAW/SMAWRrms/bin/hvw
```

2. Select [Application-Edit].

Moving to the Cluster Application Edit Window => Refer to A.2.1

Adding a Created Shared Disk Class to the Cluster Application => Refer to A.2.2

Adding a Created File System to the Cluster Application => Refer to A.2.3

Reflecting the Modifications Made to the Cluster Application => Refer to A.2.4

A.2.1 Moving to the Cluster Application Edit Window

1. Execute the hvw command.

```bash
# /opt/SMAW/SMAWRrms/bin/hvw
```

2. Select [Application-Edit].
Choose an action: 4

### A.2.2 Adding a Created Shared Disk Class to the Cluster Application

1. Select [Gds:Global-Disk-Services].

   Settings of turnkey wizard "STANDBY" (APP1:consistent)
   1) HELP                                10) Enterprise-Postgres(Fsep_APP1)
   2) READONLY                            11) Symfoware(-)
   3) SAVE+EXIT                           12) Procedure:SystemState3(-)
   4) -                                   13) Procedure:SystemState2(-)
   5) ApplicationName=APP1                14) Gls:Global-Link-Services(Gls_APP1)
   6) Machines+Basics(app1)               15) IpAddresses(-)
   7) CommandLines(-)                     16) LocalFileSystems(Lfs_APP1)
   8) Procedure:Application(-)            17) Gds:Global-Disk-Services(Gds_APP1)
   9) Procedure:BasicApplication(-)       

   Choose the setting to process: 17

2. Select [AdditionalDiskClass].

   Volume management (Gds_APP1:consistent)
   1) HELP                                6) DiskClasses[0]=class0001
   2) NO-SAVE+EXIT                        7) (ClassNameFilter=)
   3) SAVE+EXIT                           8) (StandbySupport=no)
   4) REMOVE+EXIT                         9) (AutoRecover=no)
   5) AdditionalDiskClass                 10) (Timeout=1800)
   6) DiskClasses[0]=class0001            11) (Timeout=1800)

   Choose the setting to process: 3

3. Select the created class.

   1) HELP
   2) RETURN
   3) FREECHOICE
   4) class0001
   5) class0002

   Choose the disk class: 5

4. Select [SAVE+EXIT].

   Volume management (Gds_APP1:consistent)
   1) HELP                                7) DiskClasses[1]=class0002
   2) NO-SAVE+EXIT                        8) (ClassNameFilter=)
   3) SAVE+EXIT                           9) (StandbySupport=no)
   4) REMOVE+EXIT                         10) (AutoRecover=no)
   5) AdditionalDiskClass                 11) (Timeout=1800)
   6) DiskClasses[0]=class0001            12) (Timeout=1800)

   Choose the setting to process: 3
5. Select [SAVE+EXIT] to quit or [LocalFileSystems] to add local file systems.

```
<table>
<thead>
<tr>
<th>Settings of turnkey wizard &quot;STANDBY&quot;</th>
<th>(APPL:consistent)</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>3) SAVE+EXIT</td>
<td>12) Procedure:SystemState3(-)</td>
</tr>
<tr>
<td>4) -</td>
<td>13) Procedure:SystemState2(-)</td>
</tr>
<tr>
<td>5) ApplicationName=APP1</td>
<td>14) Gls:Global-Link-Services(Gls_APP1)</td>
</tr>
<tr>
<td>6) Machines+Basics(app1)</td>
<td>15) IpAddresses(-)</td>
</tr>
<tr>
<td>7) CommandLines(-)</td>
<td>16) LocalFileSystems(Lfs_APP1)</td>
</tr>
<tr>
<td>8) Procedure:Application(-)</td>
<td>17) Gds:Global-Disk-Services(Gds_APP1)</td>
</tr>
<tr>
<td>9) Procedure:BasicApplication(-)</td>
<td></td>
</tr>
</tbody>
</table>

Choose the setting to process: 16
```

2. Select [AdditionalMountPoint].

```
<table>
<thead>
<tr>
<th>File systems (Lfs_APP1:consistent)</th>
<th>7) MountPoints[1]=LA:/mnt/swdsk2</th>
</tr>
</thead>
<tbody>
<tr>
<td>1) HELP</td>
<td>8) (Filter=)</td>
</tr>
<tr>
<td>2) NO-SAVE+EXIT</td>
<td>9) (Timeout=180)</td>
</tr>
<tr>
<td>3) SAVE+EXIT</td>
<td></td>
</tr>
<tr>
<td>4) REMOVE+EXIT</td>
<td></td>
</tr>
<tr>
<td>5) AdditionalMountPoint</td>
<td></td>
</tr>
<tr>
<td>6) MountPoints[0]= LA:/mnt/swdsk1</td>
<td></td>
</tr>
</tbody>
</table>

Choose the setting to process: 5
```

3. After registering the file systems to be used, select [SAVE+EXIT].

```
<table>
<thead>
<tr>
<th>File systems (Lfs_APP1:consistent)</th>
<th>8) MountPoints[2]=LA:/mnt/swdsk3</th>
</tr>
</thead>
<tbody>
<tr>
<td>1) HELP</td>
<td>9) (Filter=)</td>
</tr>
<tr>
<td>2) NO-SAVE+EXIT</td>

</tr>
<tr>
<td>4) REMOVE+EXIT</td>
<td></td>
</tr>
<tr>
<td>5) AdditionalMountPoint</td>
<td></td>
</tr>
<tr>
<td>6) MountPoints[0]= LA:/mnt/swdsk1</td>
<td></td>
</tr>
<tr>
<td>7) MountPoints[1]=LA:/mnt/swdsk2</td>
<td></td>
</tr>
</tbody>
</table>

Choose the setting to process: 5
```

### A.2.4 Reflecting Modifications Made to the Cluster Application

1. Select [SAVE+EXIT].

```
<table>
<thead>
<tr>
<th>Settings of turnkey wizard &quot;STANDBY&quot;</th>
<th>(APPL:consistent)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1) HELP</td>
<td>10) Enterprise-Postgres(Fsep_APP1)</td>
</tr>
<tr>
<td>2) -</td>
<td>11) Symfoware(-)</td>
</tr>
<tr>
<td>3) SAVE+EXIT</td>
<td>12) Procedure:SystemState3(-)</td>
</tr>
<tr>
<td>4) -</td>
<td>13) Procedure:SystemState2(-)</td>
</tr>
</tbody>
</table>
```
2. Select [RETURN].

   Edit: Application selection menu (restricted):
   1) HELP
   2) QUIT
   3) RETURN
   4) OPTIONS
   5) APP1

   Application Name: 3

3. Select [Configuration-Generate].

   pcl-vm13: Main configuration menu, current configuration: config
   No RMS active in the cluster
   1) HELP                                 10) Configuration-Remove
   2) QUIT                                 11) Configuration-Freeze
   3) Application-Create                  12) Configuration-Thaw
   4) Application-Edit                    13) Configuration-Edit-Global-Settings

Appendix B Command Reference

This appendix explains for details in command.

B.1 pgx_pclrsc

Name

pgx_pclrsc -- Register, unregister, or display FUJITSU Enterprise Postgres database cluster with PRIMECLUSTER as resource of PRIMECLUSTER.

Synopsis

```
pgx_pclrsc  -a  -c  name  -u  osuser  -D  directory  -w  directory
             -n  nodes  [options...]
pgx_pclrsc  -d  -c  name
pgx_pclrsc  -p  [-c  name]
```

Description

pgx_pclrsc is an utility for registering or unregistering FUJITSU Enterprise Postgres database cluster with PRIMECLUSTER, or displaying settings of FUJITSU Enterprise Postgres database cluster registered with PRIMECLUSTER. Execute the command on a member node of the cluster. Only the super user(root) can execute this command.

Options

- **-a**
  --add
  Register the specified database cluster with PRIMECLUSTER. If the specified database cluster has already been registered with PRIMECLUSTER, then terminate abnormally.

- **-c name**
  --db-cluster-name=name
  Specify database cluster name. name is case-sensitive, and must be within 16 bytes, and an initial letter must be ascii alphabet, and following letters must be ascii alphabet or ascii digit or underscore(_).

- **-d**
  --delete
  Unregister the specified database cluster from PRIMECLUSTER.

- **-D directory**
  --pgdata=directory
  Specify an absolute path of data directory.

- **--db-user=name**
  Specify a database super user. Default is the user specified with `-u`.

- **-n nodes**
  --member-nodes=nodes
  Specify names of all member nodes of the cluster. Specify a cluster node name with suffix "RMS" to the name. Separate names with comma(,). (e.g. -n node1RMS,node2RMS)

- **-p**
  --print
  Print a list of database clusters registered with PRIMECLUSTER. If `-c` option is specified, then print settings of the database cluster.
--response-timeout=seconds

Specify timeout of the query for health check. It's used with a count specified with '--timeout-retry-num'. The query is "SELECT 1" to the database "template1". If '0', wait infinitely. (default: '0')

--timeout-retry-count=count

Specify a limit count of retrying query when timeout is occurred. If retry counter is over the limit, then PRIMECLUSTER considers status of the database server as FAULT. If a query doesn't timeout once, retry counter is reset. (default: '6')

--trace-max-file-size=size

Specify max size(KB) of trace file. (default: '10240')

-u osuser
--os-user=osuser

Specify an OS user who can start/stop FUJITSU Enterprise Postgres database server.

-w directory
--work-dir=directory

Specify a directory for temporary data and trace files. It's used for starting, stopping or checking FUJITSU Enterprise Postgres database server. If the directory doesn't exist, then create it. Owner of the directory created by the command is set to the user specified with '-u'. Permission of the directory created by the command is set to 0700.

--watch-interval=seconds

Specify an interval. It's used for the amount of time between health checks. (default: '3')

Diagnostics
0 : On success
otherwise : On error

Notes
Before unregistering a resource, stop RMS of PRIMECLUSTER.

Example
The simplest example of registering a resource.

# pgx_pclrsc -a -c inst1 -u postgres -D /mnt/swdsk1/pgdata -w /var/tmp/work -n node1RMS,node2RMS

## Glossary

**Arbitration command**
A user exit (user command) called when an abnormality is detected using operating system/server heartbeat monitoring in database multiplexing mode.

**Arbitration server**
A server that objectively determines the status of database servers as a third party, and if necessary, performs fencing, if the database servers are unable to accurately ascertain the mutual statuses in database multiplexing mode, such as due to a network error or server instability between database servers.

**Archive log**
Contains the history of updates made to the database, and is used during recovery.

**Backup data storage destination**
The directory that stores the backup data.

**Client command**
A command that is executed from the client machine and used. Also known as a client application.

**Data storage destination**
The directory that stores the database clusters.

**Database cluster**
The database storage area on the database storage disk. Database clusters are a collection of databases managed by an instance.

**Data masking**
A feature that can change the returned data for queries generated by applications, to prevent exposing actual data.

**Database multiplexing**
Mechanism in which a database is made redundant on multiple servers, by transferring transaction logs (WAL) via the network to enable application jobs to be continued.

**Database superuser**
A user defined in the database with access privileges for all database objects.

**Encoding**
Indicates the character set.

**Fencing**
A process that isolates a database server with an unstable status from the cluster system in database multiplexing mode. This process is implemented as a fencing command.

**Fencing command**
A user exit (user command) that implements fencing in database multiplexing mode.

**Instance**
A series of server processes for managing database clusters.
**Instance administrator**

The OS user account that owns the database cluster files and operates the database server processes.

**Instance name**

Indicates the instance name.

**Masking policy**

A method of changing data under specific conditions when it is returned for a query from an application. You can configure masking target, masking type, masking condition and masking format.

**Mirrored transaction log**

The log that mirrors the transaction log at the backup data storage destination.

**Mirroring Controller arbitration process**

A process that performs arbitration and fencing on the arbitration server.

**Mirroring Controller monitoring process**

A process that performs heartbeat monitoring of the Mirroring Controller process. If the Mirroring Controller process returns no response or is down, the Mirroring Controller monitoring process is restarted automatically.

**Mirroring Controller process**

A process that performs operating system/server and process heartbeat monitoring and disk abnormality monitoring between database servers. Additionally, the process issues arbitration requests to the arbitration server and executes arbitration commands.

**Primary server**

The server that processes the main database jobs during multiplexed database operation.

**Server command**

A command used on the database server. Also known as a server application.

**Standby server**

A server that generates a replicated database synchronized with the primary server, and that can run as an alternative server in case the primary server fails during multiplexed database operation.

**State transition command**

A user exit (user command) called when Mirroring Controller performs a state transition of a database server in database multiplexing mode. State transition commands include the post-promote command, pre-detach command, and post-attach command.

**Transaction log**

Contains the history of updates made to the database by transactions. Also known as the WAL (Write-Ahead Log).

**Transaction log storage destination**

The directory that stores the transaction log.

**VCI (Vertical Clustered Index)**

An index with columnar data structure suitable for aggregation.

**WAL (Write-Ahead Log)**

Has the same meaning as 'transaction log'.

Preface

Purpose of this document

This document is a command reference, and explains FUJITSU Enterprise Postgres commands and options with features expanded on from PostgreSQL.

Intended readers

This document is aimed at people who manage and operate FUJITSU Enterprise Postgres. Readers of this document are also assumed to have general knowledge of:

- PostgreSQL
- SQL
- Oracle Solaris
- Linux
- Windows

Structure of this document

This document is structured as follows:

Chapter 1 Command List and Specification Format

Lists commands and describes their specification format.

Chapter 2 Client Commands

Explains options not listed in "PostgreSQL Client Applications" in the PostgreSQL Documentation.

Chapter 3 Server Commands

Explains commands and options not listed in "PostgreSQL Server Applications" in the PostgreSQL Documentation.

Chapter 4 Mirroring Controller Commands

Explains the Mirroring Controller commands

How to read this document

Examples in this document are predominantly for UNIX/Linux.

For Windows, replace values (such as paths in the examples) as appropriate.

Export restrictions

If this document is to be exported or provided overseas, confirm legal requirements for the Foreign Exchange and Foreign Trade Act as well as other laws and regulations, including U.S. Export Administration Regulations, and follow the required procedures.

# Chapter 1 Command List and Specification Format

This chapter lists commands and describes their specification format.

## 1.1 Command List

This chapter lists commands and options not explained in “PostgreSQL Client Applications” or in “PostgreSQL Server Applications” in the PostgreSQL Documentation.

### 1.1.1 Client Commands

The commands below have options not explained in “PostgreSQL Client Applications” in the PostgreSQL Documentation.

<table>
<thead>
<tr>
<th>Command</th>
<th>Functional overview</th>
</tr>
</thead>
<tbody>
<tr>
<td>pg_dumpall</td>
<td>Extract a PostgreSQL database cluster into a script file</td>
</tr>
</tbody>
</table>

The command below is not explained in “Client Applications” in the PostgreSQL Documentation.

<table>
<thead>
<tr>
<th>Command</th>
<th>Functional overview</th>
</tr>
</thead>
<tbody>
<tr>
<td>pgx_loader</td>
<td>Loads data from an external file into a PostgreSQL table.</td>
</tr>
</tbody>
</table>

### 1.1.2 Server Commands

The commands below have options not explained in “PostgreSQL Server Applications” in the PostgreSQL Documentation.

<table>
<thead>
<tr>
<th>Command</th>
<th>Functional overview</th>
</tr>
</thead>
<tbody>
<tr>
<td>pg_ctl</td>
<td>Initialize, start, stop, or control a PostgreSQL server</td>
</tr>
<tr>
<td>postgres</td>
<td>PostgreSQL database server</td>
</tr>
</tbody>
</table>

The commands below are not explained in “PostgreSQL Server Applications” in the PostgreSQL Documentation.

<table>
<thead>
<tr>
<th>Command</th>
<th>Functional overview</th>
</tr>
</thead>
<tbody>
<tr>
<td>pgx_dmpall</td>
<td>Backs up the data directory, tablespaces, and configuration files.</td>
</tr>
<tr>
<td>pgx_keystore</td>
<td>Manages keystore</td>
</tr>
<tr>
<td>pgx_rcvall</td>
<td>Recovers the data directory, tablespaces, and configuration files.</td>
</tr>
</tbody>
</table>

### 1.1.3 Mirroring Controller Commands

Mirroring Controller has the following commands:

<table>
<thead>
<tr>
<th>Command</th>
<th>Functional overview</th>
</tr>
</thead>
<tbody>
<tr>
<td>mc_arb</td>
<td><strong>S L</strong> Start, stop and display the status of the Mirroring Controller arbitration process. <strong>W</strong> Start, stop and display the status of the Mirroring Controller arbitration process, or register and unregister as a Windows service.</td>
</tr>
</tbody>
</table>
### Command Functional Overview

**mc_ctl**
- Start and stop Mirroring Controller, switch/disconnect the server, or display the server status.
- Start and stop Mirroring Controller, switch/disconnect the server, display the server status, or register and unregister as a Windows service.

### 1.2 Command Specification Format

The table below shows the command specification format.

<table>
<thead>
<tr>
<th>Item</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>[ ]</td>
<td>Indicates optional element.</td>
</tr>
<tr>
<td>...</td>
<td>Indicates that the item can be specified repeatedly.</td>
</tr>
</tbody>
</table>
Chapter 2 Client Commands

This chapter explains options not listed in "PostgreSQL Client Applications" in the PostgreSQL Documentation.

2.1 pg_dumpall

Name

pg_dumpall -- Extract a PostgreSQL database cluster into a script file

Synopsis

pg_dumpall [connectionOption...] [option...]

Options

--no-tablespace-encryption

Do not output commands to encrypt tablespaces. Running the generated SQL script will restore the originally encrypted data without being encrypted.

See

Refer to "pg_dumpall" in the PostgreSQL Documentation for details.

2.2 pgx_loader

Name

pgx_loader -- Loads data from a file into a PostgreSQL table.

Overview

pgx_loader load -c command [options...]

pgx_loader recovery -t table

Description

The pgx_loader command loads data from an external file into PostgreSQL tables, and commits or rolls back transactions prepared during data load.

In load mode, data is loaded at high speed by executing the COPY FROM command specified in command at a certain degree of parallelism. If load is completed successfully, the message below is output to the standard output.

LOAD count

Note: count is the number of rows loaded.

In recovery mode, commit or rollback of transactions prepared during data load is performed.

Options

-a

--echo-sql

Display the executed command in the standard output.
-c command
--copy-command=command

Specify the COPY FROM command to be executed. If STDIN is specified for the FROM clause, data will be loaded from the standard input. In this case, SQL superuser privileges are not required, because local user access privileges will be used for external files and external programs, instead of database server access privileges.

"binary" cannot be specified for the FORMAT option of the COPY FROM command specified in this option. Therefore, input files in binary format cannot be specified.

The FREEZE option cannot be specified for the COPY FROM command specified in this option.

See

Refer to "COPY" in the PostgreSQL Documentation for information on the COPY FROM command.

-j number-of-jobs
--jobs=number-of-jobs

Specify the number of background workers (parallel workers) that the COPY COMMAND should use to simultaneously perform data conversion, table creation, and index creation. This option can dramatically reduce the time for loading a large amount of data on instances that runs on multiple processor machines.

The optimal value depends on the server, client, and network configurations. The number of CPU cores and disk configuration also affect the optimal value. The number of CPU cores of the server is recommended as the initial value to try. Naturally, if a value that is too large is used, performance degradation will occur due to thrashing and context switching.

Specify a value from 2 to 128. The default is 2.

-t table
--table=table

Complete the prepared transactions only for the specified table.

-?  
--help

Show how to use pgx_loader command line arguments, and exit.

The command line options below control the database connection parameters.

-d connstr
--dbname=connstr

Specify the database name to connect to.

If this option is not specified, the PGDATABASE environment variable will be used. If the environment variable is not set, the specified user name will be used.

-h host
--host=host

Specify the host name of the machine the database server runs on. If the specified value starts with a slash, it will be used as the directory for a Unix domain socket.

If this option is not specified, the PGHOST environment variable will be used. If the environment variable is not set, it will be considered a Unix domain socket connection.

-p port
--port=port

Specify the TCP port to be used by the server to monitor the connection, or extension of the local Unix domain socket file.

If this option is not specified, the PGPORT environment variable will be use. If the environment variables is not set, 27500 will be used.
-U username
--username=username

User name for connection to the database.

-w
--no-password

Never prompt for the password. If the server requires password authentication but other means (such as a .pgpass file) are not available, the connection attempt will fail. This option can be useful in batch jobs, scripts, and so on, where no user is present to enter a password.

-W
--password

Force pgx_loader to prompt for the password before connecting to the database. This option is never essential, since pgx_loader will automatically prompt for the password if the server demands password authentication. However, pgx_loader will waste a connection attempt finding out if the server requires a password. In some cases it is worth specifying this option to avoid the extra connection attempt.

Diagnostics

load mode

0: Normal exit
Other than 0: Abnormal exit

recovery mode

0: There are no prepared transactions that must be completed
3: A prepared transaction was committed
4: A prepared transaction was rolled back
Other than the above: Abnormal exit

Example

The example below loads the file /path/to/data.csv (2000 records) into table tbl using a degree of parallelism of 3.

$ pgx_loader load -j 3 -c "COPY tbl FROM '/path/to/data.csv' WITH CSV"
LOAD 2000

The example below reads the file /path/to/data.csv (2000 records) from the standard input and loads into table tbl using a degree of parallelism of 3.

$ pgx_loader load -j 3 -c "COPY tbl FROM STDIN WITH CSV" < /path/to/data.csv
LOAD 2000

The example below completes the transactions prepared for table tbl.

$ pgx_loader recovery -t tbl
Chapter 3 Server Commands

This chapter explains commands and options not listed in "PostgreSQL Server Applications" in the PostgreSQL Documentation.

3.1 pg_ctl

Name
pg_ctl -- Initialize, start, stop, or control a PostgreSQL server

Synopsis

Options

--keystore-passphrase

Prompt for the passphrase to open the keystore.

See

Refer to "pg_ctl" in the PostgreSQL Documentation for details.

3.2 pgx_dmpall

Name
pgx_dmpall - Backs up the data directory, tablespaces, and configuration files.

Synopsis

pgx_dmpall [option...]

Description

The pgx_dmpall command backs up the data directory, tablespaces, and configuration files. The backup data is stored in the directory specified by backup_destination parameter of postgresql.conf. The pgx_dmpall command also deletes archived Write Ahead Logs (WAL) that are no longer necessary for recovery when the backup completes successfully.

Options

-c

This option only backs up configuration files. The configuration files are as follows:

- postgresql.conf

- File for host-based authentication (pg_hba.conf)

- Configuration file for ident authentication (pg_ident.conf)

If an external reference, such as 'include' in postgresql.conf, is set, the reference destination files are also backed up.
-C fast|spread
--checkpoint=fast|spread

Sets checkpoint mode to fast or spread (default).
If fast is specified, the checkpoint processing at the start of backup becomes quick, but the impact on performance of running applications gets larger due to intense I/O. In spread mode, the impact on applications is smaller but the backup takes longer, because the checkpoint is performed slowly.

-D datadir

Specify the data directory. If this option is omitted, the value of the environment variable PGDATA is used.

-f configFile

Specify the postgresql.conf configuration file. This option is set if the data directory and the configuration file set in the 'data_directory' parameter of the postgresql.conf file are running in separate directories.

-P tablespacesListFile
--tablespaces-list-file=tablespacesListFile

Specify the full path of the file containing the names of the tablespaces to be backed up using the copy command, using less than 1024 bytes.

The file format is described below:

tablespaceName<newline>
tablespaceName<newline>
...

Tablespaces not listed in the specified file are backed up to the backup storage directory. If this option is not specified, all tablespaces are backed up using the copy command.
This option can be specified if the -Y option has been specified, and it is used to limit the tablespaces backed up using the copy command.

-U username
--username=username

Specify the user name of the database superuser. This defaults to the name of the effective user running pgx_dmpall.

-Y copyCommandFile
--copy-command=copyCommandFile

Specify the full path of the file of the copy command for backup, using less than 1024 bytes. This option cannot be specified together with the -c option.

-w
--no-password

Never issue a password prompt. If the server requires password authentication and a password is not available by other means such as a .pgpass file, the connection attempt will fail. This option can be useful in batch jobs and scripts where no user is present to enter a password.

-W
--password

Force pgx_dmpall to prompt for a password before connecting to a database.
This option is never essential, since pgx_dmpall will automatically prompt for a password if the server demands password authentication. However, pgx_dmpall will waste a connection attempt finding out that the server wants a password. In some cases it is worth typing -W to avoid the extra connection attempt.

--maintenance-db=dbname

Specifies the name of the database to connect to. If not specified, the postgres database will be used; if that does not exist, template1 will be used.

Any database can be specified as long as it can be connected to.
--exclude-copy-cluster

Excludes a database cluster from backup via the copy command. This option can be specified if the -Y option has been specified. If this option is not specified, the database cluster will be backed up using the copy command.

Environment

PGDATA

Specify the data directory. You can overwrite using the -D option.

Diagnostics

0: Normal end

Other than 0: Abnormal end

Notes

This command can only be executed when the database server is running.

Execute this command as a PostgreSQL user account.

Do not update or delete files in the backup storage directory. Otherwise, you may not be able to recover the database.

Do not store other files in the backup storage directory.

This command uses one database connection. To establish a connection, this command uses the IPv4 loopback address 127.0.0.1 on Windows, and the UNIX domain socket on other operating systems. Therefore, permit these connections in pg_hba.conf.

This command cannot be executed on the standby server.

Example

In the following example, the data directory, tablespaces, and configuration files are backed up. At this time, stored WALs are no longer necessary because the backups are destroyed.

$ pgx_dmpall

Related item

pgx_rcvall

3.3 pgx_keystore

Name

pgx_keystore -- Manages keystore

Synopsis

pgx_keystore [option...] keystore_location

Description

pgx_keystore enables auto-open of a keystore.

Options

-a

--enable-auto-open

Enables auto-open of a keystore. This allows the keystore to open automatically without entering the passphrase when the database server starts.
When auto-open is enabled, an obfuscated copy keystore.aks is created in the same directory where the keystore file keystore.ks is stored. To disable auto-open, delete keystore.aks.

-P passphrase
--passphrase=passphrase

Specify the passphrase to open the keystore. If this option is omitted, the prompt to enter the passphrase is displayed.

keystore_location

Specify the absolute or relative path of the keystore file.

Diagnostics

0: Normal exit
Other than 0: Abnormal exit

Notes

This command can be executed whether the database server is running or stopped. It does not connect to the database server.

Example

Enables auto-open of a keystore.

$ pgx_keystore -a /key/store/location/keystore.ks

3.4 pgx_rcvall

Name

pgx_rcvall - Recovers the data directory, tablespaces, and configuration files.

Synopsis

pgx_rcvall [option...]

Description

The pgx_rcvall command recovers the data directory, tablespaces, and configuration files using the data that was backed up with pgx_dmpall command and archived Write-Ahead-Log (WAL). If none of the options that indicate the recovery point is specified, all archived WAL are applied and the data will be recovered to the latest point.

Options

-B backupdir

Specify the backup storage directory. If the data directory is damaged, this option cannot be omitted.

-D datadir

Specify the data directory. If this option is omitted, the value of the environment variable PGDATA is used.

-e targetTime

Specify this option to recover the data as of the specified date and time.

targetTime

Specify the time at which the data is recovered. The format is as follows:

"YYYY-MM-DD HH:MM:SS"
This option displays a list of the backup data information in the backup storage directory that was obtained using the pgx_dmpall command. If the pgx_dmpall command was executed using the copy command (-Y option) for backup, the resources backed up using the copy command will also be listed. This cannot be specified together with -p, -e or -n option.

-n restorePoint
Specify this option to recover the data to the specified restore point. Restore points are created with SQL function pg_create_restore_point. If multiple restore points with the same names were created, the first one after the backup was taken is used for recovery. If the specified restore point does not exist, all archived WAL are applied. This cannot be specified together with -e or -p option.

-p
Specify this option to recover the data as of the time when the last backup completed. This cannot be specified together with -e or -n option.

-s connectionString
Construct a standby server from the backup created by pgx_dmpall. Specify as an argument a connection string for connecting to the primary server. This is the same as primary_conninfo parameter in recovery.conf. This option can only be specified together with -D and -B.

-x
Specify this option if you do not want to include transactions committed at the time specified in the -e option as part of the recovery.

-Y copyCommandFile
--copy-command=copyCommandFile
Specify the full path of the file of the copy command for recovery, using less than 1024 bytes. This option cannot be specified together with the -l option.

--keystore-passphrase
Prompt for the passphrase to open the keystore.

--view-results-of-copying
Output the backup information file that was written by the copy command executed via the pgx_dmpall command. This option cannot be specified together with the -l, -p, -e, -n, or -Y option.

Environment
PGDATA
Specify the data directory. You can overwrite using the -D option.

PGPORT
Specify the port number for connecting to the database.

PGUSER
Specify the user name of the database superuser. This defaults to the name of the effective user running pgx_dmpall.

Diagnosis
0: Normal exit
Other than 0: Abnormal exit

Backup data information
Date
Date the backup data was created using the pgx_dmpall command.
Dir

This is the name of the directory in the backup storage directory that is used to store the backup data.
Directory naming format: Time format (YYYY-MM-DD_HH-MM-SS)

Status

This is the status of the pgx_dmpall command backup data.
COMPLETE: Complete
INCOMPLETE: Incomplete

Resources backed up by the copy command

List of resources that were backed up by the copy command executed via the pgx_dmpall command.
If there are resources that were backed up by the copy command, then database clusters ('pg_data') or tablespace names
will be listed, delimited by header and halfwidth comma.

Notes

This command can only be executed when the database server is stopped, except when it is executed with -l option.
Execute this command as a PostgreSQL user account.
Use backup data that was taken from the recovery target data directory.
Before executing this command, disconnect all application database connections. Additionally, do not connect to the
database during recovery.
Hash indexes cannot be recovered correctly in this command. If you are using the hash index, execute REINDEX for the
 corresponding index after this command finishes.
The configuration files are restored from those files that were taken by the last pgx_dmpall (including -c option).
This command connects to the database to determine whether the recovery has completed. So ensure that you set the port
 number with PGPORT environment variable in the environment where multiple instances exist.
Match the OS timezone setting when running pgx_dmpall/pgx_rcvall to the timezone specified by timezone parameter in
postgresql.conf.
Otherwise, data might be recovered to an unexpected time when -e or -p is specified.
If you recover to a past point, a new timeline (history of database updates) begins at that point. That recovery point is the latest
point in the new timeline when the recovery is completed. If you subsequently recover to the latest point, the database updates
in the new timeline will be replayed.
Valid restore points are the ones that were created in the timeline where the backup had been taken. That means that if you
recover to a past point, those restore points created thereafter are unavailable. Therefore, take a backup when you have
restored the past data desired.
If the pgx_dmpall command was executed using the copy command (-Y option) for backup, it is necessary to execute this
command using the copy command (-Y option) for recovery. However, because the list of resources (database cluster or
tablespace) that were backed up using the copy command is recorded in the backup directory, there is no need to specify the
target resources when executing this command. The -I option can be used to check the target resources for which a backup
is retrieved using the copy command.

Example

In the following example, the data directory, tablespaces, and configuration files are recovered.

$ pgx_rcvall -B /home/pgsql/Backupdir

In the following example, the data directory and tablespaces are recovered at 10:00:00 on 01-05-2015. The configuration files
are recovered at the point at which the last of the data is obtained.

$ pgx_rcvall -B /home/pgsql/Backupdir -e "2015-05-01 10:00:00"

In the following example, the data directory and tablespaces are recovered up to the time of restore point
"before_match_20150510_1". The configuration files are restored from the latest backup.
$ pgx_rcvall -B /home/pgsql/Backupdir -n before_match_20150510_1

In the following example, the obtained backup data information in the backup storage directory is displayed in a list.

$ pgx_rcvall -l

pgx_dmpall

3.5 postgres

Name

postgres -- PostgreSQL database server

Synopsis

postgres [option...]

Options

-K

Prompt for the passphrase to open the keystore. This option works in single-user mode only, so you must also specify the --single option, as shown below:

postgres --single -K

See

Refer to “postgres” in the PostgreSQL Documentation for details.
Chapter 4 Mirroring Controller Commands

This chapter explains the Mirroring Controller commands.

4.1 mc_arb

Name

mc_arb - Start, stop, and display the status of the Mirroring Controller arbitration process

Overview

mc_arb start [-M mcdir] [-w| -W]
mc_arb stop [-M mcdir] [-e]
mc_arb status [-M mcdir]

mc_arb register [-M mcdir] [-w| -W] -P password [-S a[uto] | d[emand]]
mc_arb unregister [-M mcdir]

Description

mc_arb starts, stops, and displays the status of the Mirroring Controller arbitration process.
mc_arb starts, stops, and displays the status of the Mirroring Controller arbitration process, or registers and unregisters it as a Windows service.

The start mode starts the Mirroring Controller arbitration process.
The stop mode stops the Mirroring Controller arbitration process.
The status mode displays the connection status of the Mirroring Controller arbitration process with the Mirroring Controller processes of the primary server and standby server.

The register mode registers the Mirroring Controller arbitration process as a Windows service. The -w and -W options can be used to start/stop the Mirroring Controller arbitration process through the Windows service, and when it executes the mc_arb command, the specified option will take effect.

The unregister mode unregisters the Mirroring Controller arbitration process as a Windows service.

If the Mirroring Controller arbitration process has not been started on the server executing the command, stop mode and status mode will terminate with an error.

Additionally, if Mirroring Controller is forcibly stopped on the database server, it may take a few moments until the status mode displays the status of the server connection as offline.

This command can be executed by any user.

Execute this command as a user with administrator privileges (operating system user that belongs to the "Administrators" group).

Options

-e

Specify this option to forcibly stop the Mirroring Controller arbitration process on the active server.
Specify this option to stop the Mirroring Controller arbitration process but keep Mirroring Controller running (to stop both, first stop Mirroring Controller of the database server, and then the Mirroring Controller arbitration process). This option can also be specified to halt the arbitration process (by stopping the Mirroring Controller arbitration process) when the fencing command called by the arbitration process becomes unresponsive.

-M mcdir

Specify the Mirroring Controller arbitration process management directory.

ASCII characters can be specified in the directory path.

If this option is omitted, the value of the environment variable ARBCONTROLDIR is used.

-W

Waits for operations to finish.

This option is the default of start mode.

This option is the default of start mode and register mode.

-W

Does not wait for operations to finish.

Environment

ARBCONTROLDIR

Specify the Mirroring Controller arbitration process management directory.

ASCII characters can be specified in the directory path.

You can specify the -M option to override this value.

Diagnostics

0: Normal end

Other than 0: Abnormal end

Notes

If the Mirroring Controller arbitration process is forcibly stopped or communication between the command and the Mirroring Controller arbitration process is interrupted while the Mirroring Controller arbitration process is being stopped, a message that the command is being executed may be output and stopping may terminate in error, even though no other instances of the mc_arb command are being executed.

To solve this issue, ensure that other instances of the mc_arb command are not being executed before forcibly stopping the Mirroring Controller arbitration process.

Use the start mode and stop mode to start and stop the Windows service. Before being able to use these modes, use the register mode to register the Mirroring Controller arbitration process as a Windows service.

In Windows Server(R) 2008, Windows Server(R) 2008 R2, Windows Server(R) 2012 and Windows Server(R) 2012 R2, the mc_arb command must be executed from "Administrator: Command Prompt". Right-click [Command Prompt], and then select [Run as administrator] from the context menu to display the [Administrator: Command Prompt] window.

Example

Start the Mirroring Controller arbitration process.
$ mc_arb start -M /mcarb_dir/arbiter1

Start the Mirroring Controller arbitration process.

$ mc_arb start -M D:\mcarb_dir\arbiter1

4.2 mc_ctl

Name

mc_ctl - Start and stop Mirroring Controller, switch/disconnect the server, or display the server status.

mc_ctl - Start and stop Mirroring Controller, switch/disconnect the server, display the server status, or register and unregister as a Windows service.

Overview

mc_ctl status [-M mcdir] [--arbiter] [--local-server server_id]

mc_ctl detach [-M mcdir] [--no-fencing] [--local-server server_id]

mc_ctl enable-failover [-M mcdir] [--local-server server_id]

mc_ctl disable-failover [-M mcdir] [--local-server server_id]

  [-S a[uto] | d[emand]] [--async-connect-arbiter] [--local-server server_id]

mc_ctl unregister [-M mcdir] [--local-server server_id]

Description

mc_ctl starts and stops Mirroring Controller, switches/disconnects the server, or displays the server status.

mc_ctl starts and stops Mirroring Controller, switches/disconnects the server, displays the server status, or registers and unregisters as a Windows service.

The start mode starts Mirroring Controller. If the --mc-only option is omitted, the command starts a database instance.
The stop mode stops Mirroring Controller. If the --mc-only option is omitted, the database instance is stopped. If --mc-only option is not specified, database instance is also stopped. When executes on standby server without --mc-only, standby server will be detached from primary server.

The status mode displays the status of the servers, database instance processes, and disks monitored by Mirroring Controller. Additionally, if the --arbiter option is specified, Mirroring Controller arbitration process connection status is displayed.

The switch mode switches the primary server. When the server is switched, the database instance on the primary server stops, and the database instance on the standby server is upgraded to primary server and begins degrading operation. This mode can be executed on the primary server and standby server in an environment where the Mirroring Controller process can communicate with the Mirroring Controller process on the other server.

The detach mode forcibly disconnects the standby server. This mode is used to forcibly disconnect the other server when stopping of Mirroring Controller cannot be performed using stop mode (which requires login to the standby server). It can only be executed on the primary server.

The enable-failover mode enables automatic switching and disconnection.

The disable-failover mode disables automatic switching and disconnection.

The register mode registers Mirroring Controller as a Windows service. The -w, -W, -f, -F, --mc-only, --async-connect-arbiter, and --local-server options are used when Mirroring Controller is started and stopped as a Windows service. If the mc_ctl command is used to start and stop Mirroring Controller, the option specified in the command will be valid.

The unregister mode unregisters Mirroring Controller as a Windows service.

Options

- Specify this option to stop Mirroring Controller on all servers.
- Specify this option to forcibly stop Mirroring Controller on the active server.
- Specify this option to enable automatic switching and disconnection of Mirroring Controller immediately after startup.
- This option is the default of start mode.
- This option is the default of start mode and register mode.
- Specify this option to disable automatic switching and disconnection immediately after startup of Mirroring Controller.
--async-connect-arbiter

Specify this option to connect the Mirroring Controller start process asynchronously to the Mirroring Controller arbitration process. This option can be specified to forcibly start Mirroring Controller if the Mirroring Controller arbitration process is not started.

Specify this option if using the Mirroring Controller arbitration server.

--arbiter

Specify this option to display the connection status of the Mirroring Controller arbitration process. This option can be specified if using status mode.

Specify this option if using the Mirroring Controller arbitration server.

--local-server server_id

If you run a simulation build of the primary and standby servers in a single server (for system testing, for example), specify this option to identify the server to be operated.

For server_id, specify the server identifier specified in the network.conf file. ASCII characters other than single-byte space can be specified in the server identifier. The operations will be executed as if the user has logged in to server_id.

--mc-only

Specify this option to start and stop only Mirroring Controller processes. At the start mode, this option can be specified only while the database instance is running. If this option is omitted, the database instance is simultaneously started and stopped.

-M mcdir

Specify the Mirroring Controller management directory.

ASCII characters can be specified in the directory path.

If this option is omitted, the value of the environment variable MCCONTROLDIR is used.

--force

Switching with this option specified can only be specified on the standby server. This option is used to perform switching forcibly after performing fencing on the primary server if communication with the Mirroring Controller process of the other server is not possible (due to a network issue between database servers or unresponsive server, for example), thus preventing normal switching. However, if the --no-fencing option is specified, fencing will not be performed on the primary server.

--no-fencing

When switching or disconnection is executed with the --force option specified, fencing of the server to be degraded is circumvented. Therefore, it is necessary for the user to isolate the server to be degraded from the cluster system in advance.

-P password

For the register mode, specify the password for the user who executed the command.

-S auto | demand

Specify the start type for the Windows service to be registered. You can choose auto or demand as the start type by specifying the entire word or just its first letter. The default is auto.

-W

Waits for operations to finish.

This option is the default of start mode.

This option is the default of start mode and register mode.

-W

Does not wait for operations to finish.
Environment variable

MCCONTROLDIR

Specifies the Mirroring Controller management directory.

ASCII characters can be specified in the directory path.

You can specify the -M option to override this value.

Diagnostics

0: Normal end

Other: Abnormal end

Notes

The message under execution might be output though the mc_ctl command is not being executed and, besides, it terminate abnormally when the server is downed while processing execution of this command, an automatic switch, and an automatic separation, and the communication between a primary server and the standby server is cut off. Besides, re activate Mirroring Controller to solve this problem after confirming that the mc_ctl command is not in progress. Afterwards, execute a necessary operation.

If a time-out error occurs when the mc_ctl command is in progress, the messages may be different from the processes. Take the actions described in the “Action” section of the message.

Automatic switching and disconnection by the enable-failover mode, the disable-failover mode, and the start mode can be enabled/disabled only while Mirroring Controller is running. Therefore, if you want to enable/disable automatic switching and disconnection on starting, specify the -f option or -F option each time you start Mirroring Controller.

Use the start mode and stop mode to start and stop the Windows service. To do this, use the register mode to register Mirroring Controller as a Windows service in advance.

In case of postgresql.conf has any incorrect parameter when this command is executed, this command may be abnormally terminated. If this is the case, re-execute it again after correct the parameter in postgresql.conf.

If the arbitration server of Mirroring Controller is used, connection with the arbitration server will be performed on startup even if startup using start mode is executed with the -F option specified, or if executed with --local-server specified.

In Windows Server(R) 2008, Windows Server(R) 2008 R2, Windows Server(R) 2012 or Windows Server(R) 2012 R2, the mc_ctl command must be executed from "Administrator: Command Prompt". Right-click [Command Prompt], and then select [Run as administrator] from the menu to display the [Administrator: Command Prompt] window.

For operation using an arbitration server, the amount of time spent attempting to connect with the arbitration server is calculated, so the Mirroring Controller startup time may take longer.

Example

To start Mirroring Controller:

$ mc_ctl start -M /mcdir/inst1

To start Mirroring Controller:

> mc_ctl start -M D:\mcdir\inst1

Display details of mc_ctl status

unknown : Unknown (*1)

(6) DBMS process status
normal : Normal
abnormal (abnormal process name (*2)) : Abnormal
unknown : Unknown (*1)

(7) Disk status
normal : Normal
abnormal (abnormal disk type (*3)) : Abnormal
unknown : Unknown (*1)

*1: Displayed when Mirroring Controller is stop state, the management network is
abnormal, or Mirroring Controller has failed or is unresponsive.

*2: The names of the DBMS processes in which the abnormality was detected are output. The
name has the following meaning: However, if multiple DBMS process issues are detected,
only the DBMS for which the first issue was detected is displayed.
-postmaster: Process (postmaster) that accepts application connections
-wal_sender or wal_receiver: Process (WAL sender or WAL receiver) that sends and
receives transaction logs

*3: The types of disks where the abnormality was detected are output separated by a
comma. The type has the following meaning:
data: Data storage disk
-tran_log: Transaction log storage disk
tablespace: Tablespace storage disk

Display details of mc_ctl status (with the --arbiter option specified)

offline : Disconnected (*1)

*1: When Mirroring Controller is stopped, connections to the Mirroring Controller
arbitration process cannot be established, so it will be displayed as "offline".
Preface

Purpose of this document
This document explains the messages output by FUJITSU Enterprise Postgres.

Intended readers
This document is intended for the following readers:
- Persons using FUJITSU Enterprise Postgres

Prerequisites
Knowledge of the following topics is required to read this document:
- A general understanding of computers
- Jobs
- PostgreSQL
- Linux
- Oracle Solaris
- Windows

Structure of this document
This document is structured as follows:

Chapter 1 Overview of Messages
This chapter explains the format in which messages are output.

Chapter 2 FUJITSU Enterprise Postgres Messages
This chapter explains messages output by FUJITSU Enterprise Postgres.

Chapter 3 Mirroring Controller Messages
This chapter explains messages output by Mirroring Controller.

Export restrictions
Exportation/release of this document may require necessary procedures in accordance with the regulations of your resident country and/or US export control laws.

Issue date and version
Edition 1.0: August 2018

Chapter 1 Overview of Messages

This chapter explains the format of messages.

1.1 Message Format

This section explains the format of messages.
- Output format
- Components

1.1.1 Output Format

The message output format is as follows:

**Format of messages returned to an application**

```
msgType: msgText (msgNumber)
```

**Format of messages output to the server message log**

```
SQLSTATE: date [processID]: [internalCode-1] user = userName, db = dbName, remote = clientIpAddress(portNumber) app = appName msgType: msgText (msgNumber)
```

See

Refer to "PostgreSQL Error Codes" under "Appendixes" in the PostgreSQL Documentation for information on SQLSTATE.

Note

- Notes on monitoring messages output to the server message log
  Use SQLSTATE to monitor server messages, noting the following:
  - Configuration method
    Refer to "Error Log Settings" under "Setup" in the Installation and Setup Guide for Server for details.
  - Notes
    - The user name, client IP address (port number), and application name may sometimes be blank.
    - Multiple message numbers may be output.
- Notes on monitoring messages returned to an application
  You can output SQLSTATE to a message to be returned to an application. The following explains how to configure the settings for outputting SQLSTATE and gives cautions to be observed when doing so.
  - How to configure the settings:
    - In the SET statement, set the log_error_verbosity parameter to VERBOSE.
    - For an application that uses the C language library, use the PQsetErrorVerbosity function to set message redundancy to PQERRORS_VERBOSE.
  - Cautions
    - SQLSTATE is output only to messages to be returned to applications that use the C language library.
- In some cases, `userName`, `clientIpAddress(portNumber)`, and `applicationName` may be blank.
- Multiple message numbers may be output.
- If the email address "pgsql-bugs@postgresql.org" is output to the message and the cause of the error cannot be identified, contact Fujitsu technical support.

### Example

**Message output to the server message log**

<table>
<thead>
<tr>
<th>Message number</th>
<th>Date and Time</th>
<th>User</th>
<th>Database</th>
<th>Error Message</th>
</tr>
</thead>
<tbody>
<tr>
<td>3D0000</td>
<td>2015-07-10 19:41:05 JST</td>
<td>fepuser, db = fep, remote = 127.0.0.1(51902)</td>
<td>FATAL: database &quot;fep&quot; does not exist (10571)</td>
<td></td>
</tr>
</tbody>
</table>

### 1.1.2 Components

This section explains the components of a message.

**Message type**

The message type indicates the type of error denoted in the message.

The message type will be one of the following:

- **Information (INFO, NOTICE, LOG, DEBUG)**
  
  This message type denotes a notification from the system, not an error. There is no need to take action.

- **Warning (WARNING)**
  
  This message type denotes that no error occurred but confirmation or action is required by the user. Take the actions described in the "Action" section of the message.

- **Error (ERROR, FATAL, PANIC)**
  
  This message type denotes that an error has occurred. Take the actions described in the "Action" section of the message.

- **Supplementary information (DETAIL, HINT, QUERY, CONTEXT, LOCATION, STATEMENT)**
  
  This message type denotes supplementary information relating to the previous message. If the message was output in English, the message type will also be in English. (Detail, hint, query, context, location, statement)

**Message text**

The text of the message reports the status of the system or an error in the system.

The notation "@numeric character@" that appears in "Chapter 2 FUJITSU Enterprise Postgres Messages" indicates an embedded character string. A character string is output to a message that is actually output.

If a message locale other than 'ja' is specified, messages added by FUJITSU Enterprise Postgres will be output in English. For other message locales, the messages are output in English.

However, messages output by the pgx_jadmin command will always be displayed in English regardless of the message locale.

**Message number**

The message number uniquely identifies each message. It is output as a string of five single-byte numeric characters. Use the message number that is output to find the explanation of the corresponding message in this document. The message numbers may change, so do not use them as keywords for monitoring.

No message number is assigned to messages output by a PL/pgSQL RAISE statement.
The message number is only output if the message locale is 'ja' or 'en'. For other message locales, the message number is not output.

### 1.2 Mirroring Controller Message Format

This section explains the format of messages output by the Mirroring Controller.

Mirroring Controller messages are output to the following locations:

- System log
- Event log

**Output format**

```
programName[processId]: msgType: msgText (msgNumber)
```

For `programName`, use the value of the syslog_ident parameter or event_source parameter defined in the `serverIdentifier.conf` file.

The message types output by Mirroring Controller, their severity, and their corresponding value in the system log are shown in the table below.

**Table 1.1 Message type, severity, and corresponding value in the system log**

<table>
<thead>
<tr>
<th>Message type</th>
<th>Severity</th>
<th>Meaning</th>
<th>System log</th>
</tr>
</thead>
<tbody>
<tr>
<td>INFO</td>
<td>Information</td>
<td>Provides information not categorized as LOG or NOTICE.</td>
<td>INFO</td>
</tr>
<tr>
<td>LOG</td>
<td>Provides information recognized as a particularly important event in tracing the operation history. (Example: Automatic switch is complete)</td>
<td>LOG</td>
<td></td>
</tr>
<tr>
<td>NOTICE</td>
<td>Notice</td>
<td>Outputs information that takes into account the user instructions within the program in response to an executed or automatically executed process.</td>
<td>NOTICE</td>
</tr>
<tr>
<td>WARNING</td>
<td>Warning</td>
<td>Provides a warning, for example it will soon be impossible to maintain multiplexing capabilities.</td>
<td>WARNING</td>
</tr>
<tr>
<td>ERROR</td>
<td>Error</td>
<td>Reports that an error other than FATAL or PANIC has occurred.</td>
<td>ERROR</td>
</tr>
<tr>
<td>FATAL</td>
<td>Reports that an error has been detected requiring system recovery in one of the multiplexed database systems. It also reports the content and cause of the error.</td>
<td>CRIT</td>
<td></td>
</tr>
<tr>
<td>PANIC</td>
<td>Reports that an error has been detected requiring immediate system recovery in all multiplexed database systems. It also reports the content and cause of the error.</td>
<td>ALERT</td>
<td></td>
</tr>
</tbody>
</table>

The message types output by Mirroring Controller, their severity, and their corresponding value in the event log are shown in the table below.
### Table 1.2 Message type, severity, and corresponding value in the event log

<table>
<thead>
<tr>
<th>Message type</th>
<th>Severity</th>
<th>Meaning</th>
<th>Event log</th>
</tr>
</thead>
<tbody>
<tr>
<td>INFO</td>
<td>Information</td>
<td>Provides information not categorized as LOG or NOTICE.</td>
<td>INFORMATION</td>
</tr>
<tr>
<td>LOG</td>
<td>Notice</td>
<td>Provides information recognized as a particularly important event in tracing the operation history. (Example: Automatic switch is complete)</td>
<td></td>
</tr>
<tr>
<td>NOTICE</td>
<td>Warning</td>
<td>Outputs information that takes into account the user instructions within the program in response to an executed or automatically executed process.</td>
<td>WARNING</td>
</tr>
<tr>
<td>WARNING</td>
<td>Warning</td>
<td>Provides a warning, for example it will soon be impossible to maintain multiplexing capabilities.</td>
<td></td>
</tr>
<tr>
<td>ERROR</td>
<td>Error</td>
<td>Reports that an error other than FATAL or PANIC has occurred.</td>
<td>ERROR</td>
</tr>
<tr>
<td>FATAL</td>
<td>Error</td>
<td>Reports that an error has been detected requiring system recovery in one of the multiplexed database systems. It also reports the content and cause of the error.</td>
<td></td>
</tr>
<tr>
<td>PANIC</td>
<td>Error</td>
<td>Reports that an error has been detected requiring immediate system recovery in all multiplexed database systems. It also reports the content and cause of the error.</td>
<td></td>
</tr>
</tbody>
</table>

The message severity has the following meanings:

- **Information**
  
  Informational status. A message that was reported by the system is displayed. No action is required.

- **Notice**
  
  Informational status, but a message that should be noted is displayed. If necessary, take the actions described in the "Action" section of the message.

- **Warning**
  
  No error has occurred, but the user is requested to check, and take action. Take the actions described in the "Action" section of the message.

- **Error**
  
  An error has occurred. Take the actions described in the "Action" section of the message.

### Output destination server

Mirroring Controller messages are output by the database server. When using an arbitration server, Mirroring Controller messages are also output by the arbitration server.

- Messages with a message number that starts with "MCA" are output by the database server.

- Messages with a message number that starts with "MCR" are output by the arbitration server.
Chapter 2 FUJITSU Enterprise Postgres Messages

This chapter explains messages output by FUJITSU Enterprise Postgres.

2.1 Message Numbers Beginning with 10000

2.1.1 10001

no Snowball stemmer available for language "@1@" and encoding "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.2 10002

multiple StopWords parameters

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.3 10003

multiple Language parameters

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.4 10004

unrecognized Snowball parameter: "@1@"

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.5 10005

missing Language parameter
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.6 10006

could not determine which collation to use for index expression
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.7 10007

old GIN indexes do not support whole-index scans nor searches for nulls
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.8 10008

index row size @1@ exceeds maximum @2@ for index "@3@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.9 10009

"@1@" is an index

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.10 10010

could not create archive status file "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.1.11 10011

could not write archive status file "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.1.12 10012

could not seek in log segment @1@ to offset @2@: @3@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.1.13 10013
could not write to log file @1@ at offset @2@, length @3@: @4@

[Description]
There are the following cases:
- failed to write transaction log file
- failed to write transaction log file on backup data storage destination

[System Processing]
Processing will be aborted.

[Action]
Lack of storage space or malfunction of storage allocating the file shown in this message is considered.
If it's true, recover the database system according to "Actions when an Error Occurs" of "Operation Guide" or "Cluster Operation Guide (Database Multiplexing)".
If it's not true, identify the cause according to the informations in this message such as errno, and work around.
The following major causes are considered.
- the file has no permission or the permission has been changed
- power of the storage allocating the file has been turned off
- unmounted the storage allocating the file
- another process or human operated the file
- the storage allocating the file has crashed

2.1.14 10014
updated min recovery point to @1@/@2@ on timeline @3@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.1.15 10015
could not open file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.1.16 10016

*could not create file "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.1.17 10017

*could not write to file "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.1.18 10018

*could not fsync file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.19 10019

*could not close file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.20 10022
not enough data in file "@1@"

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.21 10025
could not close log file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.22 10026
could not read file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.23 10027
could not remove file "@1@": @2@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.1.24 10028
archive file "@1@" has wrong size: @2@ instead of @3@
An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

---

restored log file "@1@" from archive

Terminated normally.

Continues processing.

No action required.

---

could not restore file "@1@" from archive: @2@

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

---

could not open transaction log directory "@1@": @2@

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

---

recycled write-ahead log file "@1@"

Terminated normally.
2.1.29 10034
removing write-ahead log file "@1@"

[Description]
Terminated normally.

[Action]
No action required.

2.1.30 10035
could not rename old write-ahead log file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[Action]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.1.31 10036
could not remove old transaction log file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[Action]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.1.32 10037
required WAL directory "@1@" does not exist

[Description]
An error occurred during I/O processing in the database server.

[Action]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.33 10038

creating missing WAL directory "@1@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.1.34 10039

could not create missing directory "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.1.35 10040

removing WAL backup history file "@1@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.1.36 10043

incorrect resource manager data checksum in record at @1@/@2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.1.37 10044

**Invalid record offset at @1@/@2@**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.38 10045

**Contrecord is requested by @1@/@2@**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.39 10048

**Invalid record length at @1@/@2@: wanted @3@, got @4@**

[Description]
Invalid record length was found on archive log or transaction log data.

[System Processing]
The following causes could be considered.
- if the log level is information(INFO, NOTICE, LOG, DEBUG)
  Continue processing.
- if the log level is error(ERROR, FATAL, PANIC)
  Processing will be aborted.

[Action]
If the log level is information(INFO, NOTICE, LOG, DEBUG), no action is required.
When the log level is error(ERROR, FATAL, PANIC), take either of the following actions.
- if this message is output during starting instance
  Please restore according to "Deal at the time of abnormality" of "Operation Guide" or "Cluster Operation Guide (Database Multiplexing)".
- if this message is output during recovering
  Cannot continue to recover with the current backup data because an archive log in the backup has an error.
  Recover from the other backup data.
2.1.40 10049

**invalid resource manager ID @1@ at @2@/@3@**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.41 10050

**record with incorrect prev-link @1@/@2@ at @3@/@4@**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.42 10051

**record length @1@ at @2@/@3@ too long**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.43 10052

**there is no contrecord flag at @1@/@2@**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
**invalid contrecord length @1@ at @2@/@3@**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.1.45 10054**

**invalid magic number @1@ in log segment @2@, offset @3@**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.1.46 10055**

**invalid info bits @1@ in log segment @2@, offset @3@**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.1.47 10056**

**WAL file is from different database system: WAL file database system identifier is @1@, pg_control database system identifier is @2@**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.1.48 10057**

**unexpected pageaddr @1@/@2@ in log segment @3@, offset @4@**
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.49 10058

unexpected timeline ID @1@ in log segment @2@, offset @3@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.50 10059

out-of-sequence timeline ID @1@ (after @2@) in log segment @3@, offset @4@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.51 10060

syntax error in history file: @1@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.52 10061

invalid data in history file: @1@

[Description]
An error occurred during I/O processing in the database server.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.53 10062

invalid data in history file "@1@"

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.54 10063

new timeline @1@ is not a child of database system timeline @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.55 10064

new target timeline is @1@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.1.56 10065

could not rename file "@1@" to "@2@": @3@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.57 10066
could not link file "@1@" to "@2@": @3@
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.1.58 10067
could not create control file "@1@": @2@
[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.1.59 10068
could not write to control file: @1@
[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.1.60 10069
could not fsync control file: @1@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.1.61 10070
could not close control file: @1@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.62 10071
could not open control file "@1@": @2@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.63 10072
could not read from control file: @1@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.64 10073
database files are incompatible with server
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.65 10074
incorrect checksum in control file

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.66 10075

could not write bootstrap write-ahead log file: @1@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.1.67 10076

could not fsync bootstrap write-ahead log file: @1@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.68 10077

could not close bootstrap write-ahead log file: @1@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.69 10078

could not open recovery command file "@1@": @2@
An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.1.70 10079**

**parameter "@1@" requires a Boolean value**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.1.71 10080**

**recovery_target_timeline is not a valid number: "@1@"**

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.1.72 10081**

**recovery_target_xid is not a valid number: "@1@"**

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.1.73 10082**

**recovery_target_name is too long (maximum @1@ characters)**

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.74 10083
---
unrecognized recovery parameter "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.75 10084
---
recovery command file "@1@" specified neither primary_conninfo nor restore_command

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.1.76 10085
---
recovery command file "@1@" must specify restore_command when standby mode is not enabled

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.77 10086
---
recovery target timeline @1@ does not exist

[Description]
An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.78 10087

archive recovery complete

Terminated normally.

Continues processing.

No action required.

2.1.79 10088

recovery stopping after commit of transaction @1@, time @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.1.80 10089

recovery stopping before commit of transaction @1@, time @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.1.81 10090

recovery stopping after abort of transaction @1@, time @2@

An error occurred.

Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.1.82 10091
recovery stopping before abort of transaction @1@, time @2@
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.83 10092
recovery stopping at restore point "@1@", time @2@
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.84 10093
recovery has paused
[Description]
An error occurred because execution is temporarily impossible.
[System Processing]
Processing will be aborted.
[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

2.1.85 10095
recovery is in progress
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.86 10096

hot standby is not possible because $\texttt{1}$ = $\texttt{2}$ is a lower setting than on the master server (its value was $\texttt{3}$)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.87 10097

WAL was generated with wal_level=minimal, data may be missing

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.1.88 10098

hot standby is not possible because wal_level was not set to "replica" or higher on the master server

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.89 10099

control file contains invalid data

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

## 2.2 Message Numbers Beginning with 10100

### 2.2.1 10100

database system was shut down at @1@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

### 2.2.2 10101

database system was shut down in recovery at @1@

[Description]
Displaying the date and time that the standby server is shut down last time.

[System Processing]
Continues processing.

[Action]
No action is required.

### 2.2.3 10102

database system shutdown was interrupted; last known up at @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.2.4 10103

database system was interrupted while in recovery at @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.2.5 10104

database system was interrupted while in recovery at log time @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.6 10105

database system was interrupted; last known up at @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.7 10106

requested timeline @1@ is not a child of this server’s history

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.8 10107

entering standby mode

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.2.9 10108

starting point-in-time recovery to XID @1@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.10 10109

starting point-in-time recovery to @1@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.11 10110

starting point-in-time recovery to "@1"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.12 10111

starting archive recovery

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.13 10112
checkpoint record is at @1@/@2@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.14 10113

could not find redo location referenced by checkpoint record

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.15 10114

could not locate required checkpoint record

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.16 10115

could not locate a valid checkpoint record

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.17 10116

using previous checkpoint record at @1@/@2@
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.18 10121

invalid next transaction ID

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.19 10122

invalid redo in checkpoint record

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.20 10123

invalid redo record in shutdown checkpoint

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.21 10124

database system was not properly shut down; automatic recovery in progress

[Description]
The application or command terminated normally, but a warning was output.
Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.2.22 10125

**initializing for hot standby**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.23 10126

**redo starts at @1@/@2@**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.24 10127

**redo done at @1@/@2@**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.25 10128

**last completed transaction was at log time @1@**

[Description]
Terminated normally.

[System Processing]
Continues processing.
2.2.26 10129

**redo is not required**

**[Description]**

The application or command terminated normally, but a warning was output.

**[System Processing]**

Processing will continue.

**[Action]**

Check the message text and confirm that the issue does not affect the expected outcome.

2.2.27 10130

**requested recovery stop point is before consistent recovery point**

**[Description]**

An error occurred during I/O processing in the database server.

**[System Processing]**

Processing will be aborted.

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

2.2.28 10131

**WAL ends before end of online backup**

**[Description]**

An error occurred during I/O processing in the database server.

**[System Processing]**

Processing will be aborted.

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

2.2.29 10132

**WAL ends before consistent recovery point**

**[Description]**

An error occurred during I/O processing in the database server.

**[System Processing]**

Processing will be aborted.

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.
2.2.30 10133

selected new timeline ID: @1@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.31 10134

consistent recovery state reached at @1@/@2@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.32 10135

invalid primary checkpoint link in control file

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.33 10136

invalid secondary checkpoint link in control file

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
invalid checkpoint link in backup_label file

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.35 10138

invalid primary checkpoint record

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.36 10139

invalid secondary checkpoint record

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.37 10140

invalid checkpoint record

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.38 10141

invalid resource manager ID in primary checkpoint record
An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.2.39 10142**

*invalid resource manager ID in secondary checkpoint record*

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.2.40 10143**

*invalid resource manager ID in checkpoint record*

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.2.41 10144**

*invalid xl_info in primary checkpoint record*

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.2.42 10145**

*invalid xl_info in secondary checkpoint record*

An error occurred during I/O processing in the database server.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.43 10146

invalid xl_info in checkpoint record

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.44 10147

invalid length of primary checkpoint record

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.45 10148

invalid length of secondary checkpoint record

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.46 10149

invalid length of checkpoint record

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.47 10150

shutting down

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.48 10151

database system is shut down

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.49 10152

concurrent write-ahead log activity while database system is shutting down

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.50 10153

skipping restartpoint, recovery has already ended

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.2.51 10154

**skipping restartpoint, already performed at @1@/@2@**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.52 10155

**recovery restart point at @1@/@2@**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.53 10156

**restore point "@1@" created at @2@/@3@**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.54 10157

**unexpected timeline ID @1@ (after @2@) in checkpoint record**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.55 10158
unexpected timeline ID @1@ (should be @2@) in checkpoint record

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.56 10159
could not fsync log segment @1@: @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.57 10160
could not fsync write-through log file @1@: @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.58 10161
could not fdatasync log file @1@: @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.59 10163
recovery is not in progress
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.2.60 10164**

**WAL level not sufficient for making an online backup**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.2.61 10165**

**backup label too long (max @1@ bytes)**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.2.62 10166**

**a backup is already in progress**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.2.63 10167**

**could not stat file "@1@": @2@**

There was insufficient free space in the disk of the database server during execution of the application.
2.2.64 10168

**a backup is not in progress**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.65 10169

**invalid data in file "@1@"**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.66 10170

**pg_stop_backup cleanup done, waiting for required WAL segments to be archived**

**Description**

Terminated normally.

**System Processing**

Continues processing.

**Action**

No action required.

2.2.67 10171

**pg_stop_backup still waiting for all required WAL segments to be archived (@1@ seconds elapsed)**

**Description**

The application or command terminated normally, but a warning was output.
[System Processing]
  Processing will continue.

[Action]
  Check the message text and confirm that the issue does not affect the expected outcome.

2.2.68 10172

**pg_stop_backup complete, all required WAL segments have been archived**

[Description]
  Terminated normally.

[System Processing]
  Continues processing.

[Action]
  No action required.

2.2.69 10173

**WAL archiving is not enabled; you must ensure that all required WAL segments are copied through other means to complete the backup**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.70 10176

**WAL level not sufficient for creating a restore point**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.71 10177

**value too long for restore point (maximum @1@ characters)**

[Description]
  An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.72 10179

could not read from log segment @1@, offset @2@: @3@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.73 10180

received promote request

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.74 10181

trigger file found: @1@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.75 10182

database is not accepting commands to avoid wraparound data loss in database "@1@"

[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.
[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

2.2.76 10183

database is not accepting commands to avoid wraparound data loss in database with OID @1@

[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

2.2.77 10184

database "@1@" must be vacuumed within @2@ transactions

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.2.78 10185

database with OID @1@ must be vacuumed within @2@ transactions

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.2.79 10186

transaction ID wrap limit is @1@, limited by database with OID @2@

[Description]
Terminated normally.

[System Processing]
Continues processing.
2.2.80 10187

transaction identifier "@1@" is too long

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.81 10188

prepared transactions are disabled

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.82 10189

transaction identifier "@1@" is already in use

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.83 10190

maximum number of prepared transactions reached

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.2.84 10191

**prepared transaction with identifier "@1@" is busy**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.85 10192

**permission denied to finish prepared transaction**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.86 10193

**prepared transaction belongs to another database**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.87 10194

**prepared transaction with identifier "@1@" does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
two-phase state file maximum length exceeded

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.89 10197
could not write two-phase state file: @1@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.2.90 10199
could not close two-phase state file: @1@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.3 Message Numbers Beginning with 10200

2.3.1 10200
could not open two-phase state file "@1@": @2@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.3.2 10201

could not stat two-phase state file "@1@": @2@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.3.3 10202

could not read two-phase state file "@1@": @2@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.3.4 10204

could not remove two-phase state file "@1@": @2@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.3.5 10205

could not recreate two-phase state file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.3.6 10206
could not fsync two-phase state file: @1@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.3.7 10209

removing future two-phase state file for transaction @1@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.3.8 10210

removing corrupt two-phase state file for transaction @1@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.3.9 10211

removing stale two-phase state file for transaction @1@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.3.10 10212

recovering prepared transaction @1@ from shared memory
[Description]
  Terminated normally.

[System Processing]
  Continues processing.

[Action]
  No action required.

2.3.11 10213

file "@1@" doesn't exist, reading as zeroes

[Description]
  The application or command terminated normally, but a warning was output.

[System Processing]
  Processing will continue.

[Action]
  Check the message text and confirm that the issue does not affect the expected outcome.

2.3.12 10214

could not access status of transaction @1@

[Description]
  An error occurred during I/O processing in the database server.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.3.13 10215

could not truncate directory "@1@": apparent wraparound

[Description]
  The application or command terminated normally, but a warning was output.

[System Processing]
  Processing will continue.

[Action]
  Check the message text and confirm that the issue does not affect the expected outcome.

2.3.14 10216

removing file "@1@"

[Description]
  Terminated normally.
2.3.15 10217

**cannot have more than** $2^{32}-2$ **commands in a transaction**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.16 10218

**maximum number of committed subtransactions (@1@) exceeded**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.17 10219

**cannot PREPARE a transaction that has operated on temporary tables**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.18 10220

**@1@ cannot run inside a transaction block**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.19 10221

@1@ cannot run inside a subtransaction
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.20 10222

@1@ cannot be executed from a function or multi-command string
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.21 10223

@1@ can only be used in transaction blocks
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.22 10224

there is already a transaction in progress
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
### 2.3.23 10225

**there is no transaction in progress**

[Description]

The application or command terminated normally, but a warning was output.

[System Processing]

Processing will continue.

[Action]

Check the message text and confirm that the issue does not affect the expected outcome.

### 2.3.24 10226

**no such savepoint**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.3.25 10227

**cannot have more than 2^32-1 subtransactions in a transaction**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.3.26 10228

**index "@1@" is not a btree**

[Description]

An error occurred during I/O processing in the database server.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
version mismatch in index "@1@": file version @2@, code version @3@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.3.28 10230

index "@1@" contains unexpected zero page at block @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.3.29 10231

index "@1@" contains corrupted page at block @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.3.30 10232

duplicate key value violates unique constraint "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.31 10233

failed to re-find tuple within index "@1@"
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.3.32 10234

*row is too big: size @1@, maximum size @2@*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.33 10235

"@1@" is not an index

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.34 10236

"@1@" is a composite type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.35 10237

could not obtain lock on row in relation "@1@"

[Description]
An error occurred because execution is temporarily impossible.
[System Processing]
Processing will be aborted.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

2.3.36 10238
hash indexes do not support whole-index scans

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.37 10239
index "@1@" is not a hash index

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.3.38 10240
index "@1@" has wrong hash version

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.3.39 10241
out of overflow pages in hash index "@1@"

[Description]
An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.40 10242

**index row size @1@ exceeds hash maximum @2@**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.41 10243

**column "@1@" cannot be declared SETOF**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.42 10244

**number of columns (@1@) exceeds limit (@2@)**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.43 10245

**user-defined relation parameter types limit exceeded**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.44 10246

RESET must not include values for parameters

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.45 10247

unrecognized parameter namespace "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.46 10248

unrecognized parameter "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.47 10249

parameter "@1@" specified more than once

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.3.48 10250

**Invalid value for boolean option "@1@": @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.49 10251

**Invalid value for integer option "@1@": @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.50 10252

**Value @1@ out of bounds for option "@2@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.51 10253

**Invalid value for floating point option "@1@": @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
unsupported format code: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.53 10255

number of index columns (@1@) exceeds limit (@2@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.54 10256

index row requires @1@ bytes, maximum size is @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.55 10257

picksplit method for column @1@ of index "@2@" failed

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.3.56 10259

index "@1@" contains an inner tuple marked as invalid
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.57 10260

aggregate @1@ needs to have compatible input type and transition type

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.58 10261

could not create exclusion constraint "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.59 10262

conflicting key value violates exclusion constraint "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.60 10263

RIGHT JOIN is only supported with merge-joinable join conditions

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.61 10264

FULL JOIN is only supported with merge-joinable join conditions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.62 10265

could not determine actual type of argument declared @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.63 10266

@1@ is not allowed in a SQL function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.64 10267

@1@ is not allowed in a non-volatile function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.65 10268

could not determine actual result type for function declared to return type @1@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.66 10269

set-valued function called in context that cannot accept a set
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.67 10270

return type mismatch in function declared to return @1@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.68 10271

return type @1@ is not supported for SQL functions
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.3.69 10272

cannot change sequence "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.70 10273

cannot change TOAST relation "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.71 10274

cannot insert into view "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.72 10275

cannot update view "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.73 10276
cannot copy from view "@1@">

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.74 10278

cannot change relation "@1@">

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.75 10279

cannot lock rows in sequence "@1@">

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.76 10280

cannot lock rows in TOAST relation "@1@">

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.77 10281

cannot lock rows in view "@1@">
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.78 10282

cannot lock rows in foreign table "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.79 10283

cannot lock rows in relation "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.80 10284

null value in column "@1@" violates not-null constraint

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.81 10285

new row for relation "@1@" violates check constraint "@2@"

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.82 10286

could not serialize access due to concurrent update

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.83 10287

ON COMMIT can only be used on temporary tables

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.84 10288

cannot create temporary table within security-restricted operation

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.85 10289

could not rewind hash-join temporary file: @1@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.3.86 10290**

could not write to hash-join temporary file: @1@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

**2.3.87 10291**

could not read from hash-join temporary file: @1@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.3.88 10292**

relation "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.3.89 10293**

cursor "@1@" is not a SELECT query

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.3.90 10294

**cursor "@1@" is held from a previous transaction**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.91 10295

**cursor "@1@" has multiple FOR UPDATE/SHARE references to table "@2@"**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.92 10296

**cursor "@1@" does not have a FOR UPDATE/SHARE reference to table "@2@"**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.93 10297

**cursor "@1@" is not positioned on a row**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.94 10298
cursor "@1@" is not a simply updatable scan of table "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.95 10299

type of parameter @1@ (@2@) does not match that when preparing the plan (@3@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4 Message Numbers Beginning with 10300

2.4.1 10300

no value found for parameter @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.2 10301

more than one row returned by a subquery used as an expression

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.4.3 10302

frame starting offset must not be null
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.4 10303

frame starting offset must not be negative
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.5 10304

frame ending offset must not be null
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.6 10305

frame ending offset must not be negative
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.7 10306
transaction left non-empty SPI stack

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.4.8 10307

subtransaction left non-empty SPI stack

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.4.9 10308

cannot open multi-query plan as cursor

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.10 10309

cannot open \@1\@ query as cursor

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.11 10310

DECLARE SCROLL CURSOR ... FOR UPDATE/SHARE is not supported
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.12 10311

number of array dimensions (@1@) exceeds the maximum allowed (@2@)

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.13 10312

array subscript in assignment must not be null

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.14 10313

attribute @1@ has wrong type

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.15 10314

table row type and query-specified row type do not match

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.16 10315

cannot pass more than @1@ argument to a function
cannot pass more than @2@ arguments to a function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.17 10317

function returning setof record called in context that cannot accept type record

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.18 10318

function return row and query-specified return row do not match

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.19 10319

table-function protocol for materialize mode was not followed

[Description]
An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.20 10320

unrecognized table-function returnMode: @1@

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.21 10322

rows returned by function are not all of the same row type

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.22 10325

cannot merge incompatible arrays

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.23 10326

multidimensional arrays must have array expressions with matching dimensions

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.24 10328

domain @1@ does not allow null values

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.25 10329

value for domain @1@ violates check constraint "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.26 10330

aggregate function calls cannot be nested

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.27 10331

window function calls cannot be nested

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.4.28 10332

**target type is not an array**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.29 10333

**ROW() column has type @1@ instead of type @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.30 10334

**could not identify a comparison function for type @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.31 10335

**OFFSET must not be negative**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.32 10336
**LIMIT must not be negative**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.4.33 10337**

@1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.4.34 10338**

could not find array type for data type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.4.35 10339**

cannot assign to system column "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.4.36 10340**

cannot set an array element to DEFAULT
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.37 10341

cannot set a subfield to DEFAULT

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.38 10342

column "@1@" is of type @2@ but default expression is of type @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.39 10343

row expansion via "*" is not supported here

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.40 10344

cannot assign to field "@1@" of column "@2@" because its type @3@ is not a composite type

[Description]
An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.41 10345

cannot assign to field "@1@" of column "@2@" because there is no such column in data type @3@

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.42 10346

array assignment requires type @1@ but expression is of type @2@

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.43 10347

column "@1@" is of type @2@ but expression is of type @3@

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.44 10348

cannot cast type @1@ to @2@

[Description]
  An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.45 10349

column "@1@" of relation "@2@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.46 10350

column name "@1@" specified more than once

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.47 10351

column reference "@1@" is ambiguous

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.48 10352

cross-database references are not implemented: "@1@.@2@.@3@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.49 10353

improper qualified name (too many dotted names): @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.50 10354

SELECT * with no tables specified is not valid

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.51 10355

there is no parameter $@1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.52 10356

inconsistent types deduced for parameter $@1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.4.53 10357

could not determine data type of parameter $@1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.54 10358

identifier "@1@" will be truncated to "@2@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.4.55 10363

aggregate functions are not allowed in DEFAULT expressions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.56 10365

column name "@1@" appears more than once in USING clause

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.57 10366
common column name "@1@" appears more than once in left table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.58 10367

column "@1@" specified in USING clause does not exist in left table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.59 10368

common column name "@1@" appears more than once in right table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.60 10369

column "@1@" specified in USING clause does not exist in right table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.61 10370

column alias list for "@1@" has too many entries
2.4.62 10371

**argument of @1@ must not contain variables**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.63 10372

**aggregate functions are not allowed in @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.64 10374

**@1@ "@2@" is ambiguous**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.65 10375

**non-integer constant in @1@**

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.66 10376

@1@ position @2@ is not in select list

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.67 10377

window "@1@" is already defined

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.68 10378

schema "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.69 10379

cannot override PARTITION BY clause of window "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.70 10380

cannot override ORDER BY clause of window "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.71 10382

in an aggregate with DISTINCT, ORDER BY expressions must appear in argument list

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.72 10383

for SELECT DISTINCT, ORDER BY expressions must appear in select list

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.73 10384

SELECT DISTINCT ON expressions must match initial ORDER BY expressions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.4.74 10385

"@1@" is not a valid operator name

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.75 10386

extension "@1@" already exists, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.4.76 10387

array of serial is not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.77 10388

@1@ will create implicit sequence "@2@" for serial column "@3@.@4@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.4.78 10389
conflicting NULL/NOT NULL declarations for column "@1@" of table "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.79 10390

multiple default values specified for column "@1@" of table "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.80 10391

referenced relation "@1@" is not a table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.81 10392

multiple primary keys for table "@1@" are not allowed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.82 10393

cannot use an existing index in CREATE TABLE
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.83 10394

conversion "@1@" does not exist

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.84 10395

index "@1@" is already associated with a constraint

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.85 10396

index "@1@" does not belong to table "@2@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.86 10397

index "@1@" is not valid

An error occurred during execution of the application or command.
[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.87 10399

"@1@" is not a unique index

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5 Message Numbers Beginning with 10400

2.5.1 10400

index "@1@" contains expressions

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.2 10401

"@1@" is a partial index

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.3 10402

"@1@" is a deferrable index

[Description]
    An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.4 10403

*index "@1@" does not have default sorting behavior*

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.5 10404

*column "@1@" named in key does not exist*

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.6 10405

*column "@1@" appears twice in primary key constraint*

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.7 10406

*column "@1@" appears twice in unique constraint*

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.8 10408

index expressions and predicates can refer only to the table being indexed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.9 10409

rule WHERE condition cannot contain references to other relations

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.10 10412

rules with WHERE conditions can only have SELECT, INSERT, UPDATE, or DELETE actions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.11 10413

conditional UNION/INTERSECT/EXCEPT statements are not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.5.12 10414

ON SELECT rule cannot use OLD

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.13 10415

ON SELECT rule cannot use NEW

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.14 10416

ON INSERT rule cannot use OLD

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.15 10417

ON DELETE rule cannot use NEW

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.16 10418
cannot refer to OLD within WITH query

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.17 10419
cannot refer to NEW within WITH query

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.18 10420
misplaced DEFERRABLE clause

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.19 10421
multiple DEFERRABLE/NOT DEFERRABLE clauses not allowed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.20 10422
misplaced NOT DEFERRABLE clause
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.21 10423

**constraint declared INITIALLY DEFERRED must be DEFERRABLE**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.22 10424

**misplaced INITIALLY DEFERRED clause**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.23 10425

**multiple INITIALLY IMMEDIATE/DEFERRED clauses not allowed**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.24 10426

**misplaced INITIALLY IMMEDIATE clause**

An error occurred during execution of the application or command.
2.5.25 10427

collations are not supported by type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.26 10428

CREATE specifies a schema (@1@) different from the one being created (@2@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.27 10429

table reference "@1@" is ambiguous

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.28 10430

table reference @1@ is ambiguous

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.29 10431

**table name "$1" specified more than once**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.30 10432

**WITH query "$1" has $2@ columns available but $3@ columns specified**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.31 10434

**relation "$1.@2@" does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.32 10435

**type "$1" does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.5.33 10436

a column definition list is only allowed for functions returning "record"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.34 10437

a column definition list is required for functions returning "record"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.35 10438

function "@1@" in FROM has unsupported return type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.36 10439

VALUES lists "@1@" have @2@ columns available but @3@ columns specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
tables can have at most @1@ columns

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.38 10441

WITH query "@1@" does not have a RETURNING clause

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.39 10442

column @1@ of relation "@2@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.40 10443

invalid reference to FROM-clause entry for table "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.41 10444

missing FROM-clause entry for table "@1@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.42 10445

unrecognized role option "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.43 10446

current database cannot be renamed

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.44 10447

time zone interval must be HOUR or HOUR TO MINUTE

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.45 10449

MATCH PARTIAL not yet implemented

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.5.46 10451**

**CREATE ASSERTION is not yet implemented**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.5.47 10452**

**DROP ASSERTION is not yet implemented**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.5.48 10453**

**RECHECK is no longer required**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.5.49 10454**

**missing argument**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.50 10457

number of columns does not match number of values

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.51 10458

LIMIT #,# syntax is not supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.52 10459

VALUES in FROM must have an alias

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.53 10460

subquery in FROM must have an alias

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.
2.5.54 10461

**precision for type float must be at least 1 bit**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.55 10462

**precision for type float must be less than 54 bits**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.56 10463

**UNIQUE predicate is not yet implemented**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.57 10464

**RANGE PRECEDING is only supported with UNBOUNDED**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
RANGE FOLLOWING is only supported with UNBOUNDED

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.5.59 10466**

frame start cannot be UNBOUNDED FOLLOWING

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.5.60 10467**

frame starting from following row cannot end with current row

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.5.61 10468**

frame end cannot be UNBOUNDED PRECEDING

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.5.62 10469**

frame starting from current row cannot have preceding rows
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.63 10470

frame starting from following row cannot have preceding rows

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.64 10471

type modifier cannot have parameter name

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.65 10472

wrong number of parameters on left side of OVERLAPS expression

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.66 10473

wrong number of parameters on right side of OVERLAPS expression

[Description]
An error occurred during execution of the application or command.
2.5.67 10474

syntax error

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.68 10475

multiple ORDER BY clauses not allowed

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.69 10476

multiple OFFSET clauses not allowed

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.70 10477

multiple LIMIT clauses not allowed

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.71 10478

**multiple WITH clauses not allowed**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.72 10479

**OUT and INOUT arguments aren't allowed in TABLE functions**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.73 10480

**multiple COLLATE clauses not allowed**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.74 10481

**operator does not exist: @1@**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.5.75 10482

could not identify an ordering operator for type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.76 10483

could not identify an equality operator for type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.77 10484

operator requires run-time type coercion: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.78 10485

operator @1@ is not commutative

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
operator is only a shell: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.80 10487

op ANY/ALL (array) requires array on right side

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.81 10488

op ANY/ALL (array) requires operator to yield boolean

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.82 10489

op ANY/ALL (array) requires operator not to return a set

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.83 10490

column "@1@" does not exist
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.84 10491

Column "@1@" not found in data type @2@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.85 10492

Could not identify column "@1@" in record data type

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.86 10493

Column notation .@1@ applied to type @2@, which is not a composite type

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.87 10494

Function @1@ does not exist

An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.88 10495

NULLIF requires = operator to yield boolean

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.89 10498

subquery must return only one column

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6 Message Numbers Beginning with 10500

2.6.1 10500

subquery has too many columns

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.2 10501

subquery has too few columns

[Description]
  An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.3 10502
cannot determine type of empty array
[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.4 10503
could not find range type for data type @1@
[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.5 10504
unnamed XML attribute value must be a column reference
[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.6 10505
unnamed XML element value must be a column reference
[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.7 10506

XML attribute name "@1@" appears more than once
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.8 10507

cannot cast XMLSERIALIZE result to @1@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.9 10508

unequal number of entries in row expressions
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.10 10509

cannot compare rows of zero length
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.6.11 10510

row comparison operator must yield type boolean, not type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.12 10511

row comparison operator must not return a set

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.13 10512

could not determine interpretation of row comparison operator @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.14 10513

IS DISTINCT FROM requires = operator to yield boolean

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.15 10515
VALUES lists must all be the same length

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.16 10520

INSERT has more expressions than target columns

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.17 10521

INSERT has more target columns than expressions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.18 10525

invalid UNION/INTERSECT/EXCEPT ORDER BY clause

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.19 10526

INTO is only allowed on first SELECT of UNION/INTERSECT/EXCEPT
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.20 10527

**UNION/INTERSECT/EXCEPT member statement cannot refer to other relations of same query level**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.21 10528

**each @1@ query must have the same number of columns**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.22 10535

**cannot specify both SCROLL and NO SCROLL**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.23 10537

**DECLARE CURSOR must not contain data-modifying statements in WITH**
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.24 10538

DECLARE CURSOR WITH HOLD ... @1@ is not supported

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.25 10539

DECLARE INSENSITIVE CURSOR ... @1@ is not supported

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.26 10552

aggregate function calls cannot contain window function calls

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.27 10558

window functions are not allowed in JOIN conditions

An error occurred during execution of the application or command.
2.6.28 10562

column "@1@.@2@" must appear in the GROUP BY clause or be used in an aggregate function

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.29 10563

subquery uses ungrouped column "@1@.@2@" from outer query

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.30 10564

parameter name "@1@" used more than once

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.31 10565

positional argument cannot follow named argument

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.32 10566

@1(*) specified, but @2@ is not an aggregate function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.33 10567

DISTINCT specified, but @1@ is not an aggregate function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.34 10568

ORDER BY specified, but @1@ is not an aggregate function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.35 10569

OVER specified, but @1@ is not a window function nor an aggregate function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.36 10570

function @1@ is not unique

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.37 10571

database "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.38 10572

@1@(*) must be used to call a parameterless aggregate function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.39 10573

aggregates cannot return sets

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.6.40 10574

aggregates cannot use named arguments

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.41 10576

DISTINCT is not implemented for window functions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.42 10577

aggregate ORDER BY is not implemented for window functions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.43 10578

window functions cannot return sets

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
extension "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.45 10582

aggregate @1@(*) does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.46 10583

server "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.47 10584

function "@1@" is an aggregate function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.48 10585

argument of @1@ must be a type name
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.49 10586

argument of @1@ must not return a set

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.50 10587

argument of @1@ must be type boolean, not type @2@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.51 10588

@1@ types @2@ and @3@ cannot be matched

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.52 10589

@1@ could not convert type @2@ to @3@

An error occurred during execution of the application or command.
2.6.53 10590

arguments declared "anymult" are not all alike

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.54 10591

arguments declared "anymult" are not all alike

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.55 10592

argument declared @1@ is not an array but type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.56 10593

argument declared @1@ is not consistent with argument declared @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.57 10595

**type matched to anynonarray is an array type:** @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.58 10596

**type matched to anyenum is not an enum type:** @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.59 10597

**recursive reference to query "@1@" must not appear within its non-recursive term**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.60 10598

**recursive reference to query "@1@" must not appear within a subquery**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.6.61 10599

recursive reference to query "@1@" must not appear within an outer join

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7 Message Numbers Beginning with 10600

2.7.1 10600

recursive reference to query "@1@" must not appear within INTERSECT

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.2 10601

recursive reference to query "@1@" must not appear within EXCEPT

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.3 10602

WITH query name "@1@" specified more than once

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.7.4 10604

**WITH clause containing a data-modifying statement must be at the top level**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.5 10605

**recursive query "@1@" column @2@ has type @3@ in non-recursive term but type @4@ overall**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.6 10606

**recursive query "@1@" column @2@ has collation "@3@" in non-recursive term but collation "@4@" overall**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.7 10607

**table "@1@" has @2@ columns available but @3@ columns specified**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.7.8 10608

**mutual recursion between WITH items is not implemented**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.9 10609

**recursive query "@1@" must not contain data-modifying statements**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.10 10610

**recursive query "@1@" does not have the form non-recursive-term UNION [ALL] recursive-term**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.11 10611

**ORDER BY in a recursive query is not implemented**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.7.12 10612

OFFSET in a recursive query is not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.13 10613

LIMIT in a recursive query is not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.14 10614

FOR UPDATE/SHARE in a recursive query is not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.15 10615

recursive reference to query "@1@" must not appear more than once

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.16 10616
unsafe use of string constant with Unicode escapes

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.17 10617

invalid Unicode escape

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.18 10618

unsafe use of \ in a string literal

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.19 10619

@1@ at end of input

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.20 10620

@1@ at or near "@2@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.21 10621

**nonstandard use of `\` in a string literal**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.22 10622

**nonstandard use of `\\` in a string literal**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.23 10623

**nonstandard use of escape in a string literal**

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.7.24 10624

**collation mismatch between implicit collations "@1@" and "@2@"**

An error occurred during execution of the application or command.
2.7.25 10625

collation mismatch between explicit collations "@1@" and "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.26 10626

target lists can have at most @1@ entries

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.27 10627

cannot subscript type @1@ because it is not an array

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.28 10628

array subscript must have type integer

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

\[2.7.29\] 10629

```
array assignment to "@1@" requires type @2@ but expression is of type @3@
```

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

\[2.7.30\] 10630

```
improper @1@TYPE reference (too few dotted names): @2@
```

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

\[2.7.31\] 10631

```
improper @1@TYPE reference (too many dotted names): @2@
```

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

\[2.7.32\] 10632

```
type reference @1@ converted to @2@
```

**Description**
The application or command terminated normally, but a warning was output.

**System Processing**
Processing will continue.

**Action**
Check the message text and confirm that the issue does not affect the expected outcome.
2.7.33 10633

return type @1@ is only a shell

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.34 10634

type modifier cannot be specified for shell type "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.35 10635

type modifier is not allowed for type "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.36 10636

type modifiers must be simple constants or identifiers

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.37 10637
invalid type name "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.38 10638

canceling the wait for synchronous replication and terminating connection due to administrator command

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.7.39 10639

canceling wait for synchronous replication due to user request

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.7.40 10640

standby "@1@" now has synchronous standby priority @2@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.7.41 10642

could not connect to the primary server: @1@
[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.7.42 10643

could not receive database system identifier and timeline ID from the primary server: @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.7.43 10644

invalid response from primary server

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.7.44 10645
database system identifier differs between the primary and standby

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.45 10646

highest timeline @1@ of the primary is behind recovery timeline @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.7.46 10647

could not start WAL streaming: @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.7.47 10651

could not receive data from WAL stream: @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.7.48 10652

replication terminated by primary server
[Description]
Primary server has stopped.

[System Processing]
Processing will be aborted.

[Action]
No action is required.

2.7.49 10653
could not send data to WAL stream: @1@
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.7.50 10655
base backup could not send data, aborting backup
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.7.51 10656
duplicate option "@1@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.52 10658
could not stat file or directory "@1@": @2@
[Description]
The application or command terminated normally, but a warning was output.
[System Processing]  
Processing will continue.

[Action]  
Check the message text and confirm that the issue does not affect the expected outcome.

2.7.53 10659

could not remove symbolic link "@1@": @2@

[Description]  
The application or command terminated normally, but a warning was output.

[System Processing]  
Processing will continue.

[Action]  
Check the message text and confirm that the issue does not affect the expected outcome.

2.7.54 10660

skipping special file "@1@"

[Description]  
The application or command terminated normally, but a warning was output.

[System Processing]  
Processing will continue.

[Action]  
Check the message text and confirm that the issue does not affect the expected outcome.

2.7.55 10663

unexpected EOF on standby connection

[Description]  
An error occurred because execution is temporarily impossible.

[System Processing]  
Processing will be aborted.

[Action]  
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

2.7.56 10664

invalid standby message type "@1@"

[Description]  
An error occurred during communication between the application and the database server.
[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

**2.7.57 10667**

*terminating walsender process due to replication timeout*

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

**2.7.58 10668**

*standby "@1@" has now caught up with primary*

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

**2.7.59 10669**

*number of requested standby connections exceeds max_wal_senders (currently @1@)*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.7.60 10670**

*requested WAL segment @1@ has already been removed*

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.7.61 10671**

could not read from log segment @1@, offset @2@, length @3@: @4@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.7.62 10672**

materialize mode required, but it is not allowed in this context

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.7.63 10673**

terminating walreceiver process due to administrator command

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

**2.7.64 10674**

cannot continue WAL streaming, recovery has already ended

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.
2.7.65 10675

authentication failed for user "@1@": host rejected

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.66 10677

"trust" authentication failed for user "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.67 10678

Ident authentication failed for user "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.68 10679

Peer authentication failed for user "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.69 10680
password authentication failed for user "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.70 10681

GSSAPI authentication failed for user "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.71 10682

SSPI authentication failed for user "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.72 10683

PAM authentication failed for user "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.73 10684

LDAP authentication failed for user "@1@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.74 10685

certificate authentication failed for user "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.75 10686

RADIUS authentication failed for user "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.76 10687

authentication failed for user "@1@": invalid authentication method

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.77 10689

connection requires a valid client certificate

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.78 10690

`pg_hba.conf rejects replication connection for host "@1@", user "@2@", @3@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.79 10691

`pg_hba.conf rejects replication connection for host "@1@", user "@2@`
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.80 10692

`pg_hba.conf rejects connection for host "@1@", user "@2@", database "@3@", @4@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.81 10693

`pg_hba.conf rejects connection for host "@1@", user "@2@", database "@3@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.82 10694

no pg_hba.conf entry for replication connection from host "@1@", user "@2@", @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.83 10695

no pg_hba.conf entry for replication connection from host "@1@", user "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.84 10696

no pg_hba.conf entry for host "@1@", user "@2@", database "@3@", @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.85 10697

no pg_hba.conf entry for host "@1@", user "@2@", database "@3@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.7.86 10698

**MD5 authentication is not supported when "db_user_namespace" is enabled**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.87 10699

**expected password response, got message type @1@**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8 Message Numbers Beginning with 10700

2.8.1 10700

**invalid password packet size**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8.2 10707

**GSSAPI is not supported in protocol version 2**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.8.3 10708

out of memory

[Description]
There was insufficient free space in the server’s memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.8.4 10709

expected GSS response, got message type @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8.5 10710

SSPI is not supported in protocol version 2

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.6 10711

expected SSPI response, got message type @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.
2.8.7 10712

could not create socket for Ident connection: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.
Take the following actions:
- Eliminate the cause of the communication disconnection.
Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
- If none of the above situations applies, perform the following:
a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.8.8 10713

could not bind to local address "@1@": @2@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.
Take the following actions:
- Eliminate the cause of the communication disconnection.
Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
If none of the above situations applies, perform the following:

a) Confirm that the database server has not stopped.

b) If the database server is starting or stopping, re-execute the command after the database server starts.

### 2.8.9 10714

could not connect to Ident server at address "@1@", port @2@: @3@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:

- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:

- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.

b) If the total number of update records in a single transaction is high, split it into short transactions.

c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:

a) Confirm that the database server has not stopped.

b) If the database server is starting or stopping, re-execute the command after the database server starts.

### 2.8.10 10715

could not send query to Ident server at address "@1@", port @2@: @3@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:

- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:

- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.8.11 10716

could not receive response from Ident server at address "@1@", port @2@: @3@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.8.12 10717

invalidly formatted response from Ident server: "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.13 10718
peer authentication is not supported on this platform

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.14 10719
could not get peer credentials: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.8.15 10720
could not look up local user ID @1@: @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.8.16 10721

empty password returned by client

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.17 10722

error from underlying PAM layer: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.18 10723

could not create PAM authenticator: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.19 10724

pam_set_item(PAM_USER) failed: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

[Description] An error occurred.
[System Processing] Processing will be aborted.
[Action] To investigate the cause of the occurrence from the message, and remove cause.
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.8.25 10730

could not set LDAP protocol version: @1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.8.26 10731

could not load wldap32.dll

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.8.27 10732

could not load function _ldap_start_tls_sA in wldap32.dll

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.8.28 10733

could not start LDAP TLS session: @1@

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.29 10734

**LDAP server not specified**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.30 10735

**invalid character in user name for LDAP authentication**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.31 10736

**could not perform initial LDAP bind for ldapbinddn "@1@" on server "@2@": @3@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.32 10737

**could not search LDAP for filter "@1@" on server "@2@": @3@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.33 10738
LDAP search for filter "@1@" on server "@2@" returned no entries.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.34 10740
could not get dn for the first entry matching "@1@" on server "@2@": @3@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.35 10741
could not unbind after searching for user "@1@" on server "@2@": @3@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.36 10742
LDAP login failed for user "@1@" on server "@2@": @3@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.8.37 10743

**certificate authentication failed for user "@1@": client certificate contains no user name**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.38 10744

**RADIUS server not specified**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.39 10745

**RADIUS secret not specified**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.40 10746

**could not translate RADIUS server name "@1@" to address: @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.41 10747
**RADIUS authentication does not support passwords longer than @1@ characters**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.8.42 10748
could not generate random encryption vector

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.8.43 10749
could not perform MD5 encryption of password

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.8.44 10750
could not create RADIUS socket: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.8.45 10751
could not bind local RADIUS socket: @1@
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.8.46 10752

could not send RADIUS packet: @1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.8.47 10753

timeout waiting for RADIUS response

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.8.48 10754

could not check status on RADIUS socket: @1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.8.49 10755

could not read RADIUS response: @1@

An error occurred.
[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.8.50 10756

RADIUS response from @1@ was sent from incorrect port: @2@

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.8.51 10757

RADIUS response too short: @1@

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.8.52 10759

RADIUS response is to a different request: @1@ (should be @2@)

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.8.53 10760

could not perform MD5 encryption of received packet

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.8.54  10761

**RADIUS response from @1@ has incorrect MD5 signature**

**Description**
An error occurred.

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

2.8.55 10762

**RADIUS response from @1@ has invalid code (@2@) for user "@3@"**

**Description**
An error occurred.

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

2.8.56 10763

**SSL error: @1@**

**Description**
An error occurred during communication between the application and the database server.

**System Processing**
Processing will be aborted.

**Action**
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8.57 10764

**unrecognized SSL error code: @1@**

**Description**
An error occurred during communication between the application and the database server.

**System Processing**
Processing will be aborted.

**Action**
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.
2.8.58 10767

could not create SSL context: @1@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.59 10768

could not load server certificate file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.60 10769

could not access private key file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.61 10770

private key file "@1@" has group or world access

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.62 10771
could not load private key file "@1@": @2@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.63 10772

check of private key failed: @1@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.64 10774

could not load root certificate file "@1@": @2@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.65 10775

SSL certificate revocation list file "@1@" ignored
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.8.66 10776

could not load SSL certificate revocation list file "@1@": @2@
The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

**2.8.67 10777**

**could not initialize SSL connection: @1@**

An error occurred during communication between the application and the database server.

Processing will be aborted.

Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

**2.8.68 10778**

**could not set SSL socket: @1@**

An error occurred during communication between the application and the database server.

Processing will be aborted.

Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

**2.8.69 10779**

**could not accept SSL connection: @1@**

An error occurred during communication between the application and the database server.

Processing will be aborted.

Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

**2.8.70 10780**

**could not accept SSL connection: EOF detected**

An error occurred during communication between the application and the database server.
[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8.71 10781

could not accept SSL connection: @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8.72 10782

SSL certificate’s common name contains embedded null

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8.73 10783

SSL connection from "@1@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.8.74 10784

could not translate host name "@1@", service "@2@" to address: @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.75 10785

could not translate service "@1@" to address: @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.76 10786

could not bind to all requested addresses: MAXLISTEN (@1@) exceeded

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.77 10787

could not create @1@ socket for address "@2@": @3@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.

b) If the total number of update records in a single transaction is high, split it into short transactions.

c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.8.78 10788

`setsockopt(SO_REUSEADDR) failed for @1@ address "@2@": @3@`

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
  a) If the COMMIT process is not executed after update, add the COMMIT process.
  b) If the total number of update records in a single transaction is high, split it into short transactions.
  c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
   
   - If none of the above situations applies, perform the following:
     a) Confirm that the database server has not stopped.
     b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.8.79 10789

`setsockopt(IPV6_V6ONLY) failed for @1@ address "@2@": @3@`

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
   - If none of the above situations applies, perform the following:
     a) Confirm that the database server has not stopped.
     b) If the database server is starting or stopping, re-execute the command after the database server starts.

### 2.8.80 10790

could not bind @1@ address "@2@": @3@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
   - If none of the above situations applies, perform the following:
     a) Confirm that the database server has not stopped.
     b) If the database server is starting or stopping, re-execute the command after the database server starts.

### 2.8.81 10791

could not listen on @1@ address "@2@": @3@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.
Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

### 2.8.82 10792

type @1@ does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.8.83 10793
could not set group of file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.8.84 10794
could not set permissions of file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.8.85 10795
could not accept new connection: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.
Take the following actions:
- Eliminate the cause of the communication disconnection.
Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
- If none of the above situations applies, perform the following:
a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.8.86 10796
could not set socket to nonblocking mode: @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8.87 10798
could not receive data from client: @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.
2.8.88 10799  
unexpected EOF within message length word

[Description]  
An error occurred during communication between the application and the database server.

[System Processing]  
Processing will be aborted.

[Action]  
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.9 Message Numbers Beginning with 10800

2.9.1 10800  
invalid message length

[Description]  
An error occurred during communication between the application and the database server.

[System Processing]  
Processing will be aborted.

[Action]  
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.9.2 10801  
incomplete message from client

[Description]  
An error occurred during communication between the application and the database server.

[System Processing]  
Processing will be aborted.

[Action]  
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.9.3 10802  
could not send data to client: @1@

[Description]  
An error occurred during communication between the application and the database server.

[System Processing]  
Processing will be aborted.
[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.9.4 10803

**authentication file token too long, skipping: "@1@"**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.9.5 10804

**could not open secondary authentication file "@@1@@" as "@2@": @3@**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.9.6 10806

**authentication option "@1@" is only valid for authentication methods @2@**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.9.7 10807

**authentication method "@1@" requires argument "@2@" to be set**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
**2.9.8 10808**

**local connections are not supported by this build**

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

**2.9.9 10809**

**hostssl record cannot match because SSL is disabled**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.9.10 10810**

**hostssl record cannot match because SSL is not supported by this build**

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

**2.9.11 10811**

**invalid connection type "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.9.12 10812**
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.13 10813

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.14 10814

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.15 10815

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.16 10816

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.17 10817
invalid CIDR mask in address "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.18 10818
end-of-line before netmask specification

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.19 10819
invalid IP mask "@1@": @2@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.20 10820
IP address and mask do not match

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.21 10821

end-of-line before authentication method

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.22 10822

invalid authentication method "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.23 10823

invalid authentication method "@1@": not supported by this build

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.9.24 10825

gssapi authentication is not supported on local sockets

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.25 10826

peer authentication is only supported on local sockets

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.26 10827

cert authentication is only supported on hostssl connections

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.27 10828

authentication option not in name=value format: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.28 10829

clientcert can only be configured for "hostssl" rows

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.9.29 10830
client certificates can only be checked if a root certificate store is available

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.9.30 10831
clientcert can not be set to 0 when using "cert" authentication

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.31 10832
invalid LDAP port number: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.32 10833
invalid RADIUS port number: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.33 10834
unrecognized authentication option name: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.34 10835

cannot use ldapbasedn, ldapbinddn, ldapbindpasswd, ldapsearchattribute, or ldapurl together with ldapprefix

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.35 10836

authentication method "ldap" requires argument "ldapbasedn", "ldapprefix", or "ldapsuffix" to be set

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.36 10837

could not open configuration file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.9.37 10838
invalid regular expression "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.38 10839

regular expression match for "@1@" failed: @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.39 10840

regular expression "@1@" has no subexpressions as requested by backreference in "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.40 10841

missing entry in file "@1@" at end of line @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.41 10842

provided user name (@1@) and authenticated user name (@2@) do not match
2.9.42 10843

no match in usermap "@1@" for user "@2@" authenticated as "@3@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.43 10844
could not open server file "@1": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.9.44 10845
invalid large-object descriptor: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.45 10846
permission denied for large object @1@

[Description]
An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.9.46 10847**

*large object descriptor @1@ was not opened for writing*

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.9.47 10848**

*must be owner of large object @1@*

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.9.48 10849**

*must be superuser to use server-side lo_import()*

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.9.49 10850**

*could not read server file "@1@": @2@*

**Description**
An error occurred during I/O processing in the database server.

**System Processing**
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.9.50 10851
could not create server file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.9.51 10852
must be superuser to use server-side lo_export()

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.52 10853
could not write server file "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.9.53 10854
could not write file "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.
2.9.54 10855

**no data left in message**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.9.55 10856

**insufficient data left in message**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.56 10857

**invalid string in message**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.9.57 10858

**invalid message format**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.9.58 10859
"@1@" is not a sequence

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.59 10860

shared tables cannot be toasted after initdb

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.60 10861
cannot drop @1@ because it is required by the database system

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.61 10862

role @1@ was concurrently dropped

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.62 10863
tablespace @1@ was concurrently dropped
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.63 10864

**database @1@ was concurrently dropped**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.64 10865

**cannot drop objects owned by @1@ because they are required by the database system**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.65 10866

**permission denied to create "@1@.@2@"**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.66 10867

**joins can have at most @1@ columns**

**Description**

An error occurred during execution of the application or command.
[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.67 10868

column name "@1@" conflicts with a system column name  
[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.68 10869

column "@1@" specified more than once  
[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.69 10871

column "@1@" has pseudo-type @2@  
[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.70 10872

composite type @1@ cannot be made a member of itself  
[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.71 10873

no collation was derived for column "@1@" with collatable type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.72 10874

relation "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.73 10875

type "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.74 10876

check constraint "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.9.75 10877

.constraint "@1@" for relation "@2@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.76 10878

merging constraint "@1@" with inherited definition

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.9.77 10879

cannot use column references in default expression

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.78 10881

cannot use subquery in DEFAULT expression

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.79 10882
aggregate functions are not allowed in index expressions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.80 10883
aggregate functions are not allowed in transform expressions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.81 10884
subfield "@1@" is of type @2@ but expression is of type @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.82 10885
only table "@1@" can be referenced in check constraint

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.83 10886
cannot use subquery in check constraint
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.84 10887

aggregate functions are not allowed in check constraints

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.85 10888

window functions are not allowed in check constraints

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.86 10889

unsupported ON COMMIT and foreign key combination

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.87 10890

cannot truncate a table referenced in a foreign key constraint

An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.88 10891

invalid type internal size @1@

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.89 10892

alignment "@1@" is invalid for passed-by-value type of size @2@

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.90 10893

internal size @1@ is invalid for passed-by-value type

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.91 10894

alignment "@1@" is invalid for variable-length type

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.92 10895

fixed-size types must have storage PLAIN
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.93 10896

could not form array type name for type "@1@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.94 10897

cannot determine transition data type
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.95 10898

return type of transition function @1@ is not @2@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.9.96 10899

must not omit initial value when transition function is strict and transition type is not compatible with input type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10 Message Numbers Beginning with 10900

2.10.1 10900
cannot determine result data type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.2 10901
unsafe use of pseudo-type "internal"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.3 10902
sort operator can only be specified for single-argument aggregates

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.4 10903

function @1@ returns a set

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.5 10904

function @1@ requires run-time type coercion

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.6 10905

large object @1@ does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.7 10906

primary keys cannot be expressions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.10.8 10907

user-defined indexes on system catalog tables are not supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.9 10908

concurrent index creation on system catalog tables is not supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.10 10909

shared indexes cannot be created after initdb

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.11 10910

building index "@1@" on table "@2@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.10.12 10911
cannot reindex temporary tables of other sessions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.13 10912

invalid enum label "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.14 10913

"@1@" is not an existing enum label

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.15 10914

ALTER TYPE ADD BEFORE/AFTER is incompatible with binary upgrade

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.16 10915

"@1@" is already an attribute of type @2@
[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.17 10916

function "@1@" already exists with same argument types

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.18 10917

cannot change return type of existing function

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.19 10918

cannot change name of input parameter "@1@"

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.20 10919

cannot remove parameter defaults from existing function

[Description]

An error occurred during execution of the application or command.
2.10.21 10920

cannot change data type of existing parameter default value

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.22 10921

function "@1@" is not an aggregate function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.23 10922

"@1@" is an aggregate function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.24 10923

function "@1@" is a window function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
2.10.25 10924

**function "@1@" is not a window function**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.26 10925

**there is no built-in function named "@1@"**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.27 10926

**SQL functions cannot return type @1@**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.28 10927

**SQL functions cannot have arguments of type @1@**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.10.29 10928

**invalid fork name**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.30 10929

**cannot drop @1@ because @2@ requires it**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.31 10930

**drop auto-cascades to @1@**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.10.32 10931

**cannot drop @1@ because other objects depend on it**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.33 10932
cannot drop desired object(s) because other objects depend on them

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.34 10934

constraint "@1@" for domain @2@ already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.35 10935

table "@1@" has multiple constraints named "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.36 10936

constraint "@1@" for table "@2@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.37 10937

grant options can only be granted to roles
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.38 10938

no privileges were granted for column "@1@" of relation "@2@"

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.10.39 10939

no privileges were granted for "@1@"

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.10.40 10940

not all privileges were granted for column "@1@" of relation "@2@"

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.10.41 10941

not all privileges were granted for "@1@"

The application or command terminated normally, but a warning was output.
[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.10.42 10942

**no privileges could be revoked for column "@1@" of relation "@2@"**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.10.43 10943

**no privileges could be revoked for "@1@"**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.10.44 10944

**not all privileges could be revoked for column "@1@" of relation "@2@"**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.10.45 10945

**not all privileges could be revoked for "@1@"**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.
[Action]

Check the message text and confirm that the issue does not affect the expected outcome.

2.10.46 10946

invalid privilege type @1@ for relation

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.47 10947

invalid privilege type @1@ for sequence

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.48 10948

invalid privilege type @1@ for database

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.49 10949

invalid privilege type @1@ for domain

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.10.50 10950

**invalid privilege type @1@ for function**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.51 10951

**invalid privilege type @1@ for large object**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.52 10952

**invalid privilege type @1@ for language**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.53 10953

**invalid privilege type @1@ for schema**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.54 10954

- 209 -
invalid privilege type @1@ for foreign-data wrapper

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.55 10955

invalid privilege type @1@ for foreign server

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.56 10956

column privileges are only valid for relations

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.57 10957

conflicting or redundant options

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.58 10958

default privileges cannot be set for columns
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.59 10959
"@1@" is not a domain

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.60 10960
sequence "@1@" only supports USAGE, SELECT, and UPDATE privileges

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.10.61 10961
invalid privilege type @1@ for table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.62 10962
invalid privilege type @1@ for tablespace

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.63 10963

**sequence "@1@" only supports SELECT column privileges**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.10.64 10964

**language "@1@" is not trusted**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.65 10965

**unrecognized privilege type "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.66 10966

**permission denied for column @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.67 10967

permission denied for relation @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.68 10968

permission denied for sequence @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.69 10969

permission denied for database @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.70 10970

permission denied for function @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.10.71 10971

permission denied for operator @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.72 10972

permission denied for type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.73 10973

permission denied for language @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.74 10974

permission denied for large object @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.75 10975
permission denied for schema @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.76 10976

permission denied for operator class @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.77 10977

permission denied for operator family @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.78 10978

permission denied for collation @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.79 10979

permission denied for conversion @1@
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.80 10980

permission denied for tablespace @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.81 10981

permission denied for text search dictionary @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.82 10982

permission denied for text search configuration @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.83 10983

permission denied for foreign-data wrapper @1@

An error occurred during execution of the application or command.
Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.10.84 10984

**permission denied for foreign server @1@**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.10.85 10985

**permission denied for extension @1@**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.10.86 10986

**must be owner of relation @1@**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.10.87 10987

**must be owner of sequence @1@**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.88 10988

must be owner of database @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.89 10989

must be owner of function @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.90 10990

must be owner of operator @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.91 10991

must be owner of type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.10.92 10992

must be owner of language @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.93 10993

must be owner of large object @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.94 10994

must be owner of schema @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.95 10995

must be owner of operator class @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.96 10996
must be owner of operator family @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.97 10997

must be owner of collation @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.98 10998

must be owner of conversion @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.99 10999

must be owner of tablespace @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.11 Message Numbers Beginning with 11000

2.11.1 11000

must be owner of text search dictionary @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.2 11001

must be owner of text search configuration @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.3 11002

must be owner of foreign-data wrapper @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.4 11003

must be owner of foreign server @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.11.5 11004

**must be owner of extension @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.6 11005

**permission denied for column "@1@" of relation "@2@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.7 11007

**attribute @1@ of relation with OID @2@ does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.8 11008

**relation with OID @1@ does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.9 11009
database with OID @1@ does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.10 11010

function with OID @1@ does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.11 11011

language with OID @1@ does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.12 11012

schema with OID @1@ does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.13 11013

tablespace with OID @1@ does not exist
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.14 11014

**foreign-data wrapper with OID @1@ does not exist**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.15 11015

**foreign server with OID @1@ does not exist**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.16 11016

**type with OID @1@ does not exist**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.17 11017

**operator with OID @1@ does not exist**

An error occurred during execution of the application or command.
<table>
<thead>
<tr>
<th>Error Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.11.18 11018</td>
<td>operator class with OID @1@ does not exist</td>

<tr>
<td>2.11.21 11021</td>
<td>text search configuration with OID @1@ does not exist</td>
</tr>
</tbody>
</table>
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.22 11022

**collation with OID @1@ does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.23 11023

**conversion with OID @1@ does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.24 11024

**extension with OID @1@ does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.25 11025

**conversion "@1@" already exists**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.11.26 11026

**default conversion for @1@ to @2@ already exists**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.27 11027

**cross-database references are not implemented: @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.28 11028

**temporary tables cannot specify a schema name**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.29 11029

**no schema has been selected to create in**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.30 11030
text search parser "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.31 11031

text search dictionary "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.32 11032

text search template "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.33 11033

text search configuration "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.34 11035

cannot move objects into or out of temporary schemas
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.35 11036

**cannot move objects into or out of TOAST schema**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.36 11037

**language "@1@" does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.37 11038

**improper relation name (too many dotted names): @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.38 11039

**collation "@1@" for encoding "@2@" does not exist**

[Description]
An error occurred during execution of the application or command.
<table>
<thead>
<tr>
<th>Error Code</th>
<th>Description</th>
</tr>
</thead>
</table>
| 2.11.39 11040 | **cursor "@1@" does not exist**  
An error occurred during execution of the application or command.  
Processing will be aborted.  
Check the message text and confirm that the application is written correctly and the command is being used correctly. |
| 2.11.40 11041 | **permission denied to create temporary tables in database "@1@"**  
An error occurred during execution of the application or command.  
Processing will be aborted.  
Check the message text and confirm that the application is written correctly and the command is being used correctly. |
| 2.11.41 11042 | **cannot create temporary tables during recovery**  
An error occurred because execution is temporarily impossible.  
Processing will be aborted.  
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server. |
| 2.11.42 11045 | **"@1@" is not a table**  
An error occurred during execution of the application or command. |
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.43 11046
"@1@" is not a foreign table
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.44 11047
must be owner of type @1@ or type @2@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.45 11048
must be superuser
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.46 11049
must have CREATEROLE privilege
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.47 11050

schema "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.48 11051

@1@ is not a valid encoding name

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.49 11052

only binary operators can have commutators

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.50 11053

only binary operators can have join selectivity

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.11.51 11054

**only binary operators can merge join**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.52 11055

**only binary operators can hash**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.53 11056

**only boolean operators can have negators**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.54 11057

**only boolean operators can have restriction selectivity**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.55 11058
only boolean operators can have join selectivity

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.56 11059

only boolean operators can merge join

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.57 11060

only boolean operators can hash

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.58 11061

operator @1@ already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.59 11062

operator cannot be its own negator or sort operator
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.60 11063

cannot remove dependency on @1@ because it is a system object

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.61 11064

collation "@1@" for encoding "@2@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.62 11065

collation "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.63 11066

cannot access temporary or unlogged relations during recovery

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.64 11068

**could not implement GROUP BY**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.65 11069

**could not implement DISTINCT**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.66 11070

**could not implement window PARTITION BY**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.67 11071

**could not implement window ORDER BY**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.68 11072

could not implement recursive UNION
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.69 11073

could not implement @1@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.70 11074

FULL JOIN is only supported with merge-joinable or hash-joinable join conditions
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.71 11075

unexpected EOF on client connection
[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.
**2.11.72 11076**

invalid frontend message type @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

**2.11.73 11077**

statement: @1@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

**2.11.74 11078**

current transaction is aborted, commands ignored until end of transaction block

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.11.75 11079**

duration: @1@ ms

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]

2.11.77 11081

parse @1@: @2@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.11.78 11082

cannot insert multiple commands into a prepared statement

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.79 11083

duration: @1@ ms parse @2@: @3@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.11.80 11084

bind @1@ to @2@
2.11.81 11085

prepared statement "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.82 11086

bind message has @1@ parameter formats but @2@ parameters

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.11.83 11087

bind message supplies @1@ parameters, but prepared statement "@2@" requires @3@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.11.84 11088

incorrect binary data format in bind parameter @1@

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.85 11089

duration: @1@ ms bind @2@@3@@@4@: @5@

[Description]
Terminated normally.

### 2.11.89 11094

**floating-point exception**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.11.90 11095

**terminating autovacuum process due to administrator command**

**[Description]**
Terminated normally.

**[System Processing]**
Continues processing.

**[Action]**
No action required.

### 2.11.91 11096

**terminating connection due to conflict with recovery**

**[Description]**
An error occurred because execution is temporarily impossible.

**[System Processing]**
Processing will be aborted.

**[Action]**
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

### 2.11.92 11097

**terminating connection due to administrator command**

**[Description]**
Terminated normally.

**[System Processing]**
Continues processing.
2.11.93 11098

**canceling authentication due to timeout**

[Description]
Timeout occurred during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Check the following:
- If executing SQL that outputs a large volume of search results, add a conditional expression to filter the results further.
- If numerous SQLs are being simultaneously executed, reduce the number of simultaneously executed SQLs.
- If a large volume of data is to be updated in a single transaction, modify the SQL to reduce the volume of data to be updated in a single transaction.
- If executing a complex SQL, modify it to a simple SQL.
- Check if there are any problems in the network.
- Before conducting maintenance that involves the processing of a large volume of data, use the SET statement to temporarily increase the value of maintenance_work_mem.

2.11.94 11099

**canceling statement due to statement timeout**

[Description]
Timeout occurred during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Check the following:
- If executing SQL that outputs a large volume of search results, add a conditional expression to filter the results further.
- If numerous SQLs are being simultaneously executed, reduce the number of simultaneously executed SQLs.
- If a large volume of data is to be updated in a single transaction, modify the SQL to reduce the volume of data to be updated in a single transaction.
- If executing a complex SQL, modify it to a simple SQL.
- Check if there are any problems in the network.
- Before conducting maintenance that involves the processing of a large volume of data, use the SET statement to temporarily increase the value of maintenance_work_mem.

2.12 Message Numbers Beginning with 11100

2.12.1 11100
canceling autovacuum task

[Description]
Processing was canceled.

[System Processing]
Processing will be aborted.

[Action]
Check the message text.

2.12.2 11101
canceling statement due to conflict with recovery

[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

2.12.3 11102
canceling statement due to user request

[Description]
Processing was canceled.

[System Processing]
Processing will be aborted.

[Action]
Check the message text.

2.12.4 11103
stack depth limit exceeded

[Description]
The depth of the execution stack exceeded the allowable value during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
If executing a complex SQL, modify it to a simple SQL.

2.12.5 11104
--@1@ requires a value
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.6 11105

-c @1@ requires a value

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.7 11107

@1@: invalid command-line arguments

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.8 11108

@1@: no database nor user name specified

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.9 11109

invalid CLOSE message subtype @1@

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.10 11110

invalid DESCRIBE message subtype @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.12.11 11111

disconnection: session time: @1@:@2@:@3@.@@4@ user=@5@ database=@6@
host=@7@@@8@@@9@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.12.12 11112

permission denied: "@1@" is a system catalog

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.12.13 11113

cannot execute @1@ in a read-only transaction

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.14 11114
cannot execute @1@ during recovery
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.15 11115
cannot execute @1@ within security-restricted operation
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.16 11116
must be superuser to do CHECKPOINT
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.17 11117
invalid argument size @1@ in function call message
[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.
[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.12.18 11118

fastpath function call: "@1@" (OID @2@)
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.12.19 11119

duration: @1@ ms fastpath function call: "@2@" (OID @3@)
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.12.20 11120

function call message contains @1@ arguments but function requires @2@
[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.12.21 11121

function call message contains @1@ argument formats but @2@ arguments
[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.
2.12.22 11122

**incorrect binary data format in function argument @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.23 11123

**bind message has @1@ result formats but query has @2@ columns**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.12.24 11124

**portal "@1@" cannot be run**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.25 11125

**cursor can only scan forward**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.26 11126
could not open usermap file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.12.27 11127

**unexpected delimiter**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.12.28 11128

**unexpected end of line or lexeme**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.12.29 11129

**unexpected end of line**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.12.30 11130

**thesaurus sample word "@1@" isn't recognized by subdictionary (rule @2@)**
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.31 11131

thesaurus sample word "@1@" is a stop word (rule @2@)

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.32 11132

thesaurus substitute word "@1@" is a stop word (rule @2@)

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.33 11133

thesaurus substitute word "@1@" isn't recognized by subdictionary (rule @2@)

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.34 11134

thesaurus substitute phrase is empty (rule @1@)

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.35 11135

**multiple DictFile parameters**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.36 11136

**multiple Dictionary parameters**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.37 11137

**unrecognized Thesaurus parameter: "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.38 11138

**missing DictFile parameter**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.39 11139

missing Dictionary parameter
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.40 11140

invalid text search configuration file name "@1@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.41 11141

could not open statistics file "@1@": @2@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.12.42 11142

unrecognized headline parameter: "@1@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.12.43 11143

MinWords should be less than MaxWords

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.44 11144

MinWords should be positive

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.45 11145

ShortWord should be >= 0

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.46 11146

MaxFragments should be >= 0

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.47 11147
string is too long for tsvector (@1@ bytes, max @2@ bytes)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.48 11148

multiple Accept parameters

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.49 11149

unrecognized simple dictionary parameter: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.50 11150

could not open log file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.12.51 11151

invalid regular expression: @1@
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.52 11153

could not open synonym file "@1@": @2@

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.12.53 11154

Ispell dictionary supports only "default", "long", and "num" flag values

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.54 11155

affix file contains both old-style and new-style commands

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.55 11156

unrecognized synonym parameter: "@1@"

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.56 11157

missing Synonyms parameter

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.57 11158

could not open thesaurus file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.12.58 11159

word is too long to be indexed

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.12.59 11160

conversion from wchar_t to server encoding failed: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.60 11161
text search parser does not support headline creation
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.61 11162
multiple AffFile parameters
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.62 11163
unrecognized Ispell parameter: "@1@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.63 11164
missing AffFile parameter
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.12.64 11166

WAL streaming (max_wal_senders > 0) requires wal_level "replica" or "logical"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.65 11167

invalid list syntax in parameter "@1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.66 11168

could not create listen socket for "@1@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.12.67 11169

could not create any TCP/IP sockets

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.12.68 11170
could not create Unix-domain socket in directory "@1@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.12.69 11171

no socket created for listening

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.12.70 11172

could not create I/O completion port for child queue

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.12.71 11173

could not load pg_hba.conf

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.12.72 11174

@1@: could not locate matching postgres executable
2.12.73 11175

could not open directory "@1@": @2@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.12.74 11176

directory "@1@" does not exist

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.12.75 11177

could not read permissions of directory "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.12.76 11178

specified data directory "@1@" is not a directory

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.77 11179

data directory "@1@" has wrong ownership
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.78 11180

data directory "@1@" has group or world access
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.79 11181

select() failed in postmaster: @1@
[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.
Take the following actions:
- Eliminate the cause of the communication disconnection.
Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
   - If none of the above situations applies, perform the following:
a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.12.80 11182

**incomplete startup packet**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.12.81 11183

**invalid length of startup packet**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.12.82 11184

**failed to send SSL negotiation response: @1@**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.12.83 11185

**unsupported frontend protocol @1@.@2@: server supports @3@.0 to @4@.@5@**

[Description]
An error occurred during execution of the application or command.
2.12.84 11187

invalid startup packet layout: expected terminator as last byte

[Description]
An error occurred during communication between the application and the database server.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.12.85 11188

no PostgreSQL user name specified in startup packet

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.86 11189

the database system is starting up

[Description]
An error occurred because execution is temporarily impossible.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

2.12.87 11190

the database system is shutting down

[Description]
The database system is shutting down.
[System Processing]
Processing will be aborted.

[Action]
Retry any necessary applications or commands after restarting the database system.

2.12.88 11191
the database system is in recovery mode

[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

2.12.89 11192
sorry, too many clients already

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.90 11193
wrong key in cancel request for process @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.12.91 11194
PID @1@ in cancel request did not match any process

[Description]
An unexpected error occurred.

2.12.96 11199

aborting any active transactions

[Description]
Rollback any active transactions because the database system is being requested to shut down.

[System Processing]
Continues processing.

[Action]
Retry any necessary applications or commands after restarting the database system.

2.13 Message Numbers Beginning with 11200

2.13.1 11200

received immediate shutdown request

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.13.2 11201

aborting startup due to startup process failure

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.3 11202

database system is ready to accept connections

[Description]
Terminated normally.

[System Processing]
Continues processing.
[Action]
No action required.

2.13.4 11203

terminating any other active server processes

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.13.5 11204

@1@ (PID @2@) exited with exit code @3@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.13.6 11205

@1@ (PID @2@) was terminated by exception 0x@3@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.13.7 11206

@1@ (PID @2@) was terminated by signal @3@: @4@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.13.8 11207
@1@ (PID @2@) was terminated by signal @3@
[Description]
  Terminated normally.
[System Processing]
  Continues processing.
[Action]
  No action required.

2.13.9 11208
@1@ (PID @2@) exited with unrecognized status @3@
[Description]
  Terminated normally.
[System Processing]
  Continues processing.
[Action]
  No action required.

2.13.10 11209
abnormal database system shutdown
[Description]
  An error occurred.
[System Processing]
  Processing will be aborted.
[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.13.11 11210
all server processes terminated; reinitializing
[Description]
  An error occurred.
[System Processing]
  Processing will be aborted.
[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.13.12 11211
could not fork new process for connection: @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.13 11212

connection received: host=@1@ port=@2@
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.13.14 11213

connection received: host=@1@
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.13.15 11214

could not execute server process "@1@": @2@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.16 11215

database system is ready to accept read only connections
2.13.17 11216

could not fork startup process: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.18 11217

could not fork background writer process: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.19 11218

could not fork WAL writer process: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.20 11219

could not fork WAL receiver process: @1@

[Description]
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.21 11220

could not fork archiver: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.22 11221

could not duplicate socket @1@ for use in backend: error code @2@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.13.23 11224

checkpoint request failed
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.13.24 11225

compacted fsync request queue from @1@ entries to @2@ entries

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.13.25 11226

could not resolve "localhost": @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.13.26 11227

trying another address for the statistics collector

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.13.27 11228

could not create socket for statistics collector: @1@

[Description]
The database server was disconnected during execution of the application.
[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.
Take the following actions:
- Eliminate the cause of the communication disconnection.
Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
  a) If the COMMIT process is not executed after update, add the COMMIT process.
  b) If the total number of update records in a single transaction is high, split it into short transactions.
  c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
  - If none of the above situations applies, perform the following:
    a) Confirm that the database server has not stopped.
    b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.13.28 11229

could not bind socket for statistics collector: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.
Take the following actions:
- Eliminate the cause of the communication disconnection.
Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
  a) If the COMMIT process is not executed after update, add the COMMIT process.
  b) If the total number of update records in a single transaction is high, split it into short transactions.
  c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
  - If none of the above situations applies, perform the following:
    a) Confirm that the database server has not stopped.
    b) If the database server is starting or stopping, re-execute the command after the database server starts.
2.13.29 11230

could not get address of socket for statistics collector: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.13.30 11231

could not connect socket for statistics collector: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
If none of the above situations applies, perform the following:

a) Confirm that the database server has not stopped.

b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.13.31 11232

could not send test message on socket for statistics collector: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:

- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.

b) If the total number of update records in a single transaction is high, split it into short transactions.

c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:

a) Confirm that the database server has not stopped.

b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.13.32 11233

select() failed in statistics collector: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:

- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.13.33 11234

test message did not get through on socket for statistics collector
[Description]
An error occurred during communication between the application and the database server.
[System Processing]
Processing will be aborted.
[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.13.34 11235

could not receive test message on socket for statistics collector: @1@
[Description]
The database server was disconnected during execution of the application.
[System Processing]
Processing will be aborted.
[Action]
Communication may have been disconnected for the following reasons:
  - An error occurred in the communication line (TCP/IP etc.)
  - The database server terminated abnormally.
Take the following actions:
  - Eliminate the cause of the communication disconnection.
Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
  a) If the COMMIT process is not executed after update, add the COMMIT process.
  b) If the total number of update records in a single transaction is high, split it into short transactions.
  c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
  - If none of the above situations applies, perform the following:
    a) Confirm that the database server has not stopped.
    b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.13.35 11236
incorrect test message transmission on socket for statistics collector

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.13.36 11237
could not set statistics collector socket to nonblocking mode: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.13.37 11238
disabling statistics collector for lack of working socket

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

</table>
could not write temporary statistics file "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.13.43 11246

could not close temporary statistics file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.44 11247

could not rename temporary statistics file "@1@" to "@2@": @3@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.45 11248

could not open dictionary file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.46 11249

corrupted statistics file "@1@"
The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.13.47 11250

database hash table corrupted during cleanup --- abort

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.13.48 11252

could not read from logger pipe: @1@

The database server was disconnected during execution of the application.

Processing will be aborted.

Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.

b) If the total number of update records in a single transaction is high, split it into short transactions.

c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:

a) Confirm that the database server has not stopped.

b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.13.49 11253
logger shutting down

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.13.50 11254

could not create pipe for syslog: @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.13.51 11255

could not fork system logger: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.52 11256

could not redirect stdout: @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.13.53 11257

could not redirect stderr: @1@
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.13.54 11258

could not open affix file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.55 11259

disabling automatic rotation (use SIGHUP to re-enable)

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.13.56 11260

could not fork process: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.57 11261

archive_mode enabled, yet archive_command is not set

[Description]
The application or command terminated normally, but a warning was output.
[System Processing]
   Processing will continue.

[Action]
   Check the message text and confirm that the issue does not affect the expected outcome.

2.13.58 11262

archiving write-ahead log file "@1@" failed too many times, will try again later

[Description]
   The application or command terminated normally, but a warning was output.

[System Processing]
   Processing will continue.

[Action]
   Check the message text and confirm that the issue does not affect the expected outcome.

2.13.59 11263

archive command failed with exit code @1@

[Description]
   An error occurred during executing the command specified by archive_command parameter at postgresql.conf.

[System Processing]
   Processing will be aborted.

[Action]
   Identify the cause according to the messages shown before this message and the return code shown in this message. And then work around if necessary.

2.13.60 11264

archive command was terminated by exception 0x@1@

[Description]
   An unexpected error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   Contact Fujitsu technical support.

2.13.61 11265

archive command was terminated by signal @1@: @2@

[Description]
   An unexpected error occurred.
[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.13.62 11266

archive command was terminated by signal @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.13.63 11267

archive command exited with unrecognized status @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.13.64 11268

archived write-ahead log file "@1@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.13.65 11269

could not open archive status directory "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.66 11270

could not fork autovacuum launcher process: @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.67 11271

autovacuum launcher started
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.13.68 11272

autovacuum launcher shutting down
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.13.69 11273

could not fork autovacuum worker process: @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.13.70 11274

**autovacuum: processing database "@1@"**

**[Description]**
Terminated normally.

**[System Processing]**
Continues processing.

**[Action]**
No action required.

2.13.71 11275

**autovacuum: dropping orphan temp table "@1.@2.@3@"**

**[Description]**
The application or command terminated normally, but a warning was output.

**[System Processing]**
Processing will continue.

**[Action]**
Check the message text and confirm that the issue does not affect the expected outcome.

2.13.72 11276

**autovacuum: found orphan temp table "@1@."@2@" in database "@3@"**

**[Description]**
Uncollected garbage of the temporary table was found during automatic vacuuming

**[System Processing]**
Continues processing.

**[Action]**
No action required. The garbage of the temporary table will be collected automatically later.
If you want to collect it and obtain the storage space immediately,
drop the schema derived from @1 with the database user having superuser permission.

2.13.73 11277

**autovacuum not started because of misconfiguration**

**[Description]**
The application or command terminated normally, but a warning was output.

**[System Processing]**
Processing will continue.

**[Action]**
Check the message text and confirm that the issue does not affect the expected outcome.
2.13.74 11278

no empty local buffer available

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.13.75 11279

cannot cluster temporary tables of other sessions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.13.76 11280

unexpected data beyond EOF in block @1@ of relation @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.77 11281

Continues processing past damaged page headers.

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.13.78 11283
could not write block @1@ of @2@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.13.79 11284

could not truncate file "@1@": @2@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.13.80 11285

cannot extend file "@1@" beyond @2@ blocks

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.13.81 11286

could not seek to block @1@ in file "@2@": @3@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.82 11287

could not extend file "@1@": @2@
There was insufficient free space in the disk of the database server during execution of the application.

Processing will be aborted.

Delete user data stored in the database server to free up space on the disk.

2.13.83 11288

could not extend file "@1@": wrote only @2@ of @3@ bytes at block @4@

There was insufficient free space in the disk of the database server during execution of the application.

Processing will be aborted.

Delete user data stored in the database server to free up space on the disk.

2.13.84 11289

could not read block @1@ in file "@2@": @3@

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.13.85 11290

could not read block @1@ in file "@2@": read only @3@ of @4@ bytes

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.13.86 11291

could not write block @1@ in file "@2@": @3@

There was insufficient free space in the disk of the database server during execution of the application.
[System Processing]
  Processing will be aborted.

[Action]
  Delete user data stored in the database server to free up space on the disk.

2.13.87 11292

could not write block @1@ in file "@2@": wrote only @3@ of @4@ bytes

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
  Processing will be aborted.

[Action]
  Delete user data stored in the database server to free up space on the disk.

2.13.88 11293

could not truncate file "@1@" to @2@ blocks: it's only @3@ blocks now

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.13.89 11294

could not truncate file "@1@" to @2@ blocks: @3@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.13.90 11295

could not fsync file "@1@" but retrying: @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
  Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

### 2.13.91 11296

**could not forward fsync request because request queue is full**

**Description**
Terminated normally.

**System Processing**
Continues processing.

**Action**
No action required.

### 2.13.92 11297

**could not open file "@1@" (target block @2@): @3@**

**Description**
An error occurred during I/O processing in the database server.

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

### 2.13.93 11298

**could not seek to end of file "@1@": @2@**

**Description**
An error occurred during I/O processing in the database server.

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

### 2.13.94 11299

**memory for serializable conflict tracking is nearly exhausted**

**Description**
The application or command terminated normally, but a warning was output.

**System Processing**
Processing will continue.

**Action**
Check the message text and confirm that the issue does not affect the expected outcome.
2.14 Message Numbers Beginning with 11300

2.14.1 11300

not enough shared memory for data structure "@1@" (@2@ bytes requested)

[Description]
There was insufficient free space in the database server's shared memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.14.2 11301

deferrable snapshot was unsafe; trying a new one

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.14.3 11302

out of shared memory

[Description]
There was insufficient free space in the database server's shared memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.14.4 11303

could not serialize access due to read/write dependencies among transactions

[Description]
An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.14.5 11304**

deadlock detected

[Description]
An error occurred because execution is temporarily impossible.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

---

**2.14.6 11305**
cannot acquire lock mode @1@ on database objects while recovery is in progress

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.14.7 11306**
could not send signal to process @1@: @2@

[Description]
The application or command terminated normally, but a warning was output.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

---

**2.14.8 11307**
process @1@ avoided deadlock for @2@ on @3@ by rearranging queue order after @4@.@5@ ms

[Description]
The application or command terminated normally, but a warning was output.
2.14.9 11308

process @1@ detected deadlock while waiting for @2@ on @3@ after @4@.@5@ ms

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.14.10 11309

process @1@ still waiting for @2@ on @3@ after @4@.@5@ ms

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.14.11 11310

process @1@ acquired @2@ on @3@ after @4@.@5@ ms

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.14.12 11311

process @1@ failed to acquire @2@ on @3@ after @4@.@5@ ms

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.
[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.14.13 11314

getrlimit failed: @1@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.14.14 11315

insufficient file descriptors available to start server process

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.14.15 11316

out of file descriptors: @1@; release and retry

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.14.16 11317

temporary file: path "@1@", size @2@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.14.17 11318

could not read directory "@1@": @2@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.14.18 11320

could not create directory "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.14.19 11322

could not create ShmemIndex entry for data structure "@1@"

[Description]
There was insufficient free space in the database server's shared memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.14.20 11323

ShmemIndex entry size is wrong for data structure "@1@": expected @2@, actual @3@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.
2.14.21 11324

**requested shared memory size overflows size_t**

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.22 11325

**corrupted page pointers: lower = @1@, upper = @2@, special = @3@**

**[Description]**

An error occurred during I/O processing in the database server.

**[System Processing]**

Processing will be aborted.

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

2.14.23 11326

**corrupted item pointer: @1@**

**[Description]**

An error occurred during I/O processing in the database server.

**[System Processing]**

Processing will be aborted.

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

2.14.24 11327

**corrupted item lengths: total @1@, available space @2@**

**[Description]**

An error occurred during I/O processing in the database server.

**[System Processing]**

Processing will be aborted.

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

2.14.25 11328
corrupted item pointer: offset = @1@, size = @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.14.26 11329
could not write block @1@ of temporary file: @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.14.27 11330
could not read block @1@ of temporary file: @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.14.28 11331
could not create unique index "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.29 11332
could not find function "@1@" in file "@2@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.30 11333

could not access file "@1@": @2@

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.14.31 11334

could not load library "@1@": @2@

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.14.32 11335

incompatible library "@1@": missing magic block

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.33 11336

incompatible library "@1@": version mismatch

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.34 11337

**incompatible library "@1@": magic block mismatch**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.35 11338

**access to library "@1@" is not allowed**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.36 11339

**invalid macro name in dynamic library path: @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.37 11340

**zero-length component in parameter "dynamic_library_path"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.38 11341

component in parameter "dynamic_library_path" is not an absolute path

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.39 11342

could not determine actual result type for function "@1@" declared to return type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.40 11343

number of aliases does not match number of columns

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.41 11344

no column alias was provided

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.14.42 11345

could not determine row description for function returning record

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.43 11346

internal function "@1@" is not in internal lookup table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.44 11347

unrecognized API version @1@ reported by info function "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.45 11349

cached plan must not change result type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.46 11350
"@1@" is not a type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.47 11351

record type has not been registered

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.48 11352

@1@ is not an enum

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.49 11353

could not create relation-cache initialization file "@1@": @2@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.14.50 11354

cannot PREPARE a transaction that modified relation mapping
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.51 11355

could not open relation mapping file "@1@": @2@

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.14.52 11356

could not read relation mapping file "@1@": @2@

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.14.53 11357

relation mapping file "@1@" contains invalid data

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.14.54 11358

relation mapping file "@1@" contains incorrect checksum

An error occurred during I/O processing in the database server.
could not write to relation mapping file "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.14.56 11360

could not fsync relation mapping file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.14.57 11361

could not close relation mapping file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.14.58 11362

argument type @1@ is only a shell

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.59 11363

no binary input function available for type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.60 11364

no binary output function available for type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.61 11365

no input function available for type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.62 11366

no output function available for type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.14.63 11367

could not reopen file "@1@" as stderr: @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.14.64 11368

could not reopen file "@1@" as stdout: @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.14.65 11369

cursor "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.66 11370

closing existing cursor "@1@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.14.67 11371
cannot drop active portal "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.68 11372

cannot PREPARE a transaction that has created a cursor WITH HOLD

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.69 11373

word is too long (@1@ bytes, max @2@ bytes)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.70 11374

string is too long for tsvector (@1@ bytes, max @2@ bytes)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.71 11375

argument of ntile must be greater than zero
[Description]
An error occurred during execution of the application or command.

(System Processing)
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.72 11376

argument of nth_value must be greater than zero

[Description]
An error occurred during execution of the application or command.

(System Processing)
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.73 11379

integer out of range

[Description]
An error occurred during execution of the application or command.

(System Processing)
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.74 11380

argument must be empty or one-dimensional array

[Description]
An error occurred during execution of the application or command.

(System Processing)
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.75 11381

cannot concatenate incompatible arrays

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.76 11382

invalid number of dimensions: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.77 11383

could not determine input data type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.78 11385

division by zero

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.79 11386

invalid time zone name: "@1@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.
Check the message text and confirm that the issue does not affect the expected outcome.

2.14.80 11387

timestamp out of range

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.81 11388
cannot convert abstime "invalid" to timestamp

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.82 11389
invalid status in external "tinterval" value

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.83 11390
cannot convert reltime "invalid" to interval

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.14.84 11391
invalid input syntax for type @1@: "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.85 11393
PID @1@ is not a PostgreSQL server process

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.14.86 11395
failed to send signal to postmaster: @1@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.14.87 11397
rotation not possible because log collection not active

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.14.88 11398
global tablespace never has databases

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.14.89 11399

@1@ is not a tablespace OID

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.15 Message Numbers Beginning with 11400

2.15.1 11400

invalid input syntax for integer: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.2 11401

syntax error in tsquery: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.15.3 11402

syntax error in tsvector: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.4 11403

there is no escaped character: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.5 11404

wrong position info in tsvector: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.6 11405

sequence "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.7 11406
more than one function named "@1@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.8 11407

more than one operator named @1@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.9 11408

too many arguments
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.10 11409

invalid name syntax
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.11 11410

expected a left parenthesis
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.12 11411

expected a right parenthesis

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.13 11412

expected a type name

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.14 11413

improper type name

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.15 11414

invalid type modifier

An error occurred during execution of the application or command.
2.15.16 11415

**TIME(@1@)@2@ precision must not be negative**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.17 11416

**TIME(@1@)@2@ precision reduced to maximum allowed, @3@**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.15.18 11417

**date out of range: "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.19 11418

**date/time value "current" is no longer supported**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.20 11419

timestamp cannot be NaN
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.21 11420

timestamp(@1@) precision must be between @2@ and @3@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.22 11421

interval out of range
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.23 11422

invalid INTERVAL type modifier
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.15.24 11423

**TIMESTAMP(@1@)@2@ precision must not be negative**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.25 11424

**TIMESTAMP(@1@)@2@ precision reduced to maximum allowed, @3@**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.15.26 11425

**interval(@1@) precision must be between @2@ and @3@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.27 11426

**cannot subtract infinite timestamps**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.28 11427
timestamp units "@1@" not supported
[Description]
   An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.
[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.29 11428

"time" units "@1@" not recognized
[Description]
   An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.
[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.30 11429

timestamp with time zone units "@1@" not supported
[Description]
   An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.
[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.31 11430

"time with time zone" units "@1@" not recognized
[Description]
   An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.
[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.32 11431

interval units "@1@" not supported
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.33 11432

*timestamp units "@1@" not recognized*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.34 11434

*time zone "@1@" not recognized*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.35 11435

*interval time zone "@1@" must not include months or days*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.36 11436

*step size cannot equal zero*

[Description]
An error occurred during execution of the application or command.
invalid input syntax for type @1@: "@2@"

An error occurred during execution of the application or command.

2.15.38 11438

value "@1@" is out of range for type @2@

An error occurred during execution of the application or command.

2.15.39 11439

bigint out of range

An error occurred during execution of the application or command.

2.15.40 11440

smallint out of range

An error occurred during execution of the application or command.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.41 11441

OID out of range

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.42 11442

input of anonymous composite types is not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.43 11443

malformed record literal: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.44 11444

wrong number of columns: @1@, expected @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.15.45 11445

wrong data type: @1@, expected @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.46 11446

improper binary format in record column @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.47 11447

cannot compare dissimilar column types @1@ and @2@ at record column @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.48 11448

cannot compare record types with different numbers of columns

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.49 11449
**int2vector has too many elements**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.15.50 11450**

**invalid int2vector data**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.15.51 11451**

**oidvector has too many elements**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.15.52 11452**

**invalid input syntax for type @1@: "@2@"**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.15.53 11453**

**invalid cidr value: "@1@"**
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.54 11454

could not format inet value: @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.55 11455

invalid address family in external "@1@" value

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.56 11456

invalid bits in external "@1@" value

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.57 11457

invalid length in external "@1@" value

An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.58 11458

invalid external "cidr" value

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.59 11459

invalid mask length: @1@

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.60 11460

could not format cidr value: @1@

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.61 11461

cannot AND inet values of different sizes

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

2.15.66 11466

dimension values cannot be null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.67 11467

"[" must introduce explicitly-specified array dimensions.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.68 11468

upper bound cannot be less than lower bound

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.69 11469

Array value must start with "{" or dimension information.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.70 11471
Specified array dimensions do not match array contents.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.71 11472
malformed array literal: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.72 11473
array size exceeds the maximum allowed (@1@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.73 11474
invalid array flags

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.74 11475
wrong element type
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.75 11476

improper binary format in array element @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.76 11477

slices of fixed-length arrays not implemented

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.77 11478

wrong number of array subscripts

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.78 11479

array subscript out of range

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.79 11480
cannot assign null value to an element of a fixed-length array
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.80 11481
updates on slices of fixed-length arrays not implemented
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.81 11482
source array too small
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.82 11483
null array element not allowed in this context
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.83 11484

cannot compare arrays of different element types

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.84 11485

could not identify a hash function for type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.85 11486

dimension array or low bound array cannot be null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.86 11487

wrong range of array subscripts

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.15.87 11489

value out of range: overflow

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.88 11490

value out of range: underflow

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.89 11491

invalid input syntax for type @1@: "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.90 11492

"@1@" is out of range for type real

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.91 11493
invalid input syntax for type @1@: "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.92 11494

"@1@" is out of range for type double precision

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.93 11495

cannot take square root of a negative number

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.94 11496

zero raised to a negative power is undefined

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.95 11497

a negative number raised to a non-integer power yields a complex result
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.15.96 11498**

cannot take logarithm of zero

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.15.97 11499**

cannot take logarithm of a negative number

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.16 Message Numbers Beginning with 11500**

**2.16.1 11500**

result is out of range

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.16.2 11501**

count must be greater than zero
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.3 11502

**operand, lower bound, and upper bound cannot be NaN**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.4 11503

**lower and upper bounds must be finite**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.5 11504

**lower bound cannot equal upper bound**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.6 11505

**requested length too large**

An error occurred during execution of the application or command.
2.16.7 11506

**requested character too large**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.8 11507

**requested character too large for encoding: @1@**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.9 11508

**null character not permitted**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.10 11509

**typmod array must be type cstring[]**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.11 11510
typmod array must be one-dimensional
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.12 11511
typmod array must not contain nulls
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.13 11512
suppress_redundant_updates_trigger: must be called as trigger
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.14 11513
suppress_redundant_updates_trigger: must be called on update
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.16.15 11514

**suppress_redundant_updates_trigger: must be called before update**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.16 11515

**suppress_redundant_updates_trigger: must be called for each row**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.17 11517

**value "@1@" is out of range for type @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.18 11518

**invalid oidvector data**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.19 11519
invalid line specification: must be two distinct points
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.20 11520
date/time value "@1@" is no longer supported
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.21 11521
date/time field value out of range: "@1@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.22 11522
interval field value out of range: "@1@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.23 11523
time zone displacement out of range: "@1@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.24 11524

unrecognized encoding: "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.25 11525

invalid hexadecimal digit: "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.26 11526

invalid hexadecimal data: odd number of digits

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.27 11527

unexpected "=" while decoding base64 sequence

An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.28 11528

invalid symbol "@1@" while decoding base64 sequence

[Description]
   An error occurred during execution of the application or command.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.29 11529

invalid base64 end sequence

[Description]
   An error occurred during execution of the application or command.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.30 11530

invalid input syntax for type @1@: "@2@"

[Description]
   An error occurred during execution of the application or command.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.31 11531

ts_stat query must return one tsvector column

[Description]
   An error occurred during execution of the application or command.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.32 11532
tsvector column "@1@" does not exist
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.33 11533
column "@1@" is not of tsvector type
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.34 11534
configuration column "@1@" does not exist
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.35 11535
column "@1@" is not of regconfig type
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.16.36 11536

configuration column "@1@" must not be null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.37 11537

text search configuration name "@1@" must be schema-qualified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.38 11538

column "@1@" is not of a character type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.39 11539

ts_rewrite query must return two tsquery columns

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.40 11540
encoding conversion from @1@ to ASCII not supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.41 11541

"@1@" is not a valid encoding name

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.42 11542

@1@ is not a valid encoding code

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.43 11543

insert or update on table "@1@" violates foreign key constraint "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.44 11544

function "@1@" was not called by trigger manager
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.45 11545

function "@1@" must be fired AFTER ROW

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.46 11546

function "@1@" must be fired for INSERT

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.47 11547

function "@1@" must be fired for UPDATE

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.48 11548

function "@1@" must be fired for INSERT or UPDATE

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.49 11549

function "@1@" must be fired for DELETE

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.50 11550

no pg_constraint entry for trigger "@1@" on table "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.51 11551

referential integrity query on "@1@" from constraint "@2@" on "@3@" gave unexpected result

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.16.52 11552

update or delete on table "@1@" violates foreign key constraint "@2@" on table "@3@"

[Description]
An error occurred during execution of the application or command.
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.16.53 11553

**invalid input value for enum @1@: "@2@"**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.16.54 11554

**invalid internal value for enum: @1@**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.16.55 11555

**could not determine actual enum type**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.16.56 11556

**enum @1@ contains no values**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.57 11557

invalid format specification for an interval value

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.58 11558

"EEEE" must be the last pattern used

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.59 11559

"9" must be ahead of "PR"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.60 11560

"0" must be ahead of "PR"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.16.61 11561

multiple decimal points

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.62 11562

cannot use "V" and decimal point together

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.63 11563

cannot use "S" twice

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.64 11564

cannot use "S" and "PL"/"MI"/"SG"/"PR" together

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.65 11565
cannot use "S" and "MI" together

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.66 11566

cannot use "S" and "PL" together

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.67 11567

cannot use "S" and "SG" together

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.68 11568

cannot use "PR" and "S"/"PL"/"MI"/"SG" together

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.69 11569

cannot use "EEEE" twice
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.70 11570

"EEEE" is incompatible with other formats

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.71 11571

"@1@" is not a view

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.72 11572

could not determine which collation to use for regular expression

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.73 11573

could not determine which collation to use for lower() function

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.74 11574

could not determine which collation to use for upper() function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.75 11575

invalid combination of date conventions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.76 11576

conflicting values for "@1@" field in formatting string

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.77 11577

source string too short for "@1@" formatting field

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.78 11578

**invalid argument for @1@: "@2@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.79 11579

**value for "@1@" in source string is out of range**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.80 11581

**invalid input string for "Y,YYY"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.81 11582

**hour "@1@" is invalid for the 12-hour clock**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.16.82 11584

cannot calculate day of year without year information

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.83 11585

"EEEE" not supported for input

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.84 11586

"RN" not supported for input

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.85 11587

could not open directory "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.86 11588
array of weight must be one-dimensional

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.87 11589

array of weight is too short

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.88 11590

array of weight must not contain nulls

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.89 11591

weight out of range

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.90 11592

regular expression failed: @1@
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.91 11593

invalid regexp option: "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.92 11594

invalid escape string

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.93 11595

regexp_match does not support the global option

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.94 11596

unsupported XML feature

An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.95 11597

invalid encoding name "@1@"

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.96 11598

invalid XML comment

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.97 11599

not an XML document

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17 Message Numbers Beginning with 11600

2.17.1 11600

invalid XML processing instruction

[Description]
  An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.2 11601

xmlvalidate is not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.3 11602

could not initialize XML library

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.17.4 11603

date out of range

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.5 11604

invalid query

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.6 11605

invalid array for XML namespace mapping

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.7 11606

empty XPath expression

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.8 11607

neither namespace name nor URI may be null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.9 11608

could not register XML namespace with name "@1@" and URI "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.17.10 11609

value "@1@" is out of range for type smallint

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.11 11610

value "@1@" is out of range for type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.12 11611

value "@1@" is out of range for 8-bit integer

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.13 11612

gtsvector_in not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.14 11613
**identifier too long**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.17.15 11615**

**no operand in tsquery: "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.17.16 11616**

**value is too big in tsquery: "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.17.17 11617**

**operand is too long in tsquery: "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.17.18 11618**

**word is too long in tsquery: "@1@"**
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.19 11619

text-search query doesn't contain lexemes: "@1@"

Terminated normally.

No action required.

2.17.20 11620

length for type @1@ must be at least 1

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.21 11621

length for type @1@ cannot exceed @2@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.22 11622

value too long for type character(@1@)

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.23 11623

value too long for type character varying(@1@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.24 11624

reference to parent directory ("..") not allowed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.25 11625

absolute path not allowed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.26 11626

path must be in or below the current directory

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.27 11627

could not open file "@1@" for writing: @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.17.28 11628

could not seek in file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.17.29 11629

must be superuser to read files

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.30 11630

requested length cannot be negative

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

</table>
invalid input syntax for type @1@: "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.36 11642

function "dist_lb" not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.37 11643

function "close_lb" not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.38 11644

cannot create bounding box for empty polygon

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.39 11645

invalid input syntax for type @1@: "@2@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.40 11646

Invalid number of points in external "polygon" value

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.41 11647

Function "poly_distance" not implemented

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.42 11648

Function "path_center" not implemented

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.43 11649

Open path cannot be converted to polygon

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.17.44 11650**

**invalid input syntax for type @1@: "@2@"**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.17.45 11652**

**invalid radius in external "circle" value**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.17.46 11653**

**cannot convert circle with radius zero to polygon**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.17.47 11654**

**must request at least 2 points**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.48 11655

cannot convert empty polygon to circle

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.49 11656

bit string length @1@ does not match type bit(@2@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.50 11657

"@1@" is not a valid binary digit

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.51 11658

"@1@" is not a valid hexadecimal digit

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.17.52 11659

**invalid length in external bit string**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.53 11660

**bit string too long for type bit varying(@1@)**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.54 11661

**negative substring length not allowed**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.55 11662

**cannot AND bit strings of different sizes**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.56 11663
cannot OR bit strings of different sizes

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.57 11664
cannot XOR bit strings of different sizes

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.58 11665
bit index @1@ out of valid range (0..@2@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.59 11666
new bit must be 0 or 1

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.60 11667
unrecognized key word: "@1@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.61 11668

missing name

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.62 11669

missing "=" sign

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.63 11670

invalid mode character: must be one of "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.64 11671

a name must follow the "/" sign

An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.17.65 11672

**defaulting grantor to user ID @1@**

[Description]

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

### 2.17.66 11673

**ACL array contains wrong data type**

[Description]

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.17.67 11674

**ACL arrays must be one-dimensional**

[Description]

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.17.68 11675

**ACL arrays must not contain null values**

[Description]

An error occurred during execution of the application or command.

Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.69 11676
extra garbage at the end of the ACL specification

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.70 11677
grant options cannot be granted back to your own grantor

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.71 11678
dependent privileges exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.72 11679
aclinsert is no longer supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.17.73 11680

clremove is no longer supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.74 11681

unrecognized privilege type: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.75 11682

must be member of role "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.76 11683

view "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.77 11684
INTERVAL(@1@) precision must not be negative

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.78 11685

INTERVAL(@1@) precision reduced to maximum allowed, @2@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.17.79 11686

timestamp out of range: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.80 11687

cannot subtract infinite dates

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.81 11688

date out of range for timestamp
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.82 11689

cannot convert reserved abstime value to date

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.83 11690

time out of range

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.84 11691

interval units "@1@" not recognized

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.85 11692

time zone displacement out of range

An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.86 11693

timestamp with time zone units "@1@" not recognized

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.87 11695

"@1@" is not a composite type

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.88 11696

invalid input syntax for type @1@: "@2@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.89 11697

invalid octet value in "macaddr" value: "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.90 11698

**could not determine which collation to use for initcap() function**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.91 11699

**could not convert string to UTF-16: error code @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18 Message Numbers Beginning with 11700

2.18.1 11700

**could not compare Unicode strings: @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.2 11701

**index @1@ out of valid range, 0..@2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.3 11702

**field position must be greater than zero**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.4 11703

**unrecognized format() type specifier "@1@"**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.5 11705

**format specifies argument 0, but arguments are numbered from 1**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.6 11706

**could not create locale "@1": @2**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.18.7 11707
collations with different collate and ctype values are not supported on this platform

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.8 11708
ICU is not supported in this build

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.9 11709
invalid multibyte character for locale

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.10 11710
could not determine which collation to use for ILIKE

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.11 11711
text-search query contains only stop words or doesn't contain lexemes, ignored

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.18.12 11714

invalid sign in external "numeric" value

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.13 11715

invalid digit in external "numeric" value

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.14 11716

NUMERIC precision @1@ must be between 1 and @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.15 11717

NUMERIC scale @1@ must be between 0 and precision @2@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.16 11718

invalid NUMERIC type modifier

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.17 11719

value overflows numeric format

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.18 11720

cannot convert NaN to integer

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.19 11721

cannot convert NaN to bigint

[Description]
An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.20 11722

cannot convert NaN to smallint

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.21 11723

numeric field overflow

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.22 11725

cannot accept a value of type @1@

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.23 11727

cannot accept a value of type @1@

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.24 11728

**cannot accept a value of type @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.25 11729

**cannot accept a value of type @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.26 11730

**cannot accept a value of type @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.27 11731

**cannot accept a value of type language_handler**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
**2.18.28 11732**

**cannot display a value of type @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.18.29 11733**

**cannot accept a value of type @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.18.30 11734**

**cannot display a value of type @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.18.31 11735**

**cannot accept a value of type @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.18.32 11736**
cannot display a value of type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.33 11737

cannot accept a value of type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.34 11738

cannot display a value of type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.35 11739

cannot accept a value of type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.36 11740

cannot display a value of type @1@
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.37 11741

cannot accept a value of type @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.38 11742

cannot display a value of type @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.39 11743

cannot accept a value of a shell type

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.40 11744

cannot display a value of type @1@

An error occurred during execution of the application or command.
2.18.41 11745

*cannot accept a value of type @1@*

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.42 11746

*"char" out of range*

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.43 11747

*LIKE pattern must not end with escape character*

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.44 11748

*case insensitive matching not supported on type bytea*

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.45 11749

regular-expression matching not supported on type bytea
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.46 11750

function @1@ is not an aggregate
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.47 11751

rule "@1@" has unsupported event type @2@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.48 11752

replication connection authorized: user=@1@
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.18.49 11753

connection authorized: user=@1@ database=@2@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.18.50 11754

database "@1@" has disappeared from pg_database

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.51 11755

database "@1@" is not currently accepting connections

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.52 11756

permission denied for database "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.53 11757
too many connections for role "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.54 11758
database locale is incompatible with operating system

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.55 11759
no roles are defined in this database system

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.18.56 11760
new replication connections are not allowed during database shutdown

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.57 11761
must be superuser to connect during database shutdown
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.58 11762

must be superuser to connect in binary upgrade mode

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.59 11763

remaining connection slots are reserved for non-replication superuser connections

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.60 11765

template database "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.61 11766

database @1@ does not exist

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.62 11767

could not stat directory "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.18.63 11768

could not change directory to "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.18.64 11769

cannot set parameter "@1@" within security-restricted operation

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.65 11770

role "@1@" is not permitted to log in

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.66 11771

too many connections for database "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.67 11772

permission denied to set session authorization

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.68 11773

invalid role OID: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.69 11774

could not create lock file "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.
2.18.70 11775

could not open stop-word file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.18.71 11776

could not open lock file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.18.72 11777

lock file "@1@" already exists

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.18.73 11778

pre-existing shared memory block (key @1@, ID @2@) is still in use

[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.
2.18.74 11779

could not remove old lock file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.18.75 11780

could not read lock file "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.18.76 11781

could not read from file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.18.77 11782

"@1@" is not a valid data directory

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.78 11784
loaded library "@1@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.18.79 11785

unexpected encoding ID @1@ for WIN character sets

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.18.80 11786

unexpected encoding ID @1@ for ISO 8859 character sets

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.18.81 11787

conversion between @1@ and @2@ is not supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.82 11788

default conversion function for encoding "@1@" to "@2@" does not exist
The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.18.83 11789
invalid source encoding name "@1@"
An error occurred during execution of the application or command.
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.84 11790
invalid destination encoding name "@1@"
An error occurred during execution of the application or command.
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.85 11791
invalid byte value for encoding "@1@": 0x@2@
An error occurred during execution of the application or command.
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.86 11792
encoding name too long
An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.87 11793

**invalid byte sequence for encoding "@1@": @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.88 11795

**invalid encoding number: @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.89 11796

**unrecognized configuration parameter "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.90 11797

**parameter "@1@" cannot be changed**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
2.18.91 11798

**parameter "@1@" cannot be changed without restarting the server**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.92 11799

**parameter "@1@" cannot be changed now**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19 Message Numbers Beginning with 11800

2.19.1 11800

**parameter "@1@" cannot be set after connection start**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.2 11801

**permission denied to set role "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.3 11802
cannot set parameter "@1@" within security-definer function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.4 11803
invalid value for parameter "@1@": "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.5 11804
@1@ is outside the valid range for parameter "@2@" (@3@ .. @4@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.6 11805
@1@ requires a numeric value

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.19.7 11806

@1@ is outside the valid range for parameter "@2@" (@3@ .. @4@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.8 11807

must be superuser or a member of pg_read_all_settings to examine "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.9 11808

SET @1@ takes only one argument

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.10 11809

SET requires parameter name

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.11 11810
attempt to redefine parameter "@1@"

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.19.12 11811
could not parse setting for parameter "@1@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.13 11812
invalid value for parameter "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.14 11813
invalid value for parameter "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.15 11814
parameter "@1@" removed from configuration file, reset to default
The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

**2.19.16 11815**

**parameter "@1@" changed to "@2@"**

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

**2.19.17 11816**

**could not open configuration file "@1@": maximum nesting depth exceeded**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.18 11817**

**syntax error in file "@1@" line @2@, near end of line**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.19 11818**

**syntax error in file "@1@" line @2@, near token "@3@"**

An error occurred during execution of the application or command.
2.19.20 11819

user mapping not found for "@1@"

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.21 11820

foreign-data wrapper "@1@" has no handler

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.22 11821

invalid option "@1@"

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.23 11822

foreign-data wrapper "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.24 11823

index "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.25 11824

could not create shared memory segment: @1@

[Description]
There was insufficient free space in the database server's shared memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.19.26 11825

could not stat data directory "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.19.27 11826

could not create semaphore: error code @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.
[Action]
Contact Fujitsu technical support.

2.19.28 11827
could not lock semaphore: error code @1@
[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

2.19.29 11828
could not unlock semaphore: error code @1@
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.19.30 11829
could not try-lock semaphore: error code @1@
[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

2.19.31 11830
could not create semaphores: @1@
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.
Contact Fujitsu technical support.

2.19.32 11832

**pre-existing shared memory block is still in use**

**Description**
An error occurred during I/O processing in the database server.

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

2.19.33 11833

**oldest xmin is far in the past**

**Description**
The application or command terminated normally, but a warning was output.

**System Processing**
Processing will continue.

**Action**
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.34 11834

**some databases have not been vacuumed in over 2 billion transactions**

**Description**
The application or command terminated normally, but a warning was output.

**System Processing**
Processing will continue.

**Action**
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.35 11835

**skipping analyze of "@1@" --- lock not available**

**Description**
The application or command terminated normally, but a warning was output.

**System Processing**
Processing will continue.

**Action**
Check the message text and confirm that the issue does not affect the expected outcome.
2.19.36 11836
skipping "@1@" --- only superuser can analyze it

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.37 11837
skipping "@1@" --- only superuser or database owner can analyze it

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.38 11838
skipping "@1@" --- only table or database owner can analyze it

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.39 11839
skipping "@1@" --- cannot analyze non-tables or special system tables

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.40 11840
operator class "@1@" does not exist for access method ".@2@", skipping

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.41 11841

operator family "@1@" does not exist for access method ".@2@", skipping

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.42 11842

operator family "@1@" for access method ".@2@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.43 11843

access method "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.44 11844

must be superuser to create an operator class
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.45 11845

invalid operator number @1@, must be between 1 and @2@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.46 11846

invalid procedure number @1@, must be between 1 and @2@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.47 11847

storage type specified more than once

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.48 11848

storage type cannot be different from data type for access method “@1@”

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.49 11849

operator class "@1@" for access method "@2@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.50 11850

could not make operator class "@1@" be default for type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.51 11851

must be superuser to create an operator family

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.52 11852

must be superuser to alter an operator family

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.53 11853

**operator argument types must be specified in ALTER OPERATOR FAMILY**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.54 11854

**STORAGE cannot be specified in ALTER OPERATOR FAMILY**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.55 11855

**one or two argument types must be specified**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.56 11856

**index operators must be binary**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.19.57 11857

access method "@1@" does not support ordering operators

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.58 11858

index search operators must return boolean

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.59 11859

btree comparison procedures must have two arguments

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.60 11860

btree comparison procedures must return integer

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.61 11861
hash procedures must have one argument
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.62 11862

hash procedures must return integer
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.63 11863

associated data types must be specified for index support procedure
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.64 11864

procedure number @1@ for (@2@,@3@) appears more than once
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.65 11865

operator number @1@ for (@2@,@3@) appears more than once
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.66 11866**

*operator @1@(@2@,@3@) already exists in operator family "@4@"*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.67 11867**

*function @1@(@2@,@3@) already exists in operator family "@4@"*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.68 11868**

*operator @1@(@2@,@3@) does not exist in operator family "@4@"*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.69 11869**

*function @1@(@2@,@3@) does not exist in operator family "@4@"*

[Description]
An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.70 11870

operator class "@1@" for access method "@2@" already exists in schema "@3@"

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.71 11871

operator family "@1@" for access method "@2@" already exists in schema "@3@"

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.72 11872

no security label providers have been loaded

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.73 11873

must specify provider when multiple security label providers have been loaded

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.74 11874

security label provider "@1@" is not loaded

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.75 11875

"@1@" is not a table, view, materialized view, composite type, or foreign table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.76 11876

aggregate attribute "@1@" not recognized

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.77 11877

parameter "lc_collate" must be specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.19.78 11878

**database "@1@" does not exist, skipping**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.79 11879

**collation "@1@" for encoding "@2@" already exists in schema "@3@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.80 11880

**function @1@ already exists in schema "@2@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.81 11881

**unrecognized value for EXPLAIN option "@1@": "@2@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.82 11882
unrecognized EXPLAIN option "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.83 11883

EXPLAIN option BUFFERS requires ANALYZE

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.84 11884

type "@1@" already exists in schema "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.85 11885

collation attribute "@1@" not recognized

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.86 11886

aggregate stype must be specified
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.87 11887
aggregate sfunc must be specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.88 11888
aggregate input type must be specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.89 11889
basetype is redundant with aggregate input type specification

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.90 11890
aggregate transition data type cannot be @1@

[Description]
An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.91 11891

function @1@(@2@) does not exist, skipping

The application or command terminated normally, but a warning was output.

Check the message text and confirm that the issue does not affect the expected outcome.

2.19.92 11892

collation "@1@" already exists in schema "@2@"

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.93 11894

vacuuming "@1@.@2@"

Terminated normally.

No action required.

2.19.94 11895

relation "@1@" page @2@ is uninitialized --- fixing

The application or command terminated normally, but a warning was output.

Processing will continue.
[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.95 11896

"@1@": removed @2@ row versions in @3@ pages

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.19.96 11897

"@1@": found @2@ removable, @3@ nonremovable row versions in @4@ pages

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.97 11898

"@1@": removed @2@ row versions in @3@ pages

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.19.98 11899

scanned index "@1@" to remove @2@ row versions

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.20 Message Numbers Beginning with 11900

2.20.1 11900

index "@1@" now contains @2@ row versions in @3@ pages

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.20.2 11901

"@1@": truncated @2@ to @3@ pages

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.20.3 11902

option "@1@" not found

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.4 11903

option "@1@" provided more than once

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.20.5 11904

permission denied to change owner of foreign-data wrapper "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.6 11905

function @1@ must return type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.7 11906

permission denied to create foreign-data wrapper "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.8 11907

foreign-data wrapper "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.9 11908
permission denied to alter foreign-data wrapper "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.10 11909

changing the foreign-data wrapper handler can change behavior of existing foreign tables

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.20.11 11910

changing the foreign-data wrapper validator can cause the options for dependent objects to become invalid

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.20.12 11912

foreign-data wrapper "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.20.13 11913

server "@1@" already exists
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.20.14 11914**

**type "@1@" does not exist, skipping**

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

**2.20.15 11916**

**user mapping for "@1@" does not exist for the server**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.20.16 11917**

**server "@1@" does not exist, skipping**

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

**2.20.17 11918**

**user mapping for "@1@" does not exist for the server, skipping**

The application or command terminated normally, but a warning was output.
foreign table "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

collation "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

---

tablespace "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

conversion "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[Action]
Processing will continue.
[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.20.22 11923

constraint "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.23 11924

schema "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.20.24 11925

extension "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.20.25 11926

operator @1@ does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.20.26 11927

@1@ is not a domain

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.27 11929

table "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.20.28 11931

only shared relations can be placed in pg_global tablespace

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.29 11933

truncate cascades to table "@1@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.20.30 11934
cannot vacuum temporary tables of other sessions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.31 11935
cannot inherit from temporary relation "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.32 11936
relation "@1@" would be inherited from more than once

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.33 11937
merging multiple inherited definitions of column "@1@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.20.34 11938
inherited column "@1@" has a type conflict
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.20.35 11939**

*inherited column "@1@" has a collation conflict*

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.20.36 11940**

*inherited column "@1@" has a storage parameter conflict*

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.20.37 11941**

*merging column "@1@" with inherited definition*

[Description]

Terminated normally.

[System Processing]

Continues processing.

[Action]

No action required.

---

**2.20.38 11942**

*column "@1@" has a type conflict*

[Description]

An error occurred during execution of the application or command.
### 2.20.39 11943

**column "@1@" has a collation conflict**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.20.40 11944

**column "@1@" has a storage parameter conflict**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.20.41 11945

**column "@1@" inherits conflicting default values**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.20.42 11946

**check constraint name "@1@" appears multiple times but with different expressions**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.43 11947

cannot rename column of typed table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.44 11948

"@1@" is not a table, view, materialized view, composite type, index, or foreign table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.45 11949

inherited column "@1@" must be renamed in child tables too

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.46 11950

cannot rename system column "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.20.47 11951

cannot rename inherited column 
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.48 11952

column "@1@" of relation "@2@" already exists
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.49 11953

cannot @1@ "@2@" because it is being used by active queries in this session
[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

2.20.50 11954

cannot @1@ "@2@" because it has pending trigger events
[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.
2.20.51 11955

**type @1@ is not a composite type**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.52 11956

**cannot rewrite system relation "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.53 11957

**cannot truncate temporary tables of other sessions**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.54 11958

**rewriting table "@1@"**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.20.55 11959
verifying table "@1@"
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.20.56 11960

column "@1@" contains null values
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.57 11961

check constraint "@1@" is violated by some row
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.58 11962

"@1@" is not a table, materialized view, or index
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.59 11963

"@1@" is not a table or view
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.60 11964

"@1@" is not a table or foreign table

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.61 11965

"@1@" is not a table, composite type, or foreign table

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.62 11966

"@1@" is of the wrong type

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.63 11967

cannot alter type "@1@" because it is the type of a typed table

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.64 11968

type @1@ is not a domain

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.65 11969

cannot add column to typed table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.66 11970

child table "@1@" has different type for column "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.67 11971

child table "@1@" has different collation for column "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.68 11972

child table "@1@" has a conflicting "@2@" column

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.69 11973

merging definition of column "@1@" for child "@2@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.20.70 11974

column must be added to child tables too

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.71 11975

cannot alter system column "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.20.72 11976

**column "@1@" is in a primary key**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.73 11977

**statistics target @1@ is too low**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.74 11978

**lowering statistics target to @1@**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.20.75 11979

**invalid storage type "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.76 11980
**column data type @1@ can only have storage PLAIN**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.20.77 11981**

cannot drop column from typed table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.20.78 11982**

column "@1@" of relation "@2@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

---

**2.20.79 11983**
cannot drop system column "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.20.80 11984**
cannot drop inherited column "@1@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.20.81 11985**

*ALTER TABLE / ADD CONSTRAINT USING INDEX will rename index "@1@" to "@2@"*

An error occurred during execution of the application or command.

Processing will be aborted.

No action required.

**2.20.82 11986**

*constraint must be added to child tables too*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.20.83 11987**

*inherited relation "@1@" is not a table or foreign table*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.20.84 11988**

*constraints on permanent tables may reference only permanent tables*

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.85 11989

**constraints on unlogged tables may reference only permanent or unlogged tables**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.86 11990

**constraints on temporary tables may reference only temporary tables**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.87 11991

**number of referencing and referenced columns for foreign key disagree**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.88 11992

**foreign key constraint "@1@" cannot be implemented**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.89 11993

constraint "@1@" of relation "@2@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.90 11994

column "@1@" referenced in foreign key constraint does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.91 11995

cannot have more than @1@ keys in a foreign key

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.92 11996

cannot use a deferrable primary key for referenced table "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.20.93 11997

there is no primary key for referenced table "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.94 11998

cannot use a deferrable unique constraint for referenced table "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.95 11999

there is no unique constraint matching given keys for referenced table "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21 Message Numbers Beginning with 12000

2.21.1 12000

validating foreign key constraint "@1@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
**2.21.2 12001**

cannot drop inherited constraint "@1@" of relation "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.3 12002**

constraint "@1@" of domain "@2@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.4 12003**

constraint "@1@" of relation "@2@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

**2.21.5 12004**

cannot alter column type of typed table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.6 12005**
cannot alter inherited column "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.7 12007

cannot use subquery in index expression

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.8 12010

column "@1@" cannot be cast automatically to type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.9 12011

type of inherited column "@1@" must be changed in child tables too

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.10 12012

cannot alter type of column "@1@" twice
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.11 12013**

default for column "@1@" cannot be cast automatically to type @2@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.12 12014**
cannot alter type of a column used by a view or rule

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.13 12015**
cannot alter type of a column used in a trigger definition

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.14 12016**
cannot change owner of index "@1@"

The application or command terminated normally, but a warning was output.
cannot change owner of sequence "@1@"

2.21.15 12017

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

"@1@" is not a table, materialized view, index, or foreign table

2.21.16 12018

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

index "@1@" for table "@2@" does not exist

2.21.17 12019

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

cannot have multiple SET TABLESPACE subcommands

2.21.18 12020

An error occurred during execution of the application or command.

Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.19 12021

"@1@" is not a table, view, materialized view, index, or TOAST table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.20 12022

cannot move system relation "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.21 12023

cannot rewrite temporary tables of other sessions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.22 12024

cannot change inheritance of typed table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.21.23 12025

circular inheritance not allowed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.24 12026

table "@1@" without OIDs cannot inherit from table "@2@" with OIDs

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.25 12027

column "@1@" in child table must be marked NOT NULL

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.26 12028

child table is missing column "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.27 12029
child table "@1@" has different definition for check constraint "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.28 12030

child table is missing constraint "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.29 12031

relation "@1@" is not a parent of relation "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.30 12032

typed tables cannot inherit

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.31 12033

table is missing column "@1@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.32 12034

**table has column "@1@" where type requires "@2@"**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.33 12035

**table "@1@" has different type for column "@2@"**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.34 12036

**table has extra column "@1@"**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.35 12037

"@1@" is not a typed table

An error occurred during execution of the application or command.
2.21.36 12038

**cannot move an owned sequence into another schema**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.37 12039

**conversion "@1@" already exists in schema "@2@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.38 12040

**unlogged sequences are not supported**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.39 12041

**nextval: reached maximum value of sequence "@1@" (@2@)**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
2.21.40 12042

nextval: reached minimum value of sequence "@1@" (@2@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.41 12043

currval of sequence "@1@" is not yet defined in this session

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.42 12044

lastval is not yet defined in this session

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.43 12045

setval: value @1@ is out of bounds for sequence "@2@" (@3@..@4@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.21.44 12046

**INCREMENT must not be zero**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.45 12047

**MINVALUE (@1@) must be less than MAXVALUE (@2@)**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.46 12048

**START value (@1@) cannot be less than MINVALUE (@2@)**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.47 12049

**START value (@1@) cannot be greater than MAXVALUE (@2@)**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.48 12050
**RESTART value (@1@) cannot be less than MINVALUE (@2@)**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.49 12051

**RESTART value (@1@) cannot be greater than MAXVALUE (@2@)**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.50 12052

**CACHE (@1@) must be greater than zero**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.51 12053

**invalid OWNED BY option**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.52 12054

**sequence must have same owner as table it is linked to**
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.53 12055**

*sequence must be in same schema as table it is linked to*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.54 12056**

*invalid cursor name: must not be empty*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.55 12057**

*utility statements cannot be prepared*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.56 12058**

*prepared statement is not a SELECT*

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.57 12059

**wrong number of parameters for prepared statement "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.58 12060

**cannot use subquery in EXECUTE parameter**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.59 12061

**aggregate functions are not allowed in EXECUTE parameters**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.60 12062

**window functions are not allowed in EXECUTE parameters**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.61 12063

parameter $@1@ of type @2@ cannot be coerced to the expected type @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.62 12064

prepared statement "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.63 12065

unnamed prepared statement does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.64 12066

skipping vacuum of "@1@" --- lock not available

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.21.65 12067

skipping "@1@" --- only superuser can vacuum it

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.21.66 12068

skipping "@1@" --- only superuser or database owner can vacuum it

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.21.67 12069

skipping "@1@" --- only table or database owner can vacuum it

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.21.68 12070

skipping "@1@" --- cannot vacuum non-tables or special system tables

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.21.69 12071
analyzing "@1@.@2@" inheritance tree

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.21.70 12072

analyzing "@1@.@2@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.21.71 12073

automatic analyze of table "@1@.@2@.@3@" system usage: @4@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.21.72 12074

"@1@": scanned @2@ of @3@ pages, containing @4@ live rows and @5@ dead rows; @6@ rows in sample, @7@ estimated total rows

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.21.73 12075

cannot move temporary tables of other sessions
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.74 12076**

there is no previously clustered index for table "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.75 12077**
cannot cluster a shared catalog

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.76 12078**
cannot access temporary tables of other sessions

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.77 12079**
"@1@" is not an index for table "@2@"

An error occurred during execution of the application or command.
2.21.78 12080

cannot cluster on index "@1@" because access method does not support clustering

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.79 12081

cannot cluster on partial index "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.80 12082

cannot cluster on invalid index "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.81 12083

clustering "@1@.@2@" using index scan on "@3@"

[Description]
Terminated normally.

[System Processing]
Continues processing.
[Action]
No action required.

2.21.82 12084

clustering "@1@.@2@" using sequential scan and sort

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.21.83 12086

invalid statement name: must not be empty

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.84 12088

SQL function cannot return shell type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.85 12089

type "@1@" is only a shell

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.21.86 12090

**type "@1@" is not yet defined**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.87 12091

**SQL function cannot accept shell type @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.88 12092

**type @1@ is only a shell**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.21.89 12093

**token type "@1@" does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.90 12094
functions cannot accept set arguments

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.91 12095

VARIADIC parameter must be the last input parameter

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.92 12096

VARIADIC parameter must be an array

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.93 12097

argument name "@1@" used more than once

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.94 12098

only input parameters can have default values
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.95 12099
cannot use table references in parameter default value

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22 Message Numbers Beginning with 12100

2.22.1 12103
input parameters after one with a default value must also have defaults

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.2 12104
no function body specified

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.3 12105
no language specified
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.4 12106**

*COST must be positive*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.5 12107**

*ROWS must be positive*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.6 12108**

*unrecognized function attribute "@1@" ignored*

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

**2.22.7 12109**

*only one AS item needed for language "@1@"*

An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.8 12110

role "@1@" does not exist

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.9 12111

function result type must be @1@ because of OUT parameters

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.10 12112

function result type must be specified

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.11 12113

ROWS is not applicable when function does not return a set

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.12 12114

aggregate @1@(@2@) does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.22.13 12116

source data type @1@ is a pseudo-type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.14 12117

target data type @1@ is a pseudo-type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.15 12118

cast function must take one to three arguments

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.22.16 12119

**argument of cast function must match or be binary-coercible from source data type**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.17 12120

**second argument of cast function must be type @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.18 12122

**return data type of cast function must match or be binary-coercible to target data type**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.19 12123

**cast function must not be volatile**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.20 12124
**cast function must not be an aggregate function**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.21 12125**

**cast function must not be a window function**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.22 12126**

**cast function must not return a set**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.23 12127**

**must be superuser to create a cast WITHOUT FUNCTION**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.24 12128**

**source and target data types are not physically compatible**
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.25 12129

**composite data types are not binary-compatible**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.26 12130

**enum data types are not binary-compatible**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.27 12131

**array data types are not binary-compatible**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.28 12132

**domain data types must not be marked binary-compatible**

An error occurred during execution of the application or command.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.33 12138

no inline code specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.34 12139

language "@1@" does not support inline code execution

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.35 12140

channel name cannot be empty

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.36 12141

channel name too long

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.22.37 12142
payload string too long

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.38 12143
cannot PREPARE a transaction that has executed LISTEN, UNLISTEN, or NOTIFY

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.39 12144
too many notifications in the NOTIFY queue

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.40 12145
NOTIFY queue is @1@@2@ full

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.22.41 12147
must be superuser to create text search parsers

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.42 12148

text search parser parameter "@1@" not recognized

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.43 12149

text search parser start method is required

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.44 12150

text search parser gettoken method is required

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.45 12151

text search parser end method is required
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.46 12152

text search parser lextypes method is required

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.47 12153

must be superuser to rename @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.48 12154

text search parser "@1@" does not exist, skipping

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.22.49 12156

text search parser "@1@" already exists in schema "@2@"

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.50 12157

**text search template "@1@" does not accept options**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.51 12158

**text search template is required**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.52 12159

**text search dictionary "@1@" already exists in schema "@2@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.53 12160

**text search dictionary "@1@" does not exist, skipping**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.
[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.22.54 12161

must be superuser to create text search templates

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.55 12162

text search template parameter "@1@" not recognized

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.56 12163

text search template lexize method is required

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.57 12165

text search template "@1@" already exists in schema "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.22.58 12167

text search template "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.22.59 12168

text search configuration parameter "@1@" not recognized

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.60 12169

cannot specify both PARSER and COPY options

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.61 12170

text search parser is required

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.62 12171
text search configuration "@1@" already exists in schema "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.63 12172
text search configuration "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.22.64 12174
mapping for token type "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.65 12175
mapping for token type "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.22.66 12176
invalid parameter list format: "@1@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.67 12177

group "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.68 12178

invalid extension name: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.69 12179

invalid extension version name: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.70 12180

could not open extension control file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.
[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.22.71 12181

**parameter "@1@" cannot be set in a secondary extension control file**

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.72 12183

**parameter "@1@" must be a list of extension names**

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.73 12184

**unrecognized parameter "@1@" in file "@2@"**

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.74 12185

**parameter "schema" cannot be specified when "relocatable" is true**

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.75 12186**

**transaction control statements are not allowed within an extension script**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.76 12187**

**permission denied to create extension "]@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.77 12188**

**permission denied to update extension "]@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.78 12189**

**extension "]@1@" has no update path from version "]@2@" to version "]@3@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.22.79 12190

relation "@1@" already exists, skipping

[Description]

The application or command terminated normally, but a warning was output.

[System Processing]

Processing will continue.

[Action]

Check the message text and confirm that the issue does not affect the expected outcome.

2.22.80 12191

extension "@1@" already exists

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.81 12192

nested CREATE EXTENSION is not supported

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.82 12193

version to install must be specified

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.83 12194
FROM version must be different from installation target version "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.84 12195

extension "@1@" must be installed in schema "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.85 12196

required extension "@1@" is not installed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.86 12197

language "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.22.87 12198

OID @1@ does not refer to a table
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.88 12199**

*table "@1@" is not a member of the extension being created*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.23 Message Numbers Beginning with 12200**

**2.23.1 12200**

*extension "@1@" does not support SET SCHEMA*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.23.2 12201**

*nested ALTER EXTENSION is not supported*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.23.3 12202**

*version "@1@" of extension "@2@" is already installed*
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.23.4 12203

@1@ is already a member of extension "@2@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.5 12204

@1@ is not a member of extension "@2@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.6 12205

using pg_pltemplate information instead of CREATE LANGUAGE parameters
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.23.7 12206

must be superuser to create procedural language "@1@"
[Description]
An error occurred during execution of the application or command.
[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.8 12208

Unsupported language "@1@"

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.9 12209

Must be superuser to create custom procedural language

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.10 12210

Changing return type of function @1@ from @2@ to @3@

[Description]
    The application or command terminated normally, but a warning was output.

[System Processing]
    Processing will continue.

[Action]
    Check the message text and confirm that the issue does not affect the expected outcome.

2.23.11 12211

Language "@1@" already exists

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.12 12212

relation "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.23.13 12213

unacceptable schema name "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.14 12214

sequence "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.23.15 12215

source encoding "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.23.16 12216

**destination encoding "@1@" does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.17 12217

**encoding conversion function @1@ must return type @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.18 12218

**view "@1@" does not exist, skipping**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.23.19 12219

**relation "@1@" already exists in schema "@2@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.20 12220
could not remove directory "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.23.21 12221

"@1@" exists but is not a directory

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.22 12222

permission denied to create tablespace "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.23 12223

tablespace location cannot contain single quotes

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.24 12224

tablespace location must be an absolute path
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.25 12225

**tablespace location "@1@" is too long**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.26 12226

**unacceptable tablespace name "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.27 12227

**tablespace "@1@" already exists**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.28 12228

**tablespaces are not supported on this platform**

[Description]
The application or command terminated normally, but a warning was output.
[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.23.29 12229

window "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.30 12230

index "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.23.31 12231

tablespace "@1@" is not empty

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.32 12232

aggregate @1@ does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.33 12233
could not set permissions on directory "@1@": @2@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.23.34 12234
some useless files may be left behind in old database directory "@1@"
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.23.35 12235
directory "@1@" already in use as a tablespace
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.36 12236
could not create symbolic link "@1@": @2@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.23.37 12237

could not read symbolic link "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.23.38 12238

could not read directory "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.23.39 12239

"@1@" is a foreign table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.40 12240

"@1@" is a view

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.41 12241
TRUNCATE FOR EACH ROW triggers are not supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.42 12242

INSTEAD OF triggers must be FOR EACH ROW

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.43 12243

INSTEAD OF triggers cannot have WHEN conditions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.44 12244

INSTEAD OF triggers cannot have column lists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.45 12245

cannot use subquery in trigger WHEN condition
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.46 12246

aggregate functions are not allowed in trigger WHEN conditions

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.47 12247

window functions are not allowed in trigger WHEN conditions

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.48 12248

statement trigger's WHEN condition cannot reference column values

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.49 12249

INSERT trigger's WHEN condition cannot reference OLD values

An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.23.50 12250**

**DELETE trigger’s WHEN condition cannot reference NEW values**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.23.51 12251**

**BEFORE trigger’s WHEN condition cannot reference NEW system columns**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.23.52 12252**

**changing return type of function @1@ from @2@ to @3@**

**Description**
The application or command terminated normally, but a warning was output.

**System Processing**
Processing will continue.

**Action**
Check the message text and confirm that the issue does not affect the expected outcome.

**2.23.53 12254**

**trigger "@1@" for relation "@2@" already exists**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.54 12255

ignoring incomplete trigger group for constraint "@1@" @2@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.23.55 12256

converting trigger group into constraint "@1@" @2@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.23.56 12257

trigger "@1@" for relation "@2@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.23.57 12258

trigger "@1@" for table "@2@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.23.58 12259

**permission denied: "@1@" is a system trigger**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.59 12260

**trigger function @1@ returned null value**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.60 12261

**BEFORE STATEMENT trigger cannot return a value**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.61 12262

**constraint "@1@" is not deferrable**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
SYSID can no longer be specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.63 12265

invalid connection limit: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.64 12266

must be superuser to create superusers

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.65 12267

must be superuser to create replication users

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.66 12268

permission denied to create database
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.67 12269

role name "@1@" is reserved

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.68 12270

role "@1@" already exists

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.69 12271

must be superuser to alter superusers

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.70 12272

must be superuser to alter replication users

An error occurred during execution of the application or command.
[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.71 12273

permission denied
[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.72 12274

permission denied to create role
[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.73 12275

tablespace "@1@" does not exist, skipping
[Description]
    The application or command terminated normally, but a warning was output.

[System Processing]
    Processing will continue.

[Action]
    Check the message text and confirm that the issue does not affect the expected outcome.

2.23.74 12276

current user cannot be dropped
[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.75 12277

**session user cannot be dropped**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.76 12278

**must be superuser to drop superusers**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.77 12279

**role "@1@" cannot be dropped because some objects depend on it**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.78 12280

**session user cannot be renamed**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.23.79 12281

**current user cannot be renamed**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.80 12282

**must be superuser to rename superusers**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.81 12283

**permission denied to rename database**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.82 12284

**MD5 password cleared because of role rename**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.23.83 12285
column names cannot be included in GRANT/REVOKE ROLE

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.84 12286

permission denied to drop role

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.85 12287

permission denied to drop objects

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.86 12288

must have admin option on role "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.87 12289

must be superuser to set grantor
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.88 12290

role "@1@" is a member of role "@2@"

Terminated normally.

No action required.

2.23.89 12291

role "@1@" is already a member of role "@2@"

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.23.90 12292

COPY BINARY is not supported to stdout or from stdin

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.92 12294

could not write to COPY file: @1@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.23.93 12295

connection lost during COPY to stdout

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.23.94 12296

could not read from COPY file: @1@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.23.95 12297

COPY from stdin failed: @1@
[Description]
Processing was canceled.

[System Processing]
Processing will be aborted.

[Action]
Check the message text.

2.23.96 12298

unexpected message type 0x@1@ during COPY from stdin
[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.23.97 12299

must be superuser to COPY to or from a file
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24 Message Numbers Beginning with 12300

2.24.1 12300

COPY format "@1@" not recognized
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.2 12301

argument to option "@1@" must be a list of column names

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.3 12302

argument to option "@1@" must be a valid encoding name

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.4 12303

option "@1@" not recognized

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.24.5 12304

cannot specify DELIMITER in BINARY mode

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.6 12305

cannot specify NULL in BINARY mode

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.7 12306

COPY delimiter must be a single one-byte character

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.8 12307

COPY delimiter cannot be newline or carriage return

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.9 12308

COPY null representation cannot use newline or carriage return

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.10 12309

COPY delimiter cannot be "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.11 12310

COPY HEADER available only in CSV mode

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.12 12311

COPY quote available only in CSV mode

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.13 12312

COPY quote must be a single one-byte character

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.24.14 12313

COPY delimiter and quote must be different

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.15 12314

COPY escape available only in CSV mode

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.16 12315

COPY escape must be a single one-byte character

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.17 12316

COPY force quote available only in CSV mode

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.18 12317
## COPY force quote only available using COPY TO

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.24.19 12318

### COPY force not null available only in CSV mode

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.24.20 12319

### COPY force not null only available using COPY FROM

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.24.21 12320

### COPY delimiter must not appear in the NULL specification

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.24.22 12321

### CSV quote character must not appear in the NULL specification
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.23 12322

**table "@1@" does not have OIDs**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.24 12323

**COPY (query) WITH OIDS is not supported**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.25 12324

**COPY (SELECT INTO) is not supported**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.26 12325

**FORCE_QUOTE column "@1@" not referenced by COPY**

An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.27 12326

**FORCE NOT NULL column "@1@" not referenced by COPY**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.28 12327

**cannot copy from sequence "@1@"**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.29 12328

**cannot copy from foreign table "@1@"**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.30 12329

**cannot copy to sequence "@1@"**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.31 12330
cannot copy from non-table relation "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.32 12331
relative path not allowed for COPY to file

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.33 12332
could not open file "@1@" for reading: @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.24.34 12333
"@1@" is a directory

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.24.35 12334

cannot copy to view "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.36 12335

cannot copy to foreign table "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.37 12337

cannot copy to non-table relation "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.38 12338

COPY file signature not recognized

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.39 12339
Invalid COPY file header (missing flags)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.40 12340

Unrecognized critical flags in COPY file header

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.41 12341

Invalid COPY file header (missing length)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.42 12342

Invalid COPY file header (wrong length)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.43 12343

Extra data after last expected column
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.24.44 12344

**missing data for OID column**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.24.45 12345

**null OID in COPY data**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.24.46 12346

**invalid OID in COPY data**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.24.47 12347

**missing data for column "@1@"**

An error occurred during execution of the application or command.
2.24.48 12348

received copy data after EOF marker

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.49 12349

row field count is @1@, expected @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.50 12350

 literal carriage return found in data

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.51 12351

unquoted carriage return found in data

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.52 12352

literal newline found in data

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.53 12353

unquoted newline found in data

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.54 12354

dead-of-copy marker does not match previous newline style

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.55 12355

dead-of-copy marker corrupt

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.24.56 12356

unterminated CSV quoted field

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.57 12357

unexpected EOF in COPY data

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.58 12358

invalid field size

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.59 12359

incorrect binary data format

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.60 12360
must specify at least one column

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.61 12361

cannot use more than @1@ columns in an index

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.62 12362

cannot create index on foreign table "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.63 12363

cannot create indexes on temporary tables of other sessions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.64 12364

substituting access method "gist" for obsolete method "rtree"
2.24.65 12365

**access method "@1@" does not support unique indexes**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.66 12366

**access method "@1@" does not support multicolumn indexes**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.67 12367

**access method "@1@" does not support exclusion constraints**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.68 12368

@1@ @2@ will create implicit index "@3@" for table "@4@"

[Description]
Terminated normally.
cannot use subquery in index predicate
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

aggregate functions are not allowed in index predicates
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

functions in index predicate must be marked IMMUTABLE
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

cannot use subquery in transform expression
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.73 12374

functions in index expression must be marked IMMUTABLE

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.74 12375

could not determine which collation to use for string comparison

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.75 12376

operator is not unique: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.76 12377

operator @1@ is not a member of operator family "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.24.77 12378

access method "@1@" does not support ASC/DESC options

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.78 12379

access method "@1@" does not support NULLS FIRST/LAST options

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.79 12380

data type @1@ has no default operator class for access method "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.80 12381

operator class "@1@" does not accept data type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.81 12382
there are multiple default operator classes for data type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.82 12383

table "@1@" has no indexes

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.24.83 12384

can only reindex the currently open database

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.84 12385

table "@1@.@2@" was reindexed

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.24.85 12386

@1@ requires a parameter
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.24.86 12387**

@1@ requires a Boolean value

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.24.87 12389**

argument of @1@ must be a name

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.24.88 12391**

@1@ requires an integer value

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.24.89 12393**

LOCATION is not supported anymore

The application or command terminated normally, but a warning was output.
[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.24.90 12396

permission denied to copy database "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.91 12397

invalid server encoding @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.92 12399

new encoding (@1@) is incompatible with the encoding of the template database (@2@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25 Message Numbers Beginning with 12400

2.25.1 12400

new collation (@1@) is incompatible with the collation of the template database (@2@)

[Description]
An error occurred during execution of the application or command.
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.2 12401

new LC_CTYPE (@1@) is incompatible with the LC_CTYPE of the template database (@2@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.3 12402

pg_global cannot be used as default tablespace

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.4 12403

cannot assign new default tablespace "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.5 12404

database "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.6 12405

source database "@1@" is being accessed by other users

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.7 12406

encoding "@1@" does not match locale "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.8 12407

role "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.25.9 12408

cannot drop a template database

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.25.10 12409

cannot drop the currently open database

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.11 12410

database "@1@" is being accessed by other users

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.12 12411

permission denied to rename role

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.13 12412

current database cannot be changed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.14 12413
cannot change the tablespace of the currently open database

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.15 12414

some relations of database "@1@" are already in tablespace "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.16 12415

permission denied to change owner of database

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.17 12417

SETOF type not allowed for operator argument

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.18 12418

operator attribute "@1@" not recognized
The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.25.19 12419

operator procedure must be specified

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.20 12420

at least one of leftarg or rightarg must be specified

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.21 12421

restriction estimator function @1@ must return type @2@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.22 12422

join estimator function @1@ must return type

An error occurred during execution of the application or command.

**2.25.23 12424**

**must be superuser to create a base type**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.25.24 12425**

**type attribute "@1@" not recognized**

**Description**

The application or command terminated normally, but a warning was output.

**System Processing**

Processing will continue.

**Action**

Check the message text and confirm that the issue does not affect the expected outcome.

**2.25.25 12426**

**invalid type category "@1@": must be simple ASCII**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.25.26 12427**

**array element type cannot be @1@**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.27 12428

alignment "@1@" not recognized

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.28 12429

storage "@1@" not recognized

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.29 12430

type input function must be specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.30 12431

type output function must be specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.25.31 12432

**type modifier output function is useless without a type modifier input function**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.32 12433

**changing return type of function @1@ from @2@ to @3@**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.25.33 12434

**type input function @1@ must return type @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.34 12436

**type output function @1@ must return type @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.35 12437
type receive function @1@ must return type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.36 12438

type send function @1@ must return type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.37 12439

"@1@" is not a number

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.38 12440

"@1@" is not a valid base type for a domain

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.39 12441

multiple default expressions
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.25.40 12442**

*conflicting NULL/NOT NULL constraints*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.25.41 12443**

*unique constraints not possible for domains*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.25.42 12444**

*primary key constraints not possible for domains*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.25.43 12445**

*exclusion constraints not possible for domains*

An error occurred during execution of the application or command.
[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.44 12446  
foreign key constraints not possible for domains  

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.45 12447  
specifying constraint deferrability not supported for domains  

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.46 12448  
changing argument type of function @1@ from "opaque" to "cstring"  

[Description]  
The application or command terminated normally, but a warning was output.

[System Processing]  
Processing will continue.

[Action]  
Check the message text and confirm that the issue does not affect the expected outcome.

2.25.47 12449  
changing argument type of function @1@ from "opaque" to @2@  

[Description]  
The application or command terminated normally, but a warning was output.

[System Processing]  
Processing will continue.
Check the message text and confirm that the issue does not affect the expected outcome.

2.25.48 12450

typmod_in function @1@ must return type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.49 12451

typmod_out function @1@ must return type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.50 12452

type analyze function @1@ must return type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.51 12453

column "@1@" of table "@2@" contains null values

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.25.52 12454

column "@1@" of table "@2@" contains values that violate the new constraint

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.53 12456

cannot use table references in domain check constraint

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.54 12457

@1@ is a table's row type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.55 12458

cannot alter array type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.56 12460
could not obtain lock on relation "@1.@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.57 12462

could not determine which collation to use for view column "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.58 12463

view must have at least one column

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.59 12464

cannot drop columns from view

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.60 12465

cannot change name of view column "@1@" to "@2@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.25.61 12466**

*cannot change data type of view column "@1@" from @2@ to @3@*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.25.62 12467**

*views must not contain SELECT INTO*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.25.63 12468**

*views must not contain data-modifying statements in WITH*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.25.64 12469**

*CREATE VIEW specifies more column names than columns*

An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.65 12470

**view "@1@" will be a temporary view**

[Description]
  Terminated normally.

[System Processing]
  Continues processing.

[Action]
  No action required.

2.25.66 12471

**views cannot be unlogged because they do not have storage**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.67 12472

**rule "@1@" for relation "@2@" does not exist**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.68 12473

**portal "@1@" does not exist**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.69 12475

rule "@1@" for relation "@2@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.25.70 12476

WITH query name "@1@" appears in both a rule action and the query being rewritten

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.71 12477

cannot have RETURNING lists in multiple rules

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.72 12478

multiple assignments to same column "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.25.73 12479

infinite recursion detected in rules for relation "@1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.74 12480

DO INSTEAD NOTHING rules are not supported for data-modifying statements in WITH

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.75 12481

conditional DO INSTEAD rules are not supported for data-modifying statements in WITH

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.76 12482

DO ALSO rules are not supported for data-modifying statements in WITH

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.77 12483
multi-statement DO INSTEAD rules are not supported for data-modifying statements in WITH

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.78 12484

cannot perform INSERT RETURNING on relation "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.79 12485

cannot perform UPDATE RETURNING on relation "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.80 12486

cannot perform DELETE RETURNING on relation "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.81 12487

WITH cannot be used in a query that is rewritten by rules into multiple queries
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.82 12488

conditional utility statements are not implemented

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.83 12489

WHERE CURRENT OF on a view is not implemented

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.84 12490

rule "@1@" for relation "@2@" already exists

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.85 12491

rule actions on OLD are not implemented

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.86 12492
rule actions on NEW are not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.87 12493
INSTEAD NOTHING rules on SELECT are not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.88 12494
multiple actions for rules on SELECT are not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.89 12495
rules on SELECT must have action INSTEAD SELECT

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.25.90 12496

**rules on SELECT must not contain data-modifying statements in WITH**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.25.91 12497

**event qualifications are not implemented for rules on SELECT**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.25.92 12498

**"@1@" is already a view**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.25.93 12499

**view rule for "@1@" must be named "@2@"**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.26 Message Numbers Beginning with 12500

2.26.1 12500

could not convert table "@1@" to a view because it is not empty

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.2 12501

could not convert table "@1@" to a view because it has triggers

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.3 12502

could not convert table "@1@" to a view because it has indexes

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.4 12503

could not convert table "@1@" to a view because it has child tables

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.26.5 12504

cannot have multiple RETURNING lists in a rule

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.6 12505

RETURNING lists are not supported in conditional rules

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.7 12506

RETURNING lists are not supported in non-INSTEAD rules

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.8 12507

SELECT rule's target list has too many entries

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
RETURNING list has too many entries

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.10 12509

cannot convert relation containing dropped columns to view

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.11 12510

SELECT rule's target entry @1@ has different column name from column "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.12 12511

SELECT rule's target entry @1@ has different type from column "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.13 12512

RETURNING list's entry @1@ has different type from column "@2@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.26.14 12513**

*SELECT rule's target entry @1@ has different size from column "@2@"*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.26.15 12514**

*RETURNING list's entry @1@ has different size from column "@2@"*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.26.16 12515**

*SELECT rule's target list has too few entries*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.26.17 12516**

*RETURNING list has too few entries*

An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.18 12517

Perl hash contains nonexistent column "@1@"

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.20 12519

Number of array dimensions (@1@) exceeds the maximum allowed (@2@)

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.21 12520

Multidimensional arrays must have array expressions with matching dimensions

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.22 12521

**PL/Perl function must return reference to hash or array**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.23 12522

$_TD->{new} does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.24 12523

$_TD->{new} is not a hash reference

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.25 12524

**PL/Perl functions cannot return type @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.26.26 12525
PL/Perl functions cannot accept type @1@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.27 12526
didn't get a CODE reference from compiling function "@1@"
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.26.28 12527
set-valued function called in context that cannot accept a set
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.29 12528
set-returning PL/Perl function must return reference to array or use return_next
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.30 12529
function returning record called in context that cannot accept type record

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.31 12530

ignoring modified row in DELETE trigger

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.26.32 12531

result of PL/Perl trigger function must be undef, "SKIP", or "MODIFY"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.33 12533

trigger functions can only be called as triggers

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.34 12534

cannot use return_next in a non-SETOF function
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.35 12535

SETOF-composite-returning PL/Perl function must call return_next with reference to hash

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.36 12536

PL/pgSQL functions cannot accept type @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.37 12537

could not determine actual return type for polymorphic function "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.38 12538

trigger functions can only be called as triggers

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.39 12539

PL/pgSQL functions cannot return type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.40 12540

trigger functions cannot have declared arguments

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.41 12541

parameter name "@1@" used more than once

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.42 12542

column reference "@1@" is ambiguous

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.43 12543

record "@1@" has no field "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.44 12544

variable "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.45 12545

relation "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.46 12546

variable "@1@" has pseudo-type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.26.47 12547

relation "@1@" is not a table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.48 12548

type "@1@" is only a shell

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.49 12549

unrecognized exception condition "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.50 12550

could not determine actual argument type for polymorphic function "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.51 12551
CONTINUE cannot be used outside a loop
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.52 12552
control reached end of function without RETURN
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.53 12553
set-valued function called in context that cannot accept a set
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.54 12554
control reached end of trigger procedure without RETURN
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.55 12555
trigger procedure cannot return a set
2.26.56 12556

**variable "@1@" declared NOT NULL cannot default to NULL**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.57 12557

**case not found**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.58 12558

**lower bound of FOR loop cannot be null**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.59 12559

**upper bound of FOR loop cannot be null**

[Description]
An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.60 12560

BY value of FOR loop cannot be null

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.61 12561

BY value of FOR loop must be greater than zero

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.62 12562

cursor "@1@" already in use

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.63 12563

arguments given for cursor without arguments

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.64 12564

**arguments required for cursor**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.65 12565

**FOREACH expression must not be null**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.66 12566

**FOREACH expression must yield an array, not type @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.67 12567

**slice dimension (@1@) is out of the valid range 0..@2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.26.68 12568

FOREACH ... SLICE loop variable must be of an array type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.69 12569

FOREACH loop variable must not be of an array type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.70 12570

cannot use RETURN NEXT in a non-SETOF function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.71 12571

wrong result type supplied in RETURN NEXT

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.72 12572
record "@1@" is not assigned yet

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.73 12573

wrong record type supplied in RETURN NEXT

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.74 12574

RETURN NEXT must have a parameter

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.75 12575

cannot use RETURN QUERY in a non-SETOF function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.76 12576

RAISE without parameters cannot be used outside an exception handler
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.77 12577

too few parameters specified for RAISE

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.78 12578

too many parameters specified for RAISE

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.79 12579

RAISE statement option cannot be null

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.80 12580

RAISE option already specified: @1@

An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.81 12581

**cannot COPY to/from client in PL/pgSQL**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.82 12582

**cannot begin/end transactions in PL/pgSQL**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.83 12583

**INTO used with a command that cannot return data**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.84 12584

**query returned no rows**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.85 12585

query returned more than one row

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.86 12586

query has no destination for result data

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.87 12587

query string argument of EXECUTE is null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.88 12588

EXECUTE of SELECT ... INTO is not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.26.89 12589

cursor variable "@1@" is null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.90 12590

cursor "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.91 12591

relative or absolute cursor position is null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.92 12592

null value cannot be assigned to variable "@1@" declared NOT NULL

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.93 12593

cannot assign non-composite value to a row variable

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.94 12594

cannot assign non-composite value to a record variable

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.95 12595

number of array dimensions (@1@) exceeds the maximum allowed (@2@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.96 12596

subscripted object is not an array

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.97 12597

array subscript in assignment must not be null
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

query "@1@" did not return data

row or record variable cannot be NOT NULL

default value for row or record variable is not supported

"@1@" is not a scalar variable
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.4 12604
loop variable of loop over rows must be a record or row variable or list of scalar variables

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.5 12605
cursor FOR loop must have only one target variable

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.6 12606
cursor FOR loop must use a bound cursor variable

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.7 12607
integer FOR loop must have only one target variable

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.8 12608

**cannot specify REVERSE in query FOR loop**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.9 12609

**loop variable of FOREACH must be a known variable or list of variables**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.10 12610

**FETCH statement cannot return multiple rows**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.11 12611

**cursor variable must be a simple variable**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.12 12612

**variable ":@1@" must be of type cursor or refcursor**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.13 12613

"@1@" is not a known variable

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.14 12614

**missing ":@1@" at end of SQL expression**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.15 12615

**missing "@1@" at end of SQL statement**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
RETURN cannot have a parameter in function returning set

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

RETURN cannot have a parameter in function with OUT parameters

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

RETURN cannot have a parameter in function returning void

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

RETURN NEXT cannot have a parameter in function with OUT parameters

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.
"@1@" is declared CONSTANT

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.21 12623
record or row variable cannot be part of multiple-item INTO list

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.22 12624
too many INTO variables specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.23 12625
end label "@1@" specified for unlabelled block

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.24 12626
end label "@1@" differs from block's label "@2@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.25 12627

cursor "@1@" has no arguments

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.26 12628

cursor "@1@" has arguments

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.27 12629

@1@ at end of input

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.28 12630

unexpected return value from trigger procedure

An error occurred during execution of the application or command.
2.27.29 12631

**PL/Python trigger function returned "MODIFY" in a DELETE trigger -- ignored**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.27.30 12632

**TD["new"] deleted, cannot modify row**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.31 12633

**TD["new"] is not a dictionary**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.32 12634

**TD["new"] dictionary key at ordinal position @1@ is not a string**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.33 12635

descriptor "@1@" found in TD["new"] does not exist as a column in the triggering row

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.34 12636

unsupported set function return mode

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.35 12637

returned object cannot be iterated

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.36 12638

PL/Python function with return type "void" did not return None

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.27.37 12639
forcibly aborting a subtransaction that has not been exited

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.27.38 12640
function returning record called in context that cannot accept type record

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.39 12641
trigger functions can only be called as triggers

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.40 12642
PL/Python functions cannot return type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.41 12643
PL/Python functions cannot accept type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.42 12645
could not convert Python object into cstring: Python string representation appears to contain null bytes

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.43 12646
key "@1@" not found in mapping

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.44 12647
length of returned sequence did not match number of columns in row

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.45 12648
attribute "@1@" does not exist in Python object
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.46 12649

plpy.prepare: type name at ordinal position @1@ is not a string

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.47 12652

@1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.48 12653

@1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.49 12655

trigger functions can only be called as triggers

An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.50 12656

**PL/Tcl functions cannot return type @1@**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.28 Message Numbers Beginning with 12700

2.28.1 12704

**function "@1@" does not exist**

[Description]
  An unexpected error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  Contact Fujitsu technical support.

2.28.2 12725

**operator @1@ is not a valid ordering operator**

[Description]
  An unexpected error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  Contact Fujitsu technical support.

2.29 Message Numbers Beginning with 12900

2.29.1 12908
could not remove cache file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.29.2 12909

could not open tablespace directory "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.30 Message Numbers Beginning with 13000

2.30.1 13092

too few arguments for format()

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.30.2 13094

null values cannot be formatted as an SQL identifier

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.31 Message Numbers Beginning with 13300

2.31.1 13359

online backup was canceled, recovery cannot continue

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.31.2 13362

online backup mode canceled

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.31.3 13363

online backup mode was not canceled

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.32 Message Numbers Beginning with 13400

2.32.1 13449

cannot convert whole-row table reference

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.32.2 13452

cannot alter type "@1@" because column "@2@.@3@" uses it

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.32.3 13453

cannot alter foreign table "@1@" because column "@2@.@3@" uses its row type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.32.4 13454

cannot alter table "@1@" because column "@2@.@3@" uses its row type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.32.5 13478

parameter "lc_ctype" must be specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.32.6 13481
operator family "@1@" does not exist for access method "@2@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.32.7 13490
directories for tablespace @1@ could not be removed

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.32.8 13497
cannot drop extension "@1@" because it is being modified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.32.9 13499
pg_extension_config_dump() can only be called from an SQL script executed by CREATE EXTENSION

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.33 Message Numbers Beginning with 13500

2.33.1 13508

must be superuser to set schema of @1@

*Description*  
An error occurred during execution of the application or command.

*System Processing*  
Processing will be aborted.

*Action*  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.33.2 13580

cannot PREPARE while holding both session-level and transaction-level locks on the same object

*Description*  
An error occurred during execution of the application or command.

*System Processing*  
Processing will be aborted.

*Action*  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.33.3 13589

sending cancel to blocking autovacuum PID @1@

*Description*  
Terminated normally.

*System Processing*  
Continues processing.

*Action*  
No action required.

2.33.4 13597

not enough elements in RWConflictPool to record a read/write conflict

*Description*  
There was insufficient free space in the server's memory during execution of the application.

*System Processing*  
Processing will be aborted.

*Action*  
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.33.5 13598

**not enough elements in RWConfictPool to record a potential read/write conflict**

[Description]

There was insufficient free space in the server's memory during execution of the application.

[System Processing]

Processing will be aborted.

[Action]

Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.34 Message Numbers Beginning with 13700

2.34.1 13761

**cannot move extension "@1@" into schema "@2@" because the extension contains the schema**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.35 Message Numbers Beginning with 13800

2.35.1 13833

**column @1@**

[Description]

Terminated normally.

[System Processing]

Continues processing.

[Action]

No action required.

2.35.2 13860
symbolic link "@1@" target is too long

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.35.3 13864

unexpected message type "@1@"

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.35.4 13884

could not create signal listener pipe for PID @1@: error code @2@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.36 Message Numbers Beginning with 13900

2.36.1 13922

could not close handle to backend parameter variables: error code @1@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.36.2 13941

conflicting constraint properties

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.36.3 13943

@1@ constraints cannot be marked DEFERRABLE

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.36.4 13944

@1@ constraints cannot be marked NOT VALID

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.37 Message Numbers Beginning with 14000

2.37.1 14024

column name must be qualified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.37.2 14028
cannot create relations in temporary schemas of other sessions
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.37.3 14029
cannot create temporary relation in non-temporary schema
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.37.4 14030
only temporary relations may be created in temporary schemas
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.37.5 14042
cannot reassign ownership of objects owned by @1@ because they are required by the database system
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.38 Message Numbers Beginning with 14100

2.38.1 14104

cannot convert Perl array to non-array type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.38.2 14105

cannot convert Perl hash to non-composite type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.39 Message Numbers Beginning with 14200

2.39.1 14211

PL/Tcl functions cannot accept type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.39.2 14218

"@1@" is a table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.39.3 14282

cannot add schema "@1@" to extension "@2@" because the schema contains the extension

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.39.4 14284

could not identify current directory: @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.39.5 14285

invalid binary "@1@"

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.39.6 14286

could not read binary "@1@"

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.
2.39.7 14287

could not find a "@1@" to execute

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.39.8 14289

could not read symbolic link "@1@"

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.39.9 14290

child process exited with exit code @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.39.10 14291

child process was terminated by exception 0x@1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.39.11 14292
child process was terminated by signal @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.39.12 14293

child process was terminated by signal @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.39.13 14294

child process exited with unrecognized status @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.39.14 14295

could not identify current directory: @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.39.15 14296

invalid binary "@1@"
An unexpected error occurred.
Processing will be aborted.
Contact Fujitsu technical support.

2.39.16 14297

could not read binary "@1@
[Description]
An unexpected error occurred.
[System Processing]
Processing will be aborted.
[Action]
Contact Fujitsu technical support.

2.39.17 14298

could not find a "@1@" to execute
[Description]
An unexpected error occurred.
[System Processing]
Processing will be aborted.
[Action]
Contact Fujitsu technical support.

2.39.18 14299

could not change directory to "@1": @2@
[Description]
An unexpected error occurred.
[System Processing]
Processing will be aborted.
[Action]
Contact Fujitsu technical support.

2.40 Message Numbers Beginning with 14300

2.40.1 14300

could not read symbolic link "@1@"
An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.40.2 14301

child process exited with exit code @1@

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.40.3 14302

child process was terminated by exception 0x@1@

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.40.4 14303

child process was terminated by signal @1@

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.40.5 14304

child process was terminated by signal @1@

An unexpected error occurred.
[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.6 14305

child process exited with unrecognized status @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.7 14306

could not identify current directory: @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.8 14307

invalid binary "@1@"

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.9 14308

could not read binary "@1@"

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.
[Action]
Contact Fujitsu technical support.

2.40.10 14309

could not find a "@1@" to execute

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.11 14310

could not change directory to "@1@": @2@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.12 14311

could not read symbolic link "@1@"

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.13 14318

could not identify current directory: @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.
2.40.14 14319

*invalid binary "@1@"*

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.15 14320

*could not read binary "@1@"*

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.16 14321

*could not find a "@1@" to execute*

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.17 14322

*could not change directory to "@1@": @2@*

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.
could not read symbolic link "@1@"
[Description]
  An unexpected error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  Contact Fujitsu technical support.

2.40.19 14324
child process exited with exit code @1@
[Description]
  An unexpected error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  Contact Fujitsu technical support.

2.40.20 14325
child process was terminated by exception 0x@1@
[Description]
  An unexpected error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  Contact Fujitsu technical support.

2.40.21 14326
child process was terminated by signal @1@
[Description]
  An unexpected error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  Contact Fujitsu technical support.

2.40.22 14327
child process was terminated by signal @1@
An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.40.23 14328

auto-open of the keystore has been enabled

Enabled automatic opening of the keystore.

Continues processing.

No action required.

2.40.24 14329

could not identify current directory: @1@

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.40.25 14330

invalid binary "@1@"

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.40.26 14331

could not read binary "@1@"

An unexpected error occurred.
[System Processing]
  Processing will be aborted.

[Action]
  Contact Fujitsu technical support.

2.40.27 14332

could not find a "@1@" to execute

[Description]
  An unexpected error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  Contact Fujitsu technical support.

2.40.28 14333

could not change directory to "@1@": @2@

[Description]
  An unexpected error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  Contact Fujitsu technical support.

2.40.29 14334

could not read symbolic link "@1@"

[Description]
  An unexpected error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  Contact Fujitsu technical support.

2.40.30 14335

child process exited with exit code @1@

[Description]
  An unexpected error occurred.

[System Processing]
  Processing will be aborted.
[Action]
Contact Fujitsu technical support.

2.40.31 14336

child process was terminated by exception 0x1
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.32 14337

child process was terminated by signal 1
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.33 14338

child process was terminated by signal 1
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.34 14339

@1: no database directory specified and environment variable PGDATA unset
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.
2.40.35 14340

could not identify current directory: @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.36 14341

invalid binary "@1@"

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.37 14342

could not read binary "@1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.38 14343

could not find a "@1@" to execute

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.39 14344
could not change directory to "@1@": @2@
[Description]
   An unexpected error occurred.
[System Processing]
   Processing will be aborted.
[Action]
   Contact Fujitsu technical support.

2.40.40 14345

could not read symbolic link "@1@"
[Description]
   An unexpected error occurred.
[System Processing]
   Processing will be aborted.
[Action]
   Contact Fujitsu technical support.

2.40.41 14346

child process exited with exit code @1@
[Description]
   An unexpected error occurred.
[System Processing]
   Processing will be aborted.
[Action]
   Contact Fujitsu technical support.

2.40.42 14347

child process was terminated by exception 0x@1@
[Description]
   An unexpected error occurred.
[System Processing]
   Processing will be aborted.
[Action]
   Contact Fujitsu technical support.

2.40.43 14348

child process was terminated by signal @1@
An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

**2.40.44 14349**

*child process was terminated by signal @1@*

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

**2.40.45 14351**

*could not access directory for core file "@1@": @2@*

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.40.46 14352**

*path specified by configuration parameter "@1@" is invalid: "@2@"*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.40.47 14353**

*WAL archiving is not active*

An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.40.48 14354**

**could not set permissions on path specified by configuration parameter "@1@"::"@2@"::@3@**

**Description**

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.40.49 14366**

**a failure has occurred while multiplexing transaction log files**

**Description**

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.40.50 14367**

**multiplexing of transaction log files has been stopped**

**Description**

Terminated normally.

Processing will be aborted.

No action required.

**2.40.51 14368**

**must be superuser to control WAL multiplexing**

**Description**

An error occurred during execution of the application or command.

Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.40.52 14369

WAL multiplexing is not configured
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.40.53 14370

WAL multiplexing is already paused
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.40.54 14371

WAL multiplexing is not paused
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.40.55 14372

could not fork XLog multiplexer process: @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.40.56 14373

could not set junction for "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.40.57 14374

could not set junction for "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.40.58 14375

could not remove file or directory "@1@": @2@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.40.59 14376

could not remove file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.40.60 14377
could not set junction for "@1@": @2@
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.40.61 14378

could not get junction for "@1@": @2@
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.40.62 14379
could not open directory "@1@": @2@
[Description]
The application or command terminated normally, but a warning was output.
[System Processing]
Processing will continue.
[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.40.63 14380
could not read directory "@1@": @2@
[Description]
The application or command terminated normally, but a warning was output.
[System Processing]
Processing will continue.
[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.40.64 14381
could not stat file or directory "@1@": @2@
The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.40.65 14384

could not determine encoding for locale "@1@": codeset is "@2@"

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.40.66 14385

could not remove file or directory "@1@": @2@

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.40.67 14388

@1@ at or near "@2@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.40.68 14390

query "@1@" returned more than one row

An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.40.69 14391

query "@1@" is not a SELECT

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.40.70 14392

block label must be placed before DECLARE, not after

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.40.71 14393

collations are not supported by type @1@

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.40.72 14394

row or record variable cannot be CONSTANT

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.40.73 14395

cannot use serializable mode in a hot standby
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.41 Message Numbers Beginning with 14400

2.41.1 14419

could not write lock file "@1@": @2@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.41.2 14421

Expected 1 tuple with 2 fields, got @1@ tuples with @2@ fields.
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.41.3 14422

The primary's identifier is @1@, the standby's identifier is @2@.
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.41.4 14423

The transaction has already committed locally, but might not have been replicated to the standby.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.5 14424

You can choose the collation by applying the COLLATE clause to one or both expressions.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.6 14425

Query has too few columns.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.7 14426

Cannot cast type @1@ to @2@ in column @3@.

[Description]
Supplementary information was output.

[System Processing]
None.
[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.8 14427

Query has too many columns.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.9 14430

No aggregate function matches the given name and argument types. Perhaps you misplaced ORDER BY; ORDER BY must appear after all regular arguments of the aggregate.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.10 14431

No function matches the given name and argument types. You might need to add explicit type casts.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.11 14432

There is a WITH item named "@1@", but it cannot be referenced from this part of the query.
[Description]
Supplementary information was output.

[System Processing]
None.
Refer to this message together with the message that was output immediately beforehand.

2.41.12 14433

Use WITH RECURSIVE, or re-order the WITH items to remove forward references.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.13 14434

Perhaps you meant to reference the table alias ":@1\@:"

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.14 14435

There is an entry for table ":@1\@:", but it cannot be referenced from this part of the query.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.15 14436

String constants with Unicode escapes cannot be used when standard_conforming_strings is off.

[Description]
Supplementary information was output.

[System Processing]
None.
2.41.16 14437

**Unicode escapes must be \uXXXX or \UXXXXXXXX.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.17 14438

**Use " " to write quotes in strings. \ is insecure in client-only encodings.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.18 14439

**Use " " to write quotes in strings, or use the escape string syntax (E'...').**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.19 14440

**Use the escape string syntax for backslashes, e.g., E"\\\".**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.41.20 14441

**Use the escape string syntax for escapes, e.g., E'\r\n'.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.21 14442

**Cast the output of the non-recursive term to the correct type.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.22 14443

**Use the COLLATE clause to set the collation of the non-recursive term.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.23 14444

**Explicitly cast to the desired type, for example ARRAY[]::integer[].**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.24 14445
Row comparison operators must be associated with btree operator families.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.25 14446

There are multiple equally-plausible candidates.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.26 14447

You will need to rewrite or cast the expression.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.27 14448

Use an explicit ordering operator or modify the query.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.28 14449

Could not choose a best candidate operator. You might need to add explicit type casts.
No operator matches the given name and argument type(s). You might need to add explicit type casts.

Aggregates with DISTINCT must be able to sort their inputs.

Constraint "@1@" contains a whole-row reference to table "@2@".

Index "@1@" contains a whole-row table reference.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.33 14454

Cannot create a primary key or unique constraint using such an index.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.34 14455

Cannot create a non-deferrable constraint using a deferrable index.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.35 14456

Ordering operators must be "<" or ">" members of btree operator families.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.36 14457

Update your data type.

[Description]
Supplementary information was output.
Use NONE to denote the missing argument of a unary operator.

Supplementary information was output.

Refer to this message together with the message that was output immediately beforehand.

Use separate LIMIT and OFFSET clauses.

Supplementary information was output.

Refer to this message together with the message that was output immediately beforehand.

For example, FROM (VALUES ...) [AS] foo.

Supplementary information was output.

Refer to this message together with the message that was output immediately beforehand.

For example, FROM (SELECT ...) [AS] foo.

Supplementary information was output.

Refer to this message together with the message that was output immediately beforehand.
Refer to this message together with the message that was output immediately beforehand.

2.41.41 14463

The insertion source is a row expression containing the same number of columns expected by the INSERT. Did you accidentally use extra parentheses?

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.42 14464

Only result column names can be used, not expressions or functions.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.43 14465

Add the expression/function to every SELECT, or move the UNION into a FROM clause.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.44 14466

Scrollable cursors must be READ ONLY.

[Description]
Supplementary information was output.

[System Processing]
None.
[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.45 14467

**Holdable cursors must be READ ONLY.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.46 14468

**Insensitive cursors must be READ ONLY.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.47 14469

**Valid options in this context are: @1@**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.48 14470

**Specify OWNED BY table.column or OWNED BY NONE.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
**2.41.49 14471**

**Extension names must not be empty.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.41.50 14472**

**Extension names must not contain "--".**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.41.51 14473**

**Extension names must not begin or end with "-".**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.41.52 14474**

**Extension names must not contain directory separator characters.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.41.53 14475**
Version names must not be empty.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.54 14476

Version names must not contain "--".
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.55 14477

Version names must not begin or end with "-".
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.56 14478

Version names must not contain directory separator characters.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.57 14479

Must be superuser to create this extension.
Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.41.58 14480

Must be superuser to update this extension.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.41.59 14481

@1@ is not in the extension's schema "@2@"

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.41.60 14482

Consider using table spaces instead.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.41.61 14483

Use the same encoding as in the template database, or use template0 as template.

Supplementary information was output.
[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.62 14484

**Use the same collation as in the template database, or use template0 as template.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.63 14485

**Use the same LC_CTYPE as in the template database, or use template0 as template.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.64 14486

**There is a conflict because database "@1@" already has some tables in this tablespace.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.65 14487

**The chosen LC_CTYPE setting requires encoding "@1@".**

[Description]
Supplementary information was output.

[System Processing]
None.
2.41.66 14488

The chosen LC_COLLATE setting requires encoding "@1@".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.67 14489

You must move them back to the database's default tablespace before using this command.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.68 14490

There are @1@ other session(s) and @2@ prepared transaction(s) using the database.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.69 14493

@1@ dead row versions cannot be removed yet.@2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.41.70 14494

The prefix "pg_" is reserved for system schemas.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.71 14496

The server process with PID @1@ is among those with the oldest transactions.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.72 14497

The NOTIFY queue cannot be emptied until that process ends its current transaction.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.73 14498

Use the COLLATE clause to set the collation explicitly.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.74 14499
The supported languages are listed in the pg_pltemplate system catalog.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42 Message Numbers Beginning with 14500

2.42.1 14500

Anyone can COPY to stdout or from stdin. psq1's \copy command also works for anyone.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.2 14501

Try the COPY (SELECT ...) TO variant.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.3 14502

COPY @1@, line @2@, column @3@

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.42.4 14503

COPY @1@, line @2@

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.5 14504

COPY @1@, line @2@, column @3@: "@4@"

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.6 14505

COPY @1@, line @2@, column @3@: null input

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.7 14506

COPY @1@, line @2@: "@3@"

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.8 14507
Use "\r" to represent carriage return.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.42.9 14508

Use quoted CSV field to represent carriage return.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.42.10 14509

Use "\n" to represent newline.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.42.11 14510

Use quoted CSV field to represent newline.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.42.12 14512

@1@.
Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

**2.42.13 14513**

@1@ index row versions were removed. @2@ index pages have been deleted, @3@ are currently reusable. @4@.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

**2.42.14 14514**

Operator class "@1@" already is the default.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

**2.42.15 14515**

Must be superuser to change owner of a foreign-data wrapper.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

**2.42.16 14516**

The owner of a foreign-data wrapper must be a superuser.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.17 14517

**Must be superuser to create a foreign-data wrapper.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.18 14518

**Must be superuser to alter a foreign-data wrapper.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.19 14520

**Expected @1@ parameters but got @2@.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.20 14521

**Close open transactions soon to avoid wraparound problems.**

[Description]
Supplementary information was output.
2.42.21 14522

You might have already suffered transaction-wraparound data loss.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.22 14523

Must be superuser to create a tablespace.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.23 14524

The prefix "pg_" is reserved for system tablespaces.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.24 14525

Create this directory for the tablespace before restarting the server.

[Description]
Supplementary information was output.

[System Processing]
None.
[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.25 14526
You can remove the directories manually if necessary.
[Description]
Supplementary information was output.
[System Processing]
None.
[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.26 14528
You can alter type @1@, which will alter the array type as well.
[Description]
Supplementary information was output.
[System Processing]
None.
[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.27 14529
Tables cannot have INSTEAD OF triggers.
[Description]
Supplementary information was output.
[System Processing]
None.
[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.28 14530
Views cannot have row-level BEFORE or AFTER triggers.
[Description]
Supplementary information was output.
[System Processing]
None.
[Action]
Refer to this message together with the message that was output immediately beforehand.
2.42.29 14531

**Views cannot have TRUNCATE triggers.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.30 14532

"@1@" versus "@2@"

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.31 14533

**To resolve the conflict, specify a default explicitly.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.32 14534

**Use ALTER TYPE instead.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.33 14535
Use ALTER ... CASCADE to alter the typed tables too.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.34 14536

Key columns "@1@" and "@2@" are of incompatible types: @3@ and @4@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.35 14537

@1@ depends on @2@

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.36 14538

Change the ownership of the index's table, instead.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.37 14539

Sequence "@1@" is linked to table "@2@".
2.42.38 14540
"@1@" is already a child of "@2@".
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.39 14541
Only commutative operators can be used in exclusion constraints.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.40 14542
The exclusion operator must be related to the index operator class for the constraint.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.41 14543
You must specify an operator class for the index or define a default operator class for the data type.
2.42.42 14544

Creating a shell type definition.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.43 14545

Use CREATE LANGUAGE to load the language into the database.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.44 14546

Use DROP AGGREGATE to drop aggregate functions.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.45 14549

Key @1@ is duplicated.

[Description]
Supplementary information was output.
Perhaps you need a different "datestyle" setting.

The operating system could not find any locale data for the locale name "@1@".

The server's LC_CTYPE locale is probably incompatible with the database encoding.

Provide two argument types for operator.
Refer to this message together with the message that was output immediately beforehand.

**2.42.50 14555**

*Missing left parenthesis.*

*Description*

Supplementary information was output.

*System Processing*

None.

*Action*

Refer to this message together with the message that was output immediately beforehand.

**2.42.51 14556**

*Too few columns.*

*Description*

Supplementary information was output.

*System Processing*

None.

*Action*

Refer to this message together with the message that was output immediately beforehand.

**2.42.52 14557**

*Unexpected end of input.*

*Description*

Supplementary information was output.

*System Processing*

None.

*Action*

Refer to this message together with the message that was output immediately beforehand.

**2.42.53 14558**

*Too many columns.*

*Description*

Supplementary information was output.

*System Processing*

None.

*Action*

Refer to this message together with the message that was output immediately beforehand.
2.42.54 14559

**Junk after right parenthesis.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.55 14560

**Intervals are not tied to specific calendar dates.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.56 14561

**“EEEE” may only be used together with digit and decimal point patterns.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.57 14562

**Do not mix Gregorian and ISO week date conventions in a formatting template.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.58 14563
This value contradicts a previous setting for the same field type.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.59 14564

Field requires @1@ characters, but only @2@ remain.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.60 14565

If your source string is not fixed-width, try using the "FM" modifier.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.61 14566

Field requires @1@ characters, but only @2@ could be parsed.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.62 14567

Value must be an integer.
[Description]
    Supplementary information was output.

[System Processing]
    None.

[Action]
    Refer to this message together with the message that was output immediately beforehand.

2.42.63 14568

Value must be in the range @1@ to @2@.

[Description]
    Supplementary information was output.

[System Processing]
    None.

[Action]
    Refer to this message together with the message that was output immediately beforehand.

2.42.64 14569

The given value did not match any of the allowed values for this field.

[Description]
    Supplementary information was output.

[System Processing]
    None.

[Action]
    Refer to this message together with the message that was output immediately beforehand.

2.42.65 14570

Use the 24-hour clock, or give an hour between 1 and 12.

[Description]
    Supplementary information was output.

[System Processing]
    None.

[Action]
    Refer to this message together with the message that was output immediately beforehand.

2.42.66 14571

Escape string must be empty or one character.

[Description]
    Supplementary information was output.
[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.67 14572

Value has bits set to right of mask.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.68 14573

Target must be "archiver" or "bgwriter".
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.69 14574

Identifier must be less than @1@ characters.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.70 14575

This functionality requires the server to be built with libxml support.
[Description]
Supplementary information was output.

[System Processing]
None.
2.42.71 14576

You need to rebuild PostgreSQL using --with-libxml.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.72 14577

XML processing instruction target name cannot be "@1@".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.73 14578

XML processing instruction cannot contain "?>".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.74 14579

libxml2 has incompatible char type: sizeof(char)=@1@, sizeof(xmlChar)=@2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.42.75 14580

**XML does not support infinite date values.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.76 14581

**XML does not support infinite timestamp values.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.77 14582

**The array must be two-dimensional with length of the second axis equal to 2.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.78 14583

**ACL key word must be "group" or "user".**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.79 14584
A name must follow the "group" or "user" key word.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.80 14585

Use CASCADE to revoke them too.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.81 14586

Dimension array must be one dimensional.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.82 14587

Lower bound of dimension array must be one.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.83 14588

Low bound array has different size than dimensions array.
2.42.84 14589

**MATCH FULL does not allow mixing of null and nonnull key values.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.85 14590

**Remove this referential integrity trigger and its mates, then do ALTER TABLE ADD CONSTRAINT.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.86 14591

**This is most likely due to a rule having rewritten the query.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.87 14593

**Key (@1@)=(@2@) is not present in table "@3@".**
2.42.88 14594

Key (@1@)=(@2@) is still referenced from table "@3@".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.89 14595

A field with precision @1@, scale @2@ must round to an absolute value less than @3@@4@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.90 14596

Arrays with element types @1@ and @2@ are not compatible for concatenation.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.91 14597

Arrays of @1@ and @2@ dimensions are not compatible for concatenation.

[Description]
Supplementary information was output.
Arrays with differing element dimensions are not compatible for concatenation.

Supplementary information was output.

Refer to this message together with the message that was output immediately beforehand.

2.42.92 14598

Arrays with differing dimensions are not compatible for concatenation.

Supplementary information was output.

Refer to this message together with the message that was output immediately beforehand.

2.42.93 14599

Is another postgres (PID @1@) running in data directory "@2@"?

Supplementary information was output.

Refer to this message together with the message that was output immediately beforehand.

2.43 Message Numbers Beginning with 14600

2.43.1 14600

Is another postmaster (PID @1@) running in data directory "@2@"?

Supplementary information was output.

Refer to this message together with the message that was output immediately beforehand.

2.43.2 14601
2.43.3 14602

Is another postgres (PID @1@) using socket file "@2@"?

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.4 14603

Is another postmaster (PID @1@) using socket file "@2@"?

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.5 14604

If you're sure there are no old server processes still running, remove the shared memory block or just delete the file "@1@".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.6 14605

The file seems accidentally left over, but it could not be removed. Please remove the file by hand and try again.

[Description]
Supplementary information was output.
2.43.7 14606

File "@1@" is missing.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.8 14607

File "@1@" does not contain valid data.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.9 14608

You might need to initdb.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.10 14609

The data directory was initialized by PostgreSQL version @1@, which is not compatible with this version @2@.

[Description]
Supplementary information was output.
[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.11 14610

**Specify an absolute path.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.12 14611

**Set up WAL archiving when you configure "@1@" parameter.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.13 14612

**Database OID @1@ now seems to belong to "@2@".**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.14 14613

**User does not have CONNECT privilege.**

[Description]
Supplementary information was output.

[System Processing]
None.
2.43.15 14614

The database was initialized with LC_COLLATE "@1@", which is not recognized by setlocale().

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.16 14615

Recreate the database with another locale or install the missing locale.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.17 14616

The database was initialized with LC_CTYPE "@1@", which is not recognized by setlocale().

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.18 14617

You should immediately run CREATE USER "@1@" SUPERUSER;

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.43.19 14618

It seems to have just been dropped or renamed.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.20 14619

The database subdirectory "@1@" is missing.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.21 14620

String of @1@ bytes is too long for encoding conversion.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.22 14621

Continuing anyway, but there's something wrong.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.23 14622
Failed while creating memory context "@1@".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.24 14623

Failed on request of size @1@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.25 14624

Extension libraries are required to use the PG_MODULE_MAGIC macro.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.26 14625

Server is version @1@, library is version @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.27 14627

You need an unconditional ON INSERT DO INSTEAD rule with a RETURNING clause.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.28 14628

You need an unconditional ON UPDATE DO INSTEAD rule with a RETURNING clause.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.29 14629

You need an unconditional ON DELETE DO INSTEAD rule with a RETURNING clause.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.30 14630

Use views or triggers instead.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.31 14631

Use triggers instead.

[Description]
Supplementary information was output.
[System Processing]

None.

[Action]

Refer to this message together with the message that was output immediately beforehand.

### 2.43.32 14632

**Use views instead.**

[Description]

Supplementary information was output.

[System Processing]

None.

[Action]

Refer to this message together with the message that was output immediately beforehand.

### 2.43.33 14633

**In particular, the table cannot be involved in any foreign key relationships.**

[Description]

Supplementary information was output.

[System Processing]

None.

[Action]

Refer to this message together with the message that was output immediately beforehand.

### 2.43.34 14634

**Failed system call was shmget(key=@1@, size=@2@, 0@3@).**

[Description]

Supplementary information was output.

[System Processing]

None.

[Action]

Refer to this message together with the message that was output immediately beforehand.

### 2.43.35 14638

**Failed system call was CreateFileMapping(size=@1@, name=@2@).**

[Description]

Supplementary information was output.

[System Processing]

None.
Refer to this message together with the message that was output immediately beforehand.

2.43.36 14639

Check if there are any old server processes still running, and terminate them.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.37 14640

Failed system call was DuplicateHandle.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.38 14641

Failed system call was MapViewOfFileEx.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.39 14642

Failed system call was semget(@1@, @2@, 0@3@).

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
This error does *not* mean that you have run out of disk space. It occurs when either the system limit for the maximum number of semaphore sets (SEMMNI), or the system wide maximum number of semaphores (SEMMNS), would be exceeded. You need to raise the respective kernel parameter. Alternatively, reduce PostgreSQL’s consumption of semaphores by reducing its max_connections parameter. The PostgreSQL documentation contains more information about configuring your system for PostgreSQL.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

---

You possibly need to raise your kernel’s SEMVMX value to be at least 1. Look into the PostgreSQL documentation for details.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

---

Some of the datatypes only support hashing, while others only support sorting.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

---

Window partitioning columns must be of sortable datatypes.

[Description]
Supplementary information was output.

[System Processing]
None.
2.43.44 14647

Window ordering columns must be of sortable datatypes.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.45 14648

SQL function "@1@" during startup

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.46 14649

All column datatypes must be hashable.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.47 14650

See server log for query details.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.43.48 14651

Client IP address resolved to "@1@", forward lookup matches.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.49 14652

Client IP address resolved to "@1@", forward lookup not checked.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.50 14653

Client IP address resolved to "@1@", forward lookup does not match.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.51 14654

LDAP over SSL is not supported on this platform.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.52 14655
Is another postmaster already running on port @1@? If not, remove socket file "@2@" and retry.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.53 14656

Is another postmaster already running on port @1@? If not, wait a few seconds and retry.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.54 14657

Anyone can use the client-side lo_import() provided by libpq.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.55 14658

Anyone can use the client-side lo_export() provided by libpq.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.56 14659
File must have permissions u=rw (0600) or less if owned by the database user, or permissions u=rw,g=r (0640) or less if owned by root.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.57 14660

SSL library does not support certificate revocation lists.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.58 14662

line @1@ of configuration file "@2@"

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.59 14663

Set ssl = on in postgresql.conf.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.60 14664

Compile with --with-openssl to use SSL connections.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.61 14666

Cannot enlarge string buffer containing @1@ bytes by @2@ more bytes.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.62 14667

Please REINDEX it.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.63 14668

Values larger than 1/3 of a buffer page cannot be indexed. Consider a function index of an MD5 hash of the value, or use full text indexing.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.64 14669

Key @1@ already exists.
[Description]
  Supplementary information was output.

[System Processing]
  None.

[Action]
  Refer to this message together with the message that was output immediately beforehand.

2.43.65 14670

This may be because of a non-immutable index expression.

[Description]
  Supplementary information was output.

[System Processing]
  None.

[Action]
  Refer to this message together with the message that was output immediately beforehand.

2.43.66 14671

To fix this, do REINDEX INDEX "@1@".

[Description]
  Supplementary information was output.

[System Processing]
  None.

[Action]
  Refer to this message together with the message that was output immediately beforehand.

2.43.67 14672

This is caused by an incomplete page split at crash recovery before upgrading to PostgreSQL 9.1.

[Description]
  Supplementary information was output.

[System Processing]
  None.

[Action]
  Refer to this message together with the message that was output immediately beforehand.

2.43.68 14673

The index is not optimal. To optimize it, contact a developer, or try to use the column as the second one in the CREATE INDEX command.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.69 14674

Could not open file "@1@": @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.70 14675

Could not seek in file "@1@" to offset @2@: @3@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.71 14676

Could not read from file "@1@" at offset @2@: @3@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.72 14677

Could not write to file "@1@" at offset @2@: @3@.

[Description]
Supplementary information was output.
2.43.73 14678

**Could not fsync file "@1@": @2@.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.74 14679

**Could not close file "@1@": @2@.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.75 14680

**Set max_prepared_transactions to a nonzero value.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.76 14681

**Increase max_prepared_transactions (currently @1@).**

[Description]
Supplementary information was output.

[System Processing]
None.
2.43.77 14682

Must be superuser or the user that prepared the transaction.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.78 14683

Connect to the database where the transaction was prepared to finish it.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.79 14687

Expected a numeric timeline ID.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.80 14688

Timeline IDs must be in increasing sequence.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
**2.43.81 14689**

*Timeline IDs must be less than child timeline's ID.*

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.43.82 14690**

*The database cluster was initialized with PG_CONTROL_VERSION @1@ (0x@2@), but the server was compiled with PG_CONTROL_VERSION @3@ (0x@4@).*

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.43.83 14691**

*This could be a problem of mismatched byte ordering. It looks like you need to initdb.*

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.43.84 14692**

*The database cluster was initialized with PG_CONTROL_VERSION @1@, but the server was compiled with PG_CONTROL_VERSION @2@.*

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.43.85 14693

It looks like you need to initdb.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.86 14694

The database cluster was initialized with CATALOG_VERSION_NO @1@, but the server was compiled with CATALOG_VERSION_NO @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.87 14695

The database cluster was initialized with MAXALIGN @1@, but the server was compiled with MAXALIGN @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.88 14696

The database cluster appears to use a different floating-point number format than the server executable.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
The database cluster was initialized with BLCKSZ @1@, but the server was compiled with BLCKSZ @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

It looks like you need to recompile or initdb.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

The database cluster was initialized with RELSEG_SIZE @1@, but the server was compiled with RELSEG_SIZE @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

The database cluster was initialized with XLOG_BLCKSZ @1@, but the server was compiled with XLOG_BLCKSZ @2@.

[Description]
Supplementary information was output.

[System Processing]
None.
[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.2 14701

The database cluster was initialized with XLOG_SEG_SIZE @1@, but the server was compiled with XLOG_SEG_SIZE @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.3 14702

The database cluster was initialized with NAMEDATALEN @1@, but the server was compiled with NAMEDATALEN @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.4 14703

The database cluster was initialized with INDEX_MAX_KEYS @1@, but the server was compiled with INDEX_MAX_KEYS @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.5 14704

The database cluster was initialized with TOAST_MAX_CHUNK_SIZE @1@, but the server was compiled with TOAST_MAX_CHUNK_SIZE @2@.

[Description]
Supplementary information was output.
The database cluster was initialized without USE_FLOAT4_BYVAL but the server was compiled with USE_FLOAT4_BYVAL.

Supplementary information was output.

Refer to this message together with the message that was output immediately beforehand.

The database cluster was initialized with USE_FLOAT4_BYVAL but the server was compiled without USE_FLOAT4_BYVAL.

Supplementary information was output.

Refer to this message together with the message that was output immediately beforehand.

The database cluster was initialized without USE_FLOAT8_BYVAL but the server was compiled with USE_FLOAT8_BYVAL.

Supplementary information was output.

Refer to this message together with the message that was output immediately beforehand.

The database cluster was initialized with USE_FLOAT8_BYVAL but the server was compiled without USE_FLOAT8_BYVAL.
2.44.10 14711

The database server will regularly poll the pg_wal subdirectory to check for files placed there.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.11 14712

Execute pg_wal_replay_resume() to continue.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.12 14713

Recovery control functions can only be executed during recovery.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.13 14714

This happens if you temporarily set wal_level=minimal without taking a new base backup.

[Description]
Supplementary information was output.
[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.14 14715

Either set wal_level to "replica" on the master, or turn off hot_standby here.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.15 14716

This probably means that some data is corrupted and you will have to use the last backup for recovery.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.16 14717

If this has occurred more than once some data might be corrupted and you might need to choose an earlier recovery target.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.17 14718

If you are not restoring from a backup, try removing the file "@1@/backup_label".

[Description]
Supplementary information was output.
[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.18 14719

Online backup started with pg_start_backup() must be ended with pg_stop_backup(), and all WAL up to that point must be available at recovery.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.19 14720

WAL control functions cannot be executed during recovery.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.20 14721

wal_level must be set to "replica" or "logical" at server start.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.21 14722

Run pg_stop_backup() and try again.

[Description]
Supplementary information was output.
If you're sure there is no backup in progress, remove file "@1@" and try again.

Check that your archive_command is executing properly. pg_stop_backup can be canceled safely, but the database backup will not be usable without all the WAL segments.

pg_walfile_name_offset() cannot be executed during recovery.

pg_walfile_name() cannot be executed during recovery.
[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.26 14727

WAL redo at @1@/@2@ for @3@

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.27 14731

To avoid a database shutdown, execute a database-wide VACUUM in that database. You might also need to commit or roll back old prepared transactions.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.28 14732

Values larger than a buffer page cannot be indexed.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.29 14733

Valid values are between "@1@" and "@2@".

[Description]
Supplementary information was output.
2.44.30 14734

Valid values are between "@1@" and "@2@".

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.31 14735

Returned type @1@ does not match expected type @2@ in column @3@.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.32 14736

Number of returned columns (@1@) does not match expected column count (@2@).

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.33 14737

Attribute "@1@" of type @2@ does not match corresponding attribute of type @3@.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.
[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.34 14738

Attribute "@1@" of type @2@ does not exist in type @3@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.35 14739

To enable inserting into the view, provide an INSTEAD OF INSERT trigger or an unconditional ON INSERT DO INSTEAD rule.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.36 14740

To enable updating the view, provide an INSTEAD OF UPDATE trigger or an unconditional ON UPDATE DO INSTEAD rule.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.37 14741

To enable deleting from the view, provide an INSTEAD OF DELETE trigger or an unconditional ON DELETE DO INSTEAD rule.

[Description]
Supplementary information was output.

[System Processing]
None.
Refer to this message together with the message that was output immediately beforehand.

2.44.38 14742

SQL function "@1@" statement @2@

Description
Supplementary information was output.

System Processing
None.

Action
Refer to this message together with the message that was output immediately beforehand.

2.44.39 14743

SQL function "@1@"

Description
Supplementary information was output.

System Processing
None.

Action
Refer to this message together with the message that was output immediately beforehand.

2.44.40 14744

SQL function "@1@" during inlining

Description
Supplementary information was output.

System Processing
None.

Action
Refer to this message together with the message that was output immediately beforehand.

2.44.41 14745

Function’s final statement must be SELECT or INSERT/UPDATE/DELETE RETURNING.

Description
Supplementary information was output.

System Processing
None.

Action
Refer to this message together with the message that was output immediately beforehand.
2.44.42 14746
Final statement must return exactly one column.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.43 14747
Actual return type is @1@.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.44 14748
Final statement returns too many columns.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.45 14749
Final statement returns @1@ instead of @2@ at column @3@.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.46 14750
Final statement returns too few columns.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.47 14751

Input has too many columns.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.48 14752

Table has type @1@ at ordinal position @2@, but query expects @3@.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.49 14753

Query provides a value for a dropped column at ordinal position @1@.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.50 14754

Input has too few columns.
Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

Check for missing "SPI_finish" calls.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

SQL statement "@1@"

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

Table has type @1@, but query expects @2@.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

Table row contains @1@ attribute, but query expects @2@.

Supplementary information was output.
2.44.55 14759

Physical storage mismatch on dropped attribute at ordinal position @1@.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.56 14760

Returned row contains @1@ attribute, but query expects @2@.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.57 14761

Returned type @1@ at ordinal position @2@, but query expects @3@.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.58 14762

Array with element type @1@ cannot be included in ARRAY construct with element type @2@.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.
Key @1@ conflicts with key @2@.

Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

Key @1@ conflicts with existing key @2@.

Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

This has been seen to occur with buggy kernels; consider updating your system.

Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

Multiple failures --- write error might be permanent.

Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.44.63 14767

**writing block @1@ of relation @2@**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.64 14768

**Only RowExclusiveLock or less can be acquired on database objects during recovery.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.65 14769

**You might need to increase max_locks_per_transaction.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.66 14771

**You might need to run fewer transactions at a time or increase max_connections.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.67 14772
There might be an idle transaction or a forgotten prepared transaction causing this.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.68 14773

"default_transaction_isolation" is set to "serializable".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.69 14774

You can use "SET default_transaction_isolation = 'repeatable read'" to change the default.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.70 14775

You might need to increase max_pred_locks_per_transaction.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.71 14776

The transaction might succeed if retried.
[Description]
    Supplementary information was output.

[System Processing]
    None.

[Action]
    Refer to this message together with the message that was output immediately beforehand.

2.44.72 14778

User transaction caused buffer deadlock with recovery.

[Description]
    Supplementary information was output.

[System Processing]
    None.

[Action]
    Refer to this message together with the message that was output immediately beforehand.

2.44.73 14779

System allows @1@, we need at least @2@.

[Description]
    Supplementary information was output.

[System Processing]
    None.

[Action]
    Refer to this message together with the message that was output immediately beforehand.

2.44.74 14782

Check free disk space.

[Description]
    Supplementary information was output.

[System Processing]
    None.

[Action]
    Refer to this message together with the message that was output immediately beforehand.

2.44.75 14783

Consider increasing the configuration parameter "max_wal_size".

[Description]
    Supplementary information was output.
2.44.76 14784

Consult recent messages in the server log for details.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.77 14785

This may indicate an incomplete PostgreSQL installation, or that the file "@1@" has been moved away from its proper location.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.78 14786

The server must be started by the user that owns the data directory.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.79 14787

Permissions should be u=rwx (0700).

[Description]
Supplementary information was output.
2.44.80 14788

See C include file "ntstatus.h" for a description of the hexadecimal value.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.81 14789

automatic vacuum of table "@1@.@2@.@3@"

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.82 14790

automatic analyze of table "@1@.@2@.@3@"

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.83 14791

Enable the "track_counts" option.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.
[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.84 14792

The failed archive command was: @1@

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.85 14793

Some of the transaction logs were lost that are necessary to recover the database completely.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.86 14794

Fix the problem by referring to the messages prior to this one. Then take a full backup of the database.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.87 14795

line @1@ of configuration file "@2@": "@3@"

[Description]
Supplementary information was output.

[System Processing]
None.
Refer to this message together with the message that was output immediately beforehand.

**2.44.88 14796**

*Words longer than @1@ characters are ignored.*

**[Description]**

Supplementary information was output.

**[System Processing]**

None.

**[Action]**

Refer to this message together with the message that was output immediately beforehand.

**2.44.89 14797**

*Use "?" to represent a stop word within a sample phrase.*

**[Description]**

Supplementary information was output.

**[System Processing]**

None.

**[Action]**

Refer to this message together with the message that was output immediately beforehand.

**2.44.90 14798**

*Declare it with SCROLL option to enable backward scan.*

**[Description]**

Supplementary information was output.

**[System Processing]**

None.

**[Action]**

Refer to this message together with the message that was output immediately beforehand.

**2.44.91 14799**

*prepare: @1@*

**[Description]**

Supplementary information was output.

**[System Processing]**

None.

**[Action]**

Refer to this message together with the message that was output immediately beforehand.
2.45 Message Numbers Beginning with 14800

2.45.1 14800

parameters: @1@

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.2 14801

abort reason: recovery conflict

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.3 14802

User was holding shared buffer pin for too long.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.4 14803

User was holding a relation lock for too long.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.45.5 14804

**User was or might have been using tablespace that must be dropped.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.6 14805

**User query might have needed to see row versions that must be removed.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.7 14806

**User was connected to a database that must be dropped.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.8 14808

**In a moment you should be able to reconnect to the database and repeat your command.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.9 14809
**An invalid floating-point operation was signaled. This probably means an out-of-range result or an invalid operation, such as division by zero.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.45.10 14810

**Increase the configuration parameter "max_stack_depth" (currently @1@kB), after ensuring the platform's stack depth limit is adequate.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.45.11 14811

**Try "@1@ --help" for more information.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.45.12 14812

**An aggregate returning a polymorphic type must have at least one polymorphic argument.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.45.13 14813
A function returning "internal" must have at least one "internal" argument.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.14 14814

Use DROP FUNCTION @1@ first.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.15 14815

Row type defined by OUT parameters is different.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.16 14816

System catalog modifications are currently disallowed.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.17 14818

A relation has an associated type of the same name, so you must use a name that doesn't conflict with any existing type.
Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

### 2.45.18 14819

**Table "@1@" references "@2@", but they do not have the same ON COMMIT setting.**

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

### 2.45.19 14820

**Table "@1@" references "@2@".**

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

### 2.45.20 14821

**Truncate table "@1@" at the same time, or use TRUNCATE ... CASCADE.**

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

### 2.45.21 14822

**GRANT and REVOKE are not allowed on untrusted languages, because only superusers can use untrusted languages.**
Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.45.22 14823

You can drop @1@ instead.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.45.23 14824

Use DROP ... CASCADE to drop the dependent objects too.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.45.24 14825

An aggregate using a polymorphic transition type must have at least one polymorphic argument.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.45.25 14826

A function returning a polymorphic type must have at least one polymorphic argument.
Labels must be @1@ characters or less.

Valid fork names are "main", "fsm", "vm", and "init".

Continuing to retry for 30 seconds.

You might have antivirus, backup, or similar software interfering with the database system.
[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.30 14832

while executing PostgreSQL::InServer::SPI::bootstrap

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.31 14833

while parsing Perl initialization

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.32 14834

while running Perl initialization

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.33 14835

while executing PLC_TRUSTED

[Description]
Supplementary information was output.

[System Processing]
None.
[Action]
  Refer to this message together with the message that was output immediately beforehand.

2.45.34 14836

while executing utf8fix

[Description]
  Supplementary information was output.

[System Processing]
  None.

[Action]
  Refer to this message together with the message that was output immediately beforehand.

2.45.35 14837

while executing plperl.on_plperl_init

[Description]
  Supplementary information was output.

[System Processing]
  None.

[Action]
  Refer to this message together with the message that was output immediately beforehand.

2.45.36 14838

while executing plperl.on_plperlu_init

[Description]
  Supplementary information was output.

[System Processing]
  None.

[Action]
  Refer to this message together with the message that was output immediately beforehand.

2.45.37 14839

PL/Perl function "@1@"

[Description]
  Supplementary information was output.

[System Processing]
  None.

[Action]
  Refer to this message together with the message that was output immediately beforehand.
**2.45.38 14840**

**compilation of PL/Perl function "@1@"**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.45.39 14841**

**PL/Perl anonymous code block**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.45.40 14842**

**PL/Python function "@1@"**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.45.41 14843**

**PL/Python anonymous code block**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
while modifying trigger row

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.43 14845

while creating return value

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.44 14846

Expected None or a string.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.45 14847

Expected None, "OK", "SKIP", or "MODIFY".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.46 14848

PL/Python set-returning functions only support returning one value per call.
PL/Python set-returning functions must return an iterable object.

To return null in a column, add the value None to the mapping with the key named after the column.

To return null in a column, let the returned object have an attribute named after column with value None.

The arguments of the trigger can be accessed through TG_NARGS and TG_ARGV instead.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.51 14857

**compilation of PL/pgSQL function "@1@" near line @2@**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.52 14858

**It could refer to either a PL/pgSQL variable or a table column.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.53 14859

**PL/pgSQL function @1@ line @2@ @3@**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.54 14860

**PL/pgSQL function @1@ @2@**

[Description]
Supplementary information was output.
[System Processing]
  None.
[Action]
  Refer to this message together with the message that was output immediately beforehand.

2.45.55 14861

**PL/pgSQL function @1@ line @2@ at @3@**

[Description]
  Supplementary information was output.

[System Processing]
  None.
[Action]
  Refer to this message together with the message that was output immediately beforehand.

2.45.56 14862

**PL/pgSQL function @1@**

[Description]
  Supplementary information was output.

[System Processing]
  None.
[Action]
  Refer to this message together with the message that was output immediately beforehand.

2.45.57 14863

**CASE statement is missing ELSE part.**

[Description]
  Supplementary information was output.

[System Processing]
  None.
[Action]
  Refer to this message together with the message that was output immediately beforehand.

2.45.58 14864

**The tuple structure of a not-yet-assigned record is indeterminate.**

[Description]
  Supplementary information was output.

[System Processing]
  None.
Refer to this message together with the message that was output immediately beforehand.

2.45.59 14865

@1@

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.60 14866

Use a BEGIN block with an EXCEPTION clause instead.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.61 14867

If you want to discard the results of a SELECT, use PERFORM instead.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.62 14868

You might want to use EXECUTE ... INTO or EXECUTE CREATE TABLE ... AS instead.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.45.63 14869

Use RETURN NEXT or RETURN QUERY.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.64 14870

@1@in PL/Tcl function "@2@"

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.65 14871

could not translate host name "@1@" to address: @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.66 14873

out of memory

[Description]
There was insufficient free space in the client's memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- Modify the application to reduce memory usage.
**2.45.67 14877**

**host name must be specified**

[Description]

The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]

Processing will be aborted.

>Action

Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

**2.45.68 14881**

**GSSAPI continuation error**

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

>Action

To investigate the cause of the occurrence from the message, and remove cause.

**2.45.69 14882**

**duplicate GSS authentication request**

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

>Action

To investigate the cause of the occurrence from the message, and remove cause.

**2.45.70 14883**

**GSSAPI name import error**

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

>Action

To investigate the cause of the occurrence from the message, and remove cause.
2.45.71 14884

SSPI continuation error
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.45.72 14885

could not acquire SSPI credentials
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.73 14886

SCM_CRED authentication method not supported
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.74 14887

Kerberos 4 authentication not supported
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.75 14888
Kerberos 5 authentication not supported
[Description] An error occurred during execution of the application or command.
[System Processing] Processing will be aborted.
[Action] Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.76 14889

GSSAPI authentication not supported
[Description] An error occurred during execution of the application or command.
[System Processing] Processing will be aborted.
[Action] Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.77 14890

SSPI authentication not supported
[Description] An error occurred during execution of the application or command.
[System Processing] Processing will be aborted.
[Action] Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.78 14891

Crypt authentication not supported
[Description] An error occurred during execution of the application or command.
[System Processing] Processing will be aborted.
[Action] Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.79 14892

authentication method @1@ not supported
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.80 14893
invalid sslmode value: "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.81 14894
sslmode value "@1@" invalid when SSL support is not compiled in

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.82 14895
could not set socket to TCP no delay mode: @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.83 14896
could not connect to server: @1@ Is the server running locally and accepting connections on Unix domain socket "@2@"?
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.84 14897
could not connect to server: @1@ Is the server running on host "@2@" ("@3@") and accepting TCP/IP connections on port @4@?

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.85 14898
could not connect to server: @1@ Is the server running on host "@2@" and accepting TCP/IP connections on port @3@?

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46 Message Numbers Beginning with 14900

2.46.1 14902
setsockopt(@1@) failed: @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.
2.46.2 14903

**WSAioctl(SIO_KEEPALIVE_VALS) failed: @1@i**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.3 14904

**invalid port number: "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.4 14906

**could not translate Unix-domain socket path "@1@" to address: @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.5 14907

**invalid connection state, probably indicative of memory corruption**

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.46.6 14908
could not create socket: @1@

[Description]
There was insufficient free space in the server's memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.46.7 14909

could not set socket to nonblocking mode: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.8 14910

could not set socket to close-on-exec mode: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.9 14911

keepalives parameter must be an integer

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.46.10 14913

could not get socket error status: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.11 14914

could not get client address from socket: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.12 14915

requirepeer parameter is not supported on this platform

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.13 14916

could not get peer credentials: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.14 14918
requirepeer specifies "@1@", but actual peer user name is "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.15 14919

could not send startup packet: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.16 14921

unexpected message from server during startup

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.46.17 14922

could not send SSL negotiation packet: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.18 14923

server does not support SSL, but SSL was required
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.19 14924

received invalid response to SSL negotiation: @1@

An error occurred during communication between the application and the database server.

Processing will be aborted.

Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.46.20 14925

expected authentication request from server, but received @1@

An error occurred during communication between the application and the database server.

Processing will be aborted.

Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.46.21 14926

out of memory allocating GSSAPI buffer (@1@)

There was insufficient free space in the client's memory during execution of the application.

Processing will be aborted.

Estimate memory usage and take the following action:
- Modify the application to reduce memory usage.

2.46.22 14927

invalid connection state @1@, probably indicative of memory corruption
An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

**2.46.23 14928**

*PGEVTProc "@1@" failed during PGEVT_CONNRESET event*

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.46.24 14929**

*invalid LDAP URL "@1@": scheme must be ldap://*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.46.25 14930**

*invalid LDAP URL "@1@": missing distinguished name*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.46.26 14931**

*invalid LDAP URL "@1@": must have exactly one attribute*

[Description]
An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.27 14932

invalid LDAP URL "@1@": must have search scope (base/one/sub)

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.28 14933

invalid LDAP URL "@1@": no filter

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.29 14934

invalid LDAP URL "@1@": invalid port number

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.30 14935

could not create LDAP structure

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.31 14936

lookup on LDAP server failed: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.32 14937

more than one entry found on LDAP lookup

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.33 14938

no entry found on LDAP lookup

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.34 14939

attribute has no values on LDAP lookup

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.46.35 14940

**missing ":=" after "@1@" in connection info string**

[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]
Processing will be aborted.

[Action]
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.46.36 14941

**invalid connection option "@1@"**

[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]
Processing will be aborted.

[Action]
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.46.37 14942

**unterminated quoted string in connection info string**

[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]
Processing will be aborted.

[Action]
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.46.38 14944

**definition of service "@1@" not found**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
### 2.46.39 14945

**service file "@1@" not found**

**[Description]**

The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

**[System Processing]**

Processing will be aborted.

**[Action]**

Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

### 2.46.40 14946

**line @1@ too long in service file "@2@"**

**[Description]**

The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

**[System Processing]**

Processing will be aborted.

**[Action]**

Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

### 2.46.41 14947

**syntax error in service file "@1@", line @2@**

**[Description]**

The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

**[System Processing]**

Processing will be aborted.

**[Action]**

Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

### 2.46.42 14948

**connection pointer is NULL**

**[Description]**

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.43 14951

password retrieved from file "@1@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.46.44 14952

command string is a null pointer

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.45 14953

statement name is a null pointer

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.46 14954

function requires at least protocol version 3.0

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.46.47 14955**

**no connection to the server**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.46.48 14956**

**another command is already in progress**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.46.49 14957**

**length must be given for binary parameter**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.46.50 14958**

**unexpected asyncStatus: @1@**

**Description**
An unexpected error occurred.

**System Processing**
Processing will be aborted.

**Action**
Contact Fujitsu technical support.
2.46.51 14959

**PGEvtProc "@1@" failed during PGEVT_RESULTCREATE event**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.52 14960

**COPY terminated by new PQexec**

[Description]
Processing was canceled.

[System Processing]
Processing will be aborted.

[Action]
Check the message text.

2.46.53 14961

**COPY IN state must be terminated first**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.54 14962

**COPY OUT state must be terminated first**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
PQexec not allowed during COPY BOTH

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.56 14964

no COPY in progress

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.57 14965

connection in wrong state

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.58 14966

invalid ExecStatusType code

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.59 14967

column number @1@ is out of range 0..@2@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.60 14968

row number @1@ is out of range 0..@2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.61 14969

parameter number @1@ is out of range 0..@2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.62 14970

could not interpret result from server: @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.46.63 14971

incomplete multibyte character

[Description]
An error occurred during communication between the application and the database server.
[System Processing]
    Processing will be aborted.

[Action]
    Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.46.64 14972

*cannot determine OID of function lo_truncate*

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.65 14973

*cannot determine OID of function lo_create*

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.66 14974

*could not open file "@1@": @2@

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.67 14975

*could not read from file "@1@": @2@

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.68 14976

could not write to file "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.69 14977

query to initialize large object functions did not return data

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.70 14978

cannot determine OID of function lo_open

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.71 14979

cannot determine OID of function lo_close

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
**2.46.72 14980**

**cannot determine OID of function lo_creat**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.46.73 14981**

**cannot determine OID of function lo_unlink**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.46.74 14982**

**cannot determine OID of function lo_lseek**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.46.75 14983**

**cannot determine OID of function lo_tell**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.
cannot determine OID of function loread

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.77 14985

cannot determine OID of function lowrite

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.78 14986

integer of size @1@ not supported by pqGetInt

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.79 14987

integer of size @1@ not supported by pqPutInt

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.80 14988

connection not open
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.46.81 14989**

*server closed the connection unexpectedly This probably means the server terminated abnormally before or while processing the request.*

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.46.82 14990**

*timeout expired*

Timeout occurred during execution of the application.

Processing will be aborted.

Check the following:
- If executing SQL that outputs a large volume of search results, add a conditional expression to filter the results further.
- If numerous SQLs are being simultaneously executed, reduce the number of simultaneously executed SQLs.
- If a large volume of data is to be updated in a single transaction, modify the SQL to reduce the volume of data to be updated in a single transaction.
- If executing a complex SQL, modify it to a simple SQL.
- Check if there are any problems in the network.
- Before conducting maintenance that involves the processing of a large volume of data, use the SET statement to temporarily increase the value of maintenance_work_mem.

**2.46.83 14991**

*invalid socket*

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.84 14992

select() failed: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.85 14993

invalid setenv state @1@, probably indicative of memory corruption

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.46.86 14994

invalid state @1@, probably indicative of memory corruption

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.46.87 14995

message type 0x@1@ arrived from server while idle

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.
2.46.88 14996

unexpected character @1@ following empty query response ("I" message)

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.46.89 14997

server sent data ("D" message) without prior row description ("T" message)

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.46.90 14998

server sent binary data ("B" message) without prior row description ("T" message)

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.46.91 14999

unexpected response from server; first received character was "@1@"

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.
2.47 Message Numbers Beginning with 15000

2.47.1 15000

**out of memory for query result**

[Description]
There was insufficient free space in the client's memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- Modify the application to reduce memory usage.

2.47.2 15001

**lost synchronization with server, resetting connection**

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.

b) If the total number of update records in a single transaction is high, split it into short transactions.

c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:

  a) Confirm that the database server has not stopped.

  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.47.3 15002

**protocol error: id=0x@1@**

[Description]
An error occurred during communication between the application and the database server.
[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.47.4 15003

server sent data ("D" message) without prior row description ("T" message)

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.47.5 15004

message contents do not agree with length in message type ":1:

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.47.6 15005

lost synchronization with server: got message type ":1", length @2@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
   - If none of the above situations applies, perform the following:
     a) Confirm that the database server has not stopped.
     b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.47.7 15006

unexpected field count in "D" message

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.47.8 15007

PQgetline: not doing text COPY OUT

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.47.9 15008

could not establish SSL connection: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.
Take the following actions:
- Eliminate the cause of the communication disconnection.
Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
- If none of the above situations applies, perform the following:
a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.47.10 15009

SSL SYSCALL error: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.11 15010

SSL SYSCALL error: EOF detected

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.12 15011

SSL error: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.13 15012

SSL connection has been closed unexpectedly

[Description]
The database server was disconnected during execution of the application.
[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.
Take the following actions:
- Eliminate the cause of the communication disconnection.
Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
  a) If the COMMIT process is not executed after update, add the COMMIT process.
  b) If the total number of update records in a single transaction is high, split it into short transactions.
  c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.47.14 15013

unrecognized SSL error code: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.15 15014

could not receive data from server: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.
Take the following actions:
- Eliminate the cause of the communication disconnection.
Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.

b) If the total number of update records in a single transaction is high, split it into short transactions.

c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.47.16 15015
could not send data to server: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
  - An error occurred in the communication line (TCP/IP etc.)
  - The database server terminated abnormally.

Take the following actions:
  - Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.

b) If the total number of update records in a single transaction is high, split it into short transactions.

c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.47.17 15016
could not get server’s host name from server certificate

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.47.18 15017

SSL certificate's name contains embedded null

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.19 15018

host name must be specified for a verified SSL connection

[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]
Processing will be aborted.

[Action]
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.47.20 15019

server certificate for "@1@" does not match host name "@2@"

[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]
Processing will be aborted.

[Action]
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.47.21 15020

could not create SSL context: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.22 15021
could not open certificate file "@1@": @2@
[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]
Processing will be aborted.

[Action]
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.47.23 15022
could not read certificate file "@1@": @2@
[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]
Processing will be aborted.

[Action]
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.47.24 15023
could not load SSL engine "@1@": @2@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.25 15024
could not initialize SSL engine "@1@": @2@
[Description]
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.26 15025

could not read private SSL key "@1@" from engine "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.27 15026

could not load private SSL key "@1@" from engine "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.28 15027

certificate present, but not private key file "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.29 15028

private key file "@1@" has group or world access; permissions should be u=rw (0600) or less

[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.
[System Processing]
Processing will be aborted.

[Action]
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.47.30 15029

could not load private key file "@1@": @2@

[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]
Processing will be aborted.

[Action]
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.47.31 15030

certificate does not match private key file "@1@": @2@

[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]
Processing will be aborted.

[Action]
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.47.32 15031

could not read root certificate file "@1@": @2@

[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]
Processing will be aborted.

[Action]
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.47.33 15032
SSL library does not support CRL certificates (file "@1@")

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.47.34 15033

could not get home directory to locate root certificate file Either provide the file or change sslmode to disable server certificate verification.

[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]
Processing will be aborted.

[Action]
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.47.35 15034

root certificate file "@1@" does not exist Either provide the file or change sslmode to disable server certificate verification.

[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]
Processing will be aborted.

[Action]
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.47.36 15035

certificate could not be obtained: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.47.37 15036

no SSL error reported

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.38 15037

SSL error code @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.39 15038

@1@: vacuuming database "@2@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.47.40 15042

skipped creating .ready file for multiplexed transaction log file "@1@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.47.41 15043
skipped recycling multiplexed transaction log file "@1@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.47.42 15044

skipped removing multiplexed transaction log file "@1@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.47.43 15045

no data found on line @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.44 15046

out of memory on line @1@

[Description]
There was insufficient free space in the server's memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.
**2.47.45 15047**

Unsupported type "@1@" on line @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.47.46 15048**

too many arguments on line @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.47.47 15049**

too few arguments on line @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.47.48 15050**

Invalid input syntax for type int: "@1@", on line @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.47.49 15051**
**invalid input syntax for type unsigned int: @1@ on line @2@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.47.50 15052**

**invalid input syntax for floating-point type: @1@ on line @2@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.47.51 15053**

**invalid syntax for type boolean: @1@ on line @2@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.47.52 15054**

**could not convert boolean value: size mismatch, on line @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.47.53 15055**

**empty query on line @1@**
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

null value without indicator on line @1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

variable does not have an array type on line @1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

data read from server is not an array on line @1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

inserting an array of variables is not supported on line @1@

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.58 15060
connection "@1@" does not exist on line @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.59 15061
not connected to connection "@1@" on line @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.60 15062
invalid statement name "@1@" on line @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.61 15063
descriptor "@1@" not found on line @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.47.62 15064

descriptor index out of range on line @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.63 15065

unrecognized descriptor item "@1@" on line @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.64 15066

variable does not have a numeric type on line @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.65 15067

variable does not have a character type on line @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.47.66 15068

error in transaction processing on line @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.67 15069

could not connect to database "@1@" on line @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.68 15070

SQL error @1@ on line @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.69 15071

the connection to the server was lost

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.70 15072
empty message text

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

\textbf{2.47.71 15074}

\textbf{SP-GiST inner tuple size @1@ exceeds maximum @2@}

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

\textbf{2.47.72 15075}

\textbf{backup_label contains data inconsistent with control file}

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

\textbf{2.47.73 15076}

\textbf{WAL generated with full_page_writes=off was replayed since last restartpoint}

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

\textbf{2.47.74 15077}

\textbf{the standby was promoted during online backup}
WAL generated with full_page_writes=off was replayed during online backup

**Description**
An error occurred.

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

**2.47.75 15078**

cannot set privileges of array types

**Description**
An error occurred.

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

**2.47.76 15080**

drop cascades to @1@ other object
drop cascades to @2@ other objects

**Description**
Terminated normally.

**System Processing**
Continues processing.

**Action**
No action required.

**2.47.77 15081**

constraint "@1@" conflicts with non-inherited constraint on relation "@2@"
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.79 15083

DROP INDEX CONCURRENTLY must be first action in transaction

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.80 15085

domain @1@ has multiple constraints named "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.81 15086

functions cannot have more than @1@ argument
functions cannot have more than @2@ arguments

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.82 15087

skipping "@1@" --- cannot analyze this foreign table
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.47.83 15088

could not convert row type

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.47.84 15089

unexpected EOF on client connection with an open transaction

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.85 15090

EXPLAIN option TIMING requires ANALYZE

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.86 15091

only superuser can define a leakproof function

[Description]
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.87 15092

**cast will be ignored because the source data type is a domain**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.88 15093

**cast will be ignored because the target data type is a domain**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.89 15094

**btree sort support procedures must accept type "internal"**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.90 15095

**btree sort support procedures must return void**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.47.91 15096

Use DROP TABLE to remove a table.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.92 15097

Use DROP SEQUENCE to remove a sequence.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.93 15098

Use DROP VIEW to remove a view.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.94 15099

Use DROP INDEX to remove an index.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.48 Message Numbers Beginning with 15100

2.48.1 15100

Use DROP TYPE to remove a type.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.2 15101

Use DROP FOREIGN TABLE to remove a foreign table.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.3 15102

DROP INDEX CONCURRENTLY does not support dropping multiple objects

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.4 15103

DROP INDEX CONCURRENTLY does not support CASCADE

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.48.5 15104

cannot inherit from temporary relation of another session

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.6 15105

constraints on temporary tables must involve temporary tables of this session

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.7 15106

constraint must be validated on child tables too

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.8 15107

cannot inherit to temporary relation of another session

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.9 15108
constraint "@1@" conflicts with non-inherited constraint on child table "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.10 15109

Found referenced table's UPDATE trigger.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.11 15110

Found referenced table's DELETE trigger.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.12 15111

Found referencing table's trigger.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.13 15112

@1@ constraints cannot be marked NO INHERIT
<table>

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.18 15117

range subtype diff function @1@ must be immutable

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.19 15118

constraint "@1@" of domain "@2@" does not exist, skipping

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.20 15119

"@1@": suspending truncate due to conflicting lock request

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.21 15120

cannot set transaction read-write mode inside a read-only transaction

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.48.22 15121

transaction read-write mode must be set before any query

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.23 15122

cannot set transaction read-write mode during recovery

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.24 15123

SET TRANSACTION ISOLATION LEVEL must be called before any query

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.25 15124

SET TRANSACTION ISOLATION LEVEL must not be called in a subtransaction

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.48.26 15125

**SET TRANSACTION [NOT] DEFERRABLE cannot be called within a subtransaction**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.27 15126

**SET TRANSACTION [NOT] DEFERRABLE must be called before any query**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.28 15127

**cannot delete from view "@1@"**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.29 15128

**GLOBAL is deprecated in temporary table creation**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.30 15129
duplicate trigger events specified
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.48.31 15130
unrecognized configuration parameter "@1@" in file "@2@" line @3@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.32 15131
configuration file "@1@" contains errors
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.33 15132
configuration file "@1@" contains errors; unaffected changes were applied
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.34 15133
configuration file "@1@" contains errors; no changes were applied
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.48.35 15134**

**too many syntax errors found, abandoning file "@1@"**

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.48.36 15135**

**accepting GSS security context failed**

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.48.37 15136**

**retrieving GSS user name failed**

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.48.38 15137**

**could not acquire SSPI credentials**

An error occurred.
Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.48.39 15138

could not accept SSPI security context

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.48.40 15139

could not get token from SSPI security context

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.48.46 15145

**ident, peer, gssapi, sspi, and cert**

**[Description]**
Terminated normally.

**[System Processing]**
Continues processing.

**[Action]**
No action required.
2.48.47 15146

gssapi and sspi

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.48.48 15147

configuration file "@1@" contains no entries

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.49 15148

Unix-domain socket path "@1@" is too long (maximum @2@ bytes)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.50 15149

@1@: WSAStartup failed: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.51 15150
@1@: real and effective user IDs must match

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.52 15151

could not look up effective user ID @1@: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.53 15153

too many range table entries

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.54 15154

SELECT ... INTO is not allowed here

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.55 15155

arguments declared "anyrange" are not all alike
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.48.56 15156**

argument declared @1@ is not consistent with argument declared @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.48.57 15157**

could not load dbghelp.dll, cannot write crash dump

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.48.58 15158**

could not load required functions in dbghelp.dll, cannot write crash dump

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.48.59 15159**

could not open crash dump file "@1@" for writing: error code @2@

An error occurred.
2.48.60 15160

could not write crash dump to file "@1@": error code @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.61 15161

could not check access token membership: error code @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.62 15162

could not get SID for Administrators group: error code @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.63 15163

could not get SID for PowerUsers group: error code @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.64 15164

could not create signal listener pipe: error code @1@; retrying

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.65 15165

could not create signal dispatch thread: error code @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.66 15166

@1@: superuser_reserved_connections must be less than max_connections

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.67 15167

@1@: max_wal_senders must be less than max_connections

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.48.68 15168

@1@: invalid datetoken tables, please fix

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.69 15169

@1@: could not change permissions of external PID file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.70 15170

@1@: could not write external PID file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.71 15171

could not fork new process for connection:

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.72 15172
could not read exit code for process

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.73 15173

could not post child completion status

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.74 15174

could not write to log file: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.75 15175

invalid streaming start location

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.76 15176

unterminated quoted string
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.48.77 15177**

*unexpected WAL file size "@1@"*

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.48.78 15178**

*unterminated bit string literal*

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.48.79 15179**

*unterminated hexadecimal string literal*

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.48.80 15180**

*invalid Unicode surrogate pair*

[Description]
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.81 15181

unterminated dollar-quoted string
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.82 15182

zero-length delimited identifier
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.83 15183

unterminated quoted identifier
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.84 15184

Unicode escape values cannot be used for code point values above 007F when the server encoding is not UTF8
[Description]
An error occurred.
[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.48.85 15185

invalid Unicode escape value

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.48.86 15186

invalid Unicode escape character

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.48.87 15187

temporary file size exceeds temp_file_limit (@1@kB)

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.48.88 15188

a snapshot-importing transaction must not be READ ONLY DEFERRABLE

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.89 15189

could not import the requested snapshot
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.90 15190

connection to client lost
[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]

Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.48.91 15191

invalid command-line argument for server process: @1@
[Description]
An error occurred.
[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

**2.48.92 15194**

range constructor flags argument must not be null

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

**2.48.93 15195**

result of range difference would not be contiguous

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

**2.48.94 15196**

result of range union would not be contiguous

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

**2.48.95 15197**

range lower bound must be less than or equal to range upper bound

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.96 15198

**Invalid range bound flags**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.97 15199

**Could not set up XML error handler**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49 Message Numbers Beginning with 15200

2.49.1 15200

**Keystore_location is not supported by this build**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.2 15201

**Keystore location is not configured**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.49.3 15202

could not encrypt or decrypt data because the keystore is not open

Description
An error occurred.

System Processing
Processing will be aborted.

Action
To investigate the cause of the occurrence from the message, and remove cause.

2.49.4 15203

keystore is already open

Description
An error occurred.

System Processing
Processing will be aborted.

Action
To investigate the cause of the occurrence from the message, and remove cause.

2.49.5 15204

passphrase is too short or too long

Description
An error occurred.

System Processing
Processing will be aborted.

Action
To investigate the cause of the occurrence from the message, and remove cause.

2.49.6 15205

passphrase-based key derivation failed: @1@

Description
An error occurred.

System Processing
Processing will be aborted.

Action
To investigate the cause of the occurrence from the message, and remove cause.
2.49.7 15206

**a new master encryption key has been set**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.8 15207

**passphrase of the keystore has been changed**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.9 15208

**encryption or decryption of data in tablespace @1@ failed: @2@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.10 15209

**encryption or decryption of data failed: @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.11 15210
could not open keystore "@1@": necessary master encryption key does not exist in the keystore

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.12 15211
decryption of the auto-open keystore "@1@" failed: error code = @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.13 15212
encryption of the auto-open keystore "@1@" failed: error code = @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.14 15213
keystore "@1@" is corrupted: size = @2@ bytes, expected size = @3@ bytes

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.15 15214
could not open keystore "@1@": passphrase is wrong, or the auto-open keystore was created by another computer or user

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.16 15215

keystore "@1@" is corrupted: invalid CRC

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.17 15216

encryption or decryption of the keystore "@1@" failed: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.18 15217

character with byte sequence @1@ in encoding "@2@" has no equivalent in encoding "@3@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.19 15218

Enables the planner's use of sequential-scan plans.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.20 15219

Enables the planner's use of index-scan plans.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.21 15220

Enables the planner's use of index-only-scan plans.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.22 15221

Enables the planner's use of bitmap-scan plans.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.23 15222

Enables the planner's use of TID scan plans.

[Description]
Terminated normally.
2.49.24 15223

**Enables the planner’s use of explicit sort steps.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.25 15224

**Enables the planner’s use of hashed aggregation plans.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.26 15225

**Enables the planner’s use of materialization.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.27 15226

**Enables the planner’s use of nested-loop join plans.**

[Description]
Terminated normally.

[System Processing]
Continues processing.
2.49.28 15227

Enables the planner’s use of merge join plans.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.29 15228

Enables the planner’s use of hash join plans.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.30 15229

Enables genetic query optimization.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.31 15230

Shows whether the current user is a superuser.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.49.32 15231
Enables advertising the server via Bonjour.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

2.49.33 15232
Enables SSL connections.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

2.49.34 15233
Forces synchronization of updates to disk.
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.35 15235
Writes full pages to WAL when first modified after a checkpoint.
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.36 15236
Logs each checkpoint.

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.49.37 15237

Logs each successful connection.

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.49.38 15238

Logs end of a session, including duration.

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.49.39 15239

Shows whether the running server has assertion checks enabled.

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.49.40 15240

Terminate session on any error.
2.49.41 15241

Restarts all server processes on WAL multiplexing errors.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.42 15242

Enables fast WAL multiplexing.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.43 15243

Enables encryption of temporary files used in large queries.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.44 15244

Reinitialize server after backend crash.

[Description]
An error occurred.
Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.49.45 15245**

**Logs the duration of each completed SQL statement.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

**2.49.46 15246**

**Logs each query's parse tree.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

**2.49.47 15247**

**Logs each query's rewritten parse tree.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

**2.49.48 15248**

**Logs each query's execution plan.**

[Description]
Terminated normally.

[System Processing]
Continues processing.
[Action]
No action required.

2.49.49 15249

**Indents parse and plan tree displays.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.50 15250

**Writes parser performance statistics to the server log.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.51 15251

**Writes planner performance statistics to the server log.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.52 15252

**Writes executor performance statistics to the server log.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
**2.49.53 15253**

**Writes cumulative performance statistics to the server log.**

[Description]
- Terminated normally.

[System Processing]
- Continues processing.

[Action]
- No action required.

**2.49.54 15255**

**Collects information about executing commands.**

[Description]
- Terminated normally.

[System Processing]
- Continues processing.

[Action]
- No action required.

**2.49.55 15256**

**Collects statistics on database activity.**

[Description]
- Terminated normally.

[System Processing]
- Continues processing.

[Action]
- No action required.

**2.49.56 15257**

**Collects timing statistics for database I/O activity.**

[Description]
- Terminated normally.

[System Processing]
- Continues processing.

[Action]
- No action required.

**2.49.57 15258**
Updates the process title to show the active SQL command.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.58 15259

Starts the autovacuum subprocess.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.59 15260

Generates debugging output for LISTEN and NOTIFY.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.60 15261

Logs long lock waits.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.61 15262

Logs the host name in the connection logs.

<td>No action required.</td>
</tr>
<tr>
<td>2.49.65</td>
<td>Sets the default read-only status of new transactions.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
2.49.66 15269

Sets the current transaction’s read-only status.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.67 15270

Sets the default deferrable status of new transactions.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.68 15271

Whether to defer a read-only serializable transaction until it can be executed with no possible serialization failures.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.69 15272

Check function bodies during CREATE FUNCTION.

[Description]
Terminated normally.
2.49.70 15273
Enable input of NULL elements in arrays.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

2.49.71 15274
Create new tables with OIDs by default.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

2.49.72 15275
Start a subprocess to capture stderr output and/or csvlogs into log files.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

2.49.73 15276
Truncate existing log files of same name during log rotation.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

2.49.74 15277

Emit information about resource usage in sorting.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.75 15278

Generate debugging output for synchronized scanning.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.76 15279

Enable bounded sorting using heap sort.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.77 15280

Emit WAL-related debugging output.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.49.78 15281

**Datetimes are integer based.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.79 15282

**Sets whether Kerberos and GSSAPI user names should be treated as case-insensitive.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.80 15283

**Warn about backslash escapes in ordinary string literals.**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.49.81 15284

**Causes '...' strings to treat backslashes literally.**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.49.82 15285
Enable synchronized sequential scans.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.83 15286

Allows archiving of WAL files using archive_command.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.84 15287

Allows connections and queries during recovery.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.85 15288

Allows feedback from a hot standby to the primary that will avoid query conflicts.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.86 15289

Allows modifications of the structure of system tables.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.87 15290

Disables reading from system indexes.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.88 15291

Enables backward compatibility mode for privilege checks on large objects.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.89 15292

When generating SQL fragments, quote all identifiers.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.90 15293

Forces a switch to the next WAL file if a new file has not been started within N seconds.
[Description]
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.91 15294

Waits N seconds on connection startup after authentication.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.92 15295

Sets the default statistics target.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.93 15296

Sets the FROM-list size beyond which subqueries are not collapsed.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.94 15297

Sets the FROM-list size beyond which JOIN constructs are not flattened.

[Description]
Terminated normally.

[System Processing]
Continues processing.
[Action]
No action required.

2.49.95 15298

Sets the threshold of FROM items beyond which GEQO is used.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.96 15299

GEQO: effort is used to set the default for other GEQO parameters.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50 Message Numbers Beginning with 15300

2.50.1 15300

GEQO: number of individuals in the population.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.2 15301

GEQO: number of iterations of the algorithm.

[Description]
Terminated normally.

[System Processing]
Continues processing.
[Action]
No action required.

2.50.3 15302

**Sets the time to wait on a lock before checking for deadlock.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.4 15303

**Sets the maximum delay before canceling queries when a hot standby server is processing archived WAL data.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.5 15304

**Sets the maximum delay before canceling queries when a hot standby server is processing streamed WAL data.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.6 15305

**Sets the maximum interval between WAL receiver status reports to the primary.**

[Description]
Terminated normally.

[System Processing]
Continues processing.
2.50.7 15306

Sets the maximum number of concurrent connections.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.8 15307

Sets the number of connection slots reserved for superusers.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.9 15308

Sets the number of shared memory buffers used by the server.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.10 15309

Sets the maximum number of temporary buffers used by each session.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.50.11 15310

Sets the TCP port the server listens on.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

2.50.12 15311

Sets the access permissions of the Unix-domain socket.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

2.50.13 15312

Sets the file permissions for log files.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

2.50.14 15313

Sets the maximum memory to be used for query workspaces.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

2.50.15 15314
Sets the maximum memory to be used for maintenance operations.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.16 15315

Sets the maximum stack depth, in kilobytes.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.17 15316

Limits the total size of all temporary files used by each process.

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.50.18 15317

Vacuum cost for a page found in the buffer cache.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.19 15318

Vacuum cost for a page not found in the buffer cache.
Terminated normally.

Continues processing.

No action required.

**2.50.20 15319**

*Vacuum cost for a page dirtied by vacuum.*

Terminated normally.

Continues processing.

No action required.

**2.50.21 15320**

*Vacuum cost amount available before napping.*

Terminated normally.

Continues processing.

No action required.

**2.50.22 15321**

*Vacuum cost delay in milliseconds.*

Terminated normally.

Continues processing.

No action required.

**2.50.23 15322**

*Vacuum cost delay in milliseconds, for autovacuum.*

Terminated normally.
2.50.24 15323

**Vacuum cost amount available before napping, for autovacuum.**

[Description]
Terminated normally.

[Action]
No action required.

2.50.25 15324

**Sets the maximum number of simultaneously open files for each server process.**

[Description]
Terminated normally.

[Action]
No action required.

2.50.26 15325

**Sets the maximum number of simultaneously prepared transactions.**

[Description]
Terminated normally.

[Action]
No action required.

2.50.27 15326

**Sets the maximum allowed duration of any statement.**

[Description]
Terminated normally.

[Action]
No action required.
[Action]
No action required.

2.50.28 15327

Minimum age at which VACUUM should freeze a table row.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.29 15328

Age at which VACUUM should scan whole table to freeze tuples.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.30 15329

Number of transactions by which VACUUM and HOT cleanup should be deferred, if any.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.31 15330

Sets the maximum number of locks per transaction.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

| **2.50.36 15336** |
Sets the maximum time between automatic WAL checkpoints.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.37 15337
Enables warnings if checkpoint segments are filled more frequently than this.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.38 15338
Sets the number of disk-page buffers in shared memory for WAL.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.39 15339
Time between WAL flushes performed in the WAL writer.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.40 15340
Sets the maximum number of simultaneously running WAL sender processes.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.41 15341

Sets the maximum time to wait for WAL replication.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.42 15342

Sets the delay in microseconds between transaction commit and flushing WAL to disk.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.43 15343

Sets the minimum concurrent open transactions before performing commit_delay.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.44 15344

Sets the number of digits displayed for floating-point values.

[Description]
Terminated normally.
Continues processing.

No action required.

2.50.45 15345
Sets the minimum execution time above which statements will be logged.
Description
Terminated normally.

2.50.46 15346
Sets the minimum execution time above which autovacuum actions will be logged.
Description
Terminated normally.

2.50.47 15347
Background writer sleep time between rounds.
Description
Terminated normally.

2.50.48 15348
Background writer maximum number of LRU pages to flush per round.
Description
Terminated normally.
No action required.

2.50.49 15349

Number of simultaneous requests that can be handled efficiently by the disk subsystem.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.50 15350

Automatic log file rotation will occur after N minutes.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.51 15351

Automatic log file rotation will occur after N kilobytes.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.52 15352

Shows the maximum number of function arguments.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.50.53 15353

Shows the maximum number of index keys.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.54 15354

Shows the maximum identifier length.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.55 15355

Shows the size of a disk block.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.56 15356

Shows the number of pages per disk file.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.57 15357
Shows the block size in the write ahead log.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.58 15358

Shows the number of pages per write ahead log segment.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.59 15359

Time to sleep between autovacuum runs.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.60 15360

Minimum number of tuple updates or deletes prior to vacuum.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.61 15361

Minimum number of tuple inserts, updates, or deletes prior to analyze.
2.50.62 15362

**Age at which to autovacuum a table to prevent transaction ID wraparound.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.63 15363

**Sets the maximum number of simultaneously running autovacuum worker processes.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.64 15364

**Time between issuing TCP keepalives.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.65 15365

**Time between TCP keepalive retransmits.**

[Description]
Terminated normally.
Continues processing.

No action required.

**2.50.66 15366**

**SSL renegotiation is no longer supported; this can only be 0.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

**2.50.67 15367**

**Maximum number of TCP keepalive retransmits.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

**2.50.68 15368**

**Sets the maximum allowed result for exact search by GIN.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

**2.50.69 15369**

**Sets the planner’s assumption about the size of the disk cache.**

[Description]
Terminated normally.

[System Processing]
Continues processing.
2.50.70 15370

**Shows the server version as an integer.**

**[Description]**
- Terminated normally.

**[System Processing]**
- Continues processing.

**[Action]**
- No action required.

2.50.71 15371

**Log the use of temporary files larger than this number of kilobytes.**

**[Description]**
- Terminated normally.

**[System Processing]**
- Continues processing.

**[Action]**
- No action required.

2.50.72 15372

**Sets the size reserved for pg_stat_activity.query, in bytes.**

**[Description]**
- Terminated normally.

**[System Processing]**
- Continues processing.

**[Action]**
- No action required.

2.50.73 15373

**Sets the planner’s estimate of the cost of a sequentially fetched disk page.**

**[Description]**
- Terminated normally.

**[System Processing]**
- Continues processing.

**[Action]**
- No action required.
2.50.74 15374

Sets the planner's estimate of the cost of a nonsequentially fetched disk page.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.75 15375

Sets the planner's estimate of the cost of processing each tuple (row).

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.76 15376

Sets the planner's estimate of the cost of processing each index entry during an index scan.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.77 15377

Sets the planner's estimate of the cost of processing each operator or function call.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.78 15378
Sets the planner’s estimate of the fraction of a cursor’s rows that will be retrieved.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.79 15379

GEQO: selective pressure within the population.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.80 15380

GEQO: seed for random path selection.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.81 15381

Multiple of the average buffer usage to free per round.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.82 15382

Sets the seed for random-number generation.
Terminated normally.

Continues processing.

No action required.

2.50.83 15383

**Number of tuple updates or deletes prior to vacuum as a fraction of reltuples.**

Terminated normally.

Continues processing.

No action required.

2.50.84 15384

**Number of tuple inserts, updates, or deletes prior to analyze as a fraction of reltuples.**

Terminated normally.

Continues processing.

No action required.

2.50.85 15385

**Time spent flushing dirty buffers during checkpoint, as fraction of checkpoint interval.**

Terminated normally.

Continues processing.

No action required.

2.50.86 15386

**Sets the shell command that will be called to archive a WAL file.**

Terminated normally.
2.50.87 15387

Sets the client's character set encoding.

[Description]
Terminated normally.

[Action]
No action required.

2.50.88 15388

Controls information prefixed to each log line.

[Description]
Terminated normally.

[Action]
No action required.

2.50.89 15389

Sets the time zone to use in log messages.

[Description]
Terminated normally.

[Action]
No action required.

2.50.90 15390

Sets the display format for date and time values.

[Description]
Terminated normally.

[Action]
No action required.
[Action]
No action required.

2.50.91 15391

**Sets the default tablespace to create tables and indexes in.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.92 15392

**Sets the tablespace(s) to use for temporary tables and sort files.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.93 15393

**Sets the path for dynamically loadable modules.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.94 15394

**Sets the location of the Kerberos server key file.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.50.95 15396

**Sets the Bonjour service name.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.96 15397

**Shows the collation order locale.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.97 15398

**Shows the character classification and case conversion locale.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.98 15399

**Sets the language in which messages are displayed.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.51 Message Numbers Beginning with 15400

2.51.1 15400

Sets the locale for formatting monetary amounts.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.2 15401

Sets the locale for formatting numbers.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.3 15402

Sets the locale for formatting date and time values.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.4 15403

Lists shared libraries to preload into server.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.51.5 15404

Lists shared libraries to preload into each backend.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.6 15405

Sets the schema search order for names that are not schema-qualified.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.7 15406

Sets the server (database) character set encoding.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.8 15407

Shows the server version.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.9 15408
Sets the current role.
[Description]
   Terminated normally.
[System Processing]
   Continues processing.
[Action]
   No action required.

2.51.10 15409

Sets the session user name.
[Description]
   Terminated normally.
[System Processing]
   Continues processing.
[Action]
   No action required.

2.51.11 15410

Sets the destination for server log output.
[Description]
   Terminated normally.
[System Processing]
   Continues processing.
[Action]
   No action required.

2.51.12 15411

Sets the destination directory for log files.
[Description]
   Terminated normally.
[System Processing]
   Continues processing.
[Action]
   No action required.

2.51.13 15412

Sets the file name pattern for log files.
2.51.14 15413

Sets the program name used to identify PostgreSQL messages in syslog.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.15 15414

Sets the application name used to identify PostgreSQL messages in the event log.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.16 15415

Sets the time zone for displaying and interpreting time stamps.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.17 15416

Selects a file of time zone abbreviations.

[Description]
Terminated normally.
[System Processing]
Continues processing.

[Action]
No action required.

### 2.51.18 15417
**Sets the current transaction’s isolation level.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

### 2.51.19 15418
**Sets the owning group of the Unix-domain socket.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

### 2.51.20 15419
**Sets the directories where Unix-domain sockets will be created.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

### 2.51.21 15420
**Sets the host name or IP address(es) to listen to.**

[Description]
Terminated normally.

[System Processing]
Continues processing.
[Action]
No action required.

2.51.22 15421

Sets the server's data directory.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.23 15422

Sets the server's backup directory.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.24 15423

Sets the directory where multiplexed transaction log files are stored.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.25 15424

Sets the directory where server's core files are dumped.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.51.26 15425
Sets the location where the keystore is stored
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

2.51.27 15426
Sets the server's main configuration file.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

2.51.28 15427
Sets the server's "hba" configuration file.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

2.51.29 15428
Sets the server's "ident" configuration file.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

2.51.30 15429
Writes the postmaster PID to the specified file.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.31 15430

Location of the SSL server certificate file.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.32 15431

Location of the SSL server private key file.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.33 15432

Location of the SSL certificate authority file.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.34 15433

Location of the SSL certificate revocation list file.
Terminated normally.

Continues processing.

No action required.

2.51.35 15434

Writes temporary statistics files to the specified directory.

Terminated normally.

Continues processing.

No action required.

2.51.36 15435

Number of synchronous standbys and list of names of potential synchronous ones.

Terminated normally.

Continues processing.

No action required.

2.51.37 15436

Sets default text search configuration.

Terminated normally.

Continues processing.

No action required.

2.51.38 15437

Sets the list of allowed SSL ciphers.

Terminated normally.
[System Processing]
Continues processing.

[Action]
No action required.

2.51.39 15438

Sets the application name to be reported in statistics and logs.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.40 15439

Sets whether "\\" is allowed in string literals.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.41 15440

Sets the output format for bytea.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.42 15441

Sets the message levels that are sent to the client.

[Description]
Terminated normally.

[System Processing]
Continues processing.
Enables the planner to use constraints to optimize queries.

Terminated normally.

Continues processing.

No action required.

Sets the transaction isolation level of each new transaction.

Terminated normally.

Continues processing.

No action required.

Sets the display format for interval values.

Terminated normally.

Continues processing.

No action required.

Sets the verbosity of logged messages.

Terminated normally.

Continues processing.

No action required.
2.51.47 15446

Sets the message levels that are logged.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.48 15447

Causes all statements generating error at or above this level to be logged.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.49 15448

Sets the type of statements logged.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.50 15449

Sets the syslog "facility" to be used when syslog enabled.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.51 15450
Sets the session's behavior for triggers and rewrite rules.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.52 15451

Sets the current transaction's synchronization level.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.53 15452

Enables logging of recovery-related debugging information.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.54 15453

Collects function-level statistics on database activity.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.55 15454

Set the level of information written to the WAL.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.56 15455

Selects the method used for forcing WAL updates to disk.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.57 15456

Sets how binary values are to be encoded in XML.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.58 15457

Sets whether XML data in implicit parsing and serialization operations is to be considered as documents or content fragments.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.59 15458

Sets what to dump in core files.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.60 15459

Selects the algorithm for encrypting tablespaces.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.61 15460

@1@: could not access the server configuration file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.62 15461

SET LOCAL TRANSACTION SNAPSHOT is not implemented

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.63 15464

Bonjour is not supported by this build

[Description]
An error occurred.
[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.51.64 15465

**SSL is not supported by this build**

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.51.65 15466

**internal error: unrecognized run-time parameter type**

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.51.66 15467

**time zone abbreviation "@1@" is too long (maximum @2@ characters) in time zone file "@3@", line @4@**

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.51.67 15468

**invalid number for time zone offset in time zone file "@1@", line @2@**

[Description]
  An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.68 15469

time zone offset @1@ is out of range in time zone file "@2@", line @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.69 15470

missing time zone abbreviation in time zone file "@1@", line @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.70 15471

missing time zone offset in time zone file "@1@", line @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.71 15473

invalid syntax in time zone file "@1@", line @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

**2.51.72 15474**

time zone abbreviation "@1@" is multiply defined
[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

**2.51.73 15475**

invalid time zone file name "@1@"
[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

**2.51.74 15476**

time zone file recursion limit exceeded in file "@1@"
[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

**2.51.75 15477**

line is too long in time zone file "@1@", line @2@
[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.
2.51.76 15478

@INCLUDE without file name in time zone file "@1@", line @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.77 15479
cannot export a snapshot from a subtransaction

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.78 15480

invalid snapshot data in file "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.79 15481

SET TRANSACTION SNAPSHOT must be called before any query

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.80 15482
**a snapshot-importing transaction must have isolation level SERIALIZABLE or REPEATABLE READ**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.51.81 15483

**invalid snapshot identifier: "@1@"**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.51.82 15484

**a serializable transaction cannot import a snapshot from a non-serializable transaction**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.51.83 15485

**a non-read-only serializable transaction cannot import a snapshot from a read-only transaction**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.51.84 15486
cannot import a snapshot from a different database

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.85 15487

out of memory

[Description]
There was insufficient free space in the server's memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.51.86 15488

@1@: could not open file "@2" for reading: @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.87 15489

@1@: could not open file "@2" for writing: @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.51.88 15490

@1@: could not write file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.89 15491

@1@: could not execute command "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.90 15492

@1@: removing data directory "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.91 15493

@1@: failed to remove data directory

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.92 15494
@1@: removing contents of data directory "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.93 15495

@1@: failed to remove contents of data directory

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52 Message Numbers Beginning with 15500

2.52.1 15500

@1@: data directory "@2@" not removed at user's request

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.2 15503

user name lookup failure: error code @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.52.3 15504

@1@: "@2@" is not a valid server encoding name

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.4 15505

@1@: could not create directory "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.5 15506

@1@: file "@2@" does not exist

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.6 15507

@1@: could not access file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.7 15508
@1@: file "@2@" is not a regular file

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.8 15509

Passwords didn't match.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.9 15510

@1@: could not read password from file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.10 15515

could not write to child process: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.11 15516

ok
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.52.12 15517

@1@: failed to restore old locale "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.13 15518

@1@: invalid locale name "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.14 15519

@1@: encoding mismatch

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.15 15525

@1@ initializes a PostgreSQL database cluster.

[Description]
An error occurred.
2.52.16 15527
@1@: invalid authentication method "@2@" for "@3@" connections
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.17 15528
@1@: must specify a password for the superuser to enable @2@ authentication
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.18 15529
@1@: too many command-line arguments (first is "@2@")
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.19 15530
@1@: password prompt and password file cannot be specified together
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.20 15533

The program "postgres" is needed by @1@ but was not found in the same directory as "@2@". Check your installation.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.21 15534

The program "postgres" was found by "@1@" but was not the same version as @2@. Check your installation.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.22 15535

@1@: input file location must be an absolute path

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.23 15536

@1@: could not find suitable encoding for locale "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.52.24 15537

@1@: locale "@2@" requires unsupported encoding "@3@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.25 15538

@1@: could not find suitable text search configuration for locale "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.26 15539

@1@: warning: suitable text search configuration for locale "@2@" is unknown

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.52.27 15540

@1@: warning: specified text search configuration "@2@" might not match locale "@3@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.52.28 15541

The default text search configuration will be set to "@1@".

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.52.29 15542

@1@: directory "@2@" exists but is not empty

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.30 15543

@1@: could not access directory "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.31 15544

@1@: WAL directory location must be an absolute path

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.32 15545
@1@: could not create symbolic link "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.33 15546

@1@: symlinks are not supported on this platform

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.34 15547

@1@: could not read from ready pipe: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.35 15548

@1@: could not parse write-ahead log location "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.36 15549

@1@: could not create pipe for background process: @2@
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.52.37 15550

@1@: could not create background process: @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.52.38 15551

@1@: could not create background thread: @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.52.39 15552

@1@: could not create directory "@2": @3@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.52.40 15553

@1@: directory "@2" exists but is not empty

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.41 15554

@1@: could not access directory "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.42 15555

@1@s/@2@ kB (100@3@), @4@/@5@ tablespace @6@s

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.52.43 15556

@1@s/@2@ kB (@3@@4@), @5@/@6@ tablespace (@7@%-.*s)

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.52.44 15560

@1@s/@2@ kB (@3@@4@), @5@/@6@ tablespace

[Description]
Terminated normally.

[System Processing]
Continues processing.
No action required.

2.52.45 15561

@1@: could not set compression level @2@: @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.46 15562

@1@: could not create compressed file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.47 15563

@1@: could not create file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.48 15564

@1@: could not get COPY data stream: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.52.49 15565

@1@: could not write to compressed file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.50 15566

@1@: could not write to file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.51 15567

@1@: could not close compressed file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.52 15568

@1@: could not close file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.53 15569
@1@: could not read COPY data: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.54 15570

@1@: invalid tar block header size: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.55 15573

@1@: could not set permissions on directory "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.56 15574

@1@: could not create symbolic link from "@2@" to "@3@": @4@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.57 15575

@1@: unrecognized link indicator "@2@"
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.52.58 15576

@1@: could not set permissions on file "@2@": @3@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.52.59 15577

@1@: COPY stream ended before last file was finished

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.52.60 15578

@1@: could not send replication command "@2@": @3@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.52.61 15579

@1@: could not identify system: got @2@ rows and @3@ fields, expected @4@ rows and @5@ or more fields
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.62 15580

@1@: could not initiate base backup: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.63 15581

@1@: no data returned from server

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.64 15582

@1@: could not get backup header: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.65 15584

@1@: can only write single tablespace to stdout, database has @2@

[Description]
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.66 15585

@1@: starting background WAL receiver

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.67 15586

@1@: could not get write-ahead log end position from server: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.68 15587

@1@: no write-ahead log end position returned from server

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.69 15588

@1@: final receive failed: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.70 15589

@1@: could not send command to background pipe: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.71 15590

@1@: could not wait for child process: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.72 15591

@1@: child @2@ died, expected @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.73 15592

@1@: child process did not exit normally

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.52.74 15593

@1@: child process exited with error @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.75 15594

@1@: could not wait for child thread: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.76 15595

@1@: could not get child thread exit status: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.77 15596

@1@: child thread exited with error @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.78 15597
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

---

2.52.79 15599

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

---

2.53 Message Numbers Beginning with 15600

2.53.1 15600

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

---

2.53.2 15601

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.
2.53.3 15602

@1@: too many command-line arguments (first is "@2@")

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.4 15603

@1@: no target directory specified

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.5 15604

@1@: only tar mode backups can be compressed

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.6 15606

@1@: this build does not support compression

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.7 15607
@1@: finished segment at @2@/@3@ (timeline @4@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.8 15608

@1@: received interrupt signal, exiting

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.9 15609

@1@: could not open directory "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.10 15611

@1@: could not stat file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.11 15612

@1@: segment file "@2@" has incorrect size @3@, skipping
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.12 15613

@1@: starting log streaming at @2@/@3@ (timeline @4@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.13 15614

@1@: invalid port number "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.14 15615

@1@: disconnected

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.15 15616

@1@: disconnected; waiting @2@ seconds to try again

[Description]
An error occurred.
[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.53.16 15617
@1@: could not open existing write-ahead log file "@2@": @3@
[Description]
  An error occurred.
[System Processing]
  Processing will be aborted.
[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.53.17 15619
@1@: write-ahead log file "@2@" has @3@ byte, should be 0 or @4@
[Description]
  An error occurred.
[System Processing]
  Processing will be aborted.
[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.53.18 15622
@1@: could not determine seek position in file "@2@": @3@
[Description]
  An error occurred.
[System Processing]
  Processing will be aborted.
[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.53.19 15623
@1@: could not fsync file "@2@": @3@
[Description]
  An error occurred.
[System Processing]
  Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.53.20 15625

@1@: not renaming "@2@@3@", segment is not complete

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.21 15626

@1@: system identifier does not match between base backup and streaming connection

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.22 15628

@1@: could not send feedback packet: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.23 15629

@1@: select() failed: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.53.24 15630

@1@: could not receive data from WAL stream: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.25 15632

@1@: unrecognized streaming header: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.26 15633

@1@: streaming header too small: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.27 15634

@1@: received write-ahead log record for offset @2@ with no file open

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.28 15635
@1@: got WAL data offset @2@, expected @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.29 15636

@1@: could not write @2@ bytes to WAL file "@3@": @4@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.30 15637

@1@: unexpected termination of replication stream: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.31 15638

@1@: replication stream was terminated before stop point

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.32 15640

@1@: could not connect to server
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.53.33 15642**

@1@: could not determine server setting for integer_datetimes

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.53.34 15643**

@1@: integer_datetimes compile flag does not match server

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.53.35 15645**

@1@: could not find own program executable

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.53.36 15646**

@1@: invalid argument: @2@

An error occurred.
Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.53.37 15647

@1@: no data directory specified
[Description]
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.53.38 15648

@1@: could not open file "@2@" for reading: @3@
[Description]
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.53.39 15649

@1@: could not read file "@2@": @3@
[Description]
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.53.40 15652

child process exited with unrecognized status @1@
[Description]
An error occurred.

Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.41 15653

@1@: could not open PID file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.42 15654

@1@: invalid data in PID file "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.43 15658

@1@: cannot set core file size limit; disallowed by hard limit

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.44 15659

@1@: could not read file "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.53.45 15660

@1@: option file "@2@" must have exactly one line

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.46 15661

The program "@1@" is needed by @2@ but was not found in the same directory as "@3@". Check your installation.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.47 15662

The program "@1@" was found by @2@ but was not the same version as @3@. Check your installation.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.48 15663

@1@: database system initialization failed

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.53.49 15664

@1@: another server might be running; trying to start server anyway

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.50 15666

@1@: could not start server
Examine the log output.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.51 15668

@1@: PID file "@2@" does not exist

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.52 15669

Is server running?

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.53 15670
@1@: cannot stop server; single-user server is running (PID: @2@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.54 15671

@1@: could not send stop signal (PID: @2@): @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.55 15673

@1@: server does not shut down

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.56 15674

@1@: cannot restart server; single-user server is running (PID: @2@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.57 15675

@1@: old server process (PID: @2@) seems to be gone
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.58 15676

@1@: cannot reload server; single-user server is running (PID: @2@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.59 15677

@1@: could not send reload signal (PID: @2@): @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.60 15678

@1@: cannot promote server; single-user server is running (PID: @2@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.61 15679

@1@: cannot promote server; server is not in standby mode

[Description]
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.62 15680

@1@: could not create promote signal file "@2@": @3@  
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.63 15681

@1@: could not write promote signal file "@2@": @3@  
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.64 15682

@1@: could not send promote signal (PID: @2@): @3@  
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.65 15683

@1@: could not send signal @2@ (PID: @3@): @4@  
[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.53.66 15684**

[@1@: could not find own program executable](#)

**Description**
An error occurred.

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

**2.53.67 15685**

[@1@: could not find postgres program executable](#)

**Description**
An error occurred.

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

**2.53.68 15686**

[@1@: could not open service manager](#)

**Description**
An error occurred.

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

**2.53.69 15687**

[@1@: service "@2@" already registered](#)

**Description**
An error occurred.

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.
2.53.70 15688
@1@: could not register service "@2@": error code @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.71 15689
@1@: service "@2@" not registered

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.72 15690
@1@: could not open service "@2@": error code @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.73 15691
@1@: could not unregister service "@2@": error code @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.74 15692
Timed out waiting for server startup

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.75 15693

@1@: could not start service "@2@": error code @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.76 15695

@1@: could not open process token: error code @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.77 15696

@1@: could not allocate SIDs: error code @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.78 15697

@1@: could not create restricted token: error code @2@
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

### 2.53.79 15699

**@1@**: unrecognized shutdown mode "@2@"

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

### 2.54 Message Numbers Beginning with 15700

#### 2.54.1 15700

**@1@**: unrecognized signal name "@2@"

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

#### 2.54.2 15701

**@1@**: unrecognized start type "@2@"

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

#### 2.54.3 15702

**@1@**: could not determine the data directory using command "@2@"
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.4 15703
@1@: -S option not supported on this platform

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.5 15704
@1@: too many command-line arguments (first is "@2@")

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.6 15705
@1@: missing arguments for kill mode

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.7 15706
@1@: unrecognized operation mode "@2@"

[Description]
An error occurred.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.12 15711

could not parse numeric array "@1@": invalid character in number

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.13 15712

invalid compression code: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.14 15713

not built with zlib support

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.15 15714

could not initialize compression library: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.54.16 15715

could not close compression stream: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.17 15716

could not compress data: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.18 15718

could not uncompress data: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.19 15719

could not close compression library: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.20 15720
cannot duplicate null pointer (internal error)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.21 15721

@1@: unrecognized section name: "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.22 15722

out of on_exit_nicely slots

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.23 15723

could not close output file: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.24 15725

unexpected section code @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.25 15726

**parallel restore is not supported with this archive file format**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.26 15727

**parallel restore is not supported with archives made by pre-8.0 pg_dump**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.27 15728

**cannot restore from compressed archive (compression not supported in this installation)**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.28 15729

**connecting to database for restore**

[Description]
Terminated normally.
Continues processing.

No action required.

**2.54.29 15730**

**direct database connections are not supported in pre-1.3 archives**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.54.30 15731**

**warning from original dump file: @1@**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

**2.54.31 15732**

**internal error -- WriteData cannot be called outside the context of a DataDumper routine**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.54.32 15733**

**large-object output not supported in chosen format**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.54.33 15734

restored @1@ large object

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.34 15736

could not create large object @1@: @2@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.54.35 15737

could not open large object @1@: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.36 15738

could not open TOC file "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
could not find entry for ID @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

could not close TOC file: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

could not open output file "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

could not open output file: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
wrote @1@ byte of large object data (result = @2@)

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.54.42 15746
could not write to large object (result: @1@, expected: @2@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.43 15748
Error while INITIALIZING:

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.44 15749
Error while PROCESSING TOC:

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.45 15750
Error while FINALIZING:
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.54.46 15751

Error from TOC entry @1@; @2@ @3@ @4@ @5@ @6@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.54.47 15752

bad dumpId

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.54.48 15753

bad table dumpId for TABLE DATA item

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.54.49 15754

unexpected data offset flag @1@

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.50 15755

file offset in dump file is too large

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.51 15757

directory name too long: "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.52 15758

directory "@1@" does not appear to be a valid archive ("toc.dat" does not exist)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.53 15759

could not open input file "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.54.54 15760  

could not open input file: @1@  

[Description]  
An error occurred.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.54.55 15761  

could not read input file: @1@  

[Description]  
An error occurred.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.54.56 15762  

could not open input file: @1@  

[Description]  
An error occurred.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.54.57 15763  

could not open input file: @1@  

[Description]  
An error occurred.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.
2.54.58 15764

input file does not appear to be a valid archive (too short?)
[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.54.59 15765

input file does not appear to be a valid archive
[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.54.60 15766

could not close input file: @1@
[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.54.61 15767

unrecognized file format "@1@"
[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.
entry ID @1@ out of range -- perhaps a corrupt TOC

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.63 15769

read TOC entry @1@ (ID @2@) for @3@ @4@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.64 15770

unrecognized encoding "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.65 15771

invalid ENCODING item: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.66 15772

invalid STDSTRINGS item: @1@
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.54.67 15773**

**could not set session user to "@1@": @2@**

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.54.68 15774**

**could not set default_with_oids: @1@**

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.54.69 15775**

**could not set search_path to "@1@": @2@**

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.54.70 15776**

**could not set default_tablespace to @1@: @2@**

An error occurred.
Processing will be aborted.

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

### 2.54.71 15779

**did not find magic string in file header**

**[Description]**

An error occurred.

**[System Processing]**

Processing will be aborted.

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

### 2.54.72 15780

**unsupported version (@1@.@2@) in file header**

**[Description]**

An error occurred.

**[System Processing]**

Processing will be aborted.

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

### 2.54.73 15781

**sanity check on integer size (@1@) failed**

**[Description]**

An error occurred.

**[System Processing]**

Processing will be aborted.

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

### 2.54.74 15783

**expected format (@1@) differs from format found in file (@2@)**

**[Description]**

An error occurred.

**[System Processing]**

Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

**2.54.75 15786**

*a worker process died unexpectedly*

**[Description]**

An error occurred.

**[System Processing]**

Processing will be aborted.

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

**2.54.76 15787**

*processing missed item @1@ @2@ @3@*

**[Description]**

An error occurred.

**[System Processing]**

Processing will be aborted.

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

**2.54.77 15789**

*could not create worker process: @1@*

**[Description]**

An error occurred.

**[System Processing]**

Processing will be aborted.

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

**2.54.78 15791**

*no item ready*

**[Description]**

An error occurred.

**[System Processing]**

Processing will be aborted.

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

found unexpected block ID (@1@) when reading data -- expected @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.4 15803

unrecognized data block type @1@ while restoring archive

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.5 15804

could not read from input file: end of file

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.6 15805
could not read from input file: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.7 15807

could not close archive file: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.8 15808

can only reopen input archives

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.9 15809

parallel restore from standard input is not supported

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.10 15810

parallel restore from non-seekable file is not supported
2.55.11 15811

could not determine seek position in archive file: @@1@@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.12 15812

could not set seek position in archive file: @@1@@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.13 15814

@@1@@: could not parse server version "@@2@@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.14 15815

could not get server_version from libpq

[Description]
An error occurred.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.56.42 15959**

@1@: could not change directory to "@2@": @3@

[Description]
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.43 15960

@1@: could not open file "@2@" for reading: @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.44 15961

If these values seem acceptable, use -f to force reset.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.45 15962

Transaction log reset

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.46 15963

@1@: could not read file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.47 15964

@1@: pg_control exists but has invalid CRC; proceed with caution

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.48 15965

@1@: pg_control exists but is broken or unknown version; ignoring it

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.49 15966

@1@: internal error -- sizeof(ControlFileData) is too large ... fix PG_CONTROL_SIZE

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.50 15967

@1@: could not create pg_control file: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.56.51 15968

@1@: could not write pg_control file: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.52 15969

@1@: fsync error: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.53 15970

@1@: could not open directory "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.54 15971

@1@: could not read directory "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.55 15972
@1@: could not delete file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.56 15973

@1@: could not open file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.57 15974

@1@: could not write file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.58 15975

could not create directory "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.59 15976

could not open directory "@1@": @2@
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.56.60 15977

could not stat file "@1@": @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.56.61 15978

could not read symbolic link "@1@": @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.56.62 15979

could not create symbolic link "@1@": @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.56.63 15980

out of memory

There was insufficient free space in the server's memory during execution of the application.
[System Processing]  
Processing will be aborted.

[Action]  
Estimate memory usage and take the following action:  
- If the number of simultaneous connections from client applications is high, reduce it.  
- If the number of simultaneous SQL executions is high, reduce it.

2.56.64 15981

could not open file "@1@": @2@  
[Description]  
An error occurred.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.56.65 15982

could not create file "@1@": @2@  
[Description]  
An error occurred.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.56.66 15983

could not read file "@1@": @2@  
[Description]  
An error occurred.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.56.67 15984

could not write to file "@1@": @2@  
[Description]  
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.68 15985

could not fsync file "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.69 15986

could not close file "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.70 15987

@1@: could not find own program executable

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.71 15988

@1@: invalid checkpoint argument "@2@", must be "fast" or "spread"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.72 15989

@1@: invalid argument @2@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.73 15990

@1@: option @2@ conflicts with option @3@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.74 15991

@1@: the configured database storage directory differs from the data_directory parameter
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.75 15992

@1@: an invalid value was specified for the option -@2@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.56.76 15993

@1@: backup data "@2@" is lost

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.77 15994

@1@: cannot be run as root

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.78 15995

@1@: invalid option --@2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.79 15996

@1@: invalid option -@2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.80 15997

- 969 -
@1@: backup of the database has not yet been performed, or an incorrect backup storage directory was specified

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.81 15998

@1@: the database storage directory and the $PGDATA environment variable have not been specified

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.82 15999

@1@: option @2@ is necessary for option @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57 Message Numbers Beginning with 16000

2.57.1 16000

@1@: the requested recovery point is earlier than the date and time that the backup finished

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.57.2 16001

@1@: the specified backup does not exist

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.3 16002

@1@: the directory "@2@" for the tablespace with OID "@3@" does not exist

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.4 16003

@1@: the specified backup storage directory "@2@" is not correct

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.5 16004

@1@: the specified database storage directory is not correct

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.6 16005
@1@: the token in the file "pg_hba.conf" is too long and will be skipped: "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.7 16006

the directory "@1@" for storing WAL does not exist

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.8 16007

@1@: "@2@" is being executed by another user

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.9 16008

@1@: the "@2@" parameter was not found

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.10 16009

@1@: could not find the configuration file "@2@"
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.11 16010

@1@: could not open the configuration file "@2@": maximum nesting depth exceeded

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.12 16011

@1@: the PID file "@2@" does not exist

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.13 16012

@1@: the server is running

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.14 16013

@1@: the server is not running

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.15 16014

@1@: caught signal @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.16 16015

@1@: failed to build the absolute path "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.17 16016

@1@: failed to check the completion of archiving WAL files

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.18 16017

@1@: failed to connect to the database

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.19 16018

@1@: failed to get the database OID : @2@ (@3@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.20 16019

@1@: failed to remove old backup data

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.21 16020

@1@: failed to restore the database storage directory "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.22 16021

@1@: failed to restore the tablespace directory "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.57.23 16022

@1@: retried backup @2@ times, but failed

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.24 16023

@1@: SQL command failed (@2@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.25 16024

@1@: the database with OID @2@ was created during backup

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.26 16025

@1@: backup control function "@2@" failed

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.27 16026
@1@: command failed: "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.28 16027

@1@: could not close the file "@2@": @3@ (errno=@4@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.29 16028

@1@: could not close the PID file "@2@": @3@ (errno=@4@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.30 16029

@1@: could not create the directory "@2@": @3@ (errno=@4@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.31 16030

@1@: could not create the file "@2@": @3@ (errno=@4@)
[Description]  
An error occurred.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.57.32 16031  
@1@: could not create the PID file "@2@": @3@ (errno=@4@)  
[Description]  
An error occurred.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.57.33 16032  
@1@: could not create the symbolic link "@2@": @3@ (errno=@4@)  
[Description]  
An error occurred.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.57.34 16033  
@1@: could not identify the current directory: @2@ (errno=@3@)  
[Description]  
An error occurred.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.57.35 16034  
@1@: could not open the directory "@2@": @3@ (errno=@4@)  
[Description]  
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.36 16035

@1@: could not open the file "@2@": @3@ (errno=@4@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.37 16036

@1@: could not open the PID file "@2@": @3@ (errno=@4@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.38 16037

@1@: could not read the file "@2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.39 16038

@1@: could not read the PID file "@2@": @3@ (errno=@4@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.40 16039

@1@: could not read the symbolic link "@2@": @3@ (errno=@4@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.41 16040

@1@: could not remove the file "@2@": @3@ (errno=@4@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.42 16041

@1@: could not remove the PID file "@2@": @3@ (errno=@4@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.43 16042

@1@: could not rename the directory "@2@" to "@3@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.57.44 16043

@1@: could not rename the file "@2@" to "@3@": @4@ (errno=@5@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.45 16044

@1@: could not write the file "@2@": @3@ (errno=@4@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.46 16045

@1@: could not write the PID file "@2@": @3@ (errno=@4@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.47 16046

@1@: failed to find the internal file "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.48 16047
@1@: failed to parse the internal file "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.49 16048

@1@: failed to parse the internal file: "@2@" (@3@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.50 16049

@1@: failed to parse the configuration file "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.51 16050

@1@: failed to remove archived transaction log files

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.52 16051

@1@: failed to replace the contents of the pg_wal directory
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.53 16052

@1@: failed to restore the configuration files

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.54 16053

@1@: invalid data in the PID file "@2@"

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.55 16054

@1@: out of memory

There was insufficient free space in the server's memory during execution of the application.

Processing will be aborted.

Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.57.56 16055

@1@: cannot find the server process (PID: @2@)
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.57 16056

@1@: an error occurred during recovery

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.58 16057

@1@: could not remove the directory "@2@": @3@ (errno=@4@)

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.59 16058

@1@: target "@2@" mismatch (internal error)

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.60 16059

the program "@1@" is needed by @2@ but was not found in the same directory as "@3@"

An error occurred.
2.57.61 16060

the program "@1@" was found in "@2@" but was not the same version as @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.62 16061

@1@: failed to get port number (internal error)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.63 16062

backup of configuration files completed successfully

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.57.64 16063

backup of database and configuration files completed successfully

[Description]
Terminated normally.

[System Processing]
Continues processing.
[Action]
No action required.

2.57.65 16064

Confirm that the specified directory is correct. If it is correct, the backup data may be corrupted. Copy the backup data to the backup storage directory from backup media.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.66 16065

Check the installation.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.67 16066

Continue the backup.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.57.68 16067

Create an empty directory "@1@" on which the database administrator has full permissions, and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
Create an empty directory "@1@" on which the database administrator has full permissions.

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

Recover the corrupt resource.

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

Is the server running?

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

Please check whether the backup data exists or is not in the backup storage directory.

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.
2.57.73 16072

Please decrease the length of the path and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.74 16073

Please decrease the number of digits and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.75 16074

Please log in as the user that owns the server process.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.76 16075

Please remove the cause of the error, and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.77 16076
Please set the database storage directory "@1@" to -D option, and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.78 16077

Please set the recovery point to be after the date and time that the backup finished, and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.79 16078

Please set the backup storage directory to the 'backup_destination' parameter and restart the server.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.80 16079

Please specify the database storage directory as "@1@" and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.81 16080

Please specify the database storage directory correctly and retry.
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.82 16081

Please specify the port number correctly and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.83 16082

Please specify an integer greater than 0, and try again.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.84 16083

Please specify an integer greater than 0, or the 'all' keyword, and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.85 16084

Please specify an integer greater than or equal to 0, and retry.

[Description]
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.57.86 16085**

Please specify the backup storage directory correctly and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.57.87 16086**

Please specify the time stamp using the correct length and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.57.88 16087**

Please start the server and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.57.89 16088**

Please stop the server and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

**2.57.90 16089**

*Please wait for a short period and retry.*

**Description**

An error occurred.

**System Processing**

Processing will be aborted.

**Action**

To investigate the cause of the occurrence from the message, and remove cause.

**2.57.91 16090**

*Recovery of database completed successfully.*

**Description**

An error occurred.

**System Processing**

Processing will be aborted.

**Action**

To investigate the cause of the occurrence from the message, and remove cause.

**2.57.92 16091**

*Retrying backup. (@1@ times).*

**Description**

An error occurred.

**System Processing**

Processing will be aborted.

**Action**

To investigate the cause of the occurrence from the message, and remove cause.

**2.57.93 16092**

*Specify the backup storage directory with the -B option, and retry.*

**Description**

An error occurred.

**System Processing**

Processing will be aborted.

**Action**

To investigate the cause of the occurrence from the message, and remove cause.
Refer to "@1@ --help" for more information.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

Retry after the other process terminates.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

Failed to identify backup data.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

restore point name is too long (maximum @1@ bytes)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
Try "@1@ --help" for more information.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.99 16098

@1@: keystore location is not specified

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.100 16099

@1@: too many command-line arguments (first is "@2@")

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58 Message Numbers Beginning with 16100

2.58.1 16100

@1@: no operation is specified

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.58.2 16101
@1@: could not open file "@2@": @3@ (errno=@4@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.3 16102
@1@: could not read file "@2@": @3@ (errno=@4@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.4 16103
@1@: keystore "@2@" is corrupted: size = @3@ bytes, expected size = @4@ bytes

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.5 16104
@1@: file "@2@" is not a keystore

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.6 16105
@1@: key is too long

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.7 16106

@1@: key is wrong

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.8 16107

@1@: passphrase-based key derivation failed: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.9 16108

@1@: decryption of the keystore failed: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.10 16109

@1@: decryption of the keystore failed: passphrase is wrong
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.11 16110

@1@: keystore "@2@" is corrupted: invalid CRC

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.12 16111

@1@: encryption of the keystore failed: error code = @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.13 16112

@1@: encryption of the keystore failed: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.14 16113

@1@: could not create file "@2@": @3@ (errno=@4@)

[Description]
An error occurred.
Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.15 16114

@1@: could not write file "@2@": @3@ (errno=@4@)

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.16 16115

child process exited with unrecognized status @1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.17 16116

Invalid command \@1@. Try \? for help.

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.18 16117

Invalid command \@1@.

An error occurred.

Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.58.19 16118

\@1@: extra argument "@2@" ignored

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.20 16119

could not get home directory for user ID @1@: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.21 16120

\@1@: could not change directory to "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.22 16121

You are currently not connected to a database.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.58.23 16122

**no query buffer**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.24 16123

**@1@: invalid encoding name or conversion procedure not found**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.25 16124

**\@1\@: missing required argument**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.26 16125

**Passwords didn't match.**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.27 16128
out of memory
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.28 16129
\@1\@: environment variable name must not contain "="
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.29 16130
The server (version @1@) does not support showing function source.
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.30 16131
function name is required
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.31 16132
@1@: @2@
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

### 2.58.32 16137

**Environment variable PSQL_EDITOR_LINENUMBER_ARG must be set to specify a line number**

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

### 2.58.33 16138

**Could not start editor "@1@"**

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

### 2.58.34 16139

**Could not start /bin/sh**

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

### 2.58.35 16140

**Could not locate temporary directory: @1@**
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.36 16141

could not open temporary file "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.37 16142

\pset: allowed formats are unaligned, aligned, wrapped, html, asciidoc, latex, latex-longtable, troff-ms

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.38 16143

\pset: allowed line styles are ascii, old-ascii, unicode

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.39 16144

\pset: unknown option: @1@
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.40 16145
\!: failed

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.41 16146
cannot duplicate null pointer (internal error)

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.42 16147
connection to server was lost

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.43 16148
Failed.

Supplementary information was output.
[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.58.44 16149

unexpected PQresultStatus: @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.45 16150

The server (version @1@) does not support savepoints for ON_ERROR_ROLLBACK.
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.46 16151

unexpected transaction status (@1@)
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.47 16152

\copy: arguments required
[Description]
An error occurred.

[System Processing]
Processing will be aborted.
2.58.48 16153

\copy: parse error at "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.49 16154

\copy: parse error at end of line

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.50 16155

@1@: cannot copy from/to a directory

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.51 16156

could not write COPY data: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.58.52 16158

Enter data to be copied followed by a newline. End with a backslash and a period on a line by itself, or an EOF signal.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.53 16159

aborted because of read failure

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.54 16160

The server (version @1@) does not support tablespaces.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.55 16161

\df only takes [antwS+] as options

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.58.56 16162
\df does not take a "w" option with server version @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.57 16163
The server (version @1@) does not support altering default privileges.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.58 16164
Did not find any relation named "@1@".

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.59 16165
Did not find any relation with OID @1@.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.60 16166
The server (version @1@) does not support per-database role settings.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.61 16167

Did not find any settings for role "@1@".

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.62 16168

Did not find any settings.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.63 16169

Did not find any relation named "@1@".

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.64 16170

Did not find any relations.
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.65 16171

The server (version @1@) does not support collations.

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.66 16172

The server (version @1@) does not support full text search.

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.67 16173

Did not find any text search configuration named "@1@".

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.68 16174

The server (version @1@) does not support foreign-data wrappers.

An error occurred.
The server (version @1@) does not support foreign servers.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

The server (version @1@) does not support user mappings.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

The server (version @1@) does not support foreign tables.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

The server (version @1@) does not support extensions.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
2.58.73 16179

Did not find any extension named "@1@".

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.74 16180

Did not find any extensions.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.75 16181

user name lookup failure: error code @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.76 16182

could not read from input file: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.58.77 16183
could not save history to file "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.78 16184
history is not supported by this installation

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.79 16185
@1@: not connected to a database

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.80 16186
@1@: current transaction is aborted

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.81 16187
@1@: unknown transaction status

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.82 16188

Cannot add header to table content: column count of @1@ exceeded.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.83 16189

Cannot add cell to table content: total cell count of @1@ exceeded.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.84 16190

invalid output format (internal error): @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.85 16191

skipping recursive expansion of variable "@1@"
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.58.86 16192**

**unterminated quoted string**

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.58.87 16193**

@1@: out of memory

There was insufficient free space in the server's memory during execution of the application.

Processing will be aborted.

Estimate memory usage and take the following action:

- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

**2.58.88 16194**

cannot escape without active connection

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.58.89 16195**

@1@: could not open log file "@2@": @3@

- 1015 -
[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.58.90 16196

@1@: could not set printing parameter "@2@"

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.58.91 16197

\@1@: could not read value for variable

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.58.92 16199

@1@: warning: extra command-line argument "@2@" ignored

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.59 Message Numbers Beginning with 16200

2.59.1 16200
tab completion query failed: @1@Query was:@2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.2 16201

unrecognized value "@1@" for "@2@"Available values are: @3@.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.3 16202

Try "@1@ --help" for more information.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.4 16203

@1@: too many command-line arguments (first is "@2@")

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.5 16204

@1@: cannot cluster all databases and a specific one at the same time
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.6 16205

@1@: cannot cluster specific table(s) in all databases

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.7 16206

@1@: clustering of table "@2@" in database "@3@" failed: @4@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.8 16207

@1@: clustering of database "@2@" failed: @3@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.9 16208

@1@: clustering database "@2@"

An error occurred.
[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.59.10 16213

@1@: could not connect to database @2@: @3@

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.59.11 16214

@1@: query failed: @2@

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.59.12 16215

cannot duplicate null pointer (internal error)

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.59.13 16216

out of memory

[Description]

There was insufficient free space in the server's memory during execution of the application.

[System Processing]

Processing will be aborted.
[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.59.14 16217

Cancel request sent

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.15 16218

Could not send cancel request: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.16 16219

@1@: only one of --locale and --lc-ctype can be specified

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.17 16220

@1@: only one of --locale and --lc-collate can be specified

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

2.59.22 16229

@1@: password encryption failed: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.23 16230

@1@: creation of new role failed: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.24 16231

@1@: missing required argument database name

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.25 16232

Database "@1@" will be permanently removed.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.26 16233
@1@: database removal failed: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.27 16236

@1@: missing required argument role name

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.28 16237

Role "@1@" will be permanently removed.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.29 16238

@1@: removal of role "@2@" failed: @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.30 16239

@1@: cannot reindex all databases and a specific one at the same time
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.31 16240

@1@: cannot reindex all databases and system catalogs at the same time

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.32 16241

@1@: cannot reindex specific table(s) in all databases

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.33 16242

@1@: cannot reindex specific index(es) in all databases

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.34 16243

@1@: cannot reindex specific table(s) and system catalogs at the same time

An error occurred.
[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.59.35 16244

@1@: cannot reindex specific index(es) and system catalogs at the same time
[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.59.36 16245

@1@: reindexing of table "@2@" in database "@3@" failed: @4@
[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.59.37 16246

@1@: reindexing of index "@2@" in database "@3@" failed: @4@
[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.59.38 16247

@1@: reindexing of database "@2@" failed: @3@
[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.
[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.59.39 16248

@1@: reindexing database "@2@

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.59.40 16249

@1@: reindexing of system catalogs failed: @2@

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.59.41 16250

@1@: cannot use the "@2@" option when performing only analyze

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.59.42 16252

@1@: cannot vacuum all databases and a specific one at the same time

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
2.59.43 16253
@1@: cannot vacuum specific table(s) in all databases

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.44 16254
@1@: vacuuming of table "@2@" in database "@3@" failed: @4@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.45 16255
@1@: vacuuming of database "@2@" failed: @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.46 16256
SQL error: @1@

[Description]

Try "@1@ --help" for more information.

An error occurred.
Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.56 16266

@1@: parser debug support (-d) not available

Description:
An error occurred.

System Processing:
Processing will be aborted.

Action:
To investigate the cause of the occurrence from the message, and remove cause.

2.59.57 16268

@1@: no input files specified

Description:
An error occurred.

System Processing:
Processing will be aborted.

Action:
To investigate the cause of the occurrence from the message, and remove cause.

2.59.58 16269

cursor "@1@" has been declared but not opened

Description:
An error occurred.

System Processing:
Processing will be aborted.

Action:
To investigate the cause of the occurrence from the message, and remove cause.

2.59.59 16270

could not remove output file "@1@"

Description:
An error occurred.

System Processing:
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

**2.59.60 16272**

*invalid bit string literal*

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.59.61 16273**

*unterminated bit string literal*

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.59.62 16274**

*unterminated hexadecimal string literal*

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.59.63 16275**

*unterminated quoted string*

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.59.64 16276

zero-length delimited identifier
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.65 16277

untersminated quoted identifier
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.66 16278

missing identifier in EXEC SQL UNDEF command
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.67 16279

missing matching "EXEC SQL IFDEF" / "EXEC SQL IFNDEF"
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.68 16280
missing "EXEC SQL ENDF;"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.69 16281

more than one EXEC SQL ELSE

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.70 16282

unmatched EXEC SQL ENDF

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.71 16283

too many nested EXEC SQL IFDEF conditions

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.72 16284

missing identifier in EXEC SQL IFDEF command
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.73 16285

missing identifier in EXEC SQL DEFINE command

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.74 16286

syntax error in EXEC SQL INCLUDE command

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.75 16287

internal error: unreachable state; If the cause of errors cannot be found, contact the Fujitsu Systems Engineer (SE).

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause. If the cause of errors cannot be found, contact the Fujitsu Systems Engineer (SE).

2.59.76 16288

Error: include path "@1@/@2@" is too long on line @3@, skipping
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.77 16289

could not open include file "@1@" on line @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.78 16290

cursor "@1@" does not exist

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.79 16291

initializer not allowed in type definition

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.80 16292

type name "string" is reserved in Informix mode

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.81 16293
type "@1@" is already defined

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.82 16294
multidimensional arrays for simple data types are not supported

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.83 16295
AT option not allowed in CLOSE DATABASE statement

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.84 16296
AT option not allowed in CONNECT statement

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.85 16297
AT option not allowed in DISCONNECT statement
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.86 16298
AT option not allowed in SET CONNECTION statement
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.87 16299
AT option not allowed in TYPE statement
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60 Message Numbers Beginning with 16300

2.60.1 16300
AT option not allowed in VAR statement
[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

### 2.60.2 16301

**AT option not allowed in WHENEVER statement**

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

### 2.60.3 16302

**unsupported feature will be passed to server**

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

### 2.60.4 16303

**SHOW ALL is not implemented**

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

### 2.60.5 16304

**COPY FROM STDIN is not implemented**

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
2.60.6 16308

using variable "@1@" in different declare statements is not supported

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.7 16309

cursor "@1@" is already defined

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.8 16310

no longer supported LIMIT #,# syntax passed to server

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.9 16311

subquery in FROM must have an alias

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.10 16312
CREATE TABLE AS cannot specify INTO

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.11 16313

expected "@", found "@1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.12 16314

only protocols "tcp" and "unix" and database type "postgresql" are supported

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.13 16315

expected "://", found "@1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.14 16316

Unix-domain sockets only work on "localhost" but not on "@1@"
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.60.15 16317

expected "postgresql", found "@1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.60.16 16318

invalid connection type: @1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.60.17 16319

expected "@" or "://", found "@1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.60.18 16320

invalid data type

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.19 16321

incomplete statement

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.20 16322

unrecognized token "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.21 16323

only data types numeric and decimal have precision/scale argument

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.22 16324

interval specification not allowed here

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.23 16325

too many levels in nested structure/union definition
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.24 16326

pointers to varchar are not implemented
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.25 16327

using unsupported DESCRIBE statement
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.26 16328

initializer not allowed in EXEC SQL VAR command
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.60.27 16329

arrays of indicators are not allowed on input

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.28 16330

@1@ at or near "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.29 16331

out of memory

[Description]
There was insufficient free space in the server's memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.60.30 16332

unrecognized variable type code @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.60.31 16333
variable "@1@" is hidden by a local variable of a different type

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.32 16334
variable "@1@" is hidden by a local variable

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.33 16335
indicator variable "@1@" is hidden by a local variable of a different type

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.34 16336
indicator variable "@1@" is hidden by a local variable

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.60.40 16342**

**incorrectly formed variable "@1@"**

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.60.41 16343**

**variable "@1@" is not a pointer**

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.60.42 16344**

**variable "@1@" is not a pointer to a structure or a union**

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.60.43 16345**

**variable "@1@" is neither a structure nor a union**

An error occurred.
Processing will be aborted.

**2.60.44 16346**

**variable "@1@" is not an array**

**Description**

An error occurred.

**System Processing**

Processing will be aborted.

**Action**

To investigate the cause of the occurrence from the message, and remove cause.

**2.60.45 16347**

**variable "@1@" is not declared**

**Description**

An error occurred.

**System Processing**

Processing will be aborted.

**Action**

To investigate the cause of the occurrence from the message, and remove cause.

**2.60.46 16348**

**indicator variable must have an integer type**

**Description**

An error occurred.

**System Processing**

Processing will be aborted.

**Action**

To investigate the cause of the occurrence from the message, and remove cause.

**2.60.47 16349**

**unrecognized data type name "@1@"**

**Description**

An error occurred.

**System Processing**

Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.60.48 16350

**multidimensional arrays are not supported**

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.60.49 16351

**multilevel pointers (more than 2 levels) are not supported; found @1@ level**

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.60.50 16353

**pointer to pointer is not supported for this data type**

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.60.51 16354

**multidimensional arrays for structures are not supported**

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
2.60.52 16355

**invalid URI propagated to internal parser routine: "@1@"**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.53 16356

**end of string reached when looking for matching ""]" in IPv6 host address in URI: "@1@"**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.54 16357

**IPv6 host address may not be empty in URI: "@1@"**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.55 16358

**unexpected character "@1@" at position @2@ in URI (expected ":" or "/"): "@3@"**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.56 16359
extra key/value separator "=" in URI query parameter: "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.57 16360

missing key/value separator "=" in URI query parameter: "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.58 16361

invalid URI query parameter: "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.59 16362

invalid percent-encoded token: "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.60 16363

forbidden value @1@00 in percent-encoded value: "@2@"
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.60.61 16364

insufficient data in "T" message

To investigate the cause of the occurrence from the message, and remove cause.

2.60.62 16365

extraneous data in "T" message

To investigate the cause of the occurrence from the message, and remove cause.

2.60.63 16366

insufficient data in "D" message

To investigate the cause of the occurrence from the message, and remove cause.

2.60.64 16367

extraneous data in "D" message

To investigate the cause of the occurrence from the message, and remove cause.
[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.60.65 16368

at character @1@
[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.60.66 16369

unrecognized socket error: 0x@1@/@2@
[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.60.67 16370

If true, trusted and untrusted Perl code will be compiled in strict mode.
[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.60.68 16371

Perl initialization code to execute when a Perl interpreter is initialized.
[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.69 16372

Perl initialization code to execute once when plperl is first used.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.70 16373

Perl initialization code to execute once when plperlu is first used.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.71 16374

duplicate declaration

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.72 16375
diagnostics item @1@ is not allowed in GET STACKED DIAGNOSTICS

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.60.73 16376

diagnostics item @1@ is not allowed in GET CURRENT DIAGNOSTICS

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.74 16377

unrecognized GET DIAGNOSTICS item

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.75 16378

unexpected end of function definition

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.76 16379

syntax error

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.77 16380
invalid SQLSTATE code
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.78 16381

syntax error, expected "FOR"
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.79 16382

mismatched parentheses
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.80 16383

missing expression
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.81 16384

missing SQL statement
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.60.82 16385

incomplete data type declaration

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.60.83 16386

missing data type declaration

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.60.84 16387

INTO specified more than once

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.60.85 16388

expected FROM or IN

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.86 16389

cursor "@1@" has no argument named "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.87 16390

value for parameter "@1@" of cursor "@2@" specified more than once

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.88 16391

unrecognized RAISE statement option

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.89 16392

syntax error, expected "="

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.60.90 16393

during initialization of execution state

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.91 16394

while storing call arguments into local variables

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.92 16395

during function entry

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.93 16396

while casting return value to function's return type

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.60.94 16397

returned record type does not match expected record type

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.95 16398

during function exit

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.96 16399

returned row structure does not match the structure of the triggering table

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61 Message Numbers Beginning with 16400

2.61.1 16400

during statement block local variable initialization

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.61.2 16401

during statement block entry
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.3 16402

during statement block exit
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.4 16403

during exception cleanup
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.5 16404

structure of query does not match function result type
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.6 16405
query "@1@" returned @2@ column
query "@3@" returned @4@ columns

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.61.7 16406
Sets handling of conflicts between PL/pgSQL variable names and table column names.

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.61.8 16407
plpy.cursor expected a query or a plan

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.61.9 16408
plpy.cursor takes a sequence as its second argument

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.61.10 16409
could not execute plan
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.61.11 16410

Expected sequence of @1@ argument, got @2@: @3@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.61.12 16412

iterating a closed cursor

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.61.13 16413

iterating a cursor in an aborted subtransaction

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.61.14 16414

fetch from a closed cursor

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.15 16415

**closing a cursor in an aborted subtransaction**

[Description]
An error occurred.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.16 16416

**error fetching next item from iterator**

[Description]
An error occurred.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.17 16417

**PyList_SetItem() failed, while setting up arguments**

[Description]
An error occurred.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.18 16418

**PyDict_SetItemString() failed, while setting up arguments**

[Description]
An error occurred.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.19 16419
could not create new dictionary while building trigger arguments
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.20 16420
untrapped error in initialization
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.21 16421
could not import "__main__" module
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.22 16422
could not create globals
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.61.23 16424

could not import "plpy" module

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.24 16425

could not add the spiexceptions module

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.25 16427

could not generate SPI exceptions

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.26 16428

could not unpack arguments in plpy.elog

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.27 16429
could not parse error message in plpy.elog
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.28 16430
could not compile PL/Python function "@1@"
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.29 16431
could not compile anonymous PL/Python code block
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.30 16432
command did not produce a result set
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.31 16433
second argument of plpy.prepare must be a sequence
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.32 16434

plpy.execute expected a query or a plan

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.33 16435

plpy.execute takes a sequence as its second argument

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.34 16437

this subtransaction has already been entered

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.35 16438

this subtransaction has already been exited

[Description]
An error occurred.
[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.61.36 16439

this subtransaction has not been entered
[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.61.37 16440

there is no subtransaction to exit from
[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.61.38 16441

could not create new dictionary
[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.61.39 16443

could not create bytes representation of Python object
[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

### 2.61.40 16444

**could not create string representation of Python object**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.61.41 16445

**return value of function with array return type is not a Python sequence**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.61.42 16446

**could not extract bytes from encoded string**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.61.43 16447

**The name: @1@ is invalid.**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.61.44 16448

";" is not permitted in COBOL

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.45 16449

"END-EXEC" is not permitted in C

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.46 16450

missing "EXEC SQL ENDIF END-EXEC."

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.47 16451

debug line with EXEC SQL is not permitted

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.48 16452
**SQL string literal cannot continue multiline by COBOL syntax**

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.61.49 16453

**COBOL string literal cannot continue multiline by SQL syntax**

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.61.50 16454

**syntax error at or near "END-EXEC" in declare section**

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.61.51 16455

**syntax error in include file**

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.61.52 16456

**internal error: unreachable state;**
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.61.53 16457

could not open temporary file "@1@" for continue line

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.61.54 16458

FILLER or implicit FILLER is not available in EXEC SQL TYPE statement

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.61.55 16459

VALUE clause is not available in EXEC SQL TYPE statement

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.61.56 16460

REDEFINES clause is not available in EXEC SQL TYPE statement

An error occurred.
[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.61.57 16461

**FILLER or implicit FILLER is not available in EXEC SQL VAR statement**

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.61.58 16462

**VALUE clause is not available in EXEC SQL VAR statement**

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.61.59 16463

**syntax error in WHENEVER statement**

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.61.60 16464

**FILLER or implicit FILLER is not available in TYPEDEF statement**

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.61.61 16465

**VALUE clause is not available in TYPEDEF statement**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.61.62 16466

**REDEFINES clause is not available in TYPEDEF statement**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.61.63 16467

**FILLER or implicit FILLER can use only for elementary item in group item**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.61.64 16468

**USAGE clause is not available for group item name**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.61.65 16469

**SIGN clause is not available for group item name**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.66 16470

**VALUE clause is not available for group item name**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.67 16471

**more than one USAGE clause**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.68 16472

**more than one OCCURS clause**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.69 16473
more than one VALUE clause

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.70 16474

more than one SIGN clause

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.71 16475

more than one REDEFINES clause

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.72 16476

syntax error at or near "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.73 16477

length of varchar type is not assined
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.74 16478

invalid NULL is set

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.61.75 16479

you can not be set to more than 1024 bytes of the string

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.61.76 16480

group item is too deep

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.77 16481

multidimensional array is not supported

[Description]
An error occurred.
[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.61.78 16482

* syntax is not available *

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.61.79 16483

* there is a character code that can not be determined *

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.61.80 16484

* the number of variables reached the max number 1000000 *

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.61.81 16485

* host array variable is needed when using FOR ARRAY_SIZE *

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.61.82 16486

Unsupported datatype found at FOR statement

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.83 16487

FOR value should be positive integer

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.84 16488

SELECT..INTO returns too many rows on line @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.85 16491

@1@ failed

[Description]
Aborted the processing of this operation because an error occurred.

[System Processing]
Processing will be aborted.

[Action]
Identify the cause according to the messages shown before this message, and then work around if necessary.
2.61.86 16492

CREATE TRIGGER will create implicit function "@1"."@2"() for TRIGGER "@3" on TABLE "@4"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.61.87 16493

The cursor is invalid on line @1@

[Description]
An error occurred during execution of the command.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.88 16494

Constraint trigger "@1" for relation "@2" cannot be replaced with non-constraint trigger

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.61.89 16495

Trigger "@1" for relation "@2" cannot be replaced with constraint trigger

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.61.90 16497

unterminated /*+ comment for hint of pg_hint_plan

[Description]
An unterminated /*+ comment for hint of pg_hint_plan is detected.

[System Processing]
Processing will be aborted.

[Action]
Terminate /*+ comment for hint of pg_hint_plan.

2.61.91 16498

trigger created with EXECUTE PROCEDURE cannot be replaced by DO block

[Description]
Trigger created with EXECUTE PROCEDURE cannot be replaced by DO block.

[System Processing]
Processing is aborted.

[Action]
Please redefine it after deleting the trigger.

2.61.92 16499

trigger created with DO block cannot be replaced by EXECUTE PROCEDURE

[Description]
Trigger created with DO block cannot be replaced by EXECUTE PROCEDURE.

[System Processing]
Processing is aborted.

[Action]
Please redefine it after deleting the trigger.

2.62 Message Numbers Beginning with 16500

2.62.1 16500

the connection is not the same as the connection in DECLARE STATEMENT, on line @1@

[Description]
The connection is not the same as the connection in DECLARE STATEMENT, on line @1@

[System Processing]
Processing is aborted.

[Action]
Please do not specify the connection when you use SQL statement identifier declared with DECLARE STATEMENT.
2.62.2 16501
cannot copy window "@1@" because it has a frame clause

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.62.3 16502
could not find any WAL files

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.62.4 16503
exceeded maxAllocatedDescs (@1@) while trying to open file "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.62.5 16504
exceeded maxAllocatedDescs (@1@) while trying to open directory "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.62.6 16505
tsquery is too large
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.62.7 16506
bit string length exceeds the maximum allowed (@1@)
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.62.8 16507
error occurred at @1@:@2@ before error message processing is available
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.62.9 16508
language validation function @1@ called for language @2@ instead of @3@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.62.10 16510
The sslservercertcn "@1@" could not be verified
[Description]
value of sslservercert.cn is different from common name in the server certificate.

[System Processing]
Processing is aborted.

[Action]
Set SSL certificate's common name to sslservercert.cn.

2.62.11 16511

@1@: must be superuser to run this command
[Description]
Must be superuser to run this command.

[System Processing]
Processing will be aborted.

[Action]
Re-execute the command by the superuser.

2.62.12 16512

@1@: must be database super user to run this command
[Description]
Must be database super user to run this command.

[System Processing]
Processing will be aborted.

[Action]
Re-execute the command by the database super user.

2.62.13 16513

@1@: no subcommand specified
[Description]
No subcommand specified.

[System Processing]
Processing will be aborted.

[Action]
Check the command-line, and re-execute the command with correct options or operands.

2.62.14 16514

@1@: unrecognized subcommand "@2@"
[Description]
Unknown subcommand is specified.
[System Processing]
Processing will be aborted.

[Action]
Check the command-line, and re-execute the command with correct subcommand.

2.62.15 16515

@1@: too many command-line arguments (first is "@2@")

[Description]
Too many command-line arguments.

[System Processing]
Processing will be aborted.

[Action]
Check the command-line, and re-execute the command with correct options or operands.

2.62.16 16516

@1@: argument to an option "@2@" must be a list of port numbers

[Description]
Argument to the option must be a list of port numbers.

[System Processing]
Processing will be aborted.

[Action]
Specify multiple port number, separated by commas argument to an option, and re-execute the command. Specify a number from 1024 to 32767 for the port number.

2.62.17 16517

@1@: invalid argument for an option "@2@"

[Description]
Invalid argument for an option.

[System Processing]
Processing will be aborted.

[Action]
Check the options specified in command-line, and re-execute the command with correct operands.

2.62.18 16518

@1@: option "@2@" is required

[Description]
The indispensable option is not specified.
[System Processing]
Processing will be aborted.

[Action]
Check the command-line, and re-execute the command with correct options or confirm the indispensable option is being used correctly.

2.62.19 16519

@1@: requires an option "@2@" or setting the "@3@" environment variable

[Description]
Requires an option or setting the environment variable.

[System Processing]
Processing will be aborted.

[Action]
Check the command-line, and re-execute the command with correct options. Or, set a correct value to the environment variable, and re-execute the command.

2.62.20 16520

@1@: successfully completed

[Description]
Command successfully completed.

[System Processing]
Continues processing.

[Action]
No action required.

2.62.21 16521

@1@: user "@2@" does not exist

[Description]
The user is not registered into OS.

[System Processing]
Processing will be aborted.

[Action]
Register the user into OS, and re-execute the command. Or, re-execute the command which specified the registered user.

2.62.22 16522

@1@: data directory "@2@" does not exist

[Description]
The data directory does not exist.
[System Processing]
Processing will be aborted.

[Action]
Confirm that an option "--cluster-standbynode" is being used correctly. Or, check the command-line, and re-execute the command with existing data directory.

2.62.23 16523

@1@: "@2@" is not a valid data directory
[Description]
The data directory is not valid.

[System Processing]
Processing will be aborted.

[Action]
Check the command-line, and re-execute the command with valid data directory.

2.62.24 16524

@1@: database cluster is not stopped
[Description]
Database cluster is not stopped.

[System Processing]
Processing will be aborted.

[Action]
Stop the database cluster, and re-execute the command.

2.62.25 16525

@1@: domain root "@2@" already exists
[Description]
The domain root already exists.

[System Processing]
Processing will be aborted.

[Action]
Check the command-line, and re-execute the command with correct domain root.

2.62.26 16526

@1@: could not create directory "@2@"
[Description]
Could not create the directory.
[System Processing]
Processing will be aborted.

[Action]
Check the following and eliminate the cause of errors, and re-execute the command.
- the state of a disk and file system to creating the directory
- permission of the upper directory of specified directory

2.62.27 16527

@1@: start of PL/extJava has timed out : @2@

[Description]
Timed out waiting for start of PL/extJava.

[System Processing]
Processing will be aborted.

[Action]
Re-execute the command after the load on the system has decreased.

2.62.28 16528

@1@: stop of PL/extJava has timed out : @2@

[Description]
Timed out waiting for stop of PL/extJava.

[System Processing]
Processing will be aborted.

[Action]
Re-execute the command after the load on the system has decreased.

2.62.29 16529

@1@: port number "@2@" is already in use

[Description]
The port number is already in use.

[System Processing]
Processing will be aborted.

[Action]
Re-execute the command with a port number which is not used in other processes.

2.62.30 16530

@1@: domain name can only be specified "domain1"

[Description]
Domain name can only be specified "domain1".
[System Processing]
    Processing will be aborted.

[Action]
    Check the command-line, and re-execute the command with correct domain name.

2.62.31 16531

@1@: domain @2@ has already been created
[Description]
    The domain has already been created.

[System Processing]
    Processing will be aborted.

[Action]
    Check the command-line, and re-execute the command with correct domain name.

2.62.32 16532

@1@: domain @2@ has not been created
[Description]
    The domain has not been created.

[System Processing]
    Processing will be aborted.

[Action]
    Check the command-line, and re-execute the command with correct domain name.

2.62.33 16533

@1@: permission denied to update file @2@
[Description]
    Permission denied to update the file.

[System Processing]
    Processing will be aborted.

[Action]
    Permit writing to the file by execution user, and re-execute the command.

2.62.34 16534

@1@: container for database @2@ does not exist
[Description]
    Container for database does not exist.

[System Processing]
    Processing will be aborted.
[Action]
Check the command-line, and re-execute the command with correct database name.

2.62.35 16535

@1@: container for database "@2@" already exists

[Description]
Container for database already exists.

[System Processing]
Processing will be aborted.

[Action]
Check the command-line, and re-execute the command with correct database name.

2.62.36 16536

@1@: command error occurred

[Description]
Internal command error occurred.

[System Processing]
Processing will be aborted.

[Action]
Fix the problem by referring to the messages prior to this one.

2.62.37 16537

@1@: the domain was not able to be deleted because there was a container

[Description]
The domain was not able to be deleted because the domain have a container.

[System Processing]
Processing will be aborted.

[Action]
Delete all containers on the domain, and re-execute the command. Or, re-execute the command with "--force" option.

2.62.38 16538

@1@: could not access the data directory

[Description]
Could not access the data directory.

[System Processing]
Processing will be aborted.
[Action]

Confirm that an option "--cluster-standbynode" is being used correctly. Or, specify database super user in "--dbadminuser" option and re-execute the command.

2.62.39 16539

@1@: server instance "@2@" does not exist

[Description]

Server instance does not exist.

[System Processing]

Processing will be aborted.

[Action]

Check the command-line, and re-execute the command with correct server instance.

2.62.40 16540

@1@: specified database name "@2@" does not follow the naming rules

[Description]

Specified database name does not follow the naming rules.

[System Processing]

Processing will be aborted.

[Action]

Check the command-line, and re-execute the command with correct database name.

2.62.41 16541

@1@: all the server instances of the container cannot be deleted

[Description]

All the server instances of the container cannot be deleted.

[System Processing]

Processing will be aborted.

[Action]

Check the command-line, and re-execute the command with correct database name.

2.62.42 16542

@1@: the mount does the shared-file system of the domain root or the data directory

[Description]

A command executing node is not a standby node.

[System Processing]

Processing will be aborted.
2.62.43 16543
@1@: cannot execute this subcommand on standby node
[Description]
Cannot execute this subcommand on standby node.

[Action]
Execute the command on primary node.

2.62.44 16544
@1@: cannot execute this command concurrently
[Description]
Cannot execute this command concurrently.

[Action]
Re-execute the command after a command executing was finished.

2.62.45 16545
@1@: domain root "@2@" does not exist
[Description]
Domain root does not exist.

[Action]
Confirm that the shared-file system of the domain root is mounted. Or, restore domain root from backup and re-execute the command.

2.62.46 16546
parameter "@1@" necessary for the PL/extJava environment was not set
[Description]
PL/extJava environment was not set.

[Action]

2.62.47 16547

**mismatched parentheses**

**Description**
Missing parenthesis '(' or ')' in Java function definition.

**System Processing**
Processing will be aborted.

**Action**
Check the definition of Java function.

2.62.48 16548

**invalid format specification for Java function**

**Description**
Invalid format specification for Java function.

**System Processing**
Processing will be aborted.

**Action**
Check the definition of Java function.

Java function definition format is [package].[class].[method].

2.62.49 16549

**Java function cannot return type @1@**

**Description**
The specified data type is not supported as Java function.

**System Processing**
Processing will be aborted.

**Action**
Check the data type of return value.

2.62.50 16550

**Java function cannot accept type @1@**

**Description**
The specified data type is not supported as Java function arguments.

**System Processing**
Processing will be aborted.
[Action]
Check the data type of arguments value.

2.62.51 16551

could not execute the Java function at the application server: HTTP status code @1@ details: "@2@"

[Description]
The application server could not execute the Java function.

[System Processing]
Processing will be aborted.

[Action]
Check the Java function of registered in application server.
Check the details.
- The classpath is not found. (plextjava_lib_dir=%s2)
  %s2: directory
  The directory that stores the Java function is not in the application server. Check the directory and register the Java function.
- The return type is different. (%s3)
  %s3: data type
  The return value of the Java function is not corresponding to the CREATE FUNCTION definition. Check the data type of Java function.
- The method is not found. (%s4)
  %s4: data type
  The Java function to which the data type is corresponding is not found. Check the data type of Java function.
- The class is not found. (%s5)
  %s5: class name
  The Java function to which the class name is corresponding is not found. Check the class name of Java function.
- The method is not static modifier. (%s6)
  %s6: Java function name
  The Java function is not defined by "Static". Check the Java function definition.
  here is no executed authority. (%s7)
  %s7: Java function name
  The Java function is not defined by "Public". Check the Java function definition.
- Java application throws exception(%s8).
  %s8: exception
  The exception was generated by the Java function. Check the Java function definition.
- no message
  The following causes are thought.
  - There is a possibility that the container is not made. Make the container in application server.
    a) There is a possibility where the number of server instances is insufficient. Add server instance (JavaVM) to the application server.
b) There is a possibility that memory shortage occurs. Check the Java application.
c) There is a possibility that the time-out is generated. Check the Java application.
d) There is a possibility that abnormality occurs by the application server. Check the following logs.
- Event log (For Windows(R))/system log (For Solaris/Linux).
- Server log of container
- JavaVM log of container
- Trace log of Web server
- Internal log of Web server

2.62.52 16552

could not connect to application server: @1@

[Description]
Could not connect to application server.

[System Processing]
Processing will be aborted.

[Action]
Check the plexjava.http_port parameter in postgresql.conf.

2.62.53 16553

could not create socket for application server connection: @1@

[Description]
Could not create socket.

[System Processing]
Processing will be aborted.

[Action]
There is possible where an open number of files that can be used with the system is insufficient. Please confirm the total of the file that can be used with the system.

2.62.54 16554

could not send data to application server: @1@

[Description]
The application server was disconnected during execution of the Java function.

[System Processing]
Processing will be aborted.

[Action]
Check the message of application server.

2.62.55 16555
could not receive data from application server

[Description]
The application server was disconnected during execution of the Java function.

[System Processing]
Processing will be aborted.

[Action]
Check the message of application server.

2.62.56 16556

could not receive data from application server: @1@

[Description]
The application server was disconnected during execution of the Java function.

[System Processing]
Processing will be aborted.

[Action]
Check the message of application server.

2.62.57 16563

@1@: at least one option of "@2@" must be specified

[Description]
Must specify at least one option.

[System Processing]
Processing will be aborted.

[Action]
Check the command-line, and re-execute the command with correct options.

2.62.58 16574

@1@: could not write directory "@2@"

[Description]
Could not write the directory.

[System Processing]
Processing will be aborted.

[Action]
Check that the disk of the directory has free space, and check that the abnormalities of the disk have not occurred.

2.62.59 16575

@1@: cannot execute with "@2@" option in primary server
[Description]
Do not specify the option to execute the command in primary server.

[System Processing]
Processing will be aborted.

[Action]
Check the command-line, and re-execute the command with correct options.
Restore it because PL/extJava environment may be corrupted when the server is member nodes of the cluster.

2.62.60 16576

@1@: specify "@2@" option in standby server

[Description]
Specify the option to execute the command in standby server.

[System Processing]
Processing will be aborted.

[Action]
Check the command-line, and re-execute the command with correct options.
Restore it because PL/extJava environment may be corrupted when the server is member nodes of the cluster.

2.62.61 16577

Could not translate client host name "@1@" to IP address: @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.62.62 16578

Could not resolve client IP address to a host name: @1@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.62.63 16579

SELECT target entry is named "@1@".
SELECT target entry has type @1@, but column has type @2@.
[Description]
Supplementary information was output.
[System Processing]
None.
[Action]
Refer to this message together with the message that was output immediately beforehand.

RETURNING list entry has type @1@, but column has type @2@.
[Description]
Supplementary information was output.
[System Processing]
None.
[Action]
Refer to this message together with the message that was output immediately beforehand.

pg_largeobject entry for OID @1@, page @2@ has invalid data field size @3@.
[Description]
An error occurred during I/O processing in the database server.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

could not close directory "@1@": @2@
[Description]
Terminated normally but a warning was output.
[System Processing]
Continues processing.

[Action]
Check the message text and confirm that the event indicated in supplementary information reported by the system is a planned event.

2.62.68 16584

could not create shared memory segment "@1@": @2@

[Description]
Could not create shared memory segment.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause

2.62.69 16585

could not open shared memory segment "@1@": @2@

[Description]
Could not open shared memory segment.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause

2.62.70 16586

could not map shared memory segment "@1@": @2@

[Description]
Could not map shared memory segment.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause

2.62.71 16587

could not unmap shared memory segment "@1@": @2@

[Description]
Could not unmap shared memory segment.
Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause

2.62.72 16588

could not remove shared memory segment "@1@": @2@

Could not remove shared memory segment.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause

2.62.73 16589

background worker "@1@": must attach to shared memory in order to request a database connection

Could not register background worker.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause

2.62.74 16590

background worker "@1@": cannot request database access if starting at postmaster start

Could not register background worker.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause

2.62.75 16591

background worker "@1@": invalid restart interval

Could not register background worker.
[System Processing]
    Processing will be aborted.

[Action]
    To investigate the cause of the occurrence from the message, and remove cause

2.62.76 16592

terminating background worker "@1@" due to administrator command

[Description]
    Could not register background worker.

[System Processing]
    Processing will be aborted.

[Action]
    To investigate the cause of the occurrence from the message, and remove cause

2.62.77 16595

dynamic shared memory is disabled

[Description]
    dynamic shared memory is disabled.

[System Processing]
    Processing will be aborted.

[Action]
    To investigate the cause of the occurrence from the message, and remove cause

2.62.78 16596

dynamic shared memory control segment is not valid

[Description]
    dynamic shared memory control segment is not valid.

[System Processing]
    Processing will be aborted.

[Action]
    To investigate the cause of the occurrence from the message, and remove cause

2.62.79 16597

too many dynamic shared memory segments

[Description]
    Too many dynamic shared memory segments exist.

[System Processing]
    Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause

2.62.80 16599

could not stat shared memory segment "@1@": @2@

[Description]
Could not get details about dynamic shared memory segment.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause

2.63 Message Numbers Beginning with 16600

2.63.1 16600

could not resize shared memory segment "@1@" to @2@ bytes: @3@

[Description]
Could not resize shared memory segment.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause

2.63.2 16601

could not get shared memory segment: @1@

[Description]
Could not get shared memory segment.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause

2.63.3 16604

cannot add more timeout reasons

[Description]
cannot add more timeout reasons

[System Processing]
Processing will be aborted.
[Action]

To investigate the cause of the occurrence from the message, and remove cause

2.63.4 16606

aborting because lock on relation "@1@"."@2@" is not available

[Description]

Aborting because lock on relation is not available.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.63.5 16607

affix file contains both old-style and new-style commands

[Description]

Affix file contains commands in both old and new format.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.63.6 16608

aggregate cannot accept shell type @1@

[Description]

aggregate cannot accept shell type.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.63.7 16609

aggregate functions are not allowed in a recursive query's recursive term

[Description]

aggregate functions are not allowed in a recursive query's recursive term.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
2.63.8 16610

**aggregate functions are not allowed in check constraints**

[Description]
aggregate functions are not allowed in check constraints.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.9 16611

**aggregate functions are not allowed in DEFAULT expression**

[Description]
aggregate functions are not allowed in DEFAULT expressions.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.10 16612

**aggregate functions are not allowed in EXECUTE parameters**

[Description]
aggregate functions are not allowed in EXECUTE parameter.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.11 16613

**aggregate functions are not allowed in FROM clause of their own query level**

[Description]
Should only be possible in a LATERAL subquery. aggregate functions are not allowed in FROM clause of their own query level.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.63.12 16614
 aggregate functions are not allowed in functions in FROM

[Description]
aggregate functions are not allowed in functions in FROM.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.13 16615
 aggregate functions are not allowed in index expression

[Description]
aggregate functions are not allowed in index expression.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.14 16616
 aggregate functions are not allowed in index predicates

[Description]
aggregate functions are not allowed in index predicates.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.15 16617
 aggregate functions are not allowed in JOIN conditions

[Description]
aggregate functions are not allowed in JOIN conditions.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.16 16618
aggregate functions are not allowed in @1@

[Description]
aggregate functions are not allowed in some kinds of expressions we are parsing such as EXPR_KIND_WHERE, EXPR_KIND_FILTER, EXPR_KIND_UPDATE_SOURCE, EXPR_KIND_UPDATE_TARGET, EXPR_KIND_GROUP_BY, EXPR_KIND_LIMIT, EXPR_KIND_OFFSET, EXPR_KIND_RETURNING, EXPR_KIND_VALUES.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.17 16620

aggregate functions are not allowed in trigger WHEN conditions

[Description]
aggregate functions are not allowed in trigger WHEN conditions.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.18 16621

aggregate functions are not allowed in window RANGE

[Description]
aggregate functions are not allowed in window RANGE.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.19 16622

aggregate functions are not allowed in window ROWS

[Description]
aggregate functions are not allowed in window ROWS.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.63.20 16623

**aggregate mfinalfunc must not be specified without mstype**

[Description]

aggregate mfinalfunc must not be specified without mstype.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

---

2.63.21 16624

**aggregate minitcond must not be specified without mstype**

[Description]

aggregate minitcond must not be specified without mstype.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

---

2.63.22 16625

**aggregate minvfunc must be specified when mstype is specified**

[Description]

aggregate minvfunc must be specified when mstype is specified. If mtransType is given, mtransfuncName and minvtransfuncName must be as well; if not, then none of the moving-aggregate options should have been given.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

---

2.63.23 16626

**aggregate minvfunc must not be specified without mstype**

[Description]

aggregate minvfunc must not be specified without mstype. If mtransType is given, mtransfuncName and minvtransfuncName must be as well; if not, then none of the moving-aggregate options should have been given.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
2.63.24 16627

**aggregate msfunc must be specified when mstype is specified**

[Description]
aggregate msfunc must be specified when mstype is specified. If mtransType is given, mtransfuncName and minvtransfuncName must be as well; if not, then none of the moving-aggregate options should have been given.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

2.63.25 16628

**aggregate msfunc must not be specified without mstype**

[Description]
aggregate msfunc must not be specified without mstype. If mtransType is given, mtransfuncName and minvtransfuncName must be as well; if not, then none of the moving-aggregate options should have been given.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

2.63.26 16629

**aggregate msspace must not be specified without mstype**

[Description]
aggregate msspace must not be specified without mstype. If mtransType is given, mtransfuncName and minvtransfuncName must be as well; if not, then none of the moving-aggregate options should have been given.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

2.63.27 16630

**aggregates cannot accept set arguments**

[Description]
aggregates cannot accept set arguments.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.63.28 16631

aggregates cannot have more than @1@ argument

[Description]
aggregates cannot have more than 99 argument.Aggregates can have at most FUNC_MAX_ARGS-1 args, else the
transfnand/or finalfn will be unrepresentable in pg_proc. We must check now to protect fixed-size arrays here and
possibly in called functions.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.29 16632

aggregates cannot have output arguments

[Description]
aggregates cannot have output arguments.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.30 16633

a hypothetical-set aggregate must have direct arguments matching its aggregated arguments

[Description]
a hypothetical-set aggregate must have direct arguments matching its aggregated arguments.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.31 16634

All connection parameters must be supplied because no database connection exists

[Description]
All connection parameters must be supplied because no database connection exists.We don't know the supplied
connection parameters and don't want to connect to the wrong database by using defaults, so require all parameters to be
specified.

[System Processing]
Processing will be aborted.
2.63.32 16635

all replication slots are in use

[Description]

all replication slots are in use.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.63.33 16636

an aggregate with DISTINCT must have at least one argument

[Description]

an aggregate with DISTINCT must have at least one argument. Returning an empty list would cause the parsed Query to look like it didn't have DISTINCT, with results that would probably surprise the user. Note: this case is presently impossible for aggregates because of grammar restrictions, but we check anyway.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.63.34 16637

an ordered-set aggregate with a VARIADIC direct argument must have one VARIADIC aggregated argument of the same data type

[Description]

an ordered-set aggregate with a VARIADIC direct argument must have one VARIADIC aggregated argument of the same data type.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.63.35 16638

argument declared "anyrange" is not a range type but type @1@

[Description]

argument declared "anyrange" is not a range type but type format type of range_type.
2.63.36 16639

**argument list must have even number of elements**

**Description**
argument list must have even number of elements.

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

2.63.37 16640

**argument of lo_read exceeds integer range**

**Description**
argument of lo_read exceeds integer range.Long ago, somebody thought it'd be a good idea to declare this function as taking size_t ... but the underlying backend function only accepts a signed int32 length. So throw error if the given value overflows int32.

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

2.63.38 16641

**argument of lo_truncate exceeds integer range**

**Description**
argument of lo_truncate exceeds integer range.Long ago, somebody thought it'd be a good idea to declare this function as taking size_t ... but the underlying backend function only accepts a signed int32 length. So throw error if the given value overflows int32. (A possible alternative is to automatically redirect the call to lo_truncate64; but if the caller wanted to rely on that backend function being available, he could have called lo_truncate64 for himself.)

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

2.63.39 16642

**argument of lo_write exceeds integer range**
Long ago, somebody thought it'd be a good idea to declare this function as taking `size_t` ... but the underlying backend function only accepts a signed int32 length. So throw error if the given value overflows int32.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.63.40 16643**

**argument of @1@ must be an array of objects**

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.63.41 16644**

**Array contents must start with "{"**

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.63.42 16645**

**array must be one-dimensional**

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.63.43 16646**

**array must have even number of elements**
array must have even number of elements.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.44 16647

array must have two columns

array must have two columns.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.45 16648

array must not contain nulls

array must not contain nulls.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.46 16649

Array value must start with "{" or dimension information

Array value must start with "{" or dimension information. No array dimensions, so intuit dimensions from brace structure.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.47 16650

authentication file line too long
[Description]
authentication file line too long. Line too long!

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.49 16651

a variadic ordered-set aggregate must use VARIADIC type ANY

[Description]
a variadic ordered-set aggregate must use VARIADIC type ANY. An ordered-set aggregate that is VARIADIC must be
VARIADIC ANY. In principle we could support regular variadic types, but it would make things much more complicated
because we’d have to assemble the correct subsets of arguments into array values. Since no standard aggregates have use
for such a case, we aren’t bothering for now.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.50 16653
canceling statement due to lock timeout

[Description]
canceling statement due to lock timeout. If LOCK_TIMEOUT and STATEMENT_TIMEOUT indicators are both set, we
prefer to report the former; but be sure to clear both.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.51 16654
cannot extract elements from an object

[Description]
cannot extract elements from an object.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.52 16655

cannot extract elements from a scalar

[Description]
cannot extract elements from a scalar.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.53 16656

cannot get array length of a non-array

[Description]
cannot get array length of a non-array.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.54 16657

cannot get array length of a scalar

[Description]
cannot get array length of a scalar.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.55 16658

cannot have more than $2^{32}-2$ commands in a transaction
cannot have more than $2^{32}-2$ commands in a transaction.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.56 16659

cannot insert into column "@1@" of view "@2@

cannot insert into column non_updatable_col of view RelationGetRelationName(view). This is a different error, caused by an attempt to update a non-updatable column in an otherwise updatable view.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.57 16660

cannot insert into foreign table "@1@"

cannot insert into foreign table RelationName of resultRel.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.58 16661

cannot lock rows in materialized view "@1@

cannot lock rows in materialized view RelationName of provided rel. Allow referencing a matview, but not actual locking clauses.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.59 16662

cannot move relations in to or out of pg_global tablespace
cannot move relations in to or out of pg_global tablespace. Can't move shared relations in to or out of pg_global. This is also checked by ATExecSetTableSpace, but nice to stop earlier.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.60 16663

cannot perform FREEZE because of prior transaction activity

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.61 16664

cannot perform FREEZE because the table was not created or truncated in the current subtransaction

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.62 16665

cannot refresh materialized view "@1@" concurrently

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.63 16666

cannot rename inherited constraint "@1@"
cannot rename inherited constraint oldconname.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.64 16667
cannot return non-composite value from function returning composite type

cannot return non-composite value from function returning composite type.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.65 16668
cannot rewrite table "@1@" used as a catalog table

cannot rewrite table Relation name used as a catalog table.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.66 16669
cannot update column "@1@" of view "@2@"

cannot update column non_updatable_col of view RelationGetRelationName(view).

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.67 16670
cannot update foreign table "@1@"

cannot update foreign table resultRel relation name.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.68 16671

**cannot use a logical replication slot for physical replication**

[Description]
Logical replication slots, similar to physical slots except that they are attached to a single database, cannot use a logical replication slot for physical replication.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.69 16672

**cannot use DISTINCT with WITHIN GROUP**

[Description]
cannot use DISTINCT with WITHIN GROUP. The order clause for WITHIN GROUP and the one for plain-aggregate ORDER BY share a field, so we have to check here that at most one is present. We also check for DISTINCT here to give a better error location.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.70 16673

**cannot use expression index "@1@" as replica identity**

[Description]
cannot use expression index Relation name of indexRel as replica identity. Expression indexes aren't supported.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.71 16674

**cannot use invalid index "@1@" as replica identity**

[Description]
cannot use invalid index Relation name of indexRel as replica identity.
Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.72 16675

```
cannot use ldapbasedn, ldapbinddn, ldapbindpasswd, ldapsearchattribute, or ldapurl together with ldapprefix
```

[Description]
cannot use ldapbasedn, ldapbinddn, ldapbindpasswd, ldapsearchattribute, or ldapurl together with ldapprefix. LDAP can operate in two modes: either with a direct bind, using ldapprefix and ldapsuffix, or using a search+bind, using ldapbasedn, ldapbinddn, ldapbindpasswd and ldapsearchattribute. Disallow mixing these parameters.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.73 16676

```
cannot use multiple ORDER BY clauses with WITHIN GROUP
```

[Description]
cannot use multiple ORDER BY clauses with WITHIN GROUP.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.74 16677

```
cannot use non-immediate index "@1@" as replica identity
```

[Description]
cannot use non-immediate index Relation name of indexRel as replica identity. Deferred indexes are not guaranteed to be always unique.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.75 16678

```
cannot use non-unique index "@1@" as replica identity
```
[Description]
cannot use non-unique index Relation name of indexRel as replica identity. The Access Method must support uniqueness, and the index must in fact be unique.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.76 16679

cannot use partial index "@1@" as replica identity

[Description]
cannot use partial index Relation name of indexRel as replica identity.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.77 16680

cannot use physical replication slot for logical decoding

[Description]
cannot use physical replication slot for logical decoding.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.78 16681

cannot use subquery in DEFAULT expression

[Description]
cannot use subquery in DEFAULT expression. Check to see if the sublink is in an invalid place within the query. We allow sublinks everywhere in SELECT/INSERT/UPDATE/DELETE, but generally not in utility statements.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.79 16682

cannot use VARIADIC with WITHIN GROUP
[Description]
cannot use VARIADIC with WITHIN GROUP.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.80 16683

check constraints for domains cannot be marked NO INHERIT

[Description]
check constraints for domains cannot be marked NO INHERIT. Check constraints are handled after domain creation, as they require the Oid of the domain; at this point we can only check that they're not marked NO INHERIT, because that would be bogus.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.81 16684

CONCURRENTLY and WITH NO DATA options cannot be used together

[Description]
CONCURRENTLY and WITH NO DATA options cannot be used together. Check that conflicting options have not been specified.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.82 16685

CONCURRENTLY cannot be used when the materialized view is not populated

[Description]
CONCURRENTLY cannot be used when the materialized view is not populated. Check that CONCURRENTLY is not specified if not populated.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.83 16687
constraint "@1@" of relation "@2@" is not a foreign key or check constraint

[Description]
constraint constrName of relation RelationName(rel) is not a foreign key or check constraint.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.84 16688

could not change directory to "@1@": @2@

[Description]
could not change directory to path: strerror(errno). could not change directory to orig_wd:strerror(errno).

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.85 16689

could not close directory "@1@": @2@

[Description]
could not close directory ctx->directory and the corresponding error will be printed.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.86 16690

could not close log file @1@: @2@

[Description]
could not close log file XLogFileNameP(ThisTimeLineID, openLogSegNo) and the reason failure also printed along with error.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.87 16691

could not close log segment @1@: @2@
could not close log segment XLogFileNameP(recvFileTLI, recvSegNo) and the reason for failure also printed along with error.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.88 16692

could not close pipe to external command: @1@

[Description]
could not close pipe to external command and the reason for failure also printed along with error.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.89 16693

could not close pipe to external command: @1@

[Description]
could not close pipe to external command: strerror(errno).

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.90 16694

could not complete SSL handshake on renegotiation, too many failures

[Description]
could not complete SSL handshake on renegotiation, too many failures. A handshake can fail, so be prepared to retry it, but only a few times and in this case we considered maximum limit is 20 times.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.91 16695

could not create any Unix-domain sockets
[Description]

could not create any Unix-domain sockets.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

---

2.63.92 16696

could not create communication channels: @1@

[Description]

could not create communication channels: strerror(errno).

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

---

2.63.93 16697

could not create shared memory segment "@1@": @2@

[Description]

could not create shared memory segment name and reason for failure also printed along with error.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

---

2.63.94 16698

could not create Unix-domain socket in directory "@1@"

[Description]

could not create Unix-domain socket in one of the Unix_socket_directories.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

---

2.63.95 16699

could not determine data type for argument @1@
could not determine data type for argument 1, since `json_object_agg()` is declared as taking type "any", the parser will not do any type conversion on unknown-type literals (that is, undecorated strings or NULLs). Such values will arrive here as type UNKNOWN, which fortunately does not matter to us, since `unknownout()` works fine.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64 Message Numbers Beginning with 16700

2.64.1 16700

*could not determine encoding for codeset "@1@"*

[Description]
could not determine encoding for codeset cp followed by the provided unsigned integer.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.2 16701

*could not duplicate handle for "@1@": @2@

[Description]
could not duplicate handle for handle name and the reason for failure also printed along with error.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.3 16702

*could not execute command "@1@": @2@

[Description]
could not execute command filename and reason for failure also printed along with error.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.64.4 16703

could not execute command "@1@": @2@

[Description]
could not execute command options->file and the strerror(errno).

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.5 16704

could not fdatasync log file @1@: @2@

[Description]
could not fdatasync log file XLogFileNameP(ThisTimeLineID, segno) and the reason for failure also printed along with error.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.6 16705

could not fork worker process: @1@

[Description]
could not fork worker process. The reason for failure also printed along with error.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.7 16706

could not fsync log file @1@: @2@

[Description]
could not fsync log file XLogFileNameP(ThisTimeLineID, segno) and reason for failure also printed along with error.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.64.8 16707

**could not fsync log segment @1@: @2@**

[Description]
could not fsync log segment XLogFileNameP(ThisTimeLineID, openLogSegNo) and reason for failure also printed along with error. XLogFileNameP(ThisTimeLineID, openLogSegNo) currently open log segment (if any). Also, if the open flag is changing, close the log file so it will be reopened (with new flag bit) at next use.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.9 16708

**could not fsync write-through log file @1@: @2@**

[Description]
could not fsync write-through log file XLogFileNameP(ThisTimeLineID, segno) and the reason for failure also printed along with error.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.10 16709

**could not get current working directory: @1@**

[Description]
could not get current working directory: strerror(errno).

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.11 16710

**could not get home directory for user ID @1@: @2@**

[Description]
could not get home directory for user ID user_id and strerror(errno) if errno set otherwise print _("user does not exist").

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.64.12 16711

could not get junction for "@1@": @2@

[Description]

could not get junction for path :msg.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.64.13 16712

could not get relation name for OID @1@: @2@

[Description]

could not get relation name for OID te->catalogId.oid, PQerrorMessage(AH->connection).

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.64.14 16713

could not get shared memory segment: @1@

[Description]

could not get shared memory segment and reason for failure also printed along with error.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.64.15 16714

Could not identify system: got @1@ rows and @2@ fields, expected @3@ rows and @4@ or more fields

[Description]

Could not identify system: got res->ntups rows and res->numAttributes fields, expected 3 rows and 1or more fields.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
2.64.16 16715

could not import a module for Decimal constructor

[Description]

could not import a module for Decimal constructor. Try to import cdecimal. If it doesn't exist, fall back to decimal.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.64.17 16716

could not initialize LDAP: @1@

[Description]

could not initialize LDAP and reason for failure also printed along with error.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.64.18 16719

could not look up local user ID @1@: @2@

[Description]

could not look up local user ID geteuid() and error string for the corresponding errno will be printed or if it is unknown error it will print "Unknown error".

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.64.19 16720

could not look up local user ID @1@: @2@

[Description]

could not look up local user ID (long)uid and if errno is set error string for the corresponding errno will be printed otherwise "user does not exist" will be printed.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
2.64.20 16721

could not map anonymous shared memory: @1@

[Description]
could not map anonymous shared memory and the reason for failure will be printed along with error. If errno is ENOMEM means this error usually means that PostgreSQL’s request for a shared memory segment exceeded available memory, swap space, or huge pages. To reduce the request size (currently size bytes), reduce PostgreSQL’s shared memory usage, perhaps by reducing shared_buffers or max_connections.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.21 16722

could not map shared memory segment "@1@": @2@

[Description]
could not map shared memory segment handle name and reason for failure also printed along with error.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.22 16723

could not obtain lock on relation "@1@"

[Description]
could not obtain lock on relation relation name. Lock relation. This will also accept any pending invalidation messages. If we got back InvalidOid, indicating not found, then there’s nothing to lock, but we accept invalidation messages anyway, to flush any negative catcache entries that may be lingering.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.23 16724

could not open backend variables file "@1@": @2@

[Description]
could not open backend variables file id and strerror(erno).

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.24 16725

could not open configuration directory "@1@": @2@

[Description]
could not open configuration directory absolute location of includedir and the reason for failure also be printed along with error.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.25 16726

could not open shared memory segment "@1@": @2@

[Description]
could not open shared memory segment dsm handle name and reason for failure also printed.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.26 16727

could not open transaction log file "@1@": @2@

[Description]
could not open transaction log file path and reason for failure also printed along with error.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.27 16728

could not parse file name "@1@"

[Description]
could not parse file name path name. temporary filenames from SnapBuildSerializer() include the LSN and everything but are postfixed by .Spid.tmp. We can just remove them the same as other files because there can be none that are currently being written that are older than cutoff. We just log a message if a file doesn't fit the pattern, it's probably some editors lock/state file or similar...
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.28 16729

could not parse LDAP URL "@1@": @2@

[Description]
could not parse LDAP URL val and ldap_err2string on the return value of ldap_url_parse.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.29 16730

could not perform initial LDAP bind for ldapbinddn "@1@" on server "@2@": @3@

[Description]
could not perform initial LDAP bind for ldapbinddn port->hba->ldapbinddn on server port->hba->ldapserver and ldap_err2string on the return value of ldap_simple_bind_s. Bind with a pre-defined username/password (if available) for searching. If none is specified, this turns into an anonymous bind.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.30 16731

could not read directory "@1@": @2@

[Description]
could not read directory path and strerror(errno).

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.31 16732

could not read file "@1@", read @2@ of @3@: @4@
[Description]

could not read file path, read readBytes of (int) SnapBuildOnDiskConstantSize) and the reason for failure also printed along with error. This error can occur during reading statically sized portion of snapshot or reading SnapBuild or during restore running xacts information or during restore committed xacts information.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.64.32 16733

could not read file "@1@", read @2@ of @3@: @4@

[Description]

could not read file, path read readBytes of (uint32) ReplicationSlotOnDiskConstantSize) and the reason for failure also printed along with the error.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.64.33 16734

could not read from backend variables file "@1@": @2@

[Description]

could not read from backend variables file id and strerror(errno).

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.64.34 16735

could not read from file "@1@": read @2@ instead of @3@ bytes

[Description]

could not read from file path: read readBytes instead of (int32) sizeof(LogicalRewriteMappingData) bytes.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.64.35 16736

could not read from log segment @1@, offset @2@, length @3@: @4@
[Description]
could not read from log segment XLogFileNameP(curFileTimeLine, sendSegNo), offset sendOff, length (unsigned long) segbytes) and the reason for failure also printed along with the error.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.36 16737
could not read from log segment @1@, offset @2@: @3@

[Description]
could not read from log segment fname, offset readOff and reason for failure also printed along with error.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.37 16738
could not read from reorderbuffer spill file: @1@

[Description]
could not read from reorderbuffer spill file and the reason for failure also be printed along with the error.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.38 16739
could not read from reorderbuffer spill file: read @1@ instead of @2@ bytes

[Description]
could not read from reorderbuffer spill file: read readBytes instead of (uint32) sizeof(ReorderBufferDiskChange) bytes.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.39 16740
could not read from tuplestore temporary file: @1@
could not read from tuplestore temporary file and reason for failure also printed along with error.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.64.40 16741
could not read time zone file "@1@": @2@

could not read time zone file filename and the reason for failure also be printed along with error.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.64.41 16742
could not receive timeline history file from "the primary server: @1@

could not receive timeline history file from "the primary server:PQerrorMessage(streamConn).

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.64.42 16743
could not remove directory "@1@"

could not remove directory tmppath. If removing the directory fails, the worst thing that will happen is that the user won’t be able to create a new slot with the same name until the next server restart. We crashed while a slot was being setup or deleted, clean up. If we crashed with an ephemeral slot active, don’t restore but delete it.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.64.43 16744
could not remove shared memory segment "@1@": @2@
[Description]
could not remove shared memory segment name and reason for failure also printed along with error.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.44 16746
could not resize shared memory segment "@1@" to @2@ bytes: @3@
[Description]
could not resize shared memory segment name to request_size bytes.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.45 16747
Could not resolve client IP address to a host name: @1@
[Description]
Could not resolve client IP address to a host name gai_strerror(port->remote_hostname_errcode).

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.46 16748
could not restore file "@1@" from archive: @2@
[Description]
could not restore file xlogfname from archive: Returns a human-readable string explaining the reason a child process terminated by taking the argument as rc.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.47 16749
could not search LDAP for filter "@1@" on server "@2@": @3@
could not search LDAP for filter on server port->hba->ldapserver: ldap_err2string(return value of ldap_search_s).

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.64.48 16750
could not seek in log file @1@ to offset @2@: @3@

could not seek in log file XLogFileNameP(ThisTimeLineID, openLogSegNo) to offset startoffset and reason for failure also printed along with error.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.64.49 16751
could not seek in log segment @1@ to offset @2@: @3@

could not seek in log segment fname to offset readOff: the reason for failure also printed along with the error.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.64.50 16752
could not seek in tuplestore temporary file: @1@

could not seek in tuplestore temporary file and the reason for failure also printed along with error.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.64.51 16753
could not seek to beginning of file "@1@": @2@
[Description]

could not seek to beginning of file path and the reason for failure also printed along with error.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.64.52 16754

could not send end-of-streaming message to primary: @1@

[Description]

could not send end-of-streaming message to primary: PQerrorMessage(streamConn).

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.64.53 16755

could not set LDAP protocol version: @1@

[Description]

could not set LDAP protocol version: ldap_err2string(return value of ldap_set_option).

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.64.54 16756

could not set socket to nonblocking mode: @1@

[Description]

could not set socket to nonblocking mode: the reason for failure also printed along with the error.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.64.55 16757

could not set socket to nonblocking mode: @1@

[Description]

could not set socket to nonblocking mode: SOCK_STRERROR(SOCK_ERRNO, sebuf, sizeof(sebuf).
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.56 16758

could not set variable "@1@"
[Description]
could not set variable varname.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.57 16759

could not start LDAP TLS session: @1@
[Description]
could not start LDAP TLS session: ldap_err2string(return value of ldap_start_tls_sA).

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.58 16760

could not stat control file "@1@": @2@
[Description]
could not stat control file XLOG_CONTROL_FILE and reason for failure also printed along with the error.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.59 16761

could not stat file or directory "@1@": @2@
[Description]
could not stat file or directory path/TABLESPACE_VERSIONDIRECTORY :the reason for failure printed along with the error.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.60 16762
could not stat file "@1@": @2@

[Description]
could not stat file options->file,strerror(errno).

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.61 16763
could not stat shared memory segment "@1@": @2@

[Description]
could not stat shared memory segment name: the reason for failure also printed along with the error.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.62 16764
could not stat trigger file "@1@": @2@

[Description]
Check to see whether the user-specified trigger file exists and whether apromote request has arrived. If either condition holds, return true.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.63 16765
Could not translate client host name "@1@" to IP address: @2@

[Description]
could not translate the client host name to ip address.
[System Processing]
     Processing will be aborted.

[Action]
     To investigate the cause of the occurrence from the message, and remove cause.

2.64.64 16766

could not truncate file "@1@" to @2@: @3@

[Description]
     Truncate all data that's not guaranteed to have been safely fsynced (by previous record or by the last checkpoint).

[System Processing]
     Processing will be aborted.

[Action]
     To investigate the cause of the occurrence from the message, and remove cause.

2.64.65 16767

could not unmap shared memory segment "@1@": @2@

[Description]
     could not unmap shared memory segment name: the reason for failure also printed along with the error.

[System Processing]
     Processing will be aborted.

[Action]
     To investigate the cause of the occurrence from the message, and remove cause.

2.64.66 16768

could not write to COPY program: @1@

[Description]
     could not write to COPY program: the reason for failure is printed along with the error.

[System Processing]
     Processing will be aborted.

[Action]
     To investigate the cause of the occurrence from the message, and remove cause.

2.64.67 16769

could not write to data file for XID @1@: @2@

[Description]
     could not write to data file for XID (txn->xid) and the reason for failure is also printed along with the error.

[System Processing]
     Processing will be aborted.
2.64.68 16770

could not write to file "@1@", wrote @2@ of @3@: @4@

[Description]

could not write to file src->path, wrote written of len: the reason for failure also printed along with the error.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.64.69 16771

could not write to log file @1@ at offset @2@, length @3@: @4@

[Description]

could not write to log file XLogFileNameP(ThisTimeLineID, openLogSegNo) at offset openLogOff length nbytes: the reason for failure also printed along with the error.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.64.70 16772

could not write to log segment @1@ at offset @2@, length @3@: @4@

[Description]

if write didn't set errno, assume no disk space

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.64.71 16773

could not write to the communication channel: @1@

[Description]

1. This function is executed in the worker process. It sends a message to the master on the communication channel.
2. This function is executed in the master process. It sends a message to a certain worker on the communication channel. If we're already aborting anyway, don't care if we succeed or not. The child might have gone already.
2.64.72 16774

**could not write to tuplestore temporary file:**

**Description**

could not write to tuplestore temporary file

**System Processing**

Processing will be aborted.

**Action**

To investigate the cause of the occurrence from the message, and remove cause.

2.64.73 16775

**database connection requirement not indicated during registration**

**Description**

This flag means the bgworker requires a database connection. The connection is not established automatically; the worker must establish it later. It requires that BGWORKER_SHMEM_ACCESS was passed too.

**System Processing**

Processing will be aborted.

**Action**

To investigate the cause of the occurrence from the message, and remove cause.

2.64.74 16776

**database is not accepting commands that generate new MultiXactIds to avoid wraparound data loss in database **

**Description**

database is not accepting commands that generate new MultiXactIds to avoid wraparound data loss in database Execute a database-wide VACUUM in that database. You might also need to commit or roll back old prepared transactions

**System Processing**

Processing will be aborted.

**Action**

To investigate the cause of the occurrence from the message, and remove cause.

2.64.75 16777

**database is not accepting commands that generate new MultiXactIds to avoid wraparound data loss in database with OID**
Execute a database-wide VACUUM in that database. You might also need to commit or roll back old prepared transactions.

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

### 2.64.76 16778

**database "@1@" is used by a logical replication slot**

**Description**
Check whether there are, possibly unconnected, logical slots that refer to the to-be-dropped database. The database lock we are holding prevents the creation of new slots using the database. ReplicationSlotsCountDBSlots -- count the number of slots that refer to the passed database oid. Returns true if there are any slots referencing the database. *nslots will be set to the absolute number of slots in the database, *nactive to ones currently active.

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

### 2.64.77 16779

**date field value out of range: @1@-@2@-@3@**

**Description**
Date field value out of range Note: we'll reject zero or negative year values. Perhaps negativity should be allowed to represent BC years?

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

### 2.64.78 16780

**date out of range: @1@-@2@-@3@**

**Description**
Date out of range Note: we'll reject zero or negative year values. Perhaps negativity should be allowed to represent BC years?

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.
2.64.79 16781

**DECLARE CURSOR WITH HOLD ... @1@ is not supported**

[Description]
DECLARE CURSOR WITH HOLD is not supported. FOR UPDATE and WITH HOLD are not compatible

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.80 16782

**DECLARE INSENSITIVE CURSOR ... @1@ is not supported**

[Description]
DECLARE INSENSITIVE CURSOR is not supported. FOR UPDATE and INSENSITIVE are not compatible

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.81 16783

**DECLARE SCROLL CURSOR ... @1@ is not supported**

[Description]
DECLARE SCROLL CURSOR is not supported. FOR UPDATE and SCROLL are not compatible

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.82 16784

**ECDH: could not create key**

[Description]
ECDH: could not create key

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.83 16785
ECDH: unrecognized curve name: @1@

[Description]
ECDH: unrecognized curve name

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.84 16786

enum label "@1@" already exists

[Description]
Check if label is already in use. The unique index on pg_enum would catch this anyway, but we prefer a friendlier error message, and besides we need a check to support IF NOT EXISTS.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.85 16788

error processing a parallel work item

[Description]
error processing a parallel work itemIt looks for an idle worker process and only returns if there is one.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.86 16789

error reading result of streaming command: @1@

[Description]
error reading result of streaming command

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.87 16790

event trigger functions cannot have declared arguments
[Description]
event trigger functions cannot have declared argumentsshouldn't be any declared arguments

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.88 16791

event trigger name cannot be qualified

[Description]
event trigger name cannot be qualifiedThe types of names handled by this function are not permitted to be schema-qualified or catalog-qualified.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.89 16792

event trigger "@1@" already exists

[Description]
An event trigger of same name is already exist

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.90 16793

event triggers are not supported for @1@

[Description]
Validate DDL command tags.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.91 16794

event trigger "@1@" does not exist
[Description]
event trigger does not exist.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.92 16795

_event trigger "@1@" does not exist, skipping_

[Description]
Generate a NOTICE stating that the named object was not found, and is being skipped. This is only relevant when "IF EXISTS" is used; otherwise, get_object_address() in RemoveObjects would have thrown an ERROR.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.93 16796

_event trigger with OID @1@ does not exist_

[Description]
event trigger with OID does not exist

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.94 16797

_exceeded maxAllocatedDescs (@1@) while trying to execute command "@2@)_

[Description]
exceeded maxAllocatedDescs while trying to execute command

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.64.95 16798

_Expected 1 tuple with 2 fields, got @1@ tuples with @2@ fields._
**[Description]**
Expected 1 tuple with 2 fields

**[System Processing]**
Processing will be aborted.

**[Action]**
To investigate the cause of the occurrence from the message, and remove cause.

### 2.64.96 16799

**Expected array element or "]", but found "@1".**

**[Description]**
The context of the parser is maintained by the recursive descent mechanism, but is passed explicitly to the error reporting routine for better diagnostics.

**[System Processing]**
Processing will be aborted.

**[Action]**
To investigate the cause of the occurrence from the message, and remove cause.

### 2.65 Message Numbers Beginning with 16800

#### 2.65.1 16800

**Expected a transaction log switchpoint location.**

**[Description]**
Expected a transaction log switchpoint location.

**[System Processing]**
Processing will be aborted.

**[Action]**
To investigate the cause of the occurrence from the message, and remove cause.

#### 2.65.2 16801

**Expected ":", but found "@1"**

**[Description]**
Invalid input syntax for type json The context of the parser is maintained by the recursive descent mechanism, but is passed explicitly to the error reporting routine for better diagnostics.

**[System Processing]**
Processing will be aborted.

**[Action]**
To investigate the cause of the occurrence from the message, and remove cause.
2.65.3 16802

**Extended Query Protocol Not Supported In A Replication Connection**

[Description]

'firstchar' specifies what kind of a forbidden message was received, and is used to construct the error message.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.65.4 16803

**Fastpath Function Calls Not Supported In A Replication Connection**

[Description]

'firstchar' specifies what kind of a forbidden message was received, and is used to construct the error message.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.65.5 16804

**Field Name Must Not Be Null**

[Description]

If function is not marked "proisstrict" in pg_proc, it must check for null arguments using this macro. Do not try to GETARG a null argument!

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.65.6 16805

**FILTER Is Not Implemented For Non-Aggregate Window Functions**

[Description]

FILTER is not yet supported with true window functions

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
2.65.7 16806

**filters not supported in LDAP URLs.**

[Description]
filters not supported in LDAP URLs.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.8 16807

**FILTER specified, but @1@ is not an aggregate function**

[Description]
FILTER specified, but the function is not an aggregate function

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.9 16808

**filter value "@1@" not recognized for filter variable "@2@"**

[Description]
Validate DDL command tags

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.10 16809

**filter variable "@1@" specified more than once**

[Description]
Complain about a duplicate filter variable.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.11 16810
final function with extra arguments must not be declared STRICT
[Description]
When finalfnExtraArgs is specified, the finalfn will certainly be passed at least one null argument, so complain if it's strict.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.12 16811

first argument of @1@ must be a row type
[Description]
Convenience function to determine whether a type OID represents a "rowtype" type --- either RECORD or a named composite type.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.13 16812

FORCE NULL column "@1@" not referenced by COPY
[Description]
Convert FORCE NULL name list to per-column flags, check validity.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.14 16813

foreign key referenced-columns list must not contain duplicates
[Description]
Reject duplicate appearances of columns in the referenced-columns list. Such a case is forbidden by the SQL standard, and even if we thought it useful to allow it, there would be ambiguity about how to match the list to unique indexes (in particular, it'd be unclear which indexopclass goes with which FK column).

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.65.15 16814

Foreign tables cannot have constraint triggers.

[Description]
Foreign key table does not contain constraint triggers

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.16 16815

Foreign tables cannot have INSTEAD OF triggers.

[Description]
Foreign tables cannot have INSTEAD OF triggers.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.17 16816

Foreign tables cannot have TRUNCATE triggers.

[Description]
Foreign tables cannot have TRUNCATE triggers.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.18 16817

foreign table "@1@" does not allow deletes

[Description]
foreign table does not allow deletes

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.19 16818
foreign table "@1@" does not allow inserts

[Description]
foreign table does not allow inserts

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.20 16819

foreign table "@1@" does not allow updates

[Description]
foreign table "@1@" does not allow updates

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.21 16820

foreign table "@1@" does not exist, skipping

[Description]
the foreign table is not existing.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.22 16821

format specifies argument 0, but arguments are numbered from 1

[Description]
Explicit 0 for argument index is immediately refused

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.23 16822

function returning record called in context that cannot accept type record
failed to determine actual type of RECORD function returning record called in context that cannot accept type record
2. get the tupdesc from the result set info - it must be a record type because we already checked that arg1 is a record type, or we're in ato_record function which returns a setof record.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.65.24 16823

function @1@ must accept VARIADIC ANY to be used in this aggregate

If the agg is declared to take VARIADIC ANY, the underlying functions had better be declared that way too, else they may receive too many parameters; but func_get_detail would have been happy with plain ANY.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.65.25 16824

function "@1@" must return type "event_trigger"

Find and validate the trigger function.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.65.26 16825

hot standby is not possible because wal_level was not set to "hot_standby" or higher on the master server

For Hot Standby, the WAL must be generated with 'hot_standby' mode, and we must have at least as many backend slots as the primary.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.
2.65.27 16826

**huge pages not supported on this platform**

[Description]

huge pages not supported on this platform if the value is 1

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.65.28 16827

**huge TLB pages not supported on this platform**

[Description]

huge pages not supported on this platform if the value is 1

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.65.29 16829

**index row size @1@ exceeds hash maximum @2@**

[Description]

Check whether the item can fit on a hash page at all. (Eventually, we ought to try to apply TOAST methods if not.) Note that at this point, itemsz doesn't include the ItemId.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.65.30 16830

**index row size @1@ exceeds maximum @2@ for index "@3@"**

[Description]

If the tuple would be too big to be stored, function throws a suitable error if errorTooBig is TRUE, or returns NULL if errorTooBig is FALSE.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
2.65.31 16831

index "@1@" cannot be used as replica identity because column "@2@" is nullable

[Description]
Check index for nullable columns.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.32 16832

index "@1@" contains a half-dead internal page

[Description]
Pre-9.4 page deletion only marked internal pages as half-dead, but now we only use that flag on leaf pages.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.33 16833

interval time zone "@1@" must not include months or days

[Description]

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.34 16834

interval units "@1@" not supported because months usually have fractional weeks

[Description]
default condition of the switch statement with condition val

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.35 16835

invalid backup block size in record at @1@/@2@
[Description]
Add in the backup blocks, if any

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.36 16836
invalid contrecord length @1@ at @2@/@3@

[Description]
Cross-check that xlp_rem_len agrees with how much of the record we expect there to be left.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.37 16837
invalid flags for opening a large object: @1@

[Description]
Large object descriptor, appropriately filled in. The descriptor and subsidiary data are allocated in the specified memory context, which must be suitably long-lived for the caller’s purposes.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.38 16839
invalid input syntax for numeric time zone: "@1@"

[Description]
Note pg_tzset happily parses numeric input that DecodeTimezone would reject. To avoid having it accept input that would otherwise be seen as invalid, it’s enough to disallow having a digit in the first position of our input string.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.39 16840
invalid input syntax for type json

</table>
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.52 16853
invalid scale in external "numeric" value

[Description]
invalid scale in external

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.53 16854
invalid timeline @1@

[Description]
invalid timeline

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.54 16855
invalid value for "buffering" option

[Description]
Validator for "buffering" reoption on GiST indexes. Allows "on", "off" and "auto" values.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.55 16856
invalid value for "check_option" option

[Description]
Validator for "check_option" reoption on views. The allowed values are "local" and "cascaded".

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
invalid value for parameter "replication"

[Description]
Try to interpret value as boolean value. Valid values are: true,false, yes, no, on, off, 1, 0; as well as unique prefixes thereof. If the string parses okay, return true, else false. If okay and result is not NULL, return the value in *result.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

invalid value for recovery parameter "recovery_target"

[Description]
the recovery parameter name should be "recovery_target" and the recovery parameter value should be "immediate".

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

invalid value "@1@" for "@2@"

[Description]
1. checking if the parsed character is greater than 0 and that parsed character is less than required.
2. check if the source is equal to init
3. if the length is not valid

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

invalid whence setting: @1@

[Description]
Note: overflow in the additions is possible, but since we will reject negative results, we don’t need any extra test for that.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.65.60 16861

**JSON does not support infinite date values.**

[Description]
XSD doesn't support infinite values. Infinity and minus infinity must be the max and min values of DateADT. We could use INT_MIN and INT_MAX here, but seems better to not assume that int32 == int.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.61 16862

**JSON does not support infinite timestamp values**

[Description]
XSD doesn't support infinite values

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.62 16863

**Junk after closing right brace**

[Description]
only whitespace is allowed after the closing brace. We used to use isspace() for parsing array values, but that has undesirable results: an array value might be silently interpreted differently depending on the locale setting. Now we just hard-wire the traditional ASCII definition of isspace().

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.63 16864

**Junk view columns are not updatable**

[Description]
the only updatable columns we support are those that are Vars referring to user columns of the underlying base relation. The view targetlist may contain resjunk columns (e.g., a view defined like "SELECT * FROM t ORDER BY a + b" is auto-updatable) but such columns are not auto-updatable, and in fact should never appear in the outer query's targetlist.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.65.64 16865
large object read request is too large
[Description]
A result_length calculated from loSize may not fit in a size_t. Check that the size will satisfy this and subsequently-enforced size limits.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.65 16866
LIKE is not supported for creating foreign tables
[Description]
we could support LIKE in many cases, but worry about it another day
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.66 16867
lock file "@1@" is empty
[Description]
Either another server is starting, or the lock file is the remnant of a previous server startup crash.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.67 16868
logical decoding cannot be used while in recovery
[Description]
We check shared state each time only until we leave recovery mode. We can't re-enter recovery, so there's no need to keep checking after the shared variable has once been seen false. Note: We don't need a memory barrier when we're still in recovery. We might exit recovery immediately after return, so the caller can't rely on 'true' meaning that we're still in recovery anyway.
[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.65.68 16869

**logical decoding requires a database connection**

[Description]
   Make sure the current settings & environment are capable of doing logicaldecoding.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.65.69 16870

**logical decoding requires wal_level >= logical**

[Description]
   Make sure the current settings & environment are capable of doing logicaldecoding.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.65.70 16871

**lo_lseek result out of range for large-object descriptor @1@**

[Description]
   guard against result overflow

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.65.71 16872

**lo_tell result out of range for large-object descriptor @1@**

[Description]
   guard against result overflow

[System Processing]
   Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.65.72 16873

**malformed range literal: ":@1@"**

**Description**
- First check for the empty range and then the rest should be whitespace, and then check if the string is not null terminated.

**System Processing**
- Processing will be aborted.

**Action**
- To investigate the cause of the occurrence from the message, and remove cause.

2.65.73 16874

**materialized views may not be defined using bound parameters**

**Description**
- A materialized view would either need to save parameters for use in maintaining/loading the data or prohibit them entirely. The latter seems safer and more sane.

**System Processing**
- Processing will be aborted.

**Action**
- To investigate the cause of the occurrence from the message, and remove cause.

2.65.74 16875

**materialized views must not use data-modifying statements in WITH**

**Description**
- Prohibit a data-modifying CTE in the query used to create a materialized view. It’s not sufficiently clear what the user would want to happen if the MV is refreshed or incrementally maintained.

**System Processing**
- Processing will be aborted.

**Action**
- To investigate the cause of the occurrence from the message, and remove cause.

2.65.75 16876

**materialized views must not use temporary tables or views**

**Description**
- Check whether any temporary database objects are used in the creation query. It would be hard to refresh data or incrementally maintain it if a source disappeared.

**System Processing**
- Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.65.76 16877

**mismatched array dimensions**

[Description]

take separate key and value arrays of text to construct a json object pairwise.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.65.77 16878

**Missing array dimension value**

[Description]

Missing array dimension value

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.65.78 16879

**more than one row returned for \gset**

[Description]

StoreQueryTuple: assuming query result is OK, save data into variables

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.65.79 16880

**moving-aggregate implementation returns type @1@, but plain implementation returns type @2@**

[Description]

check if the moving-aggregate implementation returns type is not same as that of plain implementation returns type

[System Processing]

Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

**2.65.80 16881**

**moving-aggregate transition function must not return null**

[Description]
Moving-aggregate transition functions must not return null, for more see advance_windowaggregate_base().

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.65.81 16882**

**Multidimensional arrays must have sub-arrays with matching dimensions**

[Description]
Multidimensional arrays must have sub-arrays with matching dimensions. ArrayCount will determine the dimensions for an array string.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.65.82 16883**

**multiple column definition lists are not allowed for the same function**

[Description]
check if the codelist and the range functions codelist, i.e., the multiple column definition list for the same function

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.65.83 16884**

**MultiXactId @1@ does no longer exist -- apparent wraparound**

[Description]
MultiXactId does no longer exist -- apparent wraparound

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

**2.65.84 16885**

**MultiXactId @1@ has not been created yet -- apparent wraparound**

[Description]
MultiXactId has not been created yet -- apparent wraparound

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.65.85 16886**

**must be owner of event trigger @1@**

[Description]
The MAX_ACL_KIND object types that can have privilege errors

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.65.86 16887**

**must be superuser or replication role to start walsender**

[Description]
Check replication permissions needed for walsender processes.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.65.87 16888**

**must be superuser or replication role to use replication slots**

[Description]

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.65.88 16889

**must be superuser to alter settings globally**

[Description]
Must be superuser to alter settings globally.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.89 16890

**must be superuser to COPY to or from an external program**

[Description]
Disallow COPY to/from file or program except to superusers.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.90 16891

**Must be superuser to create an event trigger**

[Description]
It would be nice to allow database owners or even regular users to do this, but there are obvious privilege escalation risks which would have to somehow be plugged first.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.91 16892

**must be superuser to execute ALTER SYSTEM command**

[Description]
must be superuser to execute ALTER SYSTEM command

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
new data for "@1@" contains duplicate rows without any null columns

[Description]
Note that this report() is returning data to the user. Generally, we would want to make sure that the user has been granted access to this data. However, REFRESH MAT VIEW is only able to be run by the owner of the mat view (or a superuser) and therefore there is no need to check for access to data in the mat view.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

new row violates WITH CHECK OPTION for view "@1@"

[Description]
WITH CHECK OPTION checks are intended to ensure that the new tuple is visible in the view. If the view's qual evaluates to NULL, then the new tuple won't be included in the view. Therefore we need to tell ExecQual to return FALSE for NULL (the opposite of what we do above for CHECK constraints).

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

no Decimal attribute in module

[Description]
the module is not contain any Decimal attribute.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

no matching relations in tablespace "@1@" found

[Description]
there is no matching relations in tablespace.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.96 16898

no rows returned for \gset

[Description]
StoreQueryTuple: assuming query result is OK, save data into variables Returns true if successful, false otherwise.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.65.97 16899

not enough arguments for cursor "@1@"

[Description]
check the syntax immediately, instead of checking the final expression that may have the arguments reordered. Trailing whitespace must not be trimmed, because otherwise input of the form (param -- comment\n, param) would be translated into a form where the second parameter is commented out.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66 Message Numbers Beginning with 16900

2.66.1 16900

not enough shared memory for data structure "@1@" (@2@ bytes requested)

[Description]
If the shmem index doesn't exist, we are bootstrapping: we must be trying to init the shmem index itself. Notice that the ShmemIndexLock is released before the shmem index has been initialized. This should be OK because no other process can be accessing shared memory yet.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.2 16901

not enough shared memory for elements of data structure "@1@" (@2@ bytes requested)
[Description]
not enough shared memory for elements of data structure

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.3 16902

null value not allowed for object key

[Description]
null value not allowed for object key

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.4 16903

number is out of range

[Description]
check if the number is coming out of range i.e., in between 0 and 9.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.5 16904

number of jsonb array elements exceeds the maximum allowed (1)

[Description]
number of jsonb array elements exceeds the maximum allowed

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.6 16905

number of jsonb object pairs exceeds the maximum allowed (1)

[Description]
number of jsonb object pairs exceeds the maximum allowed
2.66.7 16906

**number of parameters must be between 0 and 65535**

[Description]
number of parameters must be between 0 and 65535

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.8 16907

**Numeric time zones must have "+" or "+" as first character.**

[Description]
The starting charactor of the numeric time zone should not digit.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.9 16908

**numeric time zone "@1@" out of range**

[Description]
DecodeTimezone()-Interpret string as a numeric timezone. Return 0 if okay (and set *tzp), a DTERR code if not okay.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.10 16909

**Object keys should be text**

[Description]
If function is not marked "proisstrict" in pg_proc, it must check for null arguments using this macro. Do not try to GETARG a null argument!
only ordered-set aggregates can be hypothetical

Symbolic values for aggkind column. We distinguish normal aggregates from ordered-set aggregates (which have two sets of arguments, namely direct and aggregated arguments) and from hypothetical-set aggregates (which are a subclass of ordered-set aggregates in which the last direct arguments have to match up in number and datatypes with the aggregated arguments).

only tables, indexes, and materialized views exist in tablespaces

operator not allowed in variable definition

option --if-exists requires option -c/--clean
2.66.15 16914

**outer-level aggregate cannot contain a lower-level variable in its direct arguments**

**Description**
Now check for vars/aggs in the direct arguments, and throw error if needed. Note that we allow a Var of the agg's semantic level, but not an Agg of that level. In principle such Aggs could probably be supported, but it would create an ordering dependency among the aggregates at execution time. Since the case appears neither to be required by spec nor particularly useful, we just treat it as a nested-aggregate situation.

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

2.66.16 16915

**out-of-sequence timeline ID @1@ (after @2@) in log segment @3@, offset @4@**

**Description**
Since child timelines are always assigned a TLI greater than their immediate parent's TLI, we should never see TLI go backwards across successive pages of a consistent WAL sequence.

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

2.66.17 16916

**OVER is not supported for ordered-set aggregate @1@**

**Description**
Window functions must be called with a window definition.

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

2.66.18 16917

**page verification failed, calculated checksum @1@ but expected @2@**
[Description]
Throw a WARNING if the checksum fails, but only after we've checked for the all-zeroes case.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.19 16918

parallel backup only supported by the directory format

[Description]
Parallel backup only in the directory archive format so far

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.20 16919

parameter "@1@" requires a temporal value

[Description]
parameter recovery_min_apply_delay requires a temporal value

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.21 16920

percentile value @1@ is not between 0 and 1

[Description]
percentile value should be in between 0 and 1.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.22 16921

permission denied for event trigger @1@

[Description]
the no_priv_msg array object is ACL_KIND_EVENT_TRIGGER
[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

**2.66.23 16922**

*permission denied to change owner of event trigger "@1@"*

[Description]
   New owner must be a superuser

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

**2.66.24 16923**

*permission denied to create event trigger "@1@"

[Description]
   It would be nice to allow database owners or even regular users to do this, but there are obvious privilege escalation risks which would have to somehow be plugged first.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

**2.66.25 16924**

*pg_largeobject entry for OID @1@, page @2@ has invalid data field size @3@*

[Description]
   the size of the data field of pg_largeobject entry is less than 0 or greater than LOBLKSIZE.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

**2.66.26 16926**

*range constructor flags argument must not be null*

[Description]
   range constructor flags argument must not be null
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.27 16927

relation "@1@" in @2@ clause not found in FROM clause

[Description]
the list cell is NULL for ensuring the SQL row locking clause such as FOR UPDATE is not found in FROM clause

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.28 16928

removing elements from multidimensional arrays is not supported

[Description]
We can't remove elements from multi-dimensional arrays, since the result might not be rectangular.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.29 16929

renaming an ON SELECT rule is not allowed

[Description]
We disallow renaming ON SELECT rules, because they should always be named "_RETURN".

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.30 16930

replication slot file @1@: checksum mismatch, is @2@, should be @3@

[Description]
verify the CRCs.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.66.31 16931

replication slot file "@1@" has corrupted length @2@

[Description]
boundary check on length

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.32 16932

replication slot file "@1@" has unsupported version

[Description]
verify version

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.33 16933

replication slot file "@1@" has wrong magic @2@ instead of @3@

[Description]
verify magic

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.34 16934

replication slot name "@1@" contains invalid character

[Description]
Replication slot names may only contain letters, numbers, and the underscore character

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.66.35 16935

replication slot name "@1@" is too long

[Description]
Maximum length for identifiers (e.g. table names, column names, function names). Names actually are limited to one less byte than this, because the length must include a trailing zero byte.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.36 16936

replication slot name "@1@" is too short

[Description]
Check whether the passed slot name is valid and report errors at elevel.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.37 16937

Replication slot names may only contain letters, numbers, and the underscore character.

[Description]
Replication slot names may only contain letters, numbers, and the underscore character.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.38 16938

replication slot "@1@" already exists

[Description]
Check for name collision, and identify an allocatable slot. We need to hold ReplicationSlotControlLock in shared mode for this, so that nobody else can change the in_use flags while we're looking at them.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.66.39 16939

**replication slots can only be used if max_replication_slots > 0.**

[Description]
replication slots can only be used if max_replication_slots > 0

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.40 16940

**replication slots can only be used if wal_level >= archive**

[Description]
replication slots can only be used if wal_level >= archive

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.41 16941

**replication slot "@1@" does not exist**

[Description]
replication slot does not exist

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.42 16942

**replication slot "@1@" is already active**

[Description]
replication slot is already active

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.43 16943
replication slot "@1@" was not created in this database
[Description]
replication slot was not created in this database

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.44 16944

requested character not valid for encoding: @1@
[Description]
requested character not valid for encoding

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.45 16945

requested starting point @1@/@2@ is ahead of the WAL flush position of this server @3@/@4@
[Description]
requested starting point is ahead of the WAL flush position of this server

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.46 16946

requested starting point @1@/@2@ on timeline @3@ is not in this server's history
[Description]
requested starting point on timeline is not in this server's history

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.47 16947
requested timeline @1@ does not contain minimum recovery point @2@/@3@ on timeline @4@

[Description]
requested timeline does not contain minimum recovery point on timeline

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.48 16948

requested timeline @1@ is not a child of this server's history

[Description]
requested timeline is not a child of this server's history

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.49 16949

requested timeline @1@ is not in this server's history

[Description]
requested timeline is not in this server's history

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.50 16950

RETURNING list entry has type @1@, but column has type @2@.

[Description]
RETURNING list entry and column are of different types.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.51 16951

RETURNING must have at least one column
RETURNING must have at least one column.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.66.52 16952**

return type of inverse transition function @1@ is not @2@

Return type of inverse transition function must exactly match declared mtranstype

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.66.53 16953**

row is too big: size @1@, maximum size @2@

Row is too big.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.66.54 16954**

ROWS FROM() with multiple functions cannot have a column definition list

ROWS FROM() with multiple functions cannot have a column definition list

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.66.55 16955**

rules on materialized views are not supported

Rules on materialized views are not supported
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.56 16956

@1@ cannot be applied to a function

[Description]
cannot be applied to a function

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.57 16957

@1@ cannot be applied to a join

[Description]
cannot be applied to a join

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.58 16958

@1@ cannot be applied to a WITH query

[Description]
cannot be applied to a WITH query

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.59 16959

@1@ cannot be applied to the nullable side of an outer join

[Description]
cannot be applied to the nullable side of an outer join

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.60 16960

@1@ cannot be applied to VALUES
[Description]
cannot be applied to VALUES
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.61 16961

@1@: cannot cluster specific table(s) in all databases
[Description]
cannot cluster specific table(s) in all databases
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.62 16962

@1@: cannot reindex specific index(es) and system catalogs at the same time
[Description]
cannot reindex specific index(es) and system catalogs at the same time
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.63 16963

@1@: cannot reindex specific index(es) in all databases
[Description]
cannot reindex specific index(es) in all databases
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.66.64 16964
@1@: cannot reindex specific table(s) and system catalogs at the same time

[Description]
cannot reindex specific table(s) and system catalogs at the same time

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.65 16965
@1@: cannot reindex specific table(s) in all databases

[Description]
cannot reindex specific table(s) in all databases

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.66 16966
@1@: cannot use --create-slot or --drop-slot together with --startpos

[Description]
cannot use create-slot or drop-slot together with startpos

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.67 16967
@1@: cannot use --create-slot or --start together with --drop-slot

[Description]
cannot use create-slot or start-slot together while doing a drop-slot

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.68 16968
@1@: cannot vacuum specific table(s) in all databases

[Description]
cannot vacuum specific table(s) in all databases

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.69 16969

@1@ can only be called in a sql_drop event trigger function

[Description]
can only be called in a sql_drop event trigger function

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.70 16970

@1@: could not access directory "@2@": @3@

[Description]
Trouble in accessing directory

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.71 16971

@1@: could not allocate SIDs: error code @2@

[Description]
could not allocate security identifier(SID) and displays the last error returned by GetLastError().(GetLastError() is a windows specific call which returns one of the 500 System Error Codes)

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.72 16972

@1@: could not change permissions of directory "@2@": @3@
could not change permissions of directory

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.66.73 16973

@1@: could not change permissions of "@2@": @3@

Here chmod takes the PGPATH as path and options as S_IRUSR | S_IWUSR

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.66.74 16974

@1@: could not close directory "@2@": @3@

closedir syscall called and errno set accordingly

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.66.75 16975

@1@: could not create archive status file "@2@": @3@

This open syscall takes a temporary path name and flags O_WRONLY | O_CREAT | PG_BINARY and mode as S_IRUSR | S_IWUSR

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.66.76 16976

@1@: could not create replication slot "@2@": got @3@ rows and @4@ fields, expected @5@ rows and @6@ fields
[Description]
could not create replication slot as rows is not equal to 1 and fields is not greater than or equal to 4

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.77 16977

@1@: could not create symbolic link "@2@": @3@

[Description]
while creating symbolic path for a Xlog directory or tablespace path

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.78 16978

@1@: could not create timeline history file "@2@": @3@

[Description]
This open syscall takes a temporary path name and flags O_WRONLY | O_CREAT | PG_BINARY and mode as S_IRUSR | S_IWUSR

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.79 16979

@1@: could not drop replication slot "@2@": got @3@ rows and @4@ fields, expected @5@ rows and @6@ fields

[Description]
could not drop replication slot as rows and fields are not equal to zero

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.80 16980

@1@: could not fetch default options
The function PQconndefaults() constructs a default connection options array, which identifies all the available options and shows any default values that are available from the environment etc. On error (e.g., out of memory), NULL is returned.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.66.81 16981
@1@: could not find own program executable

find_my_exec() finds an absolute path to a valid executable

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.66.82 16982
@1@: could not fsync file "@2@": @3@

could not fsync file

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.66.83 16983
@1@: could not fsync log file "@2@": @3@

could not fsync log file.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.66.84 16984
@1@: could not identify system: got @2@ rows and @3@ fields, expected @4@ rows and @5@ or more fields
[Description]
Could not identify system as expected number of rows is not equal to 1 and number of fields is not greater than or equal to 3

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.85 16985

@1@: could not locate my own executable path

[Description]
find_my_exec() finds an absolute path to a valid executable

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.86 16986

@1@: could not open directory "@2@": @3@

[Description]
could not open directory

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.87 16987

@1@: could not open file "@2@": @3@

[Description]
could not open file

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.88 16988

@1@: could not open log file "@2@": @3@
[Description]
could not open log file

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.89 16989

@1@: could not open timeline history file "@2@": @3@

[Description]
could not open timeline history file

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.90 16990

@1@: could not parse next timeline's starting point "@2@"

[Description]
could not parse next timeline's starting point

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.91 16991

@1@: could not parse start position "@2@"

[Description]
could not parse start position

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.66.92 16992

@1@: could not read directory "@2@": @3@

[Description]
could not read directory
Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.66.93 16993

@1@: could not remove promote signal file "@2@": @3@

[Description]

could not remove promote signal file

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.66.94 16994

@1@: could not rename file "@2@" to "@3@": @4@

[Description]

could not rename file (Here we move the completed history file into place with its final name)

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.66.95 16995

@1@: could not send copy-end packet: @2@

[Description]

PQputCopyEnd - send EOF indication to the backend during COPY IN. After calling this, use PQgetResult() to check command completion status. Returns 1 if successful, 0 if data could not be sent (only possible in nonblock mode), or -1 if an error occurs.

pqFlush - send any data waiting in the output buffer. Return 0 on success, -1 on failure and 1 when not all data could be sent because the socket would block and the connection is non-blocking.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.66.96 16996

@1@: could not stat file "@2@": @3@
could not stat file

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.66.97 16997

@1@: could not write timeline history file "@2@": @3@

This write operation happens while Writing the history file to pg_xlog or Writing the history file to disk

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause

2.66.98 16998

@1@: could not write @2@ bytes to log file "@3@": @4@

could not write the bytes to log file

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause

2.66.99 16999

@1@: directory name too long

directory name too long

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause

2.67 Message Numbers Beginning with 17000

2.67.1 17000

@1@: directory "@2@" does not exist
[Description]  
directory does not exist, The errno ENOENT indicates that component of path does not exist, or path is an empty string.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause

2.67.2 17001  
@1@: directory "@2@" is not a database cluster directory

[Description]  
directory is not a database cluster directory

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause

2.67.3 17002  
SELECT rule's target entry @1@ has different column name from column "@2@" cluster directory

[Description]  
resname is required to represent the correct column name in non-resjunk entries of top-level SELECT targetlists, since it will be used as the column title sent to the frontend.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause

2.67.4 17003  
SELECT target entry has type @1@, but column has type @2@.

[Description]  
SELECT column does not match target entry

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause

2.67.5 17004  
ShmemIndex entry size is wrong for data structure "@1@": expected @2@, actual @3@
ShmemIndex entry size is wrong for data structure.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause

2.67.6 17005

@1@: incompatible server version @2@; client does not support streaming from server versions newer than @3@

incompatible server version, client does not support streaming from server. ServerMajor and maxServerMajor are calculated as follows; (serverMajor = PQserverVersion(conn) / 100 and maxServerMajor = PG_VERSION_NUM / 100; where PG_VERSION_NUM is 90401 and PQserverVersion returns the sversion; /* server version, e.g. 70401 for 7.4.1 */

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause

2.67.7 17006

@1@: incompatible server version @2@; client does not support streaming from server versions older than @3@

incompatible server version, client does not support streaming from server. ServerMajor and minServerMajor are calculated as follows; (serverMajor = PQserverVersion(conn) / 100 and minServerMajor = 903; where PQserverVersion returns the sversion; /* server version, e.g. 70401 for 7.4.1 */

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause

2.67.8 17007

@1@: incompatible server version @2@

incompatible server version; ServerMajor and maxServerMajor are calculated as follows; (minServerMajor = 903, serverMajor = PQserverVersion(conn) / 100 and maxServerMajor = PG_VERSION_NUM / 100; where PG_VERSION_NUM is 90401 and PQserverVersion returns the sversion; /* server version, e.g. 70401 for 7.4.1 */

Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause

2.67.9 17008

@1@: invalid --max-rate unit: "@2@"

[Description]

after_num is obtained by passing src string to strtod

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause

2.67.10 17009

@1@: invalid number of parallel jobs

[Description]

invalid number of parallel jobs

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause

2.67.11 17010

@1@: invalid tablespace mapping format "@2@", must be "OLDDIR=NEWDIR"

[Description]

invalid tablespace mapping format

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause

2.67.12 17011

@1@: invalid transfer rate "@2@": @3@

[Description]

invalid transfer rate

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause
2.67.13 17012

@1@: invalid xlog-method option "@2@", must be "fetch" or "stream"

[Description]
invalid xlog-method option

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause

2.67.14 17013

@1@ is not allowed with aggregate functions

[Description]
The return type of function LCS_asString is not allowed with aggregate functions. In this error case, the return type of LCS_asString is "FOR some"

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause

2.67.15 17014

@1@ is not allowed with DISTINCT clause

[Description]
The return type of function LCS_asString is not allowed with aggregate functions. In this error case, the return type of LCS_asString is "FOR some"

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause

2.67.16 17015

@1@ is not allowed with GROUP BY clause

[Description]
The return string of LCS_asString() is not allowed with GROUP BY clause

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

</table>
"@1@" is not a materialized view

[Description]
The Relation that is returned by RelationGetRelationName() is not a materialized view

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.22 17021

@1@ is not an ordered-set aggregate, so it cannot have WITHIN GROUP

[Description]
Normal aggregate, so it can't have WITHIN GROUP

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.23 17022

"@1@" is not a table, materialized view, composite type, or foreign table

[Description]
If the particular relation is not a table, materialized view, composite type, or foreign table

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.24 17023

"@1@" is not a table, materialized view, index, or foreign table

[Description]
The relation returned by the function RelationGetRelationName() is not a table, materialized view, index, or foreign table

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.25 17024

"@1@" is not a table, materialized view, or index
The relation is not a table, materialized view, or index

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.67.26 17025

"@1@" is not a table or materialized view

The relation is not a table or materialized view

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.67.27 17026

"@1@" is not a table, view, materialized view, composite type, index, or foreign table

The relation is not a table, view, materialized view, composite type, index, or foreign table

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.67.28 17027

"@1@" is not a table, view, materialized view, composite type, or foreign table

The relation is not a table, view, materialized view, composite type, or foreign table.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.67.29 17028

"@1@" is not a table, view, materialized view, index, or TOAST table

The relation is not a table, view, materialized view, index, or TOAST table
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.30 17030

"@1@" is not a table, view, materialized view, sequence, or foreign table

[Description]
The relation is not a table, view, materialized view, sequence, or foreign table. Note: Don't allow ALTER TABLE. SET SCHEMA on relations that can't be moved to a different schema, such as indexes and TOAST tables.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.31 17031

"@1@" is not a table, view, or foreign table

[Description]
The relation is not a table, view, or foreign table.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.32 17032

"@1@" is not a table, view, sequence, or foreign table

[Description]
The relation is not a table, view, sequence, or foreign table.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.33 17033

@1@ must specify unqualified relation names

[Description]
The return type of LCS_asString() must specify unqualified relation names.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.34 17034

snapbuild state file @1@: checksum mismatch, is @2@, should be @3@

[Description]
    snapbuild state file : checksum mismatch

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.35 17035

snapbuild state file "@1@" has unsupported version @2@ instead of @3@

[Description]
    snapbuild state file has unsupported version.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.36 17036

snapbuild state file "@1@" has wrong magic @2@ instead of @3@

[Description]
    snapbuild state file has wrong magic number

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.37 17037

@1@: new directory is not an absolute path in tablespace mapping: @2@

[Description]
    new directory is not an absolute path in tablespace mapping

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.67.38 17038

@1@: no database specified

[Description]
no database specified for the given program name

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.39 17039

@1@: no slot specified

[Description]
no slot specified for the given program name

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.40 17040

SP-GiST inner tuple size @1@ exceeds maximum @2@

[Description]
SPGiST leaf tuple carries a datum and a heap tuple TID. Inner tuple should be small enough to fit on a page. Values larger than a buffer page cannot be indexed.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.41 17041

SSL failed to renegotiate connection before limit expired

[Description]
SSL failed to renegotiate connection before limit expired

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.42 17042

@1@: symlink are not supported on this platform
[Description]
  symlink are not supported on this platform. Note: Define to 1 if you have the 'symlink' function.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.43 17043

@1@: transaction log directory location can only be specified in plain mode
[Description]
  transaction log directory location can only be specified in plain mode

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.67.44 17044

@1@: transaction log directory location must be an absolute path
[Description]
  transaction log directory location must be an absolute path

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.67.45 17045

@1@: transfer rate must be greater than zero
[Description]
  transfer rate must be greater than zero

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.
2.67.46 17046

@1@: transfer rate "@2@" exceeds integer range

[Description]
transfer rate exceeds integer range

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.47 17047

@1@: transfer rate "@2@" is not a valid value

[Description]
transfer rate is not a valid value Note: The second parameter is a out - parameter.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.48 17049

strictness of aggregate's forward and inverse transition functions must match

[Description]
strictness of aggregate's forward and inverse transition functions must match. Note: Insist that forward and inverse
transition functions have the same strictness setting. Allowing them to differ would require handling more special cases
in advance_windowaggregate and advance_windowaggregate_base, for no discernible benefit. This should have been
checked at agg definition time, but we must check again in case either function's strictness property has been changed.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.49 17050

string too long to represent as jsonb string

[Description]
string too long to represent as jsonb string. Note :Due to an implementation restriction, jsonb strings cannot exceed
0x0FFFFFFF

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.67.50 17051

@1@: unexpected response to TIMELINE_HISTORY command: got @2@ rows and @3@ fields, expected @4@ rows and @5@ fields

[Description]
unexpected response to TIMELINE_HISTORY command. Note: The response to TIMELINE_HISTORY is a single row result set with two fields: filename and content

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.51 17052

@1@: unexpected result set after end-of-timeline: got @2@ rows and @3@ fields, expected @4@ rows and @5@ fields

[Description]
unexpected result set after end-of-timeline

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.52 17053

@1@: WAL streaming can only be used in plain mode

[Description]
WAL streaming can only be used in plain mode

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.53 17054

system column "@1@" reference in check constraint is invalid

[Description]
system column reference in check constraint is invalid

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.67.54 17055**

**time field value out of range: @1@:@2@:@3@**

[Description]

- time field value out of range

[System Processing]

- Processing will be aborted.

[Action]

- To investigate the cause of the occurrence from the message, and remove cause.

**2.67.55 17056**

**timestamp out of range: @1@@2@@3@@4@@5@@6@@**

[Description]

- timestamp out of range

[System Processing]

- Processing will be aborted.

[Action]

- To investigate the cause of the occurrence from the message, and remove cause.

**2.67.56 17057**

**too many background workers**

[Description]

- too many background workers

[System Processing]

- Processing will be aborted.

[Action]

- To investigate the cause of the occurrence from the message, and remove cause.

**2.67.57 17058**

**too many column names were specified**

[Description]

- too many column names were specified

[System Processing]

- Processing will be aborted.

[Action]

- To investigate the cause of the occurrence from the message, and remove cause.
2.67.58 17059

too many dynamic shared memory segments

[Description]

too many dynamic shared memory segments

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.67.59 17060

too many lexemes in thesaurus entry

[Description]

too many lexemes in thesaurus entry. Note: currently, tsearch_readline can't return lines exceeding 4KB, so overflow of
the word counts is impossible. But that may not always be true, so let's check.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.67.60 17061

too many replication slots active before shutdown

[Description]

too many replication slots active before shutdown

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.67.61 17062

total size of jsonb array elements exceeds the maximum of @1@ bytes

[Description]

Total size of jsonb array elements exceeds the maximum of 0x0FFFFFFF bytes

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
2.67.62 17063

**total size of jsonb object elements exceeds the maximum of 0x100000000 bytes**

[Description]

total size of jsonb object elements exceeds the maximum of 0x100000000 bytes

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.67.63 17064

**tuple to be updated was already modified by an operation triggered by the current command**

[Description]

tuple to be updated was already modified by an operation triggered by the current command

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.67.64 17065

**type modifier cannot have ORDER BY**

[Description]

type modifier cannot have ORDER BY

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.67.65 17066

**"TZ"/"tz"/"OF" format patterns are not supported in to_date**

[Description]

format patterns are not supported in to_date

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
\u0000 cannot be converted to text.

[Description]

\u0000 cannot be converted to text. Note: The function report_json_context() reports a CONTEXT line for bogus JSON input.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.67.67 17068

Unexpected array element.

[Description]

Unexpected array element.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.67.68 17070

unexpected pageaddr @1@/@2@ in log segment @3@, offset @4@

[Description]

unexpected pageaddr in log segment offset

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.67.69 17071

unexpected previous timeline ID @1@ (current timeline ID @2@) in checkpoint record

[Description]

unexpected previous timeline ID in checkpoint record

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.67.70 17072

unexpected result after CommandComplete: @1@
[Description]
unexpected result after CommandComplete

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.71 17073

unexpected result set after end-of-streaming

[Description]
unexpected result set after end-of-streaming

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.72 17074

unexpected result status for \watch

[Description]
unexpected result status for \watch

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.73 17075

unexpected standby message type "@1@", after receiving CopyDone

[Description]
unexpected standby message type ,after receiving CopyDone . Note :If we already received a CopyDone from the frontend, the frontend should not send us anything until we've closed our end of the COPY.XXX: In theory, the frontend could already send the next command before receiving the CopyDone, but libpq doesn't currently allow that.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.74 17076

unexpected timeline ID @1@ in checkpoint record, before reaching minimum recovery point @2@@3@ on timeline @4@
unexpected timeline ID %u in checkpoint record, before reaching minimum recovery point %X/%X on timeline %u

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.67.75 17077

unexpected timeline ID @1@ in log segment @2@, offset @3@

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.67.76 17078

Unicode escape values cannot be used for code point values above 007F when the server encoding is not UTF8.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.67.77 17079

Unicode high surrogate must not follow a high surrogate.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.67.78 17080

Unicode low surrogate must follow a high surrogate.
[Description]
Unicode low surrogate must follow a high surrogate.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.79 17081

UNNEST() with multiple arguments cannot have a column definition list

[Description]
UNNEST() with multiple arguments cannot have a column definition list

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.80 17082

unsupported LDAP URL scheme: @1@

[Description]
unsupported LDAP URL scheme

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.81 17083

unsupported Unicode escape sequence

[Description]
unsupported Unicode escape sequence

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.82 17084

unterminated format specifier

[Description]
unterminated format specifier
2.67.83 17085

UTC timezone offset is out of range.

[Description]
UTC timezone offset is out of range.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.84 17086

variable "@1@" shadows a previously defined variable

[Description]
shadows a previously defined variable

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.85 17087

VARIADIC argument must be an array

[Description]
VARIADIC argument must be an array

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.86 17088

\watch cannot be used with an empty query

[Description]
watch cannot be used with an empty query.

[System Processing]
Processing will be aborted.

**Explanation**

- **watch cannot be used with COPY**
  - **Description**: watch cannot be used with COPY
  - **System Processing**: Processing will be aborted.
  - **Action**: To investigate the cause of the occurrence from the message, and remove cause.

- **WHERE CURRENT OF is not supported for this table type**
  - **Description**: WHERE CURRENT OF is not supported for this table type
  - **System Processing**: Processing will be aborted.
  - **Action**: To investigate the cause of the occurrence from the message, and remove cause.

- **window functions are not allowed in check constraints**
  - **Description**: window functions are not allowed in check constraints.
  - **System Processing**: Processing will be aborted.
  - **Action**: To investigate the cause of the occurrence from the message, and remove cause.

- **window functions are not allowed in DEFAULT expressions**
  - **Description**: window functions are not allowed in DEFAULT expressions.
  - **System Processing**: Processing will be aborted.
  - **Action**: To investigate the cause of the occurrence from the message, and remove cause.
2.67.91 17093

**window functions are not allowed in EXECUTE parameters**

[Description]
window functions are not allowed in EXECUTE parameters

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.92 17094

**window functions are not allowed in functions in FROM**

[Description]
window functions are not allowed in functions in FROM

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.93 17095

**window functions are not allowed in index expressions**

[Description]
window functions are not allowed in index expressions

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.94 17096

**window functions are not allowed in index predicates**

[Description]
window functions are not allowed in index predicates

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.95 17097
window functions are not allowed in JOIN conditions

[Description]
window functions are not allowed in JOIN conditions

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.96 17098

window functions are not allowed in @1@

[Description]
window functions are not allowed in expression kind

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.67.97 17099

window functions are not allowed in transform expressions

[Description]
window functions are not allowed in transform expressions

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68 Message Numbers Beginning with 17100

2.68.1 17100

window functions are not allowed in trigger WHEN conditions

[Description]
window functions are not allowed in trigger WHEN conditions

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.68.2 17101

window functions are not allowed in window definitions

[Description]
window functions are not allowed in window definitions

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.3 17102

window function @1@ cannot have WITHIN GROUP

[Description]
window function cannot have WITHIN GROUP Note:And, per spec, WITHIN GROUP isn't allowed.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.4 17103

window function @1@ requires an OVER clause

[Description]
window function requires an OVER clause. Note:True window functions must be called with a window definition.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.5 17104

WITH CHECK OPTION is supported only on automatically updatable views

[Description]
WITH CHECK OPTION is supported only on automatically updatable views

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.6 17105
WITH CHECK OPTION not supported on recursive views

[Description]
WITH CHECK OPTION not supported on recursive views

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.7 17106

WITHIN GROUP is required for ordered-set aggregate @1@

[Description]
WITHIN GROUP is required for ordered-set aggregate

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.8 17107

WITHIN GROUP specified, but @1@ is not an aggregate function

[Description]
WITHIN GROUP specified, but the function is not an aggregate function

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.9 17108

WITH ORDINALITY cannot be used with a column definition list

[Description]
WITH ORDINALITY cannot be used with a column definition list

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.10 17109

tablespace encryption algorithm option can not be changed
tablespace_encryption_algorithm option can not be changed with alter tablespace.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

result of USING clause for column "@1@" cannot be cast automatically to type @2@

USING clause column value cannot be typecasted automatically to new column type specified.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

could not parse contents of file "@1@"

Postgresql auto configuration file cannot be parsed

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

pg_resetxlog process cannot change the directory
2.68.15 17116

pclose failed: @1@

[Description]
pclose system call failed

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.16 17117

cannot duplicate null pointer (internal error)

[Description]
Null pointer cannot be duplicated

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.17 17118

out of memory

[Description]
Process runs out of memory

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.18 17119

@1@: WARNING: cannot create restricted tokens on this platform

[Description]
Restricted Tokens cannot be created

[Action]
WARNING is issued
To investigate the cause of the occurrence from the message, and remove cause for the WARNING.

2.68.19 17120

@1@: could not open process token: error code @2@

[Description]
Cannot open the process Token

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.20 17121

@1@: could not allocate SIDs: error code @2@

[Description]
Cannot allocate the SIDs

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.21 17122

@1@: could not create restricted token: error code @2@

[Description]
Restricted token could not be created

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.22 17123

@1@: could not start process for command "@2@": error code @3@

[Description]
Process could not be started

[System Processing]
Processing could not be initiated

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.68.23 17124
@1@: could not re-execute with restricted token: error code @2@

[Description]
Restricted Token cannot be re-executed

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.24 17125
@1@: could not get exit code from subprocess: error code @2@

[Description]
Cannot exit from the sub process

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.25 17126
user does not exist

[Description]
user does not exist

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.26 17127
user name lookup failure: error code @1@

[Description]
user does not exist

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.27 17128
command not found
[Description]
Command cannot be found
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.28 17129
command not executable
[Description]
Command is not executable
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.29 17130
could not determine encoding for codeset "@1@"
[Description]
Corresponding local could not found in PostgreSQL
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.30 17131
could not get junction for "@1@": @2@
[Description]
could not get junction
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.31 17132
could not get junction for "@1@": @2@
could not get junction

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

**2.68.32 17133**

*lock violation*

[Description]
Antivirus software or some other similar software has locked the database file

[System Processing]
Process trying to access the file continues and retries after every 30 seconds

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.68.33 17134**

*sharing violation*

[Description]
Antivirus software or some other similar software has locked the database file

[System Processing]
Process trying to access the file continues and retries after every 30 seconds

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.68.34 17135**

*could not get current working directory: @1@*

[Description]
The current working directory path cannot be found

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.68.35 17136**

*unrecognized error @1@*

[Description]
Error could not be recognized

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.68.40 17143

cannot access temporary tables during a parallel operation

[Description]
    Temporary tables cannot be accessed during parallel operation

[System Processing]
    Processing aborts

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.68.41 17144

cannot insert tuples during a parallel operation

[Description]
    Tuples cannot be inserted during the parallel operation

[System Processing]
    Processing aborts

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.68.42 17146

tried to delete invisible tuple

[Description]
    An attempt has been made to delete an invisible tuple

[System Processing]
    Processing aborts

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.68.43 17147

cannot update tuples during a parallel operation

[Description]
    Tuples cannot be updated during the parallel operation

[System Processing]
    Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.44 17148

attempted to update invisible tuple
[Description]
An attempt has been made to update an invisible tuple

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.45 17149

could not truncate file "@1@" to @2@: @3@
[Description]
File could not be truncated due to inaccessibility of the file or file's location

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.46 17150

index "@1@" contains a half-dead internal page
[Description]
Index page is corrupted. This is no harm for processes performing searches. This can be fixed by RE-INDEXING.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.47 17151

sample percentage must be between 0 and 100
[Description]
Sample percentage for sample scan must be between 0 and 100

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

cannot create temporary tables in parallel mode
[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.81 17197

"@1@" is not a materialized view

[Description]
The object type being accessed is not a materialized view

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.82 17198

default value for column "@1@" of relation "@2@" does not exist

[Description]
default value for column of relation does not exist

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.68.83 17199

operator @1@ (@2@, @3@) of @4@ does not exist

[Description]
operator does not exist

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69 Message Numbers Beginning with 17200

2.69.1 17200

function @1@ (@2@, @3@) of @4@ does not exist
[Description]
function being accessed does not exist. Check if the function is existing with appropriate permissions and search_path settings

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.2 17201

user mapping for user "@1@" on server "@2@" does not exist

[Description]
user mapping for user in server does not exists. Check the mapping user while creating foreign tables

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.3 17202

unrecognized default ACL object type "@1@

[Description]
ACL object type is unrecognized. Valid object types are "r", "S", "f", and "T"

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.4 17203

default ACL for user "@1@" in schema "@2@" on @3@ does not exist

[Description]
default ACL for user in schema on does not exist

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.5 17204

default ACL for user "@1@" on @2@ does not exist
[Description]
  default ACL for user on does not exist

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.69.6 17205

name or argument lists may not contain nulls

[Description]
  name or argument lists may not contain nulls

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.69.7 17206

unsupported object type "@1@"

[Description]
  unsupported object type

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.69.8 17207

name list length must be exactly @1@

[Description]
  name list length must be exactly 1

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.69.9 17208

large object OID may not be null

[Description]
  large object OID may not be null
2.69.10 17210

argument list length must be exactly @1@

[Description]
argument list length must be exactly 1

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.11 17211

name list length must be at least @1@

[Description]
name list length must be at least 1

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.12 17212

unrecognized object type "@1"

[Description]
unrecognized object type

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.13 17213

aggregates cannot have more than @1@ argument

[Description]
aggregates cannot have more than 1 argument

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
To investigate the cause of the occurrence from the message, and remove cause.

2.69.14 17215

**a variadic ordered-set aggregate must use VARIADIC type ANY**

[Description]

a variadic ordered-set aggregate must use VARIADIC type ANY

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.69.15 17216

**a hypothetical-set aggregate must have direct arguments matching its aggregated arguments**

[Description]

a hypothetical-set aggregate must have direct arguments matching its aggregated arguments

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.69.16 17218

**strictness of aggregate’s forward and inverse transition functions must match**

[Description]

strictness of aggregate's forward and inverse transition functions must match

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.69.17 17219

**final function with extra arguments must not be declared STRICT**

[Description]

final function with extra arguments must not be declared STRICT

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
2.69.18 17220

moving-aggregate implementation returns type @1@, but plain implementation returns type @2@

[Description]
moving-aggregate implementation returns type one type but plain implementation returns type other type

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.19 17221

function @1@ must accept VARIADIC ANY to be used in this aggregate

[Description]
The function must accept VARIADIC ANY to be used in this aggregate

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.20 17222

constraint "@1@" for domain @2@ does not exist

[Description]
The constraint for domain does not exist. Check the constraint name

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.21 17223

enum label "@1@" already exists

[Description]
enum label already exists

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.69.22 17224

pg_enum OID value not set when in binary upgrade mode

[Description]  
pg_enum OID value not set when in binary upgrade mode

[System Processing]  
Processing aborts

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.69.23 17225

pg_type OID value not set when in binary upgrade mode

[Description]  
pg_type OID value not set when in binary upgrade mode

[System Processing]  
Processing aborts

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.69.24 17226

"@1@" is not a table or materialized view

[Description]  
The object referenced by pg_stattuple utility is not a table or materialized view

[System Processing]  
Processing aborts

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.69.25 17227

only ordered-set aggregates can be hypothetical

[Description]  
only ordered-set aggregates can be hypothetical

[System Processing]  
Processing aborts

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.69.26 17228
aggregate msfunc must be specified when mstype is specified

[Description]
aggregate msfunc must be specified when mstype is specified

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.27 17229

aggregate minvfunc must be specified when mstype is specified

[Description]
aggregate minvfunc must be specified when mstype is specified

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.28 17230

aggregate msfunc must not be specified without mstype

[Description]
aggregate msfunc must not be specified without mstype

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.29 17231

aggregate minvfunc must not be specified without mstype

[Description]
aggregate minvfunc must not be specified without mstype

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.30 17232

aggregate msspace must not be specified without mstype
aggregate msspace must not be specified without mstype

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.69.31 17233

aggregate minitcond must not be specified without mstype

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.69.32 17234

event trigger "@1@" already exists

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.69.33 17236

could not write to COPY program: @1@

could not write to COPY program: %m

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.69.34 17237

must be superuser to COPY to or from an external program

Only superuser can COPY to or from an external program
2.69.35 17238

**COPY FROM not supported with row-level security**

[Description]
COPY FROM an external file is not supported when row level security is enabled. Use INSERT statements instead.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.36 17239

**COPY force null available only in CSV mode**

[Description]
COPY force null available only in CSV mod

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.37 17240

**COPY force null only available using COPY FROM**

[Description]
COPY force null only available using COPY FROM

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.38 17241

**relation referenced by COPY statement has changed**

[Description]
relation referenced by COPY statement has changed

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
To investigate the cause of the occurrence from the message, and remove cause.

2.69.39 17242

could not close pipe to external command: @1@

[Description]
could not close pipe to external command

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.40 17243

program "@1@" failed

[Description]
program has failed

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.41 17244

could not execute command "@1@": @2@

[Description]
could not execute command

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.42 17245

cannot copy to materialized view "@1@"

[Description]
cannot copy to materialized view

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.69.43 17246

cannot perform FREEZE because of prior transaction activity

[Description]
cannot perform FREEZE because of prior transaction activity

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.44 17247

cannot perform FREEZE because the table was not created or truncated in the current subtransaction

[Description]
cannot perform FREEZE because the table was not created or truncated in the current subtransaction

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.45 17248

too many column names were specified

[Description]
too many column names were specified

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.46 17249

policies not yet implemented for this command

[Description]
policies not yet implemented for this command

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.69.47 17250

**Invalid locale name: "@1@"**

[Description]
Check if the locale name mentioned is correct.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.48 17251

**Database "@1@" is used by an active logical replication slot**

[Description]
The database referenced is used by a logical replication slot.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.49 17252

**Option "@1@" cannot be specified with other options**

[Description]
When invoking alter database command option cannot be specified with other options

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.50 17253

**Cannot disallow connections for current database**

[Description]
cannot disallow connections for current database

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.51 17254
permission denied to create event trigger "@1@"

[Description]
Permission denied to create event trigger. Must be superuser to create an event trigger. Check permissions on trigger

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.52 17255

unrecognized event name "@1@"

[Description]
Unrecognized event name. Acceptable event name must be provided

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.53 17256

unrecognized filter variable "@1@"

[Description]
unrecognized filter variable

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.54 17259

event triggers are not supported for @1@

[Description]
event triggers are not supported for certain type of SQL statements

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.55 17260

filter variable "@1@" specified more than once
[Description]
    filter variable specified more than once

[System Processing]
    Processing aborts

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.69.56 17261

**event trigger "@1@" does not exist**

[Description]
    Referenced event trigger does not exist

[System Processing]
    Processing aborts

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.69.57 17262

**permission denied to change owner of event trigger "@1@"**

[Description]
    permission denied to change owner of event trigger. The owner of an event trigger must be a superuser

[System Processing]
    Processing aborts

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.69.58 17263

**@1@ can only be called in a sql_drop event trigger function**

[Description]
    The function pg_event_trigger_dropped_objects() can only be called in a sql_drop event trigger function

[System Processing]
    Processing aborts

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.69.59 17264

**@1@ can only be called in a table_rewrite event trigger function**

[Description]
    The function pg_event_trigger_table_rewrite_oid() can only be called in a table_rewrite event trigger function
[System Processing]  
Processing aborts  

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.69.60 17265

@1@ can only be called in an event trigger function

[Description]
The function pg_event_trigger_ddl_commands() can only be called in a event trigger function

[System Processing]  
Processing aborts  

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.69.61 17267

aggregates cannot accept set arguments

[Description]
aggregates cannot accept set arguments

[System Processing]  
Processing aborts  

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.69.62 17268

transform function must not be volatile

[Description]
transform function must not be volatile

[System Processing]  
Processing aborts  

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.69.63 17269

transform function must not be an aggregate function

[Description]
transform function must not be an aggregate function

[System Processing]  
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.64 17270

**transform function must not be a window function**

[Description]
transform function must not be a window function

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.65 17271

**transform function must not return a set**

[Description]
transform function must not return a set

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.66 17272

**transform function must take one argument**

[Description]
transform function must take one argument

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.67 17273

**first argument of transform function must be type @1@**

[Description]
first argument of transform function must be type internal

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
**2.69.68 17274**

**data type @1@ is a pseudo-type**

[Description]

data type referenced is a pseudo-type

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

**2.69.69 17275**

**data type @1@ is a domain**

[Description]

data type is a domain

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

**2.69.70 17276**

**return data type of FROM SQL function must be @1@**

[Description]

return data type of FROM SQL function must be internal

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

**2.69.71 17277**

**return data type of TO SQL function must be the transform data type**

[Description]

return data type of TO SQL function must be the transform data type

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
transform for type @1@ language "@2@" already exists
[Description]
transform for type language already exists

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.73 17279

transform for type @1@ language "@2@" does not exist
[Description]
transform for type language does not exist

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.74 17280

operator class "@1@" does not exist for access method "@2@"
[Description]
operator class does not exist for access method

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.75 17281

CONCURRENTLY cannot be used when the materialized view is not populated
[Description]
CONCURRENTLY cannot be used when the materialized view is not populated

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.76 17282

CONCURRENTLY and WITH NO DATA options cannot be used together
CONCURRENTLY and WITH NO DATA options cannot be used together

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.69.77 17283

new data for materialized view "@1@" contains duplicate rows without any null columns

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.69.78 17284

WITH CHECK cannot be applied to SELECT or DELETE

WITH CHECK cannot be applied to SELECT or DELETE

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.69.79 17285

only WITH CHECK expression allowed for INSERT

only WITH CHECK expression allowed for INSERT

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.69.80 17286

policy "@1@" for table "@2@" already exists

policy attempted to create for table already exists
2.69.81 17287

policy "@1@" for table "@2@" does not exist

[Description]
Policy being attempted to alter does not exist

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.82 17288

only USING expression allowed for SELECT, DELETE

[Description]
only USING expression allowed for SELECT, DELETE

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.83 17289

referenced relation "@1@" is not a table or foreign table

[Description]
Relation referenced by CREATE OR ALTER TABLE is not a regular table or foreign table

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.84 17290

materialized view "@1@" does not exist

[Description]
materialized view "%s" does not exist

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.85 17291

Use DROP MATERIALIZED VIEW to remove a materialized view.

[Description]
Use DROP MATERIALIZED VIEW to remove a materialized view

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.86 17293

inherited constraint "@1@" must be renamed in child tables too

[Description]
inherited constraint must be renamed in child tables too

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.87 17294

cannot rename inherited constraint "@1@"

[Description]
cannot rename inherited constraint

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.88 17295

cannot rewrite table "@1@" used as a catalog table

[Description]
cannot rewrite table used as a catalog table

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.69.89 17296

"@1@" is not a table, view, or foreign table

[Description]
this is not a table, view, or foreign table

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.90 17297

"@1@" is not a table, view, materialized view, or index

[Description]
object referenced is not a table, view, materialized view, or index

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.91 17298

"@1@" is not a table, materialized view, or foreign table

[Description]
object referenced is not of a type table, materialized view, or foreign table

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.69.92 17299

constraint "@1@" of relation "@2@" is not a foreign key or check constraint

[Description]
constraint of relation is not a foreign key or check constraint

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.70 Message Numbers Beginning with 17300

2.70.1 17301

"@1@" is not a table, view, sequence, or foreign table

[Description]

object type is not a table, view, sequence, or foreign table

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.70.2 17302

WITH CHECK OPTION is supported only on automatically updatable views

[Description]

WITH CHECK OPTION is supported only on automatically updatable views

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.70.3 17303

only tables, indexes, and materialized views exist in tablespaces

[Description]

only tables, indexes, and materialized views exist in tablespaces

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.70.4 17304

cannot move relations in to or out of pg_global tablespace

[Description]

cannot move relations in to or out of pg_global tablespace

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
2.70.5 17305

_aborting because lock on relation "@1@.@2@" is not available_

[Description]
aborting because lock on relation is not available

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.6 17306

_no matching relations in tablespace "@1@" found_

[Description]
no matching relations in tablespace found

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.7 17307

_invalid page in block @1@ of relation @2@_

[Description]
invalid page in block of relation

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.8 17308

_cannot use non-unique index "@1@" as replica identity_

[Description]
cannot use non-unique index as replica identity

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.9 17309
cannot use non-immediate index "@1@" as replica identity
[Description]
cannot use non-immediate index as replica identity
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.10 17310

cannot use expression index "@1@" as replica identity
[Description]
cannot use expression index as replica identity
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.11 17311

cannot use partial index "@1@" as replica identity
[Description]
cannot use partial index "%s" as replica identity
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.12 17312

cannot use invalid index "@1@" as replica identity
[Description]
cannot use invalid index as replica identity
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.13 17313

index "@1@" cannot be used as replica identity because column "@2@" is nullable
[Description]
index "\%s\" cannot be used as replica identity because column "\%s\" is nullable

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.14 17319

**could not create an encrypted tablespace because the keystore is not open**

[Description]
could not create an encrypted tablespace because the keystore is not open. Open the existing keystore, or set the master encryption key to create and open a new keystore

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.15 17321

**tablespace encryption algorithm option cannot be changed**

[Description]
tablespace encryption algorithm option cannot be changed

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.16 17323

**Foreign tables cannot have INSTEAD OF triggers.**

[Description]
Foreign tables cannot have INSTEAD OF triggers.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.17 17326

**tuple to be updated was already modified by an operation triggered by the current command**
tuple to be updated was already modified by an operation triggered by the current command. Consider using an AFTER trigger instead of a BEFORE trigger to propagate changes to other rows.

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.70.18 17327

function @1@ should return type @2@

function should return an acceptable type

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.70.19 17328

check constraints for domains cannot be marked NO INHERIT

check constraints for domains cannot be marked NO INHERIT

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.70.20 17329

range subtype cannot be @1@

range subtype cannot be of psuedo type

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.70.21 17330

range canonical function @1@ must return range type
range canonical function must return range type

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.70.22 17331

pg_type array OID value not set when in binary upgrade mode

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.70.23 17332

constraint "@1@" of domain "@2@" is not a check constraint

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.70.24 17333

constraint "@1@" for domain "@2@" already exists

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.70.25 17334

must be superuser to change bypassrls attribute

must be superuser to change bypassrls attribute
[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.26 17335

pg_authid OID value not set when in binary upgrade mode

[Description]
pg_authid OID value not set when in binary upgrade mode

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.27 17336

must be superuser to alter settings globally

[Description]
must be superuser to alter settings globally

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.28 17338

@1@ cannot be executed from VACUUM or ANALYZE

[Description]
commands VACUUM or ANALYZE cannot be executed from VACUUM or ANALYZE

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.29 17339

invalid value for "check_option" option

[Description]
invalid value for "check_option" option. Valid values are "local" and "cascaded".

[System Processing]
Processing aborts
[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.70.30 17340

ON CONFLICT does not support deferrable unique constraints/exclusion constraints as arbiters

[Description]

ON CONFLICT does not support deferrable unique constraints/exclusion constraints as arbiters

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.70.31 17341

cannot change materialized view "@1@"

[Description]

cannot change materialized view

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.70.32 17342

cannot insert into foreign table "@1@"

[Description]

cannot insert into foreign table

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.70.33 17343

foreign table "@1@" does not allow inserts

[Description]

foreign table "@1@" does not allow inserts

[System Processing]

Processing aborts
2.70.34 17344

**cannot update foreign table "@1@"**

**[Description]**

cannot update foreign table

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

2.70.35 17345

**foreign table "@1@" does not allow updates**

**[Description]**

foreign table does not allow updates

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

2.70.36 17346

**cannot delete from foreign table "@1@"**

**[Description]**

cannot delete from foreign table

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

2.70.37 17347

**foreign table "@1@" does not allow deletes**

**[Description]**

foreign table does not allow deletes

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.
2.70.38 17348

**cannot lock rows in materialized view "@1@"**

[Description]

cannot lock rows in materialized view

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

---

2.70.39 17349

**new row violates check option for view "@1@"**

[Description]

new row violates check option for view

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

---

2.70.40 17350

**new row violates row-level security policy "@1@" for table "@2@"**

[Description]

new row violates row-level security policy for table

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

---

2.70.41 17351

**new row violates row-level security policy for table "@1@"**

[Description]

new row violates row-level security policy for table

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

---

2.70.42 17352
new row violates row-level security policy "@1@" (USING expression) for table "@2@"

[Description]
new row violates row-level security policy (USING expression) for table

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.43 17353

new row violates row-level security policy (USING expression) for table "@1@"

[Description]
new row violates row-level security policy (USING expression) for table

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.44 17354

WHERE CURRENT OF is not supported for this table type

[Description]
WHERE CURRENT OF is not supported for this table type

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.45 17355

materialized view "@1@" has not been populated

[Description]
materialized view has not been populated. Use the REFRESH MATERIALIZED VIEW command

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.46 17356

custom scan "@1@" does not support MarkPos
custom-scan does not support MarkPos

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.70.47 17357

lossy distance functions are not supported in index-only scans

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.70.48 17358

ON CONFLICT DO UPDATE command cannot affect row a second time

ON CONFLICT DO UPDATE command cannot affect row a second time. Ensure that no rows proposed for insertion within the same command have duplicate constrained values

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.70.49 17359

TABLESAMPLE parameter cannot be null

TABLESAMPLE parameter cannot be null

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.70.50 17360

TABLESAMPLE REPEATABLE parameter cannot be null
TABLESAMPLE REPEATABLE parameter cannot be null

[Description]
TABLESAMPLE REPEATABLE parameter cannot be null

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.51 17361

moving-aggregate transition function must not return null

[Description]
moving-aggregate transition function must not return null

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.52 17362

could not open configuration directory "@1@": @2@

[Description]
could not open configuration directory

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.53 17363

could not initialize LDAP: @1@

[Description]
could not initialize LDAP

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.54 17364

LDAP user "@1@" does not exist

[Description]
LDAP user does not exist
[System Processing]
    Processing aborts

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.70.55 17365

LDAP user "@1@" is not unique

[Description]
    LDAP user is not unique

[System Processing]
    Processing aborts

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.70.56 17367

lo_lseek result out of range for large-object descriptor @1@

[Description]
    lo_lseek result out of range for large-object descriptor %d

[System Processing]
    Processing aborts

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.70.57 17368

lo_tell result out of range for large-object descriptor @1@

[Description]
    lo_tell result out of range for large-object descriptor

[System Processing]
    Processing aborts

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.70.58 17369

large object read request is too large

[Description]
    large object read request is too large

[System Processing]
    Processing aborts
To investigate the cause of the occurrence from the message, and remove cause.

### 2.70.59 17370

**ECDH: unrecognized curve name: @1@**

[Description]

ECDH: unrecognized curve name

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

### 2.70.60 17371

**ECDH: could not create key**

[Description]

ECDH: could not create key

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

### 2.70.61 17372

**authentication file line too long**

[Description]

authentication file line too long

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

### 2.70.62 17373

**could not parse LDAP URL "@1@": @2@**

[Description]

could not parse LDAP URL

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
2.70.63 17374

unsupported LDAP URL scheme: @1@

[Description]
unsupported LDAP URL scheme

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.64 17375

filters not supported in LDAP URLs

[Description]
filters not supported in LDAP URLs

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.65 17376

LDAP URLs not supported on this platform

[Description]
LDAP URLs not supported on this platform

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.66 17377

unrecognized address family @1@

[Description]
unrecognized address family

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.67 17378
there is no client connection

[Description]
there is no client connection

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.68 17379

terminating connection because protocol synchronization was lost

[Description]
terminating connection because protocol sync was lost

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.69 17381

@1@ cannot be applied to the nullable side of an outer join

[Description]
SQL row locking clause cannot be applied to the nullable side of an outer join

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.70 17384

constraint in ON CONFLICT clause has no associated index

[Description]
constraint in ON CONFLICT clause has no associated index

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.71 17385

ON CONFLICT DO UPDATE not supported with exclusion constraints
ON CONFLICT DO UPDATE not supported with exclusion constraints

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

there is no unique or exclusion constraint matching the ON CONFLICT specification

there is no unique or exclusion constraint matching the ON CONFLICT specification

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

@1@ cannot be applied to VALUES

SQL row locking cannot be applied to VALUES

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

RETURNING must have at least one column

RETURNING must have at least one column

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

DECLARE SCROLL CURSOR ... @1@ is not supported

DECLARE SCROLL CURSOR ... is not supported
[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.76 17390

**materialized views must not use data-modifying statements in WITH**

[Description]
materialized views must not use data-modifying statements in WITH

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.77 17391

**materialized views must not use temporary tables or views**

[Description]
materialized views must not use temporary tables or views

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.78 17392

**materialized views may not be defined using bound parameters**

[Description]
materized views may not be defined using bound parameters

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.79 17393

**materialized views cannot be UNLOGGED**

[Description]
materized views cannot be UNLOGGED

[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.80 17394

@1@ is not allowed with DISTINCT clause

[Description]
SQL row locking clause such as "FOR UPDATE" is not allowed with DISTINCT clause

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.81 17395

@1@ is not allowed with GROUP BY clause

[Description]
SQL row locking clause such as "FOR UPDATE" is not allowed with GROUP BY clause

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.82 17396

@1@ is not allowed with HAVING clause

[Description]
SQL row locking clause such as "FOR UPDATE" is not allowed with HAVING clause

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.83 17397

@1@ is not allowed with aggregate functions

[Description]
%s is not allowed with aggregate functions

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.70.84 17398

@1@ is not allowed with window functions

[Description]
SQL row locking clause such as "FOR UPDATE" is not allowed with window functions

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.70.85 17399

@1@ is not allowed with set-returning functions in the target list

[Description]
SQL row locking clause such as "FOR UPDATE" is not allowed with set-returning functions in the target list

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71 Message Numbers Beginning with 17400

2.71.1 17400

@1@ must specify unqualified relation names

[Description]
SQL row locking clause such as "FOR UPDATE" must specify unqualified relation names

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.2 17401

@1@ cannot be applied to a join

[Description]
SQL row locking clause such as "FOR UPDATE" cannot be applied to a join

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.71.3 17402

@1@ cannot be applied to a function

[Description]
SQL row locking clause such as "FOR UPDATE" cannot be applied to a function

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.4 17403

@1@ cannot be applied to a WITH query

[Description]
SQL row locking clause such as "FOR UPDATE" cannot be applied to a WITH query

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.5 17404

relation "@1@" in @2@ clause not found in FROM clause

[Description]
Relation referenced by the SQL in FROM clause is not found

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.6 17405

outer join operator (+) cannot be used with joined table

[Description]
outer join operator (+) cannot be used with joined table

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.7 17406
outer join operator (+) cannot be used with subquery

[Description]
outer join operator (+) cannot be used with subquery

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.8 17407

outer join operator (+) is not allowed in operand OR or IN predicate

[Description]
outer join operator (+) is not allowed in operand OR or IN predicate

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.9 17408

incorrect specification in outer join operator(+)

[Description]
incorrect specification in outer join operator(+)

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.10 17409

outer join operator(+) cannot refer to other relations of same query level

[Description]
outer join operator(+) cannot refer to other relations of same query level

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.11 17410

a table may be outer joined to at most one other table
a table may be outer joined to at most one other table

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.71.12 17411

multiple outer join operators (+) cannot be specified for one table

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.71.13 17412

two tables cannot be outer-joined to each other

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.71.14 17413

invalid combination of outer join operator (+) and logical operators

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.71.15 17414

GROUPING must have fewer than 32 arguments

GROUPING must have fewer than 32 arguments
<table>
<thead>
<tr>
<th>Issue</th>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.71.16 17415</td>
<td>aggregate functions are not allowed in JOIN conditions</td>
<td>aggregate functions are not allowed in JOIN conditions</td>
</tr>
<tr>
<td>2.71.17 17416</td>
<td>grouping operations are not allowed in JOIN conditions</td>
<td>grouping operations are not allowed in JOIN conditions</td>

<td>2.71.19 17418</td>
<td>grouping operations are not allowed in FROM clause of their own query level</td>
<td>grouping operations are not allowed in FROM clause of their own query level</td>
</tr>
</tbody>
</table>
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.20 17419

aggregate functions are not allowed in functions in FROM

[Description]
aggregate functions are not allowed in functions in FROM

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.21 17420

grouping operations are not allowed in functions in FROM

[Description]
grouping operations are not allowed in functions in FROM

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.22 17421

aggregate functions are not allowed in policy expressions

[Description]
aggregate functions are not allowed in policy expressions

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.23 17422

grouping operations are not allowed in policy expressions

[Description]
grouping operations are not allowed in policy expressions

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.71.24 17423
aggregate functions are not allowed in window RANGE
[Description]
aggregate functions are not allowed in window RANGE
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.25 17424
grouping operations are not allowed in window RANGE
[Description]
grouping operations are not allowed in window RANGE
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.26 17425
aggregate functions are not allowed in window ROWS
[Description]
aggregate functions are not allowed in window ROWS
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.27 17426
grouping operations are not allowed in window ROWS
[Description]
grouping operations are not allowed in window ROWS
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.
grouping operations are not allowed in check constraints

[Description]
grouping operations are not allowed in check constraints

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.29 17428

grouping operations are not allowed in DEFAULT expressions

[Description]
grouping operations are not allowed in DEFAULT expressions

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.30 17429

grouping operations are not allowed in index expressions

[Description]
grouping operations are not allowed in index expressions

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.31 17430

grouping operations are not allowed in index predicates

[Description]
grouping operations are not allowed in index predicates

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.32 17431

grouping operations are not allowed in transform expressions
grouping operations are not allowed in transform expressions

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.71.33 17432

grouping operations are not allowed in EXECUTE parameters

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.71.34 17433

grouping operations are not allowed in trigger WHEN conditions

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.71.35 17434

grouping operations are not allowed in @1@

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.71.36 17435

outer-level aggregate cannot contain a lower-level variable in its direct arguments

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.
Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.71.37 17436

window functions are not allowed in functions in FROM

[Description]
window functions are not allowed in functions in FROM

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.38 17437

window functions are not allowed in policy expressions

[Description]
window functions are not allowed in policy expressions

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.39 17438

window functions are not allowed in window definitions

[Description]
window functions are not allowed in window definitions

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.40 17439

window functions are not allowed in DEFAULT expressions

[Description]
window functions are not allowed in DEFAULT expressions

[System Processing]
Processing aborts
To investigate the cause of the occurrence from the message, and remove cause.

2.71.41 17440

**window functions are not allowed in index expressions**

[Description]
window functions are not allowed in index expressions

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.42 17441

**window functions are not allowed in index predicates**

[Description]
window functions are not allowed in index predicates

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.43 17442

**window functions are not allowed in transform expressions**

[Description]
window functions are not allowed in transform expressions

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.44 17443

**window functions are not allowed in @1@**

[Description]
window functions are not allowed in the SQL constructs like GROUP BY

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.71.45 17444
aggregate functions are not allowed in a recursive query's recursive term
[Description]
aggregate functions are not allowed in a recursive query's recursive term
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.46 17445
Direct arguments of an ordered-set aggregate must use only grouped columns.
[Description]
Direct arguments of an ordered-set aggregate must use only grouped columns
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.47 17446
arguments to GROUPING must be grouping expressions of the associated query level
[Description]
arguments to GROUPING must be grouping expressions of the associated query level
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.48 17447
multiple column definition lists are not allowed for the same function
[Description]
multiple column definition lists are not allowed for the same function
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.
ROWS FROM() with multiple functions cannot have a column definition list

[Description]
ROWS FROM() with multiple functions cannot have a column definition list. Put a separate column definition list for each function inside ROWS FROM().

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.50 17449
WITH ORDINALITY cannot be used with a column definition list

[Description]
WITH ORDINALITY cannot be used with a column definition list. Put the column definition list inside ROWS FROM().

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.51 17450
tablesample method @1@ does not exist

[Description]
tablesample method does not exist

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.52 17452
tablesample method @1@ does not support REPEATABLE

[Description]
tablesample method does not support REPEATABLE

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.53 17453
TABLESAMPLE clause can only be applied to tables and materialized views
TABLESAMPLE clause can only be applied to tables and materialized views

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.71.54 17454

**CUBE is limited to 12 elements**

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.71.55 17455

**Omit the parentheses in this OVER clause.**

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.71.56 17456

**an aggregate with DISTINCT must have at least one argument**

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.71.57 17457

**SELECT DISTINCT must have at least one column**

SELECT DISTINCT must have at least one column
[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.58 17458

ASC/DESC is not allowed in ON CONFLICT clause

[Description]
ASC/DESC is not allowed in ON CONFLICT clause

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.59 17459

NULLS FIRST/LAST is not allowed in ON CONFLICT clause

[Description]
NULLS FIRST/LAST is not allowed in ON CONFLICT clause

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.60 17460

ON CONFLICT DO UPDATE requires inference specification or constraint name

[Description]
ON CONFLICT DO UPDATE requires inference specification or constraint name

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.61 17461

ON CONFLICT is not supported with system catalog tables

[Description]
ON CONFLICT is not supported with system catalog tables

[System Processing]
Processing aborts
[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.71.62 17462

ON CONFLICT is not supported on table "@1@" used as a catalog table

[Description]  
ON CONFLICT is not supported on table used as a catalog table

[System Processing]  
Processing aborts

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.71.63 17463

argument of @1@ must be type @2@, not type @3@  

[Description]  
argument of the SQL construct must be of acceptable type

[System Processing]  
Processing aborts

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.71.64 17464

argument declared @1@ is not a range type but type @2@  

[Description]  
argument declared "anyrange" is not a range type but type %s

[System Processing]  
Processing aborts

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.71.65 17465

column @1@.@2@ does not exist

[Description]  
column does not exist.Re-check the column name referenced.

[System Processing]  
Processing aborts

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.
2.71.66 17466

**syntax error at or near "+"**

**[Description]**

syntax error at or near "+"

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

2.71.67 17467

**could not find element type for data type @1@**

**[Description]**

could not find element type for data type

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

2.71.68 17468

**WITHIN GROUP specified, but @1@ is not an aggregate function**

**[Description]**

WITHIN GROUP specified, but the function is not an aggregate function

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

2.71.69 17469

**FILTER specified, but @1@ is not an aggregate function**

**[Description]**

FILTER specified, but the function is not an aggregate function

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

2.71.70 17470
WITHIN GROUP is required for ordered-set aggregate @1@

[Description]
WITHIN GROUP is required for ordered-set aggregate

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.71 17471

OVER is not supported for ordered-set aggregate @1@

[Description]
OVER is not supported for ordered-set aggregate

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.72 17472

@1@ is not an ordered-set aggregate, so it cannot have WITHIN GROUP

[Description]
The function is not an ordered-set aggregate, so it cannot have WITHIN GROUP

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.73 17476

VARIADIC argument must be an array

[Description]
VARIADIC argument must be an array

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.74 17479

system column "@1@" reference in check constraint is invalid
[Description]
  system column reference in check constraint is invalid

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.71.75 17480

**primary key constraints are not supported on foreign tables**

[Description]
  primary key constraints are not supported on foreign tables

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.71.76 17481

**unique constraints are not supported on foreign tables**

[Description]
  unique constraints are not supported on foreign tables

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.71.77 17482

**foreign key constraints are not supported on foreign tables**

[Description]
  foreign key constraints are not supported on foreign tables

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.71.78 17483

**exclusion constraints are not supported on foreign tables**

[Description]
  exclusion constraints are not supported on foreign tables
[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.79 17484
LIKE is not supported for creating foreign tables

[Description]
LIKE is not supported for creating foreign tables

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.80 17485
rules on materialized views are not supported

[Description]
rules on materialized views are not supported

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.81 17486
poll() failed: @1@

[Description]
function call for poll() failed

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.82 17488
could not map anonymous shared memory: @1@

[Description]
could not map anonymous shared memory

[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.83 17489

huge pages not supported on this platform

[Description]
huge pages not supported on this platform

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.84 17490

could not create shared memory segment: error code @1@

[Description]
could not create shared memory segment

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.85 17491

@1@: invalid argument: "@2@"

[Description]
invalid argument

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.86 17492

WAL archival cannot be enabled when wal_level is "minimal"

[Description]
WAL archival cannot be enabled when wal_level is "minimal"

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
**2.71.87 17493**

*postmaster became multithreaded during startup*

[Description]

postmaster became multithreaded during startup

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

**2.71.88 17494**

*data directory "@1@" does not exist*

[Description]

data directory does not exist

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

**2.71.89 17495**

*performing immediate shutdown because data directory lock file is invalid*

[Description]

performing immediate shutdown because data directory lock file is invalid

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

**2.71.90 17497**

*invalid processing mode in background worker*

[Description]

invalid processing mode in background worker

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

**2.71.91 17498**
could not create inherited socket: error code @1@

[Description]
could not create inherited socket

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.71.92 17499

could not open backend variables file "@1@": @2@

[Description]
could not open backend variables file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72 Message Numbers Beginning with 17500

2.72.1 17500

could not read from backend variables file "@1@": @2@

[Description]
could not read from backend variables file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.2 17501

could not map view of backend variables: error code @1@

[Description]
could not map view of backend variables

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.72.3 17502

**could not unmap view of backend variables: error code @1@**

[Description]

could not unmap view of backend variables

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.72.4 17503

**could not open file "@1@" : @2@**

[Description]

could not open WAL file

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.72.5 17504

**could not write to log segment @1@ at offset @2@, length @3@: @4@**

[Description]

could not write to log segment

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.72.6 17507

**invalid timeline @1@**

[Description]

invalid timeline

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.72.7 17508
could not stat control file "@1@": @2@
[Description]
could not stat control file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.8 17509

could not find WAL file "@1@"
[Description]
could not find WAL file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.9 17510

could not stat file or directory "@1@": @2@
[Description]
could not stat file or directory

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.10 17511

file name too long for tar format: "@1@"
[Description]
file name too long for tar format

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.11 17512

could not send end-of-streaming message to primary: @1@

<tbody>
<tr>
<td>logical decoding requires wal_level &gt;= logical</td>
<td></td>
</tr>
</tbody>
</table>
2.72.16 17517

**logical decoding requires a database connection**

[Description]
- logical decoding requires a database connection

[Action]
- To investigate the cause of the occurrence from the message, and remove cause.

2.72.17 17518

**logical decoding cannot be used while in recovery**

[Description]
- logical decoding cannot be used while in recovery

[Action]
- To investigate the cause of the occurrence from the message, and remove cause.

2.72.18 17519

**cannot use physical replication slot for logical decoding**

[Description]
- cannot use physical replication slot for logical decoding

[Action]
- To investigate the cause of the occurrence from the message, and remove cause.

2.72.19 17520

**replication slot "@1@" was not created in this database**

[Description]
- replication slot was not created in this database

[Action]
- To investigate the cause of the occurrence from the message, and remove cause.
To investigate the cause of the occurrence from the message, and remove cause.

2.72.20 17521

**cannot create logical replication slot in transaction that has performed writes**

[Description]

cannot create logical replication slot in transaction that has performed writes

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.72.21 17522

**must be superuser or replication role to use replication slots**

[Description]

must be superuser or replication role to use replication slots

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.72.22 17523

**array must be one-dimensional**

[Description]

The provided input array must be one-dimensional

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.72.23 17524

**array must not contain nulls**

[Description]

The provided input array must not contain nulls

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
2.72.24 17525
array must have even number of elements
[Description]
The provided input array must have even number of elements

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.25 17526
logical decoding output plugin "@1@" produces binary output, but function "@2@" expects textual data
[Description]
logical decoding output plugin produces binary output, but function expects textual data

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.26 17527
only superusers can query or manipulate replication origins
[Description]
only superusers can query or manipulate replication origins

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.27 17528
cannot query or manipulate replication origin when max_replication_slots = 0
[Description]
cannot query or manipulate replication origin when max_replication_slots = 0

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
### 2.72.28 17529

**cannot manipulate replication origins during recovery**

[Description]

cannot manipulate replication origins during recovery

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

### 2.72.29 17530

**could not find free replication origin OID**

[Description]

could not find free replication origin OID

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

### 2.72.30 17531

**could not drop replication origin with OID @1@, in use by PID @2@**

[Description]

could not drop replication origin with OID as it is in use by a process

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

### 2.72.31 17532

**replication checkpoint has wrong magic @1@ instead of @2@**

[Description]

replication checkpoint has wrong magic number instead of a correct magic number provided

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
could not read file "@1@": read @2@ of @3@

[Description]
could not read file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.33 17534

could not find free replication state, increase max_replication_slots

[Description]
could not find free replication state, increase max_replication_slots

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.34 17535

replication slot checkpoint has wrong checksum @1@, expected @2@

[Description]
replication slot checkpoint has wrong checksum value, expected value is shown

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.35 17536

replication origin with OID @1@ is already active for PID @2@

[Description]
replication origin with OID is already active for process with PID

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.36 17537

could not find free replication state slot for replication origin with OID @1@
[Description]

could not find free replication state slot for replication origin with OID %u

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.72.37 17538**

replication identifier @1@ is already active for PID @2@

[Description]
replication identifier is already active for process PID

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.72.38 17539**

no replication origin is configured

[Description]
no replication origin is configured

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.72.39 17540**

could not write to data file for XID @1@: @2@

[Description]
could not write to data file for XID

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.72.40 17541**

could not read from reorderbuffer spill file: @1@

[Description]
could not read from reorderbuffer spill file
<table>
<thead>

### 2.72.44 17545

**snapbuild state file "@1@" has wrong magic number: @2@ instead of @3@**

**Description**

snapbuild state file has wrong magic number: instead of actual magic number

<table>
<thead>
<tr>
<th>System Processing</th>
<th>Processing aborts</th>
</tr>
</thead>
</table>

- 1318 -
To investigate the cause of the occurrence from the message, and remove cause.

2.72.45 17546

snapbuild state file 
"@1@" has unsupported version: @2@ instead of @3@

[Description]

snapbuild state file has unsupported version: instead of actual version number

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.72.46 17547

checksum mismatch for snapbuild state file 
"@1@": is @2@, should be @3@

[Description]

checksum mismatch for snapbuild state file

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.72.47 17548

replication slot name 
"@1@" is too short

[Description]

replication slot name is too short

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.72.48 17549

replication slot name 
"@1@" is too long

[Description]

replication slot name \"%s\" is too long

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
<table>
<thead>
<tr>

<td>2.72.52 17553</td>
<td>replication slot &quot;@1@&quot; does not exist</td>
</tr>
</tbody>
</table>

**[Description]**

replication slot name \"@\" contains invalid character

replication slot already exists invalid character

all replication slots are in use character

replication slot does not exist

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

To investigate the cause of the occurrence from the message, and remove cause.

To investigate the cause of the occurrence from the message, and remove cause.

To investigate the cause of the occurrence from the message, and remove cause.
replication slot "@1@" is active for PID @2@

[Description]
replication slot "\%s" is already active for PID

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.54 17555
could not remove directory "@1@

[Description]
could not remove directory

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.55 17556
replication slots can only be used if max_replication_slots > 0

[Description]
replication slots can only be used if max_replication_slots > 0

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.56 17557
replication slots can only be used if wal_level >= replica

[Description]
replication slots can only be used if wal_level >= archive

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.57 17558
could not read file "@1@", read @2@ of @3@: @4@
**[Description]**

could not read file

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

---

**2.72.58 17559**

replication slot file "@1@" has wrong magic number: @2@ instead of @3@

**[Description]**

replication slot file has wrong magic number

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

---

**2.72.59 17560**

replication slot file "@1@" has unsupported version @2@

**[Description]**

replication slot file has unsupported version

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

---

**2.72.60 17561**

replication slot file "@1@" has corrupted length @2@

**[Description]**

replication slot file has corrupted length

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

---

**2.72.61 17562**

checksum mismatch for replication slot file "@1@": is @2@, should be @3@

**[Description]**

checksum mismatch for replication slot file "%s": is %u, should be %u
[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.62 17563
too many replication slots active before shutdown

[Description]
too many replication slots active before shutdown

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.63 17564
terminating walreceiver due to timeout

[Description]
terminating walreceiver due to timeout

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.64 17566
could not seek to beginning of file "@1@": @2@

[Description]
could not seek to beginning of file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.65 17567
cannot use a logical replication slot for physical replication

[Description]
cannot use a logical replication slot for physical replication

[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.66 17568

requested starting point @1@/@2@ on timeline @3@ is not in this server's history

[Description]
While streaming WALs during standby recovery. Requested starting point on timeline is not in this server's history

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.67 17570

could not convert table "@1@" to a view because it has row security enabled

[Description]
could not convert table to a view because it has row security enabled

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.68 17571

could not convert table "@1@" to a view because it has row security policies

[Description]
could not convert table to a view because it has row security policies

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.69 17573

renaming an ON SELECT rule is not allowed

[Description]
renaming an ON SELECT rule is not allowed

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
### 2.72.70 17574

**infinite recursion detected in policy for relation "@1@"**

**[Description]**

infinite recursion detected in policy for relation

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

### 2.72.71 17575

**cannot insert into column "@1@" of view "@2@"**

**[Description]**

cannot insert into column of view

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

### 2.72.72 17576

**cannot update column "@1@" of view "@2@"**

**[Description]**

cannot update column of view

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

### 2.72.73 17577

**INSERT with ON CONFLICT clause cannot be used with table that has INSERT or UPDATE rules**

**[Description]**

INSERT with ON CONFLICT clause cannot be used with table that has INSERT or UPDATE rules

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

### 2.72.74 17578
NEW variables in ON UPDATE rules cannot reference columns that are part of a multiple assignment in the subject UPDATE command

[Description]
NEW variables in ON UPDATE rules cannot reference columns that are part of a multiple assignment in the subject UPDATE command

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.75 17579

exceeded maxAllocatedDescs (@1@) while trying to execute command "@2@"

[Description]
exceeded maxAllocatedDescs while trying to execute command

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.76 17580

could not duplicate handle for "@1@": @2@

[Description]
could not duplicate handle for the segment

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.77 17581

invalid flags for opening a large object: @1@

[Description]
invalid flags for opening a large object

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.78 17582
invalid whence setting: @1@

[Description]
invalid whence setting

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.79 17583

invalid large object write request size: @1@

[Description]
invalid large object write request size

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.80 17584

canceling statement due to lock timeout

[Description]
canceling statement due to lock timeout. Check the process holding the lock.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.81 17585

@1@: invalid command-line argument: @2@

[Description]
invalid command-line argument

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.82 17586

fastpath function calls not supported in a replication connection
[Description]
fastpath function calls not supported in a replication connection

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.83 17587
extended query protocol not supported in a replication connection

[Description]
extended query protocol not supported in a replication connection

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.84 17588
cannot execute @1@ during a parallel operation

[Description]
cannot execute SQL commands such as CREATE during a parallel operation

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.85 17589
too many lexemes in thesaurus entry

[Description]
too many lexemes in thesaurus entry

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.72.86 17590
input data type is not an array

[Description]
input data type is not an array
[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.72.87 17591

searching for elements in multidimensional arrays is not supported

[Description]

searching for elements in multidimensional arrays is not supported

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.72.88 17593

data type @1@ is not an array type

[Description]

data type is not an array type

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.72.89 17594

cannot accumulate null arrays

[Description]

cannot accumulate null arrays

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.72.90 17595

cannot accumulate empty arrays

[Description]

cannot accumulate empty arrays

[System Processing]

Processing aborts
To investigate the cause of the occurrence from the message, and remove cause.

2.72.91 17596

**cannot accumulate arrays of different dimensionality**

[Description]

cannot accumulate arrays of different dimensionality

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.72.92 17597

**removing elements from multidimensional arrays is not supported**

[Description]

removing elements from multidimensional arrays is not supported

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.72.93 17598

**thresholds must be one-dimensional array**

[Description]

thresholds must be one-dimensional array

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.72.94 17599

**thresholds array must not contain NULLs**

[Description]

thresholds array must not contain NULLs

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
2.73 Message Numbers Beginning with 17600

2.73.1 17600

date field value out of range: @1@-@2@-@3@
[Description]
date field value out of range
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.2 17601

date out of range: @1@-@2@-@3@
[Description]
date out of range
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.3 17602

time field value out of range: @1@:@2@:@3@
[Description]
time field value out of range
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.4 17608

localized string format value too long
[Description]
localized string format value too long
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.73.5 17610

**invalid line specification: A and B cannot both be zero**

[Description]
invalid line specification: A and B cannot both be zero

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.6 17611

**function "close_sl" not implemented**

[Description]
function "close_sl" not implemented

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.7 17612

**invalid input syntax for type @1@**

[Description]
invalid input syntax for type json

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.8 17613

**"\u" must be followed by four hexadecimal digits.**

[Description]
must be followed by four hexadecimal digits. Check the syntax

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.9 17614
unsupported Unicode escape sequence

[Description]
unsupported Unicode escape sequence

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.10 17615

key value must be scalar, not array, composite, or json

[Description]
key value must be scalar, not array, composite, or json

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.11 17616

could not determine data type for argument @1@

[Description]
could not determine data type for argument 1

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.12 17617

could not determine data type for argument @1@

[Description]
could not determine data type for argument 2

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.13 17618

field name must not be null
[Description]
field name must not be null

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

2.73.14 17619

argument list must have even number of elements

[Description]
argument list must have even number of elements

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

2.73.15 17620

could not determine data type for argument @1@

[Description]
could not determine data type for argument

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

2.73.16 17621

argument @1@ cannot be null

[Description]
argument cannot be null

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

2.73.17 17622

array must have two columns

[Description]
array must have two columns
null value not allowed for object key

null value not allowed for object key

mismatched array dimensions

mismatched array dimensions

string too long to represent as jsonb string

string too long to represent as jsonb string

argument list must have even number of elements

invalid number or arguments: object must be matched key value pairs
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.73.22 17629**

*object keys must be strings*

[Description]
object keys must be strings

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.73.23 17630**

*number of jsonb object pairs exceeds the maximum allowed (@1@)*

[Description]
number of jsonb object pairs exceeds the maximum allowed

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.73.24 17631**

*number of jsonb array elements exceeds the maximum allowed (@1@)*

[Description]
number of jsonb array elements exceeds the maximum allowed

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.73.25 17632**

*total size of jsonb array elements exceeds the maximum of @1@ bytes*

[Description]
total size of jsonb array elements exceeds the maximum number of bytes

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.73.26 17633

**total size of jsonb object elements exceeds the maximum of @1@ bytes**

[Description]
- total size of jsonb object elements exceeds the maximum number of bytes

[System Processing]
- Processing aborts

[Action]
- To investigate the cause of the occurrence from the message, and remove cause.

2.73.27 17634

**cannot call @1@ on a scalar**

[Description]
- cannot call this function on a scalar input

[System Processing]
- Processing aborts

[Action]
- To investigate the cause of the occurrence from the message, and remove cause.

2.73.28 17635

**cannot call @1@ on an array**

[Description]
- cannot call this function on an array input

[System Processing]
- Processing aborts

[Action]
- To investigate the cause of the occurrence from the message, and remove cause.

2.73.29 17636

**cannot get array length of a scalar**

[Description]
- cannot get array length of a scalar

[System Processing]
- Processing aborts

[Action]
- To investigate the cause of the occurrence from the message, and remove cause.

2.73.30 17637
cannot get array length of a non-array
[Description]
cannot get array length of a non-array
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.31 17639
function returning record called in context that cannot accept type record
[Description]
function returning record called in context that cannot accept type record
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.32 17640
cannot deconstruct an array as an object
[Description]
cannot deconstruct an array as an object
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.33 17641
cannot deconstruct a scalar
[Description]
cannot deconstruct a scalar
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.34 17642
cannot extract elements from a scalar
<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>

</tr>
<tr>
<td>2.73.38 17646</td>
<td>argument of @1@ must be an array of objects</td>
</tr>
</tbody>
</table>
[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.73.39 17647

cannot call @1@ on an object
[Description]
  cannot call this function on an object input

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.73.40 17648

cannot delete from scalar
[Description]
  cannot delete from scalar

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.73.41 17649

cannot delete from object using integer index
[Description]
  cannot delete from object using integer subscript

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.73.42 17650

cannot set path in scalar
[Description]
  cannot set path in scalar

[System Processing]
  Processing aborts
<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
</table>
| 2.73.43 17651 | cannot delete path in scalar  
**[Description]**
cannot delete path in scalar  
**[System Processing]**
Processing aborts  
**[Action]**
To investigate the cause of the occurrence from the message, and remove cause. |
| 2.73.44 17652 | invalid concatenation of jsonb objects  
**[Description]**
invalid concatenation of jsonb objects  
**[System Processing]**
Processing aborts  
**[Action]**
To investigate the cause of the occurrence from the message, and remove cause. |
| 2.73.45 17656 | must be a member of the role whose query is being canceled or member of pg_signal_backend  
**[Description]**
must be a member of the role whose query is being canceled  
**[System Processing]**
Processing aborts  
**[Action]**
To investigate the cause of the occurrence from the message, and remove cause. |
| 2.73.46 17657 | must be a superuser to terminate superuser process  
**[Description]**
must be a superuser to terminate superuser process  
**[System Processing]**
Processing aborts  
**[Action]**
To investigate the cause of the occurrence from the message, and remove cause. |
2.73.47 17658

must be a member of the role whose process is being terminated or member of pg_signal_backend

[Description]
must be a member of the role whose process is being terminated

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.48 17659

cannot merge addresses from different families

[Description]
cannot merge addresses from different families

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.49 17660

invalid scale in external "numeric" value

[Description]
invalid scale in external \"numeric\" value

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.50 17661

start value cannot be NaN

[Description]
While generating a numeric series - start value cannot be NaN

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.73.51 17662

stop value cannot be NaN

[Description]
stop value cannot be NaN

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.52 17663

step size cannot be NaN

[Description]
step size cannot be NaN

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.53 17664

percentile value @1@ is not between 0 and 1

[Description]
percentile value %g is not between 0 and 1

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.54 17665

invalid input syntax for type @1@: "%2@

[Description]
invalid input syntax for type pg_lsn

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.55 17666
**function can only be called when server is in binary upgrade mode**

[Description]
function can only be called when server is in binary upgrade mode

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.73.56 17672**

**cannot output a value of type @1@**

[Description]
cannot output a value of type pg ddl_command

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.73.57 17673**

**malformed range literal: "@1@"**

[Description]
malformed range literal. Check the input string format

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.73.58 17674**

**invalid input syntax for numeric time zone: "@1@"**

[Description]
invalid input syntax for numeric time zone

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.73.59 17675**

**numeric time zone "@1@" out of range**
numeric time zone out of range

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.73.60 17676

timestamp out of range: @1@-@2@-@3@ @4@:@5@:@6@

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.73.61 17677

interval units "@1@" not supported because months usually have fractional weeks

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.73.62 17678

invalid external txid_snapshot data

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.73.63 17679

unterminated format() type specifier

unterminated format specifier
[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.64 17680

number is out of range

[Description]
number is out of range

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.65 17681

width argument position must be ended by "$"

[Description]
width argument position must be ended by \\"$

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.66 17682

type @1@ is not composite

[Description]
type is not composite

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.67 17683

keystore location "@1@" is too long

[Description]
While configuring a keystore, the error is "keystore location mentioned is too long".

[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.68 17684

keystore does not exist

[Description]
keystore does not exist. Make sure keystore_location points to the correct location. If the setting is correct, set the master encryption key to create the keystore.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.69 17685

must be superuser to manipulate keystore

[Description]
must be superuser to manipulate keystore

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.70 17686

function "@1@" is not supported by this build

[Description]
function "%s" is not supported by this build

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.71 17687

file "@1@" is not a keystore

[Description]
file "%s" is not a keystore

[System Processing]
Processing aborts
To investigate the cause of the occurrence from the message, and remove cause.

2.73.72 17688

lock file "@1@" is empty

[Description]
lock file is empty. Check if the lockfile is corrupt.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.73 17689

could not access directory "@1@": @2@

[Description]
could not access directory

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.74 17690

bind_textdomain_codeset failed

[Description]
bind_textdomain_codeset failed

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.75 17691

parameter "@1@" requires a numeric value

[Description]
parameter "%s" requires a numeric value

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.73.76 17692
cannot set parameters during a parallel operation

[Description]
cannot set parameters during a parallel operation

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.77 17693
permission denied to set parameter "@1@"

[Description]
permission denied to set parameter

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.78 17694
must be superuser to execute ALTER SYSTEM command

[Description]
must be superuser to execute ALTER SYSTEM command

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.79 17696
parameter "@1@" could not be set

[Description]
parameter could not be set

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.73.80 17698
could not seek in tuplestore temporary file: @1@

[Description]

could not seek in tuplestore temporary file

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.73.81 17699

could not read from tuplestore temporary file: @1@

[Description]

could not read from tuplestore temporary file

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.74 Message Numbers Beginning with 17700

2.74.1 17700

could not write to tuplestore temporary file: @1@

[Description]

could not write to tuplestore temporary file

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.74.2 17703

user does not exist

[Description]

user does not exist

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
2.74.3 17704

@1@: could not open directory "@2@": @3@

[Description]
could not open directory

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.4 17705

@1@: could not read directory "@2@": @3@

[Description]
could not read directory

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.5 17706

@1@: could not stat file "@2@": @3@

[Description]
could not stat file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.6 17707

@1@: could not open file "@2@": @3@

[Description]
could not open file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.7 17708
@1@: directory name too long
[Description]
directory name too long

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.8 17709

@1@: multiple "=" signs in tablespace mapping
[Description]
multiple signs in tablespace mapping

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.9 17710

@1@: invalid tablespace mapping format "@2@", must be "OLDDIR=NEWDIR"
[Description]
invalid tablespace mapping format must be OLDDIR=NEWDIR

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.10 17711

@1@: old directory is not an absolute path in tablespace mapping: @2@
[Description]
old directory is not an absolute path in tablespace mapping

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.11 17712

@1@: new directory is not an absolute path in tablespace mapping: @2@
[Description]
new directory is not an absolute path in tablespace mapping

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.12 17713

@1@: transfer rate "@2@" is not a valid value

[Description]
backup transfer rate is not a valid value

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.13 17714

@1@: invalid transfer rate "@2@": @3@

[Description]
invalid transfer rate

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.14 17715

@1@: transfer rate must be greater than zero

[Description]
transfer rate must be greater than zero

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.15 17716

@1@: invalid --max-rate unit: "@2@"

[Description]
invalid --max-rate unit
[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.74.16 17717

@1@: transfer rate "@2@" exceeds integer range

[Description]
  Transfer rate exceeds integer range

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.74.17 17718

@1@: transfer rate "@2@" is out of range

[Description]
  Transfer rate is out of range

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.74.18 17719

@1@: incompatible server version @2@

[Description]
  incompatible server version

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.74.19 17720

@1@: server returned unexpected response to BASE_BACKUP command; got @2@ rows and @3@ fields, expected @4@ rows and @5@ fields

[Description]
  server returned unexpected response to BASE_BACKUP command; got rows and fields, expected rows and fields
[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.20 17721

@1@: invalid wal-method option "@2@", must be "fetch", "stream", or "none"

[Description]
invalid xlog-method option : must be fetch or stream

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.21 17722

@1@: WAL directory location can only be specified in plain mode

[Description]
transaction log directory location can only be specified in plain mode

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.22 17723

@1@: could not create symbolic link "@2@": @3@

[Description]
could not create symbolic link

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.23 17724

@1@: symlinks are not supported on this platform

[Description]
symlinks are not supported on this platform

[System Processing]
Processing aborts
To investigate the cause of the occurrence from the message, and remove cause.

### 2.74.24 17725

@1@: cannot use --create-slot together with --drop-slot  
[Description]  
cannot use --create-slot together with --drop-slot  
[System Processing]  
Processing aborts  
[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

### 2.74.25 17726

@1@: @2@ needs a slot to be specified using --slot  
[Description]  
needs a slot to be specified using --slot  
[System Processing]  
Processing aborts  
[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

### 2.74.26 17727

@1@: could not fsync log file "@2@": @3@  
[Description]  
could not fsync log file  
[System Processing]  
Processing aborts  
[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

### 2.74.27 17728

@1@: could not open log file "@2@": @3@  
[Description]  
could not open log file  
[System Processing]  
Processing aborts  
[Action]  
To investigate the cause of the occurrence from the message, and remove cause.
2.74.28 17729

@1@: invalid fsync interval "@2@"

[Description]
invalid fsync interval

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.29 17730

@1@: could not parse start position "@2@"

[Description]
could not parse start position

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.30 17731

@1@: no slot specified

[Description]
no slot specified

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.31 17732

@1@: no target file specified

[Description]
no target file specified

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.32 17733
@1@: no database specified
[Description]
no database specified
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.33 17734

@1@: at least one action needs to be specified
[Description]
at least one action needs to be specified
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.34 17735

@1@: cannot use --create-slot or --start together with --drop-slot
[Description]
cannot use --create-slot or --start together with --drop-slot
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.35 17736

@1@: cannot use --create-slot or --drop-slot together with --startpos
[Description]
cannot use --create-slot or --drop-slot together with --startpos
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.36 17737

@1@: could not establish database-specific replication connection
could not establish database-specific replication connection

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.74.37 17738

@1@: could not create archive status file "@2@": @3@

could not create archive status file

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.74.38 17740

@1@: server reported unexpected history file name for timeline @2@: @3@

server reported unexpected history file name for timeline

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.74.39 17741

@1@: could not create timeline history file "@2@": @3@

could not create timeline history file

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.74.40 17742

@1@: could not write timeline history file "@2@": @3@

could not write timeline history file
[System Processing]  
Processing aborts  

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.74.41 17743

@1@: could not rename file "@2@" to "@3@": @4@

[Description]  
could not rename file  

[System Processing]  
Processing aborts  

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.74.42 17744

@1@: incompatible server version @2@; client does not support streaming from server versions older than @3@

[Description]  
incompatible server version; client does not support streaming from server versions older than  

[System Processing]  
Processing aborts  

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.74.43 17745

@1@: incompatible server version @2@; client does not support streaming from server versions newer than @3@

[Description]  
incompatible server version; client does not support streaming from server versions newer than  

[System Processing]  
Processing aborts  

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.74.44 17746

@1@: starting timeline @2@ is not present in the server

[Description]  
starting timeline is not present in the server

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.74.49 17751

@1@: invalid socket: @2@

socket not open

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.74.50 17752

@1@: could not send copy-end packet: @2@

could not send copy-end packet

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.74.51 17753

@1@: could not connect to server: @2@

could not connect to server

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.74.52 17754

@1@: could not create replication slot "@2@": got @3@ rows and @4@ fields, expected @5@ rows and @6@ fields

could not create replication slot : got unexpected rows and fields
[System Processing]
   Processing aborts

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.74.53 17755

@1@: could not drop replication slot "@2@": got @3@ rows and @4@ fields, expected @5@ rows and @6@ fields

[Description]
   could not drop replication slot : got rows and fields mismatch with, expected rows and fields

[System Processing]
   Processing aborts

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.74.54 17758

@1@: WSAStartup failed: @2@

[Description]
   WSAStartup failed

[System Processing]
   Processing aborts

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.74.55 17759

could not create communication channels: @1@

[Description]
   could not create communication channels

[System Processing]
   Processing aborts

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.74.56 17761

unrecognized command received from master: "]@1@"

[Description]
   unrecognized command on communication channel
[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.74.57 17762

invalid message received from worker: "@1@"

[Description]
  invalid message received from worker

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.74.58 17764

could not write to the communication channel: @1@

[Description]
  could not write to the communication channel

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.74.59 17765

select() failed: @1@

[Description]
  error in ListenToWorkers()

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.74.60 17766

pgpipe: could not create socket: error code @1@

[Description]
  pgpipe: could not create socket

[System Processing]
  Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.61 17767

pgpipe: could not bind: error code @1@

[Description]
pgpipe: could not bind

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.62 17768

pgpipe: could not listen: error code @1@

[Description]
pgpipe: could not listen

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.63 17769

pgpipe: getsockname() failed: error code @1@

[Description]
pgpipe: getsockname() failed

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.64 17770

pgpipe: could not create second socket: error code @1@

[Description]
pgpipe: could not create second socket

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.74.65 17771

pgpipe: could not connect socket: error code @1@

[Description]
pgpipe: could not connect socket

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.66 17773

unexpected COPY statement syntax: "@1@"

[Description]
unexpected COPY statement syntax

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.67 17774

options -s/--schema-only and -a/--data-only cannot be used together

[Description]
options -s/--schema-only and -a/--data-only cannot be used together

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.68 17775

options -c/--clean and -a/--data-only cannot be used together

[Description]
options -c/--clean and -a/--data-only cannot be used together

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
option --if-exists requires option -c/--clean

[Description]
option --if-exists requires option -c/--clean

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.70 17777

@1@: invalid number of parallel jobs

[Description]
%s: invalid number of parallel jobs

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.71 17778

parallel backup only supported by the directory format

[Description]
parallel backup only supported by the directory format

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.74.72 17779

Exported snapshots are not supported by this server version.

[Description]
Exported snapshots are not supported by this server version

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.75.2 17804**

**@1@ cannot be used as a role name here**

**Description**

Reserved name cannot be used as a role name here

**System Processing**

Processing aborts

**Action**

To investigate the cause of the occurrence from the message, and remove cause.
2.75.3 17805

@1@ is not allowed with UNION/INTERSECT/EXCEPT

[Description]
Locking clause is not allowed with UNION/INTERSECT/EXCEPT

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.4 17806

@1@: could not access directory "@2@": @3@

[Description]
Failure in accessing directory

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.5 17807

@1@: could not allocate SIDs: error code @2@

[Description]
Failure in allocating SIDs

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.6 17808

@1@: could not change permissions of "@2@": @3@

[Description]
Failure in changing the permissions of a file/directory

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.7 17809
@1@: could not close directory "@2@": @3@

[Description]
  Failure in closing directory

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.75.8 17810

@1@: could not close directory "@2@": @3@

[Description]
  Failure in closing directory

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.75.9 17811

@1@: could not create restricted token: error code @2@

[Description]
  Failure in creating restricted token

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.75.10 17812

@1@: could not fsync file "@2@": @3@

[Description]
  Failure in syncing the file

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.75.11 17813

@1@: could not get exit code from subprocess: error code @2@
Failure in getting the exit code of a child process

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.75.12 17816

@1@: could not open process token: error code @2@

Failure in opening process token

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.75.13 17818

@1@: could not read directory "@2": @3@

Failure in reading from a directory

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.75.14 17819

@1@: could not read file "@2": @3@

Failure in reading the file

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.75.15 17821

@1@: could not re-execute with restricted token: error code @2@

re-executing with a restricted token is not allowed
[System Processing]
    Processing aborts

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.75.16 17822

[@1@]: could not remove promote signal file "@2@": @3@

[Description]
    Failure in removing promote signal file

[System Processing]
    Processing aborts

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.75.17 17823

[@1@]: could not start process for command "@2@": error code @3@

[Description]
    Process start failed

[System Processing]
    Processing aborts

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.75.18 17824

[@1@]: could not write @2@ bytes to log file "@3@": @4@

[Description]
    Failure in writing to a file

[System Processing]
    Processing aborts

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.75.19 17825

[@1@]: directory "@2@" does not exist

[Description]
    directory doesn't exist

[System Processing]
    Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.20 17826

@1@: directory "@2@" is not a database cluster directory
[Description]
directory is not a database cluster directory
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.21 17827

@1@: invalid argument for option -f: "@2@"
[Description]
Invalid argument
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.22 17828

@1@: invalid argument for option -t: "@2@"
[Description]
Invalid argument
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.23 17829

@1@: keystore location "@2@" is too long
[Description]
keystore location is more than 1024 characters
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.75.24 17830

@1@: oldest multitransaction ID (-m) must not be 0

[Description]
The provided oldest multitransaction ID (-m) must not be 0

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.25 17832

@1@: out of memory

[Description]
out of memory

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.26 17833

@1@: replication connection using slot "@2@" is unexpectedly database specific

[Description]
replication connection using slot specified is unexpectedly database specific

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.27 17834

@1@: the PID file "@2@" is empty

[Description]
Wrong PID file is found, it is empty

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.28 17835
@1@: too many command-line arguments (first is "@2@")

[Description]

too many command-line arguments

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.75.29 17836

@1@: transaction ID (-c) must be either 0 or greater than or equal to 2

[Description]

Provided transaction ID (-c) must be either 0 or greater than or equal to 2

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.75.30 17837

@1@: unexpected response to TIMELINE_HISTORY command: got @2@ rows and @3@ fields, expected @4@ rows and @5@ fields

[Description]

Response from server to TIMELINE_HISTORY command is wrong from the expected

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.75.31 17838

"@1@" is a symbolic link, but symbolic links are not supported on this platform

[Description]

Symbolic links are not supported in this platform

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.75.32 17839

"@1@" is not a BRIN index
The provided index is not a BRIN index

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.75.33 17840

"@1@" is not a directory or symbolic link

Specified path is not a directory or symbolic link

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.75.34 17841

"@1@" is not a directory

The specified path is not a directory

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.75.35 17842

"@1@" is not a regular file

The specified file is not a regular file

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.75.36 17843

"@1@" is not a symbolic link

The specified path/file is not a symbolic link
[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.37 17844

"@1@" is not a table, view, materialized view, sequence, or foreign table
[Description]
Object is not a table, view, materialized view, sequence, or foreign table to do the alter relation

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.38 17845

"@1@": stopping truncate due to conflicting lock request
[Description]
Truncating table is stopped due to conflicting lock request by vacuum

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.39 17846

\watch cannot be used with an empty query
[Description]

To investigate the cause of the occurrence from the message, and remove cause.
2.75.49 17857

**BKPBLOCK_HAS_DATA not set, but data length is @1@ at @2@/@3@**

[Description]
BKPBLOCK_HAS_DATA not set, but data length is present in WAL record

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.50 17858

**BKPBLOCK_HAS_DATA set, but no data included at @1@/@2@**

[Description]
BKPBLOCK_HAS_DATA set, but no data in WAL record

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.51 17859

**BKPBLOCK_SAME_REL set but no previous rel at @1@/@2@**

[Description]
BKPBLOCK_SAME_REL set but no previous rel is provided in WAL record

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.52 17860

**BKPIMAGE_HAS_HOLE not set, but hole offset @1@ length @2@ at @3@/@4@**

[Description]
BKPIMAGE_HAS_HOLE not set, but hole offset is provided

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.53 17861
BKIMAGE_HAS_HOLE set, but hole offset @1@ length @2@ block image length @3@ at @4@/@5@

[Description]
BKIMAGE_HAS_HOLE set, but hole offset is not provided

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.54 17862

BKIMAGE_IS_COMPRESSED set, but block image length @1@ at @2@/@3@

[Description]
BKIMAGE_IS_COMPRESSED set, but block image length is not provided.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.55 17863

cannot allocate multiple Perl interpreters on this platform

[Description]
cannot allocate multiple Perl interpreters on this platform

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.56 17864

cannot alter type of a column used in a policy definition

[Description]
cannot alter type of a column used in a policy definition

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.57 17865

cannot call @1@ on a non-object
[Description]
The parameter is not a Json Object

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.58 17866

cannot change logged status of table "@1@" because it is temporary
[Description]
Temporary table logged status cannot be changed

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.59 17867

cannot copy from materialized view "@1@
[Description]
Copy command cannot be executed on a materialized view

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.60 17868

cannot delete tuples during a parallel operation
[Description]
Delete operation is not allowed in parallel mode

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.61 17869

cannot determine OID of function lo_lseek64
[Description]
lo_lseek64 function is not defined
2.75.62 17870

cannot determine OID of function lo_tell64

[Description]
lo_tell64 function is not defined

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.63 17871

cannot determine OID of function lo_truncate64

[Description]
lo_truncate64 function is not defined

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.64 17872

cannot display a value of a shell type

[Description]
Shell type cannot be displayed

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.65 17873

cannot duplicate null pointer (internal error)

[Description]
The given input is a null pointer

[Action]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.66 17874

cannot refresh materialized view "@1@" concurrently
[Description]
Cannot refresh materialized view concurrently

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.67 17875

cannot set system attribute "@1@"
[Description]
Cannot set system attributes

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.68 17876

cannot setup replication origin when one is already setup
[Description]
replication origin is already setup

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.69 17877

cannot use DISTINCT with WITHIN GROUP
[Description]
cannot use DISTINCT with WITHIN GROUP

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
**2.75.70 17878**

**cannot use multiple ORDER BY clauses with WITHIN GROUP**

[Description]

cannot use multiple ORDER BY clauses with WITHIN GROUP sql query

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

**2.75.71 17879**

**cannot use special role specifier in DROP ROLE**

[Description]

cannot use special role specifier in DROP ROLE

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

**2.75.72 17880**

**cannot use VARIADIC with WITHIN GROUP**

[Description]

cannot use VARIADIC with WITHIN GROUP

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

**2.75.73 17881**

**constraint "@1@" of relation "@2@" is not a foreign key constraint**

[Description]

constraint is not a foreign key constraint

[System Processing]

Processing aborts

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

**2.75.74 17882**
**conversion from numeric to Decimal failed**

[Description]
conversion from numeric to Decimal failed

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.75.75 17883**

**COPY data transfer failed: @1@**

[Description]
Failed in data transfer of COPY command

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.75.76 17884**

**corrupted item pointer: offset = @1@, length = @2@**

[Description]
item pointer of a page is corrupted

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.75.77 17885**

**could not change table "@1@" to logged because it references unlogged table "@2@"**

[Description]
could not change table logged status because it references unlogged table

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.75.78 17886**

**could not change table "@1@" to unlogged because it references logged table "@2@"**
[Description]
could not change table logged status because it references logged table

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.79 17887

could not close directory "@1@": @2@

[Description]
Failure in closing a directory

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.80 17888

could not close directory "@1@": @2@

[Description]
Failure in closing a directory

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.81 17889

could not close file "@1@": @2@

[Description]
Failure in file close

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.82 17890

could not close pipe to external command: @1@

[Description]
Failure in closing the pipe command to external command
[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.83 17891

could not close target file "@1@": @2@

[Description]
Failure in closing target file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.84 17892

could not convert Python Unicode object to bytes

[Description]
could not convert Python Unicode object to bytes

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.85 17893

could not create any Unix-domain sockets

[Description]
Failure in creating Unix-domain sockets

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.86 17894

could not create directory "@1@": @2@

[Description]
Failure in creating a directory

[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.87 17895

could not create internal procedure "@1@": @2@
[Description]
could not create internal procedure

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.88 17896

could not create symbolic link at "@1@": @2@
[Description]
Failure in creating a symbolic link

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.89 17897

could not execute command "@1@": @2@
[Description]
could not execute command if it is not copy stream

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.75.90 17898

could not import a module for Decimal constructor
[Description]
Non decimal data found

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.75.91 17899

could not initialize globals

[Description]
could not initialize globals in pl/python function

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76 Message Numbers Beginning with 17900

2.76.1 17901

could not look up effective user ID @1@: @2@

[Description]
Getting the current user details failed

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.2 17902

could not look up local user ID @1@: @2@

[Description]
Lookup user name failed

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.3 17903

could not map dynamic shared memory segment

[Description]
Attaching to a dynamic shared memory segment failed.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.76.4 17904

**could not open directory "@1@": @2@**

[Description]
Failure in opening the directory

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.5 17905

**could not open file "@1@" for reading: @2@**

[Description]
Failure in opening a file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.6 17906

**could not open file "@1@" for truncation: @2@**

[Description]
Failure in opening a file for truncating it's size

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.7 17907

**could not open file "@1@": @2@**

[Description]
Failure in opening the file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.8 17908
could not open parent table of index @1@

[Description]
Failure in opening the parent relation of an index

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.9 17909

could not open source file "@1@": @2@

[Description]
Failure in opening a source file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.10 17910

could not open target file "@1@": @2@

[Description]
Failure in opening target file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.11 17911

could not read directory "@1@": @2@

[Description]
Failure in reading from a directory

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.12 17912

could not read directory "@1@": @2@
[Description]
Failure in reading from a directory

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.13 17913
could not read file "@1@": @2@

[Description]
Failure in reading a file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.14 17914
could not read symbolic link "@1@": @2@

[Description]
Failure in reading a symbolic link

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.15 17915
could not read time zone file "@1@": @2@

[Description]
Failure in reading timezone file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.16 17916
could not remove directory "@1@": @2@

[Description]
Failure in removing a directory
Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

**2.76.17 17917**

`could not remove file "@1@": @2@`

[Description]
Failure in removing a file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.76.18 17918**

`could not remove symbolic link "@1@": @2@`

[Description]
Failure in removing a symbolic link

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.76.19 17919**

`could not seek in log file @1@ to offset @2@: @3@`

[Description]
File seek operation is failed

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.76.20 17920**

`could not seek in source file: @1@`

[Description]
Failure in executing seek system call in source file

[System Processing]
Processing aborts
To investigate the cause of the occurrence from the message, and remove cause.

2.76.21 17921

could not seek in target file "@1@": @2@

[Description]
Failure in executing seek system call in target file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.22 17923

could not split return value from trigger: @1@

[Description]
Trigger return value couldn't be splitted

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.23 17924

could not stat file "@1@": @2@

[Description]
stat system call failed on a file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.24 17925

could not stat file "@1@": @2@

[Description]
Failure in stat system call

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.76.25 17926

could not truncate file "@1@" to @2@: @3@

[Description]
Failure in truncating a file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.26 17927

could not write file "@1@": @2@

[Description]
Failure in writing to a file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.27 17928

could not write to file "@1@", wrote @2@ of @3@: @4@

[Description]
Failure in writing to a file.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.28 17929

data file "@1@" in source is not a regular file

[Description]
The data file is not a regular file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.29 17930
database connection requirement not indicated during registration

[Description]
database connection requirement not indicated during background worker registration

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.30 17931

declared name @1@ is already defined

[Description]
declared name has been defined already

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.31 17934

EVP error code @1@

[Description]
Non zero error message. The error number returned by ERR_get_error

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.32 17935

EVP error code @1@

[Description]
EVP error code

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.33 17936

FOR value should be positive integer
FOR loop value should be positive integer

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.76.34 17937

foreign key referenced-columns list must not contain duplicates

The provided foreign key referenced-columns list contain duplicates

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.76.35 17938

foreign-data wrapper "@1@" does not support IMPORT FOREIGN SCHEMA

IMPORT FOREIGN SCHEMA doesn't supported by the foerign data wrapper

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.76.36 17939

improper use of "*"

improper use of "*" in the indirection reference

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.76.37 17941

initial position must not be null

First member of the array must not be null
Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.76.38 17942

**invalid action (CREATE) for regular file**

**Description**

Regular files are created with open_target_file function, not with this

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.76.39 17943

**invalid block_id @1@ at @2@/@3@**

**Description**

Invalid block_id in WAL record

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.76.40 17944

**Invalid character value.**

**Description**

Invalid XML character value.

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.76.41 17945

**invalid compressed image at @1@/@2@, block @3@**

**Description**

The provided index is not a BRIN index

Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.42 17947
invalid input syntax for type @1@: "@2@"
[Description]
invalid input syntax for type txid_snapshot
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.43 17948
invalid line number: @1@
[Description]
Provided line number is wrong in the sql query
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.44 17949
invalid magic number in dynamic shared memory segment
[Description]
Invalid dynamic shared memory segment
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.45 17950
invalid MultiXactId: @1@
[Description]
Invalid multixactid parameter
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.
**2.76.46 17951**

*Invalid value "@1@" for "@2@"*

[Description]
Invalid argument

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.76.47 17952**

*Invalid value for recovery parameter "@1@": "@2@"*

[Description]
Invalid recovery configuration parameter

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.76.48 17953**

*Invalid value in ECOBPG_NCHAR on line @1@. The valid value is UTF16LE/ UTF16BE/ UTF32LE/ UTF32BE/ SJIS/ COBOL_EUC.*

[Description]
Invalid ECOBPG_NCHAR environment variable value

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.76.49 17954**

*Junk view columns are not updatable.*

[Description]
Write operation Junk view columns are not updatable.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
**2.76.50 17955**

**length of nvarchar type is not assigned**

**[Description]**

length of nvarchar type is not assigned

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

**2.76.51 17956**

**local user with ID @1@ does not exist**

**[Description]**

Lookup user name failed

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

**2.76.52 17957**

**lost connection to parallel worker**

**[Description]**

Error while reading message queue may caused the worker to be shutdown

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

**2.76.53 17958**

**Malformed declaration: missing version.**

**[Description]**

Version number missing in xml document/content

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

**2.76.54 17959**
Missing encoding in text declaration.

[Description]
missing encoding in xml document/content

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.55 17960

more than one row returned for \gset

[Description]
more than one row returned for \gset command

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.56 17961

must be owner of event trigger @1@

[Description]
must be owner of the even trigger

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.57 17962

national characters is not supported on non-utf8 databases.

[Description]
national characters is not supported on non-utf8 databases.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.58 17963

neither BKPIMAGE_HAS_HOLE nor BKPIMAGE_IS_COMPRESSED set, but block image length is @1@ at @2@/@3@

- 1407 -
[Description]
neither BKPIMAGE_HAS_HOLE nor BKPIMAGE_IS_COMPRESSED set, but block impage length is provided

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.59 17964

nested service specifications not supported in service file "@1@", line @2@

[Description]
nested service specifications not supported in service file

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.60 17965

no Decimal attribute in module

[Description]
no Decimal attribute in module

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.61 17966

no EVP error reported

[Description]
The errorcode returned by ERR_get_error() function is zero.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.62 17967

no rows returned for \gset

[Description]
no rows returned for \gset command
[System Processing]
    Processing aborts

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.76.63 17968

no SSL error reported

[Description]
    no SSL error reported

[System Processing]
    Processing aborts

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.76.64 17969

not enough arguments for cursor "@1@"

[Description]
    syntax error

[System Processing]
    Processing aborts

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.76.65 17970

number of parameters must be between 0 and 65535

[Description]
    number of parameters must be between 0 and 65535

[System Processing]
    Processing aborts

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.76.66 17971

operating system error @1@

[Description]
    The error number passed to this function may be an out of range error no. So strerror function returns an empty string

[System Processing]
    Processing aborts
To investigate the cause of the occurrence from the message, and remove cause.

2.76.67 17972

operator not allowed in variable definition

[Description]
Only sizeof operation is allowed in variable definition

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.68 17973

operator too long

[Description]
The length of the operator is more than or equal to 64 characters

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.69 17974

out of memory

[Description]
out of memory

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.70 17975

out of memory

[Description]
out of memory

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.76.71 17976

**out-of-order block_id @1@ at @2@/@3@**

[Description]
Out-of-order blocks in WAL record

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.72 17977

**Parsing XML declaration: '?' expected.**

[Description]
Provided XML declaration is unfinished

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.73 17978

**pclose failed: @1@**

[Description]
pclose system call failed

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.74 17979

**permission denied to reassign objects**

[Description]
Insufficient privileges on the object

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.75 17980
pgpipe: could not accept connection: error code @1@

[Description]
Failure in reading a symbolic link

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.76 17981

record with invalid length at @1@/@2@

[Description]
record with invalid length in WAL record

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.77 17982

requested character not valid for encoding: @1@

[Description]
Invalid character for the encoding

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.78 17984

source file list is empty

[Description]
Source file list is empty

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.79 17985

Space required.
[Description]
Space required in the specified location of XML content.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.76.80 17986

**SPI_execute failed: @1@**

[Description]
Failure in SPI_execute function

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.76.81 17987

**SPI_execute_plan failed: @1@**

[Description]
Failure in SPI_execute_plan function

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.76.82 17988

**SSL error code @1@**

[Description]
SSL has reported some error

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.76.83 17989

**standalone accepts only 'yes' or 'no'.**

[Description]
XML standalone accepts only 'yes' or 'no'.
2.76.84 17990

STDIN/STDOUT not allowed with PROGRAM

[Description]
STDIN/STDOUT not allowed with PROGRAM in copy command

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.85 17991

symbolic link "@1@" target is too long

[Description]
Symbolic link target length is more than the specified length

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.86 17992

symbolic link target too long for tar format: file name "@1@", target "@2@"

[Description]
Provided symbolic link target name is too long for tar format

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.87 17993

tablesample method @1@ requires @2@ argument, not @3@

[Description]
Invalid number of tablesample arguments

[Action]
Processing aborts
To investigate the cause of the occurrence from the message, and remove cause.

2.76.88 17995

The server (version @1@) does not support editing function source.

[Description]
The server does not support editing function source.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.89 17996

time zone "@1@" appears to use leap seconds

[Description]
The provided timezone appears to have leap seconds

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.90 17997

too many arguments for cursor "@1@"

[Description]
syntax error

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.76.91 17999

type modifier cannot have ORDER BY

[Description]
type modifier cannot have ORDER BY clause

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.77 Message Numbers Beginning with 18000

2.77.1 18000
unexpected EOF while reading file "/@1@"
[Description]
unexpected EOF reach while reading file
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.2 18001
unexpected page modification for directory or symbolic link "/@1@"
[Description]
unexpected page modification for directory or symbolic link
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.3 18002
unexpected result set after end-of-streaming
[Description]
unexpected data after end-of-streaming
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.4 18003
unexpected result status for \watch
[Description]
unexpected result status for \watch command
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.77.5 18004

unexpected standby message type "@1@", after receiving CopyDone

[Description]
unexpected standby message type after copyDone

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.6 18005

Unix-domain socket path "@1@" is too long (maximum @2@ bytes)

[Description]
unix-domain socket path has crossed more than 100 bytes

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.7 18006

UNNEST() with multiple arguments cannot have a column definition list

[Description]
UNNEST() with multiple arguments cannot have a column definition list

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.8 18008

Unrecognized libxml error code: @1@.

[Description]
Unknown code error - the default error

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.9 18009
unrecognized object type in default privileges: @1@
[Description]
Unrecognized object type
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.10 18010

unterminated /* comment
[Description]
unterminated /* comment in the sql query
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.11 18011

User ",@1@" has an expired password.
[Description]
user's password has been expired
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.12 18012

User ",@1@" has no password assigned.
[Description]
no password has assigned to user
[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.13 18013

user name lookup failure: error code @1@
Lookup user name failed

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.77.14 18014

View columns that are not columns of their base relation are not updatable.

Write operation View columns that are not columns of their base relation are not updatable.

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.77.15 18015

View columns that refer to system columns are not updatable.

Write operation View columns that refer to system columns are not updatable.

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.77.16 18016

View columns that return whole-row references are not updatable.

Write operation View columns that return whole-row references are not updatable.

Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.77.17 18017

Views containing DISTINCT are not automatically updatable.

Write operation Views containing DISTINCT clause are not automatically updatable.
[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.18 18018

Views containing GROUP BY are not automatically updatable.

[Description]
Write operation Views containing GROUP BY clause are not automatically updatable.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.19 18019

Views containing HAVING are not automatically updatable.

[Description]
Write operation Views containing HAVING clause are not automatically updatable.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.20 18020

Views containing LIMIT or OFFSET are not automatically updatable.

[Description]
Write operation Views containing LIMIT or OFFSET are not automatically updatable.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.21 18021

Views containing TABLESAMPLE are not automatically updatable.

[Description]
Write operation Views containing TABLESAMPLE are not automatically updatable.

[System Processing]
Processing aborts
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.22 18022

**Views containing UNION, INTERSECT, or EXCEPT are not automatically updatable.**

[Description]
Write operation Views containing UNION, INTERSECT, or EXCEPT are not automatically updatable.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.23 18023

**Views containing WITH are not automatically updatable.**

[Description]
Write operation Views containing WITH are not automatically updatable.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.24 18024

**Views that do not select from a single table or view are not automatically updatable.**

[Description]
Write operation Views that do not select from a single table or view are not automatically updatable.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.25 18025

**Views that have no updatable columns are not automatically updatable.**

[Description]
Write operation Views that have no updatable columns are not automatically updatable.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.77.26 18026

Views that return aggregate functions are not automatically updatable.

[Description]
Write operation Views that return aggregate functions are not automatically updatable.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.27 18027

Views that return set-returning functions are not automatically updatable.

[Description]
Write operation Views that return set-returning functions are not automatically updatable.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.28 18028

Views that return window functions are not automatically updatable.

[Description]
Write operation Views that return window functions are not automatically updatable.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.29 18029

WAL file is from different database system: incorrect XLOG_BLCKSZ in page header

[Description]
WAL file is from a different database not generated by these binaries because of mismatch in WAL block size

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.77.30 18030
**WAL file is from different database system: incorrect XLOG_SEG_SIZE in page header**

[Description]
- WAL file is from a different database not generated by these binaries because of mismatch in WAL segment size

[System Processing]
- Processing aborts

[Action]
- To investigate the cause of the occurrence from the message, and remove cause.

2.77.31 18034

**window function @1@ cannot have WITHIN GROUP**

[Description]
- window function cannot have WITHIN GROUP

[System Processing]
- Processing aborts

[Action]
- To investigate the cause of the occurrence from the message, and remove cause.

2.77.32 18035

**window function @1@ requires an OVER clause**

[Description]
- True window functions must be called with a window definition

[System Processing]
- Processing aborts

[Action]
- To investigate the cause of the occurrence from the message, and remove cause.

2.77.33 18036

**WITH CHECK OPTION not supported on recursive views**

[Description]
- WITH CHECK OPTION not supported on recursive views

[System Processing]
- Processing aborts

[Action]
- To investigate the cause of the occurrence from the message, and remove cause.

2.77.34 18038

"@1@" must be registered in shared_preload_libraries and session_preload_libraries
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.77.35 18039**

"@1@" must be registered in shared_preload_libraries

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.77.36 18044**

duplicate lock detected

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.77.37 18049**

internal error. memory not allocated.

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.77.38 18050**

internal error. unknown code.

An error occurred.
[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.77.39 18058

ROS has not been formatted yet.

[Description]  
An error occurred.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.77.40 18061

could not read from SMC evacuating temporary file: @1@

[Description]  
An error occurred during I/O processing in the database server.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.77.41 18066

vci_index_size requires 1 argument

[Description]  
An error occurred.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.77.42 18067

cannot alter table because the table is indexed by VCI

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.77.43 18068

**ALTER INDEX SET TABLESPACE is not supported for VCI**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.77.44 18069

**REINDEX is not supported for VCI**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.77.45 18072

**access method "@1@" does not support EXCLUDE clause**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.77.46 18073

**access method "@1@" does not support index on temporary table**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.77.47 18074
access method "@1@" does not support to CREATE INDEX on the expression

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.77.48 18075
access method "@1@" does not support concurrent index drop

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.77.49 18076
access method "@1@" does not support concurrent index build

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.77.50 18077
access method "@1@" does not support partial-index

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.77.51 18078
**access method "@1@" does not support index on materialized view**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.77.52 18079**

**compression buffer is full**

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

**2.77.53 18091**

**could not start background process : postmaster died**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.77.54 18092**

**could not stop background process**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.77.55 18093**

**could not register background process**
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.77.56 18097

could not open file "@1@": @2@

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.77.57 18099

out of memory

There was insufficient free space in the server's memory during execution of the application.

Processing will be aborted.

Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.78 Message Numbers Beginning with 18100

2.78.1 18103

could not identify a comparison function for type @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.78.2 18104

**aggregate @1@ needs to have compatible input type and transition type**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.3 18105

**aggregate function calls cannot be nested**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.4 18106

**cannot pass more than @1@ argument to a function**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.5 18108

**value out of range: underflow**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.6 18109
value out of range: overflow

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.7 18112

access method "@1@" does not work under full_page_writes=off

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.78.8 18113

slot name must not be null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.9 18114

options array must not be null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.10 18115

cannot create a RETURNING list for a relation containing dropped columns
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.11 18116

path element at position @1@ is null

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.12 18117

path element at position @1@ is not an integer: "@2@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.13 18118

role with OID @1@ does not exist

An error occurred during DB Server processing in the database.

Processing will be aborted.

Refer to this message together with the message that was output immediately beforehand.

2.78.14 18119

BKPBLOCK_HAS_DATA not set, but data length is @1@ at @2@/@3@

BKPBLOCK_HAS_DATA not set, but data length is present in WAL record
[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.78.15 18120

BKPBLOCK_HAS_DATA set, but no data included at @1@/@2@

[Description]
BKPBLOCK_HAS_DATA set, but no data in WAL record

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.78.16 18121

BKPBLOCKSAME_REL set but no previous rel at @1@/@2@

[Description]
BKPBLOCKSAME_REL set but no previous rel is provided in WAL record

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.78.17 18122

BKPIMAGE_HAS_HOLE not set, but hole offset @1@ length @2@ at @3@/@4@

[Description]
BKPIMAGE_HAS_HOLE not set, but hole offset is provided

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.78.18 18123

BKPIMAGE_HAS_HOLE set, but hole offset @1@ length @2@ block image length @3@ at @4@/@5@

[Description]
BKPIMAGE_HAS_HOLE set, but hole offset is not provided
Processing aborts

To investigate the cause of the occurrence from the message, and remove cause.

2.78.19 18124

BKPIMAGE_IS_COMPRESSED set, but block image length @1@ at @2@/@3@

Description
BKPIMAGE_IS_COMPRESSED set, but block image length is not provided.

System Processing
Processing aborts

Action
To investigate the cause of the occurrence from the message, and remove cause.

2.78.20 18126

invalid block_id @1@ at @2@/@3@

Description
invalid block_id in WAL record

System Processing
Processing aborts

Action
To investigate the cause of the occurrence from the message, and remove cause.

2.78.21 18127

neither BKPIMAGE_HAS_HOLE nor BKPIMAGE_IS_COMPRESSED set, but block image length is @1@ at @2@/@3@

Description
neither BKPIMAGE_HAS_HOLE nor BKPIMAGE_IS_COMPRESSED set, but block image length is provided

System Processing
Processing aborts

Action
To investigate the cause of the occurrence from the message, and remove cause.

2.78.22 18128

out-of-order block_id @1@ at @2@/@3@

Description
Out-of-order blocks in WAL record
[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.78.23 18129

could not look up effective user ID @1@: @2@

[Description]
  Getting the current user details failed

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.78.24 18130

could not look up effective user ID @1@: @2@

[Description]
  Getting the current user details failed

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.78.25 18131

pclose failed: @1@

[Description]
  pclose system call failed

[System Processing]
  Processing aborts

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.78.26 18132

pclose failed: @1@

[Description]
  pclose system call failed

[System Processing]
  Processing aborts
To investigate the cause of the occurrence from the message, and remove cause.

**2.78.27 18133**

**pclose failed: @1@**

**[Description]**

pclose system call failed

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

**2.78.28 18134**

**pclose failed: @1@**

**[Description]**

pclose system call failed

**[System Processing]**

Processing aborts

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

**2.78.29 18135**

**Valid values are "none", "AES128" and "AES256".**

**[Description]**

Wrong tablespace encryption algorithm is passed during CREATE TABLESPACE command.

**[System Processing]**

Processing will be aborted

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

**2.78.30 18136**

**parameter "parallel" must be SAFE, RESTRICTED, or UNSAFE**

**[Description]**

Invalid parallel option is passed for the function to be created with CREATE FUNCTION command.

**[System Processing]**

Processing will be aborted

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.
2.78.31 18137

Sets the maximum number of parallel processes per executor node.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.78.32 18139

Sets the planner’s estimate of the cost of passing each tuple (row) from worker to master backend.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.78.33 18140

Sets the planner’s estimate of the cost of starting up worker processes for parallel query.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.78.34 18144

no EVP error reported

[Description]
The errorcode returned by ERR_get_error() function is zero.

[System Processing]
Processing aborts

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.78.35 18145

**WARNING:** password file "@1@" has group or world access; permissions should be u=rw (0600) or less

[Description]
Password file has group or world access.

[System Processing]
WARNING is issued

[Action]
To investigate the cause of the occurrence from the message, and remove cause for the WARNING.

2.78.36 18146

**WARNING:** password file "@1@" is not a plain file

[Description]
Password file is not a plain file.

[System Processing]
WARNING is issued

[Action]
To investigate the cause of the occurrence from the message, and remove cause for the WARNING.

2.78.37 18147

**nested /* ... */ comments**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.78.38 18148

@1@ cannot be run as root Please log in (using, e.g., "su") as the (unprivileged) user that will own the server process.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
**2.78.39 18149**

@1@: could not change permissions of directory "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.78.40 18150**

@1@: input file "@2@" does not belong to PostgreSQL @3@Check your installation or specify the correct path using the option -L.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.78.41 18151**

@1@: invalid locale settings; check LANG and LC_* environment variables

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.78.42 18152**

@1@: no data directory specifiedYou must identify the directory where the data for this database system will reside. Do this with either the invocation option -D or the environment variable PGDATA.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.78.43 18153

Data page checksums are disabled.
[Description]
   Terminated normally.
[System Processing]
   Continues processing.
[Action]
   No action required.

2.78.44 18154

Data page checksums are enabled.
[Description]
   Terminated normally.
[System Processing]
   Continues processing.
[Action]
   No action required.

2.78.45 18155

index "@1@" cannot be used as replica identity because column @2@ is a system column
[Description]
   An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.
[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.46 18157

parameter value for ALTER SYSTEM must not contain a newline
[Description]
   An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.
[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.47 18162
multiple Python libraries are present in session
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.48 18163

Only one Python major version can be used in one session.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.49 18164

syncing target data directory
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.50 18166

The program "initdb" was found by "@1@" but was not the same version as @2@. Check your installation.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.51 18167

sync of target directory failed
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.52 18168

reading user-defined tables

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.53 18169

**WARNING: requested compression not available in this installation -- archive will be uncompressed**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.54 18170

**WARNING: unexpected extra results during COPY of table "@1@"**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.55 18171

**Synchronized snapshots on standby servers are not supported by this server version. Run with --no-synchronized-snapshots instead if you do not need synchronized snapshots.**
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.56 18172

TCP user timeout

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.57 18173

Cancel queries that conflict with recovery during hot standby promotion.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.58 18174

could not load library "vci.so": @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.59 18175

debug_helper must be loaded via shared_preload_libraries

An error occurred during execution of the application or command.
### 2.78.60 18176

**debug_helper injects error**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.78.61 18177

**More details may be available in the server log.**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.78.62 18178

**Kill all remaining database processes and restart the database.**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.78.63 18179

**deadlock detected**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.78.64 18180**

VCI parallel execution is blocked by other operation.

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.78.65 18181**

not enough maximum share memory for parallel query (@1@ bytes requested)

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.78.66 18182**

You possibly need to raise the configuration parameter "vci.shared_work_mem" value to be at least @1@kB.

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.78.67 18183**

You may need to increase max_worker_processes.

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.68 18184

unable to map dynamic shared memory segment

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.69 18185

too many workers already @1@/@2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.70 18186

Failed while creating memory context ”@1@”.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.71 18187

Failed on request of size @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.78.72 18188

failed to shm_open()

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.73 18189

could not open file "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.74 18190

could not get process AffinityMask: error code @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.75 18191

Failed system call was DuplicateHandle.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.76 18192
could not create semaphore: error code @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.77 18193

Failed system call was GetModuleHandle("ntdll.dll").

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.78 18194

could not get address of "NtQuerySystemInformation": error code @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.79 18195

Failed system call was GetModuleHandle("NtQuerySystemInformation").

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.80 18196

could not get system processor performance information : error code @1@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.81 18197

Failed system call was NtQuerySystemInformation.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.82 18198

cannot find vci.smc_directory: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.78.83 18199

could not create shared memory segment: error code @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79 Message Numbers Beginning with 18200

2.79.1 18200

Failed system call was OpenFileMapping(name=@1@).
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.2 18201

Failed system call was MapViewOfFileEx.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.3 18202

could not map shared memory segment

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.4 18203

could not initialize security descriptor: error code @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.5 18204

Failed system call was InitializeSecurityDescriptor.

An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.6 18205

could not set security descriptor DACL: error code @1@

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.7 18206

Failed system call was SetSecurityDescriptorDacl.

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.8 18207

Failed system call was CreateFileMapping(size=@1@, name=@2@).

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.9 18208

could not get priority class: error code @1@

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.10 18209

Failed system call was GetPriorityClass.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.11 18210

could not set priority class=@1@: error code @2@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.12 18211

Failed system call was SetPriorityClass.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.13 18212

pgx_prewarm_vci requires one argument
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.79.14 18213

relation cannot be null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.15 18214

@1@(VCI index regclass)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.16 18215

@1@ is not VCI index

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.17 18216

extension '@1@' does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.18 18217
function '@1@.@2@('  

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.19 18218  
Disable VCI by 'SELECT vci_disable();'

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.20 18219  
internal error. unsupported compression format.

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.21 18220  
column missed in VCI index creation

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.22 18221  
This must never happen. Give up to use VCI index.
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.79.23 18222**

*internal error: unsupported compression type*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.79.24 18223**

*relation full*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.79.25 18224**

*internal error. unsupported compression type*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.79.26 18225**

*Use DROP INDEX "@1@"*

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.27 18226

unexpected index access method call : "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.28 18227

duplicated columns in vci index creation: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.29 18228

 duplicated columns are specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.30 18229

data type @1@ is not supported for access method "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.31 18230

unexpected attribute length

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.32 18231

You must drop index "@1@" before using this command.

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.33 18232

DROP INDEX and CREATE INDEX instead

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.34 18233

only VCI index is supported

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.79.35 18234

extension "@1@" cannot specify a schema name

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.36 18235

cannot cluster tables including @1@ index(es)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.37 18236

Use DROP INDEX @1@ first

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.38 18237

Use DROP INDEX to remove an vci index and try again without CONCURRENTLY option

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.39 18238
Try again without CONCURRENTLY option

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.40 18239

extension "@1@" prohibits this operation

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.41 18240

extension "@1@" prohibits this operation on access method "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.42 18241

extension "@1@" prohibits this operation on operation class "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.43 18242

extension "@1@" prohibits this operation on operation family "@2@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.44 18243

extension "@1@" prohibits this operation on view "@2@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.45 18244

database @1@ does not exist

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.46 18245

undefined lock state

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.47 18246

This might happen when CREATE INDEX fails. "DROP INDEX @1@;" and CREATE INDEX again may help.
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.48 18247

incompatible VCI version: expected (@1@, @2@), stored (@3@, @4@).

This can happen when accessing old database with newer VCI modules. DROP and CREATE INDEX may help.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.49 18248

internal error. unsupported parameter.

Normally relations of VCI index are smaller than the table relation, therefore this error must not happen. Disable VCI by 'SELECT vci_disable();'
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.79.52 18251**

**data relation full**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.79.53 18252**

**vci index "@1@" corrupted**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.79.54 18253**

**TID (@1@,@2@) has been deleted from table "@3@"**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.79.55 18254**

**try to insert TID (@1@,@2@) into ROS twice: extentId=@3@, index=@4@**

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.56 18255

try to delete TID (@1@,@2@) into local delete list

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.57 18256

try to delete TID (@1@,@2@) into delete vector twice

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.58 18257

too many WOS rows over estimation

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.59 18258

The number of devices exceeds the upper bound

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.60 18259
database connection requirement not indicated during registration
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.61 18260
invalid processing mode in background worker
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.62 18261
terminating VCI worker process due to administrator command
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.63 18262
"@1@" is not directory
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.79.64 18263

could not create directory "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.65 18264

could not stat directory "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.66 18265

needs to set at least @1@ to "max_worker_processes"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.67 18266

You will specify more than vci.control_max_workers + (# of CPU cores) * @1@ + 1 to the configuration parameter "max_worker_processes".

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
extension "@1@" cannot be installed under this version of PostgreSQL

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

crash emulation must be loaded via shared_preload_libraries

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

standby mode is not supported by single-user servers

[Description]
An error occurred during DB Server processing in the database.

[System Processing]
Processing will be aborted.

[Action]
Refer to this message together with the message that was output immediately beforehand.

---

constraint "@1@" conflicts with inherited constraint on relation "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
constraint "@1@" conflicts with NOT VALID constraint on relation "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.79.73 18272

constraint "@1@" conflicts with NOT VALID constraint on child table "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.79.74 18273

could not set up connection context: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.79.75 18274

@1@: only one of --source-pgdata or --source-server can be specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.79.76 18275

internal error. failed to split
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.77 18276

invalid attribute number @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.78 18277

duplicated columns in vci index creation: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.79 18278

duplicated columns are specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.80 18279

cannot use "ctid" column with other columns

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.79.81 18280

The "vci_column_ids" option is required when "ctid" column is specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.79.82 18281

The "vci_column_ids" option cannot be used without "ctid" column

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.79.83 18282

index name cannot be null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.79.84 18283

table oid cannot be null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.79.85 18284

array of column names cannot be null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.79.86 18285

storage option cannot be null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.79.87 18286

column name cannot be null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.79.88 18287

column "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly
2.79.89 18288

SPI_connect failed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.90 18289

SPI_prepare failed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.91 18290

cannot execute multi-query in vci_create()

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.92 18291

You might fold the index name with double quotation marks.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.79.93 18292
SPI_execp failed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.79.94 18293

SPI_finish failed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.79.95 18294

unterminated quoted string

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.79.96 18295

failed to parse vci_create() options.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.79.97 18296

failed to parse a vci_create() options: an invalid pair
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.79.98 18297

unrecognized options: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.79.99 18298

WARNING: could not find where to insert IF EXISTS in statement "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.79.100 18299

could not find function definition for function with OID @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly
2.80 Message Numbers Beginning with 18300

2.80.1 18300

could not create the spiexceptions module

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.80.2 18301

could not create exception "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.80.3 18302

exclusive backup not in progress

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly

2.80.4 18303

USING expression contains a whole-row table reference.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly
2.80.5 18304

cannot COPY to/from client in a SQL function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.6 18305

calculated CRC checksum does not match value stored in file

[Description]
An error occurred reading the pg_control file.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.80.7 18306

byte ordering mismatch

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.80.8 18307

operator family "@1@" of access method @2@ contains function @3@ with invalid support number @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.80.9 18308

operator family "@1@" of access method @2@ contains function @3@ with wrong signature for support number @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.10 18310

operator family "@1@" of access method @2@ contains invalid ORDER BY specification for operator @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.11 18311

operator family "@1@" of access method @2@ contains operator @3@ with wrong signature

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.12 18312

operator family "@1@" of access method @2@ is missing operator(s) for types @3@ and @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.80.13 18313
operator family "@1@" of access method @2@ is missing support function(s) for types @3@ and @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.14 18314
operator class "@1@" of access method @2@ is missing operator(s)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.15 18315
operator class "@1@" of access method @2@ is missing operator(s)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.16 18316
posting list is too long

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Reduce the value of maintenance_work_mem.
2.80.17 18317

Reduce maintenance_work_mem.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.80.18 18318

GIN pending list cannot be cleaned up during recovery.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.80.19 18319

"@1@" is not a GIN index

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.20 18320

cannot access temporary indexes of other sessions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
operator family "@1@" of access method @2@ contains support procedure @3@ with different left and right input types

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.22 18322

operator family "@1@" of access method @2@ contains function @3@ with invalid support number @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.23 18323

operator family "@1@" of access method @2@ contains function @3@ with wrong signature for support number @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.24 18324

operator family "@1@" of access method @2@ contains operator @3@ with invalid strategy number @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.80.25 18325

**operator family "@1@" of access method @2@ contains invalid ORDER BY specification for operator @3@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.26 18326

**operator family "@1@" of access method @2@ contains operator @3@ with wrong signature**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.27 18327

**operator class "@1@" of access method @2@ is missing support function @3@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.28 18328

**operator class "@1@" of access method @2@ is missing support function @3@ or @4@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.80.29 18329

**Valid values are "on", "off", and "auto".**

[**Description**]
Supplementary information was output.

[**System Processing**]
None.

[**Action**]
Refer to this message together with the message that was output immediately beforehand.

2.80.30 18330

**operator family "@1@" of access method @2@ contains support procedure @3@ with different left and right input types**

[**Description**]
An error occurred during execution of the application or command.

[**System Processing**]
Processing will be aborted.

[**Action**]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.31 18331

**operator family "@1@" of access method @2@ contains function @3@ with invalid support number @4@**

[**Description**]
An error occurred during execution of the application or command.

[**System Processing**]
Processing will be aborted.

[**Action**]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.32 18332

**operator family "@1@" of access method @2@ contains function @3@ with wrong signature for support number @4@**

[**Description**]
An error occurred during execution of the application or command.

[**System Processing**]
Processing will be aborted.

[**Action**]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.80.33 18333

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.34 18334

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.35 18335

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.36 18336

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.80.37 18337
operator class "@1@" of access method @2@ is missing support function @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.38 18338
operator family "@1@" of access method @2@ contains support procedure @3@ with different left and right input types

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.39 18339
operator family "@1@" of access method @2@ contains function @3@ with wrong signature for support number @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.40 18340
operator family "@1@" of access method @2@ contains function @3@ with invalid support number @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.80.41 18341

operator family "@1@" of access method @2@ contains operator @3@ with invalid strategy number @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.42 18342

operator family "@1@" of access method @2@ contains invalid ORDER BY specification for operator @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.43 18343

operator family "@1@" of access method @2@ contains operator @3@ with wrong signature

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.44 18344

operator family "@1@" of access method @2@ lacks support function for operator @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.80.45 18345

operator family "@1@" of access method @2@ is missing operator(s) for types @3@ and @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.46 18346

operator class "@1@" of access method @2@ is missing operator(s)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing is aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.47 18347

operator family "@1@" of access method @2@ is missing cross-type operator(s)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing is aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.48 18348

access method "@1@" is not of type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing is aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.49 18349
**index access method "@1@" does not have a handler**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing is aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.80.50 18350**

This can be caused by an interrupted VACUUM in version 9.3 or older, before upgrade. Please REINDEX it.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.80.51 18351**

operator family "@1@" of access method @2@ contains function @3@ with invalid support number @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing is aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.80.52 18352**

operator family "@1@" of access method @2@ contains function @3@ with wrong signature for support number @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing is aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.80.53 18353

operator family "@1@" of access method @2@ contains operator @3@ with invalid strategy number @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing is aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.54 18354

operator family "@1@" of access method @2@ contains invalid ORDER BY specification for operator @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing is aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.55 18355

operator family "@1@" of access method @2@ contains operator @3@ with wrong signature

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing is aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.56 18356

operator family "@1@" of access method @2@ is missing operator(s) for types @3@ and @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing is aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.80.57 18357

**operator family "@1@" of access method @2@ is missing support function for types @3@ and @4@**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing is aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.58 18358

**operator class "@1@" of access method @2@ is missing operator(s)**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing is aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.59 18359

**operator family "@1@" of access method @2@ is missing cross-type operator(s)**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing is aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.60 18360

**operator family "@1@" of access method @2@ contains support procedure @3@ with different left and right input types**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing is aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.80.61 18361
operator family "@1@" of access method @2@ contains function @3@ with invalid support number @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing is aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.62 18362
operator family "@1@" of access method @2@ contains function @3@ with wrong signature for support number @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing is aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.63 18363
operator family "@1@" of access method @2@ contains operator @3@ with invalid strategy number @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing is aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.64 18364
operator family "@1@" of access method @2@ contains invalid ORDER BY specification for operator @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing is aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.65 18365

operator family "@1@" of access method @2@ contains operator @3@ with wrong signature
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing is aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.66 18366

operator family "@1@" of access method @2@ is missing operator(s) for types @3@ and @4@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing is aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.67 18367

operator family "@1@" of access method @2@ is missing support function @3@ for type @4@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing is aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.68 18368

operator class "@1@" of access method @2@ is missing operator(s)
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing is aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.80.69 18369**

*Make sure the configuration parameter "@1@" is set on the master server.*

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.80.70 18370**

*Make sure the configuration parameter "@1@" is set.*

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.80.71 18371**

*Execute a database-wide VACUUM in that database. You might also need to commit or roll back old prepared transactions.*

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.80.72 18372**

*database "@1@" must be vacuumed before @2@ more MultiXactId is used*

[Description]
Terminated normally.

[System Processing]
Continues processing.
2.80.73 18373

**database with OID @1@ must be vacuumed before @2@ more MultiXactId is used**

**Description**
Terminated normally.

**System Processing**
Continues processing.

**Action**
No action required.

2.80.74 18374

**This command would create a multixact with @1@ members, but the remaining space is only enough for @2@ member.**

**Description**
Supplementary information was output.

**System Processing**
None.

**Action**
Refer to this message together with the message that was output immediately beforehand.

2.80.75 18375

**Execute a database-wide VACUUM in database with OID @1@ with reduced vacuum_multixact_freeze_min_age and vacuum_multixact_freeze_table_age settings.**

**Description**
Supplementary information was output.

**System Processing**
None.

**Action**
Refer to this message together with the message that was output immediately beforehand.

2.80.76 18376

**database with OID @1@ must be vacuumed before @2@ more multixact member is used**

**Description**
Supplementary information was output.

**System Processing**
None.
[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.80.77 18377**

**Execute a database-wide VACUUM in that database with reduced vacuum_multixact_freeze_min_age and vacuum_multixact_freeze_table_age settings.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.80.78 18378**

**Expected a write-ahead log switchpoint location.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.80.79 18379**

**requested timeline @1@ is not in this server's history**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.80.80 18380**

**Failed while allocating a WAL reading processor.**

[Description]
Supplementary information was output.

[System Processing]
None.
[Action]
Refer to this message together with the message that was output immediately beforehand.

2.80.81 18381

could not read two-phase state from WAL at @1@/@2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.80.82 18382

expected two-phase state data is not present in WAL at @1@/@2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.80.83 18383

Stop the postmaster and vacuum that database in single-user mode. You might also need to commit or roll back old prepared transactions.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.80.84 18384

The database cluster was initialized with LOBLKSIZE @1@, but the server was compiled with LOBLKSIZE @2@.

[Description]
Supplementary information was output.

[System Processing]
None.
2.80.85 18385

Valid values are "pause", "promote", and "shutdown".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.80.86 18386

The only allowed value is "immediate".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.80.87 18387

@1@ "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.80.88 18388

aborting backup due to backend exiting before pg_stop_backup was called

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.80.89 18389

**a backup is already in progress in this session**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.80.90 18390

**non-exclusive backup in progress**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
Try using pg_stop_backup('f') to stop a non-exclusive backup.

2.80.91 18391

**non-exclusive backup is not in progress**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
Try using pg_stop_backup('t') to stop an exclusive backup.

2.80.92 18392

**pg_class heap OID value not set when in binary upgrade mode**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.80.93 18393
return type of inverse transition function @1@ is not @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.94 18394

return type of combine function @1@ is not @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.95 18395

combine function with transition type @1@ must not be declared STRICT

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.96 18396

return type of serialization function @1@ is not @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.97 18397

return type of deserialization function @1@ is not @2@
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.98 18398

aggregate mfinalfunc must not be specified without mstype

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.80.99 18399

serialization functions may be specified only when the aggregate transition data type is @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.81 Message Numbers Beginning with 18400

2.81.1 18400

must specify both or neither of serialization and deserialization functions

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.81.2 18401

permission denied to create access method "@1@"
[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.81.3 18402

must be superuser to drop access methods

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.81.4 18403

handler function is not specified

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.81.5 18404

DO INSTEAD NOTHING rules are not supported for COPY

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.81.6 18405

conditional DO INSTEAD rules are not supported for COPY

[Description]
   An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.81.7 18406

**DO ALSO rules are not supported for the COPY**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.81.8 18407

**multi-statement DO INSTEAD rules are not supported for COPY**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.81.9 18408

**COPY query must have a RETURNING clause**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.81.10 18409

**FORCE_NULL column "@1@" not referenced by COPY**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.81.11 18410

There is @1@ active slot

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.12 18411

There is @1@ other session using the database.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.13 18412

There is @1@ prepared transaction using the database.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.14 18413

access method "@1@" does not exist, skipping

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.81.15 18414

Must be superuser to create an event trigger.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.16 18415

filter value "@1@" not recognized for filter variable "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.81.17 18416

The owner of an event trigger must be a superuser.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.18 18417

Use CREATE EXTENSION ... CASCADE to install required extensions too.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.19 18418
file "@1@" is too large
[Description]
   An error occurred.
[System Processing]
   Processing will be aborted.
[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.81.20 18420
index creation on system columns is not supported
[Description]
   An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.
[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.81.21 18421
Create a unique index with no WHERE clause on one or more columns of the materialized view.
[Description]
   Supplementary information was output.
[System Processing]
   None.
[Action]
   Refer to this message together with the message that was output immediately beforehand.

2.81.22 18422
join estimator function @1@ must return type @2@
[Description]
   An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.
[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.81.23 18423
operator attribute "@1@" cannot be changed
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.81.24 18424

**All roles are members of the PUBLIC role.**

**Description**

Supplementary information was output.

**System Processing**

None.

**Action**

Refer to this message together with the message that was output immediately beforehand.

### 2.81.25 18425

**role "@1@" could not be removed from policy "@2@" on "@3@"**

**Description**

A warning has occurred during execution of the application or command.

**System Processing**

Continues processing.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.81.26 18426

**You might need to add an explicit cast.**

**Description**

Supplementary information was output.

**System Processing**

None.

**Action**

Refer to this message together with the message that was output immediately beforehand.

### 2.81.27 18427

**You might need to specify "USING @1@::@2@".**

**Description**

Supplementary information was output.
[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.28 18428

@1@ depends on column "@2@"

[Description]
Supplementary information was output.

2.81.29 18429

tablespace location should not be inside the data directory

[Description]
A warning has occurred during execution of the application or command.

2.81.30 18430

Open the existing keystore, or set the master encryption key to create and open a new keystore

[Description]
Supplementary information was output.

2.81.31 18431

Tablespace "@1@" does not exist.

[Description]
An error occurred during execution of the application or command.

[System Processing] Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.81.32 18432**

**Foreign tables cannot have TRUNCATE triggers.**

**Description**
Supplementary information was output.

**System Processing**
None.

**Action**
Refer to this message together with the message that was output immediately beforehand.

**2.81.33 18433**

**Foreign tables cannot have constraint triggers.**

**Description**
Supplementary information was output.

**System Processing**
None.

**Action**
Refer to this message together with the message that was output immediately beforehand.

**2.81.34 18434**

**Consider using an AFTER trigger instead of a BEFORE trigger to propagate changes to other rows.**

**Description**
Supplementary information was output.

**System Processing**
None.

**Action**
Refer to this message together with the message that was output immediately beforehand.

**2.81.35 18435**

**type input function @1@ should not be volatile**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Continues processing.
Check the message text and confirm that functions are not marked as volatile.

**2.81.36 18436**

**type output function @1@ should not be volatile**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Continues processing.

**Action**

Check the message text and confirm that functions are not marked as volatile.

**2.81.37 18437**

**type receive function @1@ should not be volatile**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Continues processing.

**Action**

Check the message text and confirm that functions are not marked as volatile.

**2.81.38 18438**

**type send function @1@ should not be volatile**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Continues processing.

**Action**

Check the message text and confirm that functions are not marked as volatile.

**2.81.39 18439**

**type modifier input function @1@ should not be volatile**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Continues processing.

**Action**

Check the message text and confirm that functions are not marked as volatile.
2.81.40 18440

**type modifier output function @1@ should not be volatile**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Continues processing.

[Action]
Check the message text and confirm that functions are not marked as volatile.

2.81.41 18441

**You must specify an operator class for the range type or define a default operator class for the subtype.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.42 18442

**Use ALTER TABLE instead.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.43 18443

**VACUUM option DISABLE_PAGE_SKIPPING cannot be used with FULL**

[Description]
The DISABLE_PAGE_SKIPPING option cannot be used with VACUUM FULL or ANALYZE commands.

[System Processing]
Processing is aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.81.44 18444

oldest multixact is far in the past

[Description]
Terminated normally but a warning was output.

[System Processing]
Continues processing.

[Action]
Close open transactions with multixacts soon to avoid wraparound problems.

2.81.45 18445

Close open transactions with multixacts soon to avoid wraparound problems.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.46 18446

Unrecognized key word: ":@1@".

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.81.47 18447

Conflicting "datestyle" specifications.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.81.48 18448
Cannot specify months in time zone interval.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.81.49 18449

Cannot specify days in time zone interval.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.81.50 18450

PostgreSQL does not support leap seconds.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.51 18451

UTC timezone offset is out of range.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.52 18452

You can use REPEATABLE READ instead.
2.81.53 18453

Conversion between @1@ and @2@ is not supported.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.54 18454

Cannot change "client_encoding" now.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.55 18455

cannot change client_encoding during a parallel operation

[Description]
This error occurs if a function wants to set client_encoding and is invoked by the parallel query.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that client_encoding is not set by the parallel query operation.

2.81.56 18456

Valid values are "local" and "cascaded".

[Description]
Supplementary information was output.
[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.57 18457

Key conflicts exist.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.58 18458

Key conflicts with existing key.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.59 18459

Failing row contains @1@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.60 18460

Use the REFRESH MATERIALIZED VIEW command.

[Description]
Supplementary information was output.

[System Processing]
None.
2.81.61 18461

**combine function for aggregate @1@ must be declared as STRICT**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.81.62 18462

**Ensure that no rows proposed for insertion within the same command have duplicate constrained values.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.63 18463

**could not send tuple to shared-memory queue**

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.81.64 18464

**BSD authentication failed for user "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.81.65 18465**

Connection matched pg_hba.conf line @1@: "@2@"

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.81.66 18466**

could not translate name

[Description]
An error occurred while translating domain name to Kerberos realm name in SSL.

[Action]
Check the message text and confirm that the domain name is written correctly.

**2.81.67 18467**

realm name too long

[Description]
An error occurred while translating domain name to Kerberos realm name in SSL.

[Action]
Check the message text and confirm that the domain name is written correctly.

**2.81.68 18468**

translated account name too long

[Description]
An error occurred while translating account name to Kerberos user name in SSL.

[Action]
Check the message text and confirm that the account name is written correctly.
2.81.69 18469

pam_set_item(PAM_RHOST) failed: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.81.70 18470

LDAP search for filter "@1@" on server "@2@" returned @3@ entry.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.71 18471

RADIUS response from @1@ has corrupt length: @2@ (actual length @3@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.81.72 18472

private key file "@1@" is not a regular file

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.81.73 18473
private key file "@1@" must be owned by the database user or root

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.81.74 18474

terminating connection due to unexpected postmaster exit

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the server is still running.

2.81.75 18475

Role "@1@" does not exist.

[Description]
The user does not exist.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.81.76 18476

User "@1@" has an expired password.

[Description]
The password is blank.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.81.77 18477

Password does not match for user "@1@".
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.81.78 18478**

**Specify exactly one connection type per line.**

Supplementary information was output.

Refer to this message together with the message that was output immediately beforehand.

**2.81.79 18479**

**Specify one address range per line.**

Supplementary information was output.

Refer to this message together with the message that was output immediately beforehand.

**2.81.80 18480**

**Specify an address range in CIDR notation, or provide a separate netmask.**

Supplementary information was output.

Refer to this message together with the message that was output immediately beforehand.

**2.81.81 18481**

**Specify exactly one authentication type per line.**

Supplementary information was output.
extensible node type "@1@" already exists

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

ExtensibleNodeMethods "@1@" was not registered

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

whole row unique index inference specifications are not supported

[Description]
The whole row unique index inference specifications are not supported.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

It is SQL to which the outer joined operator is not supported. Please change to SQL that is using the joined table.

[Description]
Supplementary information was output.
[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.86 18486

**too many grouping sets present (maximum 4096)**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the items in the GROUPING SET are less than the maximum allowable value.

2.81.87 18487

**Put a separate column definition list for each function inside ROWS FROM().**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.88 18488

**Use separate UNNEST() calls inside ROWS FROM(), and attach a column definition list to each one.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.81.89 18489

**Put the column definition list inside ROWS FROM().**

[Description]
Supplementary information was output.
2.81.90 18490

For example, ON CONFLICT (column_name).

[Description]
Supplementary information was output.

2.81.91 18491

operator precedence change: @1@ is now lower precedence than @2@

[Description]
An error occurred during execution of the application or command.

2.81.92 18492

There is an ordered-set aggregate @1@, but it requires @2@ direct arguments, not @3@.

[Description]
Supplementary information was output.

2.81.93 18493

To use the hypothetical-set aggregate @1@, the number of hypothetical direct arguments (here @2@) must match the number of ordering columns (here @3@).

[Description]
Supplementary information was output.
There is an ordered-set aggregate @1@, but it requires at least @2@ direct arguments.

Could not choose a best candidate function. You might need to add explicit type casts.

FILTER is not implemented for non-aggregate window functions

The combining JOIN type must be INNER or LEFT for a LATERAL reference.
Perhaps you meant to reference the column "@1.@2@".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

There is a column named "@1@" in table "@2@", but it cannot be referenced from this part of the query.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

Perhaps you meant to reference the column "@1.@2@" or the column "@3.@4@".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

This error usually means that PostgreSQL's request for a shared memory segment exceeded your kernel's SHMMAX parameter, or possibly that it is less than your kernel's SHMMIN parameter. The PostgreSQL documentation contains more information about shared memory configuration.
2.82.3 18502

This error usually means that PostgreSQL's request for a shared memory segment exceeded your kernel's SHMALL parameter. You might need to reconfigure the kernel with larger SHMALL. The PostgreSQL documentation contains more information about shared memory configuration.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.4 18503

This error does *not* mean that you have run out of disk space. It occurs either if all available shared memory IDs have been taken, in which case you need to raise the SHMMNI parameter in your kernel, or because the system's overall limit for shared memory has been reached. The PostgreSQL documentation contains more information about shared memory configuration.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.5 18504

This error usually means that PostgreSQL's request for a shared memory segment exceeded available memory, swap space, or huge pages. To reduce the request size (currently @1@ bytes), reduce PostgreSQL's shared memory usage, perhaps by reducing shared_buffers or max_connections.

[Description]
Supplementary information was output.

[System Processing]
None.
2.82.6 18505

**wrote crash dump to file "@1@"**

**[Description]**

An error occurred.

**[System Processing]**

None

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

2.82.7 18506

**background worker "@1@": must be registered in shared_preload_libraries**

**[Description]**

The background worker must be registered in shared_preload_libraries.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.82.8 18507

**too many background workers**

**[Description]**

Up to max_worker_processes background worker can be registered with the current settings.

**[System Processing]**

Processing will be aborted.

**[Action]**

Consider increasing the value of configuration parameter max_worker_processes.

2.82.9 18508

**Up to @1@ background worker can be registered with the current settings.**

**[Description]**

Supplementary information was output.

**[System Processing]**

None.

**[Action]**

Refer to this message together with the message that was output immediately beforehand.
2.82.10 18509

**Consider increasing the configuration parameter "max_worker_processes".**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.11 18510

**checkpoints are occurring too frequently (@1@ second apart)**

[Description]
Checkpoints are occurring too frequently.

[System Processing]
Continues processing.

[Action]
Consider increasing the value of configuration parameter max_wal_size.

2.82.12 18511

**using stale statistics instead of current ones because stats collector is not responding**

[Description]
Using stale statistics instead of current ones because the statistics collector is not responding.

[System Processing]
Continues processing.

[Action]
Contact Fujitsu technical support.

2.82.13 18512

**ending log output to stderr**

[Description]
Ending log output to stderr.

[System Processing]
Continues processing.

[Action]
Future log output will be output to the log destination.

2.82.14 18513
Future log output will go to log destination "@1@".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.15 18514

Set the LC_ALL environment variable to a valid locale.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.16 18515

@1@: could not find the database system
Expected to find it in the directory "@2@", but could not open file "@3@": @4@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.82.17 18516

Valid values are: "false", 0, "true", 1, "database".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.18 18517

pg_ident.conf was not reloaded
The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

**2.82.19 18518**

*shutdown at recovery target*

Terminated normally, but a log message was output.

None

No action required.

**2.82.20 18519**

*Failed process was running: @1@

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

**2.82.21 18520**

*could not fork checkpointer process: @1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.82.22 18521**

*could not fork worker process: @1@

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.82.23 18522

could not parse connection string: @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.82.24 18523

Could not identify system: got @1@ rows and @2@ fields, expected @3@ rows and @4@ or more fields.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.25 18524

Increase max_replication_slots and try again.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.26 18525

logical decoding found consistent point at @1@@2@

[Description]
Transaction ID has finished. There are no more running transactions.
2.82.27 18527

**There are no running transactions.**

**Description**
Supplementary information was output.

**System Processing**
None.

**Action**
Refer to this message together with the message that was output immediately beforehand.

2.82.28 18528

**Logical decoding found initial starting point at @1@/@2@**

**Description**
The transaction needs to finish before building a snapshot.

**System Processing**
Continues processing.

**Action**
No action required.

2.82.29 18530

**Logical decoding will begin using saved snapshot.**

**Description**
Supplementary information was output.

**System Processing**
None.

**Action**
Refer to this message together with the message that was output immediately beforehand.

2.82.30 18531

**could not parse file name "@1@"**

**Description**
Could not parse file name in pg_logical/snapshots.

**System Processing**
Continues processing.
No action required.

2.82.31 18532
Replication slot names may only contain lower case letters, numbers, and the underscore character.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.32 18533
Free one or increase max_replication_slots.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.33 18534
standby "@1@" is now a synchronous standby with priority @2@

[Description]
Inform the user that the standby server is now a synchronous standby with priority number.

[System Processing]
Continues processing.

[Action]
No action required.

2.82.34 18535
synchronous_standby_names parser failed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the value of synchronous_standby_names, which may come from postgresql.conf or the SQL command line.

2.82.35 18536

End of WAL reached on timeline @1@ at @2@/@3@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.36 18537

primary server contains no more WAL on requested timeline @1@

[Description]
The primary server contains no more WALs on the requested timeline.

[System Processing]
Continues processing.

[Action]
No action required.

2.82.37 18538

could not close log segment @1@: @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.82.38 18539

This server's history forked from timeline @1@ at @2@/@3@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
**2.82.39 18540**

**requested starting point @1@/@2@ is ahead of the WAL flush position of this server @3@/@4@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.82.40 18541**

**terminating walsender process after promotion**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

**2.82.41 18542**

**invalid page in block @1@ of relation @2@; zeroing out page**

[Description]
In invalid page was found in the relation.

[System Processing]
Continues processing.

[Action]
No action required.

**2.82.42 18543**

**snapshot too old**

[Description]
The snapshot is too old.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

Set dynamic_shared_memory_type to a value other than "none".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.48 18549

epoll_ctl() failed: @1@

[Description]
An error occurred for epoll_ctl.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.82.49 18550

epoll_wait() failed: @1@

[Description]
An error occurred for epoll_wait.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.82.50 18551

while updating tuple (@1@, @2@) in relation "@3@"

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.51 18552

while deleting tuple (@1@, @2@) in relation "@3@"
Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

**2.82.52 18553**

while locking tuple (@1@, @2@) in relation "@3@"

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

**2.82.53 18554**

while locking updated version (@1@, @2@) of tuple in relation "@3@"

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

**2.82.54 18555**

while inserting index tuple (@1@, @2@) in relation "@3@"

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

**2.82.55 18556**

while checking uniqueness of tuple (@1@, @2@) in relation "@3@"

Supplementary information was output.
None.

Refer to this message together with the message that was output immediately beforehand.

2.82.56 18557

while rechecking updated tuple (@1@, @2@) in relation "@3@"

[Description]
Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.82.57 18558

while checking exclusion constraint on tuple (@1@, @2@) in relation "@3@"

[Description]
Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.82.58 18559

The source process with PID @1@ is not running anymore.

[Description]
Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.82.59 18560

Process @1@ waits for @2@ on @3@.

[Description]
Supplementary information was output.

None.
[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.60 18561

Page verification failed, calculated checksum @1@ but expected @2@

[Description]
The calculated checksum is different from the checksum in the page head.

[System Processing]
Continues processing.

[Action]
No action required.

2.82.61 18562

could not open file "@1@" (target block @2@): previous segment is only @3@ blocks

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.82.62 18563

terminating connection because of crash of another server process

[Description]
The postmaster has commanded this server process to roll back the current transaction and exit, because another server process exited abnormally and possibly corrupted shared memory.

[System Processing]
Continues processing.

[Action]
Check the message text and confirm that the event indicated in supplementary information reported by the system is a planned event.

2.82.63 18564

The postmaster has commanded this server process to roll back the current transaction and exit, because another server process exited abnormally and possibly corrupted shared memory.

[Description]
Supplementary information was output.
[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.64 18565

terminating connection due to idle-in-transaction timeout

[Description]
Processing was canceled.

[System Processing]
Processing will be aborted.

[Action]
Check the message text.

2.82.65 18566

"max_stack_depth" must not exceed @1@kB.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.82.66 18567

Increase the platform’s stack depth limit via "ulimit -s" or local equivalent.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.82.67 18568

invalid affix flag "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.82.68 18569

affix flag "@1@" is out of range

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.82.69 18570

invalid character in affix flag "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.82.70 18571

invalid affix flag "@1@" with "long" flag value

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.82.71 18572

invalid affix alias "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.82.72 18573
invalid number of flag vector aliases
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.82.73 18574
Missing array dimension value.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.74 18575
Missing "@1@" after array dimensions.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.75 18576
Array contents must start with "]".
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.76 18577
Unexpected "@1@" character.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.77 18578

Unexpected array element.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.78 18579

Unmatched "@1@" character.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.79 18580

Multidimensional arrays must have sub-arrays with matching dimensions.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.80 18581

Junk after closing right brace.
array slice subscript must provide both boundaries
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
When assigning to a slice of an empty array value, slice boundaries must be fully specified.

When assigning to a slice of an empty array value, slice boundaries must be fully specified.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

When assigning to a slice of an empty array value, slice boundaries must be fully specified.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

abstime out of range for date
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

This time zone name appears in the configuration file for time zone abbreviation "@1@".
[Description]
Supplementary information was output.
[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.85 18586

invalid size: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.82.86 18587

Invalid size unit: "@1@".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.87 18588

Valid units are "bytes", "kB", "MB", "GB", and "TB".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.88 18589

Input data is missing padding, is truncated, or is otherwise corrupted.

[Description]
Supplementary information was output.

[System Processing]
None.
2.82.89 18590

**Character with value 0x1 must be escaped.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.90 18591

**Unicode high surrogate must not follow a high surrogate.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.91 18592

**Unicode low surrogate must follow a high surrogate.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.82.92 18593

\u0000 cannot be converted to text.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.82.93 18594

**Unicode escape values cannot be used for code point values above 007F when the server encoding is not UTF8.**

[Description]

Supplementary information was output.

[System Processing]

None.

[Action]

Refer to this message together with the message that was output immediately beforehand.

2.82.94 18595

**Escape sequence "\\@1@" is invalid.**

[Description]

Supplementary information was output.

[System Processing]

None.

[Action]

Refer to this message together with the message that was output immediately beforehand.

2.82.95 18596

**The input string ended unexpectedly.**

[Description]

Supplementary information was output.

[System Processing]

None.

[Action]

Refer to this message together with the message that was output immediately beforehand.

2.82.96 18597

**Expected end of input, but found "@1@".**

[Description]

Supplementary information was output.

[System Processing]

None.

[Action]

Refer to this message together with the message that was output immediately beforehand.

JSON data, line @1@: @2@@3@@4@

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.8 18607

The arguments of json_build_object() must consist of alternating keys and values.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.9 18608

Object keys should be text.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.10 18609

Due to an implementation restriction, jsonb strings cannot exceed @1@ bytes.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.11 18610

Try calling the function in the FROM clause using a column definition list.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.83.12 18611

cannot replace existing key

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Try using the function jsonb_set to replace the key value.

### 2.83.13 18612

Try using the function jsonb_set to replace key value.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.83.14 18613

levenshtein argument exceeds maximum length of @1@ characters

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.83.15 18614

cannot use advisory locks during a parallel operation

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.83.16 18615

string is not a valid identifier: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
The string may have unclosed double quotation marks.

2.83.17 18616

String has unclosed double quotes.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.18 18617

Quoted identifier must not be empty.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.19 18618

No valid identifier before ".".

[Description]
Supplementary information was output.

[System Processing]
None.
[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.20 18619

No valid identifier after ".".
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.21 18620

Apply system library package updates.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.22 18621

invalid command name: "@1@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.83.23 18624

Valid values are "][", "][", "]", and "]".
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.83.24 18625

**Junk after "empty" key word.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.25 18626

**Missing left parenthesis or bracket.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.26 18627

**Missing comma after lower bound.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.27 18628

**Too many commas.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.28 18629
Junk after right parenthesis or bracket.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.29 18630

Key is not present in table "@1@".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.30 18631

Key is still referenced from table "@1@".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.31 18632

Numeric time zones must have "-" or "+" as first character.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.32 18633

timestamp out of range: "@1@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.83.33 18634

**distance in phrase operator should not be greater than @1@**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.83.34 18635

**distance in phrase operator should be non-negative and less than @1@**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.83.35 18636

**lexeme array may not contain nulls**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.83.36 18637

**weight array may not contain nulls**

An error occurred during execution of the application or command.
Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.83.37 18638**

unrecognized weight: "@1@"

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.83.38 18639**

For a single "@1@" use "@2@@3@".

**Description**

Supplementary information was output.

**System Processing**

None.

**Action**

Refer to this message together with the message that was output immediately beforehand.

---

**2.83.39 18640**

This probably indicates that the version of libxml2 being used is not compatible with the libxml2 header files that PostgreSQL was built with.

**Description**

Supplementary information was output.

**System Processing**

None.

**Action**

Refer to this message together with the message that was output immediately beforehand.

---

**2.83.40 18641**

Make sure keystore_location points to the correct location. If the setting is correct, set the master encryption key to create the keystore.

**Description**

Supplementary information was output.
[System Processing]

None.

[Action]

Refer to this message together with the message that was output immediately beforehand.

2.83.41 18642

keystore has been opened

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.83.42 18643

auto-open keystore has been opened

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.83.43 18644

Compile with --with-openssl to use transparent data encryption.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.44 18645

Specify keystore_location parameter in postgresql.conf.

[Description]
Supplementary information was output.

[System Processing]
None.
[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.45 18646

The length of the passphrase must be between \@1\@ and \@2\@ bytes.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.46 18647

Check if keystore_location parameter points to a correct directory.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.47 18648

TRAP: ExceptionalCondition: bad arguments
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.83.48 18649

TRAP: \@1\@("\@2\@", File: "\@3\@", Line: \@4\@)
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.
2.83.49 18650

Server has `FUNC_MAX_ARGS = @1@`, library has `@2@`.  
[Description]  
Supplementary information was output.  

[System Processing]  
None.  

[Action]  
Refer to this message together with the message that was output immediately beforehand.

2.83.50 18651

Server has `INDEX_MAX_KEYS = @1@`, library has `@2@`.  
[Description]  
Supplementary information was output.  

[System Processing]  
None.  

[Action]  
Refer to this message together with the message that was output immediately beforehand.

2.83.51 18652

Server has `NAMEDATALEN = @1@`, library has `@2@`.  
[Description]  
Supplementary information was output.  

[System Processing]  
None.  

[Action]  
Refer to this message together with the message that was output immediately beforehand.

2.83.52 18653

Server has `FLOAT4PASSBYVAL = @1@`, library has `@2@`.  
[Description]  
Supplementary information was output.  

[System Processing]  
None.  

[Action]  
Refer to this message together with the message that was output immediately beforehand.

2.83.53 18654
Server has FLOAT8PASSBYVAL = @1@, library has @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.54 18655

Magic block has unexpected length or padding difference.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.55 18656

Either another server is starting, or the lock file is the remnant of a previous server startup crash.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.56 18657

could not open file "@1@": @2@; continuing anyway

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Continues processing.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.83.57 18658

lock file "@1@" contains wrong PID: @2@ instead of @3@
An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

Specify a path outside the data directory.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

Specify a path outside the transaction log directory.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

replication connection authorized: user=@1@ SSL enabled (protocol=@2@, cipher=@3@, compression=@4@)

Terminated normally.

Continues processing.

No action required.

connection authorized: user=@1@ database=@2@ SSL enabled (protocol=@3@, cipher=@4@, compression=@5@)
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.83.62 18663

must be superuser or replication role to start walsender

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.83.63 18665

@1@: could not access directory "@2@": @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.83.64 18666

Run initdb or pg_basebackup to initialize a PostgreSQL data directory.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.83.65 18667

@1@ does not know where to find the server configuration file. You must specify the --config-file or -D invocation option or set the PGDATA environment variable.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.83.66 18668

@1@ does not know where to find the database system data. This can be specified as "data_directory" in "@2@", or by the -D invocation option, or by the PGDATA environment variable.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.83.67 18669

@1@ does not know where to find the "hba" configuration file. This can be specified as "hba_file" in "@2@", or by the -D invocation option, or by the PGDATA environment variable.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.83.68 18670

@1@ does not know where to find the "ident" configuration file. This can be specified as "ident_file" in "@2@", or by the -D invocation option, or by the PGDATA environment variable.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.83.69 18671
Value exceeds integer range.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.70 18672

"temp_buffers" cannot be changed after any temporary tables have been accessed in the session.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.83.71 18673

Cannot enable parameter when "log_statement_stats" is true.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.83.72 18674

Cannot enable "log_statement_stats" when "log_parser_stats", "log_planner_stats", or "log_executor_stats" is true.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.83.73 18675
query-specified return tuple and function return type are not compatible
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.83.74 18676

query would be affected by row-level security policy for table "@1@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
To disable the policy for the table owner, use ALTER TABLE NO FORCE ROW LEVEL SECURITY.

2.83.75 18677

To disable the policy for the table's owner, use ALTER TABLE NO FORCE ROW LEVEL SECURITY.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.76 18678

Entry in time zone file "@1@", line @2@, conflicts with entry in file "@3@", line @4@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.83.77 18679
cannot have more than @1@ runs for an external sort
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.83.78 18680**

**Duplicate keys exist.**

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

**2.83.79 18681**

**The source transaction is not running anymore.**

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

**2.83.80 18682**

**@1@: WARNING: cannot create restricted tokens on this platform**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.83.81 18683**

**@1@: could not open process token: error code @2@**

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.83.82 18684

@1@: could not allocate SIDs: error code @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.83.83 18685

@1@: could not create restricted token: error code @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.83.84 18686

@1@: could not start process for command "@2@": error code @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.83.85 18687

@1@: could not re-execute with restricted token: error code @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.83.86 18688
@1@: could not get exit code from subprocess: error code @2@
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.83.87 18689
You must run @1@ as the PostgreSQL superuser.
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.83.88 18690
@1@: lock file "@2@" exists Is a server running? If not, delete the lock file and try again.
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.83.89 18691
The database server was not shut down cleanly. Resetting the transaction log might cause data to be lost. If you want to proceed anyway, use -f to force reset.
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.83.90 18692

If you are sure the data directory path is correct, execute touch @1@ and try again.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.83.91 18693

user does not exist

[Description]
user does not exist.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.83.92 18694

command not executable

[Description]
The command cannot be executed.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.83.93 18695

command not found

[Description]
The command cannot be found.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
The server (version @1@) does not support editing view definitions.

[Description]
The server does not support editing the view function.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

out of memory

[Description]
There was insufficient free space in the server's memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

There is no previous error.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

Query buffer is empty.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.84 Message Numbers Beginning with 18700

2.84.1 18700

The server (version @1@) does not support showing view definitions.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.2 18701

view name is required

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.3 18702

\pset: allowed Unicode column line styles are single, double

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.4 18703

\pset: allowed Unicode header line styles are single, double

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.84.5 18704

Pager won't be used for less than @1@ line.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.6 18705

could not parse reloptions array

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.84.7 18706

The connection to the server was lost. Attempting reset:

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.8 18707

canceled by user

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.84.9 18708
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

\crosstabview: statement did not return a result set

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

\crosstabview: query must return at least three columns

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

\crosstabview: vertical and horizontal headers must be different columns

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

\crosstabview: data column must be specified when query returns more than three columns
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.84.14 18713

\crosstabview: maximum number of columns (@1@) exceeded

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.84.15 18714

\crosstabview: query result contains multiple data values for row "@1@", column "@2@"

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.84.16 18715

\crosstabview: column number @1@ is out of range 1..@2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.84.17 18716

\crosstabview: ambiguous column name: "@1@"

An error occurred.
[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.84.18 18717

\crosstabview: column name not found: "+@1@"

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.84.19 18718

The server (version @1@) does not support access methods.

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.84.20 18719

Did not find any text search parser named "@1@".

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.84.21 18720

@1@: could not find own program executable

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.84.22 18721

@1@: buffer size is wrong

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.23 18722

@1@: source or destination file is not specified

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.24 18723

@1@: too many command-line arguments (first is "@2@")

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.25 18724

out of memory

[Description]
There was insufficient free space in the server's memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.84.26 18725

could not create file "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.27 18726

could not read file "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.28 18727

could not write to file "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.29 18728

could not fsync file "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.84.30 18729

**could not close file "@1@": @2@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.31 18730

**user does not exist**

[Description]
user does not exist.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.32 18731

**user name lookup failure: error code @1@**

[Description]
User name lookup failed.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.33 18732

**Cannot add header to table content: column count of @1@ exceeded.**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
Cannot add cell to table content: total cell count of @1@ exceeded.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.35 18734

invalid output format (internal error): @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.36 18735

@1@: could not connect to database @2@: out of memory

[Description]
There was insufficient free space in the server's memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.84.37 18736

@1@: cannot reindex specific schema(s) in all databases

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.84.38 18737

@1@: cannot reindex specific schema(s) and system catalogs at the same time

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.39 18738

@1@: reindexing of schema "@2@" in database "@3@" failed: @4@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.40 18739

@1@: number of parallel jobs must be at least 1

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.41 18740

@1@: too many parallel jobs requested (maximum: @2@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
out of memory
[Description]
There was insufficient free space in the client's memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- Modify the application to reduce memory usage.

2.84.43 18742
could not obtain lock on relation "@1@"This usually means that someone requested an ACCESS EXCLUSIVE lock on the table after the pg_dump parent process had gotten the initial ACCESS SHARE lock on the table.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.44 18743
schema "@1@" not found

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.45 18744
table "@1@" not found

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.84.46 18745

*index "@1@" not found*

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.47 18746

*function "@1@" not found*

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.48 18747

*trigger "@1@" not found*

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.49 18748

*WARNING: don't know how to set owner for object type "@1@"*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.84.50 18749
**WARNING: archive was made on a machine with larger integers, some operations might fail**

**Description**

The application or command terminated normally, but a warning was output.

**System Processing**

Processing will continue.

**Action**

Check the message text and confirm that the issue does not affect the expected outcome.

---

**2.84.51 18750**

**WARNING: archive is compressed, but this installation does not support compression -- no data will be available**

**Description**

The application or command terminated normally, but a warning was output.

**System Processing**

Processing will continue.

**Action**

Check the message text and confirm that the issue does not affect the expected outcome.

---

**2.84.52 18751**

**WARNING: invalid creation date in header**

**Description**

The application or command terminated normally, but a warning was output.

**System Processing**

Processing will continue.

**Action**

Check the message text and confirm that the issue does not affect the expected outcome.

---

**2.84.53 18752**

*(The INSERT command cannot set OIDs.)*

**Description**

An error occurred.

**System Processing**

Processing will be aborted.

**Action**

To investigate the cause of the occurrence from the message, and remove cause.

---

**2.84.54 18753**
Synchronized snapshots are not supported by this server version. Run with --no-synchronized-snapshots instead if you do not need synchronized snapshots.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.55 18754

no matching tables were found for pattern "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.56 18755

Error message from server: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.57 18756

WARNING: owner of schema "@1@" appears to be invalid

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.58 18757

WARNING: owner of data type "@1@" appears to be invalid
The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

**2.84.59 18758**

**WARNING: owner of operator "@1@" appears to be invalid**

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

**2.84.60 18759**

**WARNING: owner of operator class "@1@" appears to be invalid**

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

**2.84.61 18760**

**WARNING: owner of operator family "@1@" appears to be invalid**

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

**2.84.62 18761**

**WARNING: owner of aggregate function "@1@" appears to be invalid**

The application or command terminated normally, but a warning was output.
Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

---

**2.84.63 18762**

**WARNING: owner of function "@1@" appears to be invalid**

**Description**

The application or command terminated normally, but a warning was output.

**System Processing**

Processing will continue.

**Action**

Check the message text and confirm that the issue does not affect the expected outcome.

---

**2.84.64 18763**

**WARNING: owner of table "@1@" appears to be invalid**

**Description**

The application or command terminated normally, but a warning was output.

**System Processing**

Processing will continue.

**Action**

Check the message text and confirm that the issue does not affect the expected outcome.

---

**2.84.65 18764**

**WARNING: typtype of data type "@1@" appears to be invalid**

**Description**

The application or command terminated normally, but a warning was output.

**System Processing**

Processing will continue.

**Action**

Check the message text and confirm that the issue does not affect the expected outcome.

---

**2.84.66 18765**

**WARNING: bogus value in proargmodes array**

**Description**

The application or command terminated normally, but a warning was output.

**System Processing**

Processing will continue.
[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

**2.84.67 18766**

**WARNING: could not parse proallargtypes array**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

**2.84.68 18767**

**WARNING: could not parse proargmodes array**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

**2.84.69 18768**

**WARNING: could not parse proargnames array**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

**2.84.70 18769**

**WARNING: could not parse proconfig array**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.84.71 18770

unrecognized proparallel value for function "@1@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.84.72 18771

WARNING: bogus value in pg_cast.castfunc or pg_cast.castmethod field

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.84.73 18772

WARNING: bogus value in pg_cast.castmethod field

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.84.74 18773

WARNING: bogus transform definition, at least one of trffromsql and trftosql should be nonzero

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
### 2.84.75 18774

**WARNING: bogus value in pg_transform.trffromsql field**

**[Description]**

The application or command terminated normally, but a warning was output.

**[System Processing]**

Processing will continue.

**[Action]**

Check the message text and confirm that the issue does not affect the expected outcome.

### 2.84.76 18775

**WARNING: bogus value in pg_transform.trftosql field**

**[Description]**

The application or command terminated normally, but a warning was output.

**[System Processing]**

Processing will continue.

**[Action]**

Check the message text and confirm that the issue does not affect the expected outcome.

### 2.84.77 18777

**WARNING: invalid type "@1@" of access method "@2@"**

**[Description]**

The application or command terminated normally, but a warning was output.

**[System Processing]**

Processing will continue.

**[Action]**

Check the message text and confirm that the issue does not affect the expected outcome.

### 2.84.78 18778

**WARNING: aggregate function @1@ could not be dumped correctly for this database version; ignored**

**[Description]**

The application or command terminated normally, but a warning was output.

**[System Processing]**

Processing will continue.

**[Action]**

Check the message text and confirm that the issue does not affect the expected outcome.
2.84.79 18779

could not parse initial GRANT ACL list (@1@) or initial REVOKE ACL list (@2@) for object
"@3@" (@4@)
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.84.80 18780

WARNING: could not parse reloptions array
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.84.81 18781

could not connect to server: @1@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.84.82 18782

source server must not be in recovery mode
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.84.83 18783

**full_page_writes must be enabled in the source server**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.84.84 18784

**error running query (@1@) in source server: @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.84.85 18785

**unexpected result set from query**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.84.86 18786

**unrecognized result "@1@" for current WAL insert location**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.84.87 18787
**could not fetch file list: @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.84.88 18788**

**unexpected result set while fetching file list**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.84.89 18789**

**could not send query: @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.84.90 18790**

**could not set libpq connection to single row mode**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.84.91 18791**

**unexpected result while fetching remote files: @1@**
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.84.92 18792**

*unexpected result set size while fetching remote files*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.84.93 18793**

*unexpected data types in result set while fetching remote files: @1@ @2@ @3@*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.84.94 18794**

*unexpected result format while fetching remote files*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.84.95 18795**

*unexpected null values in result while fetching remote files*

An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.84.96 18796**

*unexpected result length while fetching remote files*

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.84.97 18797**

*could not fetch remote file "@1@": @2@*

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.84.98 18798**

*unexpected result set while fetching remote file "@1@"*

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.84.99 18799**

*could not send COPY data: @1@*

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.85 Message Numbers Beginning with 18800

2.85.1 18800
could not create temporary table: @1@
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.85.2 18801
could not send file list: @1@
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.85.3 18802
could not send end-of-COPY: @1@
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.85.4 18803
unexpected result while sending file list: @1@
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.85.5 18804

could not read WAL record at @1@/@2@: @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.85.6 18805

could not read WAL record at @1@/@2@:

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.85.7 18806

could not find previous WAL record at @1@/@2@: @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.85.8 18807

could not find previous WAL record at @1@/@2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.85.9 18808

WAL record modifies a relation, but record type is not recognized
lsn: @1@/@2@, rmgr: @3@, info: @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.85.10 18809

cannot be executed by "root"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.11 18810

You must run @1@ as the PostgreSQL superuser.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.12 18811

source and target clusters are from different systems

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.85.13 18812

clusters are not compatible with this version of pg_rewind

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.14 18813

target server needs to use either data checksums or "wal_log_hints = on"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.15 18814

target server must be shut down cleanly

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.16 18815

source data directory must be shut down cleanly

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
invalid control file

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.18 18817

could not find common ancestor of the source and target cluster’s timelines

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.19 18818

backup label buffer too small

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.20 18819

unexpected control file CRC

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.21 18820

unexpected control file size @1@, expected @2@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.22 18821

The program "initdb" is needed by @1@ but was not found in the same directory as "@2@". Check your installation.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.23 18822

syntax error in history file: @1@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.24 18823

Expected a numeric timeline ID.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.25 18824

Expected a write-ahead log switchpoint location.
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.85.26 18825

invalid data in history file: @1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.85.27 18826

Timeline IDs must be in increasing sequence.

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.85.28 18827

invalid data in history file

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.85.29 18828

Timeline IDs must be less than child timeline’s ID.

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.30 18829

invalid record offset at @1@/@2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.31 18830

contrecord is requested by @1@/@2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.32 18831

record length @1@ at @2@/@3@ too long

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.33 18832

there is no contrecord flag at @1@/@2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

2.85.38 18837
invalid magic number @1@ in log segment @2@, offset @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.85.39 18838
invalid info bits @1@ in log segment @2@, offset @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.85.40 18839
WAL file is from different database system: WAL file database system identifier is @1@, pg_control database system identifier is @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.85.41 18840
WAL file is from different database system: incorrect XLOG_SEG_SIZE in page header

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.85.42 18841

**WAL file is from different database system: incorrect XLOG_BLCKSZ in page header**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.85.43 18842

**unexpected pageaddr @1/@2@ in log segment @3@, offset @4@**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.85.44 18843

**out-of-sequence timeline ID @1@ (after @2@) in log segment @3@, offset @4@**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.85.45 18844

**record with invalid length at @1@/@2@**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.85.46 18845
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.85.47 18847**

**WARNING:** Calculated CRC checksum does not match value stored in file. Either the file is corrupt, or it has a different layout than this program is expecting. The results below are untrustworthy.

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.85.48 18848**

**byte ordering mismatch**

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.85.49 18849**

**WARNING:** possible byte ordering mismatch The byte ordering used to store the pg_control file might not match the one used by this program. In that case the results below would be incorrect, and the PostgreSQL installation would be incompatible with this data directory.

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.
2.85.50 18850
@1@: too many command-line arguments (first is "@2@")

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.85.51 18851
out of memory

[Description]
There was insufficient free space in the client's memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- Modify the application to reduce memory usage.

2.85.52 18852
cannot duplicate null pointer (internal error)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.85.53 18853
command not executable

[Description]
The command cannot be executed.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.85.54 18854

command not found

[Description]
The command cannot be found.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.55 18855

WARNING: online backup mode is activeShutdown will not complete until pg_stop_backup() is called.

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.85.56 18856

@1@: WARNING: cannot create restricted tokens on this platform

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.85.57 18857

@1@: WARNING: could not locate all job object functions in system API

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
@1@: cannot be run as root
Please log in (using, e.g., "su") as the (unprivileged) user that will own the server process.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

out of memory

[Description]
There was insufficient free space in the client's memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- Modify the application to reduce memory usage.

cannot duplicate null pointer (internal error)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

@1@: out of memory

[Description]
There was insufficient free space in the client's memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- Modify the application to reduce memory usage.
2.85.62 18862

@1@: replication slots can only be used with WAL streaming

[Description]
Replication slots can only be used with WAL streaming.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.63 18863

@1@: WAL directory location must be an absolute path

[Description]
The transaction log directory location must be an absolute path.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.64 18864

@1@: Make sure the WAL archive area specified by archive_command parameter is writable and not full.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.85.65 18865

query result has too many rows to fit in a Perl array

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.85.66 18867

query result has too many rows to fit in a Python list

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.67 18868

'@1@' is an invalid keyword argument for this function

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.68 18869

invalid SQLSTATE code

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.69 18870

PGresult is not an error result

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.85.70 18871
extraneous data in "t" message

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.86 Message Numbers Beginning with 18900

2.86.1 18954

invalid operator "@1@" in @2@ section

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.86.2 18955

invalid format parameter "@1@" of field "@2@" in @3@ section

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.86.3 18956

timestamp parameter must be set with pair of the begin and end timestamp : "@1@"

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.86.4 18957

Invalid timestamp parameters, the end timestamp must advance to the begin timestamp: begin = "@1@", end = "@2@"

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.86.5 18958

Pgaudit must be loaded via shared_preload_libraries

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.86.6 18959

Pgaudit must be set log_replication_commands.

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.86.7 18960

"Pgaudit.config_file" must be specify when pgaudit is loaded

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.86.8 18961

**error invalid token "@1@" in "@2@"**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.86.9 18962

**redundant @1@ section defined in file "@2@"**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.86.10 18963

**invalid parameter "@1@" in "@2@" in file "@3@"**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.86.11 18964

**invalid operator "@1@" in file "@2@"**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.86.12 18965
An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.86.13 18966

Unrecognized configuration token "@1@" in "@2@" in file "@3@"

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.86.14 18967

Could not make FIFO special file "@1": @2

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.86.15 18968

Could not open FIFO special file "@1": @2

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.86.16 18969

Could not read from named pipe: @1

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.
An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.86.17 18970

could not write audit log "@1@": @2@

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.86.18 18971
could not open audit log file "@1@": @2@

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.86.19 18972
disabling automatic rotation

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.86.20 18973

pgaudit extension initialized

Terminated normally.
Continues processing.

No action required.

**2.86.21 18974**

following_async_walsenders parser failed

**Description**

An error occurred during I/O processing in the database server.

**System Processing**

Processing will be aborted.

**Action**

To investigate the cause of the occurrence from the message, and remove cause.

**2.86.22 18975**

Cannot specify "*" as standby names in "synchronous_standby_names" when "following_async_walsenders" is enabled

**Description**

An error occurred during I/O processing in the database server.

**System Processing**

Processing will be aborted.

**Action**

To investigate the cause of the occurrence from the message, and remove cause.

**2.86.23 18976**

Cannot enable "following_async_walsenders" when "*" is specify as standby names in "synchronous_standby_names"

**Description**

An error occurred during I/O processing in the database server.

**System Processing**

Processing will be aborted.

**Action**

To investigate the cause of the occurrence from the message, and remove cause.

**2.86.24 18977**

Cannot specify the standby name (@1@) in "synchronous_standby_names" because it has been specified in "following_async_walsenders"

**Description**

An error occurred during I/O processing in the database server.
2.86.25 18978

**Cannot specify the standby name (\@1\@) in "following_async_walsenders" because it has been specified in "synchronous_standby_names"**

[Description]
An error occurred during I/O processing in the database server.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.86.26 18979

**@1@: tablespace "@2@" in the tablespaces list file does not exist**

[Description]
An error occurred during I/O processing in the database server.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.86.27 18980

**@1@: no resource to backup with the copy command**

[Description]
An error occurred during I/O processing in the database server.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.86.28 18981

**@1@: results of copying file does not exist**

[Description]
The backup data may be corrupted.
[System Processing]
  Processing will be aborted.

[Action]
  Copy the backup data to the backup storage directory from backup media.

### 2.86.29 18982

**Backup using the copy command has not been done**

[Description]
  An error occurred during I/O processing in the database server.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

### 2.86.30 18983

@1@: option -Y is necessary because backup has been performed with the copy command

[Description]
  An error occurred during I/O processing in the database server.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

### 2.86.31 18984

@1@: option -Y must not be specified because backup has not been performed with the copy command

[Description]
  An error occurred during I/O processing in the database server.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

### 2.86.32 18985

@1@: could not set permissions of file "@2@": @3@ (errno=@4@)

[Description]
  An error occurred during I/O processing in the database server.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.86.33 18986

@1@: copy command "@2@" failed (mode=@3@): @4@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.86.34 18987

@1@: tablespace name "@2@" has been overlapped in the tablespaces list file

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.86.35 18988

@1@: file "@2@" does not exist or is not a regular file

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.86.36 18989

@1@: tablespace "@2@" can not be specified in the tablespaces list file

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.86.37 18990
@1@: the tablespace name specified in the tablespaces list file could not be acquired: @2@
[Description]
An error occurred during I/O processing in the database server.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.86.38 18991
@1@: COPY FROM command must be specified
[Description]
COPY FROM command must be specified.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the event indicated in supplementary information reported by the system is a planned event.

2.86.39 18992
@1@: cannot launch more than @2@ workers
[Description]
The number of workers is too many
[System Processing]
Processing will be aborted.
[Action]
If the number of workers is high, reduce it.

2.86.40 18993
@1@: no table name specified
[Description]
No table name specified.
[System Processing]
Processing will be aborted.
Please specify the table name you would load data.

2.86.41 18994

@1@: COPY TO command cannot be available

[Description]
COPY TO command cannot be available.

[System Processing]
Processing will be aborted.

[Action]
Please specify COPY FROM command.

2.86.42 18995

load failed

[Description]
Load failed.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the event indicated in supplementary information reported by the system is a planned event.

2.86.43 18996

could not start @1@ background processes

[Description]
Could not start %d background processes.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the event indicated in supplementary information reported by the system is a planned event.

2.86.44 18997

You might need to increase max_worker_processes.

[Description]
You might need to increase max_worker_processes.

[System Processing]
Processing will be aborted.
You might need to increase max_worker_processes

2.86.45 18998

Postmaster exited during a parallel loading

[Description]
Postmaster exited during a parallel loading.

[System Processing]
Processing will be aborted.

[Action]
Please refer to the server log, and determine the cause of the error.

2.86.46 18999

COPY statement cannot be null

[Description]
COPY statement cannot be null.

[System Processing]
Processing will be aborted.

[Action]
Please specify COPY FROM statement.

2.87 Message Numbers Beginning with 19000

2.87.1 19000

Number of workers must not be negative

[Description]
The number of workers must not be negative.

[System Processing]
Processing will be aborted.

[Action]
Please specify more than one.

2.87.2 19001

Lack of max_prepared_transactions

[Description]
Lack of max_prepared_transactions.

[System Processing]
Processing will be aborted.
[Action]
Please increase max_prepared_transactions.

2.87.3 19002

max_prepared_transactions must be set at least @1@

[Description]
Lack of max_prepared_transactions.

[System Processing]
Processing will be aborted.

[Action]
Please increase max_prepared_transactions.

2.87.4 19003

pgx_loader only available using COPY FROM

[Description]
pgx_loader can be available only COPY FROM command.

[System Processing]
Processing will be aborted.

[Action]
Please specify COPY FROM statement.

2.87.5 19004

failed to execute SPI returned @1@

[Description]
Could not execute SPI.

[System Processing]
Processing will be aborted.

[Action]
Please refer to the server log, and determine the cause of the error.

2.87.6 19005

@1@ the prepared transaction with gid: "@2@"

[Description]
The prepared transaction has been completed.

[System Processing]
Continues processing.

[Action]
No action required.
2.87.7 19006

failed to delete the record with id: @1@(SPI returned: @2@)

[Description]
Could not delete the row in pgx_loader_state table.

[System Processing]
Processing will be aborted.

[Action]
Please refer to the server log, and determine the cause of the error.

2.87.8 19007

could not write to the shared message queue for PID @1@: "@2@"

[Description]
Could not write to the shared memory message queue.

[System Processing]
Processing will be aborted.

[Action]
Please refer to the server log, and determine the cause of the error.

2.87.9 19008

COPY FROM instructs the PostgreSQL server process to read a file. You may want a client-side facility such as pgx_loader command.

[Description]
Failed to read the file.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the event indicated in supplementary information reported by the system is a planned event.

2.87.10 19009

failed to add new prepared transaction "@1@" by worker(@2@)

[Description]
Failed to add new prepared transaction.

[System Processing]
Processing will be aborted.

[Action]
Please refer to the server log, and determine the cause of the error.
2.87.11 19010

failed to fetch id column from "@1@" by worker(@2@)

[Description]
Failed to fetch the id column.

[System Processing]
Processing will be aborted.

[Action]
Please refer to the server log, and determine the cause of the error.

2.87.12 19011

cannot uniquely identify the id

[Description]
Could not uniquely identify the id.

[System Processing]
Processing will be aborted.

[Action]
Please refer to the server log, and determine the cause of the error.

2.87.13 19012

record with gid: "@1@" and master_pid: @2@ might already exist

[Description]
Could not uniquely identify the id.

[System Processing]
Processing will be aborted.

[Action]
Please refer to the server log, and determine the cause of the error.

2.87.14 19013

failed to update state column of record with id: @1@

[Description]
Failed to update the state column.

[System Processing]
Processing will be aborted.

[Action]
Please refer to the server log, and determine the cause of the error.

Processing will be aborted.  
To investigate the cause of the occurrence from the message, and remove cause. |
| 2.87.19 19018 | could not open file "@1@": @2@  
An error occurred during I/O processing in the database server.  
Processing will be aborted.  
To investigate the cause of the occurrence from the message, and remove cause. |
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.87.20 19019

**could not close file "@1@": @2@**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.87.21 19020

**parallel worker failed to initialize**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.22 19021

**More details may be available in the server log.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.87.23 19022

**operator family "@1@" of access method @2@ contains support procedure @3@ with different left and right input types**
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.24 19023

**operator family "@1@" of access method @2@ contains invalid ORDER BY specification for operator @3@**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.25 19024

**operator family "@1@" of access method @2@ contains operator @3@ with wrong signature**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.26 19025

**operator family "@1@" of access method @2@ is missing cross-type operator(s)**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.27 19026

**could not determine data type for argument @1@**
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.28 19027

@1@: data directory is of wrong version File "@2@" contains "@3@", which is not compatible with this program's version "@4@".

Terminated normally.

Continues processing.

No action required.

2.87.29 19028

@1@: could not clear search_path: @2@

Terminated normally.

Continues processing.

No action required.

2.87.30 19029

@1@: query returned @2@ row instead of one: @3@

Terminated normally.

Continues processing.

No action required.

2.87.31 19030

@1@: could not stat file "@2@": @3@
2.87.32 19031

@1@: could not open directory "@2@": @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.33 19032

@1@: could not read directory "@2@": @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.34 19033

@1@: could not open file "@2@": @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.35 19034

@1@: could not fsync file "@2@": @3@

[Description]
An error occurred during execution of the application or command.
[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.36 19035

    @1@: could not rename file "@2@" to "@3@": @4@

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.37 19036

    password too long

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.38 19037

    block number out of range: @1@

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.39 19038

    corrupted BRIN index: inconsistent range map

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.40 19039

invalid overflow block number @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.41 19040

removing stale two-phase state from memory for transaction @1@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.87.42 19041

removing future two-phase state from memory for transaction @1@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.87.43 19042

cannot PREPARE a transaction that has manipulated logical replication workers

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.87.44 19043

cannot PREPARE a transaction that has manipulated logical replication workers

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.45 19044

could not open write-ahead log directory "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.46 19045

could not generate secret authorization token

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.47 19046

cannot use IN SCHEMA clause when using GRANT/REVOKE ON SCHEMAS

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
permission denied for statistics object @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.49 19048

permission denied for publication @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.50 19049

permission denied for subscription @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.51 19050

must be owner of statistics object @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.52 19051

must be owner of publication @1@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.53 19052

must be owner of subscription @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.54 19053

publication with OID @1@ does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.55 19054

subscription with OID @1@ does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.56 19055

statistics object with OID @1@ does not exist

[Description]
An error occurred during execution of the application or command.
2.87.57 19056

cannot add NO INHERIT constraint to partitioned table "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.58 19057

statistics object "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.59 19058

must specify relation and object name

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.60 19059

publication relation "@1@" in publication "@2@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.61 19060

**empty range bound specified for partition "@1@"**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.62 19061

**partition "@1@" would overlap partition "@2@"**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.63 19062

**"@1@" is a partitioned table**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.64 19063

**"@1@" is a system table**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.87.65 19064

**table "@1@" cannot be replicated**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.66 19065

**relation "@1@" is already member of publication "@2@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.67 19066

**publication "@1@" does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.68 19067

**subscription "@1@" does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.69 19068
publication "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.70 19069

subscription "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.71 19070

statistics object "@1@" already exists in schema "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.72 19071

column "@1@" of relation "@2@" appears more than once

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.73 19072

collation "default" cannot be copied
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.87.74 19073**

*unrecognized collation provider: @1@*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.87.75 19074**

*could not convert locale name "@1@" to language tag: @2@*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.87.76 19075**

*must be superuser to import system collations*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.87.77 19076**

*no usable system locales were found*

The application or command terminated normally, but a warning was output.
2.87.78 19077

**cannot copy from partitioned table "@1@"**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.79 19078

**cannot route inserted tuples to a foreign table**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.80 19079

**database "@1@" is being used by logical replication subscription**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.81 19080

**statistics object "@1@" does not exist, skipping**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will continue.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.82 19081

publication "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.87.83 19082

extension "@1@" has no installation script nor update path for version "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.84 19083

user mapping for "@1@" already exists for server @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.85 19084

third argument of cast function must be type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.87.86 19085
cannot create index on partitioned table "@1@
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.87 19086
invalid list syntax for "publish" option
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.88 19087
unrecognized "publish" value: "@1@
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.89 19088
unrecognized publication parameter: @1@
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.90 19089
must be superuser to create FOR ALL TABLES publication

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.91 19090

publication "@1@" is defined as FOR ALL TABLES

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.92 19091

relation "@1@" is not part of the publication

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.93 19092

permission denied to change owner of publication "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.94 19093

invalid sequence option SEQUENCE NAME
_Case 2.87.95_ 19094

**identity column type must be smallint, integer, or bigint**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

_Case 2.87.96_ 19096

**MAXVALUE (@1@) is out of range for sequence data type @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

_Case 2.87.97_ 19096

**MINVALUE (@1@) is out of range for sequence data type @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

_Case 2.87.98_ 19097

**cannot change ownership of identity sequence**

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.99 19098

only a single relation is allowed in CREATE STATISTICS

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.87.100 19099

relation "@1@" is not a table, foreign table, or materialized view

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88 Message Numbers Beginning with 19100

2.88.1 19100

only simple column references are allowed in CREATE STATISTICS

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.2 19101

statistics creation on system columns is not supported
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.88.3 19102**

*column "@1@" cannot be used in statistics because its type @2@ has no default btree*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.88.4 19103**

cannot have more than @1@ columns in statistics

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.88.5 19104**

*extended statistics require at least 2 columns*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.88.6 19105**

duplicate column name in statistics definition

An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.7 19106

unrecognized statistics kind "@1@"

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.8 19107

unrecognized subscription parameter: @1@

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.9 19108

connect = false and enabled = true are mutually exclusive options

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.10 19109

connect = false and create_slot = true are mutually exclusive options

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.11 19110

**connect = false and copy_data = true are mutually exclusive options**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.12 19111

**slot_name = NONE and enabled = true are mutually exclusive options**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.13 19112

**slot_name = NONE and create_slot = true are mutually exclusive options**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.14 19113

**subscription with slot_name = NONE must also set enabled = false**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.88.15 19114

subscription with slot_name = NONE must also set create_slot = false

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.16 19115

publication name "@1@" used more than once

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.17 19116

must be superuser to create subscriptions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.18 19117

could not connect to the publisher: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.19 19118
tables were not subscribed, you will have to run ALTER SUBSCRIPTION ... REFRESH PUBLICATION to subscribe the tables

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.20 19119
cannot set slot_name = NONE for enabled subscription

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.21 19120
cannot enable subscription that does not have a slot name

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.22 19121
ALTER SUBSCRIPTION with refresh is not allowed for disabled subscriptions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.23 19122
ALTER SUBSCRIPTION ... REFRESH is not allowed for disabled subscriptions
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.24 19123

could not drop the replication slot "@1@" on publisher

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.25 19124

permission denied to change owner of subscription "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.26 19125

could not receive list of replicated tables from the publisher: @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.27 19126

cannot create table with OIDs as partition of table without OIDs

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.28 19127

"@1@" is not partitioned

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.29 19128
cannot partition using more than @1@ columns

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.30 19129
cannot truncate only a partitioned table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.31 19130
cannot inherit from partitioned table "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.32 19131

cannot inherit from partition "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.33 19132

partition constraint is violated by some row

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.34 19133

cannot add column to a partition

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.35 19134

cannot recursively add identity column to table that has child tables

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.88.36 19135

**cannot remove constraint from only the partitioned table when partitions exist**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.37 19136

**column "@1@" of relation "@2@" is an identity column**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.38 19137

**column "@1@" is marked NOT NULL in parent table**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.39 19138

**cannot add constraint to only the partitioned table when partitions exist**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.40 19139
column "@1@" of relation "@2@" must be declared NOT NULL before identity can be added

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.41 19140

column "@1@" of relation "@2@" is already an identity column

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.42 19141

column "@1@" of relation "@2@" already has a default value

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.43 19142

column "@1@" of relation "@2@" is not an identity column

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.44 19143

cannot drop column named in partition key
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

cannot drop column referenced in partition key expression
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

cannot drop column from only the partitioned table when partitions exist
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

cannot reference partitioned table "@1@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

cannot alter type of column named in partition key
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.49 19148
cannot alter type of column referenced in partition key expression
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.50 19149
cannot change inheritance of a partition
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.51 19150
cannot change inheritance of partitioned table
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.52 19151
cannot inherit from a partition
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.53 19152

trigger "@1@" prevents table "@2@" from becoming an inheritance child

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.54 19153

relation "@1@" is not a partition of relation "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.55 19154

cannot change table "@1@" to unlogged because it is part of a publication

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.56 19155

unrecognized partitioning strategy "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.88.57 19156

cannot use "list" partition strategy with more than one column

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.58 19157

column "@1@" appears more than once in partition key

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.59 19158

column "@1@" named in partition key does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.60 19159

cannot use system column "@1@" in partition key

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.61 19160
functions in partition key expression must be marked IMMUTABLE

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.62 19161

partition key expressions cannot contain whole-row references

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.63 19162

partition key expressions cannot contain system column references

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.64 19163

cannot use constant expression as partition key

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.65 19164

could not determine which collation to use for partition expression
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.88.66 19165**

**data type @1@ has no default btree operator class**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.88.67 19166**

"@1@" is already a partition

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.88.68 19167**

cannot attach a typed table as partition

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.88.69 19168**

cannot attach inheritance child as partition

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.70 19169

**cannot attach inheritance parent as partition**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.71 19170

**cannot attach a permanent relation as partition of temporary relation "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.72 19171

**cannot attach as partition of temporary relation of another session**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.73 19172

**cannot attach temporary relation of another session as partition**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.74 19173

table "@1@" contains column "@2@" not found in parent "@3@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.75 19174

trigger "@1@" prevents table "@2@" from becoming a partition

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.76 19175

ROW triggers with transition tables are not supported on partitions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.77 19176

ROW variable naming in the REFERENCING clause is not supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.88.78 19177

**ROW triggers with transition tables are not supported on inheritance children**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.79 19178

**transition table name can only be specified for an AFTER trigger**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.80 19179

**TRUNCATE triggers with transition tables are not supported**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.81 19180

**transition tables cannot be specified for triggers with more than one event**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.82 19181
transition tables cannot be specified for triggers with column lists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.83 19182

NEW TABLE can only be specified for an INSERT or UPDATE trigger

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.84 19183

NEW TABLE cannot be specified multiple times

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.85 19184

OLD TABLE can only be specified for a DELETE or UPDATE trigger

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.86 19185

OLD TABLE cannot be specified multiple times
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

OLD TABLE name and NEW TABLE name cannot be the same

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

attribute @1@ of type @2@ has been dropped

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

attribute @1@ of type @2@ has wrong type

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

new row for relation "@1@" violates partition constraint

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.91 19190

no partition of relation "@1@" found for row

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.92 19191

cannot update table "@1@" because it does not have a replica identity and publishes updates

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.93 19192

cannot delete from table "@1@" because it does not have a replica identity and publishes deletes

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.94 19193

logical replication target relation "@1@.@2@" is not a table

[Description]
An error occurred during execution of the application or command.
[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.95 19194

namespace URI must not be null

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.96 19195

row filter expression must not be null

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.97 19196

column filter expression must not be null

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.98 19197

null is not allowed in column "@1@"

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.99 19198

UNENCRYPTED PASSWORD is no longer supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.88.100 19199

sequence option "@1@" not supported here

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89 Message Numbers Beginning with 19200

2.89.1 19200

unrecognized row security option "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.2 19201

only one DEFAULT value is allowed

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.3 19202

only one PATH value per column is allowed
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.4 19203

conflicting or redundant NULL / NOT NULL declarations for column "@1@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.5 19204

unrecognized column option "@1@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.6 19205

malformed SCRAM message
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.89.7 19206**

*invalid SCRAM response*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.89.8 19207**

*could not generate random salt*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.89.9 19208**

*client requires SCRAM channel binding, but it is not supported*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.89.10 19209**

*client uses authorization identity, but it is not supported*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.89.11 19210

*client requires an unsupported SCRAM extension*

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.12 19211

*non-printable characters in SCRAM nonce*

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.13 19212

*could not generate random nonce*

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.14 19213

*unexpected SCRAM channel-binding attribute in client-final-message*

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.15 19214
SASL authentication is not supported in protocol version 2

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.16 19215

expected SASL response, got message type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.17 19216

client selected an invalid SASL authentication mechanism

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.18 19217

private key file "@1@" cannot be reloaded because it requires a passphrase

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.19 19218

could not set the cipher list (no valid ciphers available)
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.20 19219

could not initialize SSL connection: SSL context not set up

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.21 19220

could not open DH parameters file "@1@": @2@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.22 19221

could not load DH parameters file: @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.23 19222

invalid DH parameters: @1@

An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.24 19223

**invalid DH parameters: p is not prime**

**Description**
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.25 19224

**invalid DH parameters: neither suitable generator or safe prime**

**Description**
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.26 19225

**DH: could not load DH parameters**

**Description**
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.27 19226

**DH: could not set DH parameters: @1@**

**Description**
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.28 19227

could not parse RADIUS server list "@1@"

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.29 19228

could not parse RADIUS port list "@1@"

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.30 19229

could not parse RADIUS secret list "@1@"

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.31 19230

could not parse RADIUS identifiers list "@1@"

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.89.32 19231

**ON CONFLICT clause is not supported with partitioned tables**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.33 19232

@1@ cannot be applied to a table function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.34 19233

@1@ cannot be applied to a named tuplestore

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.35 19234

aggregate functions are not allowed in partition key expression

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.36 19235
grouping operations are not allowed in partition key expression

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.37 19236

aggregate function calls cannot contain set-returning function calls

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.38 19237

window functions are not allowed in partition key expression

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.39 19238

relation "@1@" cannot be the target of a modifying statement

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.40 19239

set-returning functions must appear at top level of FROM
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.41 19240

only one FOR ORDINALITY column is allowed

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.42 19241

column name "@1@" is not unique

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.43 19242

namespace name "@1@" is not unique

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.44 19243

only one default namespace is allowed

An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.
[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.45 19244

could not determine polymorphic type because input has type @1@
[Description]
  An error occurred during execution of the application or command.

2.89.46 19245

DEFAULT is not allowed in this context
[Description]
  An error occurred during execution of the application or command.

2.89.47 19246

@1@ must not return a set
[Description]
  An error occurred during execution of the application or command.

2.89.48 19247

source for a multiple-column UPDATE item must be a sub-SELECT or ROW() expression
[Description]
  An error occurred during execution of the application or command.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.49 19248

set-returning functions are not allowed in @$1@$  
[Description]  
An error occurred during execution of the application or command.  

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.50 19249

cannot use subquery in partition key expression  
[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.51 19250

window function calls cannot contain set-returning function calls  
[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.52 19251

function name "@$1@$" is not unique  
[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.89.53 19252

could not find a function named "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.54 19253

set-returning functions are not allowed in JOIN conditions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.55 19254

set-returning functions are not allowed in policy expressions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.56 19255

set-returning functions are not allowed in window definitions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
set-returning functions are not allowed in check constraints

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.58 19257

set-returning functions are not allowed in DEFAULT expressions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.59 19258

set-returning functions are not allowed in index expressions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.60 19259

set-returning functions are not allowed in index predicates

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.61 19260

set-returning functions are not allowed in transform expressions
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.62 19261

set-returning functions are not allowed in EXECUTE parameters

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.63 19262

set-returning functions are not allowed in trigger WHEN conditions

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.64 19263

set-returning functions are not allowed in partition key expressions

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.65 19264

cannot create partitioned table as inheritance child

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.66 19265

multiple identity specifications for column "@1@" of table "@2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.67 19266

primary key constraints are not supported on partitioned tables

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.68 19267

unique constraints are not supported on partitioned tables

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.69 19268

foreign key constraints are not supported on partitioned tables

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
2.89.70 19269

both default and identity specified for column "@1@" of table "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.71 19270

exclusion constraints are not supported on partitioned tables

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.72 19271

invalid bound specification for a list partition

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.73 19272

invalid bound specification for a range partition

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
FROM must specify exactly one value per partitioning column

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

TO must specify exactly one value per partitioning column

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

cannot specify NULL in range bound

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

every bound following MAXVALUE must also be MAXVALUE

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
every bound following MINVALUE must also be MINVALUE

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.79 19278

specified value cannot be cast to type @1@ for column "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.80 19279

invalid connection string syntax: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.81 19280

ero while shutting down streaming COPY: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.82 19281

could not create replication slot "@1@": @2@
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

Invalid query response

The query interface requires a database connection

Cannot start logical replication workers when max_replication_slots = 0

Out of logical replication worker slots

The application or command terminated normally, but a warning was output.
[System Processing]
  Processing will continue.

[Action]
  Check the message text and confirm that the issue does not affect the expected outcome.

2.89.87 19286

out of background worker slots

[Description]
  The application or command terminated normally, but a warning was output.

[System Processing]
  Processing will continue.

[Action]
  Check the message text and confirm that the issue does not affect the expected outcome.

2.89.88 19287

logical replication worker slot @1@ is empty, cannot attach

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.89 19288

replication origin "@1@" does not exist

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.90 19289

replication origin with OID @1@ does not exist

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.91 19290

logical replication target relation "@1@.@2@" does not exist
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.92 19291

built-in type @1@ not found
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.93 19292

data type "@1@.@2@" required for logical replication does not exist
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.94 19293

initial slot snapshot too large
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.89.95 19294

could not fetch table info for table "@1@.@2@" from publisher: @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.96 19295

table "@1@.@2@" not found on publisher

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.97 19296

could not fetch table info for table "@1@.@2@": @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.98 19297

could not start initial contents copy for table "@1@.@2@": @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.99 19298
table copy could not start transaction on publisher

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.89.100 19299

---

table copy could not finish transaction on publisher

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90 Message Numbers Beginning with 19300

2.90.1 19300

ORIGIN message sent out of order

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.2 19301

invalid logical replication message type "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.90.3 19302

**terminating logical replication worker due to timeout**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.4 19303

**subscription has no replication slot set**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.5 19304

**invalid proto_version**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.6 19305

**proto_version "@1@" out of range**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
invalid publication_names syntax

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.8 19307

client sent proto_version=@1@ but we only support protocol @2@ or lower

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.9 19308

client sent proto_version=@1@ but we only support protocol @2@ or higher

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.10 19309

publication_names parameter missing

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.11 19310

number of synchronous standbys (@1@) must be greater than zero
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.12 19311
IDENTIFY_SYSTEM has not been run before START_REPLICATION
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.13 19312
cannot execute new commands while WAL sender is in stopping mode
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.14 19313
cannot execute SQL commands in WAL sender for physical replication
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.15 19314
cannot convert partitioned table "@1@" to a view
[Description]
An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.16 19315

cannot convert partition "@1@" to a view

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.17 19316

cannot insert into column "@1@"

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.18 19317

column "@1@" can only be updated to DEFAULT

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.19 19318

invalid zero-length item array in MVDependencies

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.20 19319

statistics object "@1@.@2@" could not be computed for relation "@3@.@4@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.90.21 19320

invalid ndistinct magic @1@ (expected @2@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.22 19321

invalid ndistinct type @1@ (expected @2@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.23 19322

invalid zero-length item array in MVNDistinct

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

- 1700 -
formatting field "@1@" is only supported in to_char
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.29 19328

expected json array
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.30 19329

malformed json array
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.31 19330

macaddr8 data out of range to convert to macaddr
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.32 19331

log format "@1@" is not supported
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.90.33 19332**

cannot convert infinity to numeric

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.90.34 19333**

collation provider LIBC is not supported on this platform

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.90.35 19334**

collations with different collate and ctype values are not supported by ICU

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.90.36 19335**

could not open collator for locale "@1@": @2@

An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

2.90.37 19336

**collation "@1@" has no actual version, but a version was specified**

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

2.90.38 19337

**collation "@1@" has version mismatch**

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will continue.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

2.90.39 19338

**could not open ICU converter for encoding "@1@": @2@**

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

2.90.40 19339

**ucnv_toUChars failed: @1@**

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.
2.90.41 19340

**ucnv_fromUChars failed: @1@**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.42 19341

**regexp_split_to_table does not support the global option**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.43 19342

**regexp_split_to_array does not support the global option**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.44 19343

**transaction ID @1@ is in the future**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.90.45 19344

**collation failed: @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.46 19345

**sort key generation failed: @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.47 19346

**DEFAULT namespace is not supported**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.48 19347

**row path filter must not be empty string**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
column path filter must not be empty string

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.50 19349

more than one value returned by column XPath expression

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.51 19350

could not find function information for function "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.52 19351

encoding "@1@" not supported by ICU

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.53 19352

could not attach to dynamic shared area
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.54 19353

`@1@ command ignored; use endif or Ctrl-C to exit current if block`

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.55 19354

`elif: cannot occur after else`

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.56 19355

`elif: no matching if`

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.57 19356

`else: cannot occur after else`

An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.58 19357

\else: no matching \if

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.59 19358

\endif: no matching \if

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.60 19359

shell command argument contains a newline or carriage return: "@1@"

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.61 19360

Did not find any settings for role "@1@" and database "@2@".

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.62 19361

Did not find any text search parsers.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.63 19362

Did not find any text search configurations.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.64 19363

The server (version @1@) does not support publications.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.65 19364

Did not find any publication named "@1@".
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.90.66 19365

**Did not find any publications.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.67 19366

**The server (version @1@) does not support subscriptions.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.68 19367

\if: escaped

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.69 19368

query ignored; use \endif or Ctrl-C to exit current \if block

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.70 19369
reached EOF without finding closing `\endif(s)`

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.71 19370

unrecognized collation provider: `@1@`

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.72 19371

unrecognized value "`@1@" for "`@2@"": Boolean expected

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.73 19372

invalid value "`@1@" for "`@2@": integer

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.74 19373

invalid variable name: "`@1"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.90.75 19374**

could not write to output file: @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.90.76 19375**

no matching schemas were found for pattern "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.90.77 19376**

WARNING: owner of publication "@1@" appears to be invalid

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

**2.90.78 19377**

WARNING: subscriptions not dumped because current user is not a superuser

The application or command terminated normally, but a warning was output.
[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.90.79 19378
WARNING: owner of subscription "@1@" appears to be invalid
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.90.80 19379
WARNING: could not parse subpublications array
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.90.81 19380
failed sanity check, parent table with OID @1@ of pg_rewrite entry with OID @2@ not found
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.82 19381
invalid number of parents @1@ for table "@2@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.83 19382

@1@: could not rename file "@2@" to "@3@": @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.84 19383

@1@: failed to remove WAL directory

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.85 19384

@1@: failed to remove contents of WAL directory

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.86 19385

@1@: could not open file "@2@": @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.90.87 19386

@1@: failed to remove data directory

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.88 19387

@1@: failed to remove contents of data directory

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.89 19388

@1@: failed to remove WAL directory

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.90 19389

@1@: failed to remove contents of WAL directory

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.91 19390
@1@: data directory "@2@" not removed at user's request

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.92 19391

@1@: WAL directory "@2@" not removed at user's request

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.93 19392

@1@: changes to tablespace directories will not be undone

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.94 19393

@1@: could not finish writing WAL files: @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.95 19394

@1@: cannot stream write-ahead logs in tar mode to stdout
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.96 19395

@1@: --no-slot cannot be used with slot name

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.97 19396

@1@: could not open compressed file "@2@": @3@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.98 19397

@1@: could not seek in compressed file "@2@": @3@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.99 19398

@1@: could not read compressed file "@2@": @3@

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.90.100 19399

@1@: compressed segment file "@2@" has incorrect uncompressed size @3@, skipping

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91 Message Numbers Beginning with 19400

2.91.1 19400

@1@: could not parse end position "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.2 19401

@1@: --endpos may only be specified with --start

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.3 19402

@1@: could not get size of write-ahead log file "@2@": @3@
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.4 19403

@1@: could not fsync existing write-ahead log file "@2@": @3@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.5 19404

@1@: could not open write-ahead log file "@2@": @3@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.6 19405

@1@: could not create temporary replication slot "@2@": @3@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.7 19406

could not compress data

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.8 19407

could not reset compression stream

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.9 19408

could not initialize compression library

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.10 19409

implementation error: tar files can’t have more than one open file

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.11 19410

could not create tar header

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.12 19411

could not change compression parameters

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.13 19412

unlink not supported with compression

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.14 19413

could not close compression stream

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.15 19414

@1@: archive location "@2@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.91.16 19415

@1@: file "@2@" would be removed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.17 19416

@1@: ERROR: could not remove file "@2@": @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.18 19417

@1@: could not read archive location "@2@": @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.19 19418

@1@: could not close archive location "@2@": @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.20 19419
@1@: could not open archive location "@2@": @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.21 19420

@1@: invalid file name argument

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.22 19421

failed to get system locale name for "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.23 19422

@1@: must specify archive location

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.24 19423

@1@: must specify oldest kept WAL file
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.25 19424

@1@: too many command-line arguments

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.26 19425

This utility can only upgrade from PostgreSQL version 8.4 and later.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.27 19426

This utility can only upgrade to PostgreSQL version @1@.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.28 19427

This utility cannot be used to downgrade to older major PostgreSQL versions.

An error occurred during execution of the application or command.
[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.29 19428

Old cluster data and binary directories are from different major versions.

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.30 19429

New cluster data and binary directories are from different major versions.

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.31 19430

encodings for database "@1@" do not match: old "@2@", new "@3@"

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.32 19431

lc_collate values for database "@1@" do not match: old "@2@", new "@3@"

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.33 19432

lc_ctype values for database "@1@" do not match: old "@2@", new "@3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.34 19433

New cluster database "@1@" is not empty

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.35 19434

could not open file "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.36 19435

could not add execute permission to file "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.91.37 19436

**database user "@1@" is not the install user**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.38 19437

**could not determine the number of users**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.39 19438

**Only the install user can be defined in the new cluster.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.40 19439

**The source cluster contains prepared transactions**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.41 19440
The target cluster contains prepared transactions
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.42 19441

The source cluster contains roles starting with "pg_"
[Description]
An error occurred during execution of the application or command.

[System Processing]
 Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.43 19442

The target cluster contains roles starting with "pg_"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.44 19443

failed to get the current locale
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.45 19444

failed to restore old locale "@1@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.46 19445

could not get control data using @1@: @2@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.47 19446

@1@: pg_resetwal problem

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.48 19447

@1@: controldata retrieval problem

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.49 19448

The source cluster lacks some required control information:

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.50 19449

The target cluster lacks some required control information:

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.51 19450

Cannot continue without required control information, terminating

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.52 19451

old and new pg_controldata alignments are invalid or do not matchLikely one cluster is a 32-bit install, the other 64-bit

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.53 19452

old and new pg_controldata block sizes are invalid or do not match

[Description]
An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.54 19453

old and new pg_controldata maximum relation segment sizes are invalid or do not match

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.55 19454

old and new pg_controldata WAL block sizes are invalid or do not match

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.56 19455

old and new pg_controldata WAL segment sizes are invalid or do not match

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.57 19456

old and new pg_controldata maximum identifier lengths are invalid or do not match

An error occurred during execution of the application or command.

Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.58 19457

old and new pg_controldata maximum indexed columns are invalid or do not match

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.59 19458

old and new pg_controldata maximum TOAST chunk sizes are invalid or do not match

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.60 19459

old and new pg_controldata large-object chunk sizes are invalid or do not match

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.61 19460

old and new pg_controldata date/time storage types do not match

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.91.62 19461

**old cluster does not use data checksums but the new one does**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.63 19462

**old cluster uses data checksums but the new one does not**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.64 19463

**old and new cluster pg_controldata checksum versions do not match**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.65 19464

**Unable to rename @1@ to @2@.**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.66 19465
could not get pg_ctl version data using @1@: @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.67 19466

could not get pg_ctl version output from @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.68 19467

command too long

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.69 19468

could not write to log file "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.70 19469

There were problems executing "@1@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.71 19470

could not open file "@1@" for reading: @2@

You must have read and write access in the current directory.

check for "@1@" failed: @2@

"@1@" is not a directory
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.75 19474

check for "@1@" failed: not a regular file

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.76 19475

check for "@1@" failed: cannot read file (permission denied)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.77 19476

check for "@1@" failed: cannot execute (permission denied)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.78 19477

error while copying relation "@1@.@2@": could not open file "@3@": @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.91.79 19478**

**Error**

`error while copying relation "@1@.@2@": could not create file "@3@": @4@`

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.91.80 19479**

**Error**

`error while copying relation "@1@.@2@": could not read file "@3@": @4@`

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.91.81 19480**

**Error**

`error while copying relation "@1@.@2@": could not write file "@3@": @4@`

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.91.82 19481**

**Error**

`error while copying relation "@1@.@2@" ("@3@" to "@4@")": @5@`

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.91.83 19482

error while creating link for relation "@1@.@2@" ("@3@" to "@4@"): @5@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.84 19483

error while copying file ("@1@" to "@2@"): could not open file ": @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.85 19484

error while copying file ("@1@" to "@2@"): could not create file "@3@": @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.86 19485

error while copying file ("@1@" to "@2@"): could not read file ": @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.87 19486
error while copying file "@1@" to "@2@": could not write file "@3@": "@4@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.88 19487

error while copying file "@1@" to "@2@": "@3@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.89 19488

error while linking file "@1@" to "@2@": "@3@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.90 19489

error while copying relation "@1@.@2@": could not stat file "@3@": "@4@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.91 19490

error while copying relation "@1@.@2@": partial page found in file "@3@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.92 19491

@1@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.93 19492

Remove the problem functions from the old cluster to continue.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.94 19493

Checking for presence of required libraries

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.95 19494

could not load library "@1@": @2@

[Description]
An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.96 19495

Failed to match up old and new tables in database "@1@"

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.97 19496

which is an index on "@1@.@2@"

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.98 19497

which is an index on OID @1@

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.99 19498

which is the TOAST table for "@1@.@2@"

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.91.100 19499

which is the TOAST table for OID @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92 Message Numbers Beginning with 19500

2.92.1 19500

No match found in old cluster for new relation with OID @1@ in database "@2@": @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.2 19501

No match found in new cluster for old relation with OID @1@ in database "@2@": @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.3 19502

mappings for database "@1@":

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.4 19503

@1@.@2@: @3@ to @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.5 19505

source databases:

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.6 19506

target databases:

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.7 19507

Database: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.8 19508

rename: @1@.@2@: reloid: @3@ relblspace: @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.9 19509

@1@: cannot be run as root

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.10 19510

invalid old port number

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.11 19511

invalid new port number

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.92.12 19512

**Running in verbose mode**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.13 19513

**Try "@1@ --help" for more information.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.14 19514

**old cluster binaries reside**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.15 19515

**new cluster binaries reside**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.16 19516
old cluster data resides

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.17 19517

new cluster data resides

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.18 19518

could not determine current directory

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.19 19519

cannot run pg_upgrade from inside the new cluster data directory on Windows

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.20 19520

pg_upgrade upgrades a PostgreSQL cluster to a different major version.
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**Usage:**

```
pg_upgrade [OPTION]...
```

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**Options:**

```
-b, --old-bindir=BINDIR old cluster executable directory
```

An error occurred during execution of the application or command.
2.92.25 19525

-B, --new-bindir=BINDIR new cluster executable directory

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.26 19526

-c, --check check clusters only, don't change any data

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.27 19527

-d, --old-datadir=DATADIR old cluster data directory

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.28 19528

-D, --new-datadir=DATADIR new cluster data directory

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.29 19529

-\(j\), --\(jobs\) number of simultaneous processes or threads to use

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.30 19530

-\(k\), --\(link\) link instead of copying files to new cluster

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.31 19531

-\(o\), --\(old-options=OPTIONS\) old cluster options to pass to the server

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.32 19532

-\(O\), --\(new-options=OPTIONS\) new cluster options to pass to the server

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
**2.92.33 19533**

```plaintext
-p, --old-port=PORT old cluster port number (default @1@)
```

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.92.34 19534**

```plaintext
-P, --new-port=PORT new cluster port number (default @1@)
```

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.92.35 19535**

```plaintext
-r, --retain retain SQL and log files after success
```

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.92.36 19536**

```plaintext
-U, --username=NAME cluster superuser (default "@1@")
```

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.92.37 19537**
-v, --verbose enable verbose internal logging

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.38 19538

-V, --version display version information, then exit

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.39 19539

-?, --help show this help, then exit

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.40 19540

Report bugs to <pgsql-bugs@postgresql.org>.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.41 19541

Finding the real data directory for the source cluster
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.42 19542

Finding the real data directory for the target cluster

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.43 19543

could not get data directory using @1@: @2@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.44 19544

could not read line @1@ from file "@2@": @3@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.45 19545

user-supplied old port number @1@ corrected to @2@

An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.46 19546

could not create worker process: @1@

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.47 19547

could not create worker thread: @1@

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.48 19548

child worker exited abnormally: @1@

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.49 19549

Setting next OID for new cluster

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.50 19550

Sync data directory to disk
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.51 19551

@1@: could not find own program executable
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.52 19552

Analyzing all rows in the new cluster
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.53 19553

Freezing all rows in the new cluster
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.92.54 19554

Restoring global objects in the new cluster

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.55 19555

Restoring database schemas in the new cluster

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.56 19556

Deleting files from new @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.57 19557

could not delete directory "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.58 19558
Copying old @1@ to new server

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.59 19559

Setting next transaction ID and epoch for new cluster

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.60 19560

Setting next multixact ID and offset for new cluster

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.61 19561

Setting oldest multixact ID in new cluster

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.62 19562

Resetting WAL archives
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.63 19563

Setting frozenxid and minmxid counters in new cluster

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.64 19564

Setting minmxid counter in new cluster

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.65 19565

error while checking for existence of keystore file @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.66 19566

Linking user relation files

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.67 19567

Copying user relation files
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.68 19568

copying "@1@" to "@2@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.69 19569

linking "@1@" to "@2@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.70 19570

old database "@1@" not found in the new cluster
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.71 19571

error while checking for file existence "@1@.@2@" ("@3@" to "@4@"): @5@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.72 19572

rewriting "@1@" to "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.73 19573

connection to database failed: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.74 19574

Failure, exiting

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.92.75 19575

executing: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.76 19576

SQL command failed@1@@2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.77 19577

could not open version file: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.78 19578

could not parse PG_VERSION file from @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.79 19579
connection to database failed: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.80 19580

pg_ctl failed to start the source server, or connection failed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.81 19581

pg_ctl failed to start the target server, or connection failed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.82 19582

out of memory

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.83 19583

libpq environment variable @1@ has a non-local server value: @2@
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.84 19584

**tablespace directory "@1@" does not exist**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.85 19585

**could not stat tablespace directory "@1@": @2@**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.86 19586

**tablespace path "@1@" is not a directory**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.87 19587

**%-*s**

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.92.88 19588**

ok

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.92.89 19589**

Checking for large objects

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.92.90 19590**

warning

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.92.91 19591**

Checking for incompatible "line" data type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.92 19592

Checking for invalid "unknown" user columns
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.93 19593

Checking for hash indexes
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.94 19594

@1@: unexpected empty file "@2@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.95 19595

@1@: pg_control exists but is broken or wrong version; ignoring it
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.92.96 19596

could not find file "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.97 19597

could not seek in log file @1@ to offset @2@: @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.98 19598

could not read from log file @1@, offset @2@, length @3@: @4@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.92.99 19599

@1@: no arguments specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.93 Message Numbers Beginning with 19600

2.93.1 19600

@1@: could not parse end WAL location "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.2 19601

@1@: could not parse limit "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.3 19602

@1@: resource manager "@2@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.4 19603

@1@: could not parse start WAL location "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.93.5 19604

@1@: could not parse timeline "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.6 19605

@1@: could not parse "@2@" as a transaction ID

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.7 19606

@1@: unrecognized argument to --stats: @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.8 19607

@1@: too many command-line arguments (first is "@2@")

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.9 19608
@1@: path "@2@" could not be opened: @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

2.93.10 19609
could not open directory "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

2.93.11 19610
could not open file "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

2.93.12 19611
@1@: start WAL location @2@/@3@ is not inside file "@4@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

2.93.13 19612
ENDSEG @1@ is before STARTSEG @2@
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.14 19613

@1@: end WAL location @2@/@3@ is not inside file "@4@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.15 19614

@1@: no start WAL location given

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.16 19615

out of memory

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.17 19616

could not find a valid record after @1@/@2@

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.18 19617

error in WAL record at @1@/@2@: @3@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.19 19618

cannot set system attribute "@1@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.20 19619

function "@1@" is in the wrong language
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.21 19620

function "@1@" must not be SECURITY DEFINER
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.22 19621

set-valued function called in context that cannot accept a set

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.23 19622

column name/value list must have even number of elements

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.24 19623

column name/value list contains nonexistent column name "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.25 19624

cannot set system attribute "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.30 19629
wrong length of inner sequence: has length @1@, but @2@ was expected
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.31 19630

malformed SCRAM message (empty message)
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.32 19631

malformed SCRAM message (length mismatch)
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.33 19632

incorrect server signature
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.34 19633

invalid SCRAM exchange state
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.35 19634

malformed SCRAM message (attribute "@1@" expected)

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.36 19635

malformed SCRAM message (expected character "=" for attribute "@1@")

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.37 19636

could not generate nonce

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.38 19637

invalid SCRAM response (nonce mismatch)

An error occurred during execution of the application or command.
malformed SCRAM message (invalid iteration count)

An error occurred during execution of the application or command.

malformed SCRAM message (garbage at end of server-first-message)

An error occurred during execution of the application or command.

error received from server in SCRAM exchange: @1@

An error occurred during execution of the application or command.

malformed SCRAM message (garbage at end of server-final-message)

An error occurred during execution of the application or command.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.43 19642

malformed SCRAM message (invalid server signature)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.44 19643

out of memory allocating SSPI buffer (@1@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.45 19644

duplicate SSPI authentication request

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.46 19645

duplicate SASL authentication request

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.93.47 19646

none of the server's SASL authentication mechanisms are supported

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.48 19647

out of memory allocating SASL buffer (@1@)

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.49 19648

AuthenticationSASLFinal received from server, but SASL authentication was not completed

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.50 19649

unexpected shape of result set returned for SHOW

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.
**password_encryption value too long**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.93.52 19651**

**unrecognized password encryption algorithm "@1@"**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.93.53 19652**

**could not match @1@ host names to @2@ hostaddrs**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.93.54 19653**

**could not match @1@ port numbers to @2@ hosts**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.93.55 19654**

**invalid target_session_attrs value: "@1@"**
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.56 19655

invalid target_server value: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.57 19656

could not parse network address "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.58 19657

PGresult cannot support more than INT_MAX tuples

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.59 19658

size_t overflow

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.60 19659

cannot pass more than @1@ arguments to a function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.61 19660

set-valued function called in context that cannot accept a set

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.62 19661

More details may be available in the server log.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.63 19662

Kill all remaining database processes and restart the database.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.64 19663
deadlock detected
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.65 19664
VCI parallel execution is blocked by other operation.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.66 19665
not enough maximum share memory for parallel query (26 bytes requested)
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.67 19666
You possibly need to raise the configuration parameter "vci.shared_work_mem" value to be at least 26kB.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.68 19667

You may need to increase max_worker_processes.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.69 19669

Failed on request of size @1@.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.93.70 19670

failed to shm_open()
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.71 19671

could not open file "@1@": @2@
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.93.72 19672

could not get handle of the kernel module : error code @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.73 19673

the relation is not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.74 19674

access method "@1@" does not work with partitioned tables

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.75 19675

The "vci_column_ids" option cannot be used without "ctid" column

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.76 19676
VCI failed to catch up with dropped columns in table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.93.77 19677

Automatically recreated "CREATE INDEX" is corrupt. Please recreate VCI by "vci_create()" function.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.94 Message Numbers Beginning with 20000

2.94.1 20000

listagg_transfn called in non-aggregate context

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.2 20002

median4_transfn called in non-aggregate context

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.94.3 20003

**lock request error**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.4 20004

**event registration error**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.5 20005

**event name is NULL**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.6 20006

**feature not supported**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.7 20007
not called by trigger manager

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.8 20008

not called on valid event

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.9 20009

SPI_connect failed

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.10 20010

not called with valid relation

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.11 20011

attribute event not found
2.94.12 20012

attribute message not found

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.13 20013

SPI_prepare failed

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.14 20014

can’t execute sql

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.15 20015

SPI execute error

[Description]
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.16 20016

invalid value for @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.17 20017
date out of range

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.18 20018
timestamp out of range

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.19 20019

invalid cursor number

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.20 20020

failed to execute SQL statement
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.21 20021

SQL is empty string
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.22 20022

host variable name "@1@" is too long
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.23 20023

host variable name is NULL
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**Description**

An error occurred.

**System Processing**

Processing will be aborted.

**Action**

To investigate the cause of the occurrence from the message, and remove cause.
not all variables bound

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.29 20029

no statement execute

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.30 20030

not supported data type

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.31 20031

mismatch column_value data type and define_column data type

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.32 20032

mismatch select data type and define_column data type
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.94.33 20033

@1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.94.34 20034

invalid parameter

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.94.35 20035

null value not allowed

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.94.36 20036

invalid encoding name "@1@"

An error occurred.
[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.94.37 20037

program limit exceeded

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.94.38 20038

no data found

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.94.39 20039

SPI_prepare_failed

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.94.40 20040

start_line must be positive (@1@ passed)

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.41 20041

end_line must be positive (@1@ passed)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.42 20042

return type must be a row type

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.43 20043

failed to retrieve the default LC_COLLATE value

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.44 20044

failed to set the requested LC_COLLATE value [@1@]

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.94.45 20045

failed to set back the default LC_COLLATE value [@1@]

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.46 20046

unknown format

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.47 20047

function is called from invalid context

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.48 20048

argument is NULL

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.49 20049
out of memory
[Description]
There was insufficient free space in the server's memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.94.50 20050
insufficient privilege
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.51 20051
datatype mismatch
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.52 20052
unexpected type: @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
**2.94.53 20053**

**pipe name is NULL**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.94.54 20054**

**pipe creation error**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.94.55 20055**

**message is NULL**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.94.56 20056**

**could not determine data type of input**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.94.57 20057**
**unknown equal operand for datatype**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.94.58 20058**

**cannot set range to negative number**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.94.59 20059**

**date is out of range**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.94.60 20060**

**nonbizday registration error**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.94.61 20061**

**nonbizday unregistration error**
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.94.62 20062

`plvlex.tokens is not available in the built`

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.94.63 20063

`too few parameters specified for template string`

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.94.64 20064

`substition is NULL`

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.94.65 20065

`buffer overflow`

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.66 20066

internal error
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.67 20067

Limit decreased to @1@ bytes.
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.68 20068

Limit increased to @1@ bytes.
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.69 20069

unknown option '@1@'
[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.94.70 20070

too much large memory block request
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.71 20071

corrupted pointer
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.72 20072

unsafe use of string constant with Unicode escapes
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.73 20073

invalid Unicode escape
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.94.74 20074

unsafe use of `\' in a string literal

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.75 20075

@1@ at end of input

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.76 20076

@1@ at or near "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.77 20077

dbms_yylex_init() failed: @1@.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.78 20078
invalid hexadecimal digit
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.79 20079

nonstandard use of \ in a string literal
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.80 20080

nonstandard use of \\ in a string literal
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.81 20081

nonstandard use of escape in a string literal
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.94.82 20082

SQL is NULL
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.94.83 20083

**input value length is @1@; too long for type nvarchar2(@2@)**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.94.84 20084

**input value too long for type nvarchar2(@1@)**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.94.85 20085

**input value length is @1@; too long for type varchar2(@2@)**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.94.86 20086

**input value length is @1@; too long for type varchar2(@2@)**

An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.94.87 20087**

String constants with Unicode escapes cannot be used when standard_conforming_strings is off.

Supplementary information was output.

Refer to this message together with the message that was output immediately beforehand.

**2.94.88 20088**

Unicode escapes must be \uXXXX or \UXXXXXXXX.

Supplementary information was output.

Refer to this message together with the message that was output immediately beforehand.

**2.94.89 20089**

Use " to write quotes in strings. \ is insecure in client-only encodings.

Supplementary information was output.

Refer to this message together with the message that was output immediately beforehand.

**2.94.90 20090**

Use " to write quotes in strings, or use the escape string syntax (E'...').

Supplementary information was output.
2.94.91 20091

Use the escape string syntax for backslashes, e.g., E'\\\'.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.94.92 20092

Use the escape string syntax for escapes, e.g., E'\r\'.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.94.93 20093

cannot to parse timezone "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95 Message Numbers Beginning with 70000

2.95.1 70001

Error loading default settings from driverconfig.properties

[Description]
An unexpected error occurred.
[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.95.2 70002

Your security policy has prevented the connection from being attempted. You probably need to grant the connect java.net.SocketPermission to the database server host and port that you wish to connect to.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.3 70003

Something unusual has occurred to cause the driver to fail. Please report this exception.

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.95.4 70004

Connection attempt timed out.

[Description]
Timeout occurred during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Check the following:
- If executing SQL that outputs a large volume of search results, add a conditional expression to filter the results further.
- If numerous SQLs are being simultaneously executed, reduce the number of simultaneously executed SQLs.
- If a large volume of data is to be updated in a single transaction, modify the SQL to reduce the volume of data to be updated in a single transaction.
- If executing a complex SQL, modify it to a simple SQL.
- Check if there are any problems in the network.
Before conducting maintenance that involves the processing of a large volume of data, use the SET statement to temporarily increase the value of maintenance_work_mem.

2.95.5 70005

Interrupted while attempting to connect.

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.

b) If the total number of update records in a single transaction is high, split it into short transactions.

c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.95.6 70006

Method @1@ is not yet implemented.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.7 70007

Requested CopyIn but got @1@

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.8 70008

Requested CopyOut but got @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.9 70009

Copying from database failed: @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.95.10 70010

This copy stream is closed.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.11 70011

Read from copy failed.

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.
[Action]

Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
  
a) If the COMMIT process is not executed after update, add the COMMIT process.
  
b) If the total number of update records in a single transaction is high, split it into short transactions.
  
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
- If none of the above situations applies, perform the following:
  
a) Confirm that the database server has not stopped.
  
b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.95.12 70012

Cannot write to copy a byte of value @1@

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.13 70013

A connection could not be made using the requested protocol @1@.

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.14 70014

Premature end of input stream, expected @1@ bytes, but only read @2@.

[Description]

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.15 70015

Expected an EOF from server, got: @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.95.16 70016

An unexpected result was returned by a query.

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.95.17 70017

Illegal UTF-8 sequence: byte @1@ of @2@ byte sequence is not 10xxxxxx: @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.18 70018

Illegal UTF-8 sequence: @1@ bytes used to encode a @2@ byte value: @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.19 70019

Illegal UTF-8 sequence: initial byte is @1@: @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.20 70020

Illegal UTF-8 sequence: final value is out of range: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.21 70021

Illegal UTF-8 sequence: final value is a surrogate value: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.22 70022

Zero bytes may not occur in string parameters.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.95.23 70023

Zero bytes may not occur in identifiers.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.24 70024

Cannot convert an instance of @1@ to type @2@.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.25 70025

Connection to @1@ refused. Check that the hostname and port are correct and that the postmaster is accepting TCP/IP connections.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.26 70026

The connection attempt failed.

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.
Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.

**2.95.27 70027**

**The server does not support SSL.**

*Description*
An error occurred during execution of the application or command.

*System Processing*
Processing will be aborted.

*Action*
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.95.28 70028**

**An error occurred while setting up the SSL connection.**

*Description*
An error occurred during communication between the application and the database server.

*System Processing*
Processing will be aborted.

*Action*
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

**2.95.29 70030**

**The server requested password-based authentication, but no password was provided.**

*Description*
An error occurred during execution of the application or command.

*System Processing*
Processing will be aborted.

*Action*
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.95.30 70031

The authentication type @1@ is not supported. Check that you have configured the pg_hba.conf file to include the client’s IP address or subnet, and that it is using an authentication scheme supported by the driver.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.31 70032

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.95.32 70034

The column index is out of range: @1@, number of columns: @2@.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.33 70035

No value specified for parameter @1@.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.95.34 70036

**Expected command status BEGIN, got @1@.**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.95.35 70037

**Unexpected command status: @1@.**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.95.36 70038

**An I/O error occurred while sending to the backend.**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.95.37 70039

**Unknown Response Type @1@.**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.95.38 70040
Ran out of memory retrieving query results.

[Description]
There was insufficient free space in the server's memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.95.39 70044

CommandComplete expected COPY but got:

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.95.40 70045

Tried to obtain lock while already holding it

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.41 70046

Tried to break lock on database connection

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.95.42 70047

Interrupted while waiting to obtain lock on database connection
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.43 70048

Unable to bind parameter values for statement.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.44 70049

Database connection failed when starting copy
[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.

b) If the total number of update records in a single transaction is high, split it into short transactions.

c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.95.45 70050

**Tried to cancel an inactive copy operation**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.46 70051

**Database connection failed when canceling copy operation**

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.95.47 70052

**Missing expected error response to copy cancel request**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.
[Action]  
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.95.48 70053

Got @1@ error responses to single copy cancel request  
[Description]  
An error occurred during communication between the application and the database server.  

[Action]  
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.95.49 70054

Tried to end inactive copy  
[Description]  
An error occurred during execution of the application or command.  

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.50 70055

Database connection failed when ending copy  
[Description]  
The database server was disconnected during execution of the application.  

[Action]  
Communication may have been disconnected for the following reasons:  
- An error occurred in the communication line (TCP/IP etc.)  
- The database server terminated abnormally.  

Take the following actions:  
- Eliminate the cause of the communication disconnection.  

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.  
a) If the COMMIT process is not executed after update, add the COMMIT process.  
b) If the total number of update records in a single transaction is high, split it into short transactions.  
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.95.51 70056

**Tried to write to an inactive copy operation**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.52 70057

**Database connection failed when writing to copy**

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.
Take the following actions:
- Eliminate the cause of the communication disconnection.
Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
  a) If the COMMIT process is not executed after update, add the COMMIT process.
  b) If the total number of update records in a single transaction is high, split it into short transactions.
  c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.95.53 70058

**Tried to read from inactive copy**

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.54 70059

Database connection failed when reading from copy

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.
Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
- If none of the above situations applies, perform the following:
a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.95.55 70060

Received CommandComplete "@1@" without an active copy operation

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.56 70061

Got CopyInResponse from server during an active @1@
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.57 70062

Got CopyOutResponse from server during an active @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.58 70063

Got CopyData without an active copy operation

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.59 70064

Unexpected copydata from server for @1@

An error occurred during communication between the application and the database server.

Processing will be aborted.

Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.95.60 70065

Unexpected packet type during copy: @1@

An error occurred during execution of the application or command.

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

**2.95.65 70070**

**The driver currently does not support COPY operations.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.95.66 70071**

**This PooledConnection has already been closed.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.95.67 70072**

**Connection has been closed automatically because a new connection was opened for the same PooledConnection or the PooledConnection has been closed.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.95.68 70073**

**Connection has been closed.**
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.69 70074

Statement has been closed.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.70 70075

Failed to setup DataSource.

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.95.71 70076

DataSource has been closed.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.72 70077

Fastpath call @1@ - No result was returned and we expected an integer.

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.73 70078

The fastpath function @1@ is unknown.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.74 70079

Conversion to type @1@ failed: @2@.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.75 70080

Cannot tell if path is open or closed: @1@.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.76 70081

GSS Authentication failed

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.
[Action]

Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.95.77 70082

The array index is out of range: @1@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.78 70083

The array index is out of range: @1@, number of elements: @2@.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.79 70084

Truncation of large objects is only implemented in 8.3 and later servers.
[Description]
An error occurred during execution of the application or command.
[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.80 70085

**Cannot truncate LOB to a negative length.**

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.81 70086

**PostgreSQL LOBs can only index to: @1@**

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.82 70087

**LOB positioning offsets start at 1.**

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.83 70088

**free() was called on this LOB previously**

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.84 70089

Unsupported value for stringtype parameter: @1@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.85 70091

No results were returned by the query.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.86 70092

A result was returned when none was expected.
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.95.87 70093

Custom type maps are not supported.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.95.88 70094

**Failed to create object for: @1@.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.89 70095

**Unable to load the class @1@ responsible for the datatype @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.90 70096

**Cannot change transaction read-only property in the middle of a transaction.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.91 70097

**Cannot commit when autoCommit is enabled.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.92 70098
This connection has been closed.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.95.93 70099

Cannot rollback when autoCommit is enabled.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96 Message Numbers Beginning with 70100

2.96.1 70100

Cannot change transaction isolation level in the middle of a transaction.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.2 70101

Transaction isolation level @1@ not supported.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.96.3 70102

Unable to translate data into the desired encoding.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.4 70103

Unable to determine a value for MaxIndexKeys due to missing system catalog data.

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.96.5 70104

Unable to find name datatype in the system catalogs.

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.96.6 70105

Operation requires a scrollable ResultSet, but this ResultSet is FORWARD_ONLY.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
Can’t use relative move methods while on the insert row.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.8 70108

Invalid fetch direction constant: @1@.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.9 70109

Cannot call cancelRowUpdates() when on the insert row.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.10 70110

Cannot call deleteRow() when on the insert row.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.11 70111

Currently positioned before the start of the ResultSet. You cannot call deleteRow() here.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.12 70112
Currently positioned after the end of the ResultSet. You cannot call deleteRow() here.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.13 70113
There are no rows in this ResultSet.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.14 70114
Not on the insert row.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.15 70115
You must specify at least one column value to insert a row.

[Description]
An error occurred during execution of the application or command.
[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.16 70116

**The JVM claims not to support the encoding: @1@**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.17 70117

**Provided InputStream failed.**

[Description]

An unexpected error occurred.

[System Processing]

Processing will be aborted.

[Action]

Contact Fujitsu technical support.

2.96.18 70118

**Provided Reader failed.**

[Description]

An unexpected error occurred.

[System Processing]

Processing will be aborted.

[Action]

Contact Fujitsu technical support.

2.96.19 70119

**Can’t refresh the insert row.**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.20 70120

**Cannot call updateRow() when on the insert row.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.21 70121

**Cannot update the ResultSet because it is either before the start or after the end of the results.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.22 70122

**ResultSets with concurrency CONCUR_READ_ONLY cannot be updated.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.23 70123

**No primary key found for table @1@.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.96.24 70124

**Fetch size must be a value greater to or equal to 0.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.25 70125

**Invalid character data was found. This is most likely caused by stored data containing characters that are invalid for the character set the database was created in. The most common example of this is storing 8bit data in a SQL_ASCII database.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.26 70126

**Bad value for type @1@ : @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.27 70127

**The column name @1@ was not found in this ResultSet.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
**2.96.28 70128**

*ResultSet is not updateable. The query that generated this result set must select only one table, and must select all primary keys from that table. See the JDBC 2.1 API Specification, section 5.6 for more details.*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.96.29 70129**

*This ResultSet is closed.*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.96.30 70130**

*ResultSet not positioned properly, perhaps you need to call next.*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.96.31 70131**

*Can’t use query methods that take a query string on a PreparedStatement.*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.96.32 70132

**Multiple ResultSets were returned by the query.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.33 70133

**A CallableStatement was executed with nothing returned.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.34 70134

**A CallableStatement was executed with an invalid number of parameters**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.35 70135

**A CallableStatement function was executed and the out parameter @1@ was of type @2@ however type @3@ was registered.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.96.36 70136

**Maximum number of rows must be a value greater than or equal to 0.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.37 70137

**Query timeout must be a value greater than or equals to 0.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.38 70138

**The maximum field size must be a value greater than or equal to 0.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.39 70139

**Unknown Types value.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.40 70140
Invalid stream length @1@.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.41 70141

The JVM claims not to support the @1@ encoding.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.42 70142

Unknown type @1@.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.43 70143

Cannot cast an instance of @1@ to type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.44 70144

Unsupported Types value: @1@
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.45 70145

Can’t infer the SQL type to use for an instance of @1@. Use setObject() with an explicit Types value to specify the type to use.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.46 70146

This statement does not declare an OUT parameter. Use '{' ?= call ... '} to declare one.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.47 70147

wasNull cannot be call before fetching a result.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.48 70148

Malformed function or procedure escape syntax at offset @1@.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.49 70149

Parameter of type @1@ was registered, but call to get@2@ (sqltype=@3@) was made.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.50 70150

A CallableStatement was declared, but no call to registerOutParameter(1, <some type>) was made.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.51 70151

No function outputs were registered.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.52 70152

Results cannot be retrieved from a CallableStatement before it is executed.
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.53 70153

This statement has been closed.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.54 70154

Too many update results were returned.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.55 70155

Batch entry @1@ @2@ was aborted: @3@ Call getNextException to see other errors in the batch.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.56 70156

Unexpected error writing large object to database.
An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.96.57 70157

@1@ function takes one and only one argument.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.58 70158

@1@ function takes two and only two arguments.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.59 70159

@1@ function takes four and only four argument.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.60 70160

@1@ function takes two or three arguments.

An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.61 70161

@1@ function doesn’t take any argument.

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.62 70162

@1@ function takes three and only three arguments.

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.63 70163

Interval @1@ not yet implemented

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.64 70166

Unknown ResultSet holdability setting: @1@.

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.65 70168

**Cannot establish a savepoint in auto-commit mode.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.66 70169

**Returning autogenerated keys is not supported.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.67 70170

**The parameter index is out of range: @1@, number of parameters: @2@.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.68 70172

**Returning autogenerated keys by column index is not supported.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.96.69 70173

Cannot reference a savepoint after it has been released.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.70 70174

Cannot retrieve the id of a named savepoint.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.71 70175

Cannot retrieve the name of an unnamed savepoint.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.72 70176

Invalid UUID data.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
Unable to find server array type for provided name @1@.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.74 70178

Failed to set ClientInfo property: @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.96.75 70179

ClientInfo property not supported.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.76 70180

Unable to decode xml data.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.77 70181

Unknown XML Source class: @1@
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.78 70182

Unable to create SAXResult for SQLXML.

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.96.79 70183

Unable to create StAXResult for SQLXML

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.96.80 70184

Unknown XML Result class: @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.81 70185

This SQLXML object has already been freed.

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.82 70186

This SQLXML object has not been initialized, so you cannot retrieve data from it.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.83 70187

Failed to convert binary xml data to encoding: @1@.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.84 70188

Unable to convert DOMResult SQLXML data to a string.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.85 70189

This SQLXML object has already been initialized, so you cannot manipulate it further.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.86 70190

Failed to initialize LargeObject API

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.96.87 70191

Large Objects may not be used in auto-commit mode.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.88 70192

The SSLSocketFactory class provided @1@ could not be instantiated.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.96.89 70193

Conversion of interval failed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
Conversion of money failed.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

Transaction control methods setAutoCommit(true), commit, rollback and setSavePoint not allowed while an XA transaction is active.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

Invalid flags

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

xid must not be null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.3 70202

**tried to call end without corresponding start call**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.4 70203

**Not implemented: Prepare must be issued using the same connection that started the transaction**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.5 70204

**Prepare called before end**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.6 70206

**Error preparing transaction**

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.
**2.97.7 70207**

**Invalid flag**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.97.8 70208**

**Error during recover**

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

**2.97.9 70209**

**Error rolling back prepared transaction**

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

**2.97.10 70210**

**Not implemented: one-phase commit must be issued using the same connection that was used to start it**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
commit called before end

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

Error during one-phase commit

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

Not implemented: 2nd phase commit must be issued using an idle connection

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

Error committing prepared transaction

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.97.15 70215
**Heuristic commit/rollback not supported**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.97.16 70221**

**Could not find a server with specified targetServerType: @1@**

[Description]
Could not find a suitable target server.

[System Processing]
Processing is aborted.

[Action]
Check following settings (host, IP address, port number, or targetServer):
- Connection string
- Connection service file
- Data source of JDBC or ODBC
- Environment variables for default connection parameter values (ex. PGHOST)
- Arguments of functions of libpq
- Options of command

---

**2.97.17 70222**

**Invalid timeout (@1@<0).**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

**2.97.18 70225**

**Invalid targetServerType value: @1@**

[Description]
Value of targetserver is invalid.

[System Processing]
Processing is aborted.
[Action]
  Set one of the following:
  - primary
  - standby
  - prefer_standby
  - any (can be specified only JDBC)

2.97.19 70226
The sslservercertcn @1@ could not be verified.
[Description]
  value of sslservercertcn is different from common name in the server certificate.
[System Processing]
  Processing is aborted.
[Action]
  Set SSL certificate's common name to sslservercertcn.

2.97.20 70227
The sslservercertcn @1@ could not be verified by hostnameverifier @2@.
[Description]
  value of sslservercertcn is different from common name in the server certificate.
[System Processing]
  Processing is aborted.
[Action]
  - Set SSL certificate's common name to sslservercertcn.
  - Check the program of class specified by hostnameverifier.

2.97.21 70228
Properties for the driver contains a non-string value for the key
[Description]
  An error occurred.
[System Processing]
  Processing will be aborted.
[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.97.22 70229
(pgjdbc: autodetected server-encoding to be @1@, if the message is not readable, please check database logs and/or host, port, dbname, user, password, pg_hba.conf)
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.97.23 70230

Object is too large to send over the protocol.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.24 70231

No IOException expected from StringBuffer or StringBuilder
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.25 70232

oid type @1@ not known and not a number
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.26 70233

The SocketFactory class provided @1@ could not be instantiated.
[Description]
An error occurred during execution of the application or command.
[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.27 70234

**Added parameters index out of range: @1@, number of columns: @2@.**

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.28 70235

**Invalid sslmode value: @1@**

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.29 70237

**Unsupported property name: @1@**

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.30 70238

**Fastpath call @1@ - No result was returned and we expected a numeric.**

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.31 70239

Fastpath call @1@ - No result was returned or wrong size while expecting an integer.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.32 70240

Fastpath call @1@ - No result was returned and we expected a long.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.33 70241

Fastpath call @1@ - No result was returned or wrong size while expecting a long.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.34 70242

@1@ parameter value must be an integer but was: @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.97.35 70243

**The sslfactoryarg property may not be empty.**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.36 70244

**The environment variable containing the server’s SSL certificate must not be empty.**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.37 70245

**The system property containing the server’s SSL certificate must not be empty.**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.38 70246

**The sslfactoryarg property must start with the prefix file:, classpath:, env:, sys:, or -----BEGIN CERTIFICATE-----.**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.97.39 70247

An error occurred reading the certificate

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.40 70248

No X509TrustManager found

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.41 70249

Could not find a java cryptographic algorithm: X.509 CertificateFactory not available.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.42 70250

Could not open SSL certificate file @1@.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.43 70251
Loading the SSL certificate @1@ into a KeyManager failed.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.44 70252

Could not read password for SSL key file, console is not available.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.45 70253

Could not read password for SSL key file by callbackhandler @1@.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.46 70254

Could not decrypt SSL key file @1@.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.47 70255

Could not read SSL key file @1@.
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.48 70256

Could not find a java cryptographic algorithm: @1@.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.49 70257

The password callback class provided @1@ could not be instantiated.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.50 70258

Could not open SSL root certificate file @1@.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.51 70259

Could not read SSL root certificate file @1@.

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.52 70260

**Loading the SSL root certificate @1@ into a TrustManager failed.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.53 70261

**Could not initialize SSL context.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.54 70262

**SSL error: @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.55 70263

**The HostnameVerifier class provided @1@ could not be instantiated.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.56 70264

The hostname @1@ could not be verified by hostnameverifier @2@.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.57 70265

The hostname @1@ could not be verified.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.58 70266

One ore more ClientInfo failed.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.59 70267

Can’t use executeWithFlags(int) on a Statement.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.97.60 70268

**Bad value for type timestamp/date/time: @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.61 70269

**Unsupported binary encoding of @1@.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.62 70270

**Cannot convert the column of type @1@ to requested type @2@.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.63 70271

**No hstore extension installed.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.64 70272
Unsupported properties: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.65 70293

SCRAM authentication is not supported by this driver. You need JDK >= 8 and pgjdbc >= 42.2.0 (not ".jre" versions).

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.66 70294

Finalizing a Connection that was never closed.

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.97.67 70295

Validating connection.

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.97.68 70296

Invalid elements @1@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.69 70297

Network timeout must be a value greater than or equal to 0.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.70 70298

Unable to set network timeout.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.97.71 70299

Unable to get network timeout.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98 Message Numbers Beginning with 70300

2.98.1 70300

No SCRAM mechanism(s) advertised by the server.
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.2 70301
Invalid or unsupported by client SCRAM mechanisms

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.3 70302
Invalid server-first-message: @1@.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.4 70303
Invalid server-final-message: @1@.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.5 70304
SCRAM authentication failed, server returned error: @1@.

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.6 70305

Invalid server SCRAM signature.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.7 70306

Enter SSL password:

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.98.8 70307

Detail: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.9 70308

Hint: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.10 70309

**Position: @1@**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.11 70310

**Where: @1@**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.12 70311

**Internal Query: @1@**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.13 70312

**Location: File: @1@, Routine: @2@, Line: @3@**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.98.14 70313

**Server SQLState:** @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.15 70314

**Conversion to @1@ from @2@ not supported.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.16 70315

**Requested CopyDual but got @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.17 70316

**CopyIn copy direction can't receive data**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
An error occurred while trying to get the socket timeout.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.19 70318

An error occurred while trying to reset the socket timeout.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.20 70319

Got CopyBothResponse from server during an active @1@.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.21 70320

Unable to parse the count in command completion tag: @1@.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.22 70321

Unexpected packet type during replication: @1@.
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.23 70322

This replication stream has been closed.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.24 70323

Cannot cast to boolean: '@1@'

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.98.25 70324

Unsupported type conversion to @2@.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99 Message Numbers Beginning with 80000

2.99.1 80001

The connection configuration file cannot be opened. detail: '@1@'
[Description]
The process to open the connection configuration file failed.

[System Processing]
Processing is aborted.

[Action]
This message is output in the case of HA Database Ready.
Check the state of the connection configuration file, remove the cause of the error, and restart the application.

2.99.2 80002

Invalid definition statement format in connection configuration file. line number: @1@

[Description]
The format of a parameter definition statement in the connection configuration file is invalid.

[System Processing]
Processing is aborted.

[Action]
This message is output in the case of HA Database Ready.
Correct the connection configuration file and restart the application.

2.99.3 80003

The same server name is specified by two or more SERVER parameters in the connection configuration file.

[Description]
The same server name is specified in multiple SERVER parameters in the connection configuration file.

[System Processing]
Processing is aborted.

[Action]
This message is output in the case of HA Database Ready.
Correct the server name specified in the SERVER parameter of the connection configuration file, and restart the application.

2.99.4 80004

I/O error occurred during the reading of connection configuration file. file name: '@1@' detail: '@2@'

[Description]
An I/O error occurred during loading of the connection configuration file.

[System Processing]
Processing is aborted.

[Action]
This message is output in the case of HA Database Ready.
Check the state of the connection configuration file, remove the cause of the error, and restart the application.

### 2.99.5 80005

**CommandTimeout can't be less than zero.**

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.99.6 80006

**The Connection is broken.**

**[Description]**

The database server was disconnected during execution of the application.

**[System Processing]**

Processing will be aborted.

**[Action]**

Communication may have been disconnected for the following reasons:

- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:

- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:

  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

### 2.99.7 80007

**The Connection is not open.**

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.8 80008

Parameter @1@ not found in query.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.9 80009

The Connection property can’t be changed with an uncommitted transaction.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.10 80010

There is already an open DataReader associated with this Command which must be closed first.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.11 80011

@1@ does not exist in pg_proc

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.12 80012

Invalid parameter type: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.13 80013

Connection is not open

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.14 80014

Connection already open

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.15 80015

Invalid database name: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.99.16 80016

**Connection string argument missing!**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.17 80017

**Nested/Concurrent transactions aren’t supported.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.18 80018

**numeric value @1@ in ConnectionString exceeds maximum value @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.19 80019

**numeric value @1@ in ConnectionString is below minimum value @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.20 80020
expecting @1@=[True/False] value in ConnectionString

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.21 80021

expecting @1@=[Numeric] value in ConnectionString

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.22 80022

expecting @1@=[Protocol Version] value in ConnectionString

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.23 80023

key=value argument incorrect in ConnectionString

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.24 80024

Attempt to set compatibility with version @1@ when using version @2@
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.99.25 80025**

There is already an open DataReader associated with this Command which must be closed first.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.99.26 80026**

ApplicationName not supported.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.99.27 80027**

Timeout while getting a connection from pool.

Timeout occurred during execution of the application.

Processing will be aborted.

Check the following:
- If executing SQL that outputs a large volume of search results, add a conditional expression to filter the results further.
- If numerous SQLs are being simultaneously executed, reduce the number of simultaneously executed SQLs.
- If a large volume of data is to be updated in a single transaction, modify the SQL to reduce the volume of data to be updated in a single transaction.
- If executing a complex SQL, modify it to a simple SQL.
- Check if there are any problems in the network.
- Before conducting maintenance that involves the processing of a large volume of data, use the SET statement to temporarily increase the value of maintenance_work_mem.

2.99.28 80028

**Connection pool exceeds maximum size.**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.29 80029

**Not a COPY IN query: @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.30 80030

**Copy can only start in Ready state, not in @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.31 80031

**Tried to set Position of network stream @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.32 80032

Tried to read non-readable @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.33 80033

Tried to seek non-seekable @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.34 80034

Tried to set length of network stream @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.35 80035

Not a COPY OUT query, not in @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.99.36 80036

**Copy can only start in Ready state, not in @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.37 80037

**Tried to set Position of network stream @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.38 80038

**Tried to write non-writable @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.39 80039

**Tried to flush read-only @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.40 80040
Tried to seek non-seekable @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.41 80041

Tried to set length of network stream @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.42 80042

Do not change stream of an active @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.43 80043

Do not change delimiter of an active @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.44 80044

Do not change separator of an active @1@
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.45 80045

Do not change escape symbol of an active @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.46 80046

Do not change null symbol of an active @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.47 80047

Tried to add too many fields to a copy record with @1@ fields

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.48 80048

Invalid attempt to read when no data is present.

An error occurred during execution of the application or command.
[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.49 80049

Column index out of range

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.50 80050

could not find a suitable target server

[Description]  
Could not find a suitable target server.

[System Processing]  
Processing is aborted.

[Action]  
Check following settings (host, IP address, port number, or targetServer):
- Connection string
- Connection service file
- Data source of JDBC or ODBC
- Environment variables for default connection parameter values (ex. PGHOST)
- Arguments of functions of libpq
- Options of command

2.99.51 80051

server does not support auto connection switching

[Description]  
The server does not support auto connection switching.

[System Processing]  
Processing is aborted.

[Action]  
Specify servers that support auto connection switching.
2.99.52 80052

Only AuthenticationClearTextPassword and AuthenticationMD5Password supported for now.

Received: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.53 80053

A timeout has occurred. If you were establishing a connection, increase Timeout value in ConnectionString. If you were executing a command, increase the CommandTimeout value in ConnectionString or in your NpgsqlCommand object.

[Description]
Timeout occurred during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Check the following:
- If executing SQL that outputs a large volume of search results, add a conditional expression to filter the results further.
- If numerous SQLs are being simultaneously executed, reduce the number of simultaneously executed SQLs.
- If a large volume of data is to be updated in a single transaction, modify the SQL to reduce the volume of data to be updated in a single transaction.
- If executing a complex SQL, modify it to a simple SQL.
- Check if there are any problems in the network.
- Before conducting maintenance that involves the processing of a large volume of data, use the SET statement to temporarily increase the value of maintenance_work_mem.

2.99.54 80054

Connection establishment timeout. Increase Timeout value in ConnectionString.

[Description]
Timeout occurred during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Check the following:
- If executing SQL that outputs a large volume of search results, add a conditional expression to filter the results further.
- If numerous SQLs are being simultaneously executed, reduce the number of simultaneously executed SQLs.
- If a large volume of data is to be updated in a single transaction, modify the SQL to reduce the volume of data to be updated in a single transaction.
- If executing a complex SQL, modify it to a simple SQL.
- Check if there are any problems in the network.
- Before conducting maintenance that involves the processing of a large volume of data, use the SET statement to temporarily increase the value of maintenance_work_mem.

2.99.55 80055

Failed to establish a connection to '@1@'.

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.
Take the following actions:
- Eliminate the cause of the communication disconnection.
Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
- If none of the above situations applies, perform the following:
a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.99.56 80056

Ssl connection requested. No Ssl enabled connection from this host is configured.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.57 80057

Backend sent unrecognized response type: @1@
An error occurred during communication between the application and the database server.

Processing will be aborted.

Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

**2.99.58 80058**

*Store does not support specified edm type*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.99.59 80059**

*Can't cast @1@ into any valid DbType.*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.99.60 80060**

*Cannot set NpgsqlDbType to just Array, Binary-Or with the element type (e.g. Array of Box is NpgsqlDbType.Array | NpgsqlDbType.Box).*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.99.61 80061**

*Can't cast @1@ into NpgsqlParameter*
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.99.62 80062**

Invalid attempt to read from column ordinal '@1@'. With CommandBehavior.SequentialAccess, you may only read from column ordinal '@2@' or greater.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.99.63 80063**

this[] index value

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

**2.99.64 80064**

Field not found

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.99.65 80065**

No transaction in progress.
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.99.66 80066**

Savepoint is not supported by backend.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.99.67 80067**

Savepoint name cannot have semicolon.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.99.68 80068**

The collection is read-only

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.99.69 80069**

NotSupported @1@

An error occurred during execution of the application or command.
[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.99.70 80070**

Require primitive EdmType

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.99.71 80071**

NotSupported: @1@ @2@

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.99.72 80072**

The authData parameter con only be null at the first call to continue!

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.99.73 80073**

SSPI returned invalid number of output buffers

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.74 80074

_Dns hostname lookup timeout. Increase Timeout value in ConnectionString._

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.75 80075

_Could not load Npgsql.EntityFrameworkLegacy assembly, is it installed?_

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.76 80076

_Npgsql.EntityFrameworkLegacy assembly does not seem to contain the correct type!_

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.77 80077

_Invalid parameter name: @1@_

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.99.78 80078

**Parameter not found**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.79 80079

**The parameter already belongs to a collection**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.80 80080

**No parameter with the specified name exists in the collection**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.81 80081

**Only AuthenticationClearTextPassword and AuthenticationMD5Password supported for now. Received: @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.99.82 80082

key=value argument incorrect in ConnectionString

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.83 80083

expecting @1@=[True/False] value in ConnectionString

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.84 80084

expecting @1@=[Numeric] value in ConnectionString

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.85 80085

numeric value @1@ in ConnectionString exceeds maximum value @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.86 80086
numeric value @1@ in ConnectionString is below minimum value @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.87 80087

expecting @1@=[Protocol Version] value in ConnectionString

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.88 80088

The Transaction property can't be changed with an uncommitted transaction.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.89 80089

Only Text and StoredProcedure types supported!

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.90 80090

There have been errors reported by the backend.
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.91 80091

There have been errors on @1@():

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.92 80092

There have been errors on @1@@2@):

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.93 80093

The Connection is not set.

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.94 80094

Multiple queries not supported for this command type

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.95 80095

Cannot derive function parameter of type VARIADIC

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.96 80096

Cannot derive function parameter of type TABLE

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.97 80097

ConnectionString cannot be empty.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.99.98 80098

A SocketException occurred

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.99.99 80099**

*There have been errors on Open()*

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.100 Message Numbers Beginning with 80100**

**2.100.1 80100**

*Error in Close()*

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.100.2 80101**

*Insufficient backend data to describe dimension count in binary array header*

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.100.3 80102**

*Invalid array dimension count encountered in binary array header*

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.100.4 80103

**Insufficient backend data to describe all expected dimensions in binary array header**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.100.5 80104

**Out of backend data while reading binary array**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.100.6 80105

**Expected a hex character, got**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.100.7 80106

**Expected a hex character, got @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.100.8 80107

Expected an octal character, got @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.100.9 80108

Object is immutable

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.100.10 80109

Unexpected integer binary field length

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.100.11 80110

Unexpected float binary field length

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.100.12 80111

**Unable to cast data to NpgsqlPoint type**

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.100.13 80112

**Unable to cast data to Rectangle type**

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.100.14 80113

**Type already mapped**

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.100.15 80114

**NpgsqlDbType already aliased**

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.100.1680115**

*DbType already aliased*

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.100.1780116**

*Type already aliased*

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.
Chapter 3 Mirroring Controller Messages

This chapter explains messages output by Mirroring Controller.

3.1 Message Numbers Beginning with MCA00000

3.1.1 MCA00001

could not read file "(0)": exception=(1): (2)

[Description]
Could not read the file.

[Parameters]
(0): file name
(1): exception type
(2): exception detail

[System Processing]
Processing will be aborted.

[Action]
Identify the cause according to the message, and then remove it.

3.1.2 MCA00002

(0): wrong number of server ID in definition file "(1)"

[Description]
Invalid descriptions were found in definition file.

[Parameters]
(0): command name
(1): file name

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.1.3 MCA00003

(0): server ID not found in definition file "(1)" line (2)

[Description]
Invalid descriptions were found in definition file.

[Parameters]
(0): command name
3.1.4 MCA00004

**{0}: server ID specified in definition file "{1}" too long (max {2} bytes) line {3}**

*Description*
Invalid descriptions were found in definition file.

*Parameters*

- {0}: command name
- {1}: file name
- {2}: max length of server ID
- {3}: line number

*System Processing*
Processing will be aborted.

*Action*
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.1.5 MCA00005

**invalid host name or IP address "{1}" in definition file "{0}"**

*Description*
Invalid descriptions were found in definition file.

*Parameters*

- {0}: file name
- {1}: host name or IP address

*System Processing*
Processing will be aborted.

*Action*
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.1.6 MCA00006

**{0}: invalid port number in definition file "{1}" line {2}**
[Description]
Invalid descriptions were found in definition file.

[Parameters]

{0}: command name
{1}: file name
{2}: line number

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.1.7 MCA00007

{0}: invalid format specified in definition file "{1}" line {2}

[Description]
Invalid descriptions were found in definition file.

[Parameters]

{0}: command name
{1}: file name
{2}: line number

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.1.8 MCA00008

{0}: invalid value for parameter "{2}" in definition file "{1}"

[Description]
Invalid parameter was found in definition file.

[Parameters]

{0}: command name
{1}: file name
{2}: parameter name

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".
3.1.9  MCA00009

{0}: no value for parameter "(2)" specified in definition file "{1}"

[Description]
Invalid parameter was found in definition file.

[Parameters]
  (0): command name
  (1): file name
  (2): parameter name

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.1.10  MCA00010

{0}: unrecognized parameter "(2)" in definition file "{1}"

[Description]
Unrecognized parameter was found in definition file.

[Parameters]
  (0): file name
  (1): command name
  (2): parameter name

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.1.11  MCA00011

%s: no operation mode specified

[Description]
No operation mode was specified.

[Parameters]
  %s: command name

[System Processing]
Processing will be aborted.

[Action]
Re-execute after specifying operation modes.
**3.1.12 MCA00012**

%s: unrecognized operation mode "%%s"

[Description]
Unrecognized operation mode was specified.

[Parameters]
%\$s: command name
%\$s: operation mode

[System Processing]
Processing will be aborted.

[Action]
Re-execute after specifying operation modes.

**3.1.13 MCA00013**

%s: option "%%s" duplicated

[Description]
Certain option is duplicated.

[Parameters]
%\$s: command
%\$s: option

[System Processing]
Processing will be aborted.

[Action]
Re-execute after correcting options.

**3.1.14 MCA00014**

%s: "%%s" option conflicts with "%%s" option

[Description]
Options are conflicting.

[Parameters]
%\$s: command
%\$s: option
%\$s: option

[System Processing]
Processing will be aborted.

[Action]
Re-execute after correcting options.
3.1.15 MCA00015

%s: option requires an argument -- %s

[Description]
No argument specified for the option.

[Parameters]
%s: command
%s: option

[System Processing]
Processing will be aborted.

[Action]
Re-execute after correcting options.

3.1.16 MCA00016

%s: neither "%s" option nor environment variable "%s" specified

[Description]
Both of required option and equivalent environment variable were not specified.

[Parameters]
%s: command
%s: option
%s: environment variable

[System Processing]
Processing will be aborted.

[Action]
Re-execute after specifying required option or equivalent environment variable.

3.1.17 MCA00017

%s: out of memory

[Description]
Out of memory error occurred.

[Parameters]
%s: command

[System Processing]
Processing will be aborted.

[Action]
Obtain free memory space by stopping unnecessary processes or changing system settings.

3.1.18 MCA00018
out of memory

[Description]
Out of memory error occurred.

[System Processing]
Processing will be aborted.

[Action]
Obtain free memory space by stopping unnecessary processes or changing system settings.

3.1.19 MCA00019
detected an error on the monitored object "{0}({1})": {2}

[Description]
An error was detected on the monitored object.

[Parameters]
{0}: monitored object (server, database process, data storage destination directory, transaction log storage destination directory, tablespace directory)
{1}: object name (host name, database process name, directory path)
{2}: error detail ("no response:", "read/write error:" and detailed information)

[System Processing]
Perform failover or detaching.
If failover or detaching is already performed, these functions would be disabled.

[Action]
Refer to the description about workaround for failure of "Cluster Operation Guide (Database Multiplexing)".

3.1.20 MCA00020
unexpected error occurred in the monitoring process: {0}

[Description]
Monitoring process cannot continue because an unexpected error was occurred during its processing.

[Parameters]
{0}: error detail

[System Processing]
Continues processing.

[Action]
Refer to the description about workaround for failure of "Cluster Operation Guide (Database Multiplexing)".

3.1.21 MCA00021
starting to {2} from {0} to {1}.

[Description]
Switching standby server to primary server.
[Parameters]

(0): server ID of primary server
(1): server ID of standby server
(2): “fail over” or “switch over”

[Action]
If Mirroring Controller executed switching automatically, find the message output before this message from system log or event log to identify the cause of switching, and then work around according to the Action of the message.

### 3.1.22 MCA00022

- [2] completed.switched from (0) to (1)

[Description]
Switching standby server to primary server was completed.

[Parameters]

(0): server ID of primary server
(1): server ID of standby server
(2): “fail over” or “switch over”

### 3.1.23 MCA00023

- failed to (2) from (0) to (1)

[Description]
Failed to switch to primary server because of unexpected failure.

[Parameters]

(0): server ID of primary server
(1): server ID of standby server
(2): “fail over” or “switch over”

[System Processing]
Processing of switching will be aborted.

[Action]
Find the message output before this message from display, system log or event log, and then work around according to the Action of the message.

### 3.1.24 MCA00024

- starting to detach standby server "(0)" (1)

[Description]
Detaching standby server because of failure detected on standby server.

[Parameters]

(0): server ID
(1): “automatically” or none
If Mirroring Controller executed detaching automatically, find the message output before this message from system log or event log to identify the cause of detaching, and then work around according to the Action of the message.

3.1.25 MCA00025

`detach standby server "{0}" completed {1}`

**[Description]**
Detached standby server.

**[Parameters]**
- `{0}`: server ID
- `{1}`: "automatically" or none

3.1.26 MCA00026

`failed to {2} standby server "{0}" {1}`

**[Description]**
Failed to detach standby server.

**[Parameters]**
- `{0}`: server ID
- `{1}`: "automatically" or none
- `{2}`: "detach"

**[System Processing]**
Processing of detaching will be aborted.

**[Action]**
Refer to the description about workaround for failure of "Cluster Operation Guide (Database Multiplexing)".

3.1.27 MCA00027

`another "{0}" command is running`

**[Description]**
Cannot execute command with this operation mode because another command is running on the same or another server.

**[Parameters]**
- `{0}`: command name

**[System Processing]**
Processing will be aborted.

**[Action]**
There is a case executing another command. Wait for completion of another command on the same or another server, and then re-execute.

In addition, there are the following cases when using mc_ctl command.

There is a case under processing of a failover and an automatic detach by Mirroring Controller. Wait for completion of the processing under operation, and re-execute.
If any of the following cases occurs, there is a possibility that the processing of Mirroring Controller interrupts. Re-execute the mc_ctl command after restarting Mirroring Controller.

- When abnormality occurs in the network
- When another server is downed
- When Mirroring Controller is stopped forcibly

### 3.1.28 MCA00028

**communication timeout of Mirroring Controller occurred server:”{0}”**

[Description]

Either of the followings has occurred.

- communication timeout between mc_ctl command and Mirroring Controller process has occurred.
- communication timeout between Mirroring Controller processes have occurred.
- Terminating database instance was not completed in the specified time.

[Parameters]

{0}: server ("localhost" or server ID)

[System Processing]

Processing will be aborted.

[Action]

Completion synchronization for terminating database instance might have timed out, because connections remained. Disconnect all connections, and re-execute it.

Reduce CPU or network load caused by the other processes. If could not reduce it, extend remote_call_timeout in "server identifier".conf.

### 3.1.29 MCA00029

**could not create PID file ”{0}” of Mirroring Controller detail of cause:”{1}”**

[Description]

Could not create PID file of Mirroring Controller.

[Parameters]

{0}: file name
{1}: detail of cause

[System Processing]

Processing will be aborted.

[Action]

Identify the cause according to the message, and then remove it.

### 3.1.30 MCA00030

**could not remove PID file ”%s” of Mirroring Controller detail of cause:”%s”**

[Description]

Could not remove PID file of Mirroring Controller.
[Parameters]
  %s: file name
  %s: detail of cause

[Action]
  Identify the cause according to the message, and then remove it.

3.1.31 MCA00031

could not read PID file "%s" of Mirroring Controller detail of cause:"%s"

[Description]
  Could not read PID file of Mirroring Controller.

[Parameters]
  %s: file name
  %s: detail of cause

[Action]
  Identify the cause according to the message, and then remove it.

3.1.32 MCA00032

invalid contents of PID file "%s" of Mirroring Controller

[Description]
  The contents of PID file of Mirroring Controller is invalid.

[Parameters]
  %s: file name

[System Processing]
  Processing will be aborted.

[Action]
  The following causes could be considered.
  - The file was stored or replaced by mistake
  - The file was corrupted
  When starting Mirroring Controller, move or remove the file shown in the message.
  When stopping Mirroring Controller, terminate forcibly mc_keeper process and terminate forcibly mc_agent process with using OS command.

3.1.33 MCA00033

Mirroring Controller is already running

[Description]
  Mirroring Controller is already running.

[System Processing]
  Processing will be aborted.
If needed, stop Mirroring Controller, and re-execute.

3.1.34 MCA00034

cannot execute %s command because Mirroring Controller is not running

[Description]
Cannot execute Mirroring Controller command because Mirroring Controller process is not running.

[Parameters]
%s: command name

[System Processing]
Processing will be aborted.

[Action]
Start Mirroring Controller, and re-execute.

3.1.35 MCA00035

failed to start database instance

[Description]
Failed to start database instance.

[System Processing]
Processing will be aborted.

[Action]
Find the database message output in the log files of database output before this message, and then work around according to the Action of the message.

3.1.36 MCA00036

failed to stop database instance target server:"{0}"  

[Description]
Failed to stop database instance.

[Parameters]
{0}: target server ("localhost" or server ID)

[System Processing]
Processing will be aborted.

[Action]
Find the database message output in the log files of database on the target server output before this message, and then work around according to the Action of the message.

3.1.37 MCA00037

Mirroring Controller option is not installed
This functionality is enabled by installing Mirroring Controller option.

Processing will be aborted.

To use this functionality, install Mirroring Controller option, and then re-execute.

3.1.38 MCA00038

starting Mirroring Controller

Starting Mirroring Controller.

3.1.39 MCA00039

Mirroring Controller started

Mirroring Controller started.

3.1.40 MCA00040

failed to start Mirroring Controller

Failed to start Mirroring Controller.

Processing will be aborted.

Work around according to the Action of the message output before this message.

On Windows, if there is no message outputted before this message, please refer to the message outputted to an event log.

3.1.41 MCA00041

stopping Mirroring Controller

Stopping Mirroring Controller.

3.1.42 MCA00042

Mirroring Controller stopped target server: "({0})"

Mirroring Controller stopped.

Parameters

{0}: target server ("localhost" or server ID)
3.1.43 MCA00043

failed to stop Mirroring Controller target server: "{0}"

[Description]
Failed to stop Mirroring Controller.

[Parameters]
{0}: target server ("localhost" or server ID)

[System Processing]
Processing will be aborted.

[Action]
Identify the cause from system log or event log on the target server, and work around.

3.1.44 MCA00044

stopping Mirroring Controller forcibly

[Description]
Stopping Mirroring Controller forcibly.

3.1.45 MCA00045

stopped Mirroring Controller forcibly

[Description]
Mirroring Controller stopped forcibly.

3.1.46 MCA00046

enabled failover target server: "{0}"

[Description]
Enabled failover and automatic detach.

[Parameters]
{0}: target server ("localhost" or server ID)

3.1.47 MCA00047

failed to enable failover target server: "{0}"

[Description]
Failed to enable failover and automatic detach.

[Parameters]
{0}: target server ("localhost" or server ID)

[System Processing]
Processing will be aborted.
3.1.48 MCA00048

disabled failover target server: "{0}"

[Description]
Disabled failover and automatic detach.

[Parameters]
{0}: target server ("localhost" or server ID)

3.1.49 MCA00049

failed to disable failover target server: "{0}"

[Description]
Failed to disable failover and automatic detach.

[Parameters]
{0}: target server ("localhost" or server ID)

[System Processing]
Processing will be aborted.

[Action]
Identify the cause from messages on system log or event log, and work around.

3.1.50 MCA00050

{0}: server ID " {2}" specified with option " {1}" does not exist in definition file " {3}"

[Description]
Server ID specified with the option does not exist in definition file.

[Parameters]
{0}: command name
{1}: option
{2}: server ID
{3}: file name

[System Processing]
Processing will be aborted.

[Action]
Re-execute after correcting options or definition file.

3.1.51 MCA00051

{0}: The IP address or host name of the server where the command was executed in is not found on the definition file " {1}"
[Description]
Either of the followings has occurred.
- The IP address or host name that does not exist is specified.
- The network interface is stopped.

[Parameters]
{0}: command name
{1}: file name

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter descriptions of "Cluster Operation Guide (Database Multiplexing)".

3.1.52 MCA00052

{0}: wrong server ID "[2]" in definition file "[1]"

[Description]
Invalid descriptions were found in definition file.

[Parameters]
{0}: command name
{1}: file name
{2}: server ID

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter descriptions of "Cluster Operation Guide (Database Multiplexing)".

3.1.53 MCA00053

failed to detach standby server

[Description]
Failed to detach standby server
because processing of detaching cannot be continued by something failure.

[System Processing]
Processing of detaching will be aborted.

[Action]
Find the message output before this message from display, system log or event log, and then work around according to the Action of the message.

3.1.54 MCA00054
could not write to file "{}": exception={}: {}

[Description]
Failed to detach or synchronize standby server because could not write to the file.

[Parameters]
{0}: file name
{1}: exception type
{2}: exception detail

[System Processing]
Processing will be aborted.

[Action]
Check the error detail and eliminate causes, and detach or synchronize standby server according to "Actions when an Error Occurs" of "Cluster Operation Guide (Database Multiplexing)".

### 3.1.55 MCA00055

**unexpected error occurred in the monitoring process: {0}**

[Description]
Monitoring process could not continue because the unexpected error occurred.

[Parameters]
{0}: detail of cause

[System Processing]
Continues monitoring.

[Action]
Check the error detail and eliminate causes.
If you cannot clear the problem, contact Fujitsu technical support.

### 3.1.56 MCA00056

**unexpected error occurred: {0}**

[Description]
An unexpected error occurred.

[Parameters]
{0}: detail of cause

[System Processing]
Processing will be aborted.

[Action]
Check the error detail and eliminate cause.
If you cannot clear the problem, contact Fujitsu technical support.

### 3.1.57 MCA00057
failed to stop Mirroring Controller forcibly

[Description]
Failed to stop Mirroring Controller forcibly.

[System Processing]
Processing will be aborted.

[Action]
Check [Action] of the message output before this message, and re-execute.
If re-execution fails, terminate forcibly mc_keeper process and terminate forcibly mc_agent process with using OS command.

3.1.58 MCA00058

could not access path "%s" specified as a directory for Mirroring Controller detail of cause:"%s"

[Description]
could not access path specified as a directory for Mirroring Controller.

[Parameters]
%s: path name
%s: detail of cause

[System Processing]
Processing will be aborted.

[Action]
Check the error detail and eliminate causes.

3.1.59 MCA00059

system call error occurred:"%s" detail of cause:"%s"

[Description]
System call error occurred.

[Parameters]
%s: system call name
%s: detail of cause

[System Processing]
Processing will be aborted.

[Action]
Check the error detail and eliminate causes.

3.1.60 MCA00060

could not get installation path
Enterprise Postgres may not be installed.

Processing will be aborted.

Re-install Enterprise Postgres.

3.1.61 MCA00061
could not access path "%1$s" for parameter "%2$s" in definition file "%3$s" detail of cause:"%4$s"

could not access path for parameter in definition file.

Parameters:
%3$s: file name
%2$s: parameter name
%1$s: path name
%4$s: detail of cause

Processing will be aborted.

Check the error detail and eliminate causes.

3.1.62 MCA00062
promotion processing completed

Promotion processing completed.

3.1.63 MCA00063
promotion processing failed

Promotion processing failed.

Processing will be aborted.

Clear the problem according to [Action] of the message which was output before this message in system log or in database server log.

3.1.64 MCA00064
stopped database instance forcibly
[Description]
Database instance stopped forcibly.

3.1.65 MCA00065

database instance forcibly
[Description]
Failed to stop database instance forcibly.

[System Processing]
Processing will be aborted.

[Action]
Clear the problem according to [Action] of the message which was output before this message in system log or in database server log.

3.1.66 MCA00067

did not switch during a degeneration use
[Description]
Did not switch during a degeneration use.

[System Processing]
Processing will be aborted.

[Action]
If Mirroring Controller executed switching automatically, find the message output before this message from system log or event log to identify the cause of degeneration, and then eliminate causes according to [Action] of the message and try to switch with command.

3.1.67 MCA00068

{0}: users other than an instance administrator have the access privileges for definition file "{1}"
[Description]
users other than an instance administrator have the access privileges for definition file.

[Parameters]
{0}: command name
{1}: file name

[System Processing]
Processing will be aborted.

[Action]
Revoke all the access privileges for users other than an instance administrator.
MCA00069
could not execute because Mirroring Controller of the server "{0}" is not running
[Description]
Could not execute because Mirroring Controller is not running.

[Parameters]
{0}: server ID

[System Processing]
Processing will be aborted.

[Action]
Start Mirroring Controller, and try to switch with command.

3.1.68 MCA00070
Try "%-s --help" for more information.

[Description]
--help option can show more additional information.

[Parameters]
%-s: command name

[System Processing]
None.

[Action]
Check the message output before this message, and refer to descriptions shown by '--help' option.

3.1.69 MCA00071
Starting to {0}

[Description]
Switching standby server to primary server.

[Parameters]
{0}: "switch over"

3.1.70 MCA00072
Failed to {0}

[Description]
Failed to switch to primary server because of an unexpected failure.

[Parameters]
{0}: "switch over"

[System Processing]
Processing of switching will be aborted.

[Action]
Find the message output before this message from display, system log or event log, and then eliminate causes according to [Action] of the message.
3.1.71 MCA00073

**error detected in handling of the database instance detail of cause:{0}**

**[Description]**
Error detected in handling of the database instance for the following purposes.
- Obtain the port number of database instance
- Access to the data storage destination directory

**[Parameters]**
{0}: detail of cause

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the error detail and eliminate causes.

3.1.72 MCA00074

**could not read PID file "{0}" of Mirroring Controller detail of cause:{1}**

**[Description]**
Could not read PID file of Mirroring Controller.

**[Parameters]**
{0}: file name
{1}: detail of cause

**[Action]**
Identify the cause according to the message, and then remove it.

3.1.73 MCA00075

**invalid contents of PID file "{0}" of Mirroring Controller**

**[Description]**
The contents of PID file of Mirroring Controller is invalid.

**[Parameters]**
{0}: file name

**[System Processing]**
Processing will be aborted.

**[Action]**
The following causes could be considered.
- The file was stored or replaced by mistake
- The file was corrupted

When starting Mirroring Controller, move or remove the file shown in the message.
When stopping Mirroring Controller, terminate forcibly mc_keeper process and terminate forcibly mc_agent process with using OS command.
3.1.74 MCA00076

**cannot execute ":0": command because Mirroring Controller is not running**

[Description]
Cannot execute Mirroring Controller command because Mirroring Controller process is not running.

[Parameters]
\(0\): command name

[System Processing]
Processing will be aborted.

[Action]
Start Mirroring Controller, and re-execute.

3.1.75 MCA00077

**%s: argument of option "%s" is too long**

[Description]
Argument of option is too long.

[Parameters]
\(s\): command name
\(s\): option

[System Processing]
Processing will be aborted.

[Action]
Re-execute after correcting options.

3.1.76 MCA00078

**%s: invalid option -- %s**

[Description]
Invalid option.

[Parameters]
\(s\): command name
\(s\): option

[System Processing]
Processing will be aborted.

[Action]
Re-execute after correcting options.

3.1.77 MCA00079

**%s: unnecessary operand "%s"**
[Description]
Unnecessary operand.

[Parameters]
%s: command name
%s: operand

[System Processing]
Processing will be aborted.

[Action]
Re-execute after correcting operand.

3.1.78 MCA00080

%s: unrecognized operation mode or no operation mode specified

[Description]
Unrecognized operation mode or no operation mode specified.

[Parameters]
%s: command name

[System Processing]
Processing will be aborted.

[Action]
Re-execute after correcting or specifying operation mode.

3.1.79 MCA00081

start to enable the parameter "{1}" required to build in the standby server "{0}"

[Description]
Start to enable the parameter required to build in the standby server.

[Parameters]
{0}: server ID
{1}: parameter name

3.1.80 MCA00082

enableing the parameter "{1}" required to build in the standby server "{0}" completed

[Description]
Enabling the parameter required to build in the standby server completed.

[Parameters]
{0}: server ID
{1}: parameter name

3.1.81 MCA00083
failed to enable the parameter "{1}" required to build in the standby server "{0}"

[Description]
Failed to enable the parameter required to build in the standby server.

The following causes could be considered.
- another command is running
- can not access definition file
- parameter does not exist

[Parameters]
{0}: server ID
{1}: parameter name

[System Processing]
Processing will be aborted.

[Action]
- If the parameter is not set
  On the primary server, set the parameter of postgresql.conf file according to "parameter" description of "Cluster Operation Guide (Database Multiplexing)" and execute pg_ctl command with reload mode.
- Otherwise
  Find the message output before this message from display, system log or event log, and then eliminate causes according to [Action] of the message. Then, on the primary server, set the parameter of postgresql.conf file according to "parameter" description of "Cluster Operation Guide (Database Multiplexing)" and execute pg_ctl command with reload mode.

3.1.82 MCA00084

primary server is already running

[Description]
Primary server is already running.

[System Processing]
Processing will be aborted.

[Action]
The standby server might be running without creating recovery.conf. Create recovery.conf, and re-execute.

3.1.83 MCA00085

cannot start Mirroring Controller because database instance is not running

[Description]
Cannot start Mirroring Controller because database instance is not running.

[System Processing]
Processing will be aborted.

[Action]
Start database instance, and re-execute.
3.1.84 MCA00086

could not get state of database instance detail of cause:{0}

[Description]
Could not get state of database instance.

[Parameters]
{0}: detail of cause

[System Processing]
Processing will be aborted.

[Action]
Check the error detail and eliminate causes.

3.1.85 MCA00087

unusable character is included in path "%s" specified as a directory for Mirroring Controller

[Description]
Unusable character is included in path specified as a directory for Mirroring Controller.

[Parameters]
%s: path name

[System Processing]
Processing will be aborted.

[Action]
Correct the path specified as a directory for Mirroring Controller according to the message and mc_ctl command descriptions of "Reference".

3.1.86 MCA00088

%1$s: unusable character is included in server ID "%3$s" specified with option "%2$s"

[Description]
Unusable character is included in server ID specified with option.

[Parameters]
%1$s: command name
%2$s: option
%3$s: server ID

[System Processing]
Processing will be aborted.

[Action]
Correct the server ID specified with option according to the message and mc_ctl command descriptions of "Reference".

3.1.87 MCA00089
only instance administrator can execute this command

[Description]
Only instance administrator who created the directory for Mirroring Controller can execute this command.

[System Processing]
Processing will be aborted.

[Action]
Re-execute the command by the instance administrator who created the directory for Mirroring Controller.

3.1.88 MCA00090
could not read file "{0}": Permission denied

[Description]
No read permissions for the file.

[Parameters]
{0}: file name

[System Processing]
Processing will be aborted.

[Action]
Re-execute the command, after granting the read permissions to the file.

3.1.89 MCA00091
host name or IP address "{1}" of the primary server and the standby server in definition file "{0}" are same, but the --local-server option was not specified

[Description]
Host name or IP address of the primary server and the standby server in definition file are same, but the --local-server option was not specified.

[Parameters]
{0}: file name
{1}: host name or IP address

[System Processing]
Processing will be aborted.

[Action]
If the primary server and the standby server are built in the same server, execute the mc_ctl command with the --local-server option.
If the primary server and the standby server are built in the different server, correct host name or IP address in the definition file.

3.1.90 MCA00092
this feature is not available in this edition
[Description]
This feature is not available in this edition.

[System Processing]
Processing will be aborted

[Action]
Please install the right edition for this feature.

3.1.91 MCA00093

installation environment is destroyed

[Description]
Enterprise Postgres may not be installed correctly or may be destroyed.

[System Processing]
Processing will be aborted.

[Action]
Re-install Enterprise Postgres.

3.1.92 MCA00094

%s: invalid argument for option %s

[Description]
Invalid argument for option.

[Parameters]
%s: command name
%s: option

[System Processing]
Processing will be aborted.

[Action]
Re-execute after correcting options.

3.1.93 MCA00095

could not remove file or directory "{0}"

[Description]
Could not remove the file or the directory.

[Parameters]
{0}: file name or directory name

[System Processing]
Processing will be aborted.
[Action]
Check the status of the file or the directory and eliminate causes, and then remove it.

3.1.94 MCA00096

could not write file "(0)": exception=(1): (2)

[Description]
Could not write the file.

[Parameters]
(0): file name
(1): exception type
(2): exception detail

[System Processing]
Processing will be aborted.

[Action]
Identify the cause according to the message, and then remove it.

3.1.95 MCA00097

setup of standby server completed

[Description]
Setup of standby server completed.

3.1.96 MCA00098

setup of standby server failed

[Description]
Setup of standby server failed.

[System Processing]
Processing will be aborted.

[Action]
Find the message output before this message from display, system log or event log, and then eliminate causes according to [Action] of the message.

3.1.97 MCA00099

(0): server"'(1)"" is running as a standby server

[Description]
Could not continue processing because database instance to be duplicated is not running as a primary server.

[Parameters]
(0): command name
(1): server ID
[System Processing]
Processing will be aborted.

[Action]
Re-execute this command on the standby server to be set up.

3.2 Message Numbers Beginning with MCA00100

3.2.1 MCA00100

cannot execute \{0\} command because Mirroring Controller is running

[Description]
Cannot execute this command because Mirroring Controller is running on the server to be set up.

[Parameters]
\{0\}: command name

[System Processing]
Processing will be aborted.

[Action]
Execute this command on server where primary server is not running. If execute it on the right server, stop Mirroring Controller and then re-execute it.

3.2.2 MCA00101

cannot execute \{0\} command because database instance is running

[Description]
Cannot execute this command because database instance is running on the server to be set up.

[Parameters]
\{0\}: command name

[System Processing]
Processing will be aborted.

[Action]
Execute this command on server where primary server is not running. If execute it on the right server, stop database instance and then re-execute it.

3.2.3 MCA00102

\{0\}: invalid argument value \{2\} for option \{1\}

[Description]
Invalid argument for option.

[Parameters]
\{0\}: command name
\{1\}: option
(2): argument value

[System Processing]
Processing will be aborted.

[Action]
Re-execute after correcting argument value for the option.

### 3.2.4 MCA00103

**could not move file or directory from {0} to {1}**

[Description]
Could not move the file or the directory.

[Parameters]
{0}: source file or directory
{1}: target file or directory

[System Processing]
Processing will be aborted.

[Action]
Check the status of the file or the directory and eliminate causes, and then remove it.

### 3.2.5 MCA00104

**could not create directory {0}**

[Description]
Could not create the directory.

[Parameters]
{0}: target directory

[System Processing]
Processing will be aborted.

[Action]
Check the status of the directory and eliminate causes, and then remove it.

### 3.2.6 MCA00105

**could not read the access privileges of {0}**

[Description]
Could not read the access privileges.

[Parameters]
{0}: target directory
[System Processing]
  Processing will be aborted.

[Action]
  Check the status of the directory and eliminate causes, and then remove it.

3.2.7 MCA00106

failed to set the access privileges of {0}

[Description]
  Failed to set the access privileges.

[Parameters]
  {0}: target directory

[System Processing]
  Processing will be aborted.

[Action]
  Check the status of the directory and eliminate causes, and then remove it.

3.2.8 MCA00107

service "{0}" is not registered

[Description]
  Service is not registered.

[Parameters]
  {0}: Service name

[System Processing]
  Processing will be aborted.

[Action]
  Register service, and re-execute.

3.2.9 MCA00108

could not start service "{0}" detail of cause:"{1}"

[Description]
  Could not start service.

[Parameters]
  {0}: Service name
  {1}: detail of cause

[System Processing]
  Processing will be aborted.
3.2.10 MCA00109

could not start service "%s" detail of cause: "%s"
[Description]
Could not start service.

[Parameters]
%s: Service name
%s: detail of cause

[System Processing]
Processing will be aborted.

[Action]
Check the error detail and eliminate causes.

3.2.11 MCA00110

service "%s" is not registered
[Description]
Service is not registered.

[Parameters]
%s: Service name

[System Processing]
Processing will be aborted.

[Action]
Register service, and re-execute.

3.2.12 MCA00111

Mirroring Controller service "%s" has been registered
[Description]
Mirroring Controller service has been registered with Windows Service.

[Parameters]
%s: Service name

3.2.13 MCA00112

Mirroring Controller service "%s" has been unregistered
[Description]
Mirroring Controller service has been unregistered from Windows Service.
### 3.2.14 MCA00113

**service name "%^s" is already in use**

**[Description]**
Service name is already in use.

**[Parameters]**
%^s: Service name

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the service name, and re-execute.

### 3.2.15 MCA00114

**could not register service "%^s" detail of cause: "%^s"**

**[Description]**
An error occurred during registration of service.

**[Parameters]**
%^s: Service name
%^s: detail of cause

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the error detail and eliminate causes.

### 3.2.16 MCA00115

**could not unregister service "%^s" detail of cause: "%^s"**

**[Description]**
An error occurred during deregistration of service.

**[Parameters]**
%^s: Service name
%^s: detail of cause

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the error detail and eliminate causes.
3.2.17 MCA00116

%s: option "%%s" is required

[Description]
A required option is not specified.

[Parameters]
%s: command name
%s: option

[System Processing]
Processing will be aborted.

[Action]
Specify the required option, and re-execute.

3.2.18 MCA00117

no authority to execute this command

[Description]
Only the administrative user can run this command.

[System Processing]
Processing will be aborted.

[Action]
Invoke the administrator's prompt, and re-execute this command.

3.2.19 MCA00119

could not receive respons from {0} server({1})

[Description]
An error was detected on the server.

[Parameters]
{0}: monitored object (server)
{1}: server type (primary, standby)

[System Processing]
Perform failover or detaching.
If failover or detaching is already performed, these functions would be disabled.

[Action]
Refer to the description about workaround for failure of "Cluster Operation Guide (Database Multiplexing)".

3.2.20 MCA00120

detected streaming replication error in {0} server({1})
A streaming replication error was detected.

Parameters

0: monitored object (database process)
1: server type (primary, standby)

System Processing

Perform failover or detaching.

If failover or detaching is already performed, these functions would be disabled.

Action

Refer to the description about workaround for failure of "Cluster Operation Guide (Database Multiplexing)".

3.2.21 MCA00121

disk drives are available

[Description]
Database where data storage, transaction log storage and tablespaces are saved is working correctly.

3.2.22 MCA00122

a (0) server(1) is running normally

[Description]
A server is running normally.

Parameters

0: server type (primary, standby)
1: monitored object (server)

3.2.23 MCA00123

Streaming Replication has started

[Description]
Streaming Replication has started

3.2.24 MCA00124

postmaster is running in (0) server(1)

[Description]
postmaster is running

Parameters

0: server type (primary, standby)
1: monitored object (server)

3.2.25 MCA00125
failed to get the standby server information

[Description]
Failed to get the standby server information

[System Processing]
Perform failover or detaching.
If failover or detaching is already performed, these functions would be disabled.

[Action]
Refer to the description about workaround for failure of "Cluster Operation Guide (Database Multiplexing)".

3.2.26 MCA00126

{0} server({1}) was downed

[Description]
database server was downed

[Parameters]
{0}: server type (primary, standby)
{1}: monitored object (server)

[System Processing]
Perform failover or detaching.
If failover or detaching is already performed, these functions would be disabled.

[Action]
Refer to the description about workaround for failure of "Cluster Operation Guide (Database Multiplexing)".

3.2.27 MCA00127

You can promote the standby server

[Description]
You can promote the standby server

3.2.28 MCA00128

You cannot promote the standby server

[Description]
You cannot promote the standby server

3.2.29 MCA00129

detected a disk I/O error in {0} server({1})

[Description]
A disk I/O error was detected.

[Parameters]
{0}: server type (primary, standby)
[System Processing]
Perform failover or detaching.
If failover or detaching is already performed, these functions would be disabled.

[Action]
Refer to the description about workaround for failure of "Cluster Operation Guide (Database Multiplexing)".

3.2.30 MCA00130

starting to switch over forcibly

[Description]
Starting to switch over forcibly.

3.2.31 MCA00131

succeeded in switching over to {0} forcibly

[Description]
Switching standby server to primary server succeeded.

[Parameters]
{0}: server ID of standby server

3.2.32 MCA00132

failed to switch over to {0} forcibly

[Description]
Failed in processing of switching because of unexpected failure.

[Parameters]
{0}: server ID of standby server

[System Processing]
Processing of switching will be aborted.

[Action]
Find the message output before this message from display, system log or event log, and then work around according to the Action of the message.

3.2.33 MCA00133

starting to detach standby server forcibly

[Description]
Starting to detach standby server forcibly.

3.2.34 MCA00134

succeeded in detaching standby server "{0}" completed forcibly
Detached standby server succeeded.

3.2.35 MCA00135

**failed to detach standby server "\{0\}" forcibly**

**Description**
Failed to detach standby server.

**Parameters**
\{0\}: server ID

**System Processing**
Processing of detaching will be aborted.

**Action**
Find the message output before this message from display, system log or event log, and then work around according to the Action of the message.

3.2.36 MCA00136

\{0\}: the specified option is invalid: "\{1\}"

**Description**
the specified option is invalid.

**Parameters**
\{0\}: command name
\{1\}: option name

**System Processing**
Processing will be aborted.

**Action**
Re-execute after correcting options.

3.2.37 MCA00137

disabled standby server "\{0\}" to automatically switch because of canceling the synchronous replication for standby server

**Description**
Disabled the standby server to automatically switch because of canceling the synchronous replication for standby server.

**Parameters**
\{0\}: server ID

3.2.38 MCA00138
disabled standby server "{0}" to automatically switch

[Description]
Disabled the standby server to automatically switch.

[Parameters]
{0}: server ID

3.2.39 MCA00139

failed to disable standby server "{0}" to automatically switch

[Description]
Failed to disable the standby server to automatically switch.

[Parameters]
{0}: server ID

[System processing]
Processing will be aborted.

[Action]
The following causes could be considered.
- An error was detected in database server
- Timeout waiting for between Mirroring Controller processes of database server
Identify the cause from messages on system log or event log, and work around.

3.2.40 MCA00140

{0}: invalid server kind specified in definition file "{1}" line {2}

[Description]
Invalid descriptions were found in definition file.

[Parameters]
{0}: command name
{1}: file name
{2}: line number

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.2.41 MCA00141

{0}: server kind 'arbiter' do not specified in definition file "{2}" despite value 'arbitration' is specified parameter heartbeat_error_action in definition file "{1}"

Server kind 'arbiter' do not been specified in network.conf despite value 'arbitration' is specified parameter heartbeat_error_action in "server identifier".conf

Parameters

{0}: command name
{1}: file name
{2}: file name

System Processing

Processing will be aborted.

Action

Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.2.42 MCA00142

{0}: could not specify server kind 'arbiter' in definition file "{3}" because value '{2}' is specified parameter heartbeat_error_action in definition file "{1}"

Description

Could not specify server kind 'arbiter' in network.conf because value 'arbitration' is not specified parameter heartbeat_error_action in "server identifier".conf.

Parameters

{0}: command name
{1}: file name
{2}: message, arbitration, command, fallback
{3}: file name

System Processing

Processing will be aborted.

Action

Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.2.43 MCA00143

{0}: second port number to use for the arbitration network is not specified in definition file "{1}"

Description

Second port number to use for the arbitration network is not specified in network.conf.

Parameters

{0}: command name
{1}: file name

System Processing

Processing will be aborted.
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.2.44 MCA00144

{0}: could not specify second port number to use for the arbitration network in definition file "{3}" because value '{2}' is specified parameter heartbeat_error_action in definition file "{1}"

Could not specify second port number to use for the arbitration network in network.conf.

Parameters
{0}: command name
{1}: file name
{2}: message, command, fallback
{3}: file name

System Processing
Processing will be aborted.

Action
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.2.45 MCA00145

{0}: second IP address to use for the arbitration network is not specified in definition file "{1}"

Second IP address to use for the arbitration network is not specified in network.conf.

Parameters
{0}: command name
{1}: file name

System Processing
Processing will be aborted.

Action
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.2.46 MCA00146

{0}: cannot specify second IP Address on server kind 'arbiter' in definition file "{1}"

Cannot specify second IP Address on server kind 'arbiter' in network.conf.

Parameters
{0}: command name
{1}: file name
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.2.47 MCA00147

{0}: could not use parameter '{3}' because value '{2}' is specified parameter heartbeat_error_action in definition file "{1}"

[Description]
Could not use parameter in "server identifier".conf.

[Parameters]

{0}: command name
{1}: file name
{2}: message, arbitration, command, fallback
{3}: parameter

3.2.48 MCA00148

{0}: could not use option "{3}" because value '{2}' is specified parameter heartbeat_error_action in definition file "{1}"

[Description]
Could not use this option.

[Parameters]

{0}: command
{1}: file name
{2}: message, arbitration, command, fallback
{3}: option

3.2.49 MCA00149

requesting arbitration server "{0}" to connect
[Description]
Requesting arbitration server to connect.

[Parameters]
{0}: server ID

[System processing]
Requesting arbitration server to connect.

3.2.50 MCA00150

trying to connect to arbitration server "{0}"

[Description]
Trying to connect to arbitration server.

[Parameters]
{0}: server ID

[System processing]
Trying to connect to arbitration server until success.

3.2.51 MCA00151

succeeded in connection with arbitration server "{0}"

[Description]
Succeeded in connection with arbitration server.

[Parameters]
{0}: server ID

3.2.52 MCA00152

failed to connect to arbitration server "{0}" event:"{1}"

[Description]
Either of the followings has occurred.
- incorrect specification in network.conf
- error occurs in the network between database server and arbitration server
- Mirroring Controller Arbitration process is not running or in the stop processing
- Mirroring Controller Arbitration process or arbitration server detects an error

[Parameters]
{0}: server ID
{1}: "timeout" or "communication error"

[System Processing]
Processing will be aborted.

[Action]
Check the following and identify the cause, and eliminate cause.
- specification about server kind 'arbiter' in network.conf
- the value of arbiter_connect_timeout parameter in "server identifier".conf
- communication status between database server and arbitration server
- Mirroring Controller Arbitration process staring status
- the message in arbitration server

3.2.53 MCA00153
disconnected from arbitration server "(0)"
[Description]
Disconnected from arbitration server.

[Parameters]
(0): sever ID

3.2.54 MCA00154
timeout waiting for communication with Mirroring Controller Arbitration process server:"(0)"
[Description]
Timeout waiting for communication between Mirroring Controller process and Mirroring Controller Arbitration process.

[Parameters]
(0): server ID

[System Processing]
Try to connect to arbitration server.

[Action]
Check whether a network error between arbitration server and database server or an error of arbitration server was detected.
If an error was not detected, the value of arbiter_alive_timeout parameter in "server identifier".conf is too short.
Review and extend the value of arbiter_alive_timeout in "server identifier".conf.

3.2.55 MCA00155
failed to open communication environment detail of cause:"
[Description]
Failed to open communication environment.

[Parameters]
(0): detail of cause

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
3.2.56  MCA00156

**invalid port number for server "{0}" in definition file "{1}"**

[Description]
Invalid descriptions were found in definition file.

[Parameters]
(0): server ID  
(1): file name

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.2.57  MCA00157

**communication error with the arbitration server "{0}" occurred**

[Description]
Communication error with the arbitration server occurred.

[Parameters]
(0): server ID

[System Processing]
Trying to connect.

[Action]
Either of the followings has occurred.
- When Mirroring Controller Arbitration process of a arbitration server is not running
- When abnormality occurs in the network between a database server and arbitration server
Identify the cause from messages on system log or event log in arbitration server or database server, and work around.

3.2.58  MCA00158

**failed to start Mirroring Controller because of could not connect to arbitration server "{0}"**

[Description]
Failed to start Mirroring Controller because of could not connect to arbitration server.

[Parameters]
(0): server ID

[System processing]
Processing will be aborted.

[Action]
Work around according to the Action of the message output before this message.
On Windows, if there is no message outputted before this message, please refer to the message outputted to an event log.
requesting arbitration server "{1}" to arbitrate for database server "{0}"

[Description]
Requesting arbitration server to arbitrate for the target server.

[Parameters]
{0}: server ID
{1}: server ID

[System processing]
Requesting arbitration server to arbitrate for the target server.

3.2.59 MCA00160

the arbitration server "{0}" arbitrated status of database server "{1}" as sanity

[Description]
The arbitration server arbitrated status of database server as sanity.

[Parameters]
{0}: server ID
{1}: server ID

3.2.60 MCA00161

the request for arbitration was omitted because fencing command for a database server "{0}" was finished already

[Description]
The request for arbitration was omitted because fencing command for a database server was finished already.

[Parameters]
{0}: server ID

3.2.61 MCA00162

arbitration processing cannot request because the "{0}" command is carrying out

[Description]
Cannot request arbitration processing because command is running on the same or another server.

[Parameters]
{0}: command name

[System Processing]
Processing will be aborted.

3.2.62 MCA00163

timeout waiting for requesting arbitration server "{0}" to arbitrate

[Description]
Timeout waiting for requesting arbitration server to arbitrate.
[Parameters]
{0}: server ID

[System Processing]
Processing will be aborted.

[Action]
Switch or detach server in yourself according to descriptions of "Cluster Operation Guide (Database Multiplexing)".

3.2.63 MCA00164

requesting arbitration server "{(0)}" to fence database server "{(1)}"

[Description]
Requesting arbitration server to fence database server.

[Parameters]
{0}: server ID
{1}: server ID

[System Processing]
Requesting arbitration server to fence.

3.2.64 MCA00165

arbitration server "{(0)}" succeeded in fencing for database server "{(1)}"

[Description]
Arbitration server succeeded in executing fencing command for the target server.

[Parameters]
{0}: server ID
{1}: server ID

3.2.65 MCA00166

arbitration server "{(0)}" failed to fence for database server "{(1)}". detail of cause: check log file in arbitration server

[Description]
Arbitration process failed to execute fencing command for the target server.

[Parameters]
{0}: server ID
{1}: server ID

[System Processing]
Processing will be aborted.

[Action]
Check error message in arbitration server.
If needed, perform switch or detach the database server with manually operation according to descriptions of "Cluster Operation Guide (Database Multiplexing)".

3.2.66 MCA00167

timeout waiting for a request to fence to arbitration server "(0)"

[Description]
Timeout waiting for a request to fence to arbitration server.

[Parameters]
{0}: server ID

[System Processing]
Processing will be aborted.

[Action]
Switch or detach server in yourself according to descriptions of "Cluster Operation Guide (Database Multiplexing)".

3.2.67 MCA00168

arbitration server "(0)" rejected the request to fence database server "(1)"

[Description]
Either of the followings is esteemed.
- The arbitration server is executing arbitration process
- Fencing command was executed just before

[Parameters]
{0}: server ID
{1}: server ID

3.2.68 MCA00169

could not request "(1)" because of disconnecting from arbitration server "(0)"

[Description]
Could not request arbitration server to arbitrate, fence or disable automatically switch because of disconnecting.

[Parameters]
{0}: server ID
{1}: "arbitration" or "fencing" or "disable automatically switch"

[System Processing]
Processing will be aborted.

[Action]
Either of the followings has occurred.
- Mirroring Controller Arbitration process is not running in arbitration server
- Abnormality occurs in the network between database server and arbitration server
Identify the cause from messages on system log or event log in arbitration server or database server, and work around.
3.2.69 MCA00170
reject a request arbitration server "(1)" because database server "(0)" was being fencing

[Description]
The following requirements shouldn't be executed if it is requested from the database server which is a fencing target.
- request to arbitrate
- request to fence

[Parameters]
(0): server ID
(1): server ID

[Action]
Processing will be aborted.

3.2.70 MCA00171
requested arbitration server "(0)" to disable standby server "(1)" to automatically switch

[Description]
Requested arbitration server to disable the standby server to automatically switch.

[Parameters]
(0): server ID
(1): server ID

3.2.71 MCA00172
arbitration server "(0)" fenced standby server "(1)" because of failed to disable the standby server to automatically switch

[Description]
Arbitration server fenced the standby server because of failed to disable the standby server to automatically switch.

[Parameters]
(0): server ID
(1): server ID

3.2.72 MCA00173
arbitration server "(0)" tried to fence standby server "(1)" because of failed to disable the standby server to automatically switch, however fencing was failed

[Description]
Arbitration server tried to fence the standby server because of failed to disable the standby server to automatically switch, however fencing was failed.

[Parameters]
(0): server ID
(1): server ID
[System Processing]
Processing will be aborted.

[Action]
Switch or detach database server which error has been detected in yourself.
After, identify the cause from messages on system log or event log in arbitration server and work around.

3.2.73 MCA00174

requested standby server "{0}" to disable automatically switching

[Description]
Requested the standby server to disable automatically switching.

[Parameters]
{0}: server ID

3.2.74 MCA00175

{0}: cannot execute switching over forcibly other than on standby server

[Description]
Switching over forcibly needs to be executed only on standby server.

[Parameters]
{0}: command name

[System Processing]
Processing will be aborted.

[Action]
Check whether the server where the command was executed is correct.
Either, check that Mirroring Controller has been degenerate state yet.

3.2.75 MCA00176

{0}: cannot execute detaching forcibly other than on primary server

[Description]
Detaching forcibly needs to be executed only on primary server.

[Parameters]
{0}: command name

[System Processing]
Processing will be aborted.

[Action]
Check whether the server where the command was executed is correct.
Either, check that Mirroring Controller has been degenerate state yet.

3.2.76 MCA00177
forcible switch over to standby server "(0)" was requested although the data may be not synchronous with primary server

[Description]
Forcible switch over to standby server was requested although the data may be not synchronous with primary server.

[Parameters]
(0): server ID

[System Processing]
Processing will be continued.

[Action]
Check the data of database server and recovery as necessary, after forcible switch over will be completed.

3.2.77 MCA00178

database server which is able to be switched over is not found

[Description]
Database server which is able to be switched over is not found.

[System Processing]
Processing will be aborted.

3.2.78 MCA00179

starting to detach standby server

[Description]
Starting to detach standby server.

3.2.79 MCA00180

database server which needs to be detached is not found

[Description]
Database server which needs to be detached is not found.

[System Processing]
Processing will be aborted.

3.2.80 MCA00181

database server already has been detached

[Description]
Database server already has been detached.

[System Processing]
Processing will be aborted.

3.2.81 MCA00182
**failed to switch over forcibly**

**[Description]**
Failed in processing of switching because of unexpected failure.

**[System Processing]**
Processing of switching will be aborted.

**[Action]**
Find the message output before this message from display, system log or event log, and then work around according to the Action of the message.

**3.2.82 MCA00183**

**failed to detach standby server forcibly**

**[Description]**
Failed to detach standby server.

**[System Processing]**
Processing of detaching will be aborted.

**[Action]**
Find the message output before this message from display, system log or event log, and then work around according to the Action of the message.

**3.2.83 MCA00184**

**could not {1} because {0} server is abnormal**

**[Description]**
Could not switch over or detach because server is abnormal

**[Parameters]**

- {0}: "primary" or "standby"
- {1}: "switch over" or "detach"

**[System Processing]**
Processing will be aborted.

**[Action]**
Find the message output before this message in the log files on the target server, and work around according to the Action of the message.

**3.2.84 MCA00185**

**value of heartbeat_error_action is different from the value of other server "{0}"**

**[Description]**
Value of heartbeat_error_action is different from the value of other server "{0}".

**[Parameters]**

- {0}: server ID
Processing will be aborted.

[Action]
Re-execute after correcting value of heartbeat_error_action to the same value as another server.

3.2.85 MCA00186

**restarting Mirroring Controller process because an its error was detected: %s**

[Description]
Restarting Mirroring Controller process because an its error was detected.

[Parameters]
%s: error detail ("no response", "down")

[System Processing]
Restarting Mirroring Controller process.

3.2.86 MCA00187

**Mirroring Controller process was restarted**

[Description]
Mirroring Controller process was restarted.

3.2.87 MCA00188

**failed to restart Mirroring Controller**

[Description]
Failed to restart Mirroring Controller.

[System Processing]
Processing will be aborted.

[Action]
Work around according to the Action of the message output before this message.

On Windows, if there is no message outputted before this message, please refer to the message outputted to an event log.

After, execute the mc_ctl command to restart Mirroring Controller.

3.2.88 MCA00189

**could not access "%(0)" file detail of cause:"%(1)"**

[Description]
Could not access the process information file of OS.

[Parameters]
{0}: file name
{1}: detail of cause
[System Processing]
Processing will be aborted.

[Action]
Check the error detail and eliminate causes.

### 3.2.89 MCA00190

**invalid contents of “{0}” file**

**[Description]**
Invalid contents of /proc/[pid]/status file.

**[Parameters]**

- {0}: file name

**[System Processing]**
Processing will be aborted.

**[Action]**
Check whether mc_keeper process or mc_agent process exists with using OS command.

### 3.2.90 MCA00191

**executing arbitration command and inquiring the result of arbitration**

**[Description]**
Executing arbitration command that execute arbitration.

**[System processing]**
Degenerate depending on result of arbitration command.

### 3.2.91 MCA00192

**executing fencing command**

**[Description]**
Executing fencing command.

**[System processing]**
Processing will be continued depending on result of fencing command.

### 3.2.92 MCA00193

**starting degenerate because of result of arbitration command for database server “{0}” result:”{1}”**

**[Description]**
Starting degenerate because of result of arbitration command for target server.

**[parameters]**

- {0}: server ID
- {1}: return code of command
3.2.93 MCA00194

**Description**
Degeneracy is not executed because of result of arbitration command to target server.

**Parameters**
(0): server ID
(1): return code of command

3.2.94 MCA00195

**Description**
Timeout has occurred during arbitration command has been executing to target server.

**Parameters**
(0): server ID

**System Processing**
Processing will be aborted.

**Action**
Check the state of database server and switch or detach the server with manually operation according to descriptions of "Cluster Operation Guide (Database Multiplexing)" as necessary.
When find process ID of arbitration command, terminate forcibly by using OS command.

3.2.95 MCA00196

**Description**
Multiple synchronous standby servers can not be monitored by Mirroring Controller.

**Parameters**
(0): command name

**System Processing**
Processing will be aborted.

**Action**
Re-execute after specifying single standby server to synchronous_standby_names.

3.2.96 MCA00197

**Description**
Status of the target server was not arbitrated as sanity by arbitration server.
[Parameters]

(0): server ID
(1): server ID

[System processing]
Start degenerate processing.

3.2.97 MCA00198

fencing command for database server "(0)" succeeded: result:"(1)"

[Description]
Fencing command for database server succeeded.

[parameters]
(0): server ID
(1): return code of command

[System processing]
Processing will be continued.

3.2.98 MCA00199

fencing command for database server "(0)" failed: result:"(1)"

[Description]
Fencing command for database server failed.

[parameters]
(0): server ID
(1): return code of command

[System processing]
Processing will be aborted.

[Action]
Check the error detail and eliminate causes.
Switch or detach the server with manually operation according to descriptions of "Cluster Operation Guide (Database Multiplexing)" as necessary.

MCA00200
timeout waiting for the fencing command

[Description]
Timeout waiting for the fencing command.

[System processing]
Processing will be aborted.

[Action]
The value of fencing_command_timeout parameter in server identifer.conf is too short.
Review and extend the value of fencing_command_timeout parameter in arbitration.conf.
When find process ID of fencing command, terminate forcibly by using OS command.
3.3 Message Numbers Beginning with MCA00200

3.3.1 MCA00201

executing state-transition-command kind of command:{0}
[Description]
Executing state-transition-command.
[parameters]
{0}: kind of state-transition-command(post-promote, pre-detach, post-attach)

3.3.2 MCA00202

state-transition-command has done kind of command:{0}
[Description]
State-transition-command has done.
[parameters]
{0}: kind of state-transition-command(post-promote, pre-detach, post-attach)
[System processing]
Processing will be continued.

3.3.3 MCA00203

timeout has occurred to state-transition-command kind of command:{0}
[Description]
Timeout has occurred to state-transition-command.
[parameters]
{0}: kind of state-transition-command(post-promote, pre-detach, post-attach)
[System Processing]
Processing of state-transition-command will be aborted.
[Action]
If the process of state-transition-command remained, terminate the process forcibly by using OS command. After checking processing status of state-transition-command, exec the processing of the command manually.

3.3.4 MCA00204

detected recovery from an error on monitoring of table space({0})
[Description]
detected recovery from an error on monitoring of table space
[Parameters]
{0}: directory path of table space

3.3.5 MCA00205

detected no responce on monitoring of database process
[Description]  
Detected no response on monitoring of database process.

[System Processing]  
Continues processing.

[Action]  
Check the error detail and eliminate causes.

3.3.6 MCA00206  
detected recovery from no response on monitoring of database process  
[Description]  
Detected recovery from no response on monitoring of database process.

3.3.7 MCA00207  
{0}: the user name specified in parameter db_instance_username of definition file "{1}" is not database superuser  
[Description]  
The user name specified in parameter db_instance_username is not database superuser.

[Parameters]  
{0}: command name  
{1}: file name

[System Processing]  
Processing will be aborted.

[Action]  
Re-execute after specifying a database superuser.

3.3.8 MCA00208  
{0}: the user name specified in parameter db_instance_username of definition file "{1}" does not exist  
[Description]  
The user name specified in parameter db_instance_username does not exist.

[Parameters]  
{0}: command name  
{1}: file name

[System Processing]  
Processing will be aborted.

[Action]  
Re-execute after specifying a database superuser.
3.3.9 MCA00209

{0}: could not specify second IP address to use for the arbitration network in definition file "{3}" because value '{2}' is specified parameter heartbeat_error_action in definition file "{1}"

[Description]
Could not specify second IP address to use for the arbitration network in network.conf.

[Parameters]
{0}: command name
{1}: file name
{2}: message, command, fallback
{3}: file name

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.3.10 MCA00210

{0}: cannot specify second port number on server kind 'arbiter' in definition file "{1}"

[Description]
Cannot specify second port number on server kind 'arbiter' in network.conf.

[Parameters]
{0}: command name
{1}: file name

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.4 Message Numbers Beginning with MCR00000

3.4.1 MCR00001

could not read file "{0}": exception={1}: {2}

[Description]
Could not read the file.

[Parameters]
{0}: file name
{1}: exception type
{2}: exception detail
[System Processing]
Processing will be aborted.

[Action]
Identify the cause according to the message, and then remove it.

3.4.2 MCR00002

{0}: wrong number of server ID in definition file "{1}"

[Description]
Invalid descriptions were found in definition file.

[Parameters]
{0}: command name
{1}: file name

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.4.3 MCR00003

{0}: server ID specified in definition file "{1}" too long (max {2} bytes) line {3}

[Description]
Invalid descriptions were found in definition file.

[Parameters]
{0}: command name
{1}: file name
{2}: max length of server ID
{3}: line number

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.4.4 MCR00004

{0}: wrong server ID in definition file "{1}"

[Description]
Could not use a server ID with same name in network.conf.
[Parameters]
(0): command name
(1): file name

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter descriptions of "Cluster Operation Guide (Database Multiplexing)".

3.4.5 MCR00005

invalid host name or IP address "{1}" in definition file "{0}"

[Description]
Invalid descriptions were found in definition file.

[Parameters]
(0): file name
(1): host name or IP address

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.4.6 MCR00006

{0}: invalid port number in definition file "{1}" line {2}

[Description]
Invalid descriptions were found in definition file.

[Parameters]
(0): command name
(1): file name
(2): line number

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.4.7 MCR00007

{0}: invalid format specified in definition file "{1}" line {2}
[Description]
Invalid descriptions were found in definition file.

[Parameters]
{0}: command name
{1}: file name
{2}: line number

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

### 3.4.8 MCR00008

{0}: invalid value for parameter "{2}" in definition file "{1}"

[Description]
Invalid parameter was found in definition file.

[Parameters]
{0}: command name
{1}: file name
{2}: parameter name

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

### 3.4.9 MCR00009

{0}: no value for parameter "{2}" specified in definition file "{1}"

[Description]
Invalid parameter was found in definition file.

[Parameters]
{0}: command name
{1}: file name
{2}: parameter name

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".
3.4.10 MCR00010

{0}: unrecognized parameter "(2)" in definition file "(1)"

[Description]
Unrecognized parameter was found in definition file.

[Parameters]
(0): file name
(1): command name
(2): parameter name

[System Processing]
Processing will be aborted.

[Action]
Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.4.11 MCR00011

%{s}: option "%{s}" duplicated

[Description]
Certain option is duplicated.

[Parameters]
%{s}: command
%{s}: option

[System Processing]
Processing will be aborted.

[Action]
Re-execute after correcting options.

3.4.12 MCR00012

%{s}: "%{s}" option conflicts with "%{s}" option

[Description]
Options are conflicting.

[Parameters]
%{s}: command
%{s}: option
%{s}: option

[System Processing]
Processing will be aborted.
3.4.13 MCR00013

%s: option requires an argument -- %s

[Description]
No argument specified for the option.

[Parameters]
%s: command
%s: option

[System Processing]
Processing will be aborted.

[Action]
Re-execute after correcting options.

3.4.14 MCR00014

%s: neither "%s" option nor environment variable "%s" specified

[Description]
Both of required option and equivalent environment variable were not specified.

[Parameters]
%s: command
%s: option
%s: environment variable

[System Processing]
Processing will be aborted.

[Action]
Re-execute after specifying required option or equivalent environment variable.

3.4.15 MCR00015

%s: argument of option "%s" is too long

[Description]
Argument of option is too long.

[Parameters]
%s: command name
%s: option

[System Processing]
Processing will be aborted.
[Action]
Re-execute after correcting options.

3.4.16 MCR00016

%s: invalid option -- %s
[Description]
Invalid option.

[Parameters]
  %s: command name
  %s: option

[System Processing]
Processing will be aborted.

[Action]
Re-execute after correcting options.

3.4.17 MCR00017

%s: option "%s" is required
[Description]
A required option is not specified.

[Parameters]
  %s: command name
  %s: option

[System Processing]
Processing will be aborted.

[Action]
Specify the required option, and re-execute.

3.4.18 MCR00018

%s: unnecessary operand "%s"
[Description]
Unnecessary operand.

[Parameters]
  %s: command name
  %s: operand

[System Processing]
Processing will be aborted.

[Action]
Re-execute after correcting operand.
3.4.19 MCR00019

%s: unrecognized operation mode or no operation mode specified

[Description]
Unrecognized operation mode or no operation mode specified.

[Parameters]
%s: command name

[System Processing]
Processing will be aborted.

[Action]
Re-execute after correcting or specifying operation mode.

3.4.20 MCR00020

Try "%%s --help" for more information.

[Description]
--help option can show more additional information.

[Parameters]
%s: command name

[System Processing]
None.

[Action]
Check the message output before this message, and refer to descriptions shown by '--help' option.

3.4.21 MCR00021

%s: out of memory

[Description]
Out of memory error occurred.

[Parameters]
%s: command

[System Processing]
Processing will be aborted.

[Action]
Obtain free memory space by stopping unnecessary processes or changing system settings.

3.4.22 MCR00022

another "%(0)" command is running

[Description]
Cannot execute command with this operation mode because another command is running on the same or another server.
[Parameters]

{0}: command name

[System Processing]
Processing will be aborted.

[Action]
There is a case executing another command. Wait for completion of another command on the same or another server, and then re-execute.

In addition, there are the following cases when using mc_arb command.

There is a case under processing of an arbitration by Mirroring Controller Arbitration process. Wait for completion of the processing under operation, and re-execute.

If any of the following cases occurs, there is a possibility that the processing of Mirroring Controller Arbitration process interrupts. Re-execute the mc_arb command after restarting Mirroring Controller Arbitration process.

- When abnormality occurs in the network
- When another server is downed
- When Mirroring Controller Arbitration process is stopped forcibly

3.4.23 MCR00023

Mirroring Controller Arbitration process is already running

[Description]
Mirroring Controller Arbitration process is already running.

[System Processing]
Processing will be aborted.

[Action]
If needed, stop Mirroring Controller Arbitration process, and re-execute.

If could not start although Mirroring Controller Arbitration process not started, refer to the description about workaround for failure of "Cluster Operation Guide (Database Multiplexing)".

3.4.24 MCR00024

cannot execute %s command because Mirroring Controller Arbitration process is not running

[Description]
Cannot execute Mirroring Controller Arbitration process command because Mirroring Controller Arbitration process is not running.

[Parameters]

%s: command name

[System Processing]
Processing will be aborted.

[Action]
Start Mirroring Controller Arbitration process, and re-execute.
3.4.25 MCR00025

**timeout waiting for communication with Mirroring Controller Arbitration process**

[Description]
Timeout waiting for communication with Mirroring Controller Arbitration process.

[System processing]
Processing will be aborted.

[Action]
Check whether a network error was detected.
If an error was not detected, there is a possibility that the load of the system may be the cause, please re-execute after a while.

3.4.26 MCR00026

could not create PID file of Mirroring Controller Arbitration process detail of cause:"{0}"

[Description]
Could not create PID file of Mirroring Controller Arbitration process.

[Parameters]
{0}: detail of cause

[System Processing]
Processing will be aborted.

[Action]
Identify the cause according to the message, and then remove it.

3.4.27 MCR00027

could not remove PID file of Mirroring Controller Arbitration process detail of cause:"%s"

[Description]
Could not remove PID file of Mirroring Controller Arbitration process.

[Parameters]
%s: detail of cause

[Action]
Identify the cause according to the message, and then remove it.

3.4.28 MCR00028

could not read PID file of Mirroring Controller Arbitration process detail of cause:"%s"

[Description]
Could not read PID file of Mirroring Controller Arbitration process.

[Parameters]
%s: detail of cause
3.4.29 MCR00029

Invalid contents of PID file "%s" of Mirroring Controller Arbitration process

[Description]
The contents of PID file of Mirroring Controller Arbitration process is invalid.

[Parameters]
%s: file name

[System Processing]
Processing will be aborted.

[Action]
The following causes could be considered.
- The file was stored or replaced by mistake
- The file was corrupted

When starting Mirroring Controller Arbitration process, move or remove the file shown in the message.
When stopped Mirroring Controller Arbitration process, find ID of process named "mc_arbiter" and terminate forcibly by using OS command.

3.4.30 MCR00030

Unexpected error occurred: {0}

[Description]
An unexpected error occurred.

[Parameters]
{0}: detail of cause

[System Processing]
Processing will be aborted.

[Action]
Check the error detail and eliminate cause.
If you cannot clear the problem, contact Fujitsu technical support.

3.4.31 MCR00031

System call error occurred:"%s" detail of cause:"%s"

[Description]
System call error occurred.

[Parameters]
%s: system call name
%s: detail of cause
3.4.32 MCR00032

failed to open communication environment detail of cause:"{0}" 

[Description] 
Failed to open communication environment.

[Parameters] 
{0}: detail of cause

[Action] 
To investigate the cause of the occurrence from the message, and remove cause.

3.4.33 MCR00033

could not read file "{(0)}": Permission denied 

[Description] 
No read permissions for the file.

[Parameters] 
{0}: file name

[Action] 
Re-execute the command, after granting the read permissions to the file.

3.4.34 MCR00034

could not read the access privileges of {0} 

[Description] 
Could not read the access privileges.

[Parameters] 
{0}: target directory

[Action] 
Check the status of the directory and eliminate causes, and then remove it.
3.4.35 MCR00035

failed to set the access privileges of {0}

[Description]
Failed to set the access privileges.

[Parameters]
{0}: target directory

[System Processing]
Processing will be aborted.

[Action]
Check the status of the directory and eliminate causes, and then remove it.

3.4.36 MCR00036

could not get installation path

[Description]
FUJITSU Enterprise Postgres may not be installed.

[System Processing]
Processing will be aborted.

[Action]
Re-install FUJITSU Enterprise Postgres.

3.4.37 MCR00037

could not access "{0}" file detail of cause:"{1}"

[Description]
Could not access the process information file of OS.

[Parameters]
{0}: file name
{1}: detail of cause

[System Processing]
Processing will be aborted.

[Action]
Check the error detail and eliminate causes.

3.4.38 MCR00038

invalid contents of "{0}" file

[Description]
Invalid contents of /proc/[pid]/status file.
3.4.39 MCR00039

_unusable character is included in path "%s" specified as a directory for Mirroring Controller Arbitration process_

[Description]
Unusable character is included in path specified as a directory for Mirroring Controller Arbitration process.

[Parameters]
%s: path name

[System Processing]
Processing will be aborted.

[Action]
Correct the path specified as a directory for Mirroring Controller Arbitration process according to the message and mc_arb command descriptions of "Reference".

3.4.40 MCR00040

could not access path "%s" specified as a directory for Mirroring Controller Arbitration process
detail of cause:"%s"

[Description]
Could not access path specified as a directory for Mirroring Controller Arbitration process.

[Parameters]
%s: path name
%s: detail of cause

[System Processing]
Processing will be aborted.

[Action]
Check the error detail and eliminate causes.

3.4.41 MCR00041

{0}: IP address "{2}" specified for parameter "my_address" in definition file "{1}" is not found

[Description]
IP address specified for my_address parameter in arbitration.conf is not found.

[Parameters]
{0}: command name
[System Processing]
Processing will be aborted.

[Action]
Check whether IP address specified by my_address parameter in arbitration.conf is correct or IP address is valid.

3.4.42 MCR00042

could not access path "(0)" for parameter "(1)" in definition file "(2)" detail of cause:"(3)"

[Description]
Either of the followings has occurred.
- File does not exist
- You do not specify a file
- Could not read the access privileges

[Parameters]
(0): path name
(1): parameter name
(2): file name
(3): detail of cause

[System Processing]
Processing will be aborted.

[Action]
Check the error detail and eliminate causes.

3.4.43 MCR00043

(0): users other than a command executor have the access privileges for definition file "(1)"

[Description]
Users other than a command executor have the access privileges for definition file.

[Parameters]
(0): command name
(1): file name

[System Processing]
Processing will be aborted.

[Action]
Revoke all the access privileges for any users other than a command executor.

3.4.44 MCR00044

only the owner of definition file "(0)" can execute this command

- 1982 -
[Parameters]
{0}: file name

[Description]
Only the owner who created the directory for Mirroring Controller Arbitration process can execute this command.

[System Processing]
Processing will be aborted.

[Action]
Re-execute the command by the owner who created the directory for Mirroring Controller Arbitration process.

3.4.45 MCR00045

**starting Mirroring Controller Arbitration process**

[Description]
Starting Mirroring Controller Arbitration process.

3.4.46 MCR00046

**Mirroring Controller Arbitration process started**

[Description]
Mirroring Controller Arbitration process started.

3.4.47 MCR00047

**failed to start Mirroring Controller Arbitration process**

[Description]
Failed to start Mirroring Controller Arbitration process.

[System Processing]
Processing will be aborted.

[Action]
Work around according to the Action of the message output before this message.
On Windows, if there is no message outputted before this message, please refer to the message outputted to an event log.

MCR00048

**failed to report Mirroring Controller Arbitration process status**

[Description]
Failed to report Mirroring Controller Arbitration process status.

[System Processing]
Processing will be aborted.

[Action]
Work around according to the Action of the message output before this message.
On Windows, if there is no message outputted before this message, please refer to the message outputted to an event log.
3.4.48 MCR00049

**stopping Mirroring Controller Arbitration process**

[Description]
Stopping Mirroring Controller Arbitration process.

3.4.49 MCR00050

**Mirroring Controller Arbitration process stopped**

[Description]
Mirroring Controller Arbitration process stopped.

3.4.50 MCR00051

**could not stop Mirroring Controller Arbitration process because database server connects**

[Description]
Could not stop Mirroring Controller Arbitration process because database server connects.

[System Processing]
Processing will be aborted.

[Action]
Execute mc_arb status command to find connected database server.
Re-execute after stopping Mirroring Controller on database server.

3.4.51 MCR00052

**failed to stop Mirroring Controller Arbitration process**

[Description]
Failed to stop Mirroring Controller Arbitration process.

[System Processing]
Processing will be aborted.

[Action]
Identify the cause from system log or event log on the target server, and work around.

3.4.52 MCR00053

**stopping Mirroring Controller Arbitration process forcibly**

[Description]
Stopping Mirroring Controller Arbitration process forcibly.

3.4.53 MCR00054

**Mirroring Controller Arbitration process stopped forcibly**

[Description]
Mirroring Controller Arbitration process stopped forcibly.
3.4.54 MCR00055

failed to stop Mirroring Controller Arbitration process forcibly

[Description]
Failed to stop Mirroring Controller Arbitration process forcibly.

[System Processing]
Processing will be aborted.

[Action]
Check [Action] of the message output before this message, and re-execute.
If re-execution fails, terminate forcibly mc_arbiter process with OS command.

3.4.55 MCR00056

database server "(0)" requested to arbitrate for database server "(1)" status

[Description]
Accepts a request to arbitrate from the database server which has detected an error.

[Parameters]
(0): server ID
(1): server ID

3.4.56 MCR00057

arbitrating the status of database server "(0)"

[Description]
Arbitrating for the status of the database server which was detected an error.

[Parameters]
(0): server ID

[System Processing]
Arbitrating for the status of the database server which was detected an error.

3.4.57 MCR00058

received response from database server "(0)"

[Description]
A server is running normally.

[Parameters]
(0): server ID

[System Processing]
Return result to database server.

3.4.58 MCR00059
could not receive response from database server "{{0}}"

[Description]
Detected the database server to be abnormal.

[Parameters]
{{0}}: server ID

[System Processing]
Execute fencing command.

3.4.59 MCR00060

rejected a request to arbitrate from database server "{{0}}"

[Description]
Either of the followings has occurred.
- Fencing command was executed just before
- The arbitration server was in the stop processing

[Parameters]
{{0}}: server ID

[System Processing]
Rejected a request to arbitrate from the database server.

3.4.60 MCR00061

database server "{{0}}" requested to fence database server "{{1}}"

[Description]
Accepted a request to fence from the database server which has detected an error.

[Parameters]
{{0}}: server ID
{{1}}: server ID

3.4.61 MCR00062

executing fencing command

[Description]
Executing fencing command.

[System processing]
Executing fencing command.

3.4.62 MCR00063

fencing command for database server "{{0}}" succeeded: result:"{{1}}"

[Description]
Fencing command for database server succeeded.
[parameters]
{0}: server ID
{1}: return code of command

[System processing]
Returning result to database server.

3.4.63 MCR00064
fencing command for database server "{(0)}" failed: result:"{(1)}"

[Description]
Fencing command for database server failed.
[parameters]
{0}: server ID
{1}: return code of command
[System processing]
Returning result to database server.

3.4.64 MCR00065
timeout waiting for the fencing command

[Description]
Timeout waiting for the fencing command.
[System processing]
Processing will be aborted.

[Action]
The value of fencing_command_timeout parameter in arbitration.conf is too short.
Review and extend the value of fencing_command_timeout parameter in arbitration.conf.
When find process ID of fencing command, terminate forcibly by using OS command.

3.4.65 MCR00066
rejected a request to fence from database server "{(0)}"

[Description]
Either of the followings is esteemed.
- The arbitration server has been executing arbitration process
- Fencing command has been executed just before
- The arbitration server was in the stop processing

[Parameters]
{0}: server ID

[System Processing]
Rejected a request to fence from database server.
3.4.66 MCR00067

rejected a request to fence from database server "(0)" because the database server is a fencing target

[Description]
The following requirements shouldn't be executed if it is requested from the database server which is a fencing target.
- request to arbitrate
- request to fence
- request to disable automatically switch

[Parameters]
(0): server ID

[Action]
Processing will be aborted.

3.4.67 MCR00068

database server "(0)" requested to disable standby server "(1)" to automatically switch

[Description]
Accepted a request to disable the standby server to automatically switch.

[Parameters]
(0): sever ID
(1): sever ID

3.4.68 MCR00069

requested standby server "(0)" to disable automatically switching

[Description]
Requested the standby server to disable automatically switching.

[Parameters]
(0): server ID

3.4.69 MCR00070

disabled standby server "(0)" to automatically switch

[Description]
Disabled the standby server to automatically switch.

[Parameters]
(0): server ID

3.4.70 MCR00071

failed to disable standby server "(0)" to automatically switch
[Description]
Failed to disable the standby server to automatically switch.

[Parameters]
{0}: server ID

[System processing]
Executing fencing command.

3.4.71 MCR00072
omitted to disable standby server "{0}" to automatically switch

[Description]
It is not necessary to disable the standby server to automatically switch because a fencing for this database server is executing.

[Parameters]
{0}: server ID

[System processing]
Processing will be aborted.

3.4.72 MCR00073
connection was requested from database server "{0}"

[Description]
Connection was requested from database server.

[Parameters]
{0}: server ID

[Description]
Try connection to database server.

3.4.73 MCR00074
succeeded in connection with Mirroring Controller process of database server "{0}"

[Description]
Succeeded in connection with Mirroring Controller process of database server.

[Parameters]
{0}: server ID

3.4.74 MCR00075
rejected a request to connect from database server "{0}" because of during the fencing command execution

[Description]
Rejected a request to connect from database server because of during the fencing command execution.
[Parameters]
{0}: server ID

[Action]
Rejected a request to connect from database server.

3.4.75 MCR00076

disconnected from the database server "{0}"

[Description]
Disconnected from the database server.

[Parameters]
{0}: server ID

3.4.76 MCR00077

the disallowed IP address "{0}" tried to access

[Description]
The IP address which is different from the IP address in network.conf tried to access.
[parameters]
{0}: IP Adresses

[System Processing]
Connection will be rejected.

3.4.77 MCR00078

tried to access from database server with installed different product version IP address: "{0}"

[Description]
tried to access from database server with installed different product version.

[parameters]
{0}: IP address

[System Processing]
Connection will be rejected

[Action]
Match the product version level between arbitration server and database server.

3.4.78 MCR00079

the invalid server ID tried to access IP address: "{0}"

[Description]
The server ID which is different from the server ID in network.conf tried to access.

[Parameters]
{0}: IP address
3.4.79 MCR00080

**the combination of server IDs of arbitration server is incompatible with that of database server "{0}"**

**Description**

The combination of server IDs of arbitration server is incompatible with that of the database server.

**Parameters**

- {0}: server ID

**System Processing**

Processing will be aborted.

**Action**

Check the network.conf of both database server and arbitration sever, and correct the file.

3.4.80 MCR00081

**the invalid packet received**

**Description**

The invalid packet received.

**System Processing**

Connection will be rejected.

3.4.81 MCR00082

**{0}: invalid server kind specified in definition file "{1}" line {2}**

**Description**

Invalid descriptions were found in definition file.

**Parameters**

- {0}: command name
- {1}: file name
- {2}: line number

**System Processing**

Processing will be aborted.

**Action**

Correct the definition file according to the message and parameter description of "Cluster Operation Guide (Database Multiplexing)".

3.4.82 MCR00083

**%s: invalid argument for option %s**
[Description]
Invalid argument for option.

[Parameters]
%$s: command name
%$s: option

[System Processing]
Processing will be aborted.

[Action]
Re-execute after correcting options.

3.4.83 MCR00084

installation environment is destroyed

[Description]
FUJITSU Enterprise Postgres may not be installed correctly or may be destroyed.

[System Processing]
Processing will be aborted.

[Action]
Re-install FUJITSU Enterprise Postgres.

3.4.84 MCR00085

no authority to execute this command

[Description]
Only the user who possesses an administrative authority can run this command.

[System Processing]
Processing will be aborted.

[Action]
Invoke the administrator's prompt, and re-execute this command.

3.4.85 MCR00086

failed to start service "{0}" detail of cause:"{1}"

[Description]
Failed to start service.

[Parameters]
{0}: Service name
{1}: detail of cause

[System Processing]
Processing will be aborted.
[Action]
Check the error detail and eliminate causes.

3.4.86 MCR00087

service "{(0)}" is not registered

[Description]
Service is not registered.

[Parameters]
(0): Service name

[System Processing]
Processing will be aborted.

[Action]
Register service, and re-execute.

3.4.87 MCR00088

service "%(s)" for Mirroring Controller Arbitration process was registered

[Description]
Service for Mirroring Controller Arbitration process was registered with Windows service.

[Parameters]
%(s): Service name

3.4.88 MCR00089

failed to register service "%(s)" detail of cause:"%(s)"

[Description]
An error occurred during registration of service.

[Parameters]
%(s): Service name
%(s): detail of cause

[System Processing]
Processing will be aborted.

[Action]
Check the error detail and eliminate causes.

3.4.89 MCR00090

service name "%(s)" is already in use

[Description]
Service name is already in use.
[Parameters]
  %s: Service name

[System Processing]
  Processing will be aborted.

[Action]
  Check the service name, and re-execute.

3.4.90 MCR00091

service "%%s" for Mirroring Controller Arbitration process was unregistered

[Description]
  Service for Mirroring Controller Arbitration process was unregistered from Windows service.

[Parameters]
  %s: Service name

3.4.91 MCR00092

failed to unregister service "%%s" detail of cause:"%%s"

[Description]
  An error occurred during deregistration of service.

[Parameters]
  %s: Service name
  %s: detail of cause

[System Processing]
  Processing will be aborted.

[Action]
  Check the error detail and eliminate causes.
FJQSS User Guide
(Information Collection Tool)
Preface

This manual describes information to use the outline and the tool of FJQSS (Information Collection Tool).

Purpose of this Manual

The purpose of this manual is to be able to gather the collected information by using FJQSS (Information Collection Tool) when trouble occurs.

Reader of this Manual

This manual is targeted at the user who gathers the collected information when the trouble occurs.

You can obtain information on the method of gathering the function and the collected information of FJQSS (Information Collection Tool) obtain by referring to this manual.

Structure of this Manual

The structure of this manual is as follows:

Chapter 1 outline

Chapter 2 FJQSS (Information Collection Tool)

Appendix A Messages and error codes

Notations

The following notations are used in this manual:

Symbols used in this manual

The following symbols are used in this manual.

Example:[Enter]key

Symbols used in command

This subsection describes the symbols used in the examples of commands.

Example:

```
fjqs_collect [-s]
```

Meaning of Symbols

Chapter 1 Outline

This chapter explains the outline of FJQSS (Information Collection Tool).

1.1 FJQSS (Information Collection Tool)

This appendix explains FJQSS (Information Collection Tool) that archives the information for investigation (middleware logs and operation system logs) with an easy operation. Executing FJQSS right after a problem occurs makes a rapid investigating of the causes.
Chapter 2 Collecting the information

This chapter explains the method of gathering the survey material, the confirm method of the survey material, and notes.

2.1 Collection method

This section explains the operating procedure of FJQSS (Information Collection Tool).

Collecting information can be done by using the command. You can operate the Collection by the method that shows the product selection menu, or the method that does not show such the menu.

- 2.1.1 Collecting with showing menu
- 2.1.2 Collecting without showing menu

2.1.1 Collecting with showing menu

This subsection explains the operating procedure of FJQSS (Information Collection Tool) with showing the product selection menu.

Authority to execute

User Authority of the root user is necessary.

Prior confirmation

Set the output directory of the collected information if necessary. The output directory of default is the /var/tmp directory on Solaris, or the /tmp directory on Linux. See [2.3 Changing a path of the output directory] for details of changing the output directory.

Synopsis

If you execute the command specifying the output directory by the parameter:

```shell
fjqss_collect output_directory
```

If you execute the command specifying the output directory by the environment variable or the environmental configuration file:

```shell
fjqss_collect
```

Path to this command

```
/opt/FJSVqstl
```

Notes in executing the command

- Do not put fjqss_collect or its copy into any other directory. They work only if they are in the path shown above in [Path to this command].
- Execute this command immediately after the problem occurs.
- Multiple execution of this command is not available. If you do that, the following error message appears:

```
FJQSS is already started. Please restart FJQSS after the executing one ends.
```

Operating procedure

This part explains the operating procedure of FJQSS (Information Collection Tool).

1. Log on to the server, open the console window and execute the information collection command in the console window.

Hereafter, it explains by the example when outputting the information to the default output directory:

```shell
> cd /opt/FJSVqstl
> ./fjqss_collect
```
2. The product selection menu appears. It shows the list of the products whose information can be collected.

3. Put the number of the product of which you want to collect the information:

```
------------------------------------------
FJQSS Product Selection
------------------------------------------
  1. MW Product B (Server Side)
  2. MW Product B (Client Side)
------------------------------------------
```

Please input a number of the product of which you want to collect the information.>>1

4. Check the indicated name(s) of the middleware(s) whose investigation information are to be collected, then press the [Y] key to start.

Collection starts and the following indicator appear in the command prompt:

```
The following product information is collected.
  MW Product B (Server Side)
Input 'Y-key' to collect data, or 'N-key' to stop. (default=N): y
preparing:        ######################################## 100% [00:01]
```

The time and the disk space required for the collection depend on the condition of the target system.

5. Check the contents of the output directory.

After the FJQSS (Information Collection Tool) has completed the collection, the following prompt appears. Verify that the information have been collected in the directory whose name is indicated in the prompt:

```
The following product information is collected.
  MW Product B (Server Side)
Input 'Y-key' to collect data, or 'N-key' to stop. (default=N): y
preparing:        ######################################## 100% [00:01]
collecting:       ######################################## 100% [00:01]
archiving:        ######################################## 100% [00:01]
compress:         ######################################## 100% [00:15]
Completed.
Gathered investigation informations archived to
  /tmp/ezcollect20121018172939/result20121018172939.tar.gz (206KB)
```

This is an example on Linux.

The gathered investigation informations are archived to /var/tmp/… directory on Solaris, or /tmp/… directory in Linux.

The following files are created in the output directory (ezcollectYYYYMMDDHHMMSS: YYYYMMDDHHMMSS indicates the time (year, month, day, hours, minutes and seconds) that the collection started). See [2.2 Checking the collected information] for the output directory:

- `resultYYYYMMDDHHMMSS.tar.gz`
  The collected information.

- `result.txt`
  The result log is a text file to indicate if the collection of information has succeeded.
  This file indicates the names and the results of collection (OK/NG) of each material.

- `ez.log`
  The activity log of the FJQSS (Information Collection Tool).

### Aborting FJQSS (Information Collection Tool)

This subsection explains how to abort running FJQSS (Information Collection Tool).
Although it is recommended that you wait until the collection ends, you can press [CTRL] + [C] key combination to abort the execution if it is necessary. The following prompt appears if [CTRL] + [C] is pressed and the execution is aborted.

```
The following product information is collected.
MW Product B (Server Side)
Input 'Y-key' to collect data, or 'N-key' to stop. (default=N): y
preparing: ################################# 40% [00:01]
Stopped FJQSS process.
```

The output directory that has been made in the collecting might remain when the executing is aborted. There is no influence in the operation of FJQSS because the output directory will be newly made when FJQSS is executed again.

Moreover, there is no influence in the operation of FJQSS even if the remaining output directory was deleted.

---

**Note**

Do not close the command prompt before the collection ends. If you do so, the temporary directories might remain in the work directory. Please delete the following directories if they remain in the work directory.

- `ezcollectYYYYMMDDHHMMSS`
- `ezworkYYYYMMDDHHMMSS`

See [2.3 Changing a path of the output directory] for details of the work directory.

---

### 2.1.2 Collecting without showing menu

This subsection explains the operating procedure of FJQSS (Information Collection Tool) without showing the product selection menu.

**Authority to execute**

User Authority of the root user is necessary.

**Prior confirmation**

Verify the product identification name of the product of which you collect the information by the product information showing command. See [2.1.3 Getting the product identification name] for details.

Set the output directory of the collected information if necessary. The output directory of default is the `/var/tmp` directory on Solaris, or the `/tmp` directory on Linux. See [2.3 Changing a path of the output directory] for details of changing the output directory.

**Synopsis**

The specification of product identification name by `-pr <product identification name>` is necessary if you specify the silent mode option by `-s`.

If you execute the command specifying the output directory by the parameter:

```
fjqss_collect -pr <product identification name> [-s] output_directory
```

If you execute the command specifying the output directory by the environment variable or the environmental configuration file:

```
fjqss_collect -pr <product identification name> [-s]
```

**Description**

The `fqjss_collect` command collects the information required for the investigation.

**Option**

- `-pr`
This option specifies the product identification name of the product of which you collect the information.

-s

The command runs without asking to the operator. (It runs in silent mode.)

Path to this command

/opt/FJSVqst1

Notes in executing the command

- Do not put fjqs_collect or its copy into any other directory. They work only if they are in the path shown above in [Path to this command].
- Execute this command immediately after the problem occurs.
- Multiple execution of this command is not available. If you do that, the following error message appears:

FJQSS is already started. Please restart FJQSS after the executing one ends.

2.1.3 Getting the product identification name

This subsection explains how to get the product identification name which you specify when collecting the information without showing Product Selection Menu.

The product identification name can be got by executing the product information showing command.

Authority to execute

User Authority of the root user is necessary.

Synopsis

fjqs_mwpinfolist

Description

This command shows the list of the information of products of which the information collection is available.

Each product's information is shown in one line.

The product's Information is shown in order of "No." (number), "KEY" (product identification name), "DispName" (product name) and "Path" (destination directory of the information)

Example of the result of executing the product information showing command:

<table>
<thead>
<tr>
<th>MW Product List</th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No.  KEY</td>
<td>DispName</td>
<td>Path</td>
<td></td>
</tr>
<tr>
<td>1. PRODUCTA</td>
<td>MW PRODUCT A</td>
<td>/opt/FJSVPRDA/server/fjqss_tool1</td>
<td></td>
</tr>
<tr>
<td>2. PRODUCTB</td>
<td>MW PRODUCT B</td>
<td>/opt/FJSVPRDB/server/fjqss_tool1</td>
<td></td>
</tr>
<tr>
<td>3. PRODUCTC</td>
<td>MW PRODUCT C</td>
<td>/opt/FJSVPRDC/server/fjqss_tool1</td>
<td></td>
</tr>
</tbody>
</table>

If you collect the information of the product No.1, specify the product identification name "PRODUCTA" as the parameter to collect the information of the "MW PRODUCT A" by the procedure of 2.1.2 Collecting without showing menu].

Path to this command

/opt/FJSVqst1
2.2 Checking the collected information

The collected information are created in the output directory (ezcollectYYYYMMDDHHMMSS) as file "resultYYYYMMDDHHMMSS.tar.gz".

The output directory is created at the output specified for an environmental configuration file destination at the output destination. If no destination is specified, then the output directory is created at the /var/tmp directory on Solaris, or the /tmp directory on Linux.

You can specify a path of the output directory if you execute the information collecting command in the console window. See [2.3 Changing a path of the output directory] for details of the environmental configuration file and the output destination.

Verify that the following file and directory exist:

- Result log (result.txt)
  The result log is a text file to indicate if the collection of information has succeeded.
  This file indicates the names and the results of collection (OK/NG) of each material.
- Collected information (resultYYYYMMDDHHMMSS.tar.gz)

Note

Collected information (resultYYYYMMDDHHMMSS.tar.gz) is compressed and archived by gzip and tar. Collected information contains the following files.

- resultdir
  This directory contains the collected files.
- result.txt
  The result log is a text file to indicate if the collection of information has succeeded.
  This file indicates the names and the results of collection (OK/NG) of each material.
- ez.log
  The activity log of the FJQSS (Information Collection Tool).
- convert.txt
  If the file path name of information collecting is too long and information collecting can't get in former file name, file path name is converted and gathered. Former file path name and Converted file path name are output to convert.txt. convert.txt is output in the form of the following.
  Output form
  <Former file path name>,<Converted file path name>
  convert.txt is output when there was only information collecting for which the conversion of the file path name was necessary.

2.3 Changing a path of the output directory

You can change a path of the output directory by two methods below.

- Specifying a path of the output directory in the option of the information collecting command.
- Specifying a path of the output directory by setting the environment variable.
- Specifying a path of the output directory by updating the environmental configuration file.

The method of specifying in the option of the command explains in [2.1.1 Collecting with showing menu] and [2.1.2 Collecting without showing menu]. Hereafter, the method of specifying by the environment variable and by the environmental configuration file will be explained.

-
Specifying a path of the output directory by setting the environment variable

You can specify the directory where the output directory will be created by setting the environment variable EZ_OUTPUTDIR before executing this command.

**Description format:**

```
EZ_OUTPUTDIR="the directory path where the output directory will be created"
export EZ_OUTPUTDIR
```

**Example:**

If "/etc/work" is specified to %EZ_OUTPUTDIR%:

```
EZ_OUTPUTDIR=/etc/work
export EZ_OUTPUTDIR
```

Then the directory below will be created as the output directory:

```
/etc/work/ezcollectYYYYMMDDHHMMSS
```

Specifying a path of the output directory by updating the environmental configuration file

Environmental configuration file (FJQSSconf.txt) is a file that defines the operating environment of FJQSS.

It exists in following directory.

```
<Directory where the product is installed>/fjqss_tooln (n=1,2,..,9)
```

The items that can be specified for environmental configuration file are shown below.

<table>
<thead>
<tr>
<th>Item</th>
<th>Outline</th>
<th>Omission</th>
</tr>
</thead>
<tbody>
<tr>
<td>OutputDir</td>
<td>The directory path where the output directory will be created (*3).</td>
<td>Possible (*2)</td>
</tr>
<tr>
<td>WorkDir</td>
<td>The directory path where the work directory (*1) will be created by FJQSS execution (*3).</td>
<td>Possible(*2)</td>
</tr>
</tbody>
</table>

(*1) The work directory is a directory that temporarily stores information necessary for the execution of FJQSS. When FJQSS ends, stored information is automatically deleted.

(*2) If the specification is wrong or omitted, the /var/tmp directory (on Solaris), or the /tmp directory (on Linux) is used.

(*3) You can specify the directory by the relative path from an absolute path or environmental configuration file.

The format of environmental configuration file is shown below.

**Description format:**

```
OutputDir="the directory path where the output directory will be created"
WorkDir=" work directory"
```

**Example:**

If "/etc/work" is specified to OutputDir, "/etc/tmp" is specified to WorkDir.

```
OutputDir=/etc/work
WorkDir=/etc/tmp
```

Then the directory below will be created as the output directory:

```
/etc/work/ezcollectYYYYMMDDHHMMSS
```

And the directory below will be created as the work directory:

```
/etc/tmp/ezworkYYYYMMDDHHMMSS
```
Note

If the plural specifications of the output directory is done, then the specification becomes effective in the following order by priority:

1. Specification in the option of the information collecting command.
2. Specification by setting the environment variable.
3. Specification by updating the environmental configuration file.
### Appendix A Messages and error codes

#### A.1 Error Messages

The message which FJQSS outputs can have an error code. See [A.2 Error Codes] for detail of error codes.

<table>
<thead>
<tr>
<th>Look for</th>
<th>What to do</th>
</tr>
</thead>
<tbody>
<tr>
<td>FJQSS is already started. Please restart FJQSS after the executing one ends.</td>
<td>Check if FJQSS is running. Multiple execution of it is not available.</td>
</tr>
<tr>
<td>The file used with FJQSS is not found. Please contact a Fujitsu technological member. (product=PRODUCT_IDENTIFICATION_NAME, errcode=ERROR_CODE)</td>
<td>Please contact the Fujitsu engineer, and pass on the PRODUCT_IDENTIFICATION_NAME, PATH_NAME and ERROR_CODE in the message. About detail meanings of the ERROR_CODE, see [A.2 Error Codes].</td>
</tr>
<tr>
<td>Failed in the copy of materials used with FJQSS to the work directory. Please contact a Fujitsu technological member. (PATH=PATH_NAME, errcode=ERROR_CODE)</td>
<td></td>
</tr>
<tr>
<td>Failed in the access of the file used with FJQSS. Please contact a Fujitsu technological member. (errcode=ERROR_CODE)</td>
<td></td>
</tr>
<tr>
<td>The file used with FJQSS is not found or broken. Please contact a Fujitsu technological member. (PATH=PATH_NAME)</td>
<td></td>
</tr>
<tr>
<td>Failed in the access of the directory used with FJQSS. Please contact a Fujitsu technological member. (PATH=PATH_NAME)</td>
<td></td>
</tr>
<tr>
<td>Failed in the current directory change to the work directory. Please contact a Fujitsu technological member. (PATH=PATH_NAME)</td>
<td></td>
</tr>
<tr>
<td>Failed to execute FJQSS. Please contact Fujitsu technical staff.</td>
<td>Execute FJQSS again after removing the cause according to the left messages. About Environmental configuration file, see [2.3 Changing a path of the output directory].</td>
</tr>
<tr>
<td>There is a wrong option in the command line. Please restart FJQSS with the correct option.</td>
<td></td>
</tr>
<tr>
<td>Not super-user. Please restart FJQSS by super-user</td>
<td></td>
</tr>
<tr>
<td>A memory is insufficient. Please stop unnecessary applications and restart FJQSS.</td>
<td></td>
</tr>
<tr>
<td>The product specified by the -pr option is not found. Please restart FJQSS with the correct option. (product=PRODUCT_IDENTIFICATION_NAME)</td>
<td></td>
</tr>
<tr>
<td>Japanese characters are included in the directory name at the 'OutputDir' of environmental file. Japanese characters cannot be used. Please correct environmental file and restart FJQSS. (environmental file=PATH_NAME)</td>
<td></td>
</tr>
</tbody>
</table>
Japanese characters are included in the directory name at the 'WorkDir' of environmental file. Japanese characters cannot be used.
Please correct environmental file and restart FJQSS.
(environmental file=PATH_NAME)

Failed in making the output directory.
Please confirm the following.
- There must be an authority to make the folder.
- Passing in xx bytes or less must be specified.
- The length of each directory name must be 255 bytes or less.

Failed in making the work directory.
Please confirm the following.
- There must be an authority to make the folder.
- Passing in xx bytes or less must be specified.
- The length of each directory name must be 255 bytes or less.

Output directory is too long at the 'OutputDir' of environmental file. Please adjust the output directory to xx bytes or less and restart FJQSS
(environmental file= PATH_NAME)

Work directory is too long at the 'WorkDir' of environmental file.
Please adjust the output directory to xx bytes or less and restart FJQSS
(environmental file= PATH_NAME)

The output directory is too long specified in the option.
Please adjust the output directory to %s bytes or less and restart FJQSS.

Japanese characters are included in the output directory specified in the option.
Japanese characters cannot be used.
Please correct the output directory and restart FJQSS.

The output directory is too long specified with the environment variable: EZ_OUTPUTDIR.
Please adjust environment variable: EZ_OUTPUTDIR to xx byte or less.

Failed to create log.(PATH=PATH_NAME)
Take action indicated the following items:
- Create the output folder if it doesn't exist.
- Set the role to the output folder.

Products are not installed. Please make sure that the products that are installed.
The is no installed product of which FJQSS can collect the information. FJQSS ends.

Stopped FJQSS process. No user action is necessary.

### A.2 Error Codes
