- The primary and standby server can be pseudo-configured on the same server for system testing, for example. In this case, the setup can be performed using the same procedure, however there will be some supplementary steps. Before performing the setup, refer to "Appendix B Supplementary Information on Building the Primary Server and Standby Server on the Same Server".

### 2.1 Installation

Refer to the manuals below, and then install the product.
See

- Refer to the Installation and Setup Guide for Server for details on how to install FUJITSU Enterprise Postgres.
- Refer to the Installation and Setup Guide for Server Assistant for information on installing the Server Assistant on the arbitration server.

Note

Do not use the arbitration server also as a database server. The arbitration server is installed to check the database server status as a third party, and to perform fencing. Using the arbitration server also as a database server nullifies the effectiveness of the arbitration server.

2.2 Preparing for Setup

This section describes the preparation required before setting up Mirroring Controller.

2.2.1 Preparing the Database Server

2.2.1.1 Preparing the Backup Disk

In Mirroring Controller, by performing a backup, recovery is possible even if all server disks are corrupted.

The content on the primary server should be backed up. However, through switching and failback, the standby server may also become the primary server. Accordingly, prepare each of the backup disk devices for the primary and standby servers. Perform backup on the primary server used at the time of the backup.

2.2.2 Preparing the Arbitration Server

2.2.2.1 Preparing to Output Error Logs to the Event Log (Windows)

This section explains the preparatory tasks for outputting error logs to the event log.

Note

If no event source name is registered, messages output to the event log may be incomplete.

Configuring each server

Event logs for the Mirroring Controller commands on the arbitration server may be output with the default event source name "MirroringControllerArbiter". Therefore, register this default event source name beforehand.

Example)
The following is an example in which the DLL of a 64-bit product is registered under the default event source name. Note that "<x>" indicates the product version.

> regsvr32 "c:\Program Files\Fujitsu\fsep\<&x>\assistant64\lib\mcarbevent.dll"

Setting each instance

You can output messages to any event source named by the user, so that messages output to the event log can be identified by each instance.

Example)
The following is an example in which the DLL of a 64-bit product is registered under the event source name "Mirroring Controller arbiter1". Note that "<x>" indicates the product version.
If installing multiple versions

If FUJITSU Enterprise Postgres is already installed on the same machine, search for the key below in Registry Editor, and make a note of the path of the registered DLL. Afterwards, register a new DLL using the default event source name.

Use the DLL path that you made a note of in the above step when re-registering the default event source name during uninstallation.

The parameter must be edited for each instance. Refer to "A.4.2 Arbitration Configuration File" and set the event_source parameter.

See

- Refer to the Reference for information on the mc_arb command.
- Refer to "Appendix A Parameters" for information on the parameters to be edited for the setup.

Perform the following procedure:

Linux

1. On the arbitration server, log in as any operating system user who starts and stops the arbitration process.
2. Configure the environment variables.
   Set the following environment variables:
   - PATH
     Add the installation directory "/bin".
   - MANPATH
     Add the installation directory "/share/man".
- LD_LIBRARY_PATH

Add the installation directory "/lib".

Example

The following example configures environment variables when the installation directory is "/opt/fsepv<x>assistant".

Note that "<x>" indicates the product version.

sh, bash

```bash
$ PATH=/opt/fsepv<x>assistant/bin:$PATH ; export PATH
$ MANPATH=/opt/fsepv<x>assistant/share/man:$MANPATH ; export MANPATH
$ LD_LIBRARY_PATH=/opt/fsepv<x>assistant/lib:$LD_LIBRARY_PATH ; export LD_LIBRARY_PATH
```

csh, tcsh

```csh
csh
$ setenv PATH /opt/fsepv<x>assistant/bin:$PATH
$ setenv MANPATH /opt/fsepv<x>assistant/share/man:$MANPATH
$ setenv LD_LIBRARY_PATH /opt/fsepv<x>assistant/lib:$LD_LIBRARY_PATH
```

3. Create the Mirroring Controller arbitration process management directory that will store the files required by the arbitration server.

Use ASCII characters in the Mirroring Controller arbitration process management directory.

4. In the network configuration file (network.conf), define the Mirroring Controller network configuration that will be managed by the Mirroring Controller arbitration process.

Create network.conf in the Mirroring Controller arbitration process management directory, based on the sample file. For network.conf, set read and write permissions only for the operating system user who starts and stops the arbitration process in step 1.

If users other than this are granted access permissions, the mc_arb command will not work. Accordingly, users other than the operating system user who starts and stops the arbitration process in step 1 are prevented from operating the Mirroring Controller arbitration process.

Sample file

```
/installDir/share/mcarb_network.conf.sample
```

In network.conf, specify the IP address or host name and port number of the primary server and standby server, and define the Mirroring Controller network configuration that will be managed by the Mirroring Controller arbitration process.

Refer to "A.3 Network Configuration File" for details.

A definition example is shown below.

Example)

The IDs of the servers are set to "server1" and "server2", and their port numbers are set to "27541".

```
server1 192.0.3.100 27541
server2 192.0.3.110 27541
```

5. In the arbitration configuration file (arbitration.conf), define the information related to control of the Mirroring Controller arbitration process.

Create arbitration.conf in the Mirroring Controller arbitration process management directory, based on the sample file. For arbitration.conf, set read and write permissions only for the operating system user who starts and stops the arbitration process in step 1. If users other than this are granted access permissions, the mc_arb command will not work.

Sample file

```
/installDir/share/mcarb_arbitration.conf.sample
```

Set the parameters shown in the table below in arbitration.conf.
Table 2.1 Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Content specified</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>port</td>
<td>Port number of the Mirroring Controller arbitration process</td>
<td>The port number must be 0 to 65535. Ensure that the port number does not conflict with other software. Do not specify an ephemeral port that may temporarily be assigned by another program.</td>
</tr>
<tr>
<td>my_address</td>
<td>'ipAddrOrHostNameThatAcceptsConnectionFromMirroringControllerProcessOnDbServer'</td>
<td>IPv4 and IPv6 addresses can be specified. Specify the IP address, enclosed in single quotation marks (').</td>
</tr>
<tr>
<td>syslog_ident</td>
<td>'programName'</td>
<td>Specify using single quotation marks ('') to enclose the program name used to identify the Mirroring Controller arbitration process message in the system log. Use ASCII characters excluding spaces to specify this parameter. The default is 'MirroringControllerArbiter'.</td>
</tr>
<tr>
<td>fencing_command</td>
<td>'fencingCmdFilePath'</td>
<td>Specify the full path of the fencing command that fences a database server where it is determined that an error has occurred. Enclose the path in single quotation marks (''). Specify the path using less than 1024 bytes.</td>
</tr>
<tr>
<td>fencing_command_timeout</td>
<td>Timeout for fencing command (seconds)</td>
<td>If the command does not respond within the specified number of seconds, it is determined that fencing has failed and a signal (SIGTERM) is sent to the fencing command execution process. Specify a value between 1 and 2147483647. The default is 20 seconds.</td>
</tr>
</tbody>
</table>

Information

Refer to "A.4.2 Arbitration Configuration File" for information on the parameters and for other parameters.

Windows

1. On the arbitration server, log in as any operating system user who starts and stops the arbitration process.
2. Configure the environment variables.
   - Set the following environment variable:
     - PATH
       Add the installation folders "\bin" and "\lib".

Example

The following example configures environment variables when the installation folder is "c:\Program Files\Fujitsu \\sepv\<x>\assistant64". Note that "<x>" indicates the product version.
3. Create the Mirroring Controller arbitration process management directory that will store the files required by the arbitration server. Use ASCII characters in the Mirroring Controller arbitration process management directory.

4. In the network configuration file (network.conf), define the Mirroring Controller network configuration that will be managed by the Mirroring Controller arbitration process.

   Create network.conf in the Mirroring Controller arbitration process management directory, based on the sample file.

   Sample file

   ```
   installDir\share\mcarb_network.conf.sample
   ```

   In network.conf, specify the IP address or host name and port number of the primary server and standby server, and define the Mirroring Controller network configuration that will be managed by the Mirroring Controller arbitration process.

   Refer to "A.3 Network Configuration File" for details.

   A definition example is shown below.

   **Example**

   The IDs of the servers are set to "server1" and "server2", and their port numbers are set to "27541".

   ```
   server1 192.0.3.100 27541
   server2 192.0.3.110 27541
   ```

5. Change the access permissions for network.conf.

   For network.conf, set read and write permissions only for the operating system user who starts and stops the arbitration process in step 1. If users other than this are granted access permissions, the mc_arb command will not work. Accordingly, users other than the operating system user who starts and stops the arbitration process in step 1 are prevented from operating the Mirroring Controller arbitration process.

   **Example**

   The following is an execution example, in which the operating system user who starts and stops the arbitration process in step 1 is granted full access permissions as the owner when the user is "fsepuser". The following procedure applies when the user is logged in to the Windows server as "fsepuser".

   ```
   > takeown /f network.conf
   > icacls network.conf /reset
   > icacls network.conf /inheritance:r
   > icacls network.conf /grant fsepuser:F
   ```

6. In the arbitration configuration file (arbitration.conf), define the information related to control of the Mirroring Controller arbitration process.

   Create arbitration.conf in the Mirroring Controller arbitration process management directory, based on the sample file.

   Sample file

   ```
   installDir\share\mcarb_arbitration.conf.sample
   ```

   Set the parameters shown in the table below in arbitration.conf.

   **Table 2.2 Parameters**

<table>
<thead>

</tr>
<tr>
<td></td>
<td></td>
<td>The default is 20 seconds.</td>
</tr>
</tbody>
</table>

**Information**

Refer to "A.4.2 Arbitration Configuration File" for information on the parameters and for other parameters.

7. Change the access permissions for arbitration.conf.

For arbitration.conf, set read and write permissions only for the operating system user who starts and stops the arbitration process in step 1. If users other than this are granted access permissions, the mc_arb command will not work.

Example)

The following is an execution example, in which the operating system user who starts and stops the arbitration process in step 1 is granted full access permissions as the owner when the user is "fsepuser". The following procedure applies when the user is logged in to the Windows server as "fsepuser".
8. Configure Windows Firewall.

If Windows Firewall is used, enable the port number of Mirroring Controller specified in the network configuration file in step 3. Refer to "E.2 Windows Firewall Settings" for details.

9. Register the Mirroring Controller arbitration process as a Windows service.

Execute the mc_arb command in register mode.

For the -P option of the mc_arb command, specify the password of the operating system user who executes the command.

Example)

```bash
> mc_arb register -M D:\mcarb_dir\arbiter1 -P ********
```

Note

When specifying the password in the -P option of the mc_arb command, for security reasons, you should be careful not to allow other users to access it.

Information

Use the mc_arb command with the -S option to specify automatic start and stop of the Mirroring Controller arbitration process. Refer to "2.13 Setting Automatic Start and Stop of the Mirroring Controller Arbitration Process" for details.

The Mirroring Controller arbitration process is registered as a Windows service using the service name specified in the service_name parameter of arbitration.conf in step 6.

You can execute the sc qc command to check the registration status.

### 2.3.2 Creating a User Exit for the Arbitration Server

The only user exit for the arbitration server is the fencing command.

The fencing command is a user command that is called by the Mirroring Controller arbitration process if Mirroring Controller performs arbitration processing and determines that a database server is unstable.

In the fencing command, the user implements a process that isolates a database server from a cluster system by, for example, stopping the target operating system or server. The fencing command that was created is to be specified for the parameter in the arbitration configuration file. Refer to "A.4.2 Arbitration Configuration File" for information on the parameters.

- Fencing the primary server during the switch
  - Prevent the Mirroring Controller management process on the primary server from communicating with the Mirroring Controller management process on the other server.
  - Prevent applications from connecting to the primary server instance.

- Fencing the standby server during disconnection
  - Prevent the Mirroring Controller management process on the standby server from communicating with the Mirroring Controller management process on the other server.
  - Prevent applications from connecting to the standby server instance.
  - Prevent the standby server from continuing streaming replication.
2.3.3 Starting the Mirroring Controller Arbitration Process

This section explains how to start the Mirroring Controller arbitration process.

An operating system user who has logged in to the arbitration server can start the Mirroring Controller arbitration process by executing the `mc_arb` command in start mode.

**Linux**

Example)

```
$ mc_arb start -M /mcarb_dir/arbiter1
```

**Windows**

Example)

```
> mc_arb start -M D:\mcarb_dir\arbiter1
```

2.4 Setting Up the Primary Server

This section explains how to set up the primary server.

2.4.1 Setting Up Database Multiplexing Mode on the Primary Server

This section explains how to set up database multiplexing mode on the primary server.

In database multiplexing, the files that are required for operations are managed in the Mirroring Controller management directory. There is one Mirroring Controller management directory for each instance.

**Note**

- Do not place the Mirroring Controller management directory in a directory managed by FUJITSU Enterprise Postgres, otherwise it may be deleted by mistake with the directories managed by FUJITSU Enterprise Postgres, and an old version of files may be restored.

**See**

- Refer to "Preparing Directories for Resource Deployment" in the Installation and Setup Guide for Server for details on the directories that are managed by FUJITSU Enterprise Postgres.

- Refer to "mc_ctl" in Reference for information on the command.

- Refer to "Appendix A Parameters" for details on each parameter to be edited for the setup.

Perform the following procedure:

1. Log in to the primary server.
2. Create the Mirroring Controller management directory that will store the files required by database multiplexing.

   Use ASCII characters in the Mirroring Controller management directory.

   Additionally, grant "Write" permission to the instance administrator user for the Mirroring Controller management directory.
3. In the network configuration file (network.conf), define the network configuration that will link between the Mirroring Controller processes.

Create the network.conf file in the Mirroring Controller management directory, based on the sample file. For network.conf, set read and write permissions for the instance administrator user only.

If users other than the instance administrator user are granted access, the mc_ctl command will not work. In this way, users other than the instance administrator user are prevented from operating Mirroring Controller.

Sample file

```
/installDir/share/mc_network.conf.sample
```

In network.conf, specify the IP address or host name and port number of the primary server and standby server, and define the network configuration that will link between the Mirroring Controller processes, and between Mirroring Controller processes and the Mirroring Controller arbitration process.

Refer to "A.3 Network Configuration File" for details.

A definition example is shown below.

The content to be defined depends on the operation settings at the time a heartbeat abnormality is detected.

**When automatic degradation by the arbitration server is selected**

Example)

The IDs of the primary server and standby server are set to "server1" and "server2", and their port numbers are set to "27540" and "27541". The ID of the server of the Mirroring Controller arbitration process is set to "arbiter", and its port number is set to "27541".

```
server1 192.0.2.100,192.0.3.100 27540,27541 server
server2 192.0.2.110,192.0.3.110 27540,27541 server
arbiter 192.0.3.120 27541 arbiter
```

Ensure that the port numbers set for the primary server, standby server, and arbitration server do not conflict with other software. In addition, when the arbitration server is used for automatic degradation, use a network in which the arbitration network is not affected by a line failure in the admin network.

When the server type is "server", two IP addresses or host names, and two port numbers need to be specified in the following order:

- IP address or host name of the database server used as the admin network
- IP address or host name of the database server used as the arbitration network
- Port number of the database server used as the admin network
- Port number of the database server used as the arbitration network

If the server type is "arbiter", specify the IP address or host name set for the my_address parameter and the port number set for the port parameter in arbitration.conf of the arbitration server.

**When operation other than automatic degradation by the arbitration server is selected**

Example)

The IDs of the servers are set to "server1" and "server2", and their port numbers are set to "27540".

```
server1 192.0.2.100 27540
server2 192.0.2.110 27540
```

Ensure that the port numbers for the primary and standby server do not conflict with other software.

Register in /etc/services the port number of the primary server, because programs such as WebAdmin use it to search for available port numbers.

Register any name as the service name.

4. Define the information related to Mirroring Controller monitoring and control in the serverIdentifier.conf file.

Create the serverIdentifier.conf file in the Mirroring Controller management directory, based on the sample file.
For serverIdentifier.conf, set read and write permissions for the instance administrator user only. If users other than the instance administrator user are granted access, the mc_ctl command will not work.

As the file name for the serverIdentifier.conf file, use the server identifier name that was specified in the network.conf file in step 3.

Sample file

/InstallDir/share/mc_server.conf.sample

Set the parameters shown in the table below in the serverIdentifier.conf file.

Table 2.3 Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Content specified</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>db_instance</td>
<td>'dataStorageDestinationDir'</td>
<td>Use ASCII characters, enclosed in single quotation marks (').</td>
</tr>
<tr>
<td>db_instance_password</td>
<td>'passwordOfInstanceAdminUser'</td>
<td>If password authentication is performed, you must specify this parameter in the settings used when Mirroring Controller connects to a database instance. Use ASCII characters, enclosed in single quotation marks ('). If the specified value of this parameter includes ' or , write \ or , respectively.</td>
</tr>
<tr>
<td>enable_hash_in_password</td>
<td>on or off</td>
<td>Specify on to treat the # in the db_instance_password specification as a password character, or off to treat it as a comment. The default is &quot;off&quot;.</td>
</tr>
<tr>
<td>syslog_ident</td>
<td>'programName'</td>
<td>Specify the program name to be used to identify the Mirroring Controller messages in the system log. Use ASCII characters excluding spaces, enclosed in single quotation marks ('). Use the same program name as the parameter in the postgresql.conf file ensures that the Mirroring Controller output content can be referenced transparently, so log reference is easy.</td>
</tr>
<tr>
<td>remote_call_timeout</td>
<td>Admin communication timeout</td>
<td>Specify the timeout value (milliseconds) of the Mirroring Controller agent process for communication between servers. Specify a value that is less than the operation system TCP connection timeout.</td>
</tr>
<tr>
<td>heartbeat_error_action</td>
<td>Operation when a heartbeat abnormality is detected using operating system or server heartbeat monitoring</td>
<td>arbitration: Perform automatic degradation using the arbitration server. command: Call a user exit to determine degradation, and perform automatic degradation if required. message: Notify messages. fallback: Perform automatic degradation unconditionally. Set the same value on the primary server and standby server.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Content specified</td>
<td>Remarks</td>
</tr>
<tr>
<td>------------------</td>
<td>------------------------------------------------------------------------------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>heartbeat_interval</td>
<td>Interval time for abnormality monitoring during heartbeat monitoring of the operating system or server (milliseconds)</td>
<td>Abnormality monitoring of the operating system or server is performed at the interval (milliseconds) specified in heartbeat_interval.</td>
</tr>
<tr>
<td>heartbeat_timeout</td>
<td>Timeout for abnormality monitoring during heartbeat monitoring of the operating system or server (seconds)</td>
<td>This parameter setting is used as the default for database process heartbeat monitoring, streaming replication abnormality monitoring, and disk abnormality monitoring. When setting the monitoring time, there are some considerations to take into account to optimize degradation using abnormality monitoring. Refer to “2.11.4.1 Tuning for Abnormality Monitoring of the Operating System or Server” for details.</td>
</tr>
<tr>
<td>heartbeat_retry</td>
<td>Number of retries for abnormality monitoring during heartbeat monitoring of the operating system or server (number of times)</td>
<td></td>
</tr>
<tr>
<td>fencing_command</td>
<td><code>fencingCmdFilePath</code> [Setting example] fencing_command = '/mc/fencing_dir/execute_fencing.sh'</td>
<td>Specify the full path of the fencing command that fences a database server where an error is determined to have occurred. Enclose the path in single quotation marks ('). This parameter must be specified when &quot;command&quot; is set for heartbeat_error_action. Specify the path using less than 1024 bytes.</td>
</tr>
<tr>
<td>fencing_command_timeout</td>
<td>Fencing command timeout (seconds)</td>
<td>If the command does not respond within the specified number of seconds, fencing is determined to have failed and a signal (SIGTERM) is sent to the fencing command execution process. Specify a value between 1 and 2147483647. The default is 20 seconds.</td>
</tr>
<tr>
<td>arbitration_timeout</td>
<td>Timeout for arbitration processing in the Mirroring Controller arbitration process (seconds)</td>
<td>The specified value must be at least equal to the heartbeat monitoring time of the operating system or server + fencing_command_timeout in the arbitration configuration file. If there is no response for at least the number of seconds specified, the primary server will not be switched and the standby server will not be disconnected. Therefore, perform degradation manually. Specify a value between 1 and 2147483647. This parameter does not need to be set for operation that does not use the arbitration server.</td>
</tr>
<tr>
<td>arbitration_command</td>
<td><code>arbitrationCmdFilePath</code> [Setting example] arbitration_command = '/mc/arbitration_dir/execute_arbitration_command.sh'</td>
<td>Specify the full path of the arbitration command to be executed when an abnormality is detected during heartbeat monitoring of the operating system or server. Enclose the path in single quotation marks ('). This parameter must be specified when &quot;command&quot; is set for heartbeat_error_action.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Content specified</td>
<td>Remarks</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>------------------------------------------</td>
<td>--------------------------------------------------------------------------</td>
</tr>
<tr>
<td>arbitration_command_timeout</td>
<td>Timeout for arbitration command (seconds)</td>
<td>If the arbitration command does not respond within the specified number of seconds, it is determined that execution of the arbitration command has failed and a signal (SIGTERM) is sent to the arbitration command execution process. Specify a value between 1 and 2147483647. This parameter can be specified only when “command” is set for heartbeat_error_action.</td>
</tr>
</tbody>
</table>

### Information

Refer to “A.4.1 Server Configuration File for the Database Servers” for information on the parameters and for other parameters.

#### 2.4.2 Creating, Setting, and Registering the Primary Server Instance

This section explains how to create, set, and register the primary server instance.

### See

- Refer to "Client Authentication" in the PostgreSQL Documentation for information on the pg_hba.conf file.
- Refer to "A.1 Parameters Set on the Primary Server" for information on the postgresql.conf file.
- Refer to "mc_ctl" in Reference for information on the command.

Perform the following procedure:

1. Refer to "Setup" in the Installation and Setup Guide for Server, and then perform the FUJITSU Enterprise Postgres setup and create the FUJITSU Enterprise Postgres instance.

   Use ASCII characters in the data storage destination directory.

### Note

- If degradation starts occurring due to an error during operations in database multiplexing mode, recovery is required for the standby server. There are some conditions to execute the pg_rewind command to recover the standby server. One of the conditions can be satisfied by enabling checksums when executing the initdb command. This is not mandatory. Refer to "4.1.1.1.3 Identify cause of error and perform recovery" for details.

2. When using transparent data encryption, configure the encryption settings for the storage data.

   Create the keystore file.

   Refer to "Database Multiplexing Mode" in the Operation Guide for details, and then configure the settings.

3. Add the following entry to the pg_hba.conf file to authenticate connections from the standby server.

   Copy the file to the standby server later.

<table>
<thead>
<tr>
<th>TYPE</th>
<th>DATABASE</th>
<th>USER</th>
<th>ADDRESS</th>
<th>METHOD</th>
</tr>
</thead>
<tbody>
<tr>
<td>host</td>
<td>replication</td>
<td>fsep</td>
<td>standbyServerAddress</td>
<td>authenticationMethod</td>
</tr>
<tr>
<td>host</td>
<td>replication</td>
<td>fsep</td>
<td>primaryServerAddress</td>
<td>authenticationMethod</td>
</tr>
</tbody>
</table>

For the primary and standby server addresses, specify the IP address that will connect to the log transfer network.
Additionally, all servers can be used as the primary server or the standby server, so add entries for the addresses of all servers that comprise the database multiplexing system.

---

### Point

**Setting an authentication method other than trust authentication**

If the primary server becomes the standby server, to perform automatic authentication of connections to the primary server, create the `.pgpass` file in the home directory of the instance administrator user, and then specify a password for the replication database. Accordingly, the instance administrator operating system user and the user registered in the database will be the same, so you can verify that the connection was not made by an unspecified user. Additionally, the password that was set beforehand will be used in the authentication, so that the connection will be automatic.

---

### Note

If trust authentication is set, all OS users who can log in to the primary server will be able to connect, and if one of these is a malicious user, then that user can corrupt the standby server data, or cause the job system to fail, by sending an erroneous transaction log. Therefore, decide on the authentication method according to the security requirements of the system using database multiplexing mode.

Refer to "Authentication Methods" in the PostgreSQL Documentation for details on the authentication methods that can be set.

---

4. Configure this setting to enable the instance administrator user of the primary server to connect as a database application.

This setting enables the connection to the instance using the user name of the instance administrator user, so that Mirroring Controller can monitor instance errors. Configure this setting to enable the connection to the postgres database.

- If password authentication is used
  
  In the `db_instance_password` parameter of the `serverIdentifier.conf` file, specify the password for the instance administrator user. This password is used to connect to the database instance. If a password is not specified in the `db_instance_password` parameter, the connection to the database instance from Mirroring Controller will fail, and it will not be possible to perform the process monitoring of the instance.

- If password authentication is not used
  
  There is no need to specify the password in the `db_instance_password` parameter.

  Even if the password for the instance administrator user is specified in the `db_instance_password` parameter, it will be ignored.

- If certificate authentication using SSL is used
  
  Specify connection parameters for SSL in the `db_instance_ext_pq_conninfo` parameter and `db_instance_ext_jdbc_conninfo` parameter in the `serverIdentifier.conf` file. If the parameters are not specified, the connection to the database instance from Mirroring Controller will fail, and it will not be possible to perform the process monitoring of the instance. If certificate authentication using SSL is not performed, the parameters specification is not required.

An example of setting the authentication method is shown below.

<table>
<thead>
<tr>
<th>#</th>
<th>TYPE</th>
<th>DATABASE</th>
<th>USER</th>
<th>ADDRESS</th>
<th>METHOD</th>
</tr>
</thead>
<tbody>
<tr>
<td>host</td>
<td>postgres</td>
<td>fsep</td>
<td>127.0.0.1/32</td>
<td>authenticationMethod</td>
<td></td>
</tr>
</tbody>
</table>

---

### Note

Mirroring Controller uses the PostgreSQL JDBC 4.2 driver to connect to the database instance. Therefore, for the authentication method, specify a method supported by the JDBC driver. If an authentication method not supported by the JDBC driver is specified, Mirroring Controller will fail to start. Refer to the PostgreSQL JDBC Driver Documentation for information on authentication methods supported by the JDBC driver.
To use database multiplexing mode, specify the parameters shown in the table below in the postgresql.conf file.

The postgresql.conf file is copied when the standby server instance is created. Accordingly, set the required parameters in the standby server.

To use database multiplexing mode, specify the parameters shown in the table below in the postgresql.conf file. After editing the postgresql.conf file, restart the instance.

### Table 2.4 Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Content specified</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>wal_level</td>
<td>replica or logical</td>
<td>Specify &quot;logical&quot; when logical decoding is also to be used.</td>
</tr>
<tr>
<td>max_wal_senders</td>
<td>2 or more</td>
<td>Specify &quot;2&quot; when building a Mirroring Controller cluster system. When additionally connecting asynchronous standby servers to the cluster system, add the number of simultaneous connections from these standby servers.</td>
</tr>
<tr>
<td>synchronous_standby_names</td>
<td>'standbyServerName'</td>
<td>Specify the name that will identify the standby server. Enclose the name in single quotation marks ('). Do not change this parameter while Mirroring Controller is running. Do not specify multiple names to this parameter as the Mirroring Controller can manage only one standby server.</td>
</tr>
<tr>
<td>hot_standby</td>
<td>on</td>
<td></td>
</tr>
<tr>
<td>wal_keep_size</td>
<td>WAL save size (megabytes)</td>
<td>If a delay exceeding the value set in this parameter occurs, the WAL segment required later by the primary server may be deleted. Additionally, if you stop a standby server (for maintenance, for example), consider the stop time and set a value that will not cause the WAL segment to be deleted. Refer to &quot;Estimating Transaction Log Space Requirements&quot; in the Installation and Setup Guide for Server for information on estimating the WAL save size.</td>
</tr>
<tr>
<td>wal_log_hints</td>
<td>on</td>
<td>When using the pg_rewind command to recover a standby server, specify this parameter or enable checksums when executing the initdb command.</td>
</tr>
<tr>
<td>wal_sender_timeout</td>
<td>Timeout (milliseconds)</td>
<td>Specify the time period after which it is determined that an error has occurred in the transaction log transfer on the primary server. By aligning this value with the value for the database process heartbeat monitoring time, you can unify the time after which it is determined that an error has occurred.</td>
</tr>
<tr>
<td>archive_mode</td>
<td>on</td>
<td>Specify the archive log mode.</td>
</tr>
<tr>
<td>archive_command</td>
<td>'installDir/bin/pgx_walcopy.cmd &quot;%p&quot; &quot;backupDataStorageDestinationDirectory/ archived_wal/%f&quot;'</td>
<td>Specify the command and storage destination to save the transaction log.</td>
</tr>
<tr>
<td>backup_destination</td>
<td>Backup data storage destination directory</td>
<td>Specify the name of directory where to store the backup data. Set the permissions so that only the instance administrator user can access the specified directory.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Content specified</td>
<td>Remarks</td>
</tr>
<tr>
<td>---------------------------</td>
<td>----------------------------------------------------------------------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>max_connections</td>
<td>Number of simultaneous client connections to the instance + superuser_reserved_connections</td>
<td>The value specified is also used to restrict the number of connections from client applications and the number of connections for the management of instances. Refer to &quot;When an Instance was Created with the initdb Command&quot; in the Installation and Setup Guide for Server, and &quot;Connections and Authentication&quot; in the PostgreSQL Documentation, for details.</td>
</tr>
<tr>
<td>superuser_reserved_connections</td>
<td>Add the number of simultaneous executions of mc_ctl status (*1) + 2</td>
<td>Specify the number of connections reserved for connections from database superusers. Add the number of connections from Mirroring Controller processes. Also reflect the added value in the max_connections parameter.</td>
</tr>
<tr>
<td>wal_receiver_timeout</td>
<td>Timeout (milliseconds)</td>
<td>Specify the time period after which it is determined that an error has occurred when the transaction log was received on the standby server. By aligning this value with the value for the heartbeat monitoring time of the database process, you can unify the time after which it is determined that an error has occurred.</td>
</tr>
<tr>
<td>restart_after_crash</td>
<td>off</td>
<td>If &quot;on&quot; is specified, or the default value is used for this parameter, behavior equivalent to restarting FUJITSU Enterprise Postgres, including crash recovery, will be performed when some server processes end abnormally. However, when database multiplexing monitoring is used, a failover will occur after an error is detected when some server processes end abnormally, and the restart of those server processes is forcibly stopped. Specify &quot;off&quot; to prevent behavior such as this from occurring for no apparent reason.</td>
</tr>
<tr>
<td>synchronous_commit</td>
<td>on or remote_apply</td>
<td>Specify up to what position WAL send is to be performed before transaction commit processing returns a normal termination response to a client. The recommended value is &quot;on&quot; or &quot;remote_apply&quot; to prevent data loss caused by operating system or server down immediately after a switch or switch.</td>
</tr>
<tr>
<td>recovery_target_timeline</td>
<td>latest</td>
<td>Specify &quot;latest&quot; so that the new standby server (original primary server) will follow the new primary server when a switch occurs. This parameter is required when the original primary server is incorporated as a new standby server after the primary server is switched.</td>
</tr>
</tbody>
</table>

*1: Number of simultaneous executions of the mc_ctl command in the status mode.

### 2.4.3 Starting Mirroring Controller on the Primary Server

This section explains how to start Mirroring Controller on the primary server.

When the arbitration server is used for automatic degradation, start the Mirroring Controller arbitration process on the arbitration server in advance.
1. Start the Mirroring Controller process.

   **Enabling automatic switch/disconnection**
   
   As the instance administrator user, execute the mc_ctl command in start mode.
   
   Example)
   
   ```
   $ mc_ctl start -M /mcdir/inst1
   ```

   **Disabling automatic switch/disconnection**
   
   As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.
   
   Example)
   
   ```
   $ mc_ctl start -M /mcdir/inst1 -F
   ```

**Note**

- When the arbitration server is used for automatic degradation, the database server must connect to the arbitration server, and as a result, Mirroring Controller startup may take longer than when the arbitration server is not used.

- If the parameter for heartbeat monitoring of operating systems or servers set by the abitration server is greater than parameter for heartbeat monitoring of operating systems and servers of the Mirroring Controller, the Mirroring Controller may fail to start. In this case, check the contents of the message notification and review the parameters for heartbeat monitoring of operating systems or servers for the arbitration server or Mirroring Controller.

- If the heartbeat_error_action parameter in serverIdentifier.conf is set to "message", even if automatic switch/disconnection is enabled and Mirroring Controller is started, only message output is performed when a heartbeat abnormality is detected during heartbeat monitoring of operating systems and servers - switch/disconnection is not performed.

- Mirroring Controller startup usually fails if the standby server is mistakenly started as the primary server or if the old primary server is not recovered after the switch and is then mistakenly started as the primary server. However, if the admin network is disconnected, then startup does not fail, and both servers may become primary servers. Therefore ensure that the admin network is connected before starting Mirroring Controller.

**Point**

- The mc_ctl command fails if the Mirroring Controller arbitration process has not been started on the arbitration server when the arbitration server is used for automatic degradation. However, if the Mirroring Controller arbitration process cannot be started in advance, it can be started by specifying the --async-connect-arbiter option in the mc_ctl command.

- After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

2. Obtain the backup.

   Use the pgx_dmpall command to collect the backup.

### 2.5 Setting Up the Standby Server

This section explains how to set up the standby server.

### 2.5.1 Setting Up Database Multiplexing Mode on the Standby Server

This section explains how to set up database multiplexing mode on the standby server.

In database multiplexing, the files that are required for operations are managed in the Mirroring Controller management directory. There is one Mirroring Controller management directory for each instance.
Note

- Do not place the Mirroring Controller management directory in a directory managed by FUJITSU Enterprise Postgres, otherwise it may be deleted by mistake with the directories managed by FUJITSU Enterprise Postgres, and an old version of files may be restored.

- When creating a standby server for a large database, stop job system operations, specify a large value for the wal_keep_size parameter, or use replication slots. This is because WALs generated after the standby server is built using the pg_basebackup command, but before it is started, need to be retained. However, the number of WAL segments that can be retained is constrained by the wal_keep_size parameter. Additionally, setting the wal_keep_size parameter requires consideration regarding stabilization of the database multiplexing mode (refer to "2.11.1 Tuning to Stabilize the Database Multiplexing Mode" for details).

See

- Refer to "Preparing Directories for Resource Deployment" in the Installation and Setup Guide for Server for details on the directories that are managed by FUJITSU Enterprise Postgres.

- Refer to "pg_basebackup" in "Reference" in the PostgreSQL Documentation for information on the pg_basebackup command.

- Refer to "mc_ctl" in Reference for information on the command.

- Refer to "Appendix A Parameters" for details on each parameter to be edited for the setup.

- Refer to "Replication Slots" in the PostgreSQL Documentation for information on replication slots.

Perform the following procedure:

1. Log in to the standby server.

2. Create the Mirroring Controller management directory that will store the files required by database multiplexing. Use ASCII characters in the Mirroring Controller management directory. Additionally, grant "Write" permission to the instance administrator user for the Mirroring Controller management directory.

3. Copy, and then deploy, the network.conf file of the primary server. Copy the network.conf file that was defined in the primary server setup, and deploy it to the Mirroring Controller management directory of the standby server. Set read and write permissions for the instance administrator user only. If users other than the instance administrator user are granted access, the mc_ctl command will not work. Accordingly, users other than the instance administrator user are prevented from operating Mirroring Controller. Register in /etc/services the port number of the standby server that was specified in the network.conf file, because programs such as WebAdmin use it to search for available port numbers. Register any name as the service name.

4. Copy, and then deploy, the serverIdentifier.conf file of the primary server. Copy the serverIdentifier.conf file that was defined in the primary server setup, and deploy it to the Mirroring Controller management directory of the standby server. Set read and write permissions for the instance administrator user only. If users other than the instance administrator user are granted access permissions, the mc_ctl command will not work.

2.5.2 Creating, Setting, and Registering the Standby Server Instance

This section explains how to create, set, and register the standby server instance.
Perform the following procedure:

1. Set the kernel parameters.

2. When using transparent data encryption, configure the encryption settings for the storage data.
   Deploy a copy of the keystore file of the primary server on the standby server.
   Refer to "Database Multiplexing Mode" in the Operation Guide for details.

3. Execute the pg_basebackup command to create a copy of the primary server instance on the standby server.
   ```
   $ pg_basebackup -D /database/inst1 -X fetch --waldir=/transaction/inst1 --progress --verbose -R
   --dbname='application_name=standbyServerName' -h primaryServerIpAddress -p primaryServerPortNumber
   ```
   **Note**
   - Use the pg_basebackup command with the -R option to create a standby.signal file. If you do not create the standby.signal file, the Mirroring Controller cannot be started as a standby server.
   - If using a method that requires password authentication for connections to the primary server, you will need to ensure that authentication is performed automatically. If the -R option is specified for the pg_basebackup command and the password parameter is specified for the --dbname option, the pg_basebackup command will set the password in the primary_conninfo parameter in postgresql.auto.conf file, enabling connections to be performed automatically.
   - If a password is not set in the primary_conninfo parameter in postgresql.auto.conf file, it will be necessary to create a .pgpass file in the home directory of the instance administrator user, and specify a password for the replication database.
   - The primary_conninfo parameter should not be set in the postgresql.conf file, but only in the postgresql.auto.conf file using the pg_basebackup command.
   - When executing the pg_basebackup command, consider the following for collection of transaction logs.
     - When "fetch" is specified for the -X option of the command
       Transaction logs are collected at the end of the backup, so it is necessary to ensure that transaction logs that occur during backup are not deleted from the primary server. Therefore, allow for a sufficient value for the wal_keep_size parameter in postgresql.conf.
     - When the -X option is omitted or "stream" is specified for the -X option of the command
       Transaction logs are streamed, so when Mirroring Controller is running on the primary server, the connection is changed to a synchronous standby server on detection of a streaming replication connection using this command. Therefore, if a job has started on the primary server, the primary server will be impacted, therefore execute this command after stopping only the Mirroring Controller process on the primary server.

4. Set the parameters shown in the table below in the postgresql.conf file.
### 2.5.3 Starting Mirroring Controller on the Standby Server

This section explains how to start Mirroring Controller on the standby server.

When the arbitration server is used for automatic degradation, start the Mirroring Controller arbitration process on the arbitration server in advance.

1. After ensuring that the Mirroring Controller process of the primary server has started, start Mirroring Controller on the standby server.

   **Enabling automatic switch/disconnection**

   As the instance administrator user, execute the mc_ctl command in start mode with the `-f` option specified. This action enables automatic switch/disconnection.

   If you start Mirroring Controller and the instance without specifying the `-f` option, automatic switch/disconnection will not be enabled. To enable both, start Mirroring Controller and then execute the mc_ctl command in enable-failover mode or restart Mirroring Controller with the `-f` option specified.

   **Example**

   ```
   $ mc_ctl start -M /mcdir/inst1
   ```

   **Disabling automatic switch/disconnection**

   As the instance administrator user, execute the mc_ctl command in start mode with the `-F` option specified.

   **Example**

   ```
   $ mc_ctl start -M /mcdir/inst1 -F
   ```

2. Check the status of the Mirroring Controller process.

   As the instance administrator user, execute the mc_ctl command in status mode. Ensure that "mirroring status" is switchable.

   **Example**

   ```
   $ mc_ctl status -M /mcdir/inst1
   ```

   **Note**

   - When the arbitration server is used for automatic degradation, the time required for the database server to connect to the arbitration server is added on. Therefore, Mirroring Controller startup may take longer than when the arbitration server is not used.

   - If the parameter for heartbeat monitoring of operating systems or servers set by the arbitration server is greater than parameter for heartbeat monitoring of operating systems and servers of the Mirroring Controller, the Mirroring Controller may fail to start. In this case, check the contents of the message notification and review the parameters for heartbeat monitoring of operating systems or servers for the arbitration server or Mirroring Controller.

   - If the heartbeat_error_action parameter in `serverIdentifier.conf` is set to "message", even if automatic switch/disconnection is enabled and Mirroring Controller is started, only message output is performed when a heartbeat abnormality is detected during heartbeat monitoring of operating systems and servers - switch/disconnection is not performed.
Mirroring Controller startup usually fails if the standby server is mistakenly started as the primary server or if the old primary server is not recovered after the switch and is then mistakenly started as the primary server. However, if the admin network is disconnected, then startup does not fail, and both servers may become primary servers. Therefore, ensure that the admin network is connected before starting Mirroring Controller.

**Point**

- The `mc_ctl` command fails if the Mirroring Controller arbitration process has not been started on the arbitration server when the arbitration server is used for automatic degradation. However, if the Mirroring Controller arbitration process cannot be started in advance, it can be started by specifying the `--async-connect-arbiter` option in the `mc_ctl` command.

- After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the `enable-failover` or `disable-failover` mode of the `mc_ctl` command.

---

### 2.6 Creating a User Exit for a Database Server

This section explains how to create a user exit for a database server.

The user command types explained below can be used as user exits. These commands are called by Mirroring Controller management processes.

The user can create user exits as required.

Specify the user commands that were created for the parameters in the server configuration file of the database server. Refer to "A.4.1 Server Configuration File for the Database Servers" for information on these parameters.

#### User command types

- **Fencing command**
  This user command performs fencing if Mirroring Controller performs arbitration processing and determines that a database server is unstable.

- **Arbitration command**
  This user command performs arbitration processing in lieu of the arbitration server when there is no arbitration server.

- **State transition commands**
  These user commands are called when Mirroring Controller performs state transition of a database server. It includes the following types:
  - **Post-switch command**
    This user command is called after a promotion from standby server to primary server.
  - **Pre-detach command**
    This user command is called before the standby server is disconnected from a cluster system.
    If the pre-detach command is specified on both the primary server and standby server, it is called first on the standby server and then on the primary server.
    If the settings are configured to forcibly stop the instance on the standby server when the standby server is disconnected, the pre-detach command is called on the standby server and then the instance on the standby server is stopped.
  - **Post-attach command**
    This user command is called after the standby server has been attached to a cluster system.
    If the post-attach command is specified on both the primary server and standby server, it is called first on the primary server and then on the standby server.
Point

When the arbitration server is used for automatic degradation and the requirements can be satisfied using the fencing command on the arbitration server only, the fencing command on the database server is not required. In addition, if the requirements can be satisfied using the fencing command on the database server only, create a fencing command on the arbitration server for termination processing only (without implementation).

Table 2.6 Availability of user commands, and database server calling the command

<table>
<thead>
<tr>
<th>User command</th>
<th>Operation when a heartbeat abnormality is detected using operating system or server heartbeat monitoring</th>
<th>Database server calling the command</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Message output</td>
<td>Automatic degradation by arbitration server</td>
</tr>
<tr>
<td>Fencing command</td>
<td>Y (*1)</td>
<td>Y (*2)</td>
</tr>
<tr>
<td>Arbitration command</td>
<td>N</td>
<td>N</td>
</tr>
<tr>
<td>Post-switch command</td>
<td>Y</td>
<td>Y</td>
</tr>
<tr>
<td>Pre-detach command</td>
<td>Y</td>
<td>Y</td>
</tr>
<tr>
<td>Post-attach command</td>
<td>Y</td>
<td>Y</td>
</tr>
</tbody>
</table>

R: Required  
Y: Can be used  
N: Cannot be used  
*1: Called only when the mc_ctl command is used to execute forced switching or forced disconnection.  
*2: Creation of a fencing command on a database server is optional, but it must be created on the arbitration server.  
*3: If message output or unconditional automatic degradation is selected, this command is called only from the primary server.

See

Refer to “Appendix C User Commands” for information on the interface for each user command.

2.7 Confirming the Streaming Replication Status

Before performing the setup of the database multiplexing mode, ensure that the prerequisite streaming replication feature has been set up correctly.

Perform the following procedure:

1. On the primary server, ensure that single-row searches can be performed using the pg_stat_replication statistics view.

An example output of the psql command is shown below.

```
postgres=# select * from pg_stat_replication;
-[ RECORD 1 ]-----------------------------
pid          | 10651
usesysid     | 10
usename      | fssep
application_name | standby
client_addr  | 192.0.2.210
```
client_hostname | client_port | backend_start | backend_xmin | state | sent_lsn | write_lsn | flush_lsn | replay_lsn | write_lag | flush_lag | replay_lag | sync_priority | sync_state | reply_time |
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>2020-03-23 11:17:49.628793+09</td>
<td></td>
<td>streaming</td>
<td>0/3000060</td>
<td>0/3000060</td>
<td>0/3000060</td>
<td>0/3000060</td>
<td>0/3000060</td>
<td></td>
<td></td>
<td></td>
<td>1</td>
<td>sync</td>
</tr>
</tbody>
</table>

2. Confirm the search results of step 1.

Ensure that the connection established with the intended standby server is in synchronous mode.

Table 2.7 Items to be checked

<table>
<thead>
<tr>
<th>Item</th>
<th>Required value</th>
</tr>
</thead>
<tbody>
<tr>
<td>application_name</td>
<td>Value specified for synchronous_standby_names parameter in the postgresql.conf file of the primary server.</td>
</tr>
<tr>
<td>client_addr</td>
<td>IP address of the standby server.</td>
</tr>
<tr>
<td>state</td>
<td>“streaming”.</td>
</tr>
<tr>
<td>sync_state</td>
<td>“sync”.</td>
</tr>
</tbody>
</table>

See

- Refer to "The Statistics Collector" in "Server Administration" in the PostgreSQL Documentation for information on the pg_stat_replication statistics view.
- Note that the pg_stat_replication statistics view may change in the future.

2.8 Checking the Connection Status

This section explains how to check the connection status from a database server or the arbitration server.

2.8.1 Checking the Connection Status on a Database Server

This section explains how to use a database server to check the connection status of the Mirroring Controller arbitration process and the Mirroring Controller process on the primary server and standby server.

Perform the following procedure:

1. On the primary server and standby server, execute the mc_ctl command in status mode with the --arbiter option specified.

   Example)
   The mc_ctl command is executed with the --arbiter option specified, and the status is output.

   ```
   $ mc_ctl status --arbiter -M /mcdir/inst1
   arbiter_id | host    | status
   ---------------------------------------
   arbiter    | 192.0.3.120 | online
   ```
2. On the primary server and standby server, check the result displayed by executing the `mc_ctl` command in status mode in step 1.

**Items to be checked**

Check that the output status” is "online".

---

**2.8.2 Checking the Connection Status on the Arbitration Server**

This section explains how to use the arbitration server to check the connection status of the Mirroring Controller arbitration process and the Mirroring Controller process on the primary server and standby server.

Perform the following procedure:

1. Execute the `mc_arb` command in status mode on the arbitration server.

   The example below executes the `mc_arb` command, and shows the status.

   **Linux**

   Example)

   ```
   $ mc_arb status -M /mcarb_dir/arbiter1
   server_id    host            status
   ---------------------------------------
   server1      192.0.3.100     online
   server2      192.0.3.110     online
   ```

   **Windows**

   Example)

   ```
   > mc_arb status -M D:\mcarb_dir\arbiter1
   server_id    host            status
   ---------------------------------------
   server1      192.0.3.100     online
   server2      192.0.3.110     online
   ```

2. Check the result displayed by executing the `mc_arb` command in step 1.

**Items to be checked**

Check that the output status is "online" on both lines.

---

**2.9 Creating Applications**

This section explains how to create applications using database multiplexing, and points that should be noted when you create the applications.
2.9.1 Application Connection Server Settings

If database multiplexing is used and a failover occurs, it will be necessary to switch the application connection server. Accordingly, use the application connection switch feature to create applications.

See

Refer to "Application Connection Switch Feature" in the Application Development Guide for details.

2.10 Checking the Behavior

To check if the environment setup was performed correctly, start the application and then check the behavior of the switch and rebuild.

2.11 Tuning

This section explains how to tune database multiplexing mode.

2.11.1 Tuning to Stabilize the Database Multiplexing Mode

When large amounts of data are updated, the write-to load for the database will become great, and the multiplexing state may become unstable.

Accordingly, by editing the parameters below in the postgresql.conf file, a stable multiplexing state can be maintained. Refer to "Estimating Transaction Log Space Requirements" in the Installation and Setup Guide for Server for information on transaction log space requirements.

Table 2.8 Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Content</th>
</tr>
</thead>
<tbody>
<tr>
<td>wal_keep_size</td>
<td>Refer to &quot;2.4.2 Creating, Setting, and Registering the Primary Server Instance&quot; for details.</td>
</tr>
<tr>
<td>max_wal_size</td>
<td>The transaction log is written out according to the checkpoint trigger.</td>
</tr>
<tr>
<td></td>
<td>If a transaction log with the capacity of the value specified in this parameter is generated, the checkpoint will be executed.</td>
</tr>
<tr>
<td></td>
<td>If a large value is specified in this parameter, the time required for crash recovery will increase.</td>
</tr>
<tr>
<td></td>
<td>If a small value is specified in this parameter, many checkpoints will be generated, which will affect the performance of the applications that connect to the primary server.</td>
</tr>
</tbody>
</table>

2.11.2 Tuning to Stabilize Queries on the Standby Server

Queries made using reference jobs on the standby server may be canceled by jobs executed on the primary server.

To reduce the possibility of a job being canceled, specify as large a value as possible for the max_standby_archive_delay parameter in the postgresql.conf file.

See

- Refer to "Handling Query Conflicts" in the PostgreSQL Documentation for details.
- Refer to "Standby Servers" in the PostgreSQL Documentation for details on the max_standby_archive_delay parameter.

2.11.3 Tuning to Stabilize Queries on the Standby Server (when Performing Frequent Updates on the Primary Server)

If jobs are updated on the primary server regularly and frequently, it will be easy for the query made by the reference job on the standby server to be canceled. In this case, edit one of the postgresql.conf file parameters shown in the table below.
Table 2.9 Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>hot_standby_feedback</td>
<td>When &quot;on&quot; is set, the deletion (vacuum) of the data area that was deleted or updated on the primary server is suppressed. Accordingly, the query on the standby server will not be canceled. (*1)</td>
</tr>
<tr>
<td>vacuum_defer_cleanup_age</td>
<td>The deletion (vacuum) of the data area that was deleted or updated on the primary server is delayed until the specified number of transactions is processed. Accordingly, the probability that the query on the standby server will be canceled decreases.</td>
</tr>
</tbody>
</table>

*1: Because the vacuum is delayed, the data storage destination disk space of the primary server comes under pressure. Additionally, if there is conflict between accesses and queries executed on the standby server, transaction logs indicating this conflict will be transferred. Accordingly, specify as large a value as possible for the max_standby_archive_delay parameter so that access conflicts do not occur.

### 2.11.4 Tuning for Optimization of Degradation Using Abnormality Monitoring

Mirroring Controller uses a monitoring method that outputs an error if the timeout or number of retries is exceeded when accessing resources targeted for monitoring. Setting inappropriate values in these settings may lead to misdetection or a delay in automatic degradation, so you must design these values appropriately.

For example, the following type of issue occurs if the tuning related to abnormality monitoring is not performed appropriately.

- If the timeout is too short
  - Results in redundant degradation and availability falls.
- If the timeout is too long
  - It takes longer for automatic degradation to be performed even when an error affecting operational continuity occurs, potentially causing downtime.

You can optimize degrading operation by editing the values for the parameters in the server configuration file described below in accordance with the system. Refer to "A.4 Server Configuration File" for information on how to edit these parameters.

#### 2.11.4.1 Tuning for Abnormality Monitoring of the Operating System or Server

Tuning for abnormal monitoring of the operating system or server depends on the operation when heartbeat abnormality is detected by the heartbeat monitoring of operating systems or servers.

#### 2.11.4.1.1 Tuning Abnormality Monitoring for Operations that Use an Arbitration Server for Automatic Degeneration

In an operation that use an arbitration server for automatic degeneration, the database server is periodically monitored for abnormalities so that the Mirroring Controller arbitration process can immediately respond to an arbitration request from the Mirroring Controller.

---

See

- Refer to "Standby Servers" in the PostgreSQL Documentation for details on the hot_standby_feedback parameter.
- Refer to "Master Server" in the PostgreSQL Documentation for details on the vacuum_defer_cleanup_age parameter.
automatic degradation using the arbitration server can optimize the time from error detection to automatic degradation of the operating systems or servers by editing the following parameters.

- Parameters for the abnormality monitoring of the operating system or server in the server configuration file of the database server
- Parameters for the abnormality monitoring of the operating system or server in the arbitration configuration file
- Parameters for the arbitration processing and fencing

Parameters for the abnormality monitoring of the operating system or server in the server configuration file of the database server

Table 2.10 Parameters for the abnormality monitoring of the operating system or server in the server configuration file of the database server

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abnormality monitoring interval</td>
<td>Mirroring Controller is configured so that abnormality monitoring does not place a load on the system. This parameter does not normally need to be set. (The default is 800 milliseconds.)</td>
</tr>
<tr>
<td>Abnormality monitoring timeout</td>
<td>Take into account the time during which a load is placed continuously on the server or admin network performance. For example, it is envisaged that this parameter will be used in situations such as when performing high-load batch jobs or when a large number of online jobs occur continuously and concurrently. (The default is 1 second.)</td>
</tr>
<tr>
<td>Abnormality monitoring retries</td>
<td>This parameter can be set when needing a safety value for situations in which the value specified for heartbeat_timeout is exceeded, for example, when using systems with fluctuating loads, however, this parameter does not normally need to be set. (The default is 2 times.)</td>
</tr>
</tbody>
</table>

The expression for calculating the time required to detect an abnormality by Mirroring Controller is shown below.

\[
\text{Abnormality detection time of Mirroring Controller} = (\text{heartbeat_timeout (seconds)} + \frac{\text{heartbeat_interval (milliseconds)}}{1000}) \times (\text{heartbeat_retry (number of times)} + 1)
\]
The abnormality detection time when the default value is used is shown below.

\[
\text{Abnormality detection time of Mirroring Controller} = \left( 1 + \frac{800}{1000} \right) \times (2 + 1) \\
= 5.4\text{(seconds)}
\]

### Parameters for the abnormality monitoring of the operating system or server in the arbitration configuration file

Table 2.11 Parameters for the abnormality monitoring of the operating system or server in the arbitration configuration file

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abnormality monitoring interval</td>
<td>Mirroring Controller arbitration process is configured so that abnormality monitoring does not place a load on the system. This parameter does not normally need to be set. (The default is the value set in heartbeat_interval in the server configuration file of the database server.) (milliseconds).</td>
</tr>
<tr>
<td>Abnormality monitoring timeout</td>
<td>Take into account the time during which a load is placed continuously on the server and arbitration network capabilities. (The default is the value set in heartbeat_timeout in the server configuration file of the database server.) (seconds).</td>
</tr>
<tr>
<td>Abnormality monitoring retries</td>
<td>This parameter can be set when needing a safety value for situations in which the value specified for heartbeat_timeout is exceeded, for example, when using systems with fluctuating loads, however, this parameter does not normally need to be set. (The default is the value set in heartbeat_retry in the server configuration file of the database server.) (number of times)</td>
</tr>
</tbody>
</table>

The expression for calculating the time required to detect an abnormality by Mirroring Controller arbitration process is shown below.

![Flow of abnormality monitoring by timeout](image)
Abnormality detection time of Mirroring Controller arbitration process = ( heartbeat_timeout(seconds) + heartbeat_interval(milliseconds) / 1000 ) x ( heartbeat_retry(number of times) + 1)

The abnormality detection time when the default value is used is shown below.

Abnormality detection time of Mirroring Controller arbitration process = ( 1 + 800 / 1000 ) x ( 2 + 1 )
= 5.4(seconds)

**Point**

The abnormality detection time of the operation for automatic degradation using the arbitration server can be calculated as follows.

Abnormality detection time = Max(Abnormality detection time by Mirroring Controller, Abnormality detection time by Mirroring Controller arbitration process)

**Note**

If the heartbeat_interval is set in the arbitration configuration file, the relationship between the parameter for operating system or server abnormality monitoring specified in the server configuration file of the database server file and the heartbeat_interval of the arbitration configuration file must satisfy the following relational expression.

Heartbeat_interval in the arbitration configuration file (milliseconds) / 1000 ) < ( heartbeat_timeout(seconds) + heartbeat_interval(milliseconds) / 1000 ) x heartbeat_retry(number of times) + heartbeat_timeout(seconds)

### Parameters for the arbitration processing and fencing

**Table 2.12 Parameters for the arbitration processing and fencing**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Arbitration processing timeout (arbitration_timeout in the server configuration file of the database server)</td>
<td>Take into account the time to perform arbitration processing on the Mirroring Controller arbitration process. The value must be greater than or equal to abnormality detection time of Mirroring Controller arbitration process + fencing_command_timeout in the arbitration configuration file (seconds).</td>
</tr>
<tr>
<td>Fencing timeout (fencing_command_timeout in the arbitration configuration file)</td>
<td>Take into account the time to execute the fencing command (seconds).</td>
</tr>
</tbody>
</table>

### Flow from the abnormality detection to the automatic degeneracy

When performing automatic degradation using the arbitration server, the flow from the abnormality detection in the operating system or server to the occurrence of automatic degeneracy and the parameters is shown below.

<table>
<thead>
<tr>
<th>Flow from the abnormality detection to the automatic degeneracy</th>
<th>Description</th>
<th>Parameter</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) Abnormality detection</td>
<td>Mirroring Controller detect the database server operating system or server errors.</td>
<td>Parameters for the abnormality monitoring of the operating system or server in the server configuration file of the database server</td>
</tr>
<tr>
<td>(2) Arbitration request</td>
<td>Mirroring Controller that detect the operating system or server error asks the Arbitration Server</td>
<td>-</td>
</tr>
<tr>
<td>Flow from the abnormality detection to the automatic degeneracy</td>
<td>Description</td>
<td>Parameter</td>
</tr>
<tr>
<td>---------------------------------------------------------------</td>
<td>-------------</td>
<td>-----------</td>
</tr>
<tr>
<td>to check the status of the other server's operating system or server.</td>
<td></td>
<td>file of the database server</td>
</tr>
<tr>
<td>(3) Arbitration processing</td>
<td>The Mirroring Controller arbitration process checks the status of the other server's operating system or server. However, if the result of the operating system or server abnormality monitoring by the arbitration server has been determined before the arbitration request from the Mirroring Controller of the database server, this process is not performed.</td>
<td>Parameters for the abnormality monitoring of the operating system or server in the arbitration configuration file</td>
</tr>
<tr>
<td>(4) Fencing</td>
<td>If the Mirroring Controller arbitration process determines that the other server is an abnormality of the operating system or server, it fences the other server and isolates it from the cluster system. If the Mirroring Controller arbitration process determines that the operating system or server status is normal, this process and the (6) are not performed.</td>
<td>fencing_command_timeout in the arbitration configuration file</td>
</tr>
<tr>
<td>(5) Return of the arbitration results</td>
<td>Returns the results of the arbitration to the Mirroring Controller of the database server that requested the arbitration.</td>
<td>-</td>
</tr>
<tr>
<td>(6) Automatic degradation</td>
<td>The automatic degradation is performed. If fencing fails in (4), this procedure is not performed.</td>
<td>-</td>
</tr>
</tbody>
</table>

-: No associated parameters

**Note**

If the fencing_command parameter is specified in the server configuration file of the database server, the fencing command is invoked on the database server if fencing is successful on the arbitration server. In that case, add the value of the fencing_command_timeout parameter in the server configuration file of the database server to the estimate.
Figure 2.1 When the Mirroring Controller on the primary server detects an operating system or server error...
2.11.4.1.2 Tuning Abnormality Monitoring for Operations that Perform Automatic Degeneration by Calling a User Exit that Determines Degeneration

In an operation that perform automatic degeneration by calling a user exit that determines degeneration, you can optimize the time from operating system or server abnormality detection to automatic degradation by editing the operating system or server abnormality monitoring parameters and parameters related to arbitration processing and fencing in the server configuration file of the database server. Refer to "Parameters for the abnormality monitoring of the operating system or server in the server configuration file of the database server" for information on the operating system or server abnormality monitoring parameters in the server configuration file of the database server.

Table 2.13 Parameters for the arbitration processing and fencing

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Arbitration processing timeout</td>
<td>Take into account the time to execute the arbitration command(Seconds).</td>
</tr>
<tr>
<td>(arbitration_command_timeout)</td>
<td></td>
</tr>
<tr>
<td>Fencing timeout</td>
<td>Take into account the time to execute the fencing command (seconds).</td>
</tr>
<tr>
<td>(fencing_command_timeout)</td>
<td></td>
</tr>
</tbody>
</table>

Flow from the abnormality detection to the automatic degeneracy

When performing automatic degradation by calling a user exit that determines degeneration, the flow from the abnormality detection in the operating system or server to the occurrence of automatic degeneracy and the parameters is shown below.
<table>
<thead>
<tr>
<th>Flow from the abnormality detection to the automatic degeneracy</th>
<th>Description</th>
<th>Parameter</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) Abnormality detection</td>
<td>Mirroring Controller detect the database server operating system or server errors.</td>
<td>Parameters for the abnormality monitoring of the operating system or server in the server configuration file of the database server</td>
</tr>
<tr>
<td>(2) Arbitration processing</td>
<td>An arbitration command is executed to check the status of the other server's operating system or server.</td>
<td>arbitration_command_timeout in the server configuration file of the database server</td>
</tr>
<tr>
<td>(3) Fencing</td>
<td>If the operating system or server status of the other server is abnormal in (2), it fences the other server and isolates it from the cluster system. If the operating system or server status of the other server is normal in (2), this process and (4) are not executed.</td>
<td>fencing_command_timeout in the server configuration file of the database server</td>
</tr>
<tr>
<td>(4) Automatic degradation</td>
<td>The automatic degradation is performed. If fencing fails in (3), this procedure is not performed.</td>
<td>-</td>
</tr>
</tbody>
</table>

-: No associated parameters

Figure 2.3 When the Mirroring Controller on the primary server detects an operating system or server error
2.11.4.1.3 Tuning Abnormality Monitoring for Operations that Notify Messages

In an operation that notify messages, you can optimize the abnormality detection time by editing the operating system or server abnormality monitoring parameters in the server configuration file of the database server. Refer to “Parameters for the abnormality monitoring of the operating system or server in the server configuration file of the database server” for information on the operating system or server abnormality monitoring parameters in the server configuration file of the database server. In addition, when the Mirroring Controller detects an error, it does not perform the arbitration processing, fencing, or automatic degradation, but only notification messages is performed.

2.11.4.1.4 Tuning Abnormality Monitoring for Operations that Perform Automatic Degenerate Unconditionally due to Heartbeat Abnormality

In an operation that perform automatic degenerate unconditionally due to heartbeat abnormality, you can optimize the time from operating system or server abnormality detection to automatic degradation by editing the operating system or server abnormality monitoring parameters in the server configuration file of the database server. Refer to “Parameters for the abnormality monitoring of the operating system or server in the server configuration file of the database server” for information on the operating system or server abnormality monitoring parameters in the server configuration file of the database server. In addition, when the Mirroring Controller detects an error, it does not perform the arbitration processing, fencing, or automatic degradation, but only automatic degenerate unconditionally is performed.

Note

Refer to “Appendix D Notes on Performing Automatic Degradation Immediately after a Heartbeat Abnormality” for notes on the operation that perform automatic degenerate unconditionally due to heartbeat abnormality.
2.11.4.2 Tuning for Abnormality Monitoring of Database Processes

In an abnormality monitoring of database processes, you can optimize by editing the following parameters in the server configuration file of the database server.

Table 2.14 Parameters for abnormality monitoring of database processes

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abnormality monitoring interval</td>
<td>Abnormality monitoring by Mirroring Controller is set so as not to place load on the system, but normally it does not need to be set. (The default is the value set in heartbeat_interval.) (milliseconds)</td>
</tr>
<tr>
<td>Timeout for abnormality monitoring of database processes</td>
<td>Take into account the time during which a load is placed continuously on the database. For example, it is envisaged that this parameter will be used in situations such as when performing high-load batch jobs or when a large number of online jobs occur continuously and concurrently. (The default is the value set in heartbeat_timeout.) (seconds)</td>
</tr>
<tr>
<td>Abnormality monitoring retries</td>
<td>This parameter can be set when needing a safety value for situations in which the value specified for db_instance_check_timeout is exceeded, for example, when using systems with fluctuating loads, however, this parameter does not normally need to be set. (The default is the value set in heartbeat_retry.) (number of times)</td>
</tr>
</tbody>
</table>

Flow of abnormality monitoring by timeout

The expression for calculating the time required to detect an abnormality is shown below.

\[
\text{Abnormality detection time} = ( \text{db_instance_check_timeout (seconds)} + \frac{\text{db_instance_check_interval (milliseconds)}}{1000} ) \times ( \text{db_instance_check_retry (number of times)} + 1 )
\]

The abnormality detection time when the default value is used is shown below.
Abnormality detection time = \left( \frac{1 + 800}{1000} \right) \times (2 + 1) 
= 5.4 \text{ (seconds)}

- If the `db_instance_timeout_action` parameter in `serverIdentifier.conf` is set to "message", and the `db_instance_check_timeout` parameter is set to a short value, a crash of the database process will be detected as "no response", and it may take time for automatic degradation to occur. Therefore, specify an appropriate timeout for `db_instance_check_timeout`.

- If a high load on the database and an event that prevents connection to an instance occur at the same time, it is judged as abnormal without retrying monitoring.

### 2.11.4.3 Tuning for Abnormality Monitoring of Streaming Replication

In an abnormality monitoring of streaming replication, you can optimize by editing the following parameters in the server configuration file of the database server.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abnormality monitoring interval (<code>db_instance_check_interval</code>)</td>
<td>Abnormality monitoring by Mirroring Controller is set so as not to place load on the system, but normally it does not need to be set. (The default is the value set in <code>heartbeat_interval</code>.) (milliseconds)</td>
</tr>
<tr>
<td>Abnormality monitoring retries (<code>db_instance_check_retry</code>)</td>
<td>This parameter can be set when needing a safety value, such as when it is anticipated that a temporary log transfer LAN error may occur, but it does not normally need to be set. (The default is the value set in <code>heartbeat_retry</code>.) (number of times)</td>
</tr>
<tr>
<td>Timeout for abnormality monitoring of streaming replication (<code>wal_sender_timeout</code> and <code>wal_receiver_timeout</code> in <code>postgresql.conf</code>)</td>
<td>Take into account the capacity and load of the log transfer network and the time during which a load is placed continuously on the database. For example, if there is a succession of data update jobs that generate a high WAL volume, you must configure the settings to avoid misdetection. (The default is 60 seconds.)</td>
</tr>
</tbody>
</table>
The expression for calculating the time required to detect an abnormality is shown below.

\[
\text{Abnormality detection time} = ( \text{wal\_sender\_timeout (seconds)} + \frac{\text{db\_instance\_check\_interval (milliseconds)}}{1000} \times (\text{disk\_check\_retry (number of times)} + 1)) \quad \text{Or,} \\
= ( \text{wal\_receiver\_timeout (seconds)} + \frac{\text{db\_instance\_check\_interval (milliseconds)}}{1000} \times (\text{disk\_check\_retry (number of times)} + 1))
\]

The abnormality detection time when the default value is used is shown below.

\[
\text{Abnormality detection time} = 60 + \left( \frac{800}{1000} \times (2 + 1) \right) \\
= 62.4 \text{(seconds)}
\]
2.11.4.4 Tuning for Disk Abnormality Monitoring

In an abnormality monitoring of the disk, you can optimize by editing the following parameters in the server configuration file of the database server.

Table 2.16 Parameters for disk abnormality monitoring

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abnormality monitoring interval</td>
<td>Abnormality monitoring by Mirroring Controller is set so as not to place load on the system, but normally it does not need to be set. (The default is the value set in heartbeat_interval.) (milliseconds)</td>
</tr>
<tr>
<td>Abnormality monitoring retries</td>
<td>This parameter can be set when needing a safety value, such as when it is anticipated that a temporary disk input/output error may occur, but normally it does not need to be set. (The default is the value set in heartbeat_retry.) (number of times)</td>
</tr>
</tbody>
</table>

The expression for calculating the time required to detect an abnormality is shown below.

\[
\text{Abnormality detection time} = \text{disk\_check\_interval (milliseconds)} / 1000 \times (\text{disk\_check\_retry (number of times)} + 1)
\]

The abnormality detection time when the default value is used is shown below.

\[
\text{Abnormality detection time} = \frac{800}{1000} \times (2 + 1) = 2.4 \text{ (seconds)}
\]
The tuning described above impacts on the time taken from detection of a timeout until switching the primary server. Therefore, modify the values while taking into account the switch/disconnection time, using a design for which misdetection does not occur.

- Immediately selecting automatic degradation when a heartbeat abnormality occurs in operating system or server heartbeat monitoring risks causing split brain. Refer to "Appendix D Notes on Performing Automatic Degradation Immediately after a Heartbeat Abnormality" for details.

Mirroring Controller uses connections to database instances and SQL access to monitor abnormality in some resources targeted for monitoring. The connection destination database names and connection user names used for abnormality monitoring conform to the parameters in the server configuration file. The application name is "mc_agent".

2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances

Multiplexed instances and Mirroring Controller can be started and stopped automatically in line with the starting and stopping of the operating system of the database server.

To guarantee the startup sequence of Mirroring Controller on the primary and standby servers, first confirm that the primary server has started, and then start the standby servers in sequence.

The startup sequence of the Mirroring Controller process on the database server and the Mirroring Controller arbitration process on the arbitration server is not guaranteed. If the arbitration server cannot be started first, execute the mc_ctl command in start mode with the --async-connect-arbiter option specified to start the Mirroring Controller process.

If you start the Mirroring Controller and multiplexed instances, wait for time correction, network setup, and so on.

Perform the following procedure:

1. Create a unit file
   Copy the unit file sample stored in the directory below, and revise it to match the target instance.

   **Sample file**
   ```
   /installDir/share/mcoi.service.sample
   ```

   **Example**
   ```
   # cp /opt/fsepv<x>server64/share/mcoi.service.sample /usr/lib/systemd/system/mcoi_inst1.service
   ```

   Revise the underlined portions of the options below in the unit file.

<table>
<thead>
<tr>
<th>Section</th>
<th>Option</th>
<th>Specified value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unit</td>
<td>Description</td>
<td>FUJITSU Enterprise Postgres MirroringController instanceName</td>
<td>Specifies the feature overview. Specifies the name of the target instance. (*1)</td>
</tr>
<tr>
<td>Service</td>
<td>ExecStart</td>
<td>/bin/bash -c 'installDir/bin/mc_std start instanceDir'</td>
<td>Command to be executed when the service is started.</td>
</tr>
<tr>
<td>Section</td>
<td>Option</td>
<td>Specified value</td>
<td>Description</td>
</tr>
<tr>
<td>------------------</td>
<td>---------------------------------</td>
<td>---------------------------------------------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td></td>
<td><strong>MirroringControllerManagementDir mc_ctlOption</strong></td>
<td>Specify the option you want to add when the mc_ctl command is executed without the -M option in the mc_ctl option. Note that the content specified in this mc_ctl option is carried over from the mc_std command to the mc_ctl command. (*2)</td>
<td></td>
</tr>
<tr>
<td>ExecStop</td>
<td><code>/bin/bash -c 'installDir/bin/mc_std stop installDir MirroringControllerManagementDir mc_ctlOption'</code></td>
<td>Command to be executed when the service is stopped. Specify the option you want to add when the mc_ctl command is executed without the -M option in the mc_ctl option. However, to use the --mc-only option to stop only Mirroring Controller, you must use the --mc-only option at startup. Note that the content specified in this mc_ctl option is carried over from the mc_std command to the mc_ctl command.</td>
<td></td>
</tr>
<tr>
<td>User</td>
<td>User</td>
<td>OS user account of the instance administrator user.</td>
<td></td>
</tr>
<tr>
<td>Group</td>
<td>Group</td>
<td>Group to which the instance administrator user belongs.</td>
<td></td>
</tr>
</tbody>
</table>

*1: The instance name should be as nameThatIdentifiesTheInstance.
The naming conventions for identifying the instance are as follows:
- Up to 16 bytes
- The first character must be an ASCII alphabetic character
- The other characters must be ASCII alphanumeric characters

*2: When the arbitration server is used for automatic degradation, start the Mirroring Controller arbitration process on the arbitration server and then start the Mirroring Controller process on the database server. If the arbitration server cannot be started first, specify the --async-connect-arbiter option to start the Mirroring Controller process.

2. Enable automatic start and stop

As the OS superuser, use the systemctl command to enable automatic start and stop.

Example)
```
# systemctl enable mcoi_inst1.service
```

Note

If automatic start and stop of Mirroring Controller has been configured, to stop Mirroring Controller, do not use the mc_ctl command, but instead use the systemctl command as the OS superuser.

Example)
```
# systemctl stop mcoi_inst1.service
```

If the instance does not stop, refer to “Actions in Response to Failure to Stop an Instance” in the Operation Guide to stop the instance. Then, specify the -e option in the mc_ctl command to forcibly stop Mirroring Controller.

Example)
```
$ mc_ctl stop -M /mcdir/inst1 -e
```
If Mirroring Controller is stopped using the `mc_ctl` command, the message below is output to the system log, however there is no issue because automatic stop is executed by systemd.

Message

```
FATAL: failed to stop Mirroring Controller target server:{0}" (MCA00043)
```

---

2.13 Setting Automatic Start and Stop of the Mirroring Controller Arbitration Process

You can automatically start or stop the Mirroring Controller arbitration process when the operating system on the arbitration server is started or stopped.

Linux

Note

If you start the Mirroring Controller arbitration process, wait for time correction, network setup, and so on.

Perform the following procedure:

1. Create a unit file.
   
   Copy the unit file sample stored in the directory below, and revise it to match the target instance.
   
   Sample file
   
   `/installDir/share/mcarboi.service.sample`
   
   Example)
   
   In the following example, the installation directory is "/opt/fsepv<x>assistant", and the identifier of the arbitration process is "arbiter1". Note that "<x>" indicates the product version.
   
   ```
   # cp /opt/fsepv<x>assistant/share/mcarboi.service.sample /usr/lib/systemd/system/
   mcarboi_arbiter1.service
   ```
   
   Revise the underlined portions of the options below in the unit file.

<table>
<thead>
<tr>
<th>Section</th>
<th>Option</th>
<th>Specified value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unit</td>
<td>Description</td>
<td>FUJITSU Enterprise Postgres Mirroring Controller Arbiter &lt;arbitrationProcessId&gt;</td>
<td>Specifies the feature overview. Specifies the identifier of the targeted arbitration process. (*1)</td>
</tr>
<tr>
<td>Service</td>
<td>ExecStart</td>
<td>/bin/bash -c <code>installDir/bin/mc_arb_std start installDir mirroringController:ArbitrationProcessMgmtDir mc_arbOption</code></td>
<td>Command to be executed when the service is started. Specify the option you want to add when the mc_arb command is executed without the -M option in the mc_arb option.</td>
</tr>
</tbody>
</table>

<td>ExecStop</td>
<td>/bin/bash -c `installDir/bin/ mc_arb_std stop installDir mirroringControllerArbitrationProcessMgmtDir mc_arbOption`</td>
<td>Command to be executed when the service is stopped. Specify the option you want to add when the mc_arb command is executed without the -M option in the mc_arb option. Note that the content specified in this mc_arb option is carried over from the mc_arb_std command in &quot;Specified value&quot; to the mc_arb command.</td>
</tr>
<tr>
<td></td>
<td>User</td>
<td>User</td>
<td>Specify the account of the operating system user.</td>
</tr>
<tr>
<td></td>
<td>Group</td>
<td>Group</td>
<td>Specify the group to which the user belongs.</td>
</tr>
</tbody>
</table>

*1: The arbitration process identifier used here is a name for identifying the Mirroring Controller arbitration process. The naming conventions for identifying the Mirroring Controller arbitration process are as follows:

- Up to 16 bytes
- The first character must be an ASCII alphabetic character
- The other characters must be ASCII alphanumeric characters

2. Enable automatic start and stop.

As the operating system superuser, use the systemctl command to enable automatic start and stop.

Example)

```
# systemctl enable mcarboi_arbiter1.service
```

Windows

You can configure the Windows service to perform automatic start and stop.

Configuring during setup

When registering the Mirroring Controller arbitration process as a Windows service in "2.3.1 Configuring the Arbitration Server", specify "auto" for the -S option of the register mode used with the mc_arb command.

Example)

```
> mc_arb register -M D:\mcdir\inst1 -P ******** -S auto
```

Changing the configuration after setup

Use the sc config command to change the configuration of the Windows service of the Mirroring Controller arbitration process.
Example)
The configuration of the registered service name "Mirroring_Controller_Arbiter1" is changed.

> sc config "Mirroring_Controller_Arbiter1" start= auto

See
Refer to sc command help for information on how to configure the service.

Information
You can check the registration status in the Windows service window or by using the sc qc command.

2.14 Backup Operation
This section explains the backup operation for database multiplexing mode.

2.14.1 Backing up Database Multiplexing Mode Information
When changing the Mirroring Controller settings, in addition to backing up the database, back up the configuration file in the Mirroring Controller management directory so that the Mirroring Controller settings are not lost.
When the arbitration server is used for automatic degradation, also back up the configuration file in the Mirroring Controller arbitration process management directory.

2.14.2 Database Backup Operation
Using database multiplexing mode is the same as obtaining the backup data on the standby server as a safeguard against a disk failure. Note that all server disks may be corrupted due to some cause.
As a safeguard against this type of case, execute the pgx_dmpall command on the primary server to create the backup data.
However, it is not definite as to which server runs as the primary server, so ensure that the pgx_dmpall command is executed periodically on all servers, so that the backup data will be obtained. For example, create a script to obtain the backup data, and set it in the operation management software.

Point
When the pgx_dmpall command is executed on the standby server, it will not match the statuses, however the error message shown below will be output and return the value "1".
If a script that ignores only this type of error is executed on all servers, the backup data of the primary server can be obtained.

Error message
ERROR:recovery is in progress (10095)

Note
- Consider the possibility that the server that runs as the primary server may be destroyed alongside the backup data, so it is recommended to promote another server to become the primary server, and then back up the data on the new primary server without waiting for the next scheduled backup.
- Specify the same backup directory name for the primary and standby servers. If different backup directory names are specified, and recovery is performed using the backup data of the other server, the recovery cannot be performed correctly.
- Period backups allow shorter recovery time and reduction in disk usage. Refer to "Backing Up the Database" in the Operation Guide for details on the backup operation.

- Refer to "Chapter 4 Action Required when an Error Occurs in Database Multiplexing Mode" for details on recovery based on the backup data that was obtained using the pgx_dmpall command.
Chapter 3 Operations in Database Multiplexing Mode

This chapter describes the periodic operations that are performed when running database multiplexing mode. The periodic operations are the same as the operations on a single server.

---

3.1 Starting and Stopping the Mirroring Controller Arbitration Process

This section describes how to start and stop the Mirroring Controller arbitration process.

3.1.1 Starting the Mirroring Controller Arbitration Process

**Linux**

While the Mirroring Controller arbitration process is in a stopped state, execute the mc_arb command in start mode to start the Mirroring Controller arbitration process.

Example)

```
$ mc_arb start -M /mcarb_dir/arbiter1
```

**Windows**

The Mirroring Controller arbitration process can be started using one of the following options:

- Using the mc_arb command
- Starting the service on system startup

**Using the mc_arb command**

While the Mirroring Controller arbitration process is in a stopped state, execute the mc_arb command from the command prompt to start the Mirroring Controller arbitration process.

Example)

```
> mc_arb start -M D:\mcarb_dir\arbiter1
```

**Starting the service on system startup**

Specify automatic start when registering the Mirroring Controller arbitration process to the Windows service during setup of database multiplexing mode. Accordingly, the Mirroring Controller arbitration process service will start on startup of the operating system.

---

3.1.2 Stopping the Mirroring Controller Arbitration Process

---

---
Linux

While the Mirroring Controller arbitration process is running, execute the mc_arb command in stop mode to stop the Mirroring Controller arbitration process.

Example)

```
$ mc_arb stop -M /mcarb_dir/arbiter1
```

Windows

The Mirroring Controller arbitration process can be stopped using one of the following options:
- Using the mc_arb command
- Stopping the service

Using the mc_arb command

While the Mirroring Controller arbitration process is running, execute the mc_arb command in stop mode from the command prompt to stop the Mirroring Controller arbitration process.

Example)

```
> mc_arb stop -M D:\mcarb_dir\arbiter1
```

Stopping the service

Select [Administrative Tools], then [Services] to open the [Services] window, and then select the Mirroring Controller service and click the [Stop] menu.

Refer to the Reference for information on how to specify the mc_arb command.

Note

- The arbitration server will be forcibly stopped when the service is stopped.
- Before shutting down the operating system on the arbitration server, either stop the Mirroring Controller on the primary server or standby server or shut down the operating system on the primary server or standby server.

3.2 Starting and Stopping Mirroring Controller

When database multiplexing mode is used, use the mc_ctl command to start and stop the instance and Mirroring Controller at the same time. Do not start or stop the instance by itself.

Starting Mirroring Controller

While Mirroring Controller is in a stopped state, execute the mc_ctl command in start mode to start Mirroring Controller.

Enabling automatic switch/disconnection

Execute the mc_ctl command in start mode.

Example)

```
$ mc_ctl start -M /mcdir/inst1
```

When only the instance is started and stopped, the following will happen:
- When only the instance is started
  Features such as automatic switch and automatic disconnection will not work until Mirroring Controller is started.
- When only the instance is stopped
  Mirroring Controller determines that an error has occurred in the instance, and performs an unnecessary automatic switch.
  Automatic switch may also stop working correctly in some cases.

Disabling automatic switch/disconnection

Execute the mc_ctl command in start mode with the -F option specified.

Example)

```
$ mc_ctl start -M /mcdir/inst1 -F
```

When only the instance is started and stopped, the following will happen:
- When only the instance is started
  Errors indicated in "1.1 What is Database Multiplexing Mode" will not be detected until Mirroring Controller is started.
- When only the instance is stopped
  Mirroring Controller determines that an error has occurred in the instance, and outputs an error to the system log.

- **Point**

  - To start the Mirroring Controller process only, execute the mc_ctl command in start mode with the --mc-only option specified.
  - After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.
  - When the arbitration server is used for automatic degradation, the Mirroring Controller process startup fails on the database server if the Mirroring Controller arbitration process has not been started on the arbitration server in advance. However, even if the Mirroring Controller arbitration process cannot be started in advance, the Mirroring Controller process can be started by specifying the --async-connect-arbiter option in the mc_ctl command.

- **Note**

  - When the arbitration server is used for automatic degradation, the database server must connect to the arbitration server, and as a result, Mirroring Controller startup may take longer.
  - Mirroring Controller startup usually fails if the standby server is mistakenly started as the primary server or if the old primary server is not recovered after the switch and is then mistakenly started as the primary server. However, if the admin network is disconnected, then startup does not fail, and both servers may become primary servers. Therefore, ensure that the admin network is connected before starting Mirroring Controller.

**Stopping Mirroring Controller**

While Mirroring Controller is running, execute the mc_ctl command in stop mode to stop Mirroring Controller process.

Example)

```
$ mc_ctl stop -M /mcdir/inst1
```
To stop the Mirroring Controller process only, execute the mc_ctl command in stop mode with the --mc-only option specified.

Note
To prevent an unintended automatic switch, before shutting down the operating system on the primary server, you must stop the Mirroring Controller, or shut down the operating system on the standby server.

See
Refer to the Reference for information on how to specify the mc_ctl command.

3.3 Checking the Database Multiplexing Mode Status

3.3.1 Checking the Status of the Database Server
This section describes how to check the status of the database server.

Check the multiplexed database status by executing the mc_ctl command in status mode.

Additionally, errors can be detected by monitoring the Mirroring Controller messages. If the status or messages are monitored periodically, you can react quickly following an automatic switch failure.

Checking the status of the multiplexing database
When the mc_ctl command is executed, the details of the multiplexing configuration, information about whether switch is possible following the error, and location and details of the error that caused the switch or disconnection are displayed.

After starting database multiplexing mode, execute the mc_ctl command in status mode to check the multiplexing status.

An example of the status displayed when the mc_ctl command is executed is shown below.

Example)
```
$ mc_ctl status -M /mcdir/inst1
```

```
mirroring status
-----------------
switchable
server_id host_role host host_status db_proc_status disk_status
----------------------------------------------------------------------------------------------------
server1 primary 192.0.2.100 normal normal normal
server2 standby 192.0.2.110 normal normal normal
```

Checking the status of connection to the Mirroring Controller arbitration process
When the arbitration server is used for automatic degradation, the status of the connection to the Mirroring Controller arbitration process can be checked by specifying the --arbiter option. If the output status is "online", it indicates that an arbitration request can be made from the database server to the arbitration server. When the arbitration server is used for automatic degradation, regularly execute the command in status mode with the --arbiter option specified and check that the output status is "online".

Example)
The mc_ctl command is executed with the --arbiter option specified, and the status is output.
```
$ mc_ctl status --arbiter -M /mcdir/inst1
```
Checking the status of data synchronization

Additionally, by referencing the pg_stat_replication statistics view on the primary server, the data synchronization status can be confirmed. However, when creating the monitoring program, note that the content of pg_stat_replication may be changed in the future.

The following example shows that the locations of the transaction log after it is sent and received (sent_lsn, replay_lsn) match, and that they are fully synchronized.

Example)

```sql
postgres=# select * from pg_stat_replication;
- [ RECORD 1 ]--------------------------------------------------------
pid | 10651
usesysid | 10
usename | fsep
application_name | standby
client_addr | 192.0.2.210
client_hostname |
client_port | 55098
backend_start | 2020-03-23 11:17:49.628793+09
backend_xmin |
state | streaming
sent_lsn | 0/3000060
write_lsn | 0/3000060
flush_lsn | 0/3000060
replay_lsn | 0/3000060
write_lag |
flush_lag |
replay_lag |
sync_priority | 1
sync_state | sync
reply_time | 2020-03-23 11:23:27.703366+09
```

See

- Refer to "mc_ctl" in Reference for information on the command.
- Refer to "Notes on Application Compatibility" in the Application Development Guide for information on retaining application compatibility.
- Refer to "The Statistics Collector" in "Server Administration" in the PostgreSQL Documentation for details on pg_stat_replication.

### 3.3.2 Checking the Status of the Arbitration Server

This section describes how to check the status of the arbitration server.

The status of the connection between the Mirroring Controller arbitration process and primary server/standby server can be checked by executing the mc_arb command in status mode.

The example below executes the mc_arb command, and shows the status.

Linux

Example)

```
$ mc_arb status -M /mcarb_dir/arbiter1
server_id host status
```

- 63 -
3.4 Manually Switching the Primary Server

The primary server cannot be switched automatically in the following case:

- If automatic switch/disconnection is disabled
- If output of messages is selected for heartbeat abnormalities during heartbeat monitoring of the operating system or server and the operating system/server crashes or becomes unresponsive

In this case, to manually switch the primary server, execute the mc_ctl command in switch mode on either the primary server or the standby server.

Example)

$ mc_ctl switch -M /mcdir/inst1

Point

If automatic switch/disconnection is enabled, it is possible to perform switch of primary server at any time.

3.5 Manually Disconnecting the Standby Server

The procedure to perform disconnection of the standby server differs depending on whether the automatic switch/disconnection is enabled or disabled.

If automatic switch/disconnection is enabled

Execute the mc_ctl command in stop mode on the standby server.

Example)

$ mc_ctl stop -M /mcdir/inst1

If automatic switch/disconnection is disabled

1. Execute the mc_ctl command in stop mode on the standby server.

Example)

$ mc_ctl stop -M /mcdir/inst1

2. Comment out the synchronous_standby_names parameter in the postgresql.conf file on the primary server.

3. Execute the pg_ctl command in reload mode on the primary server.

Example)

$ pg_ctl reload -D /database/inst1
3.6 Action Required when a Heartbeat Abnormality is Detected

The message below is output when a heartbeat abnormality is detected during heartbeat monitoring of operating systems or servers:

```
detected an error on the monitored object "server(server identifier name)": no response:ping timeout (MCA00019)
```

If the heartbeat_error_action parameter in serverIdentifier.conf is set to "message", even if automatic switch/disconnection is enabled and Mirroring Controller is started, automatic switch/disconnection is not performed when a heartbeat abnormality is detected. Therefore, user action will be necessary.

This section explains the action required when the heartbeat_error_action parameter is set to "message" and a heartbeat abnormality is detected.

1. Identify the cause of the heartbeat abnormality. The possible causes are below:
   - The remote operating system or server crashed or is unresponsive
   - An admin network issue occurred
2. Address the cause identified in step 1.
   - The remote operating system or server crashed or is unresponsive
     Manually perform switch or disconnection using the mc_ctl command.
   - An admin network issue occurred
     Refer to "Chapter 4 Action Required when an Error Occurs in Database Multiplexing Mode", and recover the database multiplexing system.

3.7 Monitoring Mirroring Controller Messages

The messages that are output by Mirroring Controller are output to both the database server and the arbitration server. If the automatic switch fails, for example, an important message related to the continuation of the operation may be output, so ensure that the system log messages are monitored.

If the arbitration server is used for automatic degradation, monitor messages on both the database server and the arbitration server.

**Message output destination on the database server**

Messages are output to the system log.

**Message output destination on the arbitration server**

- **Linux**
  
  Messages are output to the system log.

- **Windows**
  
  Messages are output to the event log.

- **Point**
  
  - To monitor message types considered to be important, an operating system setting must be configured beforehand. Refer to the operating system manuals, check if the message is of a message type that is monitored to be output to the system log, and configure the setting if required.
- If the heartbeat_error_action parameter in serverIdentifier.conf is set to "message", only message output is performed when a heartbeat abnormality is detected during heartbeat monitoring of operating systems and servers - automatic switch/disconnection is not performed. Therefore users need to monitor the messages. Refer to "3.6 Action Required when a Heartbeat Abnormality is Detected" for details.

Display format on the database server

```
programName[processId]: messageType:messageText (messageNumber)
```

Specify the program name in the syslog_ident parameter of the serverIdentifier.conf file of the database server.

The message types output by Mirroring Controller, their severity, and their corresponding value in the system log are shown in the table below.

Table 3.1 Message type, severity, and corresponding value in the system log

<table>
<thead>
<tr>
<th>Message type</th>
<th>Severity</th>
<th>Meaning</th>
<th>System log</th>
</tr>
</thead>
<tbody>
<tr>
<td>INFO</td>
<td>Information</td>
<td>Provides information that does not fall under LOG or NOTICE.</td>
<td>INFO</td>
</tr>
<tr>
<td>LOG</td>
<td>Notice</td>
<td>Provides information recognized as a particularly important event in tracing the operation history. (Example: Automatic switch is complete)</td>
<td>NOTICE</td>
</tr>
<tr>
<td>NOTICE</td>
<td>Notice</td>
<td>Outputs information that takes into account the user instructions within the program in response to an executed or automatically executed process.</td>
<td>WARNING</td>
</tr>
<tr>
<td>WARNING</td>
<td>Warning</td>
<td>Provides a warning, for example it will soon be impossible to maintain the multiplexing state.</td>
<td>WARNING</td>
</tr>
<tr>
<td>ERROR</td>
<td>Error</td>
<td>Reports that an error other than FATAL or PANIC has occurred.</td>
<td>ERROR</td>
</tr>
<tr>
<td>FATAL</td>
<td>Error</td>
<td>Reports that an abnormality was detected in multiplexed database systems requiring recovery of the system, and also the content and cause of the abnormality.</td>
<td>CRIT</td>
</tr>
<tr>
<td>PANIC</td>
<td>Error</td>
<td>Reports that an abnormality was detected in all multiplexed database systems requiring immediate recovery of the system, and also the content and cause of the abnormality.</td>
<td>ALERT</td>
</tr>
</tbody>
</table>

The message severity has the following meanings:

- Information
  
  Informational status. A message that was reported by the system is displayed. No action is required.

- Notice
  
  Informational status, but a message that should be noted is displayed. If necessary, take the actions described in the "Action" section of the message.

- Warning
  
  No error has occurred, but the user is requested to check, and take action. Take the actions described in the "Action" section of the message.

- Error
  
  An error has occurred. Take the actions described in the "Action" section of the message.

Display format on the arbitration server

Linux

```
programName[processId]: messageType: messageText (messageNumber)
```
Specify the program name in the syslog_ident parameter of the arbitration.conf file of the arbitration server.

Windows

```
{eventSourceName}[processId]: messageType: messageText (messageNumber)
```

Specify the event source name in the event_source parameter of the arbitration.conf file of the arbitration server.

The message types output by Mirroring Controller, their severity, and their corresponding value in the output destination log are shown in the table below.

<table>
<thead>
<tr>
<th>Message type</th>
<th>Severity</th>
<th>Meaning</th>
<th>System log (Linux)</th>
<th>Event log (Windows)</th>
</tr>
</thead>
<tbody>
<tr>
<td>INFO</td>
<td>Information</td>
<td>Provides information not categorized as LOG or NOTICE.</td>
<td>INFO</td>
<td>INFORMATION</td>
</tr>
<tr>
<td>LOG</td>
<td>Notice</td>
<td>Provides information recognized as a particularly important event in tracing the operation history. (Example: Automatic switch is complete)</td>
<td>NOTICE</td>
<td></td>
</tr>
<tr>
<td>NOTICE</td>
<td>Notice</td>
<td>Outputs information that takes into account the user instructions within the program in response to an executed or automatically executed process.</td>
<td>NOTICE</td>
<td></td>
</tr>
<tr>
<td>WARNING</td>
<td>Warning</td>
<td>Provides a warning, for example it will soon be impossible to perform the arbitration process.</td>
<td>WARNING</td>
<td>WARNING</td>
</tr>
<tr>
<td>ERROR</td>
<td>Error</td>
<td>Reports that an error other than FATAL or PANIC has occurred.</td>
<td>ERROR</td>
<td>ERROR</td>
</tr>
<tr>
<td>FATAL</td>
<td>Error</td>
<td>Reports that an abnormality was detected in the arbitration server requiring recovery of the system, and also the content and cause of the abnormality.</td>
<td>CRIT</td>
<td></td>
</tr>
<tr>
<td>PANIC</td>
<td>Error</td>
<td>Reports that an abnormality was detected in the arbitration server requiring immediate recovery of the system, and also the content and cause of the abnormality.</td>
<td>ALERT</td>
<td></td>
</tr>
</tbody>
</table>

The message severity has the following meanings:

- Information

  Informational status. A message that was reported by the system is displayed. No action is required.

- Notice

  Informational status, but a message that should be noted is displayed. If necessary, take the actions described in the "Action" section of the message.

- Warning

  No error has occurred, but the user is requested to check, and take action. Take the actions described in the "Action" section of the message.

- Error

  An error has occurred. Take the actions described in the "Action" section of the message.

### 3.8 Server Maintenance

To perform maintenance tasks such as periodic server inspections and the application of updates for software products including the operating system, you must perform a planned stop of the server, and then perform the maintenance.
3.8.1 Rolling Updates

In database multiplexing mode, rolling updates, that perform the maintenance for the servers that comprise the cluster system, can be performed while jobs continue.

First, perform the maintenance for the standby server, and then switch the standby server to the primary server. Then, perform the maintenance for the original primary server that was switched to the standby server. This enables maintenance to be performed while jobs continue.

Note that arbitration server maintenance can be performed without affecting database server operation, so it is not necessary to consider rolling update.

See

If the downtime due to the maintenance of the standby server is expected to be long, refer to "Standby server downtime" in "3.9.1 Changes Required when the Standby Server is Stopped".

The flow of a rolling update is shown below.
Perform the following procedure as shown in the above figure:

**Standby server maintenance tasks**

1. To perform the maintenance on the standby server, stop Mirroring Controller.

   **Example**

   ```
   $ mc_ctl stop -M /mcdir/inst1
   ```
2. Ensure that Mirroring Controller has completely stopped.

   If the multiplexed instances and Mirroring Controller have been configured on the standby server to start and stop automatically when the operating system of the database server is started or stopped, cancel the setting to start and stop automatically.

   See

   Refer to "2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances" for information on how to configure the multiplexed instances and Mirroring Controller to start and stop automatically when the operating system of the database server starts and stops.

   As the OS superuser, execute the systemctl command to disable automatic start and stop.

   The example below disables automatic start and stop of "mcoi_inst1.service".

   Example)

   # systemctl disable mcoi_inst1.service

3. Perform maintenance tasks.

4. Create a copy of the primary server instance on the standby server.

   Execute the pg_basebackup command to create data in the standby server by synchronizing with the primary server.

   Example)

   $ pg_basebackup -D /database/inst1 -X fetch --waldir=/transaction/inst1 --progress --verbose -R
   --dbname='application_name=standbyServerName' -h primaryServerHostName -p
   primaryServerPortNumber

   See

   The procedure for copying the primary server instance to the standby server is the same as the procedure for setting up the standby server.

   Refer to "2.5.2 Creating, Setting, and Registering the Standby Server Instance", and then perform the recovery.

5. Check the settings for automatic start and stop of the multiplexed instances and Mirroring Controller.

   If the multiplexed instances and Mirroring Controller were configured in step 2 to not start and stop automatically when the operating system of the database server starts and stops, then change the settings back. This step can be skipped if automatic start and stop are not required.

   As the OS superuser, execute the systemctl command to enable automatic start and stop.

   The example below disables automatic start and stop of "mcoi_inst1.service".

   Example)

   # systemctl enable mcoi_inst1.service

   This operation is required when determining the maintenance tasks on the standby server.

   Enabling automatic switch/disconnection

   As the instance administrator user, execute the mc_ctl command in start mode.

   Example)

   $ mc_ctl start -W /mcdir/inst1
Disabling automatic switch/disconnection

As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.

Example)

$ mc_ctl start -M /mcdir/inst1 -F

Point

After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

Switching to the primary server

To perform the maintenance on the primary server, execute the mc_ctl command in the switch mode on the primary server or the standby server.

Example)

$ mc_ctl switch -M /mcdir/inst1

When the switch is complete, the synchronous_standby_names parameter in the postgresql.conf file of the new primary server will be commented as follows:

Example)

#synchronous_standby_names = 'primary'

New standby server maintenance tasks

1. Stop the Mirroring Controller.

   On the new standby server (the primary server before the switch), execute the mc_ctl command in stop mode.

   If automatic start and stop of Mirroring Controller has been configured using systemd, do not use the mc_ctl command, but instead use the systemctl command. Refer to "2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances" for details.

   Example)

   $ mc_ctl stop -M /mcdir/inst1

2. Ensure that Mirroring Controller has completely stopped.

   If the multiplexed instances and Mirroring Controller have been configured on the new standby server to start and stop automatically when the operating system of the database server is started or stopped, cancel the setting to start and stop automatically now.

   See

   Refer to "2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances" for information on how to configure the multiplexed instances and Mirroring Controller to start and stop automatically when the operating system of the database server starts and stops.

   As the OS superuser, execute the systemctl command to disable automatic start and stop.

   The example below disables automatic start and stop of "mcoi_inst1.service".

   Example)

   # systemctl disable mcoi_inst1.service
3. Perform the maintenance on the new standby server that was stopped.

4. Create a copy of the new primary server instance on the new standby server.
   Execute the pg_basebackup command to create data in the new standby server by synchronizing with the new primary server.
   
   Example)
   
   ```bash
   $ pg_basebackup -D /database/inst1 -X fetch --waldir=/transaction/inst1 --progress --verbose -R 
   --dbname='application_name=standbyServerName' -h primaryServerHostName -p primaryServerPortNumber
   ```

5. Check the settings for automatic start and stop of the multiplexed instances and Mirroring Controller.
   If the multiplexed instances and Mirroring Controller were configured in step 2 to not start and stop automatically when the operating system of the database server starts and stops, then change the settings back. This step can be skipped if automatic start and stop are not required.
   As the OS superuser, execute the systemctl command to enable automatic start and stop.
   The example below disables automatic start and stop of "mcoi_inst1.service".
   
   Example)
   
   ```bash
   # systemctl enable mcoi_inst1.service
   ```

6. After the maintenance is complete, edit the following parameters in the postgresql.conf file of the standby server as required.
   Copying an instance results in the value of the synchronous_standby_names parameter becoming the specified value on the primary server. Therefore, correct it to the specified value on the standby server. If the parameter was commented out, then you must uncomment it.

7. On the standby server, start (rebuild) Mirroring Controller.

   **Enabling automatic switch/disconnection**
   As the instance administrator user, execute the mc_ctl command in start mode.
   
   Example)
   
   ```bash
   $ mc_ctl start -M /mcdir/inst1
   ```

   **Disabling automatic switch/disconnection**
   As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.
   
   Example)
   
   ```bash
   $ mc_ctl start -M /mcdir/inst1 -F
   ```

   **Point**
   After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.
Failback of the Primary Server

Revert the primary server and standby server to the original server configuration. Do this to execute the main job on the previous primary server. Refer to “4.1.1.3 Failback of the Primary Server” for details.

Note

Obtain a backup as soon as this task is complete.

3.8.2 Stopping for Maintenance

Perform this procedure to stop all servers for periodic inspections, for example. On the server on which Mirroring Controller is running, execute the mc_ctl command in stop mode to stop the instance and Mirroring Controller.

If automatic start and stop of Mirroring Controller has been configured using systemd, do not use the mc_ctl command, but instead use the systemctl command. Refer to “2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances” for details.

After that, on the server where the Mirroring Controller arbitration process is running, execute the mc_arb command in stop mode to stop the Mirroring Controller arbitration process.

Stopping Mirroring Controller

Example)

`$ mc_ctl stop -M /mcdir/inst1 -a`

Stopping the Mirroring Controller arbitration process

Linux

Example)

`$ mc_arb stop -M /mcarb_dir/arbiter1`

Windows

Example)

`> mc_arb stop -M D:\mcarb_dir\arbiter1`

3.8.3 Arbitration Server Maintenance

Arbitration server maintenance can be performed without affecting database server operation.

Follow the procedure below to perform arbitration server maintenance.

1. Execute the mc_arb command in stop mode to forcibly stop the Mirroring Controller arbitration process.

   Linux

   Example)

   `$ mc_arb stop -M /mcarb_dir/arbiter1 -e`

   Windows

   Example)

   `> mc_arb stop -M D:\mcarb_dir\arbiter1 -e`

2. Perform maintenance tasks.

3. Execute the mc_arb command in start mode to restart the Mirroring Controller arbitration process.
4. Execute the mc_arb command in status mode to check that the arbitration server is connected to the database server.

The example below executes the mc_arb command, and shows the status.

**Linux**

Example)

```
$ mc_arb status -M /mcarb_dir/arbiter1
```

<table>
<thead>
<tr>
<th>server_id</th>
<th>host</th>
<th>status</th>
</tr>
</thead>
<tbody>
<tr>
<td>server1</td>
<td>192.0.3.100</td>
<td>online</td>
</tr>
<tr>
<td>server2</td>
<td>192.0.3.110</td>
<td>online</td>
</tr>
</tbody>
</table>

**Windows**

Example)

```
> mc_arb status -M D:\mcarb_dir\arbiter1
```

<table>
<thead>
<tr>
<th>server_id</th>
<th>host</th>
<th>status</th>
</tr>
</thead>
<tbody>
<tr>
<td>server1</td>
<td>192.0.3.100</td>
<td>online</td>
</tr>
<tr>
<td>server2</td>
<td>192.0.3.110</td>
<td>online</td>
</tr>
</tbody>
</table>

5. Check the command output.

**Items to be checked**

Check that the output status is "online" on both lines.

### 3.9 Changes in Operation

The following changes in operation may be required:

- Changes required when the standby server is stopped
- Changing from single server mode to database multiplexing mode
- Changing from database multiplexing mode to single server mode
- Changing to database multiplexing mode when the arbitration server is used for automatic degradation
- Changing parameters
- Uninstalling in the database multiplexing mode

### 3.9.1 Changes Required when the Standby Server is Stopped
Operation when the standby server is stopped

Before performing maintenance for the primary server instance when the standby server has been stopped, stop Mirroring Controller on the primary server, comment out the synchronous_standby_names parameter in the postgresql.conf file of the primary server, and then execute the pg_ctl command in reload mode.

If this operation is not performed, operations performed on the primary server for the instance will remain in a wait state.

See

Refer to "pg_ctl" in Reference for information on the command.

Standby server downtime

If you specified the synchronous_standby_names parameter of the postgresql.conf file and then the standby server instance is stopped, consider the points below.

- The wal_sender_timeout parameter in the postgresql.conf file
  If the standby server is stopped after the timeout set in this parameter was exceeded, an error stating that the transaction log could not be received may be output to the primary server system log, and all transaction logs that should be transferred to the standby server are accumulated.

- The wal_keep_size parameter in the postgresql.conf file
  If a transaction log that exceeds the value set in this parameter was generated while the standby server was stopped, the transaction log may be deleted.

Additionally, setting this parameter requires consideration regarding stabilization of the database multiplexing mode. Refer to "2.11.1 Tuning to Stabilize the Database Multiplexing Mode" for details.

Note

The standby server must be rebuilt if the pending transaction log to be transferred to the standby server is lost when the standby server is started after the maintenance task is complete.

Take the action advised in the recovery operation that starts from "4.1.1.1.3 Identify cause of error and perform recovery" through to "4.1.1.2 Rebuild the Standby Server".

3.9.2 Changing from Single Server Mode to Database Multiplexing Mode

The procedure for switching single server mode to database multiplexing mode for the purposes of high reliability and load distribution of the system is explained below.

This procedure is equivalent to the setup procedure explained in "Chapter 2 Setting Up Database Multiplexing Mode".

Note

If the data storage destination directory name is not comprised of ASCII characters

Stop the application job and then migrate to a directory with a name that uses only ASCII characters:

1. Stop the database instance on the primary server.
2. Change the name of the data storage destination directory to one that uses only ASCII characters.

See

When encrypting the storage data, refer to "Database Multiplexing Mode" in the Operation Guide, and then perform the setup for encryption on the primary and standby servers.
1. Install on the arbitration server
   Perform this step only if the arbitration server is used for automatic degradation.
   Install the Server Assistant on the server where the Mirroring Controller arbitration process is started.
   Refer to "Installation" in the Installation and Setup Guide for Server Assistant for information on how to install the Server Assistant.
2. Install on the standby server
   Install FUJITSU Enterprise Postgres on the server to be started as the standby server.
   Refer to "Installation" in the Installation and Setup Guide for Server for information on how to install FUJITSU Enterprise Postgres.
   Use ASCII characters in the data storage destination directory.
3. Stop the application jobs
   Stop the application jobs to be connected to the primary server.
4. Change the primary server settings
   To allow connections from the server to be started as the standby server, configure the settings in step 2 and thereafter of "2.4.2 Creating, Setting, and Registering the Primary Server Instance" on the primary server.
5. Set up the arbitration server
   Refer to "2.3 Setting Up the Arbitration Server" for details.
   Perform this step only if the arbitration server is used for automatic degradation.
6. Set up database multiplexing mode on the primary server
   Refer to "2.4.1 Setting Up Database Multiplexing Mode on the Primary Server" for details.
7. Set up database multiplexing mode on the standby server
   Refer to "2.5.1 Setting Up Database Multiplexing Mode on the Standby Server" for details.
8. Create the standby server instance and start it
   Refer to "2.5.2 Creating, Setting, and Registering the Standby Server Instance" for details.

After the above steps are completed, refer to the remaining explanations in "Chapter 2 Setting Up Database Multiplexing Mode" and ensure that the required settings and operations are completed.

3.9.3 Changing from Database Multiplexing Mode to Single Server Mode

The procedure for stopping database multiplexing mode and changing to single server mode is explained below.
Some tasks must be performed on the database server, and others must be performed on the arbitration server.

The tasks on the arbitration server are required only if the arbitration server is used for automatic degradation.

Tasks on the database server

1. Determine the server for which the instance is to be stopped, and switch this server
   Determine the server that is to be excluded as the database multiplexing mode target, and for which the instance is to be stopped.
   If the server for which the instance is to be stopped is the primary server, execute the mc_ctl command in the switch mode to switch the standby server to the primary server.
   The standby server after the switch is complete will be the server for which the instance is to be stopped.
   If the server for which the instance is to be stopped is the standby server, there is no need to perform the switch operation.
   Example)
   
   $ mc_ctl switch -M /mcdir/inst1

2. Stop Mirroring Controller and the instance, and delete the file resources
   On the server that was determined in step 1, execute the mc_ctl command in stop mode to stop Mirroring Controller and the instance.
If automatic start and stop of Mirroring Controller has been configured using systemd, do not use the mc_ctl command, but instead use the systemctl command. Refer to "2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances" for details.

Example)

```
$ mc_ctl stop -M /mcdir/inst1
```

Then, delete the following file resources:

- Data storage destination directory
- Mirroring Controller management directory

Example)

```
$ rm -rf /database/inst1
$ rm -rf /mcdir/inst1
```

See

Refer to "Security-Related Notes" in the Operation Guide for details on deleting the data securely.

3. Stop the application jobs

Stop the application jobs to be connected to the primary server.

4. Stop Mirroring Controller and the instance on the primary server

Execute the mc_ctl command in stop mode on the primary server.

If automatic start and stop of Mirroring Controller has been configured using systemd, do not use the mc_ctl command, but instead use the systemctl command. Refer to "2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances" for details.

Example)

```
$ mc_ctl stop -M /mcdir/inst1
```

5. Delete the database multiplexing mode settings that were configured for the primary server instance.

Reset the postgresql.conf file parameters to their values before the database multiplexing operation was set.

Delete the file resources from the Mirroring Controller management directory.

If the backup operation was performed, delete the following resources:

- Mirroring Controller management directory backup data obtained in database multiplexing mode
- Instance backup data obtained in database multiplexing mode

Additionally, if the primary_conninfo parameter is set in the postgresql.auto.conf file, execute the ALTER SYSTEM RESET statement to delete the setting.

Example)

An example execution of the psql command is shown below.

```
postgres=# ALTER SYSTEM RESET primary_conninfo;
```

After these actions are performed, ensure that the backup data is collected when starting the single operation.

See

- Refer to "Security-Related Notes" in the Operation Guide for details on deleting the data securely.
- Refer to "2.14 Backup Operation" for details on the backup operation.
Point

In the above procedure, if the postgresql.conf file of the single primary server can be changed by reloading the file, the operation mode can be changed without stopping the application job.

In that case, execute the mc_ctl command in stop mode with the --mc-only option specified to stop only Mirroring Controller in relation to stopping the primary server.

**Tasks on the arbitration server**

**Linux**

1. Execute the mc_arb command in stop mode to stop the Mirroring Controller arbitration process.

   Example)

   ```bash
   $ mc_arb stop -M /mcarb_dir/arbiter1
   ```

2. Delete the Mirroring Controller arbitration process management directory.

   Example)

   ```bash
   $ rm -rf /mcarb_dir/arbiter1
   ```

**Windows**

1. Execute the mc_arb command in stop mode to stop the Mirroring Controller arbitration process.

   Example)

   ```cmd
   > mc_arb stop -M D:\mcarb_dir\arbiter1
   ```

2. Unregister the Mirroring Controller arbitration process from the Windows service.

   Execute the mc_arb command in unregister mode to unregister the Mirroring Controller arbitration process from the Windows service.

   Example)

   ```cmd
   > mc_arb unregister -M D:\mcarb_dir\arbiter1
   ```

3. Delete registrations related to the event log

   If error logs are output to the event log in "2.2.2.1 Preparing to Output Error Logs to the Event Log (Windows)", delete the registered event source name for each instance.

   Example)

   ```cmd
   > regsvr32 /u /i:"Mirroring Controller arbitrer1" "c:\Program Files\Fujitsu\fsepv\x\assistant64\lib\mcarbevent.dll"
   ```

   Note that "<x>" indicates the product version.

4. Delete the Mirroring Controller arbitration process management directory.

   Example)

   ```cmd
   > rmdir /S /Q D:\mcarb_dir\arbiter1
   ```
3.9.4 Changing to Database Multiplexing Mode when the Arbitration Server is Used for Automatic Degradation

This section provides the procedure to change to database multiplexing mode using the Mirroring Controller only on the database server when the arbitration server is used for automatic degradation.

Some tasks must be performed on the database server, and others must be performed on the arbitration server.

Tasks on the arbitration server

1. Set up the arbitration server.
   Refer to "2.3 Setting Up the Arbitration Server" for information on how to set up the arbitration server.

Tasks on the database server

1. On the server where Mirroring Controller is running, execute the mc_ctl command in stop mode to stop Mirroring Controller on the primary server and standby server.

   Example)

   $ mc_ctl stop -M /mcdir/inst1 -a --mc-only

2. Edit the network.conf file of the primary server and standby server to add the information of the arbitration server.
   Refer to "A.3 Network Configuration File" for details.
   The definition example of the network.conf file of the primary server is shown below:

   Example)

   The IDs of the primary server and standby server are set to "server1" and "server2", and their port numbers are set to "27540" and "27541". The ID of the server of the Mirroring Controller arbitration process is set to "arbiter", and its port number is set to "27541".

   server1 192.0.2.100,192.0.3.100 27540,27541 server
   server2 192.0.2.110,192.0.3.110 27540,27541 server
   arbiter 192.0.3.120 27541 arbiter

   Note

   - Ensure that the port numbers set for the primary server, standby server, and arbitration server do not conflict with other software. Also do not configure the same segment for the admin network and arbitration network.
   - If the server type is "server", two IP addresses or host names, and two port numbers need to be specified in the following order:
     - IP address or host name of the database server used as the admin network
     - IP address or host name of the database server used as the arbitration network
     - Port number of the database server used as the admin network
     - Port number of the database server used as the arbitration network
   - If the server type is "arbiter", specify the IP address or host name set for the my_address parameter and the port number set for the port parameter in arbitration.conf.

3. Edit the serverIdentifier.conf file of the primary server and standby server to add parameters required for the operation where the arbitration server is used for automatic degradation.
   Refer to "A.4.1 Server Configuration File for the Database Servers" for information on the parameters required when the arbitration server is used for automatic degradation.
4. On the primary server and standby server, execute the mc_ctl command in start mode to start the Mirroring Controller process.

Example)

```
$ mc_ctl start -M /mcdir/inst1 --mc-only
```

Common tasks

1. Check the connection status from the database server or arbitration server.

Refer to "2.8 Checking the Connection Status" for details.

### 3.9.5 Changing Parameters

Stop Mirroring Controller before editing the Mirroring Controller server configuration file and network configuration file.

If the Mirroring Controller process crashes or becomes unresponsive, restart is performed automatically by the Mirroring Controller monitoring process, and the configuration file is reloaded. Therefore, if the configuration file was being edited, unintended behavior will occur.

### 3.9.6 Uninstalling in Database Multiplexing Mode

This section explains how to uninstall FUJITSU Enterprise Postgres on a server using database multiplexing mode.

Some tasks must be performed on the database server, and others must be performed on the arbitration server.

The tasks on the arbitration server are required only if the arbitration server is used for automatic degradation.

#### Tasks on the database server

1. Stop the multiplexed instances and Mirroring Controller

   Refer to "3.2 Starting and Stopping Mirroring Controller" for information on how to stop the instance.

2. Uninstall FUJITSU Enterprise Postgres

   Refer to "Uninstallation" in the Installation and Setup Guide for Server for information on how to uninstall FUJITSU Enterprise Postgres.

#### Tasks on the arbitration server

Refer to "Uninstallation" in the Installation and Setup Guide for Server Assistant, and uninstall the Server Assistant.
Chapter 4 Action Required when an Error Occurs in Database Multiplexing Mode

This chapter describes the action required if an error occurs in database multiplexing mode.

In database multiplexing mode, when an error is detected, the switch or disconnection of the standby server is performed automatically, so that only the primary server starts degrading. In this case, the recovery tasks will be required for the standby server on which the switch or disconnection was performed.

Other possible cases are as follows:
- When automatic switch fails
- When automatic disconnection fails
- When all servers or instances were stopped

4.1 Action Required when Server Degradation Occurs

If the server has started degrading, the recovery tasks will vary depending on whether the cause was the switch (failover or switchover), or the disconnection.

Execute the mc_ctl command in status mode, or refer to the system log, and check if the cause of the server degradation was the switch or the disconnection.

In the example below, the mc_ctl command is executed in status mode.

If a switch has occurred, "switched" (the switch is complete and the server is in a degrading state) is displayed for "mirroring status".

Example)

```
$ mc_ctl status -M /mcdir/inst1
  mirroring status
  ----------------
  switched

```

If a disconnection has occurred, "not-switchable" (disconnection was performed so the server cannot be switched) is displayed for "mirroring status".

Example)

```
$ mc_ctl status -M /mcdir/inst1
  mirroring status
  ----------------
  not-switchable

```

- **Note**

If Mirroring Controller detects any errors on the server on which operations are continuing during recovery to database multiplexing mode from a degrading operation state, perform the procedure in "4.1.3 Addressing Errors During Degrading Operation", and then recover to database multiplexing mode.

4.1.1 Operations when the Server has Started Degrading after a Switch has Occurred

This section explains the operations when the server has started degrading after a switch has occurred.
- After a switch has occurred as a result of an abnormality on the primary server, the database will not have a multiplexed configuration until the standby server is rebuilt. Remove the cause of the error as quickly as possible, and then rebuild the standby server.

- If the reference job was executed on the standby server, and the servers are switched because an error occurred on the primary server, the load is concentrated on the new primary server. Accordingly, pause the reference job on the original standby server, rebuild the original primary server as the new standby server, and then resume the reference job for the new standby server.

- If the instance on the new primary server is stopped before the original primary server where the error occurred is rebuilt as the new standby server, a split brain occurs at startup from the instance on the original primary server. Therefore, start the instance on the new primary server before rebuilding the standby server.

If the switch occurred and the server has started degrading, perform the following operations to recover the standby server and revert it to its original state:

- Identify Cause of Error and Restore the Standby Server

- Rebuild the Standby Server

- Failback of the Primary Server (only if required)

The flow of these operations is shown in the figure below.
4.1.1.1 Identify Cause of Error and Restore the Standby Server

Perform the recovery according to the following procedure:

1. Stop Mirroring Controller
2. Recovery of the Mirroring Controller management directory
3. Identify cause of error and perform recovery

4.1.1.1.1 Stop Mirroring Controller

Execute the mc_ctl command in stop mode for the original primary server on which the error occurred.

If automatic start and stop of Mirroring Controller has been configured using systemd, do not use the mc_ctl command, but instead use the systemctl command. Refer to "2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances" for details.
This also stops the instance that is required to perform the recovery.

**Note**

If the instance does not stop, refer to "Actions in Response to Failure to Stop an Instance" in the Operation Guide, and then stop the instance. Then, specify the -e option in the above command to forcibly stop Mirroring Controller.

### 4.1.1.1.2 Recovery of the Mirroring Controller management directory

Copy the files in the Mirroring Controller management directory from the backup data, and then perform the recovery.

### 4.1.1.1.3 Identify cause of error and perform recovery

Refer to the system log of the primary server and the standby server to identify the cause of the error, and then perform recovery.

The following commands can be used to recover a standby server. Select depending on the recovery and the situation.

- **pg_basebackup**
  
  Creates a copy of all resources of the primary server instance.

- **pg_rewind**
  
  Creates a copy of only the updated files on the new primary server. For this reason, if this command is used to incorporate a new standby server, recovery time can be shortened. To use this command to build the original primary server as a new standby server, at least one of the following must be met:

  a. Checksums were enabled when an instance was created, or

  b. The wal_log_hints parameter of postgresql.conf was enabled when an instance was started.

Additionally, full_page_writes must be enabled, which is its default value.

**See**

- Refer to "pg_basebackup" in "Reference" in the PostgreSQL Documentation for information on the pg_basebackup command.
- Refer to "pg_rewind" in "Reference" in the PostgreSQL Documentation for information on the pg_rewind command.

The example below executes the pg_rewind command to perform recovery by synchronizing data on the original primary server with the new primary server.

1. Wait for the application of unapplied update transaction logs on the new primary server.

   Execute the SQL below on the new primary server, and wait until the result is false.

   ```bash
   # select pg_is_in_recovery();
   ```

   Example)

   ```bash
   $ psql -h hostNameOfNewPrimaryServer -p portNumOfNewPrimaryServer -d dbName -c "select pg_is_in_recovery();"
   ```

   Any database can be connected to.
If the pg_rewind command is executed immediately after promotion of the new primary server, the processing in steps 1 and 2 is required. If update-type SQL can be executed on the new primary server and checkpoint processing is executed after promotion, the processing in steps 1 and 2 will not be necessary.

2. Update the timeline ID.
   Execute checkpoint processing, and update the timeline ID.
   
   $ psql -h hostnameOfNewPrimaryServer -p portNumOfNewPrimaryServer -d dbName -c "checkpoint;"
   
   Any database can be connected to.

3. Create a copy of the new primary server instance in the original primary server (new standby server).
   Execute the pg_rewind command to synchronize the new standby server data with the new primary server.
   
   Example)
   
   $ pg_rewind -D /database/inst1 -R --source-server='user=userName host=newPrimaryServerHostName port=newPrimaryServerPortNumber dbname=dbName application_name=newStandbyServerName'

   - Use the pg_rewind command with the -R option to create a standby.signal file. If you do not create the standby.signal file, the Mirroring Controller cannot be started as a standby server.
   - If using a method that requires password authentication for connections to the primary server, you will need to ensure that authentication is performed automatically. If the -R option is specified for the pg_rewind command and the password parameter is specified for the --dbname option, the pg_rewind command will set the password in the primary_conninfo parameter in postgresql.auto.conf file, enabling connections to be performed automatically.
     
     If a password is not set in the primary_conninfo parameter in postgresql.auto.conf file, it will be necessary to create a .pgpass file in the home directory of the instance administrator user, and specify a password for the replication database.
   - If you need to set a connection string other than host, port and application_name, include it in the setting of the primary_conninfo parameter.
   - The primary_conninfo parameter should not be set in the postgresql.conf file, but only in the postgresql.auto.conf file using the pg_rewind command.

4. Specify parameters in the postgresql.conf file of the original primary server (new standby server).
   Set the parameters required for the standby server in postgresql.conf.
   Refer to "Table 2.5 Parameters" for information on the parameters to set in postgresql.conf.

   - Refer to "Hot Standby" in the PostgreSQL Documentation for details on the standby.signal file.
   - Refer to "Setting Up a Standby Server" in the PostgreSQL Documentation for details on the primary_conninfo.

   A new timeline is branched for the new primary server due to promotion, so 'latest' needs to be specified for the recovery_target_timeline parameter so that the old primary server (new standby server) follows the new primary server.
4.1.1.2 Rebuild the Standby Server

The starting of the recovered original primary server as the standby server is referred to as the "standby server rebuild".

On the original primary server, start Mirroring Controller and the instance.

Enabling automatic switch/disconnection

As the instance administrator user, execute the mc_ctl command in start mode.

Example)

$ mc_ctl start -M /mcdir/inst1

Disabling automatic switch/disconnection

As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.

Example)

$ mc_ctl start -M /mcdir/inst1 -F

Point

After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

4.1.1.3 Failback of the Primary Server

To revert the primary server and standby server to the original server configuration after rebuilding the standby server, perform failback for the primary server.

Do this to execute the main job on the previous primary server.

Perform the following procedure:

1. Failback of the primary server

Execute the mc_ctl command in switch mode on the primary server or the standby server.

Example)

$ mc_ctl switch -M /mcdir/inst1

After executing the mc_ctl command in switch mode, the status will be as follows:

Example)

$ mc_ctl status -M /mcdir/inst1

<table>
<thead>
<tr>
<th>server_id</th>
<th>host_role</th>
<th>host</th>
<th>host_status</th>
<th>db_proc_status</th>
<th>disk_status</th>
</tr>
</thead>
<tbody>
<tr>
<td>server1</td>
<td>primary</td>
<td>192.0.2.100</td>
<td>normal</td>
<td>abnormal(postmaster)</td>
<td>normal</td>
</tr>
<tr>
<td>server2</td>
<td>none(inactivated primary)</td>
<td>192.0.2.110</td>
<td>normal</td>
<td>abnormal(postmaster)</td>
<td>normal</td>
</tr>
</tbody>
</table>

2. Stop the original primary server

On the original primary server, execute the mc_ctl command in stop mode to stop Mirroring Controller and the instance.

If automatic start and stop of Mirroring Controller has been configured using systemd, do not use the mc_ctl command, but instead use the systemctl command. Refer to "2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances" for details.

Example)
3. Create a copy of the new primary server instance in the original primary server (new standby server)

Execute the pg_basebackup command to create data in the new standby server by synchronizing with the new primary server.

Example)

```
$ pg_basebackup -D /database/inst1 -X fetch --waldir=/transaction/inst1 --progress --verbose --dbname='application_name=standbyServerName' -h primaryServerHostName -p primaryServerPortNumber
```

See

The procedure for copying the new primary server instance to the new standby server is the same as the procedure for setting up the new standby server.

Refer to "2.5.2 Creating, Setting, and Registering the Standby Server Instance", and then perform the recovery.

4. Rebuild the standby server

On the standby server, start Mirroring Controller and the instance.

Enabling automatic switch/disconnection

As the instance administrator user, execute the mc_ctl command in start mode.

Example)

```
$ mc_ctl start -M /mcdir/inst1
```

Disabling automatic switch/disconnection

As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.

Example)

```
$ mc_ctl start -M /mcdir/inst1 -F
```

Point

After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

4.1.2 Operations when the Server has Started Degrading after a Disconnection has Occurred

This section explains the operations when the server has started degrading after a disconnection has occurred.

Note

After a disconnection has occurred as a result of an abnormality on the standby server, the database will not have a multiplexed configuration until the standby server is rebuilt. Remove the cause of the error as quickly as possible, and then rebuild the standby server.

If the disconnection occurred and the server has started degrading, perform the following operations to recover the standby server and revert it to its original state:

- Identify Cause of Error and Restore the Standby Server
- Rebuild the Standby Server
The flow of these operations is shown in the figure below.

**Figure 4.2 Flow of operations**

4.1.2.1 Identify Cause of Error and Restore the Standby Server

Perform the recovery according to the following procedure:

1. **Stop Mirroring Controller**
2. Recovery of the Mirroring Controller management directory
3. Identify cause of error and perform recovery

4.1.2.1.1 Stop Mirroring Controller

Execute the `mc_ctl` command in stop mode for the standby server on which the error occurred.

If automatic start and stop of Mirroring Controller has been configured using systemd, do not use the `mc_ctl` command, but instead use the `systemctl` command. Refer to "2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances" for details.

Example)

```
$ mc_ctl stop -M /mcdir/inst1
```
This also stops the instance that is required to perform the recovery.

**Note**

If the instance does not stop, refer to "Actions in Response to Failure to Stop an Instance" in the Operation Guide, and then stop the instance.

Then, specify the -e option in the above command to forcibly stop Mirroring Controller.

### 4.1.2.1.2 Recovery of the Mirroring Controller management directory

Copy the files in the Mirroring Controller management directory from the backup data, and then perform the recovery.

### 4.1.2.1.3 Identify cause of error and perform recovery

Refer to the system logs of the primary server and the standby server to identify the cause of the error, and then perform recovery.

Execute the pg_basebackup command to perform recovery by synchronizing data in the primary server with the standby server.

**Example**

```bash
$ pg_basebackup -D /database/inst1 -X fetch --waldir=/transaction/inst1 --progress --verbose -R --dbname='application_name=standbyServerName' -h primaryServerHostName -p primaryServerPortNumber
```

**See**

This recovery procedure is the same as the procedure for setting up the standby server.

Refer to "2.5.2 Creating, Setting, and Registering the Standby Server Instance", and then perform the recovery.

### 4.1.2.2 Rebuild the Standby Server

Start the Mirroring Controller and the instance of the standby server, and rebuild the standby server.

**Enabling automatic switch/disconnection**

As the instance administrator user, execute the mc_ctl command in start mode.

**Example**

```bash
$ mc_ctl start -M /mcdir/inst1
```

**Disabling automatic switch/disconnection**

As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.

**Example**

```bash
$ mc_ctl start -M /mcdir/inst1 -F
```

**Point**

After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

### 4.1.3 Addressing Errors During Degrading Operation

This section explains how to address errors that may occur on the server on which operation is continuing during degrading operation triggered by a switch or disconnection.
If needing to recover from backup data

If it is necessary to recover the database using backup data due to data becoming corrupted from disk failure or user operation error, refer to the following for information on recovery to database multiplexing mode:

- Action Required when All Database Servers or Instances Stopped
- Recovering from an Incorrect User Operation

If a temporary error occurs

If a temporary error occurs, such as due to a high load on the server or insufficient system resources, remove the cause of the error and restart Mirroring Controller, and then refer to the following for details on recovery to database multiplexing mode:

- Operations when the Server has Started Degrading after a Switch has Occurred
- Operations when the Server has Started Degrading after a Disconnection has Occurred

See

Refer to “3.2 Starting and Stopping Mirroring Controller” for information on restarting Mirroring Controller.

4.2 Action Required when Automatic Switch Fails

If the system behavior is unstable, for example there are insufficient temporary system resources, the Mirroring Controller automatic switch may fail.

Perform the switch manually using one of the following methods:

- Refer to the procedures in "3.4 Manually Switching the Primary Server".
- In the standby server, execute the mc_ctl command in switch mode with the -force option specified to forcibly perform the switch.

Example)

```
$ mc_ctl switch -M /mcdir/inst1 --force
```

Point

- Even if connection cannot be established between database servers, it is possible to fence the primary server and forcibly switch by executing the mc_ctl command in switch mode with the --force option specified.
- The primary server is not fenced in the cases below, so stop Mirroring Controller and instances of the primary server database in advance:
  - The --no-fencing option is specified when performing forced switch.
  - The heartbeat_error_action parameter in serverIdentifier.conf is set to "message" and the fencing command is not configured to be used (the fencing_command parameter is omitted in serverIdentifier.conf).
  - The heartbeat_error_action parameter in serverIdentifier.conf is set to "fallback".

See

Recovery to database multiplexing mode

Refer to "4.1.1.2 Rebuild the Standby Server" and "4.1.1.3 Failback of the Primary Server" for information on recovery to database multiplexing mode.
4.3 Action Required when Automatic Disconnection Fails

If the system behavior is unstable, for example there are insufficient system resources such as available memory or free disk space, automatic disconnection using Mirroring Controller may not be possible.

Perform the disconnection manually using one of the following methods:

- Refer to the procedures in "3.5 Manually Disconnecting the Standby Server".
- In the primary server, execute the mc_ctl command in detach mode to perform forced disconnection.
  
  Example)

  $ mc_ctl detach -M /mcdir/inst1

Point

- Even if connection cannot be established between database servers, it is possible to fence the standby server and forcibly disconnect by executing the mc_ctl command in detach mode.
- In the cases below, stop Mirroring Controller and instances of the standby server database in advance so that the standby server is not fenced:
  - The --no-fencing option is specified when performing forced disconnection.
  - The heartbeat_error_action parameter in serverIdentifier.conf is set to "message" and the fencing command is not configured to be used (the fencing_command parameter is omitted in serverIdentifier.conf).
  - The heartbeat_error_action parameter in serverIdentifier.conf is set to "fallback".

See

Recovery to database multiplexing mode

Refer to "4.1.1.2 Rebuild the Standby Server" for information on recovery to database multiplexing mode.

4.4 Action Required when All Database Servers or Instances Stopped

This section explains what happens when all database servers or instances on the database server have stopped, so jobs cannot continue.

See

Recovery to database multiplexing mode

Refer to "4.1.1.2 Rebuild the Standby Server" and "4.1.1.3 Failback of the Primary Server" for information on recovery to database multiplexing mode.

The flow of these recovery operations is shown in the figure below.
Perform the following procedure:

1. Stop the applications
   Stop the applications from running.
2. Identify the primary server

Use one of the following methods to identify the primary server that was running before the servers or instances stopped:

- Refer to the system log on each server and identify the server where the following message was output.

  **Message:**

  ```
  MirroringControllerOpen[30017]: LOG: promotion processing completed (MCA00062)
  ```

- On each server, execute the `mc_ctl` command in status mode to search the servers for which "none(inactivated primary)" is displayed.

3. Stop Mirroring Controller on the primary server

Execute the `mc_ctl` command in stop mode on the primary server.

If automatic start and stop of Mirroring Controller has been configured using systemd, do not use the `mc_ctl` command, but instead use the `systemctl` command. Refer to "2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances" for details.

Example)

```
$ mc_ctl stop -M /mcdir/inst1
```

**Note**

**Forcibly stopping Mirroring Controller**

If Mirroring Controller does not stop, specify the `-e` option in the stop mode of the `mc_ctl` command and then execute the command.

Example)

```
$ mc_ctl stop -M /mcdir/inst1 -e
```

4. Recover the primary server

First, refer to "Actions when an Error Occurs" in the Operation Guide, and then identify the cause of the error and perform recovery.

Next, recover the primary server using the recovery method that uses the `pgx_rcvall` command based on the backup data.

If the backup operation was performed using the `pgx_dmpall` command based on the instructions in "2.14.2 Database Backup Operation", perform the following procedure for the recovery:

a. Perform the following operations on both the primary server and the standby server, and check the server containing the backup data and the archive log that show the latest date.

   - Execute the `pgx_rcvall` command with the `-l` option specified and identify the backup data that shows the latest date.

   - Identify the archive log that shows the latest date, as shown below.

   Example)

   ```
   $ ls -ltr backupDataStorageDir/*_wal
   ```

b. If the latest backup data exists on the standby server, copy (*1) the backup data and overwrite (*2) it to each backup storage destination directory on the primary server.

c. If the latest archive log and transaction log file exist on the standby server, copy (*1) the archive log and overwrite (*2) it to the backup storage destination directory on the primary server.

d. Execute the `pgx_rcvall` command on the primary server, specifying the backup storage destination directory of the primary server.
Note

*1: The backup data may contain a symbolic link, so copy the backup data so that the symbolic link is not converted to an ordinary file (with the tar command, for example).

*2: If you can save a copy of the backup storage destination directory, do so without overwriting it.

See

Refer to “Actions when an Error Occurs” in the Operation Guide for information on the pgx_rcvall command.

5. Recover the Mirroring Controller management directory

Copy the files in the Mirroring Controller management directory from the backup data, and then perform the recovery.

6. Start the primary server instance and Mirroring Controller

   Enabling automatic switch/disconnection
   
   As the instance administrator user, execute the mc_ctl command in start mode.
   
   Example)

   ```
   $ mc_ctl start -M /mcdir/inst1
   ```

   Disabling automatic switch/disconnection
   
   As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.
   
   Example)

   ```
   $ mc_ctl start -M /mcdir/inst1 -F
   ```

Point

After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

7. Resume applications

   Resume the applications.

8. Stop Mirroring Controller on the standby server

   Execute the mc_ctl command in stop mode on the standby server.
   
   If automatic start and stop of Mirroring Controller has been configured using systemd, do not use the mc_ctl command, but instead use the systemctl command. Refer to “2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances” for details.
   
   Example)

   ```
   $ mc_ctl stop -M /mcdir/inst1
   ```

9. Recover the standby server

   Refer to “2.5.2 Creating, Setting, and Registering the Standby Server Instance”, and then recover (set up) the standby server from the primary server.

10. Rebuild the standby server

   On the standby server, start Mirroring Controller and the instance.
Enabling automatic switch/disconnection

As the instance administrator user, execute the mc_ctl command in start mode.

Example:

```
$ mc_ctl start -M /mcdir/inst1
```

Disabling automatic switch/disconnection

As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.

Example:

```
$ mc_ctl start -M /mcdir/inst1 -F
```

**Point**

After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

---

### 4.5 Recovering from an Incorrect User Operation

This section describes how to recover an instance when data has been corrupted due to incorrect user operation.

For example, when data has been corrupted due to incorrect user operation, such as data being unintentionally changed or deleted by an application or command, it is necessary to restore the original data on the primary server and resynchronize with the standby server.

Use the following procedure to perform recovery.

1. **Identify the primary server**
   
   Execute the mc_ctl command in status mode on each server, and search for a server for which "primary" or "none(inactivated primary)" is displayed.

2. **Stop the applications and commands that caused the incorrect operation to occur**
   
   Stop applications and commands that are running on the primary server. This will minimize the impact caused by the incorrect data. Also, if any applications used for reference by the standby server are running, stop them too.

3. **Stop the instance and Mirroring Controller**
   
   Stop the instance and Mirroring Controller on both the primary server and standby server.

   Example:

   ```
   $ mc_ctl stop -a -M /mcdir/inst1
   ```

4. **Recover the database on the primary server**

   Recover the database using the recovery method in which the pgx_rcvall command uses the backup data to recover the database to a restore point prior to the time when the incorrect operation was performed.

   **See**

   Refer to "Recovering from an Incorrect User Operation" in the Operation Guide for information on using the pgx_rcvall command to recover the database to a restore point, and then perform only the database recovery procedure while the instance is in a stop state.

5. **Start the instance and Mirroring Controller**

   Start the instance and Mirroring Controller on the primary server.

   **Enabling automatic switch/disconnection**

   As the instance administrator user, execute the mc_ctl command in start mode.
Disabling automatic switch/disconnection

As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.

Example)

```
$ mc_ctl start -M /mcdir/inst1
```

---

**Point**

After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

---

6. Build the new standby server

Refer to "2.5 Setting Up the Standby Server" for information on building (setting up) a standby server from the primary server.
Chapter 5 Managing Mirroring Controller Using WebAdmin

This chapter describes how to set up and manage Mirroring Controller in a streaming replication cluster using WebAdmin.

Mirroring Controller can be used to monitor a streaming replication cluster and perform automatic switching or disconnect synchronous replication when there is an error.

WebAdmin can be used to set up Mirroring Controller in an existing replication cluster. Mirroring Controller can be set up for either synchronous standby instances or asynchronous standby instances.

The configuration of the database multiplexing system built using WebAdmin is shown below:

Figure 5.1 Configuration of database multiplexing operation system using WebAdmin

**Point**

- If Mirroring Controller is set up to the replication cluster using WebAdmin, the network with the host name (or IP address) specified in [Host name] will be used as the admin network and the log transfer network.

- To use a network other than the job network as the log transfer network, before building the replication cluster specify a host name other than the job network one in [Host name].

**Note**

If you set up the arbitration server using WebAdmin, install WebAdmin on the arbitration server.
5.1 Mirroring Controller Setup

Perform the following procedure to set up Mirroring Controller in a streaming replication cluster.

1. In the [Instances] tab, select the standby instance on which Mirroring Controller needs to be set up.

2. Click

3. Enter the information for the Mirroring Controller to be set up.

In the example below, Mirroring Controller is being set up for the replication cluster having master instance “inst1” and standby instance “inst1s”.

![Set up Mirroring Controller](image)

The instance name, host address and port of the master and standby instances are displayed for easy reference.

Enter the following items on master instance and on standby instance fields for Mirroring Controller setup, as shown in the above screenshot:

- [Enable automatic switch over]: Toggles the automatic switch/disconnection functionality. Select "Yes". The default is "No".
- [Mirroring Controller management directory]: Directory where the Mirroring Controller configuration files will be stored. When the [Mirroring Controller management directory] is entered, WebAdmin will search the Mirroring Controller configuration files in the entered directory based on the [Data storage path] of the corresponding DB instance. If Mirroring Controller configuration files are found, the Mirroring Controller fields will be auto filled.
- [Mirroring Controller port]: Port number of Mirroring Controller. Note that if the Windows firewall feature is enabled, you must enable the port number of Mirroring Controller. Refer to "E.2 Windows Firewall Settings" for details.
- [Heartbeat interval (milliseconds)]: Number of milliseconds between two consecutive heartbeat checks. The default is "800".
- [Heartbeat timeout (seconds)]: Number of seconds for the heartbeat timeout. The default is "1".
- [Heartbeat retry]: Number of retries for heartbeat monitoring, before failover occurs. The default is "2".
- [Heartbeat error action]: Operation when a heartbeat abnormality is detected. The default is "Fallback".

When using FUJITSU Enterprise Postgres 10, 11 and 12 instances created with previous versions, the instances will be in compatibility mode, and the "Fallback" is preselected and cannot be changed in the [Heartbeat error action] for Mirroring Controller setup.

When setting up Mirroring Controller for FUJITSU Enterprise Postgres 9.5 and 9.6 instances, the [Heartbeat error action] is not supported and therefore is not displayed.
When the [Heartbeat error action] is set to "Arbitration", the following extra items are displayed:

- [Arbitration network IP address]: IP address of the arbitration network.
- [Mirroring Controller Arbitration port]: Port number of Mirroring Controller for communicating with the arbitration server.

The [Arbitration server configuration] section is also displayed with the following items. The [Arbitration server configuration] will not be auto filled.

- [Location]: Location of the arbitration server. "Local" or "Remote" can be selected depending on your configuration.

If the arbitration server and WebAdmin server are located on the same server, you can select "Local" and the following items are displayed:

- [Arbitration management directory]: Directory where the arbitration server configuration files will be stored.
- [Arbitration server host or IP address]: Host name or IP address of the arbitration server.
- [Arbitration process port]: Port number for the arbitration process.
- [Fencing command]: Full path of the fencing command that fences a database server when an abnormality is detected.

If "Remote" is set for the item, the items below are displayed in addition to the above items.

- In the [Arbitration server configuration] section, [Operating system credential] is displayed where you can enter the following information:
  - [User name]: User name to access the arbitration server.
  - [Password]: Password to access the arbitration server.
- In the [Remote WebAdmin for Arbitration server] section, the following items are displayed:
  - [Remote WebAdmin address]: IP address of the remote WebAdmin installed on the arbitration server.
  - [Remote WebAdmin port]: Port number for the WebAdmin installed on the arbitration server.

When the [Heartbeat error action] is set to "Command", the following extra items are displayed:

- [Arbitration command]: Full path of the arbitration command to be executed when an abnormality is detected.
- [Fencing command]: Full path of the fencing command that fences a database server when an abnormality is detected.

4. Click to set up Mirroring Controller.
5. Upon successful completion, Mirroring Controller will be started on master and standby instances.

In the [Instances] tab, select standby instance. The page below is displayed, in which you can check the Mirroring Controller status. In the example below, standby instance “inst1s” is used.

After the Mirroring Controller has been set up, ([Edit Mirroring Controller] button) and ([Mirroring Controller Configuration] button) are available. These buttons are displayed only when FUJITSU Enterprise Postgres 10 or later instances are created with FUJITSU Enterprise Postgres WebAdmin 13.

For FUJITSU Enterprise Postgres 9.5 and 9.6 instances, the [Heartbeat error action] will not be displayed.

When the [Heartbeat error action] is "Arbitration", the following information is displayed: whether the arbitration status is "online" or "offline", the arbitration server IP address and the arbitration process port.

Note

Operating system credential (User name, Password) should not contain hazardous characters. Refer to "Appendix F WebAdmin Disallow User Inputs Containing Hazardous Characters".

5.2 Edit Mirroring Controller Setup

Settings made in “5.1 Mirroring Controller Setup” can be updated in either the master instance or a standby instance using WebAdmin. Perform the following procedure to edit Mirroring Controller configuration:

1. In the [Instances] tab, select the instance for which the Mirroring Controller configuration is to be edited.
2. Click
3. Enter the information for the Mirroring Controller to be updated. Refer to “5.1 Mirroring Controller Setup”.
4. Click to update the Mirroring Controller.
5. Upon successful completion, Mirroring Controller will be started on master and standby instances.

Editing and saving the [Edit Mirroring Controller] page will reset all other settings that are not listed on this page to default values.
5.3 Mirroring Controller Configuration

The information related to Mirroring Controller monitoring and control (refer to "A.4.1 Server Configuration File for the Database Servers") and the information related to arbitration and control of the Mirroring Controller arbitration process (refer to "A.4.2 Arbitration Configuration File") can be set using WebAdmin. You can view and update the configuration on either the master instance or the standby instance.

Perform the following procedure:

1. In the [Instances] tab, select the instance for the Mirroring Controller configuration you want to view.
2. Click to view the Mirroring Controller configuration.
3. Click to show the editing page for the Mirroring Controller configuration. The Mirroring Controller configurations defined during [Mirroring Controller Setup] are read-only on this page. Refer to "5.1 Mirroring Controller Setup".

Additionally, refer to the "Appendix A Parameters" for information about the settings and the corresponding parameter names.

The items common to all [Heartbeat error action] are:
- Target DB
- Core file path
- Syslog facility
- Syslog identity
- Remote call timeout (milliseconds)
- Agent alive timeout (seconds)
- DB instance check interval (milliseconds)
- DB instance check timeout (seconds)
- DB instance check retry
- DB instance timeout action
- Disk check interval (milliseconds)
- Disk check retry
- Tablespace directory error action
- Post-switch command
- Post-promote command
  (Post-promote command is replaced in FUJITSU Enterprise Postgres 12. The Post-promote command is still valid and will be displayed when it is used in the server configuration file of Mirroring Controller.)
- Post-attach command
- Pre-detach command
- State transition command timeout (seconds)
- Check synchronous standby names validation

When the [Heartbeat error action] is set to "Arbitration", the following extra items are displayed:
- Arbitration timeout (seconds)
- Arbiter alive interval (milliseconds)
- Arbiter alive retry
- Arbiter alive timeout (seconds)
- Arbiter connect interval (milliseconds)
Arbiter connect timeout (seconds)
- Fencing command
- Fencing command timeout (seconds)
- Shutdown detached synchronous standby

When the [Heartbeat error action] is set to "Arbitration", the [Arbitration server configuration] section is displayed with the following items:
- Core file path
- Syslog facility
- Syslog identity
- Fencing command timeout (seconds)
- Heartbeat interval (milliseconds)
- Heartbeat timeout (seconds)
- Heartbeat retry

When the [Heartbeat error action] is set to "Command", the following extra items are available:
- Fencing command timeout (seconds)
- Arbitration command timeout (seconds)
- Shutdown detached synchronous standby

When the [Heartbeat error action] is set to "Message", the following extra items are available:
- Fencing command
- Fencing command timeout (seconds)

In addition, the following configurations are provided:
- DB instance JDBC connection SSL parameters
- DB instance libpq connection SSL parameters

4. Click  to update the Mirroring Controller configurations.

5.4 Stopping Mirroring Controller

Mirroring Controller can be stopped either in master instance or in standby instance using WebAdmin.

Perform the following procedure to stop Mirroring Controller.

1. In the [Instances] tab, select the instance where to stop Mirroring Controller.

2. Click  

3. In the confirmation dialog box, click [Yes].

Mirroring Controller will be stopped on the selected instance. The Mirroring Controller status will be updated, and a confirmation message entry will be displayed in the [Message] section.
5.5 Starting Mirroring Controller

Mirroring Controller can be started either in master instance or in standby instance using WebAdmin.

Perform the following procedure to start Mirroring Controller.

1. In the [Instances] tab, select the instance where to start Mirroring Controller.

2. Click [Start].

3. In the confirmation dialog box, select the desired failover mode, and then click [Yes].

Mirroring Controller will be started on the selected instance. The Mirroring Controller status will be updated, and a confirmation message entry will be displayed in the [Message] section.

5.6 Disabling Failover Mode

Disabling failover mode in Mirroring Controller disables automatic switch/disconnection between master and standby instances.

Perform the following procedure to disable failover mode.

1. In the [Instances] tab, select the instance.

2. Click [Stop].

3. In the confirmation dialog box, click [Yes].

Failover mode will be disabled in Mirroring Controller. The Mirroring Controller status will be updated and a confirmation message entry will be displayed in the [Message] section.

5.7 Enabling Failover Mode

Enabling failover mode in Mirroring Controller enables automatic switch/disconnection between master and standby instances.

Perform the following procedure to enable failover.

1. In the [Instances] tab, select the instance.

2. Click [Start].

3. In the confirmation dialog box, click [Yes].

Failover mode will be enabled in Mirroring Controller. The Mirroring Controller status will be updated and a confirmation message entry will be displayed in the [Message] section.

5.8 Deleting Mirroring Controller Setup

Deleting Mirroring Controller setup removes its setup from master and standby instances.

1. In the [Instances] tab, select the instance.

2. Click [Remove].

3. In the confirmation dialog box, click [Yes].

Mirroring Controller setup will be removed from the cluster. The cluster status will be updated and a confirmation message entry will be displayed in the [Message] section.

For the instances in FUJITSU Enterprise Postgres 12 or later, WebAdmin does not delete the Mirroring Controller management directory and the configuration files.
5.9 Status Update after Failover

When Mirroring Controller performs a failover, standby instance will be promoted to standalone instance. The Mirroring Controller setup will be removed from both standby and master instances.

The following scenario describes one of the ways in which failover can be triggered, and the results achieved by the use of Mirroring Controller in WebAdmin.

1. In the [Instances] tab, select the master instance “inst1”.
2. Click .
3. In the confirmation dialog box, the warning "This instance is being monitored by Mirroring Controller. Stopping the instance may result in cluster failover." is displayed.
4. Choose the stop mode and click [Yes].
   In the server, the following takes place:
   a. The master instance is stopped.
   b. Failover is triggered in Mirroring Controller.
   c. The Mirroring Controller setup is removed from both master and standby instances
   d. Standby instance is promoted to standalone.
5. When the instance is refreshed in WebAdmin, the latest status of the instances will be displayed.

Note

When failover is performed, the Mirroring Controller setup is removed from both master and standby instances. Therefore, to manage the Mirroring Controller using WebAdmin again, create the standby instance and set up Mirroring Controller.

Refer to "Creating a Standby Instance" in the Operation Guide for details.

Refer to "5.1 Mirroring Controller Setup" for details.

5.10 Action Required when an Error Occurs in the Combined Admin Network and Log Transfer Network

Communication errors may temporarily occur in the network used as the admin network and log transfer network due to reasons such as high load on the server or insufficient system resources. Because of this, there is a risk of causing a split-brain situation by mistake even though the server has no issues.

Split brain is a phenomenon in which both servers temporarily operate as primary servers, causing data updates to be performed on both servers.

How to detect split brain using WebAdmin

If the conditions below are met, split brain may occur. Refer to "Split-brain detection method" and "How to recover from a split-brain" in "Appendix D Notes on Performing Automatic Degradation Immediately after a Heartbeat Abnormality" and take the actions described.

1. A standby instance is selected in the [Instances] tab, and
2. "Standalone" is displayed in [Instance type], and
3. A master instance is selected in the [Instances] tab, and
4. "Standalone" is displayed in [Instance type].

Note

The admin network is important because Mirroring Controllers use it to confirm the status of each server.
The log transfer network is also important to maintain the data freshness. Therefore, use network configurations resistant to faults for these networks by using the network redundancy channel bonding feature provided by the operating system or network driver vendor.

5.11 Performing Automatic Degradation Using the Arbitration Server

If database multiplexing is performed using WebAdmin, it is also possible to perform automatic degradation using the arbitration server. In such cases, it is necessary to perform tasks on the database server and the arbitration server after setting up Mirroring Controller in WebAdmin.

Tasks on the arbitration server

Perform setup of the arbitration server using Mirroring Controller commands.

1. Set up the arbitration server.
   Refer to "2.3 Setting Up the Arbitration Server" in "Chapter 2 Setting Up Database Multiplexing Mode" for information on how to set up the arbitration server.

Tasks on the database server

Change some of the settings after setting up Mirroring Controller in WebAdmin.

1. Set up Mirroring Controller in WebAdmin.
   Refer to "5.1 Mirroring Controller Setup" for details.

2. Use WebAdmin to stop Mirroring Controller on the master and standby instances.
   Refer to "5.4 Stopping Mirroring Controller" for details.

3. Edit the network configuration file of the master and standby instances, and add the arbitration server information.
   The network configuration file is network.conf, which exists in the Mirroring Controller management directory specified during Mirroring Controller setup. Refer to "A.3 Network Configuration File" for details.

Example:
The port number of the database server to be used as the arbitration network is set to "27541". The ID of the server of the Mirroring Controller arbitration process is set to "arbiter", and its port number is set to "27541".

```
dbsvm27500 192.0.2.100,192.0.3.100 27540,27541 server
dbsvsv27500 192.0.2.110,192.0.3.110 27540,27541 server
arbiter 192.0.3.120 27541 arbiter
```

Note

- Ensure that the port numbers set for the database server and the arbitration server do not conflict with other software. In addition, do not configure the same segment for the admin network and the arbitration network.

- If the server type is "server", two IP addresses or host names, and two port numbers need to be specified in the following order:
  - IP address or host name of the database server used as the admin network
  - IP address or host name of the database server used as the arbitration network
  - Port number of the database server used as the admin network
  - Port number of the database server used as the arbitration network
- If the server type is "arbiter", specify the IP address or host name set for the my_address parameter and the port number set for the port parameter in arbitration.conf of the arbitration server.

- WebAdmin also support editing mirroring controller configuration via Use WebAdmin to edit Mirroring Controller configurations.
  Refer to "5.2 Edit Mirroring Controller Setup" for details.

4. Edit the server configuration file of the master and standby instances, and add the parameters required for automatic degradation using the arbitration server.
   The server configuration file is instanceName.conf or instancePort.conf, which exists in the Mirroring Controller management directory specified during Mirroring Controller setup.
   To perform automatic degradation using the arbitration server, set the heartbeat_error_action parameter to "arbitration".
   Refer to "A.4.1 Server Configuration File for the Database Servers" for information on other parameters.

5. Use WebAdmin to start Mirroring Controller on the master and standby instances.
   Refer to "5.5 Starting Mirroring Controller" for details.

**Common tasks**

1. Use the Mirroring Controller command to check the connection status from the database server or the arbitration server.
   Refer to "2.8 Checking the Connection Status" for information on how to check the connection status.
Appendix A Parameters

This appendix describes the configuration files and parameters required by the database multiplexing mode.

See

Refer to "Server Configuration" in the PostgreSQL Documentation for information on the postgresql.conf file.

A.1 Parameters Set on the Primary Server

The content for the parameters set in the postgresql.conf file of the primary server is shown in the table below.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value set</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>wal_level</td>
<td>replica or logical</td>
<td>Specify the output level for the transaction log. Specify &quot;logical&quot; when logical decoding is also to be used.</td>
</tr>
<tr>
<td>max_wal_senders</td>
<td>2 or more</td>
<td>Specify &quot;2&quot; when building a Mirroring Controller cluster system. When additionally connecting asynchronous standby servers to the cluster system, add the number of simultaneous connections from these standby servers.</td>
</tr>
<tr>
<td>synchronous_standby_names</td>
<td>'standbyServerName'</td>
<td>Use single quotation marks (') to enclose the name that will identify the standby server. Any name can be specified. Do not change this parameter while Mirroring Controller is running. Do not specify multiple names to this parameter as the Mirroring Controller can manage only one standby server.</td>
</tr>
<tr>
<td>hot_standby</td>
<td>on</td>
<td>Specify whether queries can be run on the standby server. Specify &quot;on&quot;.</td>
</tr>
<tr>
<td>wal_keep_size</td>
<td>WAL save size (megabytes)</td>
<td>If a delay exceeding the value set in this parameter occurs, the WAL segment required later by the primary server may be deleted. Additionally, if you stop a standby server (for maintenance, for example), consider the stop time and set a value that will not cause the WAL segment to be deleted. Refer to &quot;Estimating Transaction Log Space Requirements&quot; in the Installation and Setup Guide for Server for information on estimating the WAL save size.</td>
</tr>
<tr>
<td>wal_log_hints</td>
<td>on</td>
<td>When using the pg_rewind command to recover a standby server, specify this parameter or enable checksums when executing the initdb command.</td>
</tr>
<tr>
<td>wal_sender_timeout</td>
<td>Timeout (milliseconds)</td>
<td>Specify the time period after which it is determined that the receiver process (walreceiver) of the transaction log is in an abnormal state on the primary server. The specified value must be larger than the value set for the wal_receiver_status_interval parameter set in the postgresql.conf file of the standby server.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Value set</td>
<td>Explanation</td>
</tr>
<tr>
<td>----------------------------</td>
<td>-------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>wal_receiver_timeout</td>
<td>Timeout (milliseconds)</td>
<td>Specify the time period after which it is determined that an error has occurred when the transaction log was received on the standby server. By aligning this value with the value for the database process heartbeat monitoring time, you can unify the time after which it is determined that an error has occurred.</td>
</tr>
<tr>
<td>archive_mode</td>
<td>on</td>
<td>Specify the archive log mode.</td>
</tr>
<tr>
<td>archive_command</td>
<td>'installDir/bin/pgx_walcopy.cmd &quot;%p&quot; &quot;backupDataStorageDestinationDir ectory/archived_wal/%f&quot;'</td>
<td>Specify the command and storage destination to save the transaction log.</td>
</tr>
<tr>
<td>backup_destination</td>
<td>Backup data storage destination directory</td>
<td>Specify the name of directory where to store the backup data.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Set the permissions so that only the instance administrator user can access the specified directory.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Specify the same full path on all servers, so that the backup data of other servers can be used to perform recovery.</td>
</tr>
<tr>
<td>listen_addresses</td>
<td>Primary server IP address, host name, or &quot;*&quot;</td>
<td>Specify the IP address or host name of the primary server. Specify the IP address or corresponding host name that will be used to connect to the log transfer network.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The content specified is also used to allow connections from client applications.</td>
</tr>
</tbody>
</table>
|                           |                               | To receive the connection and the transaction log from any client or standby server, specify "*".
|                           |                               | Refer to "Connections and Authentication" in the PostgreSQL Documentation for details.                                                                                                                  |
| max_connections            | Number of simultaneous client connections to the instance + superuser_reserved_connections value | The value specified is also used to restrict the number of connections from client applications and the number of connections for the management of instances. Refer to "When an Instance was Created with the initdb Command" in the Installation and Setup Guide for Server, and "Connections and Authentication" in the PostgreSQL Documentation, for details. |
| superuser_reserved_connections | Add the number of simultaneous executions of mc_ctl status (*1) + 2 | Specify the number of connections reserved for connections from database superusers. Add the number of connections from Mirroring Controller processes. Also reflect the added value in the max_connections parameter. |
| restart_after_crash        | off                           | If "on" is specified, or the default value is used for this parameter, behavior equivalent to restarting FUJITSU Enterprise Postgres, including crash recovery, will be performed when some server processes end abnormally. However, when database multiplexing monitoring is used, a failover will occur after an error is detected when some server processes end abnormally, and the restart of those server processes is forcibly stopped. Specify "off" to |
### A.2 Parameters Set on the Standby Server

This section explains the content of the file and parameters set on the standby server. After editing `postgresql.conf` file, start the instance.

The content for the parameters specified in `postgresql.conf` file is shown in the table below.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value set</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>wal_level</code></td>
<td>replica or logical</td>
<td>Specify the output level for the transaction log.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Specify &quot;logical&quot; when logical decoding is also to be used.</td>
</tr>
<tr>
<td><code>max_wal_senders</code></td>
<td>2 or more</td>
<td>Specify &quot;2&quot; when building a Mirroring Controller cluster system.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>When additionally connecting asynchronous standby servers to the cluster system, add the number of simultaneous connections from these standby servers.</td>
</tr>
<tr>
<td><code>synchronous_standby_names</code></td>
<td>'primaryServerName'</td>
<td>Use single quotation marks (') to enclose the name that will identify the primary server. Any name can be specified.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>This name will be required to rebuild the original primary server as the new standby server after the primary server was switched.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Do not change this parameter while Mirroring Controller is running.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Do not specify multiple names to this parameter as the Mirroring Controller can manage only one standby server.</td>
</tr>
<tr>
<td><code>hot_standby</code></td>
<td>on</td>
<td>Specify whether queries can be run on the standby server.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Specify &quot;on&quot;.</td>
</tr>
<tr>
<td><code>wal_keep_size</code></td>
<td>WAL save size (megabytes)</td>
<td>If a delay exceeding the value set in this parameter occurs, the WAL segment required later by the standby server may be deleted by the primary server.</td>
</tr>
</tbody>
</table>

*1: Number of simultaneous executions of the mc_ctl command in the status mode.
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value set</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>wal_log_hints</td>
<td>on</td>
<td>When using the pg_rewind command to recover a standby server, specify this parameter or enable checksums when executing the initdb command.</td>
</tr>
<tr>
<td>wal_sender_timeout</td>
<td>Timeout (milliseconds)</td>
<td>Specify the time period after which it is determined that the receiver process (walreceiver) of the transaction log is in an abnormal state on the primary server. The specified value must be larger than the value set for the wal_receiver_status_interval parameter set in the postgresql.conf file of the standby server. By aligning this value with the value for the database process heartbeat monitoring time, you can unify the time after which it is determined that an error has occurred.</td>
</tr>
<tr>
<td>wal_receiver_timeout</td>
<td>Timeout (milliseconds)</td>
<td>Specify the time period after which it is determined that an error has occurred when the transaction log was received on the standby server. By aligning this value with the value for the database process heartbeat monitoring time, you can unify the time after which it is determined that an error has occurred.</td>
</tr>
<tr>
<td>backup_destination</td>
<td>Backup data storage destination directory</td>
<td>Specify the name of the backup data storage directory. Set the permissions so that only the instance administrator user can access the specified directory. Specify the same full path on all servers so that the backup data of other servers can be used to perform recovery.</td>
</tr>
<tr>
<td>archive_mode</td>
<td>on</td>
<td>Specify the archive log mode.</td>
</tr>
<tr>
<td>archive_command</td>
<td>'installDir/bin/pgx_walcopy.cmd &quot;%p&quot; &quot;backupDataStorageDestinationDestinationDirectory/archived_wal/%f&quot;'</td>
<td>Specify the command and storage destination to save the transaction log.</td>
</tr>
<tr>
<td>listen_addresses</td>
<td>Standby server IP address, host name, or &quot;*&quot;</td>
<td>Specify the IP address or host name of the standby server. Specify the IP address or corresponding host name that will be used to connect to the log transfer network. The content specified is also used to allow connections from client applications. To receive the connection and the transaction log from any client or standby server, specify &quot;*&quot;. Refer to &quot;Connections and Authentication” in the PostgreSQL Documentation for details.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Value set</td>
<td>Explanation</td>
</tr>
<tr>
<td>---------------------------------------</td>
<td>---------------------------------------------------------------------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>max_connections</td>
<td>Number of simultaneous client connections to the instance + superuser_reserved_connections value</td>
<td>The value specified is also used to restrict the number of connections from client applications and the number of connections for the management of instances. Refer to &quot;When an Instance was Created with the initdb Command&quot; in the Installation and Setup Guide for Server, and &quot;Connections and Authentication&quot; in the PostgreSQL Documentation, for details.</td>
</tr>
<tr>
<td>superuser_reserved_connections</td>
<td>Add the number of simultaneous executions of mc_ctl status (*1) + 2</td>
<td>Specify the number of connections reserved for connections from database superusers. Add the number of connections from Mirroring Controller processes. Also reflect the added value in the max_connections parameter.</td>
</tr>
<tr>
<td>restart_after_crash</td>
<td>off</td>
<td>If &quot;on&quot; is specified, or the default value is used for this parameter, behavior equivalent to restarting FUJITSU Enterprise Postgres, including crash recovery, will be performed when some server processes end abnormally. However, when database multiplexing monitoring is used, a failover will occur after an error is detected when some server processes end abnormally, and the restart of those server processes is forcibly stopped. Specify &quot;off&quot; to prevent behavior such as this from occurring for no apparent reason.</td>
</tr>
<tr>
<td>synchronous_commit</td>
<td>on or remote_apply</td>
<td>Specify up to what position WAL send is to be performed before transaction commit processing returns a normal termination response to a client. The recommended value is &quot;on&quot; or &quot;remote_apply&quot; to prevent data loss caused by operating system or server down immediately after a switch or switch.</td>
</tr>
<tr>
<td>primary_conninfo</td>
<td>'streamingReplication ConnectionDestinationInfo'</td>
<td>Use single quotation marks (') to enclose the connection destination information of the streaming replication. The default value of this parameter is automatically set to postgresql.auto.conf in the procedure to run pg_basebackup for instance setup.</td>
</tr>
<tr>
<td>recovery_target_timeline</td>
<td>latest</td>
<td>Specify &quot;latest&quot; so that the new standby server (original primary server) will follow the new primary server when a switch occurs. This parameter is required when the original primary server is incorporated as a new standby server after the primary server is switched.</td>
</tr>
</tbody>
</table>

**A.3 Network Configuration File**

This section explains the network configuration file (network.conf) to be defined individually for the database servers and the arbitration server. Define the same content on the primary server and standby server.

For database multiplexing mode, define the network configuration for the following in network.conf.

- Integration between Mirroring Controller processes
- Integration between a Mirroring Controller process and the Mirroring Controller arbitration process
Items to be defined in network.conf

Format:

```
serverIdentifier hostName[,hostName] portNum[,portNum] [serverType]
Or,
serverIdentifier ipAddr[,ipAddr] portNum[,portNum] [serverType]
```

Specify the server identifier, IP address or host name, port number, and server type, using a space as the delimiter.

The items are explained in the table below.

Table A.3 network.conf file

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverIdentifier</td>
<td>Specify any identifier for the server. The maximum length is 64 bytes. Use ASCII characters excluding spaces and number signs (#) to specify this parameter.</td>
</tr>
<tr>
<td>ipAddrOrHostName</td>
<td>Specify the IP address or its corresponding host name that will connect to the admin network that performs communication between the database servers, and to the arbitration network that performs communication between a database server and the arbitration server. When specifying two IP addresses or host names delimited by a comma, do not insert a space after the comma. Use ASCII characters excluding spaces to specify the host name.</td>
</tr>
<tr>
<td>portNum</td>
<td>A port number cannot be specified if it exceeds the range 0 to 65535. Ensure that the port number does not conflict with other software. Do not specify an ephemeral port that may temporarily be assigned by another program. Note that the value specified in this parameter must also be set in the services file. When specifying two port numbers delimited by a comma, do not insert a space after the comma.</td>
</tr>
<tr>
<td>serverType</td>
<td>Specify &quot;server&quot; for a database server (&quot;server&quot; can be omitted), or &quot;arbiter&quot; for the arbitration server.</td>
</tr>
</tbody>
</table>

Content to be defined on the database servers

This section explains the network.conf content to be defined on the database servers.

The content to be defined depends on the operation settings at the time a heartbeat abnormality is detected.

When automatic degradation by the arbitration server is selected

- Specify definitions related to the admin network and arbitration network.
- Specify the IP address or host name and port number according to the server type (database server or arbitration server) as shown in the table below.

<table>
<thead>
<tr>
<th>Server type</th>
<th>IP address or host name</th>
<th>Port number</th>
</tr>
</thead>
<tbody>
<tr>
<td>server</td>
<td>IP address or host name used as the admin network</td>
<td>Port number used as the admin network</td>
</tr>
<tr>
<td></td>
<td>IP address or host name used as the arbitration network (*1)</td>
<td>Port number used as the arbitration network (*1)</td>
</tr>
<tr>
<td>arbiter</td>
<td>IP address or host name of the arbitration server</td>
<td>Port number on the arbitration server</td>
</tr>
<tr>
<td></td>
<td>Specify the same value as that specified in the my_address parameter of arbitration.conf on the arbitration server.</td>
<td>Specify the same value as that specified in the port parameter of arbitration.conf on the arbitration server.</td>
</tr>
<tr>
<td></td>
<td>Not required</td>
<td>Not required</td>
</tr>
</tbody>
</table>

*1: This value can be omitted from definitions not related to the local server. If it is omitted, network.conf must be created on both the primary server and standby server.
Example)

IPv4

server1 192.0.2.100, 192.0.3.100 27540, 27541 server
server2 192.0.2.110, 192.0.3.110 27540, 27541 server
arbiter 192.0.3.120 27541 arbiter

IPv6

When operation other than automatic degradation by the arbitration server is selected

- Specify definitions related to the admin network.
- Define the same content on the primary server and standby server.
- Define lines for database servers only.
- Specify only one IP address or host name and port number.

<table>
<thead>
<tr>
<th>IP address or host name</th>
<th>Port number</th>
</tr>
</thead>
<tbody>
<tr>
<td>First</td>
<td>Second</td>
</tr>
<tr>
<td>IP address or host name</td>
<td>Not required</td>
</tr>
</tbody>
</table>

Example)

The literal space represents a space.

IPv4

server1 192.0.2.100 27540
server2 192.0.2.110 27540

IPv6

Content to be defined on the arbitration server

This section explains the network.conf content to be defined on the arbitration server.

- Specify definitions related to the arbitration network.
- Define lines for database servers only.
- For the IP address or host name, specify the same value as the second IP address or host name specified in the database server line in network.conf of the database server.
- For the port number, specify the same value as the second port number specified in the database server line in network.conf of the database server.

Example)

The literal space represents a space.

**IPv4**

```
server1 192.0.3.100 27541
server2 192.0.3.110 27541
```

**IPv6**

```
server1 2001:258:8404:1217:250:56ff:fea8:559f 27541
```

**Relationship between network-related definitions**

Refer to the diagram below for the relationship between the host names and IP addresses or port numbers specified in the network configuration file (network.conf) and arbitration configuration file (arbitration.conf).

**A.4 Server Configuration File**

**A.4.1 Server Configuration File for the Database Servers**

Define the information related to Mirroring Controller monitoring and control in the serverIdentifier.conf file. The maximum length of the server identifier is 64 bytes. Use ASCII characters excluding spaces to specify this parameter.

If the primary server and standby server environments are different, define content that is different, according to the environment.
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value set</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>db_instance</td>
<td><code>dataStorageDestinationDir</code></td>
<td>Specify using single quotation marks (‘) to enclose the data storage destination directory used to identify the monitoring target instance. Use ASCII characters to specify this parameter.</td>
</tr>
<tr>
<td></td>
<td>[Example]</td>
<td></td>
</tr>
<tr>
<td></td>
<td>db_instance = '/database1/inst1'</td>
<td></td>
</tr>
<tr>
<td>target_db</td>
<td>postgres or template1</td>
<td>Specify the name of the database to be connected to the database instance. The default is &quot;postgres&quot;.</td>
</tr>
<tr>
<td>db_instance_username</td>
<td><code>usernameToConnectToDbInstance</code></td>
<td>Specify the username to connect to the database instance. Use ASCII characters to specify this parameter.Specify this parameter if the database administrator user is different from the operating system user who starts Mirroring Controller. Enclose the username of the database superuser in single quotation marks (‘). The maximum length of the username is 63 bytes. The default is the operating system user who starts Mirroring Controller.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>db_instance_password</td>
<td><code>passwordOfInstanceAdminUser</code></td>
<td>Specify the password used when Mirroring Controller connects to a database instance, enclosed in single quotation marks (‘). Use ASCII characters to specify this parameter. If password authentication is performed, you must specify this parameter in the settings used when Mirroring Controller connects to a database instance. If you specify this parameter when password authentication is not performed, the parameter will be ignored. If the specified value of this parameter includes ‘ or , write ‘ or , respectively.</td>
</tr>
<tr>
<td>enable_hash_in_password</td>
<td>on or off</td>
<td>Specify on to treat the # in the db_instance_password specification as a password character, or off to treat it as a comment. The default is &quot;off&quot;.</td>
</tr>
<tr>
<td>core_file_path</td>
<td><code>coreFileOutputDir</code></td>
<td>Specify the directory to which the core file is to be output, enclosed in single quotation marks (‘). Use ASCII characters to specify this parameter. If this parameter is omitted, it will be assumed that the Mirroring Controller management directory was specified.</td>
</tr>
<tr>
<td>syslog_facility</td>
<td>Specify LOCAL0, LOCAL1, LOCAL2, LOCAL3, LOCAL4, LOCAL5, LOCAL6, or LOCAL7.</td>
<td>When the import of logs to the syslog is enabled, the value of this parameter will be used for &quot;facility&quot; of the syslog. The default is &quot;LOCAL0&quot;.</td>
</tr>
<tr>
<td>syslog_ident (*1)</td>
<td><code>programName</code></td>
<td>Specify using single quotation marks (‘) to enclose the program name used to identify the Mirroring Controller message in the system log.</td>
</tr>
</tbody>
</table>

<td>post_switch_command</td>
<td>'postSwitchCmdFilePath'</td>
<td>Specify the full path of the command to be called by Mirroring Controller after a new primary server is promoted during a failover of the primary server. Enclose the path in single quotation marks ('). Specify the path using less than 1024 bytes.</td>
</tr>
<tr>
<td>post_attach_command</td>
<td>'postAttachCmdFilePath'</td>
<td>Specify the full path of the command to be called by Mirroring Controller after the standby server is attached to the cluster system. Enclose the path in single quotation marks ('). Specify the path using less than 1024 bytes.</td>
</tr>
<tr>
<td>pre_detach_command</td>
<td>'preDetachCmdFilePath'</td>
<td>Specify the full path of the command to be called by Mirroring Controller before the standby server is disconnected from the cluster system. Enclose the path in single quotation marks ('). Specify the path using less than 1024 bytes.</td>
</tr>
</tbody>
</table>
### status_change_command_timeout

State transition command timeout (seconds)

Specify the timeout value of the post-switch command, post-attach command, and pre-detach command. If the command does not respond within the specified number of seconds, a signal (SIGTERM) is sent to the execution process of the status change command.

Specify a timeout between 1 and 2147483647.

The default is 20 seconds.

### check_synchronous_standby_names_validation

on or off

Specify whether Mirroring Controller is to periodically check during operations whether the synchronous_standby_names parameter in postgresql.conf was changed by an incorrect user operation.

However, it is not recommended to enable this parameter, because performing this check causes Mirroring Controller to use the CPU of the database server redundantly and execute SQL statements at high frequency.

This parameter is compatible with operations in FUJITSU Enterprise Postgres 9.6 or earlier.

The default is "off".

### db_instance_ext_pq_conninfo

Specify, in key-value form, the connection parameter for libpq that Mirroring Controller adds when connecting to a database. The connection parameters you can specify are those related to SSL. Use ASCII characters to specify this parameter.

The connection parameter specified in this parameter must also be specified in the db_instance_ext_jdbc_conninfo.

### db_instance_ext_jdbc_conninfo

Specify, in URI form, the connection parameter for JDBC that Mirroring Controller adds when connecting to a database. The connection parameters you can specify are those related to SSL. Use ASCII characters to specify this parameter.

The connection parameter specified in this parameter must also be specified in the db_instance_ext_pq_conninfo.

*1: By specifying the syslog_ident parameter of the postgresql.conf file, the Mirroring Controller output content can be referenced transparently, so log reference is easy.

*2: The operating system TCP connection timeout period is determined by the kernel parameter tcp_syn_retries. The remote_call_timeout parameter must be set to a value that is shorter than the timeout period for the operating system TCP connection timeout, so change either parameter as necessary.

The availability of some parameters depends on the value set for the heartbeat_error_action parameter that sets the operation to be performed if heartbeat monitoring of the operating system or server detects a heartbeat abnormality.

#### Table A.5 Parameter availability depending on the value set for the heartbeat_error_action parameter

the admin network and the reduction in the time it takes to degrade.

*1:Refer to "2.11.4 Tuning for Optimization of Degradation Using Abnormality Monitoring" for information on the tuning parameters for operating system or server abnormality monitoring when using an arbitration server.
Appendix B  Supplementary Information on Building the Primary Server and Standby Server on the Same Server

The primary server and standby server can be pseudo-configured on the same server for system testing, for example. Out of consideration for performance and reliability, do not use this type of configuration for any other purposes. For this reason, do not use this type of configuration in a production environment.

Note that the setup and operations is the same as if the primary and standby servers are built on different servers.

This appendix provides supplementary information explaining how to configure the primary server and standby server on the same server.

Note

Even if automatic degradation by an arbitration server is set when the primary server and standby server are configured on the same server, there will be no effect of it.

B.1 Backup Data Storage Destination Directory

It is not a problem if the same backup data storage destination directory is used on the primary server and standby server.

B.2 How to Execute the mc_ctl Command

When executing the mc_ctl command, specify the server identifier in the --local-server option in order to identify the operation destination server.

Below is an example of starting Mirroring Controller of the server "server1" defined in the network.conf file. For mc_ctl command operations using another mode, also specify the --local-server option.

Define two server identifiers for the same IP address with different port numbers in the network.conf file.

Example)

server1 192.0.2.100 27540
server2 192.0.2.100 27541

Ensure that the port numbers of both primary server and standby server do not conflict with any other software.

Enabling automatic switch/disconnection

Start Mirroring Controller of the server "server1":

Example)

$ mc_ctl start -M /mcdir/inst1 --local-server server1

Stop Mirroring Controller of the server "server1":

Example)

$ mc_ctl stop -M /mcdir/inst1 --local-server server1

Disabling automatic switch/disconnection

Start Mirroring Controller of the server "server1":

Example)

$ mc_ctl start -M /mcdir/inst1 -F --local-server server1
Stop Mirroring Controller of the server "server1":

Example)

$ mc_ctl stop -M /mcdir/inst1 --local-server server1

Note

Add the --local-server option to the mc_ctl option specification for ExecStart and ExecStop of the unit file for systemd.

Refer to "2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances" for details.
Appendix C  User Commands

This appendix describes three categories of commands:
- Fencing command
- Arbitration command
- State transition commands

This appendix describes each category of user command.

C.1 Fencing Command

Format

The syntax for calling the fencing command from the Mirroring Controller process or the Mirroring Controller arbitration process is described below.

Fencing command of the database server

```
fencingCmd executionMode mcDegradationOper cmdServerId targetServerId primarycenter
```

Fencing command of the arbitration server

```
fencingCmd executionMode mcDegradationOper targetServerId
```

Input

Fencing command of the database server

Execution mode

- monitor: Detect issues via automatic monitoring of the Mirroring Controller process
- command: Mirroring Controller command execution (switch mode or detach mode of the mc_ctl command)

Degradation operation to be performed by Mirroring Controller

- switch: Switch
- detach: Disconnect

`cmdServerId`

ID of the database server that called the command

`targetServerId`

ID of the database server to be fenced

`primarycenter`

Fixed value

Fencing command of the arbitration server

Execution mode

- monitor: Detect issues via automatic monitoring of the Mirroring Controller process
- command: Mirroring Controller command execution (switch mode or detach mode of the mc_ctl command)

Degradation operation to be performed by Mirroring Controller

- switch: Switch
- detach: Disconnect

`targetServerId`

ID of the database server to be fenced
Output

Return value

0: Mirroring Controller will continue the degradation process.
Other than 0: Mirroring Controller will cancel the degradation process.

Description

Identifies the database server targeted for fencing based on the input server identifier, and implements the process that isolates it from the cluster system.

Notes

- The command is executed by the operating system user who started Mirroring Controller or the Mirroring Controller arbitration process. Therefore, if the command is to be executed by a specific operating system user, change the executing user of the command accordingly.

- The operating system user who started Mirroring Controller or the Mirroring Controller arbitration process must have execution privileges to the command. Otherwise, the degradation process will be canceled.

- From a security point of view, set the access privileges as necessary so that the fencing command is not overwritten and unauthorized operations are not performed by unintended operating system users.

- If the fencing command returns a value other than 0, Mirroring Controller will cancel the degradation process, so it is necessary for the user to check the status of the server, and switch or disconnect it manually.

- Before executing the fencing command, check if the server is already fenced, to avoid the command terminating abnormally.

- If the command times out, Mirroring Controller will stop the command, output an error message, and cancel the degradation process.

Information

The fencing command can be implemented by simply stopping the operating system or server. For example, if stopping the power for the database server, it is possible to use a utility to control the hardware control board in environments equipped with boards compatible with IPMI hardware standard.

Linux

Below is a sample script of a fencing command that powers off the database server using the IPMI tool.

Sample shell script

```
/installDir/share/mcarb_execute_fencing.sh.sample
```

Windows

Below is a sample script of a fencing command that powers off the database server using IPMIUTIL.

Sample shell script

```
installDir\share\mcarb_execute_fencing.bat.sample
```

C.2 Arbitration Command

Format

The syntax for calling the arbitration command from the Mirroring Controller process is described below.

```
arbitrationCmd cmdServerId targetServerId primarycenter
```
Input

cmdServerId
ID of the database server that called the command

targetServerId
ID of the database server to arbitrate

primarycenter
Fixed value

Output

Return value

0: The database server to arbitrate has an issue, and Mirroring Controller will continue the degradation process.

Other than 0: The database server to arbitrate is normal, and Mirroring Controller will cancel the degradation process.

Description

Identifies the database server to arbitrate based on the input server identifier, and checks the status of the server.

Notes

- The command is executed by the operating system user who started Mirroring Controller.
- The operating system user who started Mirroring Controller must have execution privileges to the command. Otherwise, the command will not be called, and the degradation process will be canceled.
- If the command times out, Mirroring Controller will stop the command, output an error message, and cancel the degradation process.

C.3 State Transition Commands

State transition commands include the three types of user commands below. Any of the commands can be implemented by Mirroring Controller in conjunction with database server status transitions.

- Post-switch command
- Pre-detach command
- Post-attach command

C.3.1 Post-switch Command

Format

The syntax for calling the post-switch command from the Mirroring Controller process is described below.

```
postswitchCmd serverIdentifier primarycenter
```

Input

serverIdentifier
ID of the database server (new primary server) that was switched

primarycenter
Fixed value

Output

Return value

None
Notes
- The command is executed by the operating system user who started Mirroring Controller.
- The operating system user who started Mirroring Controller must have execution privileges to the command. Otherwise, the command will not be called.
- If the command times out, Mirroring Controller will stop the command, output an error message, and cancel the process.

C.3.2 Pre-detach Command

Format
The syntax for calling the pre-detach command from the Mirroring Controller process is described below.

```
predetachCmd cmdServerId serverRole targetServerId primarycenter
```

Input
`cmdServerId`
ID of the database server that called the command

`serverRole`
Role of the database server that called the command
  - primary: Primary
  - standby: Standby

`targetServerId`
ID of the standby server to be disconnected from the cluster system

`primarycenter`
Fixed value

Output
Return value
None

Notes
- The command is executed by the operating system user who started Mirroring Controller.
- The operating system user who started Mirroring Controller must have execution privileges to the command. Otherwise, the command will not be called, however, Mirroring Controller will output an error message and continue the process.
- If the command times out, Mirroring Controller will stop the command, output an error message, and cancel the process.

C.3.3 Post-attach Command

Format
The syntax for calling the post-attach command from the Mirroring Controller process is described below.

```
postattachCmd cmdServerId serverRole targetServerId primarycenter
```

Input
`cmdServerId`
ID of the database server that called the command
Server role

   Role of the database server that called the command
   primary: Primary
   standby: Standby

targetServerId

   ID of the standby server to be attached to the cluster system

primarycenter

   Fixed value

Output

Return value

   None

Notes

   - The command is executed by the operating system user who started Mirroring Controller.
   - The operating system user who started Mirroring Controller must have execution privileges to the command. Otherwise, the command will not be called.
   - If the command times out, Mirroring Controller will stop the command, output an error message, and cancel the process.
Appendix D  Notes on Performing Automatic Degradation Immediately after a Heartbeat Abnormality

The type of issue below occurs if automatic degradation is performed unconditionally after an issue is detected during heartbeat monitoring of an operating system or server, and heartbeat monitoring was not properly tuned.

- If the timeout time is too short

![Diagram with steps 1, 2, and 3 explaining the process and issues related to heartbeat monitoring and automatic degradation.]
Notes on monitoring when the operating system or server crashes or is unresponsive

As illustrated in the diagram above, timeout is used to monitor whether the operating system or server crashes or is unresponsive. Therefore, if tuning has not been performed correctly, there is a risk of a split-brain mistakenly occurring even if the server is in a sound state.

Split-brain is a phenomenon in which both servers temporarily operate as primary servers, causing data updates to be performed on both servers.

Split-brain detection method

It can be confirmed that split-brain occurs under the following conditions:

1. When the mc_ctl command is executed in status mode on both servers, the "host_role" of both servers is output as "primary", and
2. The following message is output to the system log of one of the servers:

```
promotion processing completed (MCA00062)
```

How to recover from a split-brain

Use the procedure described below. Note that the new primary server is the server that was confirmed in step 2 of the aforementioned detection method.

1. Stop all applications that are running on the old and new primary servers.
2. Investigate and recover the database.
   Investigate the update results that have not been reflected to the new primary server from the database of the old primary server, and apply to the new primary server as necessary.
3. Stop the old primary server instance and the Mirroring Controller.
4. Resume the applications that were stopped in step 1.

5. Recover the old primary server.
   While referring to "2.5 Setting Up the Standby Server", build (set up) the old primary server as the new standby server, from the new primary server.
Appendix E  Supplementary Procedure on Configuring for Operation in Database Multiplexing Mode

This appendix explains a supplementary procedure on the configuration required for operation in database multiplexing mode.

E.1 Security Policy Settings

This section explains how to configure the security settings to enable an operating system user account designated as an instance administrator user to log on as a service.

1. Displaying the [Local Security Policy] window
   In Windows, select [Administrative Tools], and then click [Local Security Policy].

2. Setting up security
   1. In the [Local Security Policy] window, select [Security Settings], select [Local Policies], and then click [User Rights Assignment].
   3. In the [Log on as a service Properties] window, set the following:
      b. On the [Local Security Setting] tab, click [Add User or Group].
      c. In the [Select Users or Groups] window, enter the operating system user account of the instance administrator user in [Enter the object names to select].
      d. Click [OK].
   4. In the [Log on as a service Properties] window, click [OK].
   5. From the [Local Security Policy] tree, click [Local Policies], and then double-click [Security Options].
   6. Scroll down and double-click [User Account Control: Behavior of the elevation prompt for administrators in Admin Approval Mode].
   7. From the drop-down menu, select the "Elevate without prompting" in the [Local Security Setting] tab.
   8. Click [OK].

E.2 Windows Firewall Settings

This section explains how to enable the port number used by Mirroring Controller, if the Windows firewall feature is enabled.

Windows Server(R) 2019:

1. In the [Windows Defender Firewall] window, click [Advanced settings] on the left side of the window.
3. Click [New Rule] on the right side of the window.
4. In the [New Inbound Rule Wizard] window, select [Port], and then click [Next].
5. Select [TCP] and [Specific local ports], then specify the port number defined in the network definition file, and then click [Next].
6. Select [Allow the connection], and then click [Next].
7. Select the profiles for which this rule applies, and then click [Next].
8. In [Name], specify the desired name, and then click [Finish].
9. In the [Windows Defender Firewall with Advanced Security] window, check if the added rule is enabled under [Inbound Rules] in the center of the window.
Other than above:

1. In the [Windows Firewall] window, click [Advanced settings] on the left side of the window.
3. Click [New Rule] on the right side of the window.
4. In the [New Inbound Rule Wizard] window, select [Port], and then click [Next].
5. Select [TCP] and [Specific local ports], then specify the port number defined in the network definition file, and then click [Next].
6. Select [Allow the connection], and then click [Next].
7. Select the profiles for which this rule applies, and then click [Next].
8. In [Name], specify the desired name, and then click [Finish].
9. In the [Windows Firewall with Advanced Security] window, check if the added rule is enabled under [Inbound Rules] in the center of the window.
Appendix F  WebAdmin Disallow User Inputs Containing Hazardous Characters

WebAdmin considers the following as hazardous characters, which are not allowed in user inputs.

| (pipe sign)  
& (ampersand sign)  
; (semicolon sign)  
$ (dollar sign)  
% (percent sign)  
@ (at sign)  
' (single apostrophe)  
" (quotation mark)  
\' (backslash-escaped apostrophe)

Appendix G  Collecting Failure Investigation Data

If the cause of an error that occurs while building the environment or during operations is unclear, data must be collected for initial investigation.

This appendix describes how to collect data for initial investigation.

Use FJQSS (Information Collection Tool) to collect data for initial investigation.

See

Refer to the FJQSS manual for information on how to use FJQSS.

Note

Using a database server to collect data

- When using FJQSS to collect data for initial investigation, you must set the following environment variables:
  - Environment variable required for collecting data from the database
    Refer to “Collecting Failure Investigation Data” in the Operation Guide.
  - MCCONTROLDIR
  - Set the Mirroring Controller management directory.
    Refer to “1.2.1 Mirroring Controller Resources” for information on the Mirroring Controller management directory.

Using an arbitration server to collect data

Linux

- When using FJQSS to collect data for initial investigation, you must set the following environment variables:
  - ARBCONTROLDIR
    Set the Mirroring Controller arbitration process management directory.
    Refer to “1.2.1 Mirroring Controller Resources” for information on the Mirroring Controller arbitration server management directory.
  - ARBUSER
    Specify the operating system user who started the Mirroring Controller arbitration process.
  - FSEP_SA_HOME
    Set the Server Assistant installation directory.

Windows

- When using FJQSS to collect data for initial investigation, a window will be displayed for you to set the following environment variables:
  - ARBCONTROLDIR
    Set the Mirroring Controller arbitration process management directory.
    Refer to “1.2.1 Mirroring Controller Resources” for information on the Mirroring Controller arbitration server management directory.

Preface

Purpose of this document
This document describes the tasks required for using the database multiplexing feature of FUJITSU Enterprise Postgres.

Intended readers
This document is intended for those who set up and use the database multiplexing feature.
Readers of this document are also assumed to have general knowledge of:
- PostgreSQL
- SQL
- Windows

Structure of this document
This document is structured as follows:
Chapter 1 Overview of Database Multiplexing Mode
Provides an overview of database multiplexing mode.
Chapter 2 Setting Up Database Multiplexing Mode
Describes how to set up database multiplexing mode.
Chapter 3 Operations in Database Multiplexing Mode
Explains periodic database multiplexing mode.
Chapter 4 Action Required when an Error Occurs in Database Multiplexing Mode
Explains the action required when an error occurs during a database multiplexing mode.
Chapter 5 Managing Mirroring Controller Using WebAdmin
Explains how to set up and manage Mirroring Controller in a streaming replication cluster using WebAdmin.

Appendix A Parameters
Explains the configuration files and parameters required for database multiplexing mode.

Appendix B Supplementary Information on Building the Primary Server and Standby Server on the Same Server
Explains supplementary information on building the primary server and standby server on the same server.

Appendix C User Commands
Explains the user commands.

Appendix D Notes on Performing Automatic Degradation Immediately after a Heartbeat Abnormality
Provides notes when performing automatic degradation unconditionally after a heartbeat abnormality is detected during heartbeat monitoring of an operating system or server.

Appendix E Supplementary Procedure on Configuring for Operation in Database Multiplexing Mode
Explains supplementary procedure on the configuration required for operation in database multiplexing mode.

Appendix F WebAdmin Disallow User Inputs Containing Hazardous Characters
Explains characters not allowed in WebAdmin.

Appendix G Collecting Failure Investigation Data
Explains how to collect data for initial investigation.
Export restrictions

Exportation/release of this document may require necessary procedures in accordance with the regulations of your resident country and/or US export control laws.

Chapter 1 Overview of Database Multiplexing Mode

This chapter provides an overview of database multiplexing mode.

**Point**

In this and subsequent chapters, the word "Mirroring Controller" may be used in the process or management directory name or explanation.

1.1 What is Database Multiplexing Mode

Database multiplexing mode is an operation mode (log shipping mode) based on PostgreSQL streaming replication. Other software such as cluster software is not required.

This mode replicates the database on all servers that comprise the cluster system. It achieves this by transferring the updated transaction logs of the database from the server that receives the updates (primary server) to another server (standby server), and then reflecting them on the standby server. The client driver automatically distinguishes between the primary and standby servers, so applications can be connected transparently regardless of the physical server.

It consists of a feature that detects faults in the elements that are essential for the continuity of the database operation (such as the database process, disk, and network), as well as simplified switchover and standby server disconnection features. Furthermore, referencing can be performed on the standby server. The database will be copied in synchronous mode.

**Note**

If using WebAdmin or Mirroring Controller, FUJITSU Enterprise Postgres supports cluster systems comprising one primary server and one standby server.

- Although it is possible to connect an asynchronous standby server to the cluster system as an additional server, the standby server is not targeted for monitoring by Mirroring Controller.

- A synchronous standby server cannot be connected to the cluster system as an additional server.

**See**

The streaming replication feature is not described in this manual.

Refer to "High Availability, Load Balancing, and Replication" in the PostgreSQL Documentation for information on the streaming replication feature.
FUJITSU Enterprise Postgres provides the Server Assistant that objectively determines the status of database servers as a third party, and if necessary, isolates affected databases if the database servers are unable to accurately ascertain their mutual statuses in database multiplexing mode, such as due to a network error between database servers, or server instability. Database degradation can be performed by using the server (arbitration server) on which the Server Assistant is installed.

For database degradation using the arbitration server, if the database servers are unable to check their mutual statuses (due to a network error between database servers or server instability), then the database server queries the arbitration server for the status of the other database server. If it is determined based on the heartbeat result that the status is unstable, the applicable database server will be isolated from the cluster system (fencing). The arbitration server periodically heartbeats the database server so that it can respond immediately to queries from the database server. The fencing process can be customized according to the environment where Mirroring Controller is used.

Additionally, the database servers are always performing their heartbeats for the arbitration server so that it can perform check requests any time.
Figure 1.3 Database degradation using the arbitration server

Database degradation using the arbitration command

The arbitration command is a user command that performs arbitration processing in lieu of the arbitration server. If an arbitration server cannot be deployed, arbitration of the database server can be performed using the arbitration command.

Note

Install the arbitration server on a different physical server to that of the database server. Refer to "1.2 System Configuration for Database Multiplexing Mode" for information on the system configuration when using the arbitration server.
1.1.1 Monitoring Using Database Multiplexing Mode

In database multiplexing mode, perform the monitoring below.

- Operating system or server failures, and no-response state

  By generating a heartbeat between Mirroring Controller on each server, operating system or server errors are detected and acknowledged between the relevant servers.

The optimal operating method for environments where database multiplexing mode is performed can be selected from the following:

- Use the arbitration server to perform automatic degradation (switch/disconnect)

  This is the default method.

  The arbitration server objectively determines the status of database servers, then isolates and degrades from the cluster system the ones with an unstable status.

  Refer to "Database degradation using the arbitration server" for details.

- Call the user exit (user command) that will perform the degradation decision, and perform automatic degradation

  If the arbitration server cannot be installed, select if arbitration processing can be performed by the user instead.

  Mirroring Controller queries the user exit on whether to degrade. The user exit determines the status of the database server, and notifies Mirroring Controller whether to perform degradation.

  Refer to "Database degradation using the arbitration command" for details.

- Notification messages

  Use this method if using a two-database server configuration.

  Mirroring Controller outputs messages to the event log when an abnormality is detected. This ensures that a split brain will not occur due to a heartbeat abnormality - however, automatic switching will not be performed if the primary server operating system or server fails or becomes unresponsive.
Perform automatic degradation unconditionally after a heartbeat abnormality

This method is handled as in FUJITSU Enterprise Postgres 9.6 or earlier versions.

This method is not recommended, because Mirroring Controller unconditionally will perform automatic degradation after heartbeat abnormalities.

- Database process failures, and no-response state

Mirroring Controller periodically accesses the database processes and checks the status. A process error is detected by monitoring whether an access timeout occurs.

- Disk failure

Mirroring Controller periodically creates files on the data storage destination disk below. A disk error is detected when an I/O error occurs.
  - Data storage destination disk
  - Transaction log storage destination disk
  - Tablespace storage destination disk

Failures that can be detected are those that physically affect the entire system, such as disk header or device power failures.

- Streaming replication issue

Mirroring Controller detects streaming replication issues (log transfer network and WAL send/receive processes) by periodically accessing the PostgreSQL system views.

- Mirroring Controller process failure and no response

In order to continue the monitoring process on Mirroring Controller, Mirroring Controller process failures and no responses are also monitored.

The Mirroring Controller monitoring process detects Mirroring Controller process failures and no responses by periodically querying the Mirroring Controller process. If an issue is detected, Mirroring Controller is automatically restarted by the Mirroring Controller monitoring process.

---

**Point**

- If output of messages is selected as the operation to be performed when a heartbeat abnormality is detected during heartbeat monitoring of the operating system or server, automatic degradation will not be performed. However, if an issue in the WAL send process is detected on the primary server, then the standby server will be disconnected, and as a result an automatic disconnection may be performed even if the standby server operating system or server fails or becomes unresponsive.

- You can select in the parameters if the primary server will be switched if a database process is unresponsive or if tablespace storage destination disk failure is detected. Refer to "Appendix A Parameters" for details.

- If the standby server was disconnected, Mirroring Controller will automatically comment out the synchronous_standby_names parameter in the postgresql.conf file of the primary server. Accordingly, you can prevent the application processing for the primary server being stopped.

---

**Note**

If the role of primary server was switched to another server and then starts degrading, the original primary server will not become the standby server automatically. Remove the cause of the error, and then change the role of the original primary server to the server currently acting as standby server. Refer to "4.1 Action Required when Server Degradation Occurs" for details.
1.1.2 Referencing on the Standby Server

1.1.2.1 If Prioritizing the Main Job on the Primary Server

If a reference job is performed on the standby server and the primary server is switched, this may impact the main job from the point of view of load and conflict. This is because, on the new primary server (that is, the original standby server), both the main job that was being executed on the original primary server and the reference job that was being continued on the original standby server will be processed.

Therefore, to degrade the reference job (so that the impact on the main job is reduced), you can select the user exit below to disconnect the reference job that was performed on the original standby server.

- Post-switch command

Note

If continuing with the referencing job after switching the primary server, give careful consideration to the server resource estimates, and the likely impact on performance.

1.1.2.2 If Performing the Referencing Job on the Synchronous Standby Server

If an issue such as a log transfer network failure obstructs the continuation of a job on the primary server, the standby server may be automatically disconnected from the cluster system.

Therefore, if operating the reference job on the assumption that the connection destination is the synchronous standby server, you can select to temporarily stop the job by using the user exit or the feature below, so that unexpected referencing of past data does not occur as a result of the disconnection.

- Pre-detach command
- Forced stoppage of the standby server instance on disconnection (specify in the parameter of the server configuration file)

Additionally, if the standby server is incorporated into the cluster system, reference jobs can be started or resumed by using the user exit below.

- Post-attach command

See

- Refer to "2.6 Creating a User Exit for a Database Server" or "Appendix C User Commands" for information on each user exit.
- Refer to "A.4.1 Server Configuration File for the Database Servers" for information on the server configuration file of the database server.

Point

Mirroring Controller will continue processing regardless of the processing result of the above user exits and features.

1.2 System Configuration for Database Multiplexing Mode

This section explains the products, features, and networks that are part of a database multiplexing system.

The following table shows the network types uses by database multiplexing systems.

<table>
<thead>
<tr>
<th>Network type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Job network</td>
<td>Network between the application that accesses the database, and the database server.</td>
</tr>
<tr>
<td>Network type</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Arbitration network</td>
<td>Network used by the arbitration server to check the status of the primary server and standby server, and communicate with Mirroring Controller of the database servers. Additionally, if the job network is disconnected from outside, it can also be used as the arbitration network. Refer to &quot;1.4 Security in Database Multiplexing&quot; for details on network security.</td>
</tr>
<tr>
<td>Admin network</td>
<td>Network used by the primary server and the standby server to monitor each other using Mirroring Controller, and to control Mirroring Controller of other servers.</td>
</tr>
<tr>
<td>Log transfer network</td>
<td>Network used to transfer the transaction logs of the database, which is part of database multiplexing.</td>
</tr>
</tbody>
</table>

**Figure 1.5 System configuration for database multiplexing mode**

The arbitration server is installed to check the database server status as a third party, and to perform fencing. Therefore, to obtain the intended benefits, consider the following:

- Install the arbitration server on a different server to that of the database server.
- For the arbitration network, use a network that will not be impacted by line faults or the load on the admin network or log transfer network. This is necessary to correctly determine issues on the admin network or log transfer network.
Point

- The arbitration server can also be used as an application server. However, consider the server load.
- It is recommended to link the arbitration server with other cluster systems, in order to provide redundancy.
- Use the arbitration server in combination with the same version of FUJITSU Enterprise Postgres as that of the primary server and standby server.
- The arbitration server can be built on a different platform to that of the database server.

Note

Because the ping command of the operating system is used for heartbeat monitoring of the database server, configure the network so that ICMP can be used on the admin network and the arbitration network.

1.2.1 Mirroring Controller Resources

This section describes the database server and arbitration server resources of Mirroring Controller.

1.2.1.1 Database Server Resources

The only Mirroring Controller resource is the Mirroring Controller management directory, which stores the files that define the Mirroring Controller behavior, and the temporary files that are created when Mirroring Controller is active.

Note

- Do not create the Mirroring Controller management directory in a directory managed by FUJITSU Enterprise Postgres, otherwise it may be deleted by mistake or may cause unexpected problems when FUJITSU Enterprise Postgres recovery is performed (such as old version of files being restored).

- The backup methods described in “Backing Up the Database” in the Operation Guide cannot be used to back up the Mirroring Controller resources. Therefore, users must obtain their own backup of Mirroring Controller resources, in addition to FUJITSU Enterprise Postgres server resources. Retrieve backups after stopping Mirroring Controller.

- If the automatic switch/disconnection is enabled, do not edit synchronous_standby_names for the Mirroring Controller monitoring target instance. Otherwise, if Mirroring Controller is switched after editing, data may be lost or SQL access may stop.

- If you are building on a virtual machine or cloud, make sure the virtual machines are on different physical servers. Refer to your virtual machine software and cloud vendor documentation for instructions on how to deploy virtual machines.

The content on the primary server will be backed up. You cannot tell which server is the primary server to be backed up, because switching and failback may be performed between the servers. It is also impossible to tell which server is to be restored using the backed up data. Accordingly, ensure that you create a backup of each server when it is working as the primary server.
1.2.1.2 Arbitration Server Resources

The only arbitration server resource is the Mirroring Controller arbitration process management directory. This directory stores the files that define the Mirroring Controller arbitration process behavior and the temporary files created when Mirroring Controller is active.

1.2.2 Mirroring Controller Processes

This section describes the database server and arbitration server processes of Mirroring Controller.

1.2.2.1 Database Server Processes

The database server processes comprise the Mirroring Controller process and Mirroring Controller monitoring process.

<table>
<thead>
<tr>
<th>Process type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mirroring Controller process</td>
<td>Performs operating system/server and process heartbeat monitoring and disk abnormality monitoring between database servers. Additionally, it issues arbitration requests to the arbitration server.</td>
</tr>
<tr>
<td>Mirroring Controller monitoring process</td>
<td>Performs heartbeat monitoring of the Mirroring Controller process. If the Mirroring Controller process returns no response or is down, the monitoring process is restarted automatically.</td>
</tr>
</tbody>
</table>

1.2.2.2 Arbitration Server Process

The only arbitration process is the Mirroring Controller arbitration process.
<table>
<thead>
<tr>
<th>Process type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mirroring Controller arbitration process</td>
<td>Performs rechecks for issues detected on the primary server or the standby server. Additionally, this process performs fencing if it determines that there is an issue on the primary server or the standby server.</td>
</tr>
</tbody>
</table>

### 1.2.3 Redundancy of the Admin and Log Transfer Networks

The admin network is an important one, because it is used by Mirroring Controller to check the status of each server. Additionally, the log transfer network is an important one, because it is necessary to ensure data freshness. Accordingly, configure a failure-resistant network by implementing network redundancy via the NIC teaming feature provided by the operating system or network driver vendor.

**Information**

NIC teaming feature is provided by the operating system by default.

### 1.2.4 Notes on CPU Architecture and Products

Use the same CPU architecture (endian) for the primary server, standby server, and the arbitration server.

A server using only PostgreSQL streaming replication cannot be specified as the database multiplexing system log transfer destination.

### 1.3 Deciding on Operation when a Heartbeat Abnormality is Detected

The operation to be performed when a heartbeat abnormality is detected using operating system/server heartbeat monitoring is decided on according to the environment where database multiplexing mode is performed or the operating method.

It is possible to select from the four operations below, and specify this in the parameters of Mirroring Controller:
- Use the arbitration server to perform automatic degradation (switch/disconnect)
- Call the user exit (user command) that will perform the degradation decision, and perform automatic degradation
- Notification messages
- Perform automatic degradation unconditionally (switch/disconnect)

The table below shows if jobs can be continued on the primary server when an issue is detected during heartbeat monitoring of the operating system/server.

**Continuation of jobs on the primary server when an issue is detected during heartbeat monitoring of the operating system/server**

<table>
<thead>
<tr>
<th>Operation</th>
<th>Abnormal event</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Server/operating system failures or no responses</td>
</tr>
<tr>
<td></td>
<td>Primary server</td>
</tr>
<tr>
<td>Automatic degradation using the arbitration server</td>
<td>Y (switch)</td>
</tr>
<tr>
<td>Call a user exit and perform automatic degradation</td>
<td>Y (switch)</td>
</tr>
</tbody>
</table>
### 1.4 Security in Database Multiplexing

The database server replicates the database on all servers that comprise the cluster system. It achieves this by transferring and reflecting the updated transaction logs of the database from the primary server to the standby server.

To safeguard the database against unauthorized access and preserve data confidentiality in transaction log transfers, carefully consider security and take note of the following when performing database multiplexing:

- Do not use trust authentication when using replication connection.
- Configure the admin network and the log transfer network so that they cannot be connected from the outside, as shown in Figure 1.7 Security.

Additionally, for the line on which Mirroring Controller connects from the database server to the arbitration server, take note of the following points and consider security carefully:

- Build a network with the arbitration server disconnected from outside, as shown in Figure 1.7 Security.

However, it may not always be possible to adopt the configuration mentioned above. For example, you may want to place the servers in a nearby/neighboring office to minimize network delays.

In this case, combine the following features to enhance security:

- Authentication of the Standby Server
- Encryption of Transaction Logs Transferred to the Standby Server

When these features are combined, security will be achieved as shown below.

---

**Point**

If the job network is disconnected from outside, it can be used as the arbitration network. However, if a network is to be used as both a job network and arbitration network, consider the load on the network.

---

**Note**

If a port is blocked (access permission has not been granted) by a firewall, etc., enable use of the target port by granting access. Refer to the vendor document for information on how to open (grant access permission to) a port. Consider the security risks carefully when opening ports.
1.4.1 Authentication of the Standby Server

You can prevent spoofing connections from an external server purporting to be the standby server by using authentication with a user name and password.

Configure the setting in the primary server pg_hba.conf file so that authentication is performed for connections from the standby server in the same way as for connections from the client.

Refer to “Client Authentication” in the PostgreSQL Documentation for information on content that can be configured in pg_hba.conf.
1.4.2 Encryption of Transaction Logs Transferred to the Standby Server

In case the authentication of the standby server is breached so that a malicious user purporting to be the standby server can spoof data, the transaction log data can be encrypted to prevent it from being deciphered. The transparent data encryption feature is used to encrypt the data.

See

Refer to "Protecting Storage Data Using Transparent Data Encryption" in the Operation Guide for details.
Chapter 2 Setting Up Database Multiplexing Mode

This chapter describes how to set up database multiplexing mode, and how to check it.

Users who perform setup and operations on the database server

Setup and operations of the database server must be performed by the instance administrator user with administrator privileges (operating system user ID belonging to the Administrators group). The instance administrator user must be assigned the "Log on as a service" user right.

Users who perform setup and operations on the arbitration server

The following users may perform setup and operations on the arbitration server when it is used for automatic degradation.

Linux

Any operating system user.

Windows

Any user with administrator privileges. This user must be assigned the "Log on as a service" user right.

Point

- Mirroring Controller selects a database superuser as the user who will connect to the database instance. This enables instance administrator users and database superusers who operate the Mirroring Controller commands to run database multiplexing mode in different environments.

- The application name for connecting to the database instance is "mc_agent".

Matching the system times

Before starting the setup, ensure that the times in the primary server, standby server and arbitration server match, by using the operating system time synchronization feature, for example.

The tolerated difference is approximately one second.

If the system times are not synchronized (because the tolerated difference is exceeded, for example), problem investigation may be affected.

Configuring ICMP

Because the ping command of the operating system is used for heartbeat monitoring of the database server, configure the network so that ICMP can be used on the admin network and the arbitration network. Refer to the relevant operating system procedure for details.

Setup

The setup procedure is shown in the table below. However, the procedure on the arbitration server should be performed only when the arbitration server is used for automatic degradation. A distinction is made between the procedures on the primary server and standby server according to whether the arbitration server is used.

<table>

</table>

Explanations for each step are provided below.

- The setup procedure is also the same when changing the mode on a single server to database multiplexing mode. In this case, omit the installation of FUJITSU Enterprise Postgres and the creation of the instance.

Refer to "3.9.2 Changing from Single Server Mode to Database Multiplexing Mode" for details.

- The primary and standby server can be pseudo-configured on the same server for system testing, for example. In this case, the setup can be performed using the same procedure, however there will be some supplementary steps.

Before performing the setup, refer to "Appendix B Supplementary Information on Building the Primary Server and Standby Server on the Same Server".

### 2.1 Installation

Refer to the manuals below, and then install the product.
2.2 Preparing for Setup

This section describes the preparation required before setting up Mirroring Controller.

2.2.1 Preparing the Database Server

2.2.1.1 Preparing the Backup Disk

In Mirroring Controller, by performing a backup, recovery is possible even if all server disks are corrupted.

The content on the primary server should be backed up. However, through switching and failback, the standby server may also become the primary server. Accordingly, prepare each of the backup disk devices for the primary and standby servers. Perform backup on the primary server used at the time of the backup.

2.2.1.2 Preparatory Tasks for the Output of Error Logs to the Event Log

This section explains the preparatory tasks required to output error logs to the event log.

Note

If you do not register an event source name, the message content output to the event log may be incomplete.

Setting each server

You should register this default event source name beforehand because the default event source name "MirroringControllerOpen" may be output to the event log when Mirroring Controller commands on the database server are used.

Example

The following is an example in which the DLL of a 64-bit product is registered under the default event source name. Note that "<x>" indicates the product version.

```bash
> regsvr32 "c:\Program Files\Fujitsu\fsepv<x>\server64\lib\mcevent.dll"
```

Setting each instance

You can output messages to any event source named by the user, so that messages output to the event log can be identified by each instance.

Example

The following is an example in which the DLL of a 64-bit product is registered under the event source name "Mirroring Controller inst1". Note that "<x>" indicates the product version.

```bash
> regsvr32 /n /i:"Mirroring Controller inst1" "c:\Program Files\Fujitsu\fsepv<x>\server64\lib \mcevent.dll"
```
The parameter must be edited for each instance. Refer to "A.4.1 Server Configuration File for the Database Servers" to set the event_source parameter.

If installing multiple versions

If FUJITSU Enterprise Postgres is already installed on the same machine, search for the key below in a registry editor, and make a note of the path of the registered DLL. Afterwards, register a new DLL using the default event source name.

Use the DLL path that you made a note of in the above step when re-registering the default event source name during uninstallation.

2.2.1.3 Security Policy Settings

Security settings that allow logon as a service are required in Mirroring Controller for the operating system user account of the instance administrator user in order to start and stop Mirroring Controller and an instance using a Windows service.

If the security settings have not been configured, refer to "E.1 Security Policy Settings" for information on configuring the settings.

2.2.2 Preparing the Arbitration Server

2.2.2.1 Preparing to Output Error Logs to the Event Log (Windows)

This section explains the preparatory tasks for outputting error logs to the event log.

Note

If no event source name is registered, messages output to the event log may be incomplete.

Configuring each server

Event logs for the Mirroring Controller commands on the arbitration server may be output with the default event source name "MirroringControllerArbiter". Therefore, register this default event source name beforehand.

Example)

The following is an example in which the DLL of a 64-bit product is registered under the default event source name. Note that "<x>" indicates the product version.

```
> regsvr32 "c:\Program Files\Fujitsu\fsepv<x>assistant64\lib\mcarbevent.dll"
```

Setting each instance

You can output messages to any event source named by the user, so that messages output to the event log can be identified by each instance.

Example)

The following is an example in which the DLL of a 64-bit product is registered under the event source name "Mirroring Controller arbiter1". Note that "<x>" indicates the product version.

```
> regsvr32 /n /i:"Mirroring Controller arbiter1" "c:\Program Files\Fujitsu\fsepv<x>assistant64\lib\mcarbevent.dll"
```

The parameter must be edited for each instance. Refer to "A.4.2 Arbitration Configuration File" and set the event_source parameter.

If installing multiple versions

If FUJITSU Enterprise Postgres is already installed on the same machine, search for the key below in Registry Editor, and make a note of the path of the registered DLL. Afterwards, register a new DLL using the default event source name.

Use the DLL path that you made a note of in the above step when re-registering the default event source name during uninstallation.
2.2.2.2 Security Policy Settings (Windows)

On the arbitration server, operating system user accounts that operate the Mirroring Controller arbitration process must be assigned the "Log on as a service" user right in order to use Windows Services to start and stop the Mirroring Controller arbitration process.

If the security settings to enable this have not been configured, refer to "E.1 Security Policy Settings" and configure the settings.

2.3 Setting Up the Arbitration Server

This section explains how to set up the arbitration server.

2.3.1 Configuring the Arbitration Server

This section explains how to set up database multiplexing mode on the arbitration server.

In database multiplexing mode, the files that are required for operations are managed in the Mirroring Controller arbitration process management directory.

There is one Mirroring Controller arbitration process management directory for each arbitration process.

**Point**

The arbitration process for each database multiplexing system can be started on a single arbitration server.

**See**

- Refer to the Reference for information on the mc_arb command.
- Refer to "Appendix A Parameters" for information on the parameters to be edited for the setup.

Perform the following procedure:

**Linux**

1. On the arbitration server, log in as any operating system user who starts and stops the arbitration process.
2. Configure the environment variables.

   Set the following environment variables:

   - **PATH**
     
     Add the installation directory "/bin".

   - **MANPATH**
     
     Add the installation directory "/share/man".

   - **LD_LIBRARY_PATH**
     
     Add the installation directory "/lib".

   **Example**

   The following example configures environment variables when the installation directory is "/opt/fsepv<x>assistant".

   Note that "<x>" indicates the product version.

   **sh, bash**

   ```bash
   $ PATH=/opt/fsepv<x>assistant/bin:$PATH ; export PATH
   $ MANPATH=/opt/fsepv<x>assistant/share/man:$MANPATH ; export MANPATH
   $ LD_LIBRARY_PATH=/opt/fsepv<x>assistant/lib:$LD_LIBRARY_PATH ; export LD_LIBRARY_PATH
   
   **csh, tcsh**
   ```
3. Create the Mirroring Controller arbitration process management directory that will store the files required by the arbitration server. Use ASCII characters in the Mirroring Controller arbitration process management directory.

4. In the network configuration file (network.conf), define the Mirroring Controller network configuration that will be managed by the Mirroring Controller arbitration process.

Create network.conf in the Mirroring Controller arbitration process management directory, based on the sample file. For network.conf, set read and write permissions only for the operating system user who starts and stops the arbitration process in step 1.

If users other than this are granted access permissions, the mc_arb command will not work. Accordingly, users other than the operating system user who starts and stops the arbitration process in step 1 are prevented from operating the Mirroring Controller arbitration process.

Sample file

```
/installDir/share/mcarb_network.conf.sample
```

In network.conf, specify the IP address or host name and port number of the primary server and standby server, and define the Mirroring Controller network configuration that will be managed by the Mirroring Controller arbitration process.

Refer to "A.3 Network Configuration File" for details.

A definition example is shown below.

Example)
The IDs of the servers are set to "server1" and "server2", and their port numbers are set to "27541".

```
server1 192.0.3.100 27541
server2 192.0.3.110 27541
```

5. In the arbitration configuration file (arbitration.conf), define the information related to control of the Mirroring Controller arbitration process.

Create arbitration.conf in the Mirroring Controller arbitration process management directory, based on the sample file. For arbitration.conf, set read and write permissions only for the operating system user who starts and stops the arbitration process in step 1. If users other than this are granted access permissions, the mc_arb command will not work.

Sample file

```
/installDir/share/mcarb_arbitration.conf.sample
```

Set the parameters shown in the table below in arbitration.conf.

**Table 2.1 Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Content specified</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>port</td>
<td>Port number of the Mirroring Controller arbitration process</td>
<td>The port number must be 0 to 65535. Ensure that the port number does not conflict with other software. Do not specify an ephemeral port that may temporarily be assigned by another program.</td>
</tr>
<tr>
<td>my_address</td>
<td>'ipAddrOrHostNameThatAcceptsConnectionFromMirroringControllerProcessOnDbServer'</td>
<td>IPv4 and IPv6 addresses can be specified. Specify the IP address, enclosed in single quotation marks (').</td>
</tr>
<tr>
<td>Parameter</td>
<td>Content specified</td>
<td>Remarks</td>
</tr>
<tr>
<td>-----------------------</td>
<td>-----------------------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>syslog_ident</td>
<td>'programName'</td>
<td>Specify using single quotation marks (') to enclose the program name used to identify the Mirroring Controller arbitration process message in the system log. Use ASCII characters excluding spaces to specify this parameter. The default is 'MirroringControllerArbiter'.</td>
</tr>
<tr>
<td>fencing_command</td>
<td>'/fencingCmdFilePath'</td>
<td>Specify the full path of the fencing command that fences a database server where it is determined that an error has occurred. Enclose the path in single quotation marks ('). Specify the path using less than 1024 bytes.</td>
</tr>
<tr>
<td>fencing_command_timeout</td>
<td>Timeout for fencing command (seconds)</td>
<td>If the command does not respond within the specified number of seconds, it is determined that fencing has failed and a signal (SIGTERM) is sent to the fencing command execution process. Specify a value between 1 and 2147483647. The default is 20 seconds.</td>
</tr>
</tbody>
</table>

---

**Information**

Refer to "A.4.2 Arbitration Configuration File" for information on the parameters and for other parameters.

---

**Windows**

1. On the arbitration server, log in as any operating system user who starts and stops the arbitration process.

2. Configure the environment variables.

   Set the following environment variable:

   ```
   - PATH
     Add the installation folders "bin" and "lib".
   ```

   **Example**

   The following example configures environment variables when the installation folder is "c:\Program Files\Fujitsu\fsepv<x>assistant64".

   Note that "<x>" indicates the product version.

   ```
   > SET PATH=c:\Program Files\Fujitsu\fsepv<x>assistant64\bin;c:\Program Files\Fujitsu\fsepv<x>assistant64\lib;%PATH%
   ```

3. Create the Mirroring Controller arbitration process management directory that will store the files required by the arbitration server. Use ASCII characters in the Mirroring Controller arbitration process management directory.

4. In the network configuration file (network.conf), define the Mirroring Controller network configuration that will be managed by the Mirroring Controller arbitration process.

   Create network.conf in the Mirroring Controller arbitration process management directory, based on the sample file.

   **Sample file**
In network.conf, specify the IP address or host name and port number of the primary server and standby server, and define the Mirroring Controller network configuration that will be managed by the Mirroring Controller arbitration process.

Refer to "A.3 Network Configuration File" for details.

A definition example is shown below.

Example)
The IDs of the servers are set to "server1" and "server2", and their port numbers are set to "27541".

server1 192.0.3.100 27541
server2 192.0.3.110 27541

5. Change the access permissions for network.conf.

For network.conf, set read and write permissions only for the operating system user who starts and stops the arbitration process in step 1. If users other than this are granted access permissions, the mc_arb command will not work. Accordingly, users other than the operating system user who starts and stops the arbitration process in step 1 are prevented from operating the Mirroring Controller arbitration process.

Example)
The following is an execution example, in which the operating system user who starts and stops the arbitration process in step 1 is granted full access permissions as the owner when the user is "fsepuser". The following procedure applies when the user is logged in to the Windows server as "fsepuser".

> takeown /f network.conf
> icacls network.conf /reset
> icacls network.conf /inheritance:r
> icacls network.conf /grant fsepuser:F

6. In the arbitration configuration file (arbitration.conf), define the information related to control of the Mirroring Controller arbitration process.

Create arbitration.conf in the Mirroring Controller arbitration process management directory, based on the sample file.

Sample file

installDir\share\mcarb_arbitration.conf.sample

Set the parameters shown in the table below in arbitration.conf.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Content specified</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>port</td>
<td>Port number of the Mirroring Controller arbitration process</td>
<td>The port number must be 0 to 65535. Ensure that the port number does not conflict with other software. Do not specify an ephemeral port that may temporarily be assigned by another program.</td>
</tr>
<tr>
<td>my_address</td>
<td>'ipAddrOrHostNameThatAcceptsConnectionFromMirroringControllerProcessOnDbServer' [Setting example] my_address = '192.0.3.120'</td>
<td>IPv4 and IPv6 addresses can be specified. Enclose the parameter value in single quotation marks (').</td>
</tr>
<tr>
<td>service_name</td>
<td>'registeredServiceNameOfArbitrationProcessInWindowsServices'</td>
<td>Use ASCII characters excluding forward slash (/) and backslash (/) to specify this parameter. Enclose the parameter value in single quotation marks (').</td>
</tr>
</tbody>
</table>
### Parameter | Content specified | Remarks
--- | --- | ---
**event_source** | 'eventSourceNameUsedToIdentifyArbitrationProcessMsgInEventLog' | The maximum length of the service name is 124 bytes. Use ASCII characters excluding spaces to specify this parameter. Enclose the parameter value in single quotation marks ('). The maximum length of the event source name is 255 bytes.

**fencing_command** | 'fencingCmdFilePath' |
| [Setting example] fencing_command = 'c:\arbiter\fencing_dir\execute_fencing.bat' | Specify the full path of the fencing command that fences a database server where it is determined that an error has occurred. Specify "\" as the delimiter. Enclose the path in single quotation marks ('). Specify the path using less than 260 bytes. Any multibyte characters must use the same encoding as the operating system.

**fencing_command_timeout** | Timeout for fencing command (seconds) | If the command does not respond within the specified number of seconds, it is determined that fencing has failed and a signal (SIGTERM) is sent to the fencing command execution process. Specify a value between 1 and 2147483647. The default is 20 seconds.

---

**Information**

Refer to "A.4.2 Arbitration Configuration File" for information on the parameters and for other parameters.

7. Change the access permissions for arbitration.conf.

For arbitration.conf, set read and write permissions only for the operating system user who starts and stops the arbitration process in step 1. If users other than this are granted access permissions, the mc_arb command will not work.

**Example**
The following is an execution example, in which the operating system user who starts and stops the arbitration process in step 1 is granted full access permissions as the owner when the user is "fsepuser". The following procedure applies when the user is logged in to the Windows server as "fsepuser".

```bash
> takeown /f arbitration.conf
> icacls arbitration.conf /reset
> icacls arbitration.conf /inheritance:r
> icacls arbitration.conf /grant fsepuser:F
```

8. Configure Windows Firewall.

If Windows Firewall is used, enable the port number of Mirroring Controller specified in the network configuration file in step 3. Refer to "E.2 Windows Firewall Settings" for details.

9. Register the Mirroring Controller arbitration process as a Windows service.

Execute the mc_arb command in register mode.
For the -P option of the mc_arb command, specify the password of the operating system user who executes the command.

Example)

```
> mc_arb register -M D:\mcarb_dir\arbiter1 -P ********
```

**Note**

When specifying the password in the -P option of the mc_arb command, for security reasons, you should be careful not to allow other users to access it.

**Information**

Use the mc_arb command with the -S option to specify automatic start and stop of the Mirroring Controller arbitration process. Refer to "2.13 Setting Automatic Start and Stop of the Mirroring Controller Arbitration Process" for details.

The Mirroring Controller arbitration process is registered as a Windows service using the service name specified in the service_name parameter of arbitration.conf in step 6. You can execute the sc qc command to check the registration status.

### 2.3.2 Creating a User Exit for the Arbitration Server

The only user exit for the arbitration server is the fencing command.

The fencing command is a user command that is called by the Mirroring Controller arbitration process if Mirroring Controller performs arbitration processing and determines that a database server is unstable.

In the fencing command, the user implements a process that isolates a database server from a cluster system by, for example, stopping the target operating system or server. The fencing command that was created is to be specified for the parameter in the arbitration configuration file. Refer to "A.4.2 Arbitration Configuration File" for information on the parameters.

- Fencing the primary server during the switch
  - Prevent the Mirroring Controller management process on the primary server from communicating with the Mirroring Controller management process on the other server.
  - Prevent applications from connecting to the primary server instance.

- Fencing the standby server during disconnection
  - Prevent the Mirroring Controller management process on the standby server from communicating with the Mirroring Controller management process on the other server.
  - Prevent applications from connecting to the standby server instance.
  - Prevent the standby server from continuing streaming replication.

**See**

Refer to "Appendix C User Commands" for information on user exits.

### 2.3.3 Starting the Mirroring Controller Arbitration Process

This section explains how to start the Mirroring Controller arbitration process.

An operating system user who has logged in to the arbitration server can start the Mirroring Controller arbitration process by executing the mc_arb command in start mode.
2.4 Setting Up the Primary Server

This section explains how to set up the primary server.

2.4.1 Setting Up Database Multiplexing Mode on the Primary Server

This section explains how to set up database multiplexing mode on the primary server.

In database multiplexing, the files that are required for operations are managed in the Mirroring Controller management directory.

There is one Mirroring Controller management directory for each instance.

- **Note**

  - Do not place the Mirroring Controller management directory in a directory managed by FUJITSU Enterprise Postgres, otherwise it may be deleted by mistake with the directories managed by FUJITSU Enterprise Postgres, and an old version of files may be restored.

- **See**

  - Refer to "Preparing Directories for Resource Deployment" in the Installation and Setup Guide for Server for details on the directories that are managed by FUJITSU Enterprise Postgres.
  - Refer to "mc_ctl" in Reference for information on the command.
  - Refer to "Appendix A Parameters" for details on each parameter to be edited for the setup.

Perform the following procedure:

1. Log in to the primary server.

2. Create the Mirroring Controller management directory that will store the files required by database multiplexing.

   Use ASCII characters in the Mirroring Controller management directory.

   Additionally, grant "Write" permission to the instance administrator user for the Mirroring Controller management directory.

3. In the network configuration file (network.conf), define the network configuration that will link between the Mirroring Controller processes.

   Create the network.conf file in the Mirroring Controller management directory, based on the sample file.

   **Sample file**

   ```
   installDir\share\mc_network.conf.sample
   ```

   In network.conf, specify the IP address or host name and port number of the primary server and standby server, and define the network configuration that will link between the Mirroring Controller processes, and between Mirroring Controller processes and the Mirroring Controller arbitration process.

   Refer to "A.3 Network Configuration File" for details.
A definition example is shown below.

The content to be defined depends on the operation settings at the time a heartbeat abnormality is detected.

**When automatic degradation by the arbitration server is selected**

Example)

The IDs of the primary server and standby server are set to "server1" and "server2", and their port numbers are set to "27540" and "27541". The ID of the server of the Mirroring Controller arbitration process is set to "arbiter", and its port number is set to "27541".

```
server1 192.0.2.100,192.0.3.100 27540,27541 server
server2 192.0.2.110,192.0.3.110 27540,27541 server
arbiter 192.0.3.120 27541 arbiter
```

Ensure that the port numbers set for the primary server, standby server, and arbitration server do not conflict with other software. In addition, when the arbitration server is used for automatic degradation, use a network in which the arbitration network is not affected by a line failure in the admin network.

When the server type is "server", two IP addresses or host names, and two port numbers need to be specified in the following order:

- IP address or host name of the database server used as the admin network
- IP address or host name of the database server used as the arbitration network
- Port number of the database server used as the admin network
- Port number of the database server used as the arbitration network

If the server type is "arbiter", specify the IP address or host name set for the my_address parameter and the port number set for the port parameter in arbitration.conf of the arbitration server.

**When operation other than automatic degradation by the arbitration server is selected**

Example)

The IDs of the servers are set to "server1" and "server2", and their port numbers are set to "27540".

```
server1 192.0.2.100 27540
server2 192.0.2.110 27540
```

Ensure that the port numbers for the primary and standby server do not conflict with other software.

Register the port number of the primary server in the services file, because there are programs, such as WebAdmin, that search an available port number using the services file.

Register any name as the service name.

4. Change the access permissions for the network.conf file.

For network.conf, set read and write permissions for the instance administrator user only.

If users other than the instance administrator user are granted access permissions, the mc_ctl command will not work. Accordingly, users other than the instance administrator user are prevented from operating Mirroring Controller.

Example)

The following is an execution example, in which the instance administrator user is granted full access permissions as the owner when the operating system user name of the instance administrator user is "fsepuser". The following procedure applies when the user is logged in to the Windows server as "fsepuser":

```
> takeown /f network.conf
> icacls network.conf /reset
> icacls network.conf /inheritance:r
> icacls network.conf /grant fsepuser:F
```

5. Define the information related to Mirroring Controller monitoring and control in the serverIdentifier.conf file.

Create the serverIdentifier.conf file in the Mirroring Controller management directory, based on the sample file.
As the file name for the serverIdentifier.conf file, use the server identifier name that was specified in the network.conf file in step 3.

**Sample file**

```
installDir\share\mc_server.conf.sample
```

Set the parameters shown in the table below in the serverIdentifier.conf file.

### Table 2.3 Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Content specified</th>
<th>Remarks</th>
</tr>
</thead>
</table>
| db_instance       | \`dataStorageDestinationDir`                         | Use ASCII characters, and specify \"\" as the path delimiter.  
                    |                                                         | Enclose the parameter value in single quotation marks ('). |
| db_instance_service_name | \`registeredServiceNameOfFujitsuEnterprisePostgresInstance` | Specify the registered service name of the FUJITSU Enterprise Postgres instance in the Windows service.  
                            |                                                         | Use ASCII characters, enclosed in single quotation marks ('). |
| db_instance_password | \`passwordOfInstanceAdminUser`                  | If password authentication is performed, specify this parameter in the settings used when Mirroring Controller connects to a database instance.  
                               |                                                         | Use ASCII characters, enclosed in single quotation marks (').  
                               |                                                         | If the specified value of this parameter includes \' or \, write \' or \, respectively. |
| enable_hash_in_password | on or off                                  | Specify on to treat the # in the db_instance_password specification as a password character, or off to treat it as a comment.  
                                         |                                                         | The default is "off". |
| mc_service_name   | \`registeredServiceNameOfMirroringController`       | Specify the Mirroring Controller service name registered in the Windows service. Use ASCII characters excluding forward slash (/) and backslash (\) to specify this parameter.  
                            |                                                         | The service name is up to 124 bytes. |
| event_source      | \`eventSourceName`                                  | Specify the event source name to be used to identify the Mirroring Controller message in the event log. Use ASCII characters to specify this parameter.  
                            |                                                         | The maximum length of the event source name is 255 bytes.  
<pre><code>                        |                                                         | By using a similar event source name as the postgresql.conf file parameter, the Mirroring Controller output content can be referenced transparently, so log reference is easy. |
</code></pre>
<p>| remote_call_timeout | Admin communication timeout                           | Specify the timeout value (milliseconds) of the Mirroring Controller agent process for communication between servers. |</p>
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Content specified</th>
<th>Remarks</th>
</tr>
</thead>
</table>
| heartbeat_error_action | Operation when a heartbeat abnormality is detected using operating system or server heartbeat monitoring | arbitration: Perform automatic degradation using the arbitration server.  
command: Call a user exit to determine degradation, and perform automatic degradation if required.  
message: Notify messages.  
fallback: Perform automatic degradation unconditionally.  
Set the same value on the primary server and standby server. |
| heartbeat_interval     | Interval time for abnormality monitoring during heartbeat monitoring of the operating system or server (milliseconds) | Abnormality monitoring of the operating system or server is performed at the interval (milliseconds) specified in heartbeat_interval.  
This parameter setting is used as the default for database process heartbeat monitoring, streaming replication abnormality monitoring, and disk abnormality monitoring.  
When setting the monitoring time, there are some considerations to take into account to optimize degradation using abnormality monitoring. Refer to “2.11.4.1 Tuning for Abnormality Monitoring of the Operating System or Server” for details. |
| heartbeat_timeout      | Timeout for abnormality monitoring during heartbeat monitoring of the operating system or server (seconds) |                                                                                                                                                                                                         |
| heartbeat_retry        | Number of retries for abnormality monitoring during heartbeat monitoring of the operating system or server (number of times) |                                                                                                                                                                                                         |
| fencing_command       | ‘fencingCmdFilePath’  
[Setting example]  
fencing_command = ‘c:\mc\fencing_dir\execute_fencing.bat’ | Specify the full path of the fencing command that fences a database server where an error is determined to have occurred.  
Enclose the path in single quotation marks (’).  
Any multibyte characters must use the same encoding as the operating system.  
This parameter must be specified when “command” is set for heartbeat_error_action.  
Specify the path using less than 260 bytes. |
| fencing_command_timeout| Fencing command timeout (seconds) | If the command does not respond within the specified number of seconds, fencing is determined to have failed and a signal (SIGTERM) is sent to the fencing command execution process.  
Specify a value between 1 and 2147483647.  
The default is 20 seconds. |
| arbitration_timeout    | Timeout for arbitration processing in the Mirroring Controller arbitration process (seconds) | The specified value must be at least equal to the heartbeat monitoring time of the operating system or server + fencing_command_timeout in the arbitration configuration file. |
### Parameter Table

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Content specified</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>If there is no response for at least the number of seconds specified, the primary server will not be switched and the standby server will not be disconnected. Therefore, perform degradation manually. Specify a value between 1 and 2147483647. This parameter does not need to be set for operation that does not use the arbitration server.</td>
</tr>
<tr>
<td>arbitration_command</td>
<td>'ArbitrationCmdFilePath' [Setting example] arbitration_command = 'c:\mc\arbitration_dir\execute_arbitration_command.bat'</td>
<td>Specify the full path of the arbitration command to be executed when an abnormality is detected during heartbeat monitoring of the operating system or server. Enclose the path in single quotation marks ('). Any multibyte characters must use the same encoding as the operating system. This parameter must be specified when &quot;command&quot; is set for heartbeat_error_action. Specify the path using less than 260 bytes.</td>
</tr>
<tr>
<td>arbitration_command_timeout</td>
<td>Timeout for arbitration command (seconds)</td>
<td>If the command does not respond within the specified number of seconds, it is determined that execution of the arbitration command has failed and a signal (SIGTERM) is sent to the arbitration command execution process. Specify a value between 1 and 2147483647. This parameter can be specified only when &quot;command&quot; is set for heartbeat_error_action.</td>
</tr>
</tbody>
</table>

### Information

Refer to "A.4.1 Server Configuration File for the Database Servers" for information on the parameters and for other parameters.

6. Change the access permissions for the serverIdentifier.conf file.

   For serverIdentifier.conf, set read and write permissions for the instance administrator user only. If users other than the instance administrator user are granted access permissions, the mc_ctl command will not work.

   **Example**

   The following is an execution example, in which the instance administrator user is granted full access permissions when the operating system user name of the instance administrator user is "fsepuser". The following procedure applies when the user is logged in to the Windows server as "fsepuser":

   ```
   > takeown /f serverIdentifier.conf
   >icacls serverIdentifier.conf /reset
   >icacls serverIdentifier.conf /inheritance:r
   >icacls serverIdentifier.conf /grant fsepuser:F
   ```

7. Configure the Windows firewall.

   If the Windows firewall feature is to be enabled, you should enable the port number of Mirroring Controller that you specified in the network definition file in step 3. Refer to "E.2 Windows Firewall Settings" for details.
8. Register Mirroring Controller to the Windows service.
   Execute the mc_ctl command in the register mode.
   For the -P option of the mc_ctl command, specify the password of the operating system user who executes the command.
   Example)

   ```
   > mc_ctl register -M D:\mcdir\inst1 -P ********
   ```

   **Note**

   When specifying the password in the -P option of the mc_ctl command, for security reasons, you should be careful not to allow other users to access it.

   **Information**

   You can use the mc_ctl command with the -S option to specify automatic start and stop of Mirroring Controller. Refer to "2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances" for details.

   Using the service name specified in the mc_service_name parameter of serverIdentifier.conf in step 5, Mirroring Controller is registered to the Windows service.

   You can execute the sc qc command to check the registration status.

### 2.4.2 Creating, Setting, and Registering the Primary Server Instance

This section explains how to create, set, and register the primary server instance.

**Note**

- Mirroring Controller supports instances that are registered in the Windows service.

**See**

- Refer to "Client Authentication" in the PostgreSQL Documentation for information on the pg_hba.conf file.
- Refer to "A.1 Parameters Set on the Primary Server" for information on the postgresql.conf file.
- Refer to "mc_ctl" in Reference for information on the command.

Perform the following procedure:

1. Refer to "Setup" in the Installation and Setup Guide for Server, and then perform the FUJITSU Enterprise Postgres setup and create the FUJITSU Enterprise Postgres instance.
   - Use ASCII characters in the data storage destination directory.
   - When registering an instance to the Windows service, perform the settings required to enable Mirroring Controller to start and stop the instance. Execute the pg_ctl command with the following specified for the register mode:
     - For the service name of the -N option, specify the name set for the db_instance_service_name parameter in the server definition file
     - Specify "demand" for the -S option, so that the service does not start automatically on startup of the system
Note

- If degradation starts occurring due to an error during operations in database multiplexing mode, recovery is required for the standby server. There are some conditions to execute the pg_rewind command to recover the standby server. One of the conditions can be satisfied by enabling checksums when executing the initdb command. This is not mandatory. Refer to “4.1.1.1.3 Identify cause of error and perform recovery” for details.

- Do not configure the Windows service of a multiplexed instance to perform automatic start, as it is started by Mirroring Controller.

2. When using transparent data encryption, configure the encryption settings for the storage data.

Create the keystore file.

Refer to "Database Multiplexing Mode" in the Operation Guide for details, and then configure the settings.

3. Add the following entry to the pg_hba.conf file to authenticate connections from the standby server.

Copy the file to the standby server later.

<table>
<thead>
<tr>
<th>#</th>
<th>TYPE</th>
<th>DATABASE</th>
<th>USER</th>
<th>ADDRESS</th>
<th>METHOD</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>host</td>
<td>replication</td>
<td>fnep</td>
<td>standbyServerAddress</td>
<td>authenticationMethod</td>
</tr>
<tr>
<td></td>
<td>host</td>
<td>replication</td>
<td>fnep</td>
<td>primaryServerAddress</td>
<td>authenticationMethod</td>
</tr>
</tbody>
</table>

For the primary and standby server addresses, specify the IP address that will connect to the log transfer network.

Additionally, all servers can be used as the primary server or the standby server, so add entries for the addresses of all servers that comprise the database multiplexing system.

Point

Setting an authentication method other than trust authentication

If the primary server becomes the standby server, to perform automatic authentication of connections to the primary server, create a password file (%APPDATA%\postgresql\pgpass.conf), and then specify a password for the replication database. Accordingly, the instance administrator operating system user and the user registered in the database will be the same, so you can verify that the connection was not made by an unspecified user. Additionally, the password that was set beforehand will be used in the authentication, so that the connection will be automatic.

Note

If trust authentication is set, all OS users who can log in to the primary server will be able to connect, and if one of these is a malicious user, then that user can corrupt the standby server data, or cause the job system to fail, by sending an erroneous transaction log. Therefore, decide on the authentication method according to the security requirements of the system using database multiplexing mode.

Refer to "Authentication Methods" in the PostgreSQL Documentation for details on the authentication methods that can be set.

4. Configure this setting to enable the instance administrator user of the primary server to connect as a database application.

This setting enables the connection to the instance using the user name of the instance administrator user, so that Mirroring Controller can monitor instance errors. Configure this setting to enable the connection to the postgres database.

- If password authentication is used

  In the db_instance_password parameter of the serverIdentifier.conf file, specify the password for the instance administrator user. This password is used to connect to the database instance. If a password is not specified in the db_instance_password parameter, the connection to the database instance from Mirroring Controller will fail, and it will not be possible to perform the process monitoring of the instance.

- If password authentication is not used

  There is no need to specify the password in the db_instance_password parameter.
Even if the password for the instance administrator user is specified in the db_instance_password parameter, it will be ignored.

- If certificate authentication using SSL is used

Specify connection parameters for SSL in the db_instance_ext_pq_conninfo parameter and db_instance_ext_jdbc_conninfo parameter in the serverIdentifier.conf file. If the parameters are not specified, the connection to the database instance from Mirroring Controller will fail, and it will not be possible to perform the process monitoring of the instance. If certificate authentication using SSL is not performed, the parameters specification is not required.

An example of setting the authentication method is shown below.

```
# TYPE DATABASE USER ADDRESS METHOD
host postgres fsep 127.0.0.1/32 authenticationMethod
```

**Note**

Mirroring Controller uses the PostgreSQL JDBC 4.2 driver to connect to the database instance. Therefore, for the authentication method, specify a method supported by the JDBC driver. If an authentication method not supported by the JDBC driver is specified, Mirroring Controller will fail to start. Refer to the PostgreSQL JDBC Driver Documentation for information on authentication methods supported by the JDBC driver.

5. To use database multiplexing mode, specify the parameters shown in the table below in the postgresql.conf file.

The postgresql.conf file is copied when the standby server instance is created. Accordingly, set the required parameters in the standby server.

To use database multiplexing mode, specify the parameters shown in the table below in the postgresql.conf file. After editing the postgresql.conf file, restart the instance.

**Table 2.4 Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Content specified</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>wal_level</td>
<td>replica or logical</td>
<td>Specify &quot;logical&quot; when logical decoding is also to be used.</td>
</tr>
<tr>
<td>max_wal_senders</td>
<td>2 or more</td>
<td>Specify &quot;2&quot; when building a Mirroring Controller cluster system.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>When additionally connecting asynchronous standby servers to the cluster system, add the number of simultaneous connections from these standby servers.</td>
</tr>
<tr>
<td>synchronous_standby_names</td>
<td>'standbyServerName'</td>
<td>Specify the name that will identify the standby server.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Enclose the name in single quotation marks (').</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Do not change this parameter while Mirroring Controller is running.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Do not specify multiple names to this parameter as the Mirroring Controller can manage only one standby server.</td>
</tr>
<tr>
<td>hot_standby</td>
<td>on</td>
<td>Specify this to execute reference jobs on the standby server.</td>
</tr>
<tr>
<td>wal_keep_size</td>
<td>WAL save size (megabytes)</td>
<td>If a delay exceeding the value set in this parameter occurs, the WAL segment required later by the primary server may be deleted.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Additionally, if you stop a standby server (for maintenance, for example), consider the stop time and set a value that will not cause the WAL segment to be deleted.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Refer to &quot;Estimating Transaction Log Space Requirements&quot; in the Installation and Setup Guide for Server for information on estimating the WAL save size.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Content specified</td>
<td>Remarks</td>
</tr>
<tr>
<td>---------------------------</td>
<td>-------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>wal_log_hints</td>
<td>on</td>
<td>When using the pg_rewind command to recover a standby server, specify this parameter or enable checksums when executing the initdb command.</td>
</tr>
<tr>
<td>wal_sender_timeout</td>
<td>Timeout (milliseconds)</td>
<td>Specify the time period after which it is determined that an error has occurred in the transaction log transfer on the primary server. By aligning this value with the value for the database process heartbeat monitoring time, you can unify the time after which it is determined that an error has occurred.</td>
</tr>
<tr>
<td>archive_mode</td>
<td>on</td>
<td>Specify the archive log mode.</td>
</tr>
<tr>
<td>archive_command</td>
<td>'cmd /c &quot;installDir\bin\pgx_walcopy.cmd&quot; &quot;%p&quot; &quot;backupDataStorageDestinationDir\archived_wal%f&quot;'</td>
<td>Specify the command and storage destination to save the transaction log.</td>
</tr>
<tr>
<td>backup_destination</td>
<td>Backup data storage destination directory</td>
<td>Specify the name of directory where to store the backup data. Set the permissions so that only the instance administrator user can access the specified directory. Specify the same full path on all servers, so that the backup data of other servers can be used to perform recovery.</td>
</tr>
<tr>
<td>max_connections</td>
<td>Number of simultaneous client connections to the instance + superuser_reserved_connections</td>
<td>The value specified is also used to restrict the number of connections from client applications and the number of connections for the management of instances. Refer to &quot;When an Instance was Created with the initdb Command&quot; in the Installation and Setup Guide for Server, and &quot;Connections and Authentication&quot; in the PostgreSQL Documentation, for details.</td>
</tr>
<tr>
<td>superuser_reserved_connections</td>
<td>Add the number of simultaneous executions of mc_ctl status (*1) + 2</td>
<td>Specify the number of connections reserved for connections from database superusers. Add the number of connections from Mirroring Controller processes. Also reflect the added value in the max_connections parameter.</td>
</tr>
<tr>
<td>wal_receiver_timeout</td>
<td>Timeout (milliseconds)</td>
<td>Specify the time period after which it is determined that an error has occurred when the transaction log was received on the standby server. By aligning this value with the value for the heartbeat monitoring time of the database process, you can unify the time after which it is determined that an error has occurred.</td>
</tr>
<tr>
<td>restart_after_crash</td>
<td>off</td>
<td>If &quot;on&quot; is specified, or the default value is used for this parameter, behavior equivalent to restarting FUJITSU Enterprise Postgres, including crash recovery, will be performed when some server processes end abnormally. However, when database multiplexing monitoring is used, a failover will occur after an error is detected when some server processes end abnormally, and the restart of those server processes is forcibly stopped. Specify &quot;off&quot; to prevent behavior such as this from occurring for no apparent reason.</td>
</tr>
</tbody>
</table>
### 2.4.3 Starting Mirroring Controller on the Primary Server

This section explains how to start Mirroring Controller on the primary server.

When the arbitration server is used for automatic degradation, start the Mirroring Controller arbitration process on the arbitration server in advance.

1. Start the Mirroring Controller process.

   **Enabling automatic switch/disconnection**
   
   As the instance administrator user, execute the mc_ctl command in start mode.

   **Example**

   ```
   > mc_ctl start -M D:\mcdir\inst1
   ```

   **Disabling automatic switch/disconnection**

   As the instance administrator user, execute the mc_ctl command in start mode with the `-F` option specified.

   **Example**

   ```
   > mc_ctl start -M D:\mcdir\inst1 -F
   ```

---

**Note**

- When the arbitration server is used for automatic degradation, the database server must connect to the arbitration server, and as a result, Mirroring Controller startup may take longer than when the arbitration server is not used.

- If the parameter for heartbeat monitoring of operating systems or servers set by the arbitration server is greater than parameter for heartbeat monitoring of operating systems and servers of the Mirroring Controller, the Mirroring Controller may fail to start. In this case, check the contents of the message notification and review the parameters for heartbeat monitoring of operating systems or servers for the arbitration server or Mirroring Controller.

- If the `heartbeat_error_action` parameter in `serverIdentifier.conf` is set to "message", even if automatic switch/disconnection is enabled and Mirroring Controller is started, only message output is performed when a heartbeat abnormality is detected during heartbeat monitoring of operating systems and servers - switch/disconnection is not performed.

- Mirroring Controller startup usually fails if the standby server is mistakenly started as the primary server or if the old primary server is not recovered after the switch and is then mistakenly started as the primary server. However, if the admin network is disconnected, then startup does not fail, and both servers may become primary servers. Therefore ensure that the admin network is connected before starting Mirroring Controller.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Content specified</th>
<th>Remarks</th>
</tr>
</thead>
</table>
| synchronous_commit  | on or remote_apply   | Specify up to what position WAL send is to be performed before transaction commit processing returns a normal termination response to a client.  
                        |                      | The recommended value is on or remote_apply to prevent data loss caused by operating system or server down immediately after a switch or switch. |
| recovery_target_timeline | latest              | Specify "latest" so that the new standby server (original primary server) will follow the new primary server when a switch occurs.  
                        |                      | This parameter is required when the original primary server is incorporated as a new standby server after the primary server is switched. |

*1: Number of simultaneous executions of the mc_ctl command in the status mode.*
Point

- The mc_ctl command fails if the Mirroring Controller arbitration process has not been started on the arbitration server when the arbitration server is used for automatic degradation. However, if the Mirroring Controller arbitration process cannot be started in advance, it can be started by specifying the --async-connect-arbiter option in the mc_ctl command.
- After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

2. Obtain the backup.

   Use the pgx_dmpall command to collect the backup.

2.5 Setting Up the Standby Server

This section explains how to set up the standby server.

2.5.1 Setting Up Database Multiplexing Mode on the Standby Server

This section explains how to set up database multiplexing mode on the standby server.

In database multiplexing, the files that are required for operations are managed in the Mirroring Controller management directory.

There is one Mirroring Controller management directory for each instance.

Note

- Do not place the Mirroring Controller management directory in a directory managed by FUJITSU Enterprise Postgres, otherwise it may be deleted by mistake with the directories managed by FUJITSU Enterprise Postgres, and an old version of files may be restored.
- When creating a standby server for a large database, stop job system operations, specify a large value for the wal_keep_size parameter, or use replication slots.
  This is because WALs generated after the standby server is built using the pg_basebackup command, but before it is started, need to be retained. However, the number of WAL segments that can be retained is constrained by the wal_keep_size parameter.
  Additionally, setting the wal_keep_size parameter requires consideration regarding stabilization of the database multiplexing mode (refer to "2.11.1 Tuning to Stabilize the Database Multiplexing Mode" for details).

See

- Refer to "Preparing Directories for Resource Deployment" in the Installation and Setup Guide for Server for details on the directories that are managed by FUJITSU Enterprise Postgres.
- Refer to "pg_basebackup" in "Reference" in the PostgreSQL Documentation for information on the pg_basebackup command.
- Refer to "mc_ctl" in Reference for information on the command.
- Refer to "Appendix A Parameters" for details on each parameter to be edited for the setup.
- Refer to "Replication Slots" in the PostgreSQL Documentation for information on replication slots.

Perform the following procedure:

1. Log in to the standby server.
2. Create the Mirroring Controller management directory that will store the files required by database multiplexing.

   Use ASCII characters in the Mirroring Controller management directory.
   Additionally, grant "Write" permission to the instance administrator user for the Mirroring Controller management directory.
3. Copy, and then deploy, the network.conf file of the primary server.

Copy the network.conf file that was defined in the primary server setup, and deploy it to the Mirroring Controller management directory of the standby server.

Register the port number of the standby server that was specified in the network.conf file in the services file, because there are programs, such as WebAdmin, that search an available port number using the services file.

Register any name as the service name.

4. Change the access permissions for the network.conf file.

Set read and write permissions for the instance administrator user only. If users other than the instance administrator user are granted access permissions, the mc_ctl command will not work. Accordingly, users other than the instance administrator user are prevented from operating Mirroring Controller.

Example)

The following is an execution example, in which the instance administrator user is granted full access permissions as the owner when the operating system user name of the instance administrator user is "fsepuser". The following procedure applies when the user is logged in to the Windows server as "fsepuser".

```
> takeown /f network.conf
> icacls network.conf /reset
> icacls network.conf /inheritance:r
> icacls network.conf /grant fsepuser:F
```

5. Copy, and then deploy, the serverIdentifier.conf file of the primary server.

Copy the serverIdentifier.conf file that was defined in the primary server setup, and deploy it to the Mirroring Controller management directory of the standby server.

```
Note
```

If the primary server and standby server are to be built within the same server, change the following parameters in the serverIdentifier.conf file, ensuring that the names are not duplicated with those on the primary server:

- db_instance_service_name (registered service name of the FUJITSU Enterprise Postgres instance)
- mc_service_name (registered service name of Mirroring Controller)
- event_source (event source name)
```

6. Change the access permissions for the serverIdentifier.conf file.

Set read and write permissions for the instance administrator user only. If users other than the instance administrator user are granted access permissions, the mc_ctl command will not work.

Example)

The following is an execution example, in which the instance administrator user is granted full access permissions as the owner when the operating system user name of the instance administrator user is "fsepuser". The following procedure applies when the user is logged in to the Windows server as "fsepuser".

```
> takeown /f serverIdentifier.conf
> icacls serverIdentifier.conf /reset
> icacls serverIdentifier.conf /inheritance:r
> icacls serverIdentifier.conf /grant fsepuser:F
```

7. Configure the Windows firewall.

If the Windows firewall feature is to be enabled, you should enable the port number of Mirroring Controller that you specified in the network definition file in step 3. Refer to "E.2 Windows Firewall Settings" for details.

8. Register Mirroring Controller to the Windows service.

Execute the mc_ctl command in the register mode.
For the `-P` option of the `mc_ctl` command, specify the password of the operating system user who executes the command.

Example)

```
> mc_ctl register -M D:\mdir\inst1 -P ********
```

**Note**

When specifying the password in the `-P` option of the `mc_ctl` command, for security reasons, you should be careful not to allow other users to access it.

**Information**

You can use the `mc_ctl` command with the `-S` option to specify automatic start and stop of Mirroring Controller. Refer to "2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances" for details.

Using the service name specified in the `mc_service_name` parameter of `serverIdentifier.conf` in step 5, Mirroring Controller is registered to the Windows service.

You can execute the `sc qc` command to check the registration status.

### 2.5.2 Creating, Setting, and Registering the Standby Server Instance

This section explains how to create, set, and register the standby server instance.

**Note**

Mirroring Controller supports instances that are registered in the Windows service.

**See**

- Refer to "Appendix A Parameters" for details on each parameter.
- Refer to "mc_ctl" in Reference for information on the command.

Perform the following procedure:

1. Prepare for setup.

   Refer to "Preparations for Setup" in the Installation and Setup Guide for Server for information on the preparatory tasks to be performed before creating an instance on the standby server.

   **Note**

   If the primary server and standby server are to be built within the same server, perform preparation to ensure that the event source names of FUJITSU Enterprise Postgres are not duplicated with that of the primary server.

2. When using transparent data encryption, configure the encryption settings for the storage data.

   Deploy a copy of the keystore file of the primary server on the standby server.

   Refer to "Database Multiplexing Mode" in the Operation Guide for details.

3. Execute the `pg_basebackup` command to create a copy of the primary server instance on the standby server.

   Example)
> pg_basebackup -D D:\database\inst1 -X fetch --waldir=E:\transaction\inst1 --progress --verbose
- -R --dbname="application_name=standbyServerName" -h primaryServerIpAddress -p primaryServerPortNumber

Note

- Use the pg_basebackup command with the -R option to create a standby.signal file. If you do not create the standby.signal file, the Mirroring Controller cannot be started as a standby server.
- If using a method that requires password authentication for connections to the primary server, you will need to ensure that authentication is performed automatically. If the -R option is specified for the pg_basebackup command and the password parameter is specified for the --dbname option, the pg_basebackup command will set the password in the primary_conninfo parameter in postgresql.auto.conf file, enabling connections to be performed automatically.

If a password is not set in the primary_conninfo parameter in postgresql.auto.conf file, it will be necessary to create a password file (%APPDATA%postgresql\pgpass.conf), and then specify a password for the replication database.
- The primary_conninfo parameter should not be set in the postgresql.conf file, but only in the postgresql.auto.conf file using the pg_basebackup command.
- When executing the pg_basebackup command, consider the following for collection of transaction logs.
  - When "fetch" is specified for the -X option of the command
    Transaction logs are collected at the end of the backup, so it is necessary to ensure that transaction logs that occur during backup are not deleted from the primary server. Therefore, allow for a sufficient value for the wal_keep_size parameter in postgresql.conf.
  - When the -X option is omitted or "stream" is specified for the -X option of the command
    Transaction logs are streamed, so when Mirroring Controller is running on the primary server, the connection is changed to a synchronous standby server on detection of a streaming replication connection using this command. Therefore, if a job has started on the primary server, the primary server will be impacted, therefore execute this command after stopping only the Mirroring Controller process on the primary server.

See

Refer to "Hot Standby" in the PostgreSQL Documentation for information on the standby.signal file.

4. Set the parameters shown in the table below in the postgresql.conf file.

<table>
<thead>
<tr>
<th>Table 2.5 Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Parameter</td>
</tr>
<tr>
<td>synchronous_standby_names</td>
</tr>
</tbody>
</table>

5. Register an instance to the Windows service.

Refer to "Creating an Instance" in the Installation and Setup Guide for Server for information on how to register an instance to the Windows service. Note that you should execute the pg_ctl command with the following specified for the register mode to enable Mirroring Controller to start and stop an instance:
- For the service name of the -N option, specify the name set for the db_instance_service_name parameter in the server definition file
- Specify "demand" for the -S option, so that the service does not start automatically on startup of the system

**Note**

- Do not configure the Windows service of a multiplexed instance to perform automatic start, as it is started by Mirroring Controller.
- If the primary server and standby server are to be built within the same server, ensure that the registered service name of the FUJITSU Enterprise Postgres instance is not duplicated with that of the primary server.

### 2.5.3 Starting Mirroring Controller on the Standby Server

This section explains how to start Mirroring Controller on the standby server.

When the arbitration server is used for automatic degradation, start the Mirroring Controller arbitration process on the arbitration server in advance.

1. After ensuring that the Mirroring Controller process of the primary server has started, start Mirroring Controller on the standby server.

   **Enabling automatic switch/disconnection**
   
   As the instance administrator user, execute the mc_ctl command in start mode with the -f option specified. This action enables automatic switch/disconnection.

   If you start Mirroring Controller and the instance without specifying the -f option, automatic switch/disconnection will not be enabled. To enable both, start Mirroring Controller and then execute the mc_ctl command in enable-failover mode or restart Mirroring Controller with the -f option specified.

   **Example**
   
   ```
   > mc_ctl start -M D:\mcdir\inst1
   ```

   **Disabling automatic switch/disconnection**
   
   As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.

   **Example**
   
   ```
   > mc_ctl start -M D:\mcdir\inst1 -F
   ```

2. Check the status of the Mirroring Controller process.

   As the instance administrator user, execute the mc_ctl command in status mode. Ensure that "mirroring status" is switchable.

   **Example**
   
   ```
   > mc_ctl status -M D:\mcdir\inst1
   ```

**Note**

- When the arbitration server is used for automatic degradation, the time required for the database server to connect to the arbitration server is added on. Therefore, Mirroring Controller startup may take longer than when the arbitration server is not used.
- If the parameter for heartbeat monitoring of operating systems or servers set by the arbitration server is greater than parameter for heartbeat monitoring of operating systems and servers of the Mirroring Controller, the Mirroring Controller may fail to start. In this case, check the contents of the message notification and review the parameters for heartbeat monitoring of operating systems or servers for the arbitration server or Mirroring Controller.
- If the heartbeat_error_action parameter in serverIdentifier.conf is set to "message", even if automatic switch/disconnection is enabled and Mirroring Controller is started, only message output is performed when a heartbeat abnormality is detected during heartbeat monitoring of operating systems and servers - switch/disconnection is not performed.

- 39 -
- Mirroring Controller startup usually fails if the standby server is mistakenly started as the primary server or if the old primary server is not recovered after the switch and is then mistakenly started as the primary server. However, if the admin network is disconnected, then startup does not fail, and both servers may become primary servers. Therefore, ensure that the admin network is connected before starting Mirroring Controller.

Point

- The mc_ctl command fails if the Mirroring Controller arbitration process has not been started on the arbitration server when the arbitration server is used for automatic degradation. However, if the Mirroring Controller arbitration process cannot be started in advance, it can be started by specifying the --async-connect-arbitier option in the mc_ctl command.
- After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

2.6 Creating a User Exit for a Database Server

This section explains how to create a user exit for a database server.

The user command types explained below can be used as user exits. These commands are called by Mirroring Controller management processes.

The user can create user exits as required.

Specify the user commands that were created for the parameters in the server configuration file of the database server. Refer to “A.4.1 Server Configuration File for the Database Servers” for information on these parameters.

User command types

- Fencing command
  This user command performs fencing if Mirroring Controller performs arbitration processing and determines that a database server is unstable.

- Arbitration command
  This user command performs arbitration processing in lieu of the arbitration server when there is no arbitration server.

- State transition commands
  These user commands are called when Mirroring Controller performs state transition of a database server.
  It includes the following types:
  - Post-switch command
    This user command is called after a promotion from standby server to primary server.
  - Pre-detach command
    This user command is called before the standby server is disconnected from a cluster system.
    If the pre-detach command is specified on both the primary server and standby server, it is called first on the standby server and then on the primary server.
    If the settings are configured to forcibly stop the instance on the standby server when the standby server is disconnected, the pre-detach command is called on the standby server and then the instance on the standby server is stopped.
  - Post-attach command
    This user command is called after the standby server has been attached to a cluster system.
    If the post-attach command is specified on both the primary server and standby server, it is called first on the primary server and then on the standby server.
When the arbitration server is used for automatic degradation and the requirements can be satisfied using the fencing command on the arbitration server only, the fencing command on the database server is not required. In addition, if the requirements can be satisfied using the fencing command on the database server only, create a fencing command on the arbitration server for termination processing only (without implementation).

Table 2.6 Availability of user commands, and database server calling the command

<table>
<thead>
<tr>
<th>User command</th>
<th>Operation when a heartbeat abnormality is detected using operating system or server heartbeat monitoring</th>
<th>Database server calling the command</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Message output</td>
<td>Automatic degradation by arbitration server</td>
</tr>
<tr>
<td>Fencing command</td>
<td>Y (*1)</td>
<td>Y (*2)</td>
</tr>
<tr>
<td>Arbitration command</td>
<td>N</td>
<td>N</td>
</tr>
<tr>
<td>Post-switch command</td>
<td>Y</td>
<td>Y</td>
</tr>
<tr>
<td>Pre-detach command</td>
<td>Y</td>
<td>Y</td>
</tr>
<tr>
<td>Post-attach command</td>
<td>Y</td>
<td>Y</td>
</tr>
</tbody>
</table>

R: Required
Y: Can be used
N: Cannot be used

*1: Called only when the mc_ctl command is used to execute forced switching or forced disconnection.

*2: Creation of a fencing command on a database server is optional, but it must be created on the arbitration server.

*3: If message output or unconditional automatic degradation is selected, this command is called only from the primary server.

Refer to "Appendix C User Commands" for information on the interface for each user command.

2.7 Confirming the Streaming Replication Status

Before performing the setup of the database multiplexing mode, ensure that the prerequisite streaming replication feature has been set up correctly.

Perform the following procedure:

1. On the primary server, ensure that single-row searches can be performed using the pg_stat_replication statistics view.

   An example output of the psql command is shown below.

   Example)

   ```sql
   postgres=# select * from pg_stat_replication;
   -[ RECORD 1 ]-+---------------------------------+
   pid           | 10651  
   usesysid      | 10     
   usename       | fsep   
   application_name | standby 
   client_addr   | 192.0.2.210 
   ```
2. Confirm the search results of step 1.
   Ensure that the connection established with the intended standby server is in synchronous mode.

<table>
<thead>
<tr>
<th>Item</th>
<th>Required value</th>
</tr>
</thead>
<tbody>
<tr>
<td>application_name</td>
<td>Value specified for synchronous_standby_names parameter in the postgresql.conf file of the primary server.</td>
</tr>
<tr>
<td>client_addr</td>
<td>IP address of the standby server.</td>
</tr>
<tr>
<td>state</td>
<td>“streaming”.</td>
</tr>
<tr>
<td>sync_state</td>
<td>“sync”.</td>
</tr>
</tbody>
</table>

See

- Refer to “The Statistics Collector” in “Server Administration” in the PostgreSQL Documentation for information on the pg_stat_replication statistics view.
- Note that the pg_stat_replication statistics view may change in the future.

2.8 Checking the Connection Status

This section explains how to check the connection status from a database server or the arbitration server.

2.8.1 Checking the Connection Status on a Database Server

This section explains how to use a database server to check the connection status of the Mirroring Controller arbitration process and the Mirroring Controller process on the primary server and standby server.

Perform the following procedure:

1. On the primary server and standby server, execute the mc_ctl command in status mode with the --arbiter option specified.
   **Example**
   The mc_ctl command is executed with the --arbiter option specified, and the status is output.

   ```
   > mc_ctl status --arbiter -M D:\mcdir\inst1
   arbiter_id  host       status
   ------------------------------
   arbiter     192.0.3.120  online
   ```
2. On the primary server and standby server, check the result displayed by executing the mc_ctl command in status mode in step 1.

Items to be checked

Check that the output status is "online".

See

Refer to the Reference for information on the mc_ctl command.

2.8.2 Checking the Connection Status on the Arbitration Server

This section explains how to use the arbitration server to check the connection status of the Mirroring Controller arbitration process and the Mirroring Controller process on the primary server and standby server.

Perform the following procedure:

1. Execute the mc_arb command in status mode on the arbitration server.

The example below executes the mc_arb command, and shows the status.

Linux

Example)

```bash
$ mc_arb status -M /mcarb_dir/arbiter1

server_id host  status
server1   192.0.3.100 online
server2   192.0.3.110 online
```

Windows

Example)

```bash
> mc_arb status -M D:\mcarb_dir\arbiter1

server_id host  status
server1  192.0.3.100 online
server2  192.0.3.110 online
```

2. Check the result displayed by executing the mc_arb command in step 1.

Items to be checked

Check that the output status is "online" on both lines.

See

Refer to the Reference for information on the mc_arb command.

2.9 Creating Applications

This section explains how to create applications using database multiplexing, and points that should be noted when you create the applications.
2.9.1 Application Connection Server Settings

If database multiplexing is used and a failover occurs, it will be necessary to switch the application connection server. Accordingly, use the application connection switch feature to create applications.

See
Refer to “Application Connection Switch Feature” in the Application Development Guide for details.

2.10 Checking the Behavior

To check if the environment setup was performed correctly, start the application and then check the behavior of the switch and rebuild.

2.11 Tuning

This section explains how to tune database multiplexing mode.

2.11.1 Tuning to Stabilize the Database Multiplexing Mode

When large amounts of data are updated, the write-to load for the database will become great, and the multiplexing state may become unstable.

Accordingly, by editing the parameters below in the postgresql.conf file, a stable multiplexing state can be maintained. Refer to “Estimating Transaction Log Space Requirements” in the Installation and Setup Guide for Server for information on transaction log space requirements.

Table 2.8 Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Content</th>
</tr>
</thead>
<tbody>
<tr>
<td>wal_keep_size</td>
<td>Refer to “2.4.2 Creating, Setting, and Registering the Primary Server Instance” for details.</td>
</tr>
<tr>
<td>max_wal_size</td>
<td>The transaction log is written out according to the checkpoint trigger.</td>
</tr>
<tr>
<td></td>
<td>If a transaction log with the capacity of the value specified in this parameter is generated, the checkpoint will be executed.</td>
</tr>
<tr>
<td></td>
<td>If a large value is specified in this parameter, the time required for crash recovery will increase.</td>
</tr>
<tr>
<td></td>
<td>If a small value is specified in this parameter, many checkpoints will be generated, which will affect the performance of the applications that connect to the primary server.</td>
</tr>
</tbody>
</table>

2.11.2 Tuning to Stabilize Queries on the Standby Server

Queries made using reference jobs on the standby server may be canceled by jobs executed on the primary server.

To reduce the possibility of a job being canceled, specify as large a value as possible for the max_standby_archive_delay parameter in the postgresql.conf file.

See
- Refer to "Handling Query Conflicts" in the PostgreSQL Documentation for details.
- Refer to “Standby Servers” in the PostgreSQL Documentation for details on the max_standby_archive_delay parameter.

2.11.3 Tuning to Stabilize Queries on the Standby Server (when Performing Frequent Updates on the Primary Server)

If jobs are updated on the primary server regularly and frequently, it will be easy for the query made by the reference job on the standby server to be canceled. In this case, edit one of the postgresql.conf file parameters shown in the table below.
Table 2.9 Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>hot_standby_feedback</td>
<td>When &quot;on&quot; is set, the deletion (vacuum) of the data area that was deleted or updated on the primary server is suppressed. Accordingly, the query on the standby server will not be canceled. (*1)</td>
</tr>
<tr>
<td>vacuum_defer_cleanup_age</td>
<td>The deletion (vacuum) of the data area that was deleted or updated on the primary server is delayed until the specified number of transactions is processed. Accordingly, the probability that the query on the standby server will be canceled decreases.</td>
</tr>
</tbody>
</table>

*1: Because the vacuum is delayed, the data storage destination disk space of the primary server comes under pressure. Additionally, if there is conflict between accesses and queries executed on the standby server, transaction logs indicating this conflict will be transferred. Accordingly, specify as large a value as possible for the max_standby_archive_delay parameter so that access conflicts do not occur.

2.11.4 Tuning for Optimization of Degradation Using Abnormality Monitoring

Mirroring Controller uses a monitoring method that outputs an error if the timeout or number of retries is exceeded when accessing resources targeted for monitoring. Setting inappropriate values in these settings may lead to misdetection or a delay in automatic degradation, so you must design these values appropriately.

For example, the following type of issue occurs if the tuning related to abnormality monitoring is not performed appropriately.

- If the timeout is too short
  Results in redundant degradation and availability falls.
- If the timeout is too long
  It takes longer for automatic degradation to be performed even when an error affecting operational continuity occurs, potentially causing downtime.

You can optimize degrading operation by editing the values for the parameters in the server configuration file described below in accordance with the system. Refer to "A.4 Server Configuration File" for information on how to edit these parameters.

2.11.4.1 Tuning for Abnormality Monitoring of the Operating System or Server

Tuning for abnormal monitoring of the operating system or server depends on the operation when heartbeat abnormality is detected by the heartbeat monitoring of operating systems or servers.

2.11.4.1.1 Tuning Abnormality Monitoring for Operations that Use an Arbitration Server for Automatic Degeneration

In an operation that use an arbitration server for automatic degeneration, the database server is periodically monitored for abnormalities so that the Mirroring Controller arbitration process can immediately respond to an arbitration request from the Mirroring Controller.
automatic degradation using the arbitration server can optimize the time from error detection to automatic degradation of the operating systems or servers by editing the following parameters.

- Parameters for the abnormality monitoring of the operating system or server in the server configuration file of the database server
- Parameters for the abnormality monitoring of the operating system or server in the arbitration configuration file
- Parameters for the arbitration processing and fencing

Parameters for the abnormality monitoring of the operating system or server in the server configuration file of the database server

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abnormality monitoring interval</td>
<td>Mirroring Controller is configured so that abnormality monitoring does not place a load on the system. This parameter does not normally need to be set. (The default is 800 milliseconds.)</td>
</tr>
<tr>
<td>Abnormality monitoring timeout</td>
<td>Take into account the time during which a load is placed continuously on the server or admin network performance. For example, it is envisaged that this parameter will be used in situations such as when performing high-load batch jobs or when a large number of online jobs occur continuously and concurrently. (The default is 1 second.)</td>
</tr>
<tr>
<td>Abnormality monitoring retries</td>
<td>This parameter can be set when needing a safety value for situations in which the value specified for heartbeat_timeout is exceeded, for example, when using systems with fluctuating loads, however, this parameter does not normally need to be set. (The default is 2 times.)</td>
</tr>
</tbody>
</table>

The expression for calculating the time required to detect an abnormality by Mirroring Controller is shown below.

\[
\text{Abnormality detection time of Mirroring Controller} = (\text{heartbeat_timeout (seconds)} + \frac{\text{heartbeat_interval (milliseconds)}}{1000}) \times (\text{heartbeat_retry (number of times)} + 1)
\]
The abnormality detection time when the default value is used is shown below.

\[
\text{Abnormality detection time of Mirroring Controller} = \left( \frac{1 + 800}{1000} \right) \times \left( 2 + 1 \right) = 5.4 \text{(seconds)}
\]

**Parameters for the abnormality monitoring of the operating system or server in the arbitration configuration file**

Table 2.11 Parameters for the abnormality monitoring of the operating system or server in the arbitration configuration file

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abnormality monitoring interval</td>
<td>Mirroring Controller arbitration process is configured so that abnormality monitoring does not place a load on the system. This parameter does not normally need to be set. (The default is the value set in heartbeat_interval in the server configuration file of the database server.) (milliseconds).</td>
</tr>
<tr>
<td>Abnormality monitoring timeout</td>
<td>Take into account the time during which a load is placed continuously on the server and arbitration network capabilities. (The default is the value set in heartbeat_timeout in the server configuration file of the database server.) (seconds).</td>
</tr>
<tr>
<td>Abnormality monitoring retries</td>
<td>This parameter can be set when needing a safety value for situations in which the value specified for heartbeat_timeout is exceeded, for example, when using systems with fluctuating loads, however, this parameter does not normally need to be set. (The default is the value set in heartbeat_retry in the server configuration file of the database server.) (number of times)</td>
</tr>
</tbody>
</table>

The expression for calculating the time required to detect an abnormality by Mirroring Controller arbitration process is shown below.
Abnormality detection time of Mirroring Controller arbitration process = ( heartbeat_timeout(seconds) + heartbeat_interval(milliseconds) / 1000 ) x ( heartbeat_retry(number of times) + 1)

The abnormality detection time when the default value is used is shown below.

\[
\text{Abnormality detection time of Mirroring Controller arbitration process} = \left( \frac{1 + 800}{1000} \right) \times (2 + 1) \\
= 5.4 \text{(seconds)}
\]

**Point**

The abnormality detection time of the operation for automatic degradation using the arbitration server can be calculated as follows.

\[
\text{Abnormality detection time} = \text{Max(Abnormality detection time by Mirroring Controller, Abnormality detection time by Mirroring Controller arbitration process)}
\]

**Note**

If the heartbeat_interval is set in the arbitration configuration file, the relationship between the parameter for operating system or server abnormality monitoring specified in the server configuration file of the database server file and the heartbeat_interval of the arbitration configuration file must satisfy the following relational expression.

\[
\text{Heartbeat_interval in the arbitration configuration file (milliseconds) / 1000} < (\text{heartbeat_timeout(seconds)} + \text{heartbeat_interval(milliseconds) / 1000}) \times \text{heartbeat_retry(number of times)} + \text{heartbeat_timeout(seconds)}
\]

Parameters for the arbitration processing and fencing

**Table 2.12 Parameters for the arbitration processing and fencing**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Parameter</th>
</tr>
</thead>
<tbody>
<tr>
<td>Arbitration processing timeout (arbitration_timeout in the server configuration file of the database server)</td>
<td>Take into account the time to perform arbitration processing on the Mirroring Controller arbitration process. The value must be greater than or equal to abnormality detection time of Mirroring Controller arbitration process + fencing_command_timeout in the arbitration configuration file (seconds).</td>
<td>-</td>
</tr>
<tr>
<td>Fencing timeout (fencing_command_timeout in the arbitration configuration file)</td>
<td>Take into account the time to execute the fencing command (seconds).</td>
<td>arbitration_timeout in the server configuration</td>
</tr>
</tbody>
</table>

Flow from the abnormality detection to the automatic degeneracy

When performing automatic degradation using the arbitration server, the flow from the abnormality detection in the operating system or server to the occurrence of automatic degeneracy and the parameters is shown below.

<table>
<thead>
<tr>
<th>Flow from the abnormality detection to the automatic degeneracy</th>
<th>Description</th>
<th>Parameter</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) Abnormality detection</td>
<td>Mirroring Controller detect the database server operating system or server errors.</td>
<td>Parameters for the abnormality monitoring of the operating system or server in the server configuration file of the database server</td>
</tr>
<tr>
<td>(2) Arbitration request</td>
<td>Mirroring Controller that detect the operating system or server error asks the Arbitration Server</td>
<td>arbitration_timeout in the server configuration</td>
</tr>
<tr>
<td>Flow from the abnormality detection to the automatic degeneracy</td>
<td>Description</td>
<td>Parameter</td>
</tr>
<tr>
<td>---------------------------------------------------------------</td>
<td>-------------</td>
<td>----------</td>
</tr>
<tr>
<td></td>
<td>to check the status of the other server's operating system or server.</td>
<td>file of the database server</td>
</tr>
</tbody>
</table>

(3) Arbitration processing

The Mirroring Controller arbitration process checks the status of the other server’s operating system or server. However, if the result of the operating system or server abnormality monitoring by the arbitration server has been determined before the arbitration request from the Mirroring Controller of the database server, this process is not performed. Parameters for the abnormality monitoring of the operating system or server in the arbitration configuration file

(4) Fencing

If the Mirroring Controller arbitration process determines that the other server is an abnormality of the operating system or server, it fences the other server and isolates it from the cluster system. If the Mirroring Controller arbitration process determines that the operating system or server status is normal, this process and the (6) are not performed. fencing_command_timeout in the arbitration configuration file

(5) Return of the arbitration results

Returns the results of the arbitration to the Mirroring Controller of the database server that requested the arbitration.

(6) Automatic degradation

The automatic degradation is performed. If fencing fails in (4), this procedure is not performed.

-: No associated parameters

**Note**

If the fencing_command parameter is specified in the server configuration file of the database server, the fencing command is invoked on the database server if fencing is successful on the arbitration server. In that case, add the value of the fencing_command_timeout parameter in the server configuration file of the database server to the estimate.

5. Return of the arbitration results
2.11.4.1.2 Tuning Abnormality Monitoring for Operations that Perform Automatic Degeneration by Calling a User Exit that Determines Degeneration

In an operation that perform automatic degeneration by calling a user exit that determines degeneration, you can optimize the time from operating system or server abnormality detection to automatic degradation by editing the operating system or server abnormality monitoring parameters and parameters related to arbitration processing and fencing in the server configuration file of the database server. Refer to "Parameters for the abnormality monitoring of the operating system or server in the server configuration file of the database server" for information on the operating system or server abnormality monitoring parameters in the server configuration file of the database server.

<table>

<td>-</td>
</tr>
</tbody>
</table>

Figure 2.3 When the Mirroring Controller on the primary server detects an operating system or server error
2.11.4.1.3 Tuning Abnormality Monitoring for Operations that Notify Messages

In an operation that notify messages, you can optimize the abnormality detection time by editing the operating system or server abnormality monitoring parameters in the server configuration file of the database server. Refer to "Parameters for the abnormality monitoring of the operating system or server in the server configuration file of the database server" for information on the operating system or server abnormality monitoring parameters in the server configuration file of the database server. In addition, when the Mirroring Controller detects an error, it does not perform the arbitration processing, fencing, or automatic degradation, but only notification messages is performed.

2.11.4.1.4 Tuning Abnormality Monitoring for Operations that Perform Automatic Degenerate Unconditionally due to Heartbeat Abnormality

In an operation that perform automatic degenerate unconditionally due to heartbeat abnormality, you can optimize the time from operating system or server abnormality detection to automatic degradation by editing the operating system or server abnormality monitoring parameters in the server configuration file of the database server. Refer to "Parameters for the abnormality monitoring of the operating system or server in the server configuration file of the database server" for information on the operating system or server abnormality monitoring parameters in the server configuration file of the database server. In addition, when the Mirroring Controller detects an error, it does not perform the arbitration processing, fencing, or automatic degradation, but only automatic degenerate unconditionally is performed.

---

Refer to "Appendix D Notes on Performing Automatic Degradation Immediately after a Heartbeat Abnormality" for notes on the operation that perform automatic degenerate unconditionally due to heartbeat abnormality.
2.11.4.2 Tuning for Abnormality Monitoring of Database Processes

In an abnormality monitoring of database processes, you can optimize by editing the following parameters in the server configuration file of the database server.

| Table 2.14 Parameters for abnormality monitoring of database processes |
|---|---|
| Parameter | Description |
| Abnormality monitoring interval (db_instance_check_interval) | Abnormality monitoring by Mirroring Controller is set so as not to place load on the system, but normally it does not need to be set. (The default is the value set in heartbeat_interval.) (milliseconds) |
| Timeout for abnormality monitoring of database processes (db_instance_check_timeout) | Take into account the time during which a load is placed continuously on the database. For example, it is envisaged that this parameter will be used in situations such as when performing high-load batch jobs or when a large number of online jobs occur continuously and concurrently. (The default is the value set in heartbeat_timeout.) (seconds) |
| Abnormality monitoring retries (db_instance_check_retry) | This parameter can be set when needing a safety value for situations in which the value specified for db_instance_check_timeout is exceeded, for example, when using systems with fluctuating loads, however, this parameter does not normally need to be set. (The default is the value set in heartbeat_retry.) (number of times) |

The expression for calculating the time required to detect an abnormality is shown below.

\[
\text{Abnormality detection time} = \left( \text{db_instance_check_timeout (seconds)} + \frac{\text{db_instance_check_interval (milliseconds)}}{1000} \right) \times (\text{db_instance_check_retry (number of times)} + 1)
\]

The abnormality detection time when the default value is used is shown below.
Abnormality detection time \( = \frac{1 + 800}{1000} \times (2 + 1) \)
\( = 5.4 \) (seconds)

### Note
- If the `db_instance_timeout_action` parameter in `serverIdentiier.conf` is set to "message", and the `db_instance_check_timeout` parameter is set to a short value, a crash of the database process will be detected as "no response", and it may take time for automatic degradation to occur. Therefore, specify an appropriate timeout for `db_instance_check_timeout`.
- If a high load on the database and an event that prevents connection to an instance occur at the same time, it is judged as abnormal without retrying monitoring.

#### 2.11.4.3 Tuning for Abnormality Monitoring of Streaming Replication

In an abnormality monitoring of streaming replication, you can optimize by editing the following parameters in the server configuration file of the database server.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abnormality monitoring interval (( db_instance_check_interval ))</td>
<td>Abnormality monitoring by Mirroring Controller is set so as not to place load on the system, but normally it does not need to be set. (The default is the value set in <code>heartbeat_interval</code>.) (milliseconds)</td>
</tr>
<tr>
<td>Abnormality monitoring retries (( db_instance_check_retry ))</td>
<td>This parameter can be set when needing a safety value, such as when it is anticipated that a temporary log transfer LAN error may occur, but it does not normally need to be set. (The default is the value set in <code>heartbeat_retry</code>.) (number of times)</td>
</tr>
<tr>
<td>Timeout for abnormality monitoring of streaming replication (( wal_sender_timeout ) and ( wal_receiver_timeout ) in <code>postgresql.conf</code>)</td>
<td>Take into account the capacity and load of the log transfer network and the time during which a load is placed continuously on the database. For example, if there is a succession of data update jobs that generate a high WAL volume, you must configure the settings to avoid misdetection. (The default is 60 seconds.)</td>
</tr>
</tbody>
</table>
The expression for calculating the time required to detect an abnormality is shown below.

\[
\text{Abnormality detection time} = ( \text{wal_sender_timeout (seconds)} + \frac{\text{db_instance_check_interval (milliseconds)}}{1000} \times (\text{disk_check_retry (number of times)} + 1)) \quad \text{Or,} \\
= ( \text{wal_receiver_timeout (seconds)} + \frac{\text{db_instance_check_interval (milliseconds)}}{1000} \times (\text{disk_check_retry (number of times)} + 1))
\]

The abnormality detection time when the default value is used is shown below.

\[
\text{Abnormality detection time} = 60 + \left( \frac{800}{1000} \times (2 + 1) \right) \\
= 62.4\text{(seconds)}
\]
2.11.4.4 Tuning for Disk Abnormality Monitoring

In an abnormality monitoring of the disk, you can optimize by editing the following parameters in the server configuration file of the database server.

Table 2.16 Parameters for disk abnormality monitoring

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abnormality monitoring interval</td>
<td>Abnormality monitoring by Mirroring Controller is set so as not to place load on the system, but normally it does not need to be set. (The default is the value set in heartbeat_interval.) (milliseconds)</td>
</tr>
<tr>
<td>Abnormality monitoring retries</td>
<td>This parameter can be set when needing a safety value, such as when it is anticipated that a temporary disk input/output error may occur, but normally it does not need to be set. (The default is the value set in heartbeat_retry.) (number of times)</td>
</tr>
</tbody>
</table>

The expression for calculating the time required to detect an abnormality is shown below.

\[
\text{Abnormality detection time} = \frac{\text{disk\_check\_interval (milliseconds)}}{1000} \times ( \text{disk\_check\_retry (number of times)} + 1 )
\]

The abnormality detection time when the default value is used is shown below.

\[
\text{Abnormality detection time} = \frac{800}{1000} \times (2 + 1) \\
= 2.4 \text{ (seconds)}
\]
Note

- The tuning described above impacts on the time taken from detection of a timeout until switching the primary server. Therefore, modify the values while taking into account the switch/disconnection time, using a design for which misdetection does not occur.

- Immediately selecting automatic degradation when a heartbeat abnormality occurs in operating system or server heartbeat monitoring risks causing split brain. Refer to "Appendix D Notes on Performing Automatic Degradation Immediately after a Heartbeat Abnormality" for details.

Information

Mirroring Controller uses connections to database instances and SQL access to monitor abnormality in some resources targeted for monitoring. The connection destination database names and connection user names used for abnormality monitoring conform to the parameters in the server configuration file. The application name is "mc_agent".

2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances

Multiplexed instances and Mirroring Controller can be started and stopped automatically in line with the starting and stopping of the operating system of the database server.

However, to stop the operating system on the primary server, it is necessary to stop the operating system on the standby server so that no unnecessary automatic switching or errors occur.

Note

To guarantee the startup sequence of Mirroring Controller on the primary and standby servers, first confirm that the primary server has started, and then start the standby servers in sequence.

The startup sequence of the Mirroring Controller process on the database server and the Mirroring Controller arbitration process on the arbitration server is not guaranteed. If the arbitration server cannot be started first, execute the mc_ctl command in start mode with the --async-connect-arbiter option specified to start the Mirroring Controller process.

You can configure the Windows service to perform automatic start and stop of Mirroring Controller.

Setting automatic start and stop of a multiplexed instance

No settings are required for Mirroring Controller to start and stop an instance.

Note

Do not configure the Windows service of a multiplexed instance to perform automatic start.

Configuring automatic start and stop for database multiplexing mode

Configuring during setup

When registering Mirroring Controller to the Windows service in "2.4.1 Setting Up Database Multiplexing Mode on the Primary Server" and "2.5.1 Setting Up Database Multiplexing Mode on the Standby Server", specify "auto" for the -S option of the register mode used with the mc_ctl command.

Example)

```
> mc_ctl register -M D:\mcdir\inst1 -P ******** -S auto
```

Changing the configuration after setup

Use the sc config command to change the configuration of the Windows service of Mirroring Controller.
Example)
The following is an example using the registered service name "Mirroring_Controller_inst1".

```bash
> sc config "Mirroring_Controller_inst1" start= auto
```

See
Refer to documentation such as Windows Help and Support for the sc command for information on how to configure the service.

Information
You can check the registration status in the Windows service window or by using the sc qc command.

### 2.13 Setting Automatic Start and Stop of the Mirroring Controller Arbitration Process

You can automatically start or stop the Mirroring Controller arbitration process when the operating system on the arbitration server is started or stopped.

**Linux**

**Note**

If you start the Mirroring Controller arbitration process, wait for time correction, network setup, and so on.

Perform the following procedure:

1. Create a unit file.

   Copy the unit file sample stored in the directory below, and revise it to match the target instance.

   **Sample file**

   ```bash
   /installDir/share/mcarboi.service.sample
   ```

   Example)
   In the following example, the installation directory is "/opt/fsepv<x>assistant", and the identifier of the arbitration process is "arbiter1". Note that "<x>" indicates the product version.

   ```bash
   # cp /opt/fsepv<x>assistant/share/mcarboi.service.sample /usr/lib/systemd/system/mcarboi_arbiter1.service
   ```

   Revise the underlined portions of the options below in the unit file.

<table>
<thead>
<tr>
<th>Section</th>
<th>Option</th>
<th>Specified value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unit</td>
<td>Description</td>
<td>FUJITSU Enterprise Postgres Mirroring Controller Arbiter &lt;arbitrationProcessId&gt;</td>
<td>Specifies the feature overview.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Specifies the identifier of the targeted arbitration process. (*1)</td>
</tr>
<tr>
<td>Service</td>
<td>ExecStart</td>
<td>/bin/bash -c 'installDir/bin/mc_arb_std start installDir mirroringControllerArbitrationProcessMgmtDir mc_arbOption'</td>
<td>Command to be executed when the service is started.</td>
</tr>
<tr>
<td>Section</td>
<td>Option</td>
<td>Specified value</td>
<td>Description</td>
</tr>
<tr>
<td>---------</td>
<td>--------</td>
<td>----------------</td>
<td>-------------</td>
</tr>
<tr>
<td></td>

<td>Specify the option you want to add when the mc_arb command is executed without the -M option in the mc_arb option. Note that the content specified in this mc_arb option is carried over from the mc_arb_std command in &quot;Specified value&quot; to the mc_arb command.</td>
</tr>
<tr>
<td></td>
<td>ExecStop</td>
<td>/bin/bash -c 'installDir/bin/ mc_arb_std stop installDir mirroringControllerArbitrationProcessMgmtDir mc_arbOption'</td>
<td>Command to be executed when the service is stopped. Specify the option you want to add when the mc_arb command is executed without the -M option in the mc_arb option. Note that the content specified in this mc_arb option is carried over from the mc_arb_std command in &quot;Specified value&quot; to the mc_arb command.</td>
</tr>
<tr>
<td>User</td>
<td>User</td>
<td></td>
<td>Specify the account of the operating system user.</td>
</tr>
<tr>
<td>Group</td>
<td>Group</td>
<td></td>
<td>Specify the group to which the user belongs.</td>
</tr>
</tbody>
</table>

*1: The arbitration process identifier used here is a name for identifying the Mirroring Controller arbitration process. The naming conventions for identifying the Mirroring Controller arbitration process are as follows:
- Up to 16 bytes
- The first character must be an ASCII alphabetic character
- The other characters must be ASCII alphanumeric characters

2. Enable automatic start and stop.

As the operating system superuser, use the systemctl command to enable automatic start and stop.

Example)

```
# systemctl enable mcarboi_arbiter1.service
```

### Windows

You can configure the Windows service to perform automatic start and stop.

**Configuring during setup**

When registering the Mirroring Controller arbitration process as a Windows service in "2.3.1 Configuring the Arbitration Server", specify "auto" for the -S option of the register mode used with the mc_arb command.
Example)

```
> mc_arb register -M D:\mcdir\inst1 -P ******** -S auto
```

Changing the configuration after setup

Use the `sc config` command to change the configuration of the Windows service of the Mirroring Controller arbitration process.

Example)

The configuration of the registered service name "Mirroring_Controller_Arbiter1" is changed.

```
> sc config "Mirroring_Controller_Arbiter1" start= auto
```

See

Refer to `sc` command help for information on how to configure the service.

Information

You can check the registration status in the Windows service window or by using the `sc qc` command.

### 2.14 Backup Operation

This section explains the backup operation for database multiplexing mode.

#### 2.14.1 Backing up Database Multiplexing Mode Information

When changing the Mirroring Controller settings, in addition to backing up the database, back up the configuration file in the Mirroring Controller management directory so that the Mirroring Controller settings are not lost.

When the arbitration server is used for automatic degradation, also back up the configuration file in the Mirroring Controller arbitration process management directory.

#### 2.14.2 Database Backup Operation

Using database multiplexing mode is the same as obtaining the backup data on the standby server as a safeguard against a disk failure. Note that all server disks may be corrupted due to some cause.

As a safeguard against this type of case, execute the `pgx_dmpall` command on the primary server to create the backup data.

However, it is not definite as to which server runs as the primary server, so ensure that the `pgx_dmpall` command is executed periodically on all servers, so that the backup data will be obtained. For example, create a script to obtain the backup data, and set it in the operation management software.

**Point**

When the `pgx_dmpall` command is executed on the standby server, it will not match the statuses, however the error message shown below will be output and return the value "1".

If a script that ignores only this type of error is executed on all servers, the backup data of the primary server can be obtained.

Error message

```
ERROR:recovery is in progress (10095)
```
Note

- Consider the possibility that the server that runs as the primary server may be destroyed alongside the backup data, so it is recommended to promote another server to become the primary server, and then back up the data on the new primary server without waiting for the next scheduled backup.

- Specify the same backup directory name for the primary and standby servers. If different backup directory names are specified, and recovery is performed using the backup data of the other server, the recovery cannot be performed correctly.

See

- Period backups allow shorter recovery time and reduction in disk usage. Refer to "Backing Up the Database" in the Operation Guide for details on the backup operation.

- Refer to "Chapter 4 Action Required when an Error Occurs in Database Multiplexing Mode" for details on recovery based on the backup data that was obtained using the pgx_dmpull command.
Chapter 3 Operations in Database Multiplexing Mode

This chapter describes the periodic operations that are performed when running database multiplexing mode. The periodic operations are the same as the operations on a single server.

See

Refer to "Periodic Operations" in the Operation Guide for information on the periodic operations.

3.1 Starting and Stopping the Mirroring Controller Arbitration Process

This section describes how to start and stop the Mirroring Controller arbitration process.

3.1.1 Starting the Mirroring Controller Arbitration Process

Linux

While the Mirroring Controller arbitration process is in a stopped state, execute the mc_arb command in start mode to start the Mirroring Controller arbitration process.

Example)

```bash
$ mc_arb start -M /mcarb_dir/arbiter1
```

Windows

The Mirroring Controller arbitration process can be started using one of the following options:

- Using the mc_arb command
- Starting the service on system startup

Using the mc_arb command

While the Mirroring Controller arbitration process is in a stopped state, execute the mc_arb command from the command prompt to start the Mirroring Controller arbitration process.

Example)

```bash
> mc_arb start -M D:\mcarb_dir\arbiter1
```

Starting the service on system startup

Specify automatic start when registering the Mirroring Controller arbitration process to the Windows service during setup of database multiplexing mode. Accordingly, the Mirroring Controller arbitration process service will start on startup of the operating system.

See

Refer to the Reference for information on how to specify the mc_arb command.

3.1.2 Stopping the Mirroring Controller Arbitration Process
Linux

While the Mirroring Controller arbitration process is running, execute the mc_arb command in stop mode to stop the Mirroring Controller arbitration process.

Example)

```bash
$ mc_arb stop -M /mcarb_dir/arbiter1
```

Windows

The Mirroring Controller arbitration process can be stopped using one of the following options:

- Using the mc_arb command
- Stopping the service

Using the mc_arb command

While the Mirroring Controller arbitration process is running, execute the mc_arb command in stop mode from the command prompt to stop the Mirroring Controller arbitration process.

Example)

```bash
> mc_arb stop -M D:\mcarb_dir\arbiter1
```

Stopping the service

Select [Administrative Tools], then [Services] to open the [Services] window, and then select the Mirroring Controller service and click the [Stop] menu.

See

Refer to the Reference for information on how to specify the mc_arb command.

Note

- The arbitration server will be forcibly stopped when the service is stopped.
- Before shutting down the operating system on the arbitration server, either stop the Mirroring Controller on the primary server or standby server or shut down the operating system on the primary server or standby server.

3.2 Starting and Stopping Mirroring Controller

This section describes how to start and stop the Mirroring Controller.

3.2.1 Starting Mirroring Controller

Mirroring Controller can be started using one of the following:

- Using the mc_ctl command
- Starting a service on system startup

Note

Mirroring Controller must be started by a user with administrator privileges (user ID belonging to the Administrators group).
Using the `mc_ctl` command

While Mirroring Controller is in a stopped state, execute the `mc_ctl` command from the command prompt to start the instance and Mirroring Controller.

Enabling automatic switch/disconnection

Execute the `mc_ctl` command in start mode.

Example)

```
> mc_ctl start -M D:\mcdir\inst1
```

Disabling automatic switch/disconnection

Execute the `mc_ctl` command in start mode with the `-F` option specified.

Example)

```
> mc_ctl start -M D:\mcdir\inst1 -F
```

Point

- To start the Mirroring Controller process only, execute the `mc_ctl` command in start mode with the `--mc-only` option specified.
- After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the `enable-failover` or `disable-failover` mode of the `mc_ctl` command.
- When the arbitration server is used for automatic degradation, the Mirroring Controller process startup fails on the database server if the Mirroring Controller arbitration process has not been started on the arbitration server in advance. However, even if the Mirroring Controller arbitration process cannot be started in advance, the Mirroring Controller process can be started by specifying the `--async-connect-arbiter` option in the `mc_ctl` command.

See

Refer to the Command Reference for information on how to specify the `mc_ctl` command.

Starting a service on system startup

Specify automatic start when registering Mirroring Controller to the Windows service during setup of database multiplexing mode. Accordingly, the Mirroring Controller service will start on startup of the operating system.

See

Refer to "2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances" for details.

Note

- Mirroring Controller startup usually fails if the standby server is mistakenly started as the primary server or if the old primary server is not recovered after the switch and is then mistakenly started as the primary server. However, if the admin network is disconnected, then startup does not fail, and both servers may become primary servers. Therefore, ensure that the admin network is connected before starting Mirroring Controller.
- When only the instance is started without starting Mirroring Controller, the impact will be as follows:
  - Enabling automatic switch/disconnection
    Features such as automatic switch and automatic disconnection will not work until Mirroring Controller is started.
3.2.2 Stopping Mirroring Controller

Mirroring Controller can be stopped using one of the following ways:

- Using the mc_ctl command
- Stopping the service

**Note**

Mirroring Controller must be stopped by a user with administrator privileges (user ID belonging to the Administrators group).

Using the mc_ctl command

While Mirroring Controller is running, execute the mc_ctl command from the command prompt in stop mode to stop Mirroring Controller.

Example)

```bash
> mc_ctl stop -M D:\mcdir\inst1
```

**Point**

To stop the Mirroring Controller process only, execute the mc_ctl command in stop mode with the --mc-only option specified.

**See**

Refer to the Command Reference for information on how to specify the mc_ctl command.

Stopping the service

Select [Administrative Tools], then [Services] to open the [Services] window, and then select the Mirroring Controller service and click the [Stop] menu.

**Note**

- To prevent an unintended automatic switch, before shutting down the operating system on the primary server, you must stop the Mirroring Controller, or shut down the operating system on the standby server.
- If you stop the Mirroring Controller by stopping the service, you must firstly exit all applications or programs that are using the instance that is to be stopped.
- When only the instance is stopped without stopping Mirroring Controller, the impact will be as follows:
  - Enabling automatic switch/disconnection
    Mirroring Controller determines that an error has occurred in the instance, and performs an unnecessary automatic switch. Automatic switch may also stop working correctly in some cases.
  - Disabling automatic switch/disconnection
    Mirroring Controller determines that an error has occurred in the instance, and outputs an error to the event log.
3.3 Checking the Database Multiplexing Mode Status

3.3.1 Checking the Status of the Database Server

This section describes how to check the status of the database server.

Check the multiplexed database status by executing the mc_ctl command in status mode.

Additionally, errors can be detected by monitoring the Mirroring Controller messages. If the status or messages are monitored periodically, you can react quickly following an automatic switch failure.

Checking the status of the multiplexing database

When the mc_ctl command is executed, the details of the multiplexing configuration, information about whether switch is possible following the error, and location and details of the error that caused the switch or disconnection are displayed.

After starting database multiplexing mode, execute the mc_ctl command in status mode to check the multiplexing status.

An example of the status displayed when the mc_ctl command is executed is shown below.

Example)

```
> mc_ctl status -M D:\mcdir\inst1

mirroring status

switchable

server_id  host_role       host            host_status  db_proc_status       disk_status
----------------------------------------------------------------------------------------------------
----
server1    primary         192.0.2.100     normal       normal                 normal
server2    standby         192.0.2.110     normal       normal                 normal
```

Checking the status of connection to the Mirroring Controller arbitration process

When the arbitration server is used for automatic degradation, the status of the connection to the Mirroring Controller arbitration process can be checked by specifying the --arbiter option. If the output status is "online", it indicates that an arbitration request can be made from the database server to the arbitration server. When the arbitration server is used for automatic degradation, regularly execute the command in status mode with the --arbiter option specified and check that the output status is "online".

Example)

The mc_ctl command is executed with the --arbiter option specified, and the status is output.

Example)

```
> mc_ctl status --arbiter -M D:\mcdir\inst1

arbiter_id   host            status
---------------------------------------
arbiter      192.0.3.120     online
```

Checking the status of data synchronization

Additionally, by referencing the pg_stat_replication statistics view on the primary server, the data synchronization status can be confirmed. However, when creating the monitoring program, note that the content of pg_stat_replication may be changed in the future.

The following example shows that the locations of the transaction log after it is sent and received (sent_lsn, replay_lsn) match, and that they are fully synchronized.

Example)

```
postgres=# select * from pg_stat_replication;
-[ RECORD 1 ]-------------------------------
  pid   | 10651
  usesysid | 10
  usename | fsep
```
3.3.2 Checking the Status of the Arbitration Server

This section describes how to check the status of the arbitration server.

The status of the connection between the Mirroring Controller arbitration process and primary server/standby server can be checked by executing the `mc_arb` command in status mode.

The example below executes the `mc_arb` command, and shows the status.

Linux

Example)

```
$ mc_arb status -M /mcarb_dir/arbiter1

server_id     host    status
server1        192.0.3.100 online
server2        192.0.3.110 online
```

Windows

Example)

```
> mc_arb status -M D:\mcarb_dir\arbiter1

server_id     host    status
server1        192.0.3.100 online
server2        192.0.3.110 online
```

3.4 Manually Switching the Primary Server

The primary server cannot be switched automatically in the following case:
- If automatic switch/disconnection is disabled
- If output of messages is selected for heartbeat abnormalities during heartbeat monitoring of the operating system or server and the operating system/server crashes or becomes unresponsive

In this case, to manually switch the primary server, execute the mc_ctl command in switch mode on either the primary server or the standby server.

Example)

```plaintext
> mc_ctl switch -M D:\mcdir\inst1
```

**Point**

If automatic switch/disconnection is enabled, it is possible to perform switch of primary server at any time.

### 3.5 Manually Disconnecting the Standby Server

The procedure to perform disconnection of the standby server differs depending on whether the automatic switch/disconnection is enabled or disabled.

If automatic switch/disconnection is enabled

Execute the mc_ctl command in stop mode on the standby server.

Example)

```plaintext
> mc_ctl stop -M D:\mcdir\inst1
```

If automatic switch/disconnection is disabled

1. Execute the mc_ctl command in stop mode on the standby server.

Example)

```plaintext
> mc_ctl stop -M D:\mcdir\inst1
```

2. Comment out the synchronous_standby_names parameter in the postgresql.conf file on the primary server.

3. Execute the pg_ctl command in reload mode on the primary server.

Example)

```plaintext
> pg_ctl reload -D D:\database\inst1
```

### 3.6 Action Required when a Heartbeat Abnormality is Detected

The message below is output when a heartbeat abnormality is detected during heartbeat monitoring of operating systems or servers:

```
detected an error on the monitored object "server(server identifier name)"; no response:ping timeout (MCA00019)
```

If the heartbeat_error_action parameter in serverIdentifier.conf is set to "message", even if automatic switch/disconnection is enabled and Mirroring Controller is started, automatic switch/disconnection is not performed when a heartbeat abnormality is detected. Therefore, user action will be necessary.

This section explains the action required when the heartbeat_error_action parameter is set to "message" and a heartbeat abnormality is detected.

1. Identify the cause of the heartbeat abnormality. The possible causes are below:

   - The remote operating system or server crashed or is unresponsive
- An admin network issue occurred

2. Address the cause identified in step 1.
   - The remote operating system or server crashed or is unresponsive
     Manually perform switch or disconnection using the mc_ctl command.
   - An admin network issue occurred
     Refer to "Chapter 4 Action Required when an Error Occurs in Database Multiplexing Mode", and recover the database multiplexing system.

3.7 Monitoring Mirroring Controller Messages

The messages that are output by Mirroring Controller are output to both the database server and the arbitration server. If the automatic switch fails, for example, an important message related to the continuation of the operation may be output, so ensure that the system log messages are monitored.

If the arbitration server is used for automatic degradation, monitor messages on both the database server and the arbitration server.

**Message output destination on the database server**

Messages are output to the event log.

**Message output destination on the arbitration server**

**Linux**

Messages are output to the system log.

**Windows**

Messages are output to the event log.

**Point**

- To monitor message types considered to be important, an operating system setting must be configured beforehand. Refer to the operating system manuals, check if the message is of a message type that is monitored to be output to the system log, and configure the setting if required.

- If the heartbeat_error_action parameter in serverIdentifier.conf is set to "message", only message output is performed when a heartbeat abnormality is detected during heartbeat monitoring of operating systems and servers - automatic switch/disconnection is not performed. Therefore users need to monitor the messages. Refer to "3.6 Action Required when a Heartbeat Abnormality is Detected" for details.

**Display format on the database server**

```plaintext
eventSourceName[processId]: messageType: messageContent (messageNumber)
```

Specify the event source name in the event_source parameter of the serverIdentifier.conf file of the database server.

The message types output by Mirroring Controller, their severity, and their corresponding value in the event log are shown in the table below.

**Table 3.1 Message type, severity, and corresponding value in the event log**

<table>
<thead>
<tr>
<th>Message type</th>
<th>Severity</th>

<td>PANIC</td>
<td></td>
<td>Reports that an abnormality was detected in all multiplexed database systems requiring immediate recovery of the system, and also the content and cause of the abnormality.</td>
<td></td>
</tr>
</tbody>
</table>

The message severity has the following meanings:

- **Information**
  
  Informational status. A message that was reported by the system is displayed. No action is required.

- **Notice**
  
  Informational status, but a message that should be noted is displayed. If necessary, take the actions described in the “Action” section of the message.

- **Warning**
  
  No error has occurred, but the user is requested to check, and take action. Take the actions described in the “Action” section of the message.

- **Error**
  
  An error has occurred. Take the actions described in the “Action” section of the message.

**Display format on the arbitration server**

**Linux**

```
programName[processId]: messageType: messageText (messageNumber)
```

Specify the program name in the syslog_ident parameter of the arbitration.conf file of the arbitration server.

**Windows**

```
eventSourceName[processId]: messageType: messageText (messageNumber)
```

Specify the event source name in the event_source parameter of the arbitration.conf file of the arbitration server.

The message types output by Mirroring Controller, their severity, and their corresponding value in the output destination log are shown in the table below.

**Table 3.2 Message type, severity, and corresponding value in the output destination log**

<table>
<thead>
<tr>
<th>Message type</th>
<th>Severity</th>
<th>Meaning</th>
<th>System log (Linux)</th>
<th>Event log (Windows)</th>
</tr>
</thead>
<tbody>
<tr>
<td>INFO</td>
<td>Information</td>
<td>Provides information not categorized as LOG or NOTICE.</td>
<td>INFO</td>
<td>INFORMATION</td>
</tr>
<tr>
<td>LOG</td>
<td></td>
<td>Provides information recognized as a particularly important event in tracing the operation history. (Example: Automatic switch is complete)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

</tbody>
</table>

The message severity has the following meanings:

- **Information**
  - Informational status. A message that was reported by the system is displayed. No action is required.

- **Notice**
  - Informational status, but a message that should be noted is displayed. If necessary, take the actions described in the "Action" section of the message.

- **Warning**
  - No error has occurred, but the user is requested to check, and take action. Take the actions described in the "Action" section of the message.

- **Error**
  - An error has occurred. Take the actions described in the "Action" section of the message.

### 3.8 Server Maintenance

To perform maintenance tasks such as periodic server inspections and the application of updates for software products including the operating system, you must perform a planned stop of the server, and then perform the maintenance.

#### 3.8.1 Rolling Updates

In database multiplexing mode, rolling updates, that perform the maintenance for the servers that comprise the cluster system, can be performed while jobs continue.

First, perform the maintenance for the standby server, and then switch the standby server to the primary server. Then, perform the maintenance for the original primary server that was switched to the standby server. This enables maintenance to be performed while jobs continue.

Note that arbitration server maintenance can be performed without affecting database server operation, so it is not necessary to consider rolling update.

- **See**

  If the downtime due to the maintenance of the standby server is expected to be long, refer to "Standby server downtime" in "3.9.1 Changes Required when the Standby Server is Stopped".

The flow of a rolling update is shown below.
Perform the following procedure as shown in the above figure:

**Standby server maintenance tasks**

1. To perform the maintenance on the standby server, stop Mirroring Controller.

   Example:

   ```bash
   mc_ctl stop -M D:\mcdir\inst1
   ```
2. Ensure that Mirroring Controller has completely stopped.

If the multiplexed instances and Mirroring Controller have been configured on the standby server to start and stop automatically when the operating system of the database server is started or stopped, cancel the setting to start and stop automatically.

See

Refer to "2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances" for information on how to configure the multiplexed instances and Mirroring Controller to start and stop automatically when the operating system of the database server starts and stops.

This task should be performed by the instance administrator user with administrator privileges.

Use the `sc config` command to disable automatic start of multiplexed instances and Mirroring Controller from the Windows service.

Example)

The following is an example using the registered service name "Mirroring_Controller_inst1".

```
> sc config "Mirroring_Controller_inst1" start= demand
```

Information

You can use the `sc qc` command to check the registration status.

Refer to documentation such as Windows Help and Support for the `sc` command for information on registry content.

3. Perform maintenance tasks.

4. Create a copy of the primary server instance on the standby server.

Execute the `pg_basebackup` command to create data in the standby server by synchronizing with the primary server.

Example)

```
> pg_basebackup -D D:\database\inst1 -X fetch --waldir=E:\transaction\inst1 --progress --verbose -R --dbname="application_name=standbyServerName" -h primaryServerHostName -p primaryServerPortNumber
```

See

The procedure for copying the primary server instance to the standby server is the same as the procedure for setting up the standby server.

Refer to "2.5.2 Creating, Setting, and Registering the Standby Server Instance", and then perform the recovery.

5. Check the settings for automatic start and stop of the multiplexed instances and Mirroring Controller.

If the multiplexed instances and Mirroring Controller were configured in step 2 to not start and stop automatically when the operating system of the database server starts and stops, then change the settings back. This step can be skipped if automatic start and stop are not required.

This task should be performed by an instance administrator user with administrator privileges.

Use the `sc config` command to enable automatic start of multiplexed instances and Mirroring Controller from the Windows service.

Example)

The following is an example using the registered service name "Mirroring_Controller_inst1".

```
> sc config "Mirroring_Controller_inst1" start= auto
```
**Information**

You can use the `sc qc` command to check the registration status. Refer to documentation such as Windows Help and Support for the `sc` command for information on registry content.

This operation is required when determining the maintenance tasks on the standby server.

Enabling automatic switch/disconnection

As the instance administrator user, execute the `mc_ctl` command in start mode.

Example:

```
> mc_ctl start -M D:\mcdir\inst1
```

Disabling automatic switch/disconnection

As the instance administrator user, execute the `mc_ctl` command in start mode with the `-F` option specified.

Example:

```
> mc_ctl start -M D:\mcdir\inst1 -F
```

**Point**

After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the `enable-failover` or `disable-failover` mode of the `mc_ctl` command.

Switching to the primary server

To perform the maintenance on the primary server, execute the `mc_ctl` command in the switch mode on the primary server or the standby server.

Example:

```
> mc_ctl switch -M D:\mcdir\inst1
```

When the switch is complete, the `synchronous_standby_names` parameter in the `postgresql.conf` file of the new primary server will be commented as follows:

Example:

```
#synchronous_standby_names = 'primary'
```

New standby server maintenance tasks

1. Stop the Mirroring Controller.

   On the new standby server (the primary server before the switch), execute the `mc_ctl` command in stop mode.

   Example:

   ````
   > mc_ctl stop -M D:\mcdir\inst1
   ```

2. Ensure that Mirroring Controller has completely stopped.

   If the multiplexed instances and Mirroring Controller have been configured on the new standby server to start and stop automatically when the operating system of the database server is started or stopped, cancel the setting to start and stop automatically now.
Refer to "2.12 Setting Automatic Start and Stop of Mirroring Controller and Multiplexed Instances" for information on how to configure the multiplexed instances and Mirroring Controller to start and stop automatically when the operating system of the database server starts and stops.

This task should be performed by an instance administrator user with administrator privileges.

Use the sc config command to disable automatic start of multiplexed instances and Mirroring Controller from the Windows service.

Example)
The following is an example using the registered service name "Mirroring_Controller_inst1".

```
> sc config "Mirroring_Controller_inst1" start= demand
```

Information
You can use the sc qc command to check the registration status.
Refer to documentation such as Windows Help and Support for the sc command information on registry content.

3. Perform the maintenance on the new standby server that was stopped.
4. Create a copy of the new primary server instance on the new standby server.
   Execute the pg_basebackup command to create data in the new standby server by synchronizing with the new primary server.
   Example)
   ```
   > pg_basebackup -D D:\database\inst1 -X fetch --waldir=\transaction\inst1 --progress --verbose -R --dbname="application_name=standbyServerName" -h primaryServerHostName -p primaryServerPortNumber
   ```

See
The procedure for copying the primary server instance to the standby server is the same as the procedure for setting up the standby server.
Refer to "2.5.2 Creating, Setting, and Registering the Standby Server Instance", and then perform the recovery.

5. Check the settings for automatic start and stop of the multiplexed instances and Mirroring Controller.
   If the multiplexed instances and Mirroring Controller were configured in step 2 to not start and stop automatically when the operating system of the database server starts and stops, then change the settings back. This step can be skipped if automatic start and stop are not required.
   This task should be performed by an instance administrator user with administrator privileges.
   Use the sc config command to enable automatic start of multiplexed instances and Mirroring Controller from the Windows service.
   Example)
   The following is an example using the registered service name "Mirroring_Controller_inst1".
   ```
   > sc config "Mirroring_Controller_inst1" start= auto
   ```

Information
You can use the sc qc command to check the registration status.
Refer to the document such as Windows Help and Support for the sc command for information on registry content.
6. After the maintenance is complete, edit the following parameters in the postgresql.conf file of the standby server as required.

   Copying an instance results in the value of the synchronous_standby_names parameter becoming the specified value on the primary server. Therefore, correct it to the specified value on the standby server. If the parameter was commented out, then you must uncomment it.

7. On the standby server, start (rebuild) Mirroring Controller.

   Enabling automatic switch/disconnection
   
   As the instance administrator user, execute the mc_ctl command in start mode.

   Example)
   
   > mc_ctl start -M D:\mcdir\inst1

   Disabling automatic switch/disconnection
   
   As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.

   Example)
   
   > mc_ctl start -M D:\mcdir\inst1 -F

   Point
   
   After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

Failback of the Primary Server

Revert the primary server and standby server to the original server configuration. Do this to execute the main job on the previous primary server. Refer to "4.1.1.3 Failback of the Primary Server" for details.

Note

Obtain a backup as soon as this task is complete.

3.8.2 Stopping for Maintenance

Perform this procedure to stop all servers for periodic inspections, for example. On the server on which Mirroring Controller is running, execute the mc_ctl command in stop mode to stop the instance and Mirroring Controller.

After that, on the server where the Mirroring Controller arbitration process is running, execute the mc_arb command in stop mode to stop the Mirroring Controller arbitration process.

Stopping Mirroring Controller

   Example)
   
   > mc_ctl stop -M D:\mcdir\inst1 -a

Stopping the Mirroring Controller arbitration process

   Linux
   
   Example)
   
   $ mc_arb stop -M /mcarb_dir/arbiter1
3.8.3 Arbitration Server Maintenance

Arbitration server maintenance can be performed without affecting database server operation.

Follow the procedure below to perform arbitration server maintenance.

1. Execute the `mc_arb` command in stop mode to forcibly stop the Mirroring Controller arbitration process.

   **Linux**
   ```bash
   $ mc_arb stop -M /mcarb_dir/arbiter1 -e
   ```

   **Windows**
   ```cmd
   > mc_arb stop -M D:\mcarb_dir\arbiter1 -e
   ```

2. Perform maintenance tasks.

3. Execute the `mc_arb` command in start mode to restart the Mirroring Controller arbitration process.

   **Linux**
   ```bash
   $ mc_arb start -M /mcarb_dir/arbiter1
   ```

   **Windows**
   ```cmd
   > mc_arb start -M D:\mcarb_dir\arbiter1
   ```

4. Execute the `mc_arb` command in status mode to check that the arbitration server is connected to the database server.

   The example below executes the `mc_arb` command, and shows the status.

   **Linux**
   ```bash
   $ mc_arb status -M /mcarb_dir/arbiter1
   server_id    host            status
   -------------------------------
   server1      192.0.3.100     online
   server2      192.0.3.110     online
   ```

   **Windows**
   ```cmd
   > mc_arb status -M D:\mcarb_dir\arbiter1
   server_id    host            status
   ---------------------------------------
server1  192.0.3.100  online
server2  192.0.3.110  online

5. Check the command output.
   Items to be checked
   Check that the output status is "online" on both lines.

### 3.9 Changes in Operation

The following changes in operation may be required:

- Changes required when the standby server is stopped
- Changing from single server mode to database multiplexing mode
- Changing from database multiplexing mode to single server mode
- Changing to database multiplexing mode when the arbitration server is used for automatic degradation
- Changing parameters
- Uninstalling in the database multiplexing mode

#### 3.9.1 Changes Required when the Standby Server is Stopped

**Operation when the standby server is stopped**

Before performing maintenance for the primary server instance when the standby server has been stopped, stop Mirroring Controller on the primary server, comment out the synchronous_standby_names parameter in the postgresql.conf file of the primary server, and then execute the pg_ctl command in reload mode.

If this operation is not performed, operations performed on the primary server for the instance will remain in a wait state.

---

Refer to "pg_ctl" in Reference for information on the command.

---

**Standby server downtime**

If you specified the synchronous_standby_names parameter of the postgresql.conf file and then the standby server instance is stopped, consider the points below.

- The wal_sender_timeout parameter in the postgresql.conf file
  
  If the standby server is stopped after the timeout time set in this parameter was exceeded, an error stating that the transaction log could not be received may be output to the primary server event log, and all transaction logs that should be transferred to the standby server are accumulated.

- The wal_keep_size parameter in the postgresql.conf file

  If a transaction log that exceeds the value set in this parameter was generated while the standby server was stopped, the transaction log may be deleted.

  Additionally, setting this parameter requires consideration regarding stabilization of the database multiplexing mode. Refer to "2.11.1 Tuning to Stabilize the Database Multiplexing Mode" for details.

---

**Note**

The standby server must be rebuilt if the pending transaction log to be transferred to the standby server is lost when the standby server is started after the maintenance task is complete.
Take the action advised in the recovery operation that starts from "4.1.1.3 Identify cause of error and perform recovery" through to "4.1.2 Rebuild the Standby Server".

---

### 3.9.2 Changing from Single Server Mode to Database Multiplexing Mode

The procedure for switching single server mode to database multiplexing mode for the purposes of high reliability and load distribution of the system is explained below.

This procedure is equivalent to the setup procedure explained in "Chapter 2 Setting Up Database Multiplexing Mode".

---

**Note**

If the data storage destination directory name is not comprised of ASCII characters

Stop the application job and then perform the following procedure to migrate to a directory with a name that uses only ASCII characters:

1. Stop the database instance on the primary server.
2. Change the name of the data storage destination directory to one that uses only ASCII characters. For example, do not perform operations that will cause the symbolic link contained in the data storage destination directory to become lost, such as moving data to another drive.

---

**See**

When encrypting the storage data, refer to "Database Multiplexing Mode" in the Operation Guide, and then perform the setup for encryption on the primary and standby servers.

---

1. Install on the arbitration server
   - Perform this step only if the arbitration server is used for automatic degradation.
   - Install the Server Assistant on the server where the Mirroring Controller arbitration process is started.
   - Refer to "Installation" in the Installation and Setup Guide for Server Assistant for information on how to install the Server Assistant.
2. Install on the standby server
   - Install FUJITSU Enterprise Postgres on the server to be started as the standby server.
   - Refer to "Installation" in the Installation and Setup Guide for Server for information on how to install FUJITSU Enterprise Postgres.
   - Use ASCII characters in the data storage destination directory.
3. Stop the application jobs
   - Stop the application jobs to be connected to the primary server.
4. Change the primary server settings
   - To allow connections from the server to be started as the standby server, configure the settings in step 2 and thereafter of "2.4.2 Creating, Setting, and Registering the Primary Server Instance" on the primary server.
5. Set up the arbitration server
   - Refer to "2.3 Setting Up the Arbitration Server" for details.
   - Perform this step only if the arbitration server is used for automatic degradation.
6. Set up database multiplexing mode on the primary server
   - Refer to "2.4.1 Setting Up Database Multiplexing Mode on the Primary Server" for details.
7. Set up database multiplexing mode on the standby server
   - Refer to "2.5.1 Setting Up Database Multiplexing Mode on the Standby Server" for details.
8. Create the standby server instance and start it
   Refer to "2.5.2 Creating, Setting, and Registering the Standby Server Instance" for details.
After the above steps are completed, refer to the remaining explanations in "Chapter 2 Setting Up Database Multiplexing Mode" and ensure that the required settings and operations are completed.

3.9.3 Changing from Database Multiplexing Mode to Single Server Mode

The procedure for stopping database multiplexing mode and changing to single server mode is explained below.
Some tasks must be performed on the database server, and others must be performed on the arbitration server.
The tasks on the arbitration server are required only if the arbitration server is used for automatic degradation.

Tasks on the database server

1. Determine the server for which the instance is to be stopped, and switch this server
   Determine the server that is to be excluded as the database multiplexing mode target, and for which the instance is to be stopped.
   If the server for which the instance is to be stopped is the primary server, execute the mc_ctl command in the switch mode to switch the standby server to the primary server.
   The standby server after the switch is complete will be the server for which the instance is to be stopped.
   If the server for which the instance is to be stopped is the standby server, there is no need to perform the switch operation.
   Example)
   ```
   > mc_ctl switch -M D:\mcdir\inst1
   ```

2. Stop Mirroring Controller and the instance.
   On the server that was determined in step 1, execute the mc_ctl command in the stop mode to stop Mirroring Controller and the instance.
   Example)
   ```
   > mc_ctl stop -M D:\mcdir\inst1
   ```

3. Unregister Mirroring Controller from the Windows service.
   Execute the mc_ctl command in unregister mode to unregister Mirroring Controller from the Windows service.
   Example)
   ```
   > mc_ctl unregister -M D:\mcdir\inst1
   ```

4. Delete registries related to the event log
   If error logs are output to the event log in "2.2.1.2 Preparatory Tasks for the Output of Error Logs to the Event Log", delete the registered event source name for each instance.
   Example)
   ```
   > regsvr32 /u /i:"Mirroring Controller inst1" "c:\Program Files\Fujitsu\fsepv<x>server64\lib\mcevent.dll"
   ```
   Note that "<x>" indicates the product version.

5. Delete the file resources
   Delete the following file resources:
   - Data storage destination directory
- Mirroring Controller management directory

Example)

```
> rmdir /S /Q D:\database\inst1
> rmdir /S /Q D:\mcdir\inst1
```

See

Refer "Security-Related Notes" in the Operation Guide for information on deleting the data securely.

6. Stop the application jobs

Stop the application jobs to be connected to the primary server.

7. Stop Mirroring Controller and the instance on the primary server

Execute the mc_ctl command in stop mode on the primary server.

Example)

```
> mc_ctl stop -M D:\mcdir\inst1
```

8. Unregister Mirroring Controller from the Windows service on the primary server

Execute the mc_ctl command in unregister mode to unregister Mirroring Controller from the Windows service.

Example)

```
> mc_ctl unregister -M D:\mcdir\inst1
```

9. Delete registries related to the event log on the primary server

If error logs are output to the event log in "2.2.1.2 Preparatory Tasks for the Output of Error Logs to the Event Log", delete the registered event source name for each instance.

Example)

```
> regsvr32 /u /i:"Mirroring Controller inst1" "c:\Program Files\Fujitsu\fsepv<x>server64\lib \mcevent.dll"
```

Note that "<x>" indicates the product version.

10. Delete the database multiplexing mode settings that were configured for the primary server instance.

Reset the postgresql.conf file parameters to their values before the database multiplexing operation was set.

Delete the file resources from the Mirroring Controller management directory.

If the backup operation was performed, delete the following resources:

- Mirroring Controller management directory backup data obtained in database multiplexing mode
- Instance backup data obtained in database multiplexing mode

Additionally, if the primary_conninfo parameter is set in the postgresql.auto.conf file, execute the ALTER SYSTEM RESET statement to delete the setting.

Example)

```
> regsvr32 /u /i:"Mirroring Controller inst1" "c:\Program Files\Fujitsu\fsepv<x>server64\lib \mcevent.dll"
```

An example execution of the psql command is shown below.

```
postgres=# ALTER SYSTEM RESET primary_conninfo;
```

After these actions are performed, ensure that the backup data is collected when starting the single operation.
- Refer to "Security-Related Notes" in the Operation Guide for details on deleting the data securely.
- Refer to "2.14 Backup Operation" for details on the backup operation.
- Refer to "Appendix A Parameters" for details on the postgresql.conf file parameters.

**Point**

In the above procedure, if the postgresql.conf file of the single primary server can be changed by reloading the file, the operation mode can be changed without stopping the application job.

In that case, execute the mc_ctl command in stop mode with the --mc-only option specified to stop only Mirroring Controller in relation to stopping the primary server.

**Tasks on the arbitration server**

**Linux**

1. Execute the mc_arb command in stop mode to stop the Mirroring Controller arbitration process.

   Example)

   ```
   $ mc_arb stop -M /mcarb_dir/arbiter1
   ```

2. Delete the Mirroring Controller arbitration process management directory.

   Example)

   ```
   $ rm -rf /mcarb_dir/arbiter1
   ```

**Windows**

1. Execute the mc_arb command in stop mode to stop the Mirroring Controller arbitration process.

   Example)

   ```
   > mc_arb stop -M D:\mcarb_dir\arbiter1
   ```

2. Unregister the Mirroring Controller arbitration process from the Windows service.

   Execute the mc_arb command in unregister mode to unregister the Mirroring Controller arbitration process from the Windows service.

   Example)

   ```
   > mc_arb unregister -M D:\mcarb_dir\arbiter1
   ```

3. Delete registrations related to the event log

   If error logs are output to the event log in "2.2.2.1 Preparing to Output Error Logs to the Event Log (Windows)", delete the registered event source name for each instance.

   Example)

   ```
   > regsvr32 /u /i:"Mirroring Controller arbiter1" "c:\Program Files\Fujitsu\fsepv<\assistant64\lib\mcarbevent.dll"
   ```

   Note that "<x>" indicates the product version.
4. Delete the Mirroring Controller arbitration process management directory.

Example)

```bash
> rmdir /S /Q D:\mcarb_dir\arbiter1
```

### 3.9.4 Changing to Database Multiplexing Mode when the Arbitration Server is Used for Automatic Degradation

This section provides the procedure to change to database multiplexing mode using the Mirroring Controller only on the database server when the arbitration server is used for automatic degradation.

Some tasks must be performed on the database server, and others must be performed on the arbitration server.

**Tasks on the arbitration server**

1. Set up the arbitration server.

   Refer to "2.3 Setting Up the Arbitration Server" for information on how to set up the arbitration server.

**Tasks on the database server**

1. On the server where Mirroring Controller is running, execute the mc_ctl command in stop mode to stop Mirroring Controller on the primary server and standby server.

   Example)

   ```bash
   > mc_ctl stop -M D:\mcdir\inst1 -a --mc-only
   ```

2. Edit the network.conf file of the primary server and standby server to add the information of the arbitration server.

   Refer to "A.3 Network Configuration File" for details.

   The definition example of the network.conf file of the primary server is shown below:

   ```
   Example)
   server1 192.0.2.100,192.0.3.100 27540,27541 server
   server2 192.0.2.110,192.0.3.110 27540,27541 server
   arbiter 192.0.3.120 27541 arbiter
   ```

**Note**

- Ensure that the port numbers set for the primary server, standby server, and arbitration server do not conflict with other software. Also do not configure the same segment for the admin network and arbitration network.

- If the server type is "server", two IP addresses or host names, and two port numbers need to be specified in the following order:
  - IP address or host name of the database server used as the admin network
  - IP address or host name of the database server used as the arbitration network

- If the server type is "arbiter", specify the IP address or host name set for the my_address parameter and the port number set for the port parameter in arbitration.conf.
3. Edit the `serverIdentifier.conf` file of the primary server and standby server to add parameters required for the operation where the arbitration server is used for automatic degradation.

Refer to "A.4.1 Server Configuration File for the Database Servers" for information on the parameters required when the arbitration server is used for automatic degradation.

4. On the primary server and standby server, execute the `mc_ctl` command in start mode to start the Mirroring Controller process.

Example:

```
> mc_ctl start -M D:\mcdir\inst1 --mc-only
```

**Common tasks**

1. Check the connection status from the database server or arbitration server.

Refer to "2.8 Checking the Connection Status" for details.

### 3.9.5 Changing Parameters

Stop Mirroring Controller before editing the Mirroring Controller server configuration file and network configuration file.

If the Mirroring Controller process crashes or becomes unresponsive, restart is performed automatically by the Mirroring Controller monitoring process, and the configuration file is reloaded. Therefore, if the configuration file was being edited, unintended behavior will occur.

### 3.9.6 Uninstalling in Database Multiplexing Mode

This section explains how to uninstall FUJITSU Enterprise Postgres on a server using database multiplexing mode.

Some tasks must be performed on the database server, and others must be performed on the arbitration server.

The tasks on the arbitration server are required only if the arbitration server is used for automatic degradation.

#### Tasks on the database server

1. Stop the multiplexed instances and Mirroring Controller

   Refer to "3.2 Starting and Stopping Mirroring Controller" for information on how to stop the instance.

2. Unregister Mirroring Controller from the Windows service

   Execute the `mc_ctl` command in unregister mode to unregister Mirroring Controller from the Windows service.

   Example:

   ```
   > mc_ctl unregister -M D:\mcdir\inst1
   ```

3. Delete registries related to the event log

   If messages are output to the event log, DLLs are registered in accordance with "2.2.1.2 Preparatory Tasks for the Output of Error Logs to the Event Log". Delete these registries so that no unnecessary issues occur.

   Example:

   The following is an example in which the DLL of a 64-bit product that is registered under the default event source name is deleted. Note that "<x>" indicates the product version.

   ```
   > regsvr32 /u "c:\Program Files\Fujitsu\fsepv<x>\server64\lib\mcevent.dll"
   ```

   - Delete the registered DLL for each instance

     DLL registration is performed so that messages output to the event log are identified by each instance, and are output to any event source named by the user.

     Accordingly, it is necessary to delete the DLL registry for each instance. Delete the DLL registry for each event source name.

     Example:

     The following is an example in which the DLL of a 64-bit product that is registered under the
event source name "Mirroring Controller inst1" is deleted. Note that "<x>" indicates the product version.

> regsvr32 /u /i:"Mirroring Controller inst1" "c:\Program Files\Fujitsu\fsepv<x>server64\lib\mcevent.dll"

- If installing multiple versions

If the database multiplexing system you set up using the FUJITSU Enterprise Postgres package has been set to output error logs to the event log, use the DLL path name that you took note of previously as explained in "2.2.1.2 Preparatory Tasks for the Output of Error Logs to the Event Log" to reregister the default event source name.

Note

Ensure that you delete the DLLs before the uninstallation. If you perform the uninstallation without doing so, you may not be able to delete the DLLs at a later time.

4. Uninstall FUJITSU Enterprise Postgres

Refer to "Uninstallation" in the Installation and Setup Guide for Server for information on how to uninstall FUJITSU Enterprise Postgres.

Tasks on the arbitration server

Refer to "Uninstallation" in the Installation and Setup Guide for Server Assistant, and uninstall the Server Assistant.
This chapter describes the action required if an error occurs in database multiplexing mode.

In database multiplexing mode, when an error is detected, the switch or disconnection of the standby server is performed automatically, so that only the primary server starts degrading. In this case, the recovery tasks will be required for the standby server on which the switch or disconnection was performed.

Other possible cases are as follows:
- When automatic switch fails
- When automatic disconnection fails
- When all servers or instances were stopped

### 4.1 Action Required when Server Degradation Occurs

If the server has started degrading, the recovery tasks will vary depending on whether the cause was the switch (failover or switchover), or the disconnection.

Execute the `mc_ctl` command in status mode, or refer to the event log, and check if the cause of the server to start degrading was the switch or the disconnection.

In the example below, the `mc_ctl` command is executed in status mode.

If a switch has occurred, "switched" (the switch is complete and the server is in a degrading state) is displayed for "mirroring status".

Example)

```
> mc_ctl status -M D:\mcdir\inst1
mirroring status
------------
switched
```

If a disconnection has occurred, "not-switchable" (disconnection was performed so the server cannot be switched) is displayed for "mirroring status".

Example)

```
> mc_ctl status -M D:\mcdir\inst1
mirroring status
------------
not-switchable
```

**Note**

If Mirroring Controller detects any errors on the server on which operations are continuing during recovery to database multiplexing mode from a degrading operation state, perform the procedure in "4.1.3 Addressing Errors During Degrading Operation", and then recover to database multiplexing mode.

### 4.1.1 Operations when the Server has Started Degrading after a Switch has Occurred

This section explains the operations when the server has started degrading after a switch has occurred.
- After a switch has occurred as a result of an abnormality on the primary server, the database will not have a multiplexed configuration until the standby server is rebuilt. Remove the cause of the error as quickly as possible, and then rebuild the standby server.

- If the reference job was executed on the standby server, and the servers are switched because an error occurred on the primary server, the load is concentrated on the new primary server. Accordingly, pause the reference job on the original standby server, rebuild the original primary server as the new standby server, and then resume the reference job for the new standby server.

- If the instance on the new primary server is stopped before the original primary server where the error occurred is rebuilt as the new standby server, a split brain occurs at startup from the instance on the original primary server. Therefore, start the instance on the new primary server before rebuilding the standby server.

If the switch occurred and the server has started degrading, perform the following operations to recover the standby server and revert it to its original state:

- Identify Cause of Error and Restore the Standby Server
- Rebuild the Standby Server
- Failback of the Primary Server (only if required)

The flow of these operations is shown in the figure below.
4.1.1.1 Identify Cause of Error and Restore the Standby Server

Perform the recovery according to the following procedure:

1. Stop Mirroring Controller
2. Recovery of the Mirroring Controller management directory
3. Identify cause of error and perform recovery

4.1.1.1.1 Stop Mirroring Controller

Execute the mc_ctl command in stop mode for the original primary server on which the error occurred.

Example)
> mc_ctl stop -M D:\mcdir\inst1

This also stops the instance that is required to perform the recovery.

**Note**

If the instance does not stop, refer to "Actions in Response to Failure to Stop an Instance" in the Operation Guide, and then stop the instance. Then, specify the -e option in the above command to forcibly stop Mirroring Controller.

### 4.1.1.1.2 Recovery of the Mirroring Controller management directory

Copy the files in the Mirroring Controller management directory from the backup data, and then perform the recovery.

### 4.1.1.1.3 Identify cause of error and perform recovery

Refer to the event log of the primary server and the standby server to identify the cause of the error, and then perform recovery.

The following commands can be used to recover a standby server. Select depending on the recovery and the situation.

- **pg_basebackup**
  
  Creates a copy of all resources of the primary server instance.

- **pg_rewind**
  
  Creates a copy of only the updated files on the new primary server. For this reason, if this command is used to incorporate a new standby server, recovery time can be shortened. To use this command to build the original primary server as a new standby server, at least one of the following must be met:
  
  a. Checksums were enabled when an instance was created, or
  
  b. The wal_log_hints parameter of postgresql.conf was enabled when an instance was started.

Additionally, full_page_writes must be enabled, which is its default value.

**See**

- Refer to "pg_basebackup" in "Reference" in the PostgreSQL Documentation for information on the pg_basebackup command.

- Refer to "pg_rewind" in "Reference" in the PostgreSQL Documentation for information on the pg_rewind command.

The example below executes the pg_rewind command to perform recovery by synchronizing data on the original primary server with the new primary server.

1. Wait for the application of unapplied update transaction logs on the new primary server.

   Execute the SQL below on the new primary server, and wait until the result is false.

   ```
   # select pg_is_in_recovery();
   ```

   Example:

   ```
   > psql -h hostNameOfNewPrimaryServer -p portNumOfNewPrimaryServer -d dbName -c "select pg_is_in_recovery();"
   ```

   Any database can be connected to.
If the pg_rewind command is executed immediately after promotion of the new primary server, the processing in steps 1 and 2 is required. If update-type SQL can be executed on the new primary server and checkpoint processing is executed after promotion, the processing in steps 1 and 2 will not be necessary.

2. Update the timeline ID.

Execute checkpoint processing, and update the timeline ID.

```
> psql -h hostNameOfNewPrimaryServer -p portNumOfNewPrimaryServer -d dbName -c "checkpoint;"
```

Any database can be connected to.

3. Create a copy of the new primary server instance in the original primary server (new standby server).

Execute the pg_rewind command to synchronize the new standby server data with the new primary server.

```
> pg_rewind -D D:\database\inst1 -R --source-server="user=userName host=newPrimaryServerHostName port=newPrimaryServerPortNumber dbname=dbName application_name=newStandbyServerName"
```

Note

- Use the pg_rewind command with the -R option to create a standby.signal file. If you do not create the standby.signal file, the Mirroring Controller cannot be started as a standby server.

- If using a method that requires password authentication for connections to the primary server, you will need to ensure that authentication is performed automatically. If the -R option is specified for the pg_rewind command and the password parameter is specified for the --dbname option, the pg_rewind command will set the password in the primary_conninfo parameter in postgresql.auto.conf file, enabling connections to be performed automatically.

  If a password is not set in the primary_conninfo parameter in postgresql.auto.conf file, it will be necessary to create a password file (%APPDATA%postgresql\pgpass.conf), and then specify a password for the replication database.

- If you need to set a connection string other than host, port and application_name, include it in the setting of the primary_conninfo parameter.

- The primary_conninfo parameter should not be set in the postgresql.conf file, but only in the postgresql.auto.conf file using the pg_rewind command.

4. Specify parameters in the postgresql.conf file of the original primary server (new standby server).

Set the parameters required for the standby server in postgresql.conf.

Refer to "Table 2.5 Parameters" for information on the parameters to set in postgresql.conf.

See

- Refer to "Hot Standby" in the PostgreSQL Documentation for details on the standby.signal file.

- Refer to "Setting Up a Standby Server" in the PostgreSQL Documentation for details on the primary_conninfo.

Note

A new timeline is branched for the new primary server due to promotion, so 'latest' needs to be specified for the recovery_target_timeline parameter so that the old primary server (new standby server) follows the new primary server.
4.1.1.2 Rebuild the Standby Server

The starting of the recovered original primary server as the standby server is referred to as the "standby server rebuild".

On the original primary server, start Mirroring Controller and the instance.

Enabling automatic switch/disconnection
As the instance administrator user, execute the mc_ctl command in start mode.

Example)

```
> mc_ctl start -M D:\mcdir\inst1
```

Disabling automatic switch/disconnection
As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.

Example)

```
> mc_ctl start -M D:\mcdir\inst1 -F
```

Point

After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

4.1.1.3 Failback of the Primary Server

To revert the primary server and standby server to the original server configuration after rebuilding the standby server, perform failback for the primary server.

Do this to execute the main job on the previous primary server.

Perform the following procedure:

1. Failback of the primary server
   Execute the mc_ctl command in switch mode on the primary server or the standby server.

Example)

```
> mc_ctl switch -M D:\mcdir\inst1
```

After executing the mc_ctl command in switch mode, the status will be as follows:

Example)

```
> mc_ctl status -M D:\mcdir\inst1

switched
server_id  host_role                  host        host_status   db_proc_status       disk_status
----------------------------------------------------------------------------------------------
server1    primary                   192.0.2.100 normal        abnormal(postmaster) normal
server2    none(inactivated primary) 192.0.2.110 normal        abnormal(postmaster) normal
```

2. Stop the original primary server
   On the original primary server, execute the mc_ctl command in stop mode to stop Mirroring Controller and the instance.

Example)

```
> mc_ctl stop -M D:\mcdir\inst1
```
3. Create a copy of the new primary server instance in the original primary server (new standby server)

Execute the `pg_basebackup` command to create data in the new standby server by synchronizing with the new primary server.

Example)

```
> pg_basebackup -D D:\database\inst1 -X fetch --waldir=E:\transaction\inst1 --progress --verbose -R --dbname="application_name=standbyServerName" -h primaryServerHostName -p primaryServerPortNumber
```

The procedure for copying the new primary server instance to the new standby server is the same as the procedure for setting up the new standby server.

Refer to "2.5.2 Creating, Setting, and Registering the Standby Server Instance", and then perform the recovery.

4. Rebuild the standby server

On the standby server, start Mirroring Controller and the instance.

Enabling automatic switch/disconnection

As the instance administrator user, execute the `mc_ctl` command in start mode.

Example)

```
> mc_ctl start -M D:\mcdir\inst1
```

Disabling automatic switch/disconnection

As the instance administrator user, execute the `mc_ctl` command in start mode with the `-F` option specified.

Example)

```
> mc_ctl start -M D:\mcdir\inst1 -F
```

After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the `mc_ctl` command.

**4.1.2 Operations when the Server has Started Degrading after a Disconnection has Occurred**

This section explains the operations when the server has started degrading after a disconnection has occurred.

**Note**

After a disconnection has occurred as a result of an abnormality on the standby server, the database will not have a multiplexed configuration until the standby server is rebuilt. Remove the cause of the error as quickly as possible, and then rebuild the standby server.

If the disconnection occurred and the server has started degrading, perform the following operations to recover the standby server and revert it to its original state:

- Identify Cause of Error and Restore the Standby Server
- Rebuild the Standby Server

The flow of these operations is shown in the figure below.
4.1.2.1 Identify Cause of Error and Restore the Standby Server

Perform the recovery according to the following procedure:

1. Stop Mirroring Controller
2. Recovery of the Mirroring Controller management directory
3. Identify cause of error and perform recovery

4.1.2.1.1 Stop Mirroring Controller

Execute the mc_ctl command in stop mode for the standby server on which the error occurred.

Example

```
> mc_ctl stop -M D:\mcdir\inst1
```

This also stops the instance that is required to perform the recovery.
Note

If the instance does not stop, refer to "Actions in Response to Failure to Stop an Instance" in the Operation Guide, and then stop the instance.

Then, specify the -e option in the above command to forcibly stop Mirroring Controller.

4.1.2.1.2 Recovery of the Mirroring Controller management directory

Copy the files in the Mirroring Controller management directory from the backup data, and then perform the recovery.

4.1.2.1.3 Identify cause of error and perform recovery

Refer to the event log of the primary server and the standby server to identify the cause of the error, and then perform recovery.

Execute the pg_basebackup command to perform recovery by synchronizing data in the primary server with the standby server.

Example)

```bash
> pg_basebackup -D D:\database\inst1 -X fetch --waldir=E:\transaction\inst1 --progress --verbose -R --dbname="application_name=standbyServerName" -h primaryServerHostName -p primaryServerPortNumber
```

See

This recovery procedure is the same as the procedure for setting up the standby server.

Refer to "2.5.2 Creating, Setting, and Registering the Standby Server Instance", and then perform the recovery.

4.1.2.2 Rebuild the Standby Server

Start the Mirroring Controller and the instance of the standby server, and rebuild the standby server.

Enabling automatic switch/disconnection

As the instance administrator user, execute the mc_ctl command in start mode.

Example)

```bash
> mc_ctl start -M D:\mcdir\inst1
```

Disabling automatic switch/disconnection

As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.

Example)

```bash
> mc_ctl start -M D:\mcdir\inst1 -F
```

Point

After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

4.1.3 Addressing Errors During Degrading Operation

This section explains how to address errors that may occur on the server on which operation is continuing during degrading operation triggered by a switch or disconnection.

If needing to recover from backup data

If it is necessary to recover the database using backup data due to data becoming corrupted from disk failure or user operation error, refer to the following for information on recovery to database multiplexing mode:
Action Required when All Database Servers or Instances Stopped

- Recovering from an Incorrect User Operation

If a temporary error occurs

If a temporary error occurs, such as due to a high load on the server or insufficient system resources, remove the cause of the error and restart Mirroring Controller, and then refer to the following for details on recovery to database multiplexing mode:

- Operations when the Server has Started Degrading after a Switch has Occurred
- Operations when the Server has Started Degrading after a Disconnection has Occurred

See

Refer to “3.2.1 Starting Mirroring Controller” and “3.2.2 Stopping Mirroring Controller” for information on restarting Mirroring Controller.

4.2 Action Required when Automatic Switch Fails

If the system behavior is unstable, for example there are insufficient temporary system resources, the Mirroring Controller automatic switch may fail.

Perform the switch manually using one of the following methods:

- Refer to the procedures in "3.4 Manually Switching the Primary Server".
- In the standby server, execute the mc_ctl command in switch mode with the -force option specified to forcibly perform the switch.

Example)

```
> mc_ctl switch -M D:\mcdir\inst1 --force
```

Point

- Even if connection cannot be established between database servers, it is possible to fence the primary server and forcibly switch by executing the mc_ctl command in switch mode with the --force option specified.
- The primary server is not fenced in the cases below, so stop Mirroring Controller and instances of the primary server database in advance:
  - The --no-fencing option is specified when performing forced switch.
  - The heartbeat_error_action parameter in serverIdentifier.conf is set to "message" and the fencing command is not configured to be used (the fencing_command parameter is omitted in serverIdentifier.conf).
  - The heartbeat_error_action parameter in serverIdentifier.conf is set to "fallback".

See

Refer to "4.1.1.2 Rebuild the Standby Server" and "4.1.1.3 Failback of the Primary Server" for information on recovery to database multiplexing mode.

4.3 Action Required when Automatic Disconnection Fails

If the system behavior is unstable, for example there are insufficient system resources such as available memory or free disk space, automatic disconnection using Mirroring Controller may not be possible.

Perform the disconnection manually using one of the following methods:
- Refer to the procedures in "3.5 Manually Disconnecting the Standby Server".
- In the primary server, execute the mc_ctl command in detach mode to perform forced disconnection.

Example)
```bash
> mc_ctl detach -M D:\mcdir\inst1
```

**Point**
- Even if connection cannot be established between database servers, it is possible to fence the standby server and forcibly disconnect by executing the mc_ctl command in detach mode.
- In the cases below, stop Mirroring Controller and instances of the standby server database in advance so that the standby server is not fenced:
  - The --no-fencing option is specified when performing forced disconnection.
  - The heartbeat_error_action parameter in serverIdentifier.conf is set to "message" and the fencing command is not configured to be used (the fencing_command parameter is omitted in serverIdentifier.conf).
  - The heartbeat_error_action parameter in serverIdentifier.conf is set to "fallback".

**See**

**Recovery to database multiplexing mode**

Refer to "4.1.2.2 Rebuild the Standby Server" for information on recovery to database multiplexing mode.

**4.4 Action Required when All Database Servers or Instances Stopped**

This section explains what happens when all database servers or instances on the database server have stopped, so jobs cannot continue.

**See**

**Recovery to database multiplexing mode**

Refer to "4.1.1.2 Rebuild the Standby Server" and "4.1.1.3 Failback of the Primary Server" for information on recovery to database multiplexing mode.

**Overview of recovery operations**

After recovering the database to the state immediately prior to the failure on a specific server comprising the database multiplexing system, restore the system.

In other words, after specifying the server on which the database is to be recovered and then recovering it as the new primary server, configure all other servers as new standby servers.

The flow of these recovery operations is shown in the figure below.
Perform the following procedure.

1. Stop applications
   Stop running applications.
2. Stop Mirroring Controller

Execute the mc_ctl command in stop mode on all servers that comprise the database multiplexing system.

Example)

> mc_ctl stop -M D:\mcdir\inst1

**Note**

**Forcibly stop Mirroring Controller**

If Mirroring Controller does not stop, execute the mc_ctl command in stop mode with the -e option specified.

Example)

> mc_ctl stop -M D:\mcdir\inst1 -e

3. Perform prerequisite tasks before recovering the database

First, refer to "Actions when an Error Occurs" in the Operation Guide, and then identify the cause of the error and perform recovery of the disk on which the failure occurred, etc.

4. Identify the new primary server

Perform the following operations on all servers comprising the database multiplexing system, and check the server containing the backup data that shows the latest date. This server will become the new primary server, on which the database is to be recovered.

Example)

In the example below, the pgx_rcvall command is executed with the -l option specified and the backup data that shows the latest date is identified.

```plaintext
> pgx_rcvall -l -D D:\database\inst1
```

<table>
<thead>
<tr>
<th>Date</th>
<th>Status</th>
<th>Dir</th>
</tr>
</thead>
</table>

5. Recover the database on the new primary server

Recover the database using the recovery method that uses the pgx_rcvall command based on the backup data.

a. Perform the following operations on all servers comprising the database multiplexing system, and check the server containing the archive log and mirrored transaction log that show the latest date.

Example)

In the example below, the archive log and mirrored transaction log that show the latest date are identified.

```plaintext
> dir /OD <backupDataStorageDir>\*_wal
```

b. If the server containing the latest archive log and mirrored transaction log is different to the new primary server identified in step 4, all files and directories under the directory shown below are copied and written to the backup storage destination directory on the new primary server.

Deployment destination directory of the archive log and mirrored transaction log

```plaintext
<backupDataStorageDir>\*_wal
```

c. Execute the pgx_rcvall command on the new primary server, specifying the backup storage destination directory of the new primary server.

Example)

In the example below, the pgx_rcvall command is executed with the -B option specified.

```plaintext
> pgx_rcvall -B E:\backup\inst1 -D D:\database\inst1
```
Refer to "Actions when an Error Occurs" in the Operation Guide for information on the pgx_rcvall command.

6. Recover the Mirroring Controller management directory

Copy the files in the Mirroring Controller management directory from the backup data on the new primary server, and then perform the recovery.

7. Start the instance and Mirroring Controller

Start the instance and Mirroring Controller on the new primary server.

Enabling automatic switch/disconnection

As the instance administrator user, execute the mc_ctl command in start mode.

Example:

```
> mc_ctl start -M D:\mcdir\inst1
```

Disabling automatic switch/disconnection

As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.

Example:

```
> mc_ctl start -M D:\mcdir\inst1 -F
```

Point

After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

8. Resume applications

Resume execution of applications.

9. Build the new standby server

Refer to "2.5 Setting Up the Standby Server" for information on building (setting up) a standby server from the primary server.

Point

It is not necessary to repeat steps that have already been performed, such as registering to Windows services.

4.5 Recovering from an Incorrect User Operation

This section describes how to recover an instance when data has been corrupted due to incorrect user operation.

For example, when data has been corrupted due to incorrect user operation, such as data being unintentionally changed or deleted by an application or command, it is necessary to restore the original data on the primary server and resynchronize with the standby server.

Use the following procedure to perform recovery.

1. Identify the primary server

   Execute the mc_ctl command in status mode on each server, and search for a server for which "primary" or "none(inactivated primary)" is displayed.

2. Stop the applications and commands that caused the incorrect operation to occur

   Stop applications and commands that are running on the primary server. This will minimize the impact caused by the incorrect data.
Also, if any applications used for reference by the standby server are running, stop them too.

3. Stop the instance and Mirroring Controller

Stop the instance and Mirroring Controller on both the primary server and standby server.

Example)

```
$ mc_ctl stop -a -M D:\mcdir\inst1
```

4. Recover the database on the primary server

Recover the database using the recovery method in which the pgx_rcvall command uses the backup data to recover the database to a restore point prior to the time when the incorrect operation was performed.

See

Refer to "Recovering from an Incorrect User Operation" in the Operation Guide for information on using the pgx_rcvall command to recover the database to a restore point, and then perform only the database recovery procedure while the instance is in a stop state.

5. Start the instance and Mirroring Controller

Start the instance and Mirroring Controller on the primary server.

Enabling automatic switch/disconnection

As the instance administrator user, execute the mc_ctl command in start mode.

Example)

```
> mc_ctl start -M D:\mcdir\inst1
```

Disabling automatic switch/disconnection

As the instance administrator user, execute the mc_ctl command in start mode with the -F option specified.

Example)

```
> mc_ctl start -M D:\mcdir\inst1 -F
```

Point

After Mirroring Controller is started, automatic switch/disconnection can be enabled or disabled using the enable-failover or disable-failover mode of the mc_ctl command.

6. Build the new standby server

Refer to "2.5 Setting Up the Standby Server" for information on building (setting up) a standby server from the primary server.

Point

It is not necessary to repeat steps that have already been performed, such as registering to Windows services.
Chapter 5 Managing Mirroring Controller Using WebAdmin

This chapter describes how to set up and manage Mirroring Controller in a streaming replication cluster using WebAdmin.

Mirroring Controller can be used to monitor a streaming replication cluster and perform automatic switching or disconnect synchronous replication when there is an error.

WebAdmin can be used to set up Mirroring Controller in an existing replication cluster. Mirroring Controller can be set up for either synchronous standby instances or asynchronous standby instances.

The configuration of the database multiplexing system built using WebAdmin is shown below:

Figure 5.1 Configuration of database multiplexing operation system using WebAdmin

- If Mirroring Controller is set up to the replication cluster using WebAdmin, the network with the host name (or IP address) specified in [Host name] will be used as the admin network and the log transfer network.

- To use a network other than the job network as the log transfer network, before building the replication cluster specify a host name other than the job network one in [Host name].

Note

If you set up the arbitration server using WebAdmin, install WebAdmin on the arbitration server.
5.1 Mirroring Controller Setup

Perform the following procedure to set up Mirroring Controller in a streaming replication cluster.

1. In the [Instances] tab, select the standby instance on which Mirroring Controller needs to be set up.

2. Click [ ]

3. Enter the information for the Mirroring Controller to be set up.

In the example below, Mirroring Controller is being set up for the replication cluster having master instance "inst1" and standby instance "inst1s".

The instance name, host address and port of the master and standby instances are displayed for easy reference.

Enter the following items on master instance and on standby instance fields for Mirroring Controller setup, as shown in the above screenshot:

- [Enable automatic switch over]: Toggles the automatic switch/disconnection functionality. Select "Yes". The default is "No".

- [Mirroring Controller management directory]: Directory where the Mirroring Controller configuration files will be stored. When the [Mirroring Controller management directory] is entered, WebAdmin will search the Mirroring Controller configuration files in the entered directory based on the [Data storage path] of the corresponding DB instance. If Mirroring Controller configuration files are found, the Mirroring Controller fields will be auto filled.

- [Mirroring Controller port]: Port number of Mirroring Controller. Note that if the Windows firewall feature is enabled, you must enable the port number of Mirroring Controller. Refer to “E.2 Windows Firewall Settings” for details.

- [Heartbeat interval (milliseconds)]: Number of milliseconds between two consecutive heartbeat checks. The default is “800”.

- [Heartbeat timeout (seconds)]: Number of seconds for the heartbeat timeout. The default is “1”.

- [Heartbeat retry]: Number of retries for heartbeat monitoring, before failover occurs. The default is “2”.

- [Heartbeat error action]: Operation when a heartbeat abnormality is detected. The default is “Fallback”.

When using FUJITSU Enterprise Postgres 10, 11 and 12 instances created with previous versions, the instances will be in compatibility mode, and the “Fallback” is preselected and cannot be changed in the [Heartbeat error action] for Mirroring Controller setup.

When setting up Mirroring Controller for FUJITSU Enterprise Postgres 9.5 and 9.6 instances, the [Heartbeat error action] is not supported and therefore is not displayed.
When the [Heartbeat error action] is set to "Arbitration", the following extra items are displayed:

- [Arbitration network IP address]: IP address of the arbitration network.
- [Mirroring Controller Arbitration port]: Port number of Mirroring Controller for communicating with the arbitration server.

The [Arbitration server configuration] section is also displayed with the following items. The [Arbitration server configuration] will not be auto filled.

- [Location]: Location of the arbitration server. "Local" or "Remote" can be selected depending on your configuration.

  If the arbitration server and WebAdmin server are located on the same server, you can select "Local" and the following items are displayed:

  - [Arbitration management directory]: Directory where the arbitration server configuration files will be stored.
  - [Arbitration server host or IP address]: Host name or IP address of the arbitration server.
  - [Arbitration process port]: Port number for the arbitration process.
  - [Fencing command]: Full path of the fencing command that fences a database server when an abnormality is detected.

  If "Remote" is set for the item, the items below are displayed in addition to the above items.

  - In the [Arbitration server configuration] section, [Operating system credential] is displayed where you can enter the following information:
    - [User name]: User name to access the arbitration server.
    - [Password]: Password to access the arbitration server.

  - In the [Remote WebAdmin for Arbitration server] section, the following items are displayed:
    - [Remote WebAdmin address]: IP address of the remote WebAdmin installed on the arbitration server.
    - [Remote WebAdmin port]: Port number for the WebAdmin installed on the arbitration server.

When the [Heartbeat error action] is set to "Command", the following extra items are displayed:

- [Arbitration command]: Full path of the arbitration command to be executed when an abnormality is detected.
- [Fencing command]: Full path of the fencing command that fences a database server when an abnormality is detected.

4. Click to set up Mirroring Controller.
5. Upon successful completion, Mirroring Controller will be started on master and standby instances.

In the [Instances] tab, select standby instance. The page below is displayed, in which you can check the Mirroring Controller status. In the example below, standby instance “inst1s” is used.

After the Mirroring Controller has been set up, ([Edit Mirroring Controller] button) and ([Mirroring Controller Configuration] button) are available. These buttons are displayed only when FUJITSU Enterprise Postgres 10 or later instances are created with FUJITSU Enterprise Postgres WebAdmin 13.

For FUJITSU Enterprise Postgres 9.5 and 9.6 instances, the [Heartbeat error action] will not be displayed.

When the [Heartbeat error action] is "Arbitration", the following information is displayed: whether the arbitration status is "online" or "offline", the arbitration server IP address and the arbitration process port.

Note

Operating system credential (User name, Password) should not contain hazardous characters. Refer to "Appendix F WebAdmin Disallow User Inputs Containing Hazardous Characters".

5.2 Edit Mirroring Controller Setup

Settings made in “5.1 Mirroring Controller Setup” can be updated in either the master instance or a standby instance using WebAdmin. Perform the following procedure to edit Mirroring Controller configuration:

1. In the [Instances] tab, select the instance for which the Mirroring Controller configuration is to be edited.
2. Click ([Edit Mirroring Controller] button).
3. Enter the information for the Mirroring Controller to be updated. Refer to "5.1 Mirroring Controller Setup".
4. Click ([Mirroring Controller Configuration] button) to update the Mirroring Controller.
5. Upon successful completion, Mirroring Controller will be started on master and standby instances.

Editing and saving the [Edit Mirroring Controller] page will reset all other settings that are not listed on this page to default values.
5.3 Mirroring Controller Configuration

The information related to Mirroring Controller monitoring and control (refer to "A.4.1 Server Configuration File for the Database Servers") and the information related to arbitration and control of the Mirroring Controller arbitration process (refer to "A.4.2 Arbitration Configuration File") can be set using WebAdmin. You can view and update the configuration on either the master instance or the standby instance.

Perform the following procedure:

1. In the [Instances] tab, select the instance for the Mirroring Controller configuration you want to view.
2. Click to view the Mirroring Controller configuration.
3. Click to show the editing page for the Mirroring Controller configuration. The Mirroring Controller configurations defined during [Mirroring Controller Setup] are read-only on this page. Refer to "5.1 Mirroring Controller Setup".

Additionally, refer to the "Appendix A Parameters" for information about the settings and the corresponding parameter names.

The items common to all [Heartbeat error action] are:

- Target DB
- Core file path
- Remote call timeout (milliseconds)
- Agent alive timeout (seconds)
- DB instance check interval (milliseconds)
- DB instance check timeout (milliseconds)
- DB instance check retry
- DB instance timeout action
- Disk check interval (milliseconds)
- Disk check retry
- Tablespace directory error action
- Post-switch command
- Post-promote command
  (Post-promote command is replaced in FUJITSU Enterprise Postgres 12. The Post-promote command is still valid and will be displayed when it is used in the server configuration file of Mirroring Controller.)
- Post-attach command
- Pre-detach command
- State transition command timeout (seconds)
- Check synchronous standby names validation

When the [Heartbeat error action] is set to "Arbitration", the following extra items are displayed:

- Arbitration timeout (seconds)
- Arbiter alive interval (milliseconds)
- Arbiter alive retry
- Arbiter alive timeout (seconds)
- Arbiter connect interval (milliseconds)
- Arbiter connect timeout (seconds)
- Fencing command
When the [Heartbeat error action] is set to "Arbitration", the [Arbitration server configuration] section is displayed with the following items:

- Core file path
- Fencing command timeout (seconds)
- Heartbeat interval (milliseconds)
- Heartbeat timeout (seconds)
- Heartbeat retry

When the [Heartbeat error action] is set to "Command", the following extra items are available:

- Fencing command timeout (seconds)
- Arbitration command timeout (seconds)
- Shutdown detached synchronous standby

When the [Heartbeat error action] is set to "Message", the following extra items are available:

- Fencing command
- Fencing command timeout (seconds)

In addition, the following configurations are provided:

- DB instance JDBC connection SSL parameters
- DB instance libpq connection SSL parameters

4. Click to update the Mirroring Controller configurations.

5.4 Stopping Mirroring Controller

Mirroring Controller can be stopped either in master instance or in standby instance using WebAdmin.

Perform the following procedure to stop Mirroring Controller.

1. In the [Instances] tab, select the instance where to stop Mirroring Controller.

2. Click .

3. In the confirmation dialog box, click [Yes].

Mirroring Controller will be stopped on the selected instance. The Mirroring Controller status will be updated, and a confirmation message entry will be displayed in the [Message] section.

5.5 Starting Mirroring Controller

Mirroring Controller can be started either in master instance or in standby instance using WebAdmin.

Perform the following procedure to start Mirroring Controller.

1. In the [Instances] tab, select the instance where to start Mirroring Controller.
2. Click

3. In the confirmation dialog box, select the desired failover mode, and then click [Yes].

Mirroring Controller will be started on the selected instance. The Mirroring Controller status will be updated, and a confirmation message entry will be displayed in the [Message] section.

## 5.6 Disabling Failover Mode

Disabling failover mode in Mirroring Controller disables automatic switch/disconnection between master and standby instances.

Perform the following procedure to disable failover mode.

1. In the [Instances] tab, select the instance.

2. Click

3. In the confirmation dialog box, click [Yes].

Failover mode will be disabled in Mirroring Controller. The Mirroring Controller status will be updated and a confirmation message entry will be displayed in the [Message] section.

## 5.7 Enabling Failover Mode

Enabling failover mode in Mirroring Controller enables automatic switch/disconnection between master and standby instances.

Perform the following procedure to enable failover.

1. In the [Instances] tab, select the instance.

2. Click

3. In the confirmation dialog box, click [Yes].

Failover mode will be enabled in Mirroring Controller. The Mirroring Controller status will be updated and a confirmation message entry will be displayed in the [Message] section.

## 5.8 Deleting Mirroring Controller Setup

Deleting Mirroring Controller setup removes its setup from master and standby instances.

1. In the [Instances] tab, select the instance.

2. Click

3. In the confirmation dialog box, click [Yes].

Mirroring Controller setup will be removed from the cluster. The cluster status will be updated and a confirmation message entry will be displayed in the [Message] section.

For the instances in FUJITSU Enterprise Postgres 12 or later, WebAdmin does not delete the Mirroring Controller management directory and the configuration files.

## 5.9 Status Update after Failover

When Mirroring Controller performs a failover, standby instance will be promoted to standalone instance. The Mirroring Controller setup will be removed from both standby and master instances.

The following scenario describes one of the ways in which failover can be triggered, and the results achieved by the use of Mirroring Controller in WebAdmin.

1. In the [Instances] tab, select the master instance "inst1".

2. Click
3. In the confirmation dialog box, the warning "This instance is being monitored by Mirroring Controller. Stopping the instance may result in cluster failover." is displayed.

4. Choose the stop mode and click [Yes].

   In the server, the following takes place:
   a. The master instance is stopped.
   b. Failover is triggered in Mirroring Controller.
   c. The Mirroring Controller setup is removed from both master and standby instances
   d. Standby instance is promoted to standalone.

5. When the instance is refreshed in WebAdmin, the latest status of the instances will be displayed.

---

**Note**

When failover is performed, the Mirroring Controller setup is removed from both master and standby instances. Therefore, to manage the Mirroring Controller using WebAdmin again, create the standby instance and set up Mirroring Controller.

Refer to "Creating a Standby Instance" in the Operation Guide for details.

Refer to "5.1 Mirroring Controller Setup" for details.

---

**5.10 Action Required when an Error Occurs in the Combined Admin Network and Log Transfer Network**

Communication errors may temporarily occur in the network used as the admin network and log transfer network due to reasons such as high load on the server or insufficient system resources. Because of this, there is a risk of causing a split-brain situation by mistake even though the server has no issues.

Split brain is a phenomenon in which both servers temporarily operate as primary servers, causing data updates to be performed on both servers.

**How to detect split brain using WebAdmin**

If the conditions below are met, split brain may occur. Refer to "Split-brain detection method" and "How to recover from a split-brain" in "Appendix D Notes on Performing Automatic Degradation Immediately after a Heartbeat Abnormality" and take the actions described.

1. A standby instance is selected in the [Instances] tab, and
2. "Standalone" is displayed in [Instance type], and
3. A master instance is selected in the [Instances] tab, and
4. "Standalone" is displayed in [Instance type].

---

**Note**

The admin network is important because Mirroring Controllers use it to confirm the status of each server.

The log transfer network is also important to maintain the data freshness.

Therefore, use network configurations resistant to faults for these networks by using the network redundancy channel bonding feature provided by the operating system or network driver vendor.
5.11 Performing Automatic Degradation Using the Arbitration Server

If database multiplexing is performed using WebAdmin, it is also possible to perform automatic degradation using the arbitration server. In such cases, it is necessary to perform tasks on the database server and the arbitration server after setting up Mirroring Controller in WebAdmin.

Tasks on the arbitration server

Perform setup of the arbitration server using Mirroring Controller commands.

1. Set up the arbitration server.

   Refer to "2.3 Setting Up the Arbitration Server" in "Chapter 2 Setting Up Database Multiplexing Mode" for information on how to set up the arbitration server.

Tasks on the database server

Change some of the settings after setting up Mirroring Controller in WebAdmin.

1. Set up Mirroring Controller in WebAdmin.

   Refer to "5.1 Mirroring Controller Setup" for details.

2. Use WebAdmin to stop Mirroring Controller on the master and standby instances.

   Refer to "5.4 Stopping Mirroring Controller" for details.

3. Edit the network configuration file of the master and standby instances, and add the arbitration server information.

   The network configuration file is network.conf, which exists in the Mirroring Controller management directory specified during Mirroring Controller setup. Refer to "A.3 Network Configuration File" for details.

   A definition example of network.conf is shown below.

   Example:
   The port number of the database server to be used as the arbitration network is set to "27541". The ID of the server of the Mirroring Controller arbitration process is set to "arbiter", and its port number is set to "27541".

   ```
   dbsvm27500 192.0.2.100,192.0.3.100 27540,27541 server
dbsvs27500 192.0.2.110,192.0.3.110 27540,27541 server
arbiter 192.0.3.120 27541 arbiter
   ``

   - Ensure that the port numbers set for the database server and the arbitration server do not conflict with other software. In addition, do not configure the same segment for the admin network and the arbitration network.

   - If the server type is "server", two IP addresses or host names, and two port numbers need to be specified in the following order:
     - IP address or host name of the database server used as the admin network
     - IP address or host name of the database server used as the arbitration network
     - Port number of the database server used as the admin network
     - Port number of the database server used as the arbitration network

   - If the server type is "arbiter", specify the IP address or host name set for the my_address parameter and the port number set for the port parameter in arbitration.conf of the arbitration server.

   - WebAdmin also support editing mirroring controller configuration via Use WebAdmin to edit Mirroring Controller configurations.

   Refer to "5.2 Edit Mirroring Controller Setup" for details.
4. Edit the server configuration file of the master and standby instances, and add the parameters required for automatic degradation using the arbitration server.

The server configuration file is `instanceName.conf` or `instancePort.conf`, which exists in the Mirroring Controller management directory specified during Mirroring Controller setup.

To perform automatic degradation using the arbitration server, set the heartbeat_error_action parameter to "arbitration". Refer to "A.4.1 Server Configuration File for the Database Servers" for information on other parameters.

5. Use WebAdmin to start Mirroring Controller on the master and standby instances.

Refer to "5.5 Starting Mirroring Controller" for details.

Common tasks

1. Use the Mirroring Controller command to check the connection status from the database server or the arbitration server.

Refer to "2.8 Checking the Connection Status" for information on how to check the connection status.
## Appendix A Parameters

This appendix describes the configuration files and parameters required by the database multiplexing mode.

See

Refer to "Server Configuration" in the PostgreSQL Documentation for information on the postgresql.conf file.

### A.1 Parameters Set on the Primary Server

The content for the parameters set in the postgresql.conf file of the primary server is shown in the table below.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value set</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>wal_level</td>
<td>replica or logical</td>
<td>Specify the output level for the transaction log. Specify &quot;logical&quot; when logical decoding is also to be used.</td>
</tr>
<tr>
<td>max_wal_senders</td>
<td>2 or more</td>
<td>Specify &quot;2&quot; when building a Mirroring Controller cluster system. When additionally connecting asynchronous standby servers to the cluster system, add the number of simultaneous connections from these standby servers.</td>
</tr>
<tr>
<td>synchronous_standby_names</td>
<td>'standbyServerName'</td>
<td>Use single quotation marks (') to enclose the name that will identify the standby server. Any name can be specified. Do not change this parameter while Mirroring Controller is running. Do not specify multiple names to this parameter as the Mirroring Controller can manage only one standby server.</td>
</tr>
<tr>
<td>hot_standby</td>
<td>on</td>
<td>Specify whether queries can be run on the standby server. Specify this to execute reference jobs on the standby server.</td>
</tr>
<tr>
<td>wal_keep_size</td>
<td>WAL save size (megabytes)</td>
<td>If a delay exceeding the value set in this parameter occurs, the WAL segment required later by the primary server may be deleted. Additionally, if you stop a standby server (for maintenance, for example), consider the stop time and set a value that will not cause the WAL segment to be deleted. Refer to &quot;Estimating Transaction Log Space Requirements&quot; in the Installation and Setup Guide for Server for information on estimating the WAL save size.</td>
</tr>
<tr>
<td>wal_log_hints</td>
<td>on</td>
<td>When using the pg_rewind command to recover a standby server, specify this parameter or enable checksums when executing the initdb command.</td>
</tr>
<tr>
<td>wal_sender_timeout</td>
<td>Timeout (milliseconds)</td>
<td>Specify the time period after which it is determined that the receiver process (walreceiver) of the transaction log is in an abnormal state on the primary server. The specified value must be larger than the value set for the wal_receiver_status_interval parameter set in the postgresql.conf file of the standby server.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Value set</td>
<td>Explanation</td>
</tr>
<tr>
<td>------------------------------</td>
<td>----------------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>wal_receiver_timeout</td>
<td>Timeout (milliseconds)</td>
<td>Specify the time period after which it is determined that an error has occurred when the transaction log was received on the standby server. By aligning this value with the value for the database process heartbeat monitoring time, you can unify the time after which it is determined that an error has occurred.</td>
</tr>
<tr>
<td>archive_mode</td>
<td>on</td>
<td>Specify the archive log mode.</td>
</tr>
<tr>
<td>archive_command</td>
<td><code>cmd /c &quot;&quot;installDir\bin\pgx_walcopy.cmd&quot; &quot;%p&quot; &quot;backupDataStorageDestinationDir \archived_wal\%f&quot;&quot;</code></td>
<td>Specify the command and storage destination to save the transaction log.</td>
</tr>
<tr>
<td>backup_destination</td>
<td>Backup data storage destination directory</td>
<td>Specify the name of directory where to store the backup data. Set the permissions so that only the instance administrator user can access the specified directory. Specify the same full path on all servers, so that the backup data of other servers can be used to perform recovery.</td>
</tr>
<tr>
<td>listen_addresses</td>
<td>Primary server IP address, host name, or &quot;*&quot;</td>
<td>Specify the IP address or host name of the primary server. Specify the IP address or corresponding host name that will be used to connect to the log transfer network. The content specified is also used to allow connections from client applications. To receive the connection and the transaction log from any client or standby server, specify &quot;*&quot;. Refer to &quot;Connections and Authentication&quot; in the PostgreSQL Documentation for details.</td>
</tr>
<tr>
<td>max_connections</td>
<td>Number of simultaneous client connections to the instance + superuser_reserved_connections value</td>
<td>The value specified is also used to restrict the number of connections from client applications and the number of connections for the management of instances. Refer to &quot;When an Instance was Created with the initdb Command&quot; in the Installation and Setup Guide for Server, and &quot;Connections and Authentication&quot; in the PostgreSQL Documentation, for details.</td>
</tr>
<tr>
<td>superuser_reserved_connections</td>
<td>Add the number of simultaneous executions of mc_ctl status (*1) + 2</td>
<td>Specify the number of connections reserved for connections from database superusers. Add the number of connections from Mirroring Controller processes. Also reflect the added value in the max_connections parameter.</td>
</tr>
<tr>
<td>restart_after_crash</td>
<td>off</td>
<td>If &quot;on&quot; is specified, or the default value is used for this parameter, behavior equivalent to restarting FUJITSU Enterprise Postgres, including crash recovery, will be performed when some server processes end abnormally. However, when database multiplexing monitoring is used, a failover will occur after an error is detected when some server processes end abnormally, and the restart of those server processes is forcibly stopped. Specify &quot;off&quot; to</td>
</tr>
</tbody>
</table>
### A.2 Parameters Set on the Standby Server

This section explains the content of the file and parameters set on the standby server. After editing `postgresql.conf` file, start the instance.

The content for the parameters specified in `postgresql.conf` file is shown in the table below.

**Table A.2 postgresql.conf file**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value set</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>wal_level</code></td>
<td>replica or logical</td>
<td>Specify the output level for the transaction log. Specify &quot;logical&quot; when logical decoding is also to be used.</td>
</tr>
<tr>
<td><code>max_wal_senders</code></td>
<td>2 or more</td>
<td>Specify &quot;2&quot; when building a Mirroring Controller cluster system. When additionally connecting asynchronous standby servers to the cluster system, add the number of simultaneous connections from these standby servers.</td>
</tr>
<tr>
<td><code>synchronous_standby_names</code></td>
<td>'primaryServerName'</td>
<td>Use single quotation marks (') to enclose the name that will identify the primary server. Any name can be specified. This name will be required to rebuild the original primary server as the new standby server after the primary server was switched. Do not change this parameter while Mirroring Controller is running. Do not specify multiple names to this parameter as the Mirroring Controller can manage only one standby server.</td>
</tr>
<tr>
<td><code>hot_standby</code></td>
<td>on</td>
<td>Specify whether queries can be run on the standby server. Specify this to execute reference type jobs on the standby server.</td>
</tr>
</tbody>
</table>

*1: Number of simultaneous executions of the `mc_ctl` command in the status mode.
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value set</th>
<th>Explanation</th>
</tr>
</thead>
</table>
| wal_keep_size         | WAL save size (megabytes)                     | If a delay exceeding the value set in this parameter occurs, the WAL segment required later by the primary server may be deleted.  
|                       |                                               | Additionally, if you stop a standby server (for maintenance, for example), consider the stop time and set a value that will not cause the WAL segment to be deleted.  
| wal_log_hints         | on                                            | When using the pg_rewind command to recover a standby server, specify this parameter or enable checksums when executing the initdb command.                                                               |
| wal_sender_timeout    | Timeout (milliseconds)                        | Specify the time period after which it is determined that the receiver process (walreceiver) of the transaction log is in an abnormal state on the primary server.  
|                       |                                               | The specified value must be larger than the value set for the wal_receiver_status_interval parameter set in the postgresql.conf file of the standby server.  
|                       |                                               | By aligning this value with the value for the database process heartbeat monitoring time, you can unify the time after which it is determined that an error has occurred. |
| wal_receiver_timeout  | Timeout (milliseconds)                        | Specify the time period after which it is determined that an error has occurred when the transaction log was received on the standby server.  
|                       |                                               | By aligning this value with the value for the database process heartbeat monitoring time, you can unify the time after which it is determined that an error has occurred. |
| backup_destination    | Backup data storage destination directory     | Specify the name of the backup data storage directory.  
|                       |                                               | Set the permissions so that only the instance administrator user can access the specified directory.  
|                       |                                               | Specify the same full path on all servers so that the backup data of other servers can be used to perform recovery.  
| archive_mode          | on                                            | Specify the archive log mode.                                                                                                                                                                           |
| archive_command       | ‘cmd /c ““installDir\bin\  
|                       | \pgx_walcopy.cmd” ”%p”  
|                       | ”backupDataStorageDestinationD  
|                       | ir\archived_wal\%f””             | Specify the command and storage destination to save the transaction log.                                                                                                                                  |
| listen_addresses      | Standby server IP address, host name, or “*” | Specify the IP address or host name of the standby server. Specify the IP address or corresponding host name that will be used to connect to the log transfer network.  
|                       |                                               | The content specified is also used to allow connections from client applications.  
<p>|                       |                                               | To receive the connection and the transaction log from any client or standby server, specify “*”:                                                                                                         |</p>
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value set</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>max_connections</td>
<td>Number of simultaneous client connections to the instance + superuser_reserved_connections value</td>
<td>The value specified is also used to restrict the number of connections from client applications and the number of connections for the management of instances. Refer to &quot;When an Instance was Created with the initdb Command&quot; in the Installation and Setup Guide for Server, and &quot;Connections and Authentication&quot; in the PostgreSQL Documentation, for details.</td>
</tr>
<tr>
<td>superuser_reserved_connections</td>
<td>Add the number of simultaneous executions of mc_ctl status (+1) + 2</td>
<td>Specify the number of connections reserved for connections from database superusers. Add the number of connections from Mirroring Controller processes. Also reflect the added value in the max_connections parameter.</td>
</tr>
<tr>
<td>restart_after_crash</td>
<td>off</td>
<td>If &quot;on&quot; is specified, or the default value is used for this parameter, behavior equivalent to restarting FUJITSU Enterprise Postgres, including crash recovery, will be performed when some server processes end abnormally. However, when database multiplexing monitoring is used, a failover will occur after an error is detected when some server processes end abnormally, and the restart of those server processes is forcibly stopped. Specify &quot;off&quot; to prevent behavior such as this from occurring for no apparent reason.</td>
</tr>
<tr>
<td>synchronous_commit</td>
<td>on or remote_apply</td>
<td>Specify up to what position WAL send is to be performed before transaction commit processing returns a normal termination response to a client. The recommended value is &quot;on&quot; or &quot;remote_apply&quot; to prevent data loss caused by operating system or server down immediately after a switch or switch.</td>
</tr>
<tr>
<td>primary_conninfo</td>
<td>'streamingReplication ConnectionDestinationInfo'</td>
<td>Use single quotation marks (') to enclose the connection destination information of the streaming replication. The default value of this parameter is automatically set to postgresql.auto.conf in the procedure to run pg_basebackup for instance setup.</td>
</tr>
<tr>
<td>recovery_target_timeline</td>
<td>latest</td>
<td>Specify &quot;latest&quot; so that the new standby server (original primary server) will follow the new primary server when a switch occurs. This parameter is required when the original primary server is incorporated as a new standby server after the primary server is switched.</td>
</tr>
</tbody>
</table>

### A.3 Network Configuration File

This section explains the network configuration file (network.conf) to be defined individually for the database servers and the arbitration server. Define the same content on the primary server and standby server.

For database multiplexing mode, define the network configuration for the following in network.conf.

- Integration between Mirroring Controller processes
- Integration between a Mirroring Controller process and the Mirroring Controller arbitration process
Items to be defined in network.conf

Format:

```
serverIdentifier hostName[,hostName] portNum[,portNum] [serverType]
Or,
serverIdentifier ipAddr[,ipAddr] portNum[,portNum] [serverType]
```

Specify the server identifier, IP address or host name, port number, and server type, using a space as the delimiter.

The items are explained in the table below.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>serverIdentifier</code></td>
<td>Specify any identifier for the server. The maximum length is 64 bytes. Use ASCII characters excluding spaces and number signs (#) to specify this parameter.</td>
</tr>
<tr>
<td><code>ipAddrOrHostName</code></td>
<td>Specify the IP address or its corresponding host name that will connect to the admin network that performs communication between the database servers, and to the arbitration network that performs communication between a database server and the arbitration server. When specifying two IP addresses or host names delimited by a comma, do not insert a space after the comma. Use ASCII characters excluding spaces to specify the host name.</td>
</tr>
<tr>
<td><code>portNum</code></td>
<td>A port number cannot be specified if it exceeds the range 0 to 65535. Ensure that the port number does not conflict with other software. Do not specify an ephemeral port that may temporarily be assigned by another program. Note that the value specified in this parameter must also be set in the services file. When specifying two port numbers delimited by a comma, do not insert a space after the comma.</td>
</tr>
<tr>
<td><code>serverType</code></td>
<td>Specify &quot;server&quot; for a database server (&quot;server&quot; can be omitted), or &quot;arbiter&quot; for the arbitration server.</td>
</tr>
</tbody>
</table>

Content to be defined on the database servers

This section explains the network.conf content to be defined on the database servers.

The content to be defined depends on the operation settings at the time a heartbeat abnormality is detected.

When automatic degradation by the arbitration server is selected

- Specify definitions related to the admin network and arbitration network.
- Specify the IP address or host name and port number according to the server type (database server or arbitration server) as shown in the table below.

<table>
<thead>
<tr>
<th>Server type</th>
<th>IP address or host name</th>
<th>Port number</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>First</td>
<td>Second</td>
</tr>
<tr>
<td>server</td>
<td>IP address or host name used as the admin network</td>
<td>Port number used as the admin network</td>
</tr>
<tr>
<td></td>
<td>IP address or host name used as the arbitration network (*1)</td>
<td>Port number used as the arbitration network (*1)</td>
</tr>
<tr>
<td>arbiter</td>
<td>IP address or host name of the arbitration server Specify the same value as that specified in the my_address parameter of arbitration.conf on the arbitration server.</td>
<td>Port number on the arbitration server Specify the same value as that specified in the port parameter of arbitration.conf on the arbitration server.</td>
</tr>
</tbody>
</table>
*1: This value can be omitted from definitions not related to the local server. If it is omitted, network.conf must be created on both the primary server and standby server.

Example)

IPv4

```
server1 192.0.2.100,192.0.3.100 27540,27541 server
server2 192.0.2.110,192.0.3.110 27540,27541 server
arbiter 192.0.3.120 27541 arbiter
```

IPv6

```
```

When operation other than automatic degradation by the arbitration server is selected

- Specify definitions related to the admin network.
- Define the same content on the primary server and standby server.
- Define lines for database servers only.
- Specify only one IP address or host name and port number.

<table>
<thead>
<tr>
<th>IP address or host name to be used as the admin network</th>
<th>Port number used as the admin network</th>
</tr>
</thead>
<tbody>
<tr>
<td>Not required</td>
<td>Not required</td>
</tr>
</tbody>
</table>

Example)

The literal space represents a space.

IPv4

```
server1 192.0.2.100 27540
server2 192.0.2.110 27540
```

IPv6

```
```

Content to be defined on the arbitration server

This section explains the network.conf content to be defined on the arbitration server.

- Specify definitions related to the arbitration network.
- Define lines for database servers only.
- For the IP address or host name, specify the same value as the second IP address or host name specified in the database server line in network.conf of the database server.
For the port number, specify the same value as the second port number specified in the database server line in network.conf of the database server.

**Example**

The literal space represents a space.

IPv4

```
server1 192.0.3.100 27541
server2 192.0.3.110 27541
```

IPv6

```
server1 2001:258:8404:1217:250:56ff:fea8:559f 27541
```

**Relationship between network-related definitions**

Refer to the diagram below for the relationship between the host names and IP addresses or port numbers specified in the network configuration file (network.conf) and arbitration configuration file (arbitration.conf).

---

**A.4 Server Configuration File**

**A.4.1 Server Configuration File for the Database Servers**

Define the information related to Mirroring Controller monitoring and control in the serverIdentifier.conf file. The maximum length of the server identifier is 64 bytes. Use ASCII characters excluding spaces to specify this parameter.

If the primary server and standby server environments are different, define content that is different, according to the environment.
### Table A.4 serverIdentifier.conf file

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value set</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>db_instance</td>
<td>'dataStorageDestinationDir'</td>
<td>Use halfwidth single quotation marks (’) to enclose the data storage destination directory that will identify the monitoring target instance. Use ASCII characters, and specify &quot;&quot; as the path delimiter.</td>
</tr>
<tr>
<td></td>
<td>[Example]</td>
<td>db_instance = 'D:\database1\inst1'</td>
</tr>
<tr>
<td>target_db</td>
<td>postgres or template1</td>
<td>Specify the name of the database to be connected to the database instance. The default is &quot;postgres&quot;.</td>
</tr>
<tr>
<td>db_instance_username</td>
<td>'usernameToConnectToDbInstance'</td>
<td>Specify the username to connect to the database instance. Use ASCII characters to specify this parameter. Specify this parameter if the database administrator user is different from the operating system user who starts Mirroring Controller. Enclose the username of the database superuser in single quotation marks (’). The maximum length of the username is 63 bytes. The default is the operating system user who starts Mirroring Controller.</td>
</tr>
<tr>
<td>db_instance_password</td>
<td>'passwordOfInstanceAdminUser'</td>
<td>Specify the password used when Mirroring Controller connects to a database instance, enclosed in single quotation marks (’). Use ASCII characters to specify this parameter. If password authentication is performed, you must specify this parameter in the settings used when Mirroring Controller connects to a database instance. If you specify this parameter when password authentication is not performed, the parameter will be ignored. If the specified value of this parameter includes ‘ or , write ‘ or , respectively.</td>
</tr>
<tr>
<td>enable_hash_in_password</td>
<td>on or off</td>
<td>Specify on to treat the # in the db_instance_password specification as a password character, or off to treat it as a comment. The default is &quot;off&quot;.</td>
</tr>
<tr>
<td>core_file_path</td>
<td>'coreFileOutputDir'</td>
<td>Specify the directory to which the core file is to be output, enclosed in single quotation marks (’). Use ASCII characters, and specify &quot;&quot; as the path delimiter. If this parameter is omitted, it will be assumed that the Mirroring Controller management directory was specified.</td>
</tr>
<tr>
<td>db_instance_service_name</td>
<td>'registeredServiceNameOfFujitsuEnterprisePostgresInstance'</td>
<td>Specify the registered service name of the FUJITSU Enterprise Postgres instance in the Windows service. Use ASCII characters to specify this parameter, enclosed in single quotation marks (’).</td>
</tr>
<tr>
<td>mc_service_name</td>
<td>'registeredServiceNameOfMirroringController'</td>
<td>Specify the Mirroring Controller service name registered in the Windows service. Use ASCII characters excluding forward slash (/) and backslash () to specify this parameter, enclosed in single quotation marks (’).</td>
</tr>
<tr>
<td>Parameter</td>
<td>Value set</td>
<td>Explanation</td>
</tr>
<tr>
<td>---------------------------------</td>
<td>---------------------------------------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
</tbody>
</table>
| event_source(*1)                | 'eventSourceName'                                                         | Specify the event source name to be used to identify the Mirroring Controller message in the event log, enclosed in single quotation marks ('). Use ASCII characters to specify this parameter.  
The maximum length of the event source name is 255 bytes.  
The default is 'MirroringControllerOpen'. |
| remote_call_timeout             | Admin communication timeout                                               | Specify the timeout value (milliseconds) of the Mirroring Controller agent process for communication between servers.  
Specify a value between 0 and 2147483647 to be less than the operation system TCP connection timeout (*2).  
The value 0 indicates that there is no timeout limit.  
The default is 70000 milliseconds (70 seconds). |
| agent_alive_timeout             | Timeout for Mirroring Controller process heartbeat monitoring (seconds)   | If there is no response for at least the number of seconds specified, the Mirroring Controller process is restarted.  
Specify 0 or a value between 2 and 2147483647. The value 0 indicates that there is no timeout limit.  
The default is 0 seconds. |
| heartbeat_error_action          | Operation when a heartbeat abnormality is detected using operating system or server heartbeat monitoring | arbitration: Perform automatic degradation using the arbitration server.  
command: Call a user exit to determine degradation, and perform automatic degradation if required.  
message: Notify messages.  
fallback: Perform automatic degradation unconditionally.  
The default is "arbitration".  
Set the same value on the primary server and standby server. |
| heartbeat_interval              | Interval time for abnormality monitoring during heartbeat monitoring of the operating system or server (milliseconds) | Abnormality monitoring of the operating system or server is performed at the interval specified in heartbeat_interval.  
If an error is detected, operation will conform to the value specified for heartbeat_error_action. If "arbitration" is specified in heartbeat_error_action, the error detection time during monitoring of the operating system or server becomes longer than when the arbitration server is not used, by up to the value specified for arbitration_timeout.  
Specify a value between 1 and 2147483647.  
The specified value is used as the default for db_instance_check_interval and disk_check_interval.  
The default is 800 milliseconds. |
<p>| heartbeat_timeout               | Timeout for abnormality monitoring during heartbeat monitoring of the operating system or server (seconds) | If there is no response for at least the number of seconds specified, it will be assumed that an error has occurred that requires the primary server to be switched, or the standby server to be disconnected. |</p>
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value set</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>heartbeat_retry</td>
<td>Number of retries for abnormality monitoring during heartbeat monitoring of the operating system or server (number of times)</td>
<td>Specify the number of retries to be performed when an error has been detected that requires the primary server to be switched, or the standby server to be disconnected. If an error is detected in succession more than the specified number of times, switch or disconnection will be performed. If an error is detected, operation will conform to the value specified for heartbeat_error_action. If “arbitration” is specified in heartbeat_error_action, the error detection time during monitoring of the operating system or server becomes longer than when the arbitration server is not used, by up to the value specified for arbitration_timeout. Specify a value between 0 and 2147483647. The specified value is used as the default for db_instance_check_retry and disk_check_retry. The default is 2 times.</td>
</tr>
<tr>
<td>db_instance_check_interval</td>
<td>Database process heartbeat monitoring interval (milliseconds)</td>
<td>Heartbeat monitoring of the database process is performed at the interval specified in db_instance_check_interval. This parameter setting is also used for abnormality monitoring of streaming replication. Specify a value between 1 and 2147483647. The default is the value set for heartbeat_interval.</td>
</tr>
<tr>
<td>db_instance_check_timeout</td>
<td>Database process heartbeat monitoring timeout (seconds)</td>
<td>If there is no response for at least the number of seconds specified, it will be assumed that an error has occurred that requires the primary server to be switched, or the standby server to be disconnected. Specify a value between 1 and 2147483647. The default is the value set for heartbeat_timeout.</td>
</tr>
<tr>
<td>db_instance_check_retry</td>
<td>Number of retries for database process heartbeat monitoring (number of times)</td>
<td>Specify the number of retries to be performed when an error has been detected that requires the primary server to be switched, or the standby server to be disconnected. If an error is detected in succession more than the specified number of times, switch or disconnection will be performed. However, if it detects that the database process is down, it will immediately switch or disconnect regardless of the setting of this parameter. This parameter setting is also used for abnormality monitoring of streaming replication.</td>

</table>
| db_instance_timeout_action        | none, message, or failover                          | Specify the behavior for no-response monitoring of the instance.  
none: Do not perform no-response monitoring.  
message: Notify messages if an error is detected during no-response monitoring.  
failover: Perform automatic degradation if an error is detected during no-response monitoring.  
The default is "failover". |
| disk_check_interval               | Interval time for disk abnormality monitoring (milliseconds) | Abnormality monitoring of disk failure is performed at the interval (milliseconds) specified in disk_check_interval. If the file cannot be created, it will be assumed that an error has occurred that requires the primary server to be switched, or the standby server to be disconnected.  
Specify a value between 1 and 2147483647.  
The default is the value set for heartbeat_interval. |
| disk_check_retry                  | Number of retries for disk abnormality monitoring (number of times) | Specify the number of retries to be performed when an error has been detected that requires the primary server to be switched, or the standby server to be disconnected.  
If an error is detected in succession more than the specified number of times, switch or disconnection will be performed.  
Specify a value between 0 and 2147483647.  
The default number of retries is the value set for heartbeat_retry. |
| tablespace_directory_error_action | message or failover                                   | Specify the behavior to be implemented if an error is detected in the tablespace storage directory.  
message: Notify messages.  
failover: Perform automatic degradation.  
The default is "failover". |
| arbiter_alive_interval            | Interval time for monitoring connection to the Mirroring Controller arbitration process (milliseconds) | A heartbeat is sent to the Mirroring Controller arbitration process at the specified interval.  
Specify a value between 1 and 2147483647.  
The default is 16000 milliseconds.  
This parameter does not need to be set for operation that does not use the arbitration server. |
| arbiter_alive_timeout             | Timeout for monitoring connection to the Mirroring Controller arbitration process (seconds) | If the heartbeat does not respond within the specified number of seconds, the Mirroring Controller arbitration process is determined to have been disconnected, a message is output, and reconnection is attempted.  
Specify a value between 1 and 2147483647.  
The default is 20 seconds. |
<table>
<thead>
<tr>

<td>status_change_command_timeout</td>
<td>State transition command timeout (seconds)</td>
<td>Specify the timeout value of the post-switch command, post-attach command, and pre-detach command. If the command does not respond within the specified number of seconds, a signal (SIGTERM) is sent to the execution process of the status change command. Specify a timeout between 1 and 2147483647. The default is 20 seconds.</td>
</tr>
<tr>
<td>check_synchronous_standby_names_validation</td>
<td>on or off</td>
<td>Specify whether Mirroring Controller is to periodically check during operations whether the synchronous_standby_names parameter in postgresql.conf was changed by an incorrect user operation. However, it is not recommended to enable this parameter, because performing this check causes Mirroring Controller to use the CPU of the database server redundantly and execute SQL statements at high frequency. This parameter is compatible with operations in FUJITSU Enterprise Postgres 9.6 or earlier. The default is &quot;off&quot;.</td>
</tr>
<tr>
<td>db_instance_ext_pq_conninfo</td>
<td><code>libpqConnectionSSLParmToConnectToDbinstance</code></td>
<td>Specify, in key-value form, the connection parameter for libpq that Mirroring Controller adds when connecting to a database. The connection parameters you can specify are those related to SSL. Use ASCII characters to specify this parameter. The connection parameter specified in this parameter must also be specified in the db_instance_ext_jdbc_conninfo.</td>
</tr>
<tr>
<td>db_instance_ext_jdbc_conninfo</td>
<td><code>JDBCConnectionSSLParmToConnectToDbinstance</code></td>
<td>Specify, in URI form, the connection parameter for JDBC that Mirroring Controller adds when connecting to a database. The connection parameters you can specify are those related to SSL. Use ASCII characters to specify this parameter. The connection parameter specified in this parameter must also be specified in the db_instance_ext_pq_conninfo.</td>
</tr>
</tbody>
</table>
*1: By using an event source name that is similar to the specified event_source parameter of the postgresql.conf file, the Mirroring Controller output content can be referenced transparently, so log reference is easy.

*2: The operating system TCP connection timeout period is determined by the TCP global parameters initial RTO and maximum SYN retransmits. The remote_call_timeout parameter must be set to a value that is shorter than the timeout period for the operating system TCP connection timeout, so change either parameter as necessary.

The availability of some parameters depends on the value set for the heartbeat_error_action parameter that sets the operation to be performed if heartbeat monitoring of the operating system or server detects a heartbeat abnormality.

*1: Refer to "2.11.4 Tuning for Optimization of Degradation Using Abnormality Monitoring" for information on the tuning parameters for operating system or server abnormality monitoring when using an arbitration server.
Appendix B Supplementary Information on Building the Primary Server and Standby Server on the Same Server

The primary server and standby server can be pseudo-configured on the same server for system testing, for example. Out of consideration for performance and reliability, do not use this type of configuration for any other purposes. For this reason, do not use this type of configuration in a production environment.

Note that the setup and operations is the same as if the primary and standby servers are built on different servers.

This appendix provides supplementary information explaining how to configure the primary server and standby server on the same server.

Note

Even if automatic degradation by an arbitration server is set when the primary server and standby server are configured on the same server, there will be no effect of it.

B.1 Backup Data Storage Destination Directory

It is not a problem if the same backup data storage destination directory is used on the primary server and standby server.

B.2 Registering Service Names and Event Source Names in the Windows Service

Ensure that the following names of resources to be registered on the operating system by FUJITSU Enterprise Postgres and Mirroring Controller are not duplicated between the primary server and standby server:

- Service name registered in the Windows service
- Event source name

B.3 How to Execute the mc_ctl Command

When executing the mc_ctl command, specify the server identifier in the --local-server option in order to identify the operation destination server.

Below is an example of starting Mirroring Controller of the server "server1" defined in the network.conf file. For mc_ctl command operations using another mode, also specify the --local-server option.

Define two server identifiers for the same IP address with different port numbers in the network.conf file.

Example)

```
server1 192.0.2.100 27540
server2 192.0.2.100 27541
```

Ensure that the port numbers of both primary server and standby server do not conflict with any other software.

Enabling automatic switch/disconnection

Start Mirroring Controller of the server "server1":

Example)

```
> mc_ctl start -M D:\mcdir\inst1 --local-server server1
```

Stop Mirroring Controller of the server "server1":

Example)
Example)

> mc_ctl stop -M D:\mcdir\inst1 --local-server server1

Disabling automatic switch/disconnection

Start Mirroring Controller of the server "server1":

Example)

> mc_ctl start -M D:\mcdir\inst1 -F --local-server server1

Stop Mirroring Controller of the server "server1":

Example)

> mc_ctl stop -M D:\mcdir\inst1 --local-server server1

Note

To specify the mc_ctl command with register mode, for registering to the Windows service, and the mc_ctl command with unregister mode, for unregistering from the Windows service, add the --local-server option.
Appendix C User Commands

This appendix describes three categories of commands:

- Fencing command
- Arbitration command
- State transition commands

This appendix describes each category of user command.

C.1 Fencing Command

Format

The syntax for calling the fencing command from the Mirroring Controller process or the Mirroring Controller arbitration process is described below.

Fencing command of the database server

```
fencingCmd executionMode mcDegradationOper cmdServerId targetServerId primarycenter
```

Fencing command of the arbitration server

```
fencingCmd executionMode mcDegradationOper targetServerId
```

Input

Fencing command of the database server

Execution mode

- monitor: Detect issues via automatic monitoring of the Mirroring Controller process
- command: Mirroring Controller command execution (switch mode or detach mode of the mc_ctl command)

Degradation operation to be performed by Mirroring Controller

- switch: Switch
- detach: Disconnect

`cmdServerId`

ID of the database server that called the command

`targetServerId`

ID of the database server to be fenced

`primarycenter`

Fixed value

Fencing command of the arbitration server

Execution mode

- monitor: Detect issues via automatic monitoring of the Mirroring Controller process
- command: Mirroring Controller command execution (switch mode or detach mode of the mc_ctl command)

Degradation operation to be performed by Mirroring Controller

- switch: Switch
- detach: Disconnect

`targetServerId`

ID of the database server to be fenced
Output

Return value

0: Mirroring Controller will continue the degradation process.

Other than 0: Mirroring Controller will cancel the degradation process.

Description

Identifies the database server targeted for fencing based on the input server identifier, and implements the process that isolates it from the cluster system.

Notes

- The command is executed by the operating system user who started Mirroring Controller or the Mirroring Controller arbitration process. Therefore, if the command is to be executed by a specific operating system user, change the executing user of the command accordingly.

- The operating system user who started Mirroring Controller or the Mirroring Controller arbitration process must have execution privileges to the command. Otherwise, the degradation process will be canceled.

- From a security point of view, set the access privileges as necessary so that the fencing command is not overwriten and unauthorized operations are not performed by unintended operating system users.

- If the fencing command returns a value other than 0, Mirroring Controller will cancel the degradation process, so it is necessary for the user to check the status of the server, and switch or disconnect it manually.

- Before executing the fencing command, check if the server is already fenced, to avoid the command terminating abnormally.

- If the command times out, Mirroring Controller will stop the command, output an error message, and cancel the degradation process.

Information

The fencing command can be implemented by simply stopping the operating system or server. For example, if stopping the power for the database server, it is possible to use a utility to control the hardware control board in environments equipped with boards compatible with IPMI hardware standard.

Linux

Below is a sample script of a fencing command that powers off the database server using the IPMI tool.

Sample shell script

```
/installDir/share/mcarb_execute_fencing.sh.sample
```

Windows

Below is a sample script of a fencing command that powers off the database server using IPMIUTIL.

Sample shell script

```
installDir\share\mcarb_execute_fencing.bat.sample
```

C.2 Arbitration Command

Format

The syntax for calling the arbitration command from the Mirroring Controller process is described below.

```
arbitrationCmd cmdServerId targetServerId primarycenter
```
Input

**cmdServerId**
ID of the database server that called the command

**targetServerId**
ID of the database server to arbitrate

**primarycenter**
Fixed value

Output

Return value

- 0: The database server to arbitrate has an issue, and Mirroring Controller will continue the degradation process.
- Other than 0: The database server to arbitrate is normal, and Mirroring Controller will cancel the degradation process.

Description

Identifies the database server to arbitrate based on the input server identifier, and checks the status of the server.

Notes

- The command is executed by the operating system user who started Mirroring Controller.
- The operating system user who started Mirroring Controller must have execution privileges to the command. Otherwise, the command will not be called, and the degradation process will be canceled.
- If the command times out, Mirroring Controller will stop the command, output an error message, and cancel the degradation process.

### C.3 State Transition Commands

State transition commands include the three types of user commands below. Any of the commands can be implemented by Mirroring Controller in conjunction with database server status transitions.

- Post-switch command
- Pre-detach command
- Post-attach command

#### C.3.1 Post-switch Command

Format

The syntax for calling the post-switch command from the Mirroring Controller process is described below.

```
postswitchCmd serverIdentifier primarycenter
```

Input

**serverIdentifier**
ID of the database server (new primary server) that was switched

**primarycenter**
Fixed value

Output

Return value

None
Notes

- The command is executed by the operating system user who started Mirroring Controller.
- The operating system user who started Mirroring Controller must have execution privileges to the command. Otherwise, the command will not be called.
- If the command times out, Mirroring Controller will stop the command, output an error message, and cancel the process.

C.3.2 Pre-detach Command

Format

The syntax for calling the pre-detach command from the Mirroring Controller process is described below.

```
predetachCmd cmdServerId serverRole targetServerId primarycenter
```

Input

`cmdServerId`

ID of the database server that called the command

`serverRole`

Role of the database server that called the command

primary: Primary
standby: Standby

`targetServerId`

ID of the standby server to be disconnected from the cluster system

`primarycenter`

Fixed value

Output

Return value

None

Notes

- The command is executed by the operating system user who started Mirroring Controller.
- The operating system user who started Mirroring Controller must have execution privileges to the command. Otherwise, the command will not be called, however, Mirroring Controller will output an error message and continue the process.
- If the command times out, Mirroring Controller will stop the command, output an error message, and cancel the process.

C.3.3 Post-attach Command

Format

The syntax for calling the post-attach command from the Mirroring Controller process is described below.

```
postattachCmd cmdServerId serverRole targetServerId primarycenter
```

Input

`cmdServerId`

ID of the database server that called the command
Server role
   Role of the database server that called the command
   primary: Primary
   standby: Standby

`targetServerId`
   ID of the standby server to be attached to the cluster system

`primarycenter`
   Fixed value

Output
   Return value
     None

Notes
   - The command is executed by the operating system user who started Mirroring Controller.
   - The operating system user who started Mirroring Controller must have execution privileges to the command. Otherwise, the command will not be called.
   - If the command times out, Mirroring Controller will stop the command, output an error message, and cancel the process.
Appendix D  Notes on Performing Automatic Degradation Immediately after a Heartbeat Abnormality

The type of issue below occurs if automatic degradation is performed unconditionally after an issue is detected during heartbeat monitoring of an operating system or server, and heartbeat monitoring was not properly tuned.

- If the timeout time is too short

```
Database server 1 (primary server)  Database server 2 (standby server)

Mirroring Controller

Abnormality monitoring processing

FUJITSU Enterprise Postgres

Database

(1) Identified as no response due to the timeout time being too short (Identified as an error even if the primary server is in a sound state)

(2) Promoted to primary server

(3) A split-brain occurs (Data can be updated for both servers)

Mirroring Controller

Abnormality monitoring processing

Standby

Primary

FUJITSU Enterprise Postgres

Database
```

- 139 -
Notes on monitoring when the operating system or server crashes or is unresponsive

As illustrated in the diagram above, timeout is used to monitor whether the operating system or server crashes or is unresponsive. Therefore, if tuning has not been performed correctly, there is a risk of a split-brain mistakenly occurring even if the server is in a sound state.

Split-brain is a phenomenon in which both servers temporarily operate as primary servers, causing data updates to be performed on both servers.

Split-brain detection method

It can be confirmed that split-brain occurs under the following conditions:

1. When the mc_ctl command is executed in status mode on both servers, the "host_role" of both servers is output as "primary", and
2. The following message is output to the system log of one of the servers:

   ```
   promotion processing completed (MCA00062)
   ```

How to recover from a split-brain

Use the procedure described below. Note that the new primary server is the server that was confirmed in step 2 of the aforementioned detection method.

1. Stop all applications that are running on the old and new primary servers.
2. Investigate and recover the database.
   Investigate the update results that have not been reflected to the new primary server from the database of the old primary server, and apply to the new primary server as necessary.
3. Stop the old primary server instance and the Mirroring Controller.
4. Resume the applications that were stopped in step 1.

5. Recover the old primary server.
   
   While referring to "2.5 Setting Up the Standby Server", build (set up) the old primary server as the new standby server, from the new primary server.
Appendix E  Supplementary Procedure on Configuring for Operation in Database Multiplexing Mode

This appendix explains a supplementary procedure on the configuration required for operation in database multiplexing mode.

E.1 Security Policy Settings

This section explains how to configure the security settings to enable an operating system user account designated as an instance administrator user to log on as a service.

1. Displaying the [Local Security Policy] window
   In Windows, select [Administrative Tools], and then click [Local Security Policy].

2. Setting up security
   1. In the [Local Security Policy] window, select [Security Settings], select [Local Policies], and then click [User Rights Assignment].
   3. In the [Log on as a service Properties] window, set the following:
      b. On the [Local Security Setting] tab, click [Add User or Group].
      c. In the [Select Users or Groups] window, enter the operating system user account of the instance administrator user in [Enter the object names to select].
      d. Click [OK].
   4. In the [Log on as a service Properties] window, click [OK].
   5. From the [Local Security Policy] tree, click [Local Policies], and then double-click [Security Options].
   6. Scroll down and double-click [User Account Control: Behavior of the elevation prompt for administrators in Admin Approval Mode].
   7. From the drop-down menu, select the "Elevate without prompting" in the [Local Security Setting] tab.
   8. Click [OK].

E.2 Windows Firewall Settings

This section explains how to enable the port number used by Mirroring Controller, if the Windows firewall feature is enabled.

Windows Server(R) 2019:

1. In the [Windows Defender Firewall] window, click [Advanced settings] on the left side of the window.
3. Click [New Rule] on the right side of the window.
4. In the [New Inbound Rule Wizard] window, select [Port], and then click [Next].
5. Select [TCP] and [Specific local ports], then specify the port number defined in the network definition file, and then click [Next].
6. Select [Allow the connection], and then click [Next].
7. Select the profiles for which this rule applies, and then click [Next].
8. In [Name], specify the desired name, and then click [Finish].
9. In the [Windows Defender Firewall with Advanced Security] window, check if the added rule is enabled under [Inbound Rules] in the center of the window.
Other than above:

1. In the [Windows Firewall] window, click [Advanced settings] on the left side of the window.
3. Click [New Rule] on the right side of the window.
4. In the [New Inbound Rule Wizard] window, select [Port], and then click [Next].
5. Select [TCP] and [Specific local ports], then specify the port number defined in the network definition file, and then click [Next].
6. Select [Allow the connection], and then click [Next].
7. Select the profiles for which this rule applies, and then click [Next].
8. In [Name], specify the desired name, and then click [Finish].
9. In the [Windows Firewall with Advanced Security] window, check if the added rule is enabled under [Inbound Rules] in the center of the window.
WebAdmin considers the following as hazardous characters, which are not allowed in user inputs.

| (pipe sign)
& (ampersand sign)
; (semicolon sign)
$ (dollar sign)
% (percent sign)
@ (at sign)
' (single apostrophe)
" (quotation mark)
\' (backslash-escaped apostrophe)
\" (backslash-escaped quotation mark)
<> (triangular parenthesis)
() (parenthesis)
+ (plus sign)
CR (Carriage return, ASCII 0x0d)
LF (Line feed, ASCII 0x0a)
, (comma sign)
\ (backslash)
Appendix G Collecting Failure Investigation Data

If the cause of an error that occurs while building the environment or during operations is unclear, data must be collected for initial investigation.

This appendix describes how to collect data for initial investigation.

Use FJQSS (Information Collection Tool) to collect data for initial investigation.

See

Refer to the following manual for information on how to use FJQSS.

- In the [Apps] menu, select [FJQSS (Information Collection Tool)], and then click [FJSQ User's Guide].

Note

Using a database server to collect data

- When using FJQSS to collect data for initial investigation, a window will be displayed for you to set the following environment variables:
  - Environment variable required for collecting data from the database
    Refer to "Collecting Failure Investigation Data" in the Operation Guide.
  - MCCONTROLDIR
    Set the Mirroring Controller management directory.
    Refer to "1.2.1 Mirroring Controller Resources" for information on the Mirroring Controller management directory.

- FJQSS operations must be performed by the instance administrator user.

Using an arbitration server to collect data

  Linux

  - When using FJQSS to collect data for initial investigation, you must set the following environment variables:
    - ARBCONTROLDIR
      Set the Mirroring Controller arbitration process management directory.
      Refer to "1.2.1 Mirroring Controller Resources" for information on the Mirroring Controller arbitration server management directory.
    - ARBUSER
      Specify the operating system user who started the Mirroring Controller arbitration process.
    - FSEP_SA_HOME
      Set the Server Assistant installation directory.

  Windows

  - When using FJQSS to collect data for initial investigation, a window will be displayed for you to set the following environment variables:
    - ARBCONTROLDIR
      Set the Mirroring Controller arbitration process management directory.
      Refer to "1.2.1 Mirroring Controller Resources" for information on the Mirroring Controller arbitration server management directory.
FJQSS corresponds the required operating system of FUJITSU Enterprise Postgres described below.

Cluster Operation Guide
PRIMECLUSTER
Preface

Purpose of this document
This document explains the items required to operate FUJITSU Enterprise Postgres on a cluster system that uses PRIMECLUSTER.

Intended readers
This document is aimed at people who install and operate FUJITSU Enterprise Postgres on a cluster system that uses PRIMECLUSTER. Readers of this document are also assumed to have general knowledge of:
- PRIMECLUSTER
- PostgreSQL
- SQL
- Linux

Structure of this document
This document is structured as follows:
Chapter 1 Overview of Failover Operation
Provides an overview of failover operation.
Chapter 2 Setting Up Failover Operation
Explains how to set up failover operation.
Chapter 3 Failover Operation
Explains the procedures involved in failover operation.
Chapter 4 Procedures Required after a Failover Error
Explains the procedures required after an abnormality occurs during failover operation.
Appendix A Creating Resources and Creating/Modifying Cluster Applications
Explains how to create and modify cluster applications that include FUJITSU Enterprise Postgres resources.
Appendix B Command Reference
Explains for details in command.

Export restrictions
Exportation/release of this document may require necessary procedures in accordance with the regulations of your resident country and/or US export control laws.

Chapter 1 Overview of Failover Operation

This chapter provides an overview of failover operation in FUJITSU Enterprise Postgres.

1.1 Definition of Failover Operation

When an abnormality occurs on any of the multiple server devices that make up the cluster system (hereafter referred to as "nodes"), the failover feature transfers a job operating on such a node to another one. Failover can reduce the time for which jobs are stopped when an abnormality occurs, and allows jobs to continue while the node on which the abnormality occurred is recovered.

In FUJITSU Enterprise Postgres, failover can be integrated with PRIMECLUSTER. In such a configuration, the shared disk (GDS) provided by PRIMECLUSTER is used. A server in the cluster system receives the application processing, acting as the active server (active node).

For example, if the active node fails, another server (standby node) inherits the shared disk content and becomes the active node. Using the PRIMECLUSTER feature, the applications to be run on the active node for the database can also be linked with the database and switched. Therefore, jobs can be continued even during recovery of a node where an abnormality has occurred. There is also no need to send the updated content of the database on the active node to the standby node, so the processing performance will be the same as that of a non-cluster system.

Note

When failover operation is integrated with PRIMECLUSTER, the disk is not referenced by the standby node, and therefore failover operation cannot be used for load distribution.

In addition, failover operation cannot be performed concurrently with database multiplexing.

Hereinafter, failover operation integrated with PRIMECLUSTER is referred to as "failover operation".

Figure 1.1 Concept of failover

Feature of failover operation

Failover operation in Symfoware Server supports the standby feature.

When an abnormality occurs on a node, the standby feature starts the instance that is the standby system at the time of the switch, and transfers the job to it.
Operation mode of failover operation

The operation mode supported in failover operation in Symfoware Server is 1:1 standby. 1:1 standby is a mode in which one active system or standby system operates on one node. Because failover allows jobs to continue when an abnormality occurs in the active system, this mode allows highly reliable systems to be constructed.

1.2 System Configuration of Failover Operation

In the illustration below, the file system is on a GDS volume (shared disk), mounted on node 1 only. The following FUJITSU Enterprise Postgres resources are located in this file system:
- Data storage destination directory
- Tablespace
- Backup data storage destination directory
- Transaction log storage destination directory
A FUJITSU Enterprise Postgres process waits for connections of user applications that access the database, on a logical IP address activated on node 1 only or on a takeover IP address.
When an error is detected on node 1, PRIMECLUSTER mounts the file system on node 2, and activates the logical IP address or the takeover IP address on it. The FUJITSU Enterprise Postgres process is also started on node 2. Since the logical IP address or the takeover IP address remains unchanged, the user application can access FUJITSU Enterprise Postgres process on node 2 simply by re-establishing the database connection.

*1: Some settings and operations must also be performed on the standby node. Refer to the relevant sections for details.

Note: GDS: PRIMECLUSTER GD

The sections that follow explain each step.
2.1 Installing PRIMECLUSTER and FUJITSU Enterprise Postgres

Refer to the manual for each product, and then install each product.

See

- Refer to the PRIMECLUSTER Installation and Administration Guide for information on how to install PRIMECLUSTER.
- Refer to the Installation and Setup Guide for Server for information on how to install FUJITSU Enterprise Postgres.

2.2 Configuring PRIMECLUSTER

Configure the initial settings for the cluster.

If using PRIMECLUSTER GL (hereafter referred to as "GLS"), configure the GLS settings.

See

Refer to the PRIMECLUSTER Installation and Administration Guide for information on steps required before setup.

2.3 Creating a GDS Volume

Each of the following FUJITSU Enterprise Postgres resources must be located in a file system on a shared disk:

- Data storage destination directory
- Tablespaces
- Backup data storage destination directory
- Transaction log storage destination directory

Note

- Store data storage destination directories or tablespaces and backup data storage destination directories for these in different GDS classes to guard against file system corruption and the MONITORONLY attribute settings at the time of the Gds resource and Fsystem resource creation.
- It is also recommended that database storage destination directories and transaction log storage destination directories be placed in different groups or different single disks, so that the I/O load is distributed.
- Create a directory for each resource on each node. Ensure that the directories to be mounted have the same path on all nodes.

See

- Refer to the PRIMECLUSTER Installation and Administration Guide for information on GDS volume creation.
- Refer to "Preparing Directories to Deploy Resources" in the Installation and Setup Guide for Server for information on how to create directories.

2.4 Creating a File System

Create a file system.
Refer to the PRIMECLUSTER Installation and Administration Guide for information on how to create a file system on a GDS volume.

2.4.1 Creating a File System

Use the operating system or file system command to create a file system on the GDS volume.

Example)

The example below creates a file system using ext4.

```bash
# mkfs -t ext4 /dev/sfdsk/class0001/dsk/volume0001
```

2.4.2 Editing Configuration Files

Edit `/etc/fstab` and `/etc/fstab.pcl` on each node.

- `/etc/fstab`

Comment out each line below by prepending it with `#`.

```bash
#/dev/sfdsk/class0001/dsk/volume0001 /mnt/swdsk1 ext4 noauto 0 0
#/dev/sfdsk/class0001/dsk/volume0002 /mnt/swdsk2 ext4 noauto 0 0
```

- `/etc/fstab.pcl`

Copy the entries above, and then replace "#" in each line with "#RMS#", as follows:

```bash
#RMS#/dev/sfdsk/class0001/dsk/volume0001 /mnt/swdsk1 ext4 noauto 0 0
#RMS#/dev/sfdsk/class0001/dsk/volume0002 /mnt/swdsk2 ext4 noauto 0 0
```

Note

Different files are specified depending on the version of the PRIMECLUSTER. Check the version of PRIMECLUSTER being used and edit appropriate files. Refer to the PRIMECLUSTER Installation and Administration Guide for details.

2.4.3 Checking

Start the GDS volume, and ensure that each file system can be mounted on each node.

```bash
# mount -t ext4 /dev/sfdsk/class0001/dsk/volume0001 /mnt/swdsk1
# mount -t ext4 /dev/sfdsk/class0001/dsk/volume0002 /mnt/swdsk2
# umount /mnt/swdsk1
# umount /mnt/swdsk2
```

2.5 Creating an Operating System User to Start FUJITSU Enterprise Postgres

Create an operating system user (an OS user that will become the instance administrator) who is to start FUJITSU Enterprise Postgres.

Note

Ensure that the name, UID, and GID of the operating system user (an OS user that will become the instance administrator) who is to start FUJITSU Enterprise Postgres match on all nodes that make up the cluster system.
2.6 Mounting the File System

1. Start the GDS volume if it has not already started.

2. Mount all file systems containing the resources required to create database clusters, such as for the data storage destination directory, as shown below:

```
# mount -t ext4 /dev/sfdsk/class0001/dsk/volume0001 /mnt/swdsk1
```

**Note**

Create directories in the file system for storing each resource. Each directory must meet certain conditions to be able to create the FUJITSU Enterprise Postgres database cluster. Check the notes in "Preparing Directories to Deploy Resources" in the Installation and Setup Guide for Server.

2.7 Creating a Symfoware Database Cluster

1. Create the database cluster.

**Note**

- If the configuration requires password authentication, create a .pgpass file in the home directory of the operating system user who is to start FUJITSU Enterprise Postgres, and then specify a password for the template1 database as this is required. This will be used when PRIMECLUSTER checks the operation of the FUJITSU Enterprise Postgres database server. If authentication fails, a fault will be assumed to have occurred in the database server.

- The value specified for the port parameter in postgresql.conf needs to be set in the /etc/services files on all nodes.

- Since postgresql.conf is stored in the data directory, it becomes a common configuration file for each node in the shared disk. Therefore, it must be taken into account that the path set for postgresql.conf must be valid for the FUJITSU Enterprise Postgres server processes started on each node. For example, if a local directory is specified in the core_directory parameter, that local directory must have been created on all nodes.

- To execute the FUJITSU Enterprise Postgres commands, you must configure the environment variables on each node.

- Use the initdb command to create a database cluster.

- Specify "off" for the restart_after_crash parameter in postgresql.conf.

  If "on" is specified, or the default value is used for the restart_after_crash parameter, behaviors equivalent to restarting the FUJITSU Enterprise Postgres, including crash recovery, will be performed when some server processes go down. When linking with PRIMECLUSTER, however, a failover will occur after an error is detected as soon as some server processes go down, and server processes restarting will be forced to stop. This is to inhibit complex behaviors such as processes being canceled in the middle of restarting for no particular meaningful purpose.

2. Check starting, connection, and stopping at each node. The procedure is as follows.

**Note**

Queries are issued to monitor the FUJITSU Enterprise Postgres from PRIMECLUSTER. With this connection process, if a password is requested, the monitoring process cannot be continued. For this reason, when checking the connection, ensure that connections can be made without entering a password.

**Point**

When monitoring FUJITSU Enterprise Postgres from PRIMECLUSTER, the name of the application that connects to instances is "pgx_wch_svprocess".
1. Check the starting, connection, and stopping at node 1.

   Use the pg_ctl command to start and stop the node.

   For connection, execute the following to ensure that connections can be made without entering a password:

   ```
   su - OsUser
   psql -d template1 -p portNum [ -U dbUser ]
   ```

   *OsUser*: Operating system user to start the FUJITSU Enterprise Postgres
   *portNum*: Port number specified when the database cluster was created
   *dbUser*: Database superuser

   If the database superuser is specified at the time of executing the initdb command, or if the database superuser has been changed after the initdb command was executed, specify the user for the -U option. If the database superuser is not specified or changed, omit this.

2. Unmount all file systems containing the resources required to create database clusters (such as the data storage destination directory) on node 1, and stop the GDS volume.

3. Start the GDS volume on node 2, and mount all file systems containing the resources required to create database clusters (such as the data storage destination directory).

4. Check starting, connection, and stopping at node 2.

   Perform the same check as step 1.

5. Unmount all file systems containing the resources required to create database clusters (such as the data storage destination directory) on node 2, and stop the GDS volume.

6. Start the GDS volume on node 1, and mount all file systems containing the resources required to create database clusters (such as the data storage destination directory).

---

### 2.8 Registering Resource Information for the FUJITSU Enterprise Postgres Database Cluster

1. Use the pgx_pclrsc command to register the database cluster in PRIMECLUSTER - the following is the simplest execution example:

   ```
   # pgx_pclrsc -a -c databaseClusterName -u OsUser -D pgData -w workDir -n memberNodes
   ```

<table>
<thead>
<tr>
<th>Item</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>databaseClusterName</code></td>
<td>Specify the FUJITSU Enterprise Postgres database cluster name.</td>
</tr>
<tr>
<td></td>
<td>The database cluster name is case-sensitive.</td>
</tr>
<tr>
<td></td>
<td>The database cluster name must be as follows:</td>
</tr>
<tr>
<td></td>
<td>- Up to 16 bytes, and</td>
</tr>
<tr>
<td></td>
<td>- The first byte must be an ASCII letter, and</td>
</tr>
<tr>
<td></td>
<td>- The other bytes must be ASCII alphanumeric characters, or underscores (_)</td>
</tr>
</tbody>
</table>
**OsUser**
Specify the operating system user (an OS user that will become the instance administrator) who can start the FUJITSU Enterprise Postgres database server.

**pgData**
Specify the absolute path of the data storage destination directory specified during database cluster creation.

**workDir**
Specify the directory for storing the temporary files required for FUJITSU Enterprise Postgres resource monitoring and state transition, and for storing the trace logs required in case of problems.

- If a parent directory that does not exist is specified, create the directory. The newly created directory path assumes the OsUser specified with the -u option as the owner, and 0700 as the privilege.
- Required directory size is twice the size that is specified in the --trace-max-file-size option. If the default value is specified in the --trace-max-file-size option, 10240 KB x 2 is required for the directory size.

**memberNodes**
Specify the names of all nodes that make up the cluster system.
- Use a comma (,) to separate each node name.
- Suffix each cluster node name with the literal “RMS”.
- Specification example:
  
  -n node1RMS,node2RMS

Other than the above, the following options can be specified:

<table>
<thead>
<tr>
<th>Option</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>--db-user=name</td>
<td>Specify the FUJITSU Enterprise Postgres database superuser. The user specified in the -u option is the default.</td>
</tr>
<tr>
<td>--response-timeout=seconds</td>
<td>In cluster operations, queries are regularly issued to the server to perform error detection and state monitoring. Specify a timeout time for queries issued for the heartbeat monitoring of the FUJITSU Enterprise Postgres database server. For queries, &quot;SELECT 1&quot; for the database &quot;template1&quot; is used. If 0 is specified, queries will not time out. The default is 0.</td>
</tr>
<tr>
<td>--timeout-retry-count=count</td>
<td>Specify the upper limit for the number of retries when queries for monitoring time out. The default is 6 times.</td>
</tr>
<tr>
<td>--trace-max-file-size</td>
<td>Specify the maximum size of the trace file. The default is 10240 KB.</td>
</tr>
<tr>
<td>Option</td>
<td>Explanation</td>
</tr>
<tr>
<td>---------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>--watch-interval=seconds</td>
<td>Specify the monitoring interval (the interval with which the queries are issued to the server) for a monitoring program to monitor the FUJITSU Enterprise Postgres database server. The default is 3 seconds.</td>
</tr>
</tbody>
</table>

2.9 Configuring Storage Data Protection Using Transparent Data Encryption

If using transparent data encryption, refer to "Protecting Storage Data Using Transparent Data Encryption" in the Operation Guide to configure it. Take note on the following when configuring it:

**Location of the keystore file**

Do not specify a shared disk for the keystore_location parameter in postgresql.conf. Instead, specify a local directory with the same path on all nodes that comprise the cluster application.

If a shared disk is specified, startup from the cluster application will fail. This is because the keystore.aks file, which is generated when automatic opening of the keystore is enabled, is obfuscated so that it can only be read on the node where it was generated, and therefore it cannot be shared across the shared disk.

**Distribution of the keystore file**

The master encryption key settings must be common across all nodes. For this reason, configure the master encryption key settings on one node, and then copy the keystore file to each node. Also, if the master encryption key or passphrase is changed, you must also copy the keystore file to each node.

**Enabling automatic opening of the keystore**

Automatic opening of the keystore must be enabled in all nodes that comprise the cluster application. Note that, when enabling the automatic opening of the keystore, only the directory in which the keystore file is stored will be referenced, therefore tasks such as starting and stopping the GDS volume are not required.

If it is not enabled, then startup from the cluster application will fail. This is because the startup process will not finish, since it waits for the manual input of the passphrase that opens the keystore.

2.10 Unmounting the File System

1. Unmount all file systems containing the resources required to create database clusters (such as the data storage destination directory).

   # umount /mnt/swdskl

2. Stop the GDS volume.

2.11 Creating a Cluster Application

Refer to "Appendix A Creating Resources and Creating/Modifying Cluster Applications".

2.12 Application Development

This section explains points to consider when creating applications during cluster operations.
2.12.1 Precautions when Developing Applications

To specify the IP address specified by the application, specify the IP address specified when creating the Gls resource or creating the takeover network resource. When state transition occurred, the operation can continue only by re-execute without changing the application. Refer to "A.1.5 Creating Gls or Takeover Network Resources" for details.

2.12.2 Corrective Action with Application when State Transition Occurs

When the application running on the another node such as an application server, access the Symfoware Server, the following describes the error information to be returned when an abnormality or the like occurs in the node where FUJITSU Enterprise Postgres operates, and the actions.

**JDBC driver**

<table>
<thead>
<tr>
<th>State</th>
<th>Error information(*1)</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Node failure or FUJITSU Enterprise Postgres system failure</td>
<td>Failure occurs during access 57P01 08006</td>
<td>After the switch is complete, reestablish the connection, or re-execute the application.</td>
</tr>
<tr>
<td></td>
<td>Accessed during node/system failure 08001</td>
<td></td>
</tr>
<tr>
<td>Switch to the standby node</td>
<td>Switched during access 57P01 08006</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Accessed during switch 08001</td>
<td></td>
</tr>
</tbody>
</table>

*1: Return value of the getSQLState() of SQLException.

**ODBC driver**

<table>
<thead>
<tr>
<th>State</th>
<th>Error information(*1)</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Node failure or FUJITSU Enterprise Postgres system failure</td>
<td>Failure occurs during access 57P01 08S01</td>
<td>After the switch is complete, reestablish the connection, or re-execute the application.</td>
</tr>
<tr>
<td></td>
<td>Accessed during node/system failure 08001</td>
<td></td>
</tr>
<tr>
<td>Switch to the standby node</td>
<td>Switched during access 57P01 08S01</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Accessed during switch 08001</td>
<td></td>
</tr>
</tbody>
</table>

*1: Return value of SQLSTATE.

**.NET Data Provider**

<table>
<thead>
<tr>
<th>State</th>
<th>Error information</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Node failure or</td>
<td>Failure occurs during access 57P01 (*1) Empty string (*1)</td>

</tr>
</tbody>
</table>
### FUJITSU Enterprise PostgreSQL System Failure

<table>
<thead>
<tr>
<th>State</th>
<th>Error information</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>FUJITSU Enterprise Postgres system failure</td>
<td>NullReferenceException is generated.</td>
<td>connection, or re-execute the application.</td>
</tr>
</tbody>
</table>

**Accessed during node/system failure**
- Empty string (*1)

Switch to the standby node

<table>
<thead>
<tr>
<th>State</th>
<th>Error information</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Switched during access</td>
<td>57P01 (*1) Empty string (*1) NullReferenceException is generated.</td>
<td>connection, or re-execute the application.</td>
</tr>
</tbody>
</table>

**Accessed during switch**
- Empty string (*1)

---

*1: This is the return value of the PostgresException attribute SqlState.

---

### C library(libpq)

<table>
<thead>
<tr>
<th>State</th>
<th>Error information</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Node failure or FUJITSU Enterprise Postgres system failure</td>
<td>PGRES_FATAL_ERROR(*1) 57P01(*2) NULL(*2)</td>
<td>After the switch is complete, reestablish the connection, or re-execute the application.</td>
</tr>
</tbody>
</table>

**Accessed during node/system failure**
- CONNECTION_BAD(*3)

Switch to the standby node

<table>
<thead>
<tr>
<th>State</th>
<th>Error information</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Switched during access</td>
<td>PGRES_FATAL_ERROR(*1) 57P01(*2) NULL(*2)</td>
<td>connection, or re-execute the application.</td>
</tr>
</tbody>
</table>

**Accessed during switch**
- CONNECTION_BAD(*3)

---

*1: Return value of PQresultStatus().
*2: Return value of PQresultErrorField() PG_DIAG_SQLSTATE.
*3: Return value of PQstatus().

<tr>
<td></td>
<td>40001</td>
<td></td>
</tr>
<tr>
<td>Access during node/system failure</td>
<td>08001</td>
<td></td>
</tr>
</tbody>
</table>

*1: Return value of SQLSTATE.

### 2.13 Checking Operation

To ensure that the environment settings have been configured correctly, start, switch, and stop from Web-Based Admin View, and check the behavior.

To do a failover test, follow the procedure below.

1. Stop the FUJITSU Enterprise Postgres server processes by `pg_ctl` command with immediate mode.

   ```
   # pg_ctl stop -m immediate
   ```

2. Check whether switching was done correctly.
FUJITSU Enterprise Postgres uses the su(1) command to periodically monitor its resources.

Therefore, in a RHEL environment, after a cluster system is built, operating system messages relating to the su(1) command will be periodically output to /var/log/messages during cluster system operation.

Refer to the relevant manual of your operating system for information on how to control these messages.
Chapter 3 Failover Operation

This chapter explains the procedures involved in failover operation.

3.1 Adding Tablespaces

This section explains how to add tablespaces to a new file system. This procedure is not required when you are adding tablespaces to an existing file system.

Perform the following steps when using a new shared disk class:
- Stop RMS on all nodes.
- Perform setup as described from "2.3 Creating a GDS Volume" to "2.4 Creating a File System".
- Modify the cluster application (refer to "A.2 Modifying Cluster Applications" for details).

Perform the following steps when using a new shared disk class:
- Stop RMS on all nodes.
- Perform the setup as described in "2.4 Creating a File System".
  If a new GDS volume is to be used, the GDS volume must be created in advance.
- Modify the cluster application (refer to "A.2 Modifying Cluster Applications" for details).

3.2 Modifying Database Cluster Resources

This section explains the following operations:
- Displaying database cluster resource information
- Modifying database cluster resource content
- Deleting a database cluster resource

Displaying database cluster resource information

Execute the pgx_pclrsc command as shown below (note that if -c is not specified, the command lists all registered database cluster names):

```
# pgx_pclrsc -p -c databaseClusterName
```

Modifying database cluster resource content

1. Stop RMS.
2. Execute the pgx_pclrsc command as shown below (this is the simplest example):

```
# pgx_pclrsc -d -c databaseClusterName
# pgx_pclrsc -a -c databaseClusterName -u OsUser -D pgData -w workDir -n memberNodes
```

Note

If you are modifying resource content, first delete the FUJITSU Enterprise Postgres resource from the cluster application, and then re-create it.

See

Refer to "B.1 pgx_pclrsc" for information on the pgx_pclrsc command.
Deleting a database cluster resource

1. Stop RMS.
2. Delete the FUJITSU Enterprise Postgres resource from the cluster application.
3. Execute the `pgx_pclrsc` command as shown below:

   ```
   # pgx_pclrsc -d -c databaseClusterName
   ```

**Note**

The directory specified in the `-w` option of the `pgx_pclrsc` command during registration will not be deleted. Use operating system commands to delete it if necessary.

### 3.3 Operations under Normal Circumstances

**Starting and stopping**

For cluster operations, perform starting and stopping from the cluster application. If starting and stopping are performed by using the `pg_ctl` command or WebAdmin during failover operation, the cluster application will misjudge that services have gone down, resulting in unexpected behaviors.

**Note**

Issuing a query to monitor Fujitsu Enterprise Postgres from PRIMECLUSTER.

If a query is issued during startup or shutdown, the following message may be printed, but this is not a problem.

```
FATAL: Database system is in the process of starting
FATAL: Database system is shutting down
```

**Switching**

There are two ways to switch between the active node and the standby node, as shown below.

Under normal circumstances, switch using mutual switch. In an emergency, for example when there is no response from the active node, perform forced switch. Forced switch should only be used in emergency scenarios because the differences in FUJITSU Enterprise Postgres stop modes when the active node is offline will cause the statistics to be initialized, and the load will increase as crash recovery is performed after the switch.

- Mutual switch
  
  Refer to "3.5.2.4 Mutual Switch".

  FUJITSU Enterprise Postgres is stopped with the "fast" mode of the `pg_ctl` command.

- Forced switch
  
  Right-click the cluster application object, and select [Switch] from the menu. From the switchable nodes displayed in the drop-down menu, select a target node, and switch the cluster application to that node.

  FUJITSU Enterprise Postgres is stopped with the "immediate" mode of the `pg_ctl` command.

### 3.4 Operation at State Transition

The workflow for operation at state transition is shown below.

The start operation during failover operation will be performed automatically by the Online script.
Non-transferrable feature

- All transactions being processed by the cluster application on the active system will be rolled back.
- The statistics FUJITSU Enterprise Postgres has collected will be initialized.

The statistics will be initialized in any of the following cases. Refer to the notes outlined in “Starting and Stopping an Instance” in the Operation Guide for details.
- When the node goes down because of a kernel panic, for example
- When forced switch is performed
  Statistics are initialized because the “immediate” mode of the pg_ctl command is used to stop FUJITSU Enterprise Postgres.
  Refer to “3.3 Operations under Normal Circumstances” for details.
- When an error occurs in the cluster application resources
  Statistics are initialized because the “immediate” mode of the pg_ctl command is used to stop FUJITSU Enterprise Postgres to perform an immediate switch.

Errors during state transition

If an error occurs in a FUJITSU Enterprise Postgres script during cluster application state transition, the following message will be displayed in the switchlog of Cluster Admin (the registered database cluster name will be displayed in the inst1 part shown below):

```
```

To display the switchlog, select [Tools] >> [View switchlog] in the [Cluster Admin] window.

If the resource displayed in the error message is a FUJITSU Enterprise Postgres resource name, a message indicating the cause will be output either before the message above or to the system log.

3.5 Maintenance Tasks

When you need to perform tasks such as configuration changes, patch application, and hardware parts replacement that may require restarting, there are two ways of node maintenance. Performing maintenance on both nodes by stopping both active and standby nodes, and performing maintenance on one node at a time by leaving the active node running to perform maintenance on the standby node first, and then switch the active node to perform maintenance on the other node. In this section, the former is referred to as simultaneous stopped node maintenance, whereas the latter is referred to as mutual switch maintenance.

Refer to the tasks outlined below in either "Figure 3.1 Workflow for simultaneous stopped node maintenance" or "Figure 3.2 Workflow for mutual switch maintenance", and perform your maintenance tasks accordingly.
3.5.1 Simultaneous Stopped Node Maintenance

This section explains the procedure to perform maintenance on both active and standby nodes simultaneously.

3.5.1.1 Stopping the Cluster Applications on Both Nodes for Node Maintenance

Follow the steps shown below to stop the cluster application on the active and standby nodes:

1. Start the [Cluster Admin] window.
2. Stop the cluster application.

   On the RMS tree in the [Cluster Admin] window, right-click the standby cluster application to be stopped, and select [Offline] from the pop-up menu to stop it.
   Stop the cluster application on both the active and standby nodes.

3. Stop RMS.

   On the RMS tree in the [Cluster Admin] window, right-click the system node where the cluster application to be stopped exists, and select [Shutdown RMS] from the pop-up menu to stop RMS. To perform maintenance without stopping RMS, execute the hvutil -m on command to change the cluster application to maintenance mode.

Note

- If applying the FUJITSU Enterprise Postgres update patches, RMS on the node (onto which the patches are applied) must be stopped. This is because the FUJITSU Enterprise Postgres monitoring process that runs when linked with PRIMECLUSTER must be stopped.
- By stopping RMS, all cluster applications on the system node where RMS is stopped will stop. When you have multiple cluster applications configured, ensure that stopping all other cluster applications will not cause any problems, before stopping RMS.

3.5.1.2 Maintenance Tasks on Both Nodes

Perform maintenance tasks such as configuration changes, patch application, hardware and parts replacement that may require restarting.

3.5.1.3 Restarting the Cluster Applications Stopped on Both Nodes for Node Maintenance

Follow the steps shown below to restart the cluster application on the active and standby nodes.

1. Start the [Cluster Admin] window.

2. If RMS has not been started, select [Tools] >> [Start RMS] in the [Cluster Admin] window, and select the node to be started and click [Ok].

   Note that if the cluster applications were stopped for node maintenance using the hvutil -m on command, execute the hvutil -m off command instead of starting RMS.

3. Start the cluster application.

   On the RMS tree in the [Cluster Admin] window, right-click the standby cluster application, and from the pop-up menu, if you are starting the node as the active node, select [Online], or if you are starting it as the standby node, select [Standby]. If the state is [Fault], then select [Clear fault].

   This operation is not required if the cluster application has been configured to start automatically when RMS is started.

3.5.2 Mutual Switch Maintenance

This section explains the procedure to perform maintenance on the standby node while running the active node at the same time.

3.5.2.1 Stopping the Cluster Applications on the Standby Node for Node Maintenance

Follow the steps shown below to stop the cluster application on the standby node only:

1. Edit the /opt/SMAW/SMAWRrms/bin/hvenv.local file, and add "export HV_RCSTART=0".

   If the hvenv.local file does not exist, then create it.

   ```
   # vi /opt/SMAW/SMAWRrms/bin/hvenv.local
   Add export HV_RCSTART=0
   ```

2. On the RMS tree in the [Cluster Admin] window, right-click the cluster application on the standby node to be stopped, and select [Offline] from the pop-up menu to stop it.
3. On the RMS tree in the [Cluster Admin] window, right-click the system node (where the cluster application on the standby node that was stopped exists), and select [Shutdown RMS]. At this stage, select [Stop all Apps] as the option, and stop RMS.

Note

- Ensure that the steps up to step 3 have been completed properly before performing the maintenance tasks. If the active node goes down at the point when steps 1 and 2 have been completed, FUJITSU Enterprise Postgres will be started on the supposedly stopped standby node, and it becomes the active node instead. As a result, this will compete with the maintenance tasks and unexpected behavior may occur.

- If applying the FUJITSU Enterprise Postgres update patches, RMS on the node (onto which the patches are applied) must be stopped. This is because the FUJITSU Enterprise Postgres monitoring process that runs when linked with PRIMECLUSTER must be stopped.

- By stopping RMS, all cluster applications on the system node where RMS is stopped will stop. When you have multiple cluster applications configured, ensure that stopping all other cluster applications will not cause any problems, before stopping RMS.

3.5.2.2 Standby Node Maintenance

Perform maintenance tasks such as patch application and hardware parts replacement.

3.5.2.3 Restarting the Cluster Applications Stopped on the Standby Node for Node Maintenance

Follow the steps shown below to restart the cluster application on the standby node only (that was stopped for maintenance):

1. Edit the `/opt/SMAW/SMAWRrms/bin/hvenv.local` file, and delete "export HV_RCSTART=0".

   ```bash
   # vi /opt/SMAW/SMAWRrms/bin/hvenv.local
   Delete export HV_RCSTART=0
   ```

2. Select [Tools]-[Start RMS] in the [Cluster Admin] window, and select the node to be started and click [Ok].

3. On the RMS tree in the [Cluster Admin] window, right-click the cluster application to be started as the standby node, and select [Standby] from the pop-up menu to start it. If the state is [Fault], then select [Clear fault].

3.5.2.4 Mutual Switch

To perform mutual switch between the active and standby nodes, perform the steps shown below:

1. Select and right-click the cluster application on the active node, and select [Offline] from the pop-up menu to stop it.

2. Select and right-click the cluster application on the standby node, and select [Online] from the pop-up menu to start it.

3. Select and right-click the cluster application that was previously on the active node, and select [Standby] from the pop-up menu to start it as standby.

3.5.2.5 Standby Node Maintenance after the Mutual Switch

To perform maintenance tasks on the new standby node after mutual switch, perform the steps from "3.5.2.1 Stopping the Cluster Applications on the Standby Node for Node Maintenance" to "3.5.2.3 Restarting the Cluster Applications Stopped on the Standby Node for Node Maintenance".
Chapter 4 Procedures Required after a Failover Error

This chapter explains how to perform recovery when an abnormality occurs during failover operation.

When an error occurs during failover operation, refer to the system log to identify the cause and stop the RMS to perform recovery, separately from the RMS management. Normal operations can be resumed by restarting the RMS once the recovery is completed.

Note that the database cluster may be started or stopped without using cluster applications when performing recovery.

Refer to the tasks outlined below in "Figure 4.1 Operation flow when a failover error occurs", and perform recovery.

Figure 4.1 Operation flow when a failover error occurs

<table>
<thead>
<tr>
<th>Error occurs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Identify the cause of the error</td>
</tr>
<tr>
<td>Stopping the cluster applications for node maintenance (*1)</td>
</tr>
<tr>
<td>Starting the database cluster (*2)</td>
</tr>
<tr>
<td>Recovery tasks</td>
</tr>
<tr>
<td>Stopping the database cluster (*2)</td>
</tr>
<tr>
<td>Restarting the cluster applications stopped for node maintenance</td>
</tr>
<tr>
<td>Resume operation</td>
</tr>
</tbody>
</table>

*1) If the machine is already stopped when the error occurred, this step is not necessary.
*2) Depending on the recovery tasks, start or stop the database cluster as required.

4.1 Identifying the Cause of an Error

When an error occurs during failover operation, refer to the system log to identify the cause. When cluster applications fail to start, refer to the server.log file to identify the cause.

The server.log file is a file created under the directory specified in the -w option when executing the pgx_pclrsc command. This file has almost the same content as the file specified in the -l option when executing the pg_ctl command to start the database cluster, and errors that are not output to the system log are output to these files, including startup errors.
4.2 Stopping the Cluster Applications for Node Maintenance

When an error occurs during failover operation, stop the RMS to perform recovery, separately from the RMS management. Refer to "3.5 Maintenance Tasks" for information on how to stop cluster applications for node maintenance.

Note that this task is not required in cases such as when the RMS is stopped because the machine is stopped due to an error.

4.3 Starting the Database Cluster

To perform recovery when an error occurs, it is necessary to start the database cluster without using cluster applications.

Follow the procedure below to start the database cluster if required.

Check if the database cluster needs to be started by referring to the recovery tasks written in "Actions When an Error Occurs" in the Operation Guide.

1. Start the GDS volume.
2. Mount the necessary file systems such as those where the data storage destination directory is placed.
3. Start the database cluster by using the pg_ctl command. Refer to "Using Server Commands" in "Starting an Instance and Creating a Database" in the Operation Guide for information on how to start the database cluster.

4.4 Recovery Tasks

Refer to "Actions When an Error Occurs" in the Operation Guide for information on how to perform recovery. If there are two ways available to perform recovery; using WebAdmin or commands, use commands.

4.5 Stopping the Database Cluster

If a database cluster is started, stop the database cluster.

1. Stop the database cluster using the pg_ctl command. Refer to "Using Server Commands" in "Starting an Instance and Creating a Database" in the Operation Guide for information on how to stop the database cluster.
2. Unmount the file systems such as those where the data storage destination directory is placed.
3. Stop the GDS volume.

4.6 Restarting the Cluster Applications Stopped for Node Maintenance

Refer to "3.5 Maintenance Tasks" to restart the cluster applications stopped for node maintenance.
Appendix A Creating Resources and Creating/Modifying Cluster Applications

This appendix explains how to create and modify cluster applications that include FUJITSU Enterprise Postgres resources in PRIMECLUSTER.

A.1 Creating Resources and Cluster Applications

Use the following procedure to create resources and a cluster application:

- Preparing for Creation
- Creating a Cluster Application and Configuring Its Attributes
- Create Gds Resources
- Creating FUJITSU Enterprise Postgres Resources
- Creating Gls or Takeover Network Resources
- Creating Fsystem Resources
- Creating Resources and Finalizing Cluster Application Creation

A.1.1 Preparing for Creation

1. Execute the hvgdsetup command for all shared disk classes to be used by all file systems to be registered in the cluster application.

```bash
# /opt/SMAW/SMAWRrms/bin/hvgdsetup -a class0001
```

2. From the Web-Based Admin View, stop RMS on all nodes.

3. Execute the hvw command.

```bash
# /opt/SMAW/SMAWRrms/bin/hvw
```

See Refer to the PRIMECLUSTER Installation and Administration Guide for information on the hvgdsetup command.

A.1.2 Creating a Cluster Application and Configuring Its Attributes

1. Select [Application-Create].

```
pcl-vm13: Main configuration menu, current configuration: config
No RMS active in the cluster
1) HELP 10) Configuration-Remove
```
2. Select [STANDBY].

Creation: Application type selection menu:
1) HELP 7) SCALABLE
2) QUIT 8) STANDBY
3) RETURN
4) OPTIONS
5) DEMO
6) GENERIC

Application Type: 8

3. Select [Machines+Basics].

Settings of turnkey wizard "STANDBY" (APP1:not yet consistent)
1) HELP 4) REMOVE+EXIT
2) NO-SAVE+EXIT 5) ApplicationName=APP1
3) SAVE+EXIT 6) Machines+Basics(-)

Choose the setting to process: 6

Note

Although ApplicationName can be set to any name within the range of constraints of PRIMECLUSTER, do not set it to the database cluster name specified when registering a database cluster to PRIMECLUSTER using the pgx_pclrsc command. If the same name is set, RMS will fail to start.

4. Select [AdditionalMachine].

Machines+Basics (app1:consistent)
1) HELP 14) (AutoStartUp=no)
2) - 15) (AutoSwitchOver=No)
3) SAVE+EXIT 16) (PreserveState=no)
4) REMOVE+EXIT 17) (PersistentFault=0)
5) AdditionalMachine 18) (ShutdownPriority=)
6) AdditionalConsole 19) (OnlinePriority=)
7) Machines[0]=pcl-vm13RMS 20) (StandbyTransitions=)
8) (PreCheckScript=) 21) (LicenseToKill=no)
9) (PreOnlineScript=) 22) (AutoBreak=yes)
10) (PostOnlineScript=) 23) (AutoBreakMaintMode=no)
11) (PreOfflineScript=) 24) (HaltFlag=no)
12) (OfflineDoneScript=) 25) (PartialICluster=0)
13) (FaultScript=) 26) (ScriptTimeout=)

Choose the setting to process: 5

5. Select a standby node.

1) HELP
2) RETURN
3) pcl-vm13RMS
4) pcl-vm14RMS

Choose a machine for this application: 4
6. Ensure that all nodes that make up the cluster application are displayed in [Machines]. Note that the item displayed in Machines[0] needs to be the active node, and Machines[1] to be the standby node. If these are not set correctly, modify the setting.

<table>
<thead>
<tr>
<th>Machines+Basics (app1:consistent)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1) HELP</td>
</tr>
<tr>
<td>2) -</td>
</tr>
<tr>
<td>3) SAVE+EXIT</td>
</tr>
<tr>
<td>4) REMOVE+EXIT</td>
</tr>
<tr>
<td>5) AdditionalMachine</td>
</tr>
<tr>
<td>6) AdditionalConsole</td>
</tr>
<tr>
<td>7) Machines[0]=pcl-vm13RMS</td>
</tr>
<tr>
<td>8) Machines[1]=pcl-vm14RMS</td>
</tr>
<tr>
<td>9) (PreCheckScript=)</td>
</tr>
<tr>
<td>10) (PreOnlineScript=)</td>
</tr>
<tr>
<td>11) (PostOnlineScript=)</td>
</tr>
<tr>
<td>12) (PreOfflineScript=)</td>
</tr>
<tr>
<td>13) (OfflineDoneScript=)</td>
</tr>
<tr>
<td>14) (FaultScript=)</td>
</tr>
<tr>
<td>Choose the setting to process:</td>
</tr>
</tbody>
</table>

7. Configure attributes for cluster applications from step 8.

Refer to the PRIMECLUSTER Installation and Administration Guide for information on the attributes for cluster applications.

Configure the attributes as shown below:

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>AutoStartUp</td>
<td>Yes</td>
</tr>
<tr>
<td>(Automatically starts cluster applications when the RMS is started.)</td>
<td></td>
</tr>
<tr>
<td>AutoSwitchOver</td>
<td>- HostFailure</td>
</tr>
<tr>
<td>(Automatically switches nodes when a fault occurs in cluster applications.)</td>
<td>- ResourceFailure</td>
</tr>
<tr>
<td>PersistentFault</td>
<td>0 or 1</td>
</tr>
<tr>
<td>(Selects whether to keep the Faulted state of the cluster application after restarting the RMS.)</td>
<td></td>
</tr>
<tr>
<td>OnlinePriority</td>
<td>0 or 1</td>
</tr>
<tr>
<td>(Selects whether to use the same online nodes as those used before all clusters were restarted or follow the configured order for nodes, when all clusters were restarted.)</td>
<td></td>
</tr>
<tr>
<td>StandbyTransitions</td>
<td>- ClearFaultRequest</td>
</tr>
<tr>
<td>(Timing to perform standby state transition.)</td>
<td>- StartUp</td>
</tr>
<tr>
<td>HaltFlag</td>
<td>Yes</td>
</tr>
<tr>
<td>(Selects whether to terminate the node forcibly when another error occurs during the Fault process.)</td>
<td></td>
</tr>
</tbody>
</table>

*1: If 0 is specified, the Faulted state is automatically canceled when the RMS is started. If 1 is specified, the Faulted state is kept.

*2: If 0 is specified, cluster applications will become Online in accordance with the node setting order when all clusters are restarted. If 1 is specified, cluster applications will become Online on nodes where the cluster applications were Online before the restart.
8. Select [AutoStartUp].

Machines+Basics (app1:consistent)

1) HELP  15) (AutoStartUp=no)

26) (PartialCluster=0)
27) (ScriptTimeout=)
Choose the setting to process: 3

- 30 -
A.1.3 Creating Gds Resources

1. Select [Gds:Global-Disk-Services].

2. Select [AdditionalDiskClass].

3. Select a class.

4. Follow the steps above for all shared disk classes to be used by all file systems to be registered in the cluster application. When doing so, configure the MONITORONLY attribute as shown in the following table:

<table>
<thead>
<tr>
<th>Purpose of file system</th>
<th>MONITORONLY attribute</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data storage destination directory</td>
<td>No</td>
</tr>
<tr>
<td>Backup data storage destination directory</td>
<td>Yes</td>
</tr>
<tr>
<td>Table space</td>
<td>No</td>
</tr>
<tr>
<td>Transaction log storage directory</td>
<td>No</td>
</tr>
</tbody>
</table>

To set the MONITORONLY attribute to "Yes", select "MONITORONLY".

Set a flag for the disk class: class0001
Currently set:
1) HELP
2) -
5) MONITORONLY (M)
3) SAVE+RETURN
4) DEFAULT
Choose additionally one of the flags:

5. To configure the disk class, select [StandbySupport] and specify "no" - this means that upon failure, the disk will switch according to the purpose of the class.

<table>
<thead>
<tr>
<th>Volume management (Gds_APP1:consistent)</th>

</tr>
</tbody>
</table>

3. Select the database cluster name specified in the pgx_pclrsc command in "2.8 Registering Resource Information for the FUJITSU Enterprise Postgres Database Cluster".

| 1) HELP                                              |
| 2) RETURN                                            |
| 3) FREECHOICE                                        |
| 4) inst1                                             |
| Choose the resource: 4                               |

4. Select [SAVE+EXIT].

<table>
<thead>
<tr>
<th>Resource (Fsep_APP1:consistent)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1) HELP</td>
</tr>
<tr>
<td>2) -</td>
</tr>
<tr>
<td>3) FREECHOICE</td>
</tr>
<tr>
<td>4) inst1</td>
</tr>
<tr>
<td>5) AdditionalResource</td>
</tr>
<tr>
<td>6) ResourceName[0]=inst1</td>
</tr>
<tr>
<td>7) Flags[0]=T900</td>
</tr>
</tbody>
</table>
A.1.5 Creating Gls or Takeover Network Resources

Create Gls or takeover network resources to use takeover network resources. This section provides an example for configuring Gl resources.

See

- Refer to the PRIMECLUSTER Installation and Administration Guide for information on creating takeover network resources.
- Refer to the PRIMECLUSTER Installation and Administration Guide for information on creating Gl resources.

1. Select [Gls:Global-Link-Services].

   Settings of turnkey wizard "STANDBY" (APPL:consistent)
   1) HELP
   2) -
   3) SAVE+EXIT
   4) -
   5) ApplicationName=APPL
   6) Machines+Basics(app1)
   7) CommandLines(-)
   8) Procedure:Application(-)
   9) Procedure:BasicApplication(-)
   Choose the setting to process: 14

2. Select [AdditionalTakeoverIpaddress].

   Gls (Gls_APP1:not yet consistent)
   1) HELP
   2) -
   3) SAVE+EXIT
   4) REMOVE+EXIT
   5) AdditionalTakeoverIpaddress
   Choose the setting to process: 5

3. Select a takeover IP.

   1) HELP
   2) RETURN
   3) FREECHOICE
   4) takeoverip
   Choose a takeover IP address for Gls: 4

4. Select [SAVE+RETURN].

   Set a flag for takeover IP address: takeoverip
   Currently set:
   1) HELP
   2) -
   3) SAVE+RETURN
   4) DEFAULT
   Choose additionally one of the flags: 3

5. Select [SAVE+EXIT].

   Gls (Gls_APP1:consistent)
   1) HELP
   2) -
   3) SAVE+EXIT
   5) AdditionalTakeoverIpaddress
   6) TakeoverIpaddress[0]=N,takeoverip
   7) (Timeout=60)
4) REMOVE+EXIT
Choose the setting to process: 3

A.1.6 Creating Fsystem Resources

1. Select [LocalFileSystem].

   Settings of turnkey wizard "STANDBY" (APPl:consistent)
   1) HELP                                10) Enterprise-Postgres(Fsep_APP1)
   2) -                                   11) Symfoware(-)
   3) SAVE+EXIT                           12) Procedure:SystemState3(-)
   4) -                                   13) Procedure:SystemState2(-)
   5) ApplicationName=APPl                14) Gls:Global-Link-Services(Gls_APP1)
   6) Machines+Basics(app1)               15) IpAddresses(-)
   7) CommandLines(-)                    16) LocalFileSystems(-)
   8) Procedure:Application(-)           17) Gds:Global-Disk-Services(Gds_APP1)
   9) Procedure:BasicApplication(-)      

Choose the setting to process: 16

2. Select [AdditionalMountPoint].

   File systems (Lfs_APP1:not yet consistent)
   1) HELP                    4) REMOVE+EXIT            7) (Timeout=180)
   2) -                      5) AdditionalMountPoint
   3) SAVE+EXIT              6) (Filter=)

Choose the setting to process: 5

3. Select the mount point of the file system.

   For all mount points assigned to the data storage destination directory, the backup data storage destination directory, the tablespace directory, and the transaction log storage destination directory, repeat Steps 3 to 5. Additionally, to register multiple file systems for monitoring, repeat Steps 3 to 5 before proceeding to configure settings for file systems used for the job.

   1) HELP                                5) /mnt/swdsk1
   2) RETURN                               6) /mnt/swdsk2
   3) FREECHOICE                           
   4) ALL                                  

Choose a mount point: 5

4. Configure the MONITORONLY attribute.

<table>
<thead>
<tr>
<th>Purpose of the file system</th>
<th>MONITORONLY attribute</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data storage destination</td>
<td>No</td>
</tr>
<tr>
<td>directory</td>
<td></td>
</tr>
<tr>
<td>Backup data storage</td>
<td>Yes</td>
</tr>
<tr>
<td>destination directory</td>
<td></td>
</tr>
<tr>
<td>Table space</td>
<td>No</td>
</tr>
<tr>
<td>Transaction log</td>
<td>No</td>
</tr>
<tr>
<td>storage destination</td>
<td></td>
</tr>
<tr>
<td>directory</td>
<td></td>
</tr>
</tbody>
</table>

Select MONITORONLY to specify Yes to the MONITORONLY attribute.

   | Set flags for mount point: /mnt/swdsk1 Currently set: LOCAL,AUTORECOVER (LA) |
   |---------------------------|-----------------------------|
   | 1) HELP                   | 4) DEFAULT                 | 7) SHARE(S) |

---

See

Refer to the PRIMECLUSTER Installation and Administration Guide for information on creating Fsystem resources.

A.1.7 Creating Resources and Finalizing Cluster Application Creation

1. Select [Configuration-Generate].

<table>
<thead>
<tr>
<th>pcl-vm13: Main configuration menu, current configuration: config</th>
</tr>
</thead>
<tbody>
<tr>
<td>No RMS active in the cluster</td>
</tr>
<tr>
<td>1) HELP</td>
</tr>
<tr>
<td>2) QUIT</td>
</tr>
<tr>
<td>3) Application-Generate</td>
</tr>
<tr>
<td>4) Application-Edit</td>
</tr>
<tr>
<td>5) Application-Remove</td>
</tr>
<tr>
<td>6) Application-Clone</td>
</tr>
<tr>
<td>7) Configuration-Generate</td>
</tr>
<tr>
<td>8) Configuration-Activate</td>
</tr>
<tr>
<td>9) Configuration-Copy</td>
</tr>
<tr>
<td>Choose an action: 7</td>
</tr>
</tbody>
</table>

2. Select [Configuration-Activate].

If processing is successful, "The activation has finished successfully." will be displayed. If this message is not displayed, there is an issue with the information or configuration that was set. In such a case, review the changed information.
A.2 Modifying Cluster Applications

Follow the steps shown below to add a new file system to a cluster application. Refer to the PRIMECLUSTER Installation and Administration Guide for information on other modifications on cluster applications. Stop the RMS on all nodes when modifying cluster applications.

A.2.1 Moving to the Cluster Application Edit Window

1. Execute the hvw command.

```
#/opt/SMAW/SMAWRms/bin/hvw
```

2. Select [Application-Edit].

A.2.2 Adding a Created Shared Disk Class to the Cluster Application

A.2.3 Adding a Created File System to the Cluster Application

A.2.4 Reflecting the Modifications Made to the Cluster Application

---

- 36 -
3. Select the user application to be used.

A.2.2 Adding a Created Shared Disk Class to the Cluster Application

1. Select [Gds:Global-Disk-Services].

Volume management (Gds_APP1:consistent)
1) HELP 6) DiskClasses[0]=class0001
2) NO-SAVE+EXIT 7) (ClassNameFilter=)
3) SAVE+EXIT 8) (StandbySupport=no)
4) REMOVE+EXIT 9) (AutoRecover=no)
5) AdditionalDiskClass 10) (Timeout=1800)
6) DiskClasses[0]=class0001
Choose the setting to process: 5

3. Select the created class.

4. Select [SAVE+EXIT].

Volume management (Gds_APP1:consistent)
1) HELP 7) DiskClasses[1]=class0002
2) NO-SAVE+EXIT 8) (ClassNameFilter=)
3) SAVE+EXIT 9) (StandbySupport=no)
4) REMOVE+EXIT 10) (AutoRecover=no)
5) AdditionalDiskClass 11) (Timeout=1800)
6) DiskClasses[0]=class0001
Choose the setting to process: 3
5. Select [SAVE+EXIT] to quit or [LocalFileSystems] to add local file systems.

<table>
<thead>
<tr>
<th>Settings of turnkey wizard &quot;STANDBY&quot; (APPL1:consistent)</th>
</tr>
</thead>

Appendix B  Command Reference

This appendix explains for details in command.

B.1 pgx_pclrsc

Name
pgx_pclrsc -- Register, unregister, or display FUJITSU Enterprise Postgres database cluster with PRIMECLUSTER as resource of PRIMECLUSTER.

Synopsis
pgx_pclrsc -a -c name -u osuser -D directory -w directory
    -n nodes [options...]
pgx_pclrsc -d -c name
pgx_pclrsc -p [-c name]

Description
pgx_pclrsc is an utility for registering or unregistering FUJITSU Enterprise Postgres database cluster with PRIMECLUSTER, or displaying settings of FUJITSU Enterprise Postgres database cluster registered with PRIMECLUSTER. Execute the command on a member node of the cluster. Only the super user(root) can execute this command.

Options
- a
  --add
      Register the specified database cluster with PRIMECLUSTER. If the specified database cluster has already been registered with PRIMECLUSTER, then terminate abnormally.
- c name
  --db-cluster-name=name
      Specify database cluster name. name is case-sensitive, and must be within 16 bytes, and an initial letter must be ascii alphabet, and following letters must be ascii alphabet or ascii digit or underscore(_).
- d
  --delete
      Unregister the specified database cluster from PRIMECLUSTER.
- D directory
  --pgdata=directory
      Specify an absolute path of data directory.
- db-user=name
  --db-user=name
      Specify a database super user. Default is the user specified with `-u`.
- n nodes
  --member-nodes=nodes
      Specify names of all member nodes of the cluster. Specfity a cluster node name with uffix "RMS" to the name. Separate names with comma(,). (e.g. -n node1RMS,node2RMS)
- p
  --print
      Print a list of database clusters registered with PRIMECLUSTER. If `-c` option is specified, then print settings of the database cluster.
--response-timeout=seconds
    Specify timeout of the query for health check. It's used with a count specified with '--timeout-retry-num'. The query is "SELECT 1" to the database "template1". If '0', wait infinitely. (default: '0')

--timeout-retry-count=count
    Specify a limit count of retrying query when timeout is occurred. If retry counter is over the limit, then PRIMECLUSTER considers status of the database server as FAULT. If a query doesn't timeout once, retry counter is reset. (default: '6')

--trace-max-file-size=size
    Specify max size(KB) of trace file. (default: '10240')

-u osuser
--os-user=osuser
    Specify an OS user who can start/stop FUJITSU Enterprise Postgres database server.

-w directory
--work-dir=directory
    Specify a directory for temporary data and trace files. It's used for starting, stopping or checking FUJITSU Enterprise Postgres database server. If the directory doesn't exist, then create it. Owner of the directory created by the command is set to the user specified with '-u'. Permission of the directory created by the command is set to 0700.

--watch-interval=seconds
    Specify an interval. It's used for the amount of time between health checks. (default: '3')

Diagnostics
    0 : On success
    otherwise : On error

Notes
    Before unregistering a resource, stop RMS of PRIMECLUSTER.

Example
    The simplest example of registering a resource.

    # pgx_pclrsc -a -c inst1 -u postgres -D /mnt/swdskl/pgdata -w /var/tmp/work -n node1RMS,node2RMS

Preface

Purpose of this document
This document describes the Connection Manager features of FUJITSU Enterprise Postgres.

Intended readers
This document is aimed at people who use the Connection Manager features.
Readers of this document are also assumed to have general knowledge of:
- FUJITSU Enterprise Postgres
- PostgreSQL
- Linux

Structure of this document
This document is structured as follows:

Chapter 1 Connection Manager Features
Explains the features and Mechanisms of the Connection Manager.

Chapter 2 Setting Up
Explains setting up the Connection Manager.

Chapter 3 Using from an Application
Explains how to use the Connection Manager from an application.

Appendix A System Views
Explains the system view of Connection Manager.

Export restrictions
If this document is to be exported or provided overseas, confirm legal requirements for the Foreign Exchange and Foreign Trade Act as well as other laws and regulations, including U.S. Export Administration Regulations, and follow the required procedures.

Issue date and version
Edition 1.0: April 2021

The Connection Manager provides the following features:

Heartbeat monitoring feature

Detects kernel panics between the server running the client and the server running the PostgreSQL instance (hereinafter referred to as instance), physical server failures, and inter-server network link downs, and notifies the client or instance. The client is notified as an error event through the SQL connection, and the instance will be notified in the form of a force collection of SQL connections with clients that are out of service.

Transparent connection support feature

When an application wants to connect to an instance of an attribute in a set of instances configured for replication, it can connect to that instance without being aware of which server it is running on.

Information

- The available client drivers for Connection Manager are libpq (C language library) and ECPG (embedded SQL in C).
- The Connection Manager is only available for Linux server and Linux client.

Each function is described below.

1.1 Heartbeat Monitoring Feature

Describes the Connection Manager's heartbeat monitoring feature.

Note

The Connection Manager does not monitor for delays, such as CPU busy occurring in the postmaster process or in the backend processes to which the application connects directly, or for no response, such as due to a software bug. It also does not monitor application downtime or unresponsiveness. To detect these, use various timeout features provided by PostgreSQL or the client drivers.

1.1.1 Difference from TCP keepalive

A peer of TCP connections cannot automatically detect a link down or server down.

There are two main methods to detect it. One is the operating system (Not all operating systems support it) TCP keepalive feature, and the other is the keepalive-equivalent timeout function implemented at the application layer. Connection Manager's heartbeat monitoring capabilities are categorized as the latter.

The operating system TCP keepalive feature has the following disadvantages, but the Connection Manager's heartbeat monitoring feature does not:

- The keepalive does not work when the TCP layer cannot receive an acknowledgement (ACK) and retransmits the packet repeatedly. This means that it is not possible to detect a down (For example, if a network goes down,) before sending some data and receiving ACK from the other side. There is also a parameter to interrupt retransmissions, which is not supported by some operating systems. The Connection Manager's heartbeat monitoring feature does not have this disadvantage because it is timeout monitoring at the application layer.

- The periodic packets for keepalive are sent per-TCP socket. If a instance accepts too many (For example, a few thousand clients) SQL connections, the load on the instance side cannot be ignored. The Connection Manager's heartbeat monitoring feature greatly reduces the load by allowing packets to be sent to the instance on a per-server basis on which the client runs.
1.1.2 Mechanism of Heartbeat Monitoring Feature

On the client side, the user must start one monitoring process using the cm_ctl command for the set of the instances to be monitored. This process, called the "conmgr process", can only be started by a user who is not an administrator (e.g. superuser(root) on Linux). An instance set is a collection of one or more instances that make up replication. One configuration file (conmgr.conf) for each conmgr process is used to set the information about the set of the instances being monitored and the parameters for monitoring.

On the server side, by installing PostgreSQL’s EXTENSION that is called "watchdog", the postmaster will start two processes as background workers at instance startup.

One is the process for sending and receiving packets to and from the conmgr process for heartbeat monitoring. It is called "watchdog process". The other is the process for forcibly terminating SQL connections of the clients for which the watchdog process detects a failure on heartbeat monitoring. It is called "terminator process". SQL connections that do not use Connection Manager is also terminated, because the terminator process terminates them by IP address as key.

System Configuration Notes

For replication, it is recommended that the instance that connects to the upstream instance of replication and the conmgr process that regards the upstream instance as an instance to be monitored for heartbeat (specified in backend_host parameter or backend_hostaddr parameter that is a configuration parameter of conmgr process) be not placed on the same server. This is because if the conmgr process stops normally or abnormally, the terminator process in the upstream instance will also kill the replication connection. The replication connection will reconnect automatically even if it is forcibly disconnected, so replication will continue without any problems. However, this can be a problem when the replication load is high or on systems that are sensitive to replication delays.

Note that the replication connection have different monitoring feature than the Connection Manager, so there is no need to monitor the Connection Manager for heartbeat. Refer to PostgreSQL documentation for details.

The process relationship is as follows:

Refer to "cm_ctl" in the Reference for information on cm_ctl command.
1.2 Transparent Connection Support Feature

The features similar to Connection Manager's transparent connection support feature can be found in PostgreSQL’s libpq and other client drivers.

Using libpq as an example, the connection parameter to use that feature is target_session_attrs parameter. If this parameter is used not through Connection Manager, libpq will attempt to find the required instance by connecting sequentially to all instances of the set of instance requested by the host parameter or hostaddr parameter. In the worst case, libpq may find the promoted primary at the connection to the last instance of instance set. This means that you cannot predict how long it will take to complete the switch.

However, when combined with the Connection Manager, the conmgr process obtains its attributes via the watchdog process from all servers in a set of servers in advance, so that the connections to that server can be initiated as soon as the application requests it.

1.2.1 Mechanism of Connections using Transparent Connection Support Feature

A connection using this mechanism actually consists of two steps, but from the perspective of the application, it looks like a single SQL connection. In the application's connection string, specify the IP address or host name (in most cases it is "localhost") and port number where the conmgr process listens, and target_session_attrs parameter. You do not need to explicitly state that the connection is to the conmgr process. This is because the client driver can automatically determine whether the connection is to a instance or a conmgr process.

In the first phase of the connection, the client driver receives a connection request from the application and connects to the location specified in the connection string. Initially, it uses the protocol PostgreSQL requests, and if it learns in the middle that the connection is to a conmgr process, it asks the conmgr process for the IP address and port number that the instance with the attributes specified in the connection parameter target_session_attrs is listening for. If the destination is a backend process rather than a conmgr process, the connection process completes immediately and continues to send and receive data for normal SQL execution. The first stage of processing falls within the scope of timeout monitoring for SQL connection processing by each client driver. For example, the connection_timeout parameter of libpq.

In the second phase of the connection, the client driver connects to the instance using the IP address and port number from the conmgr process. Thereafter, the client driver and the instance directly send and receive the data for SQL execution. This ensures that the Connection Manager does not affect the performance of the SQL execution.

When the client driver is waiting to receive data after the second stage is completed, it monitors the reception of data to the two sockets obtained at each stage of the connection. This allows the client driver to know when, for example, the conmgr process notifies the client of a network link down.
Chapter 2 Setting Up

Describes setting up the Connection Manager.

2.1 Setting Up the Client Side

On the client side, configure settings for the conmgr process.

2.1.1 Creating a Directory for the conmgr Process

You need one conmgr process for each set of instances that you want to configure for replication. Assign a dedicated directory to each conmgr process. This directory must assign read, execute, and write permissions for the user who starts the conmgr process.

This directory is specified when you run the cm_ctl command, which starts and stops the conmgr process. To specify a directory in the cm_ctl command, set it in the environment variable CMDATA or specify it in the -D option.

2.1.2 Configuring conmgr.conf

Place the configuration file conmgr.conf in the directory for the conmgr process.

Syntax for conmgr.conf

- In conmgr.conf, after the symbol(#) are considered comments.
- The parameter name = value" is a set of settings and must be written on one line.
- Set the value in a format that matches the type of each parameter. The types and formats are:
  - integer: Numeric type. Express as a sequence of numbers in decimal number.
  - string: String type. You can also include spaces by enclosing them in quotation marks('.). If you include quotation marks, escape them.
  - enum: Enumeration type. Possible values are determined.

Parameters to Set

port (integer)

Specify the port number on which the conmgr process listens for connections from the applications.

The value must be greater than or equal to 1 and less than or equal to 65535. The default is 27546. You must restart conmgr process for this parameter change to take effect.

backend_host* (string)

Specify the host name or IP address of the instance.

You can also use IPv6 address. If you specify the IP address directly, you can save time by using backend_hostaddr parameter. If backend_host parameter and backend_hostaddr parameter are both specified, backend_hostaddr parameter is used. You must restart conmgr process for this parameter change to take effect.

To distinguish multiple instances, append a zero-based number immediately after the parameter name, such as backend_host0, backend_host1,... This number is called the instance number. A parameter identified by the same instance number configures the settings of a single instance. If you want to exclude some instances from your replication configuration, you can simply remove the settings for that instance.

Note

Refer to "System Configuration Notes" in "1.1.2 Mechanism of Heartbeat Monitoring Feature" for details.

For example, if two instances are listening on "host name:host0, port number:5432" and "host name:host1, port number:2345", write as follows.
You can also mix different instance number settings:

backend_host0='host0'
backend_host1='host1'
backend_port0=5432
backend_port1=2345

It does not matter if the instance number is missing as in the following (instance number 1):

backend_host0='host0'
backend_host2='host2'
backend_port0=5432
backend_port2=2345

If the host name is omitted even if the port is specified, as in the following instance number 1, it is regarded as a missisng number.

backend_host0='host0'
backend_host2='host2'
backend_port0=5432
backend_port1=5555
backend_port2=2345

backend_hostaddr*(string)

Same as backend_host parameter except no name resolution is used.

backend_port* (integer)

Specify the port number the postmaster of the instance will listen on.

The value must be greater than or equal to 1 and less than or equal to 65535. The default is 27500. Append the instance number as you would for backend_host parameter. You must restart conmgr process for this parameter change to take effect.

watchdog_port* (integer)

Specify the port number on which the watchdog process listens.

The conmgr process connects to this port, but the user application does not. you must set it to the same value as watchdog.port parameter in postgresql.conf. The value must be greater than or equal to 1 and less than or equal to 65535. The default is 27545. Append the instance number as you would for backend_host parameter. You must restart conmgr process for this parameter change to take effect.

heartbeat_interval (integer)

Specify the interval at which heartbeat packets are sent for heartbeat monitoring.

Used in conjunction with heartbeat_timeout parameter. Connection Manager heartbeat monitoring always continues to send packets periodically from both ends of the connection. If a packet is not received from the other side within a certain period of time, the link is considered down.

Note that this method is different from TCP keepalive. TCP keepalive send a keepalive packet only when there is a certain amount of inactivity (idle), and expects to receive an ACK for that packet. If TCP keepalive does not receive an ACK, it repeats this a specified number of times and then assumes that the link is down.

The heartbeat_interval parameter and heartbeat_timeout parameter are propagated from the conmgr process to the watchdog process, and also apply to the interval between the transmissions of heartbeat packets from the watchdog process. If a watchdog process is connected from both a conmgr process with a heartbeat_interval parameter of 3 seconds and a conmgr process with a heartbeat_interval of 5 seconds, it sends heartbeat packets every 3 seconds to the former process and every 5 seconds to the latter process. The unit is seconds. Specify a value equal to or more than 1 second. The default is 10 seconds. You must restart conmgr process for this parameter change to take effect.

heartbeat_timeout (integer)

If a heartbeat packet for heartbeat monitoring cannot be received for more than the time specified by this parameter, an error is assumed to have occurred and the application is notified of the error.
This parameter should be decided by the `heartbeat_interval` parameter as the basis. No error is occurred when the configuration file is loaded, but is always considered abnormal by heartbeat monitoring if it is at least not greater than `heartbeat_interval` parameter. The unit is seconds. Specify a value equal to or more than 1 second. The default is 20 seconds. You must restart `conmgr` process for this parameter change to take effect.

Refer to the following figure for the relationship between the `heartbeat_interval` parameter and `heartbeat_timeout` parameter settings and the heartbeat timeout.

![Configuration: heartbeat_interval=10, heartbeat_timeout=20]

- **PeerX**
  - Send packet [00:00]
  - [00:01] Receive packet and set timeout timer for 00:21
  - *At the same time, PeerY sends Interval packet to PeerX.*
  - *PeerX watches timeout timer for PeerY’s interval packet independently of the above schedule.

- **Server down**
- **PeerY**
  - Send packet [00:10]
  - [00:11] Receive packet and reset timeout timer for 00:31
  - [00:31] *If PeerY is watchdog, terminate SQL connection in db server.*
  - *If PeerY is conmgr, inform timeout to client driver.*

- No packet is arrived.

**heartbeat_connect_interval** (integer)

Specify the interval between attempts to establish heartbeat monitoring again after detecting an abnormality.

This parameter is useful when only the database server is started, but not the instance. In such a situation, the TCP connection fails immediately, and retries cannot be attempted without an interval. If you specify an excessively long value, you may delay noticing the start of the instance. If a connection attempt fails for a long time, it will attempt the next connection after the time specified by `heartbeat_connect_interval` parameter has elapsed. The unit is seconds. Specify a value equal to or more than 1 second. The default is 1 second. You must restart `conmgr` for this parameter change to take effect.

**heartbeat_connect_timeout** (integer)

Specify the connection timeout for establishing heartbeat monitoring.

The connection includes the time it takes to send the TCP connection and the first heartbeat packet to the watchdog process and receive a reply from the watchdog process. This parameter is particularly needed when the other server is down or the network is disconnected. This is because TCP connections are attempted over a long period of time, depending on the operating system configuration, and the connection takes a long time to fail. The unit is seconds. Specify a value equal to or more than 1 second. The default is 10 seconds. You must restart `conmgr` process for this parameter change to take effect.

**log_destination** (string)

Specify the destination of the message.

You can specify multiple destinations. Use commas to separate multiple entries and enclose all in single quotation marks. "stderr" and "syslog" can be specified. The default is to print only to stderr. You must restart `conmgr` process for this parameter change to take effect.

**syslog_facility** (enum)

Specify the syslog facility.
Valid only if log_destination parameter includes "syslog". LOCAL0, LOCAL1, LOCAL2, LOCAL3, LOCAL4, LOCAL5, LOCAL6, or LOCAL7 can be specified.

The default is "LOCAL0". You must restart conmgr process for this parameter change to take effect.

description (string)

Specify the program name used to identify the output from the conmgr process.

The default is "conmgr". You must restart conmgr process for this parameter change to take effect.

log_min_messages (enum)

Specifies the level of messages to output.

It can be DEBUG, INFO, NOTICE, WARNING, ERROR, LOG, FATAL, or PANIC. Messages below the specified level are not output.

The default is "WARNING". You must restart conmgr process for this parameter change to take effect.

max_connections (integer)

Specifies the maximum number of simultaneous connections to the conmgr process.

If there are more than this maximum number of client connections, it forces the connection to be closed without sending an error message to the client.

The conmgr process also outputs this fact at level "LOG" to the destination specified by log_destination. Specify a value equal to or more than 0.

If 0 is specified, there is no limit. The default is 0. You must restart conmgr process for this parameter change to take effect.

Note

The maximum number of file descriptors that can be opened simultaneously (You can check it with -n of the ulimit command.) imposed on a conmgr process by the OS user limit should be greater than the value derived from the following equation: Otherwise, the conmgr process will abort if the user limit is violated.

\[ S + \text{Number of database instances specified in conmgr.conf} \times 2 + \text{max_connections specified in conmgr.conf} \]

Overview of connections definitions

The following figure shows the relationship between the IP address or host name and the port number set in conmgr.conf and the processes.
2.2 Setting Up the Server Side

On the server side, configure settings for the watchdog process.

2.2.1 Configuring postgresql.conf

Describes the postgresql.conf parameters that must be set when using the Connection Manager.

Parameters to Set

max_connections

An existing PostgreSQL parameter. Add 2 to the value already set.

Connection to the instance is maintained from the time the instance is started to do the following:

- The watchdog process checks the state of the instance.
- The terminator process forces the client to terminate the SQL connection.

shared_preload_libraries

An existing PostgreSQL parameter. Add a watchdog.

The watchdog process and terminator process start when you add watchdog and restart the instance.

watchdog.port (integer)

Specify the port number on which the watchdog process accepts connections for heartbeat monitoring from the conmgr process.

The value must be greater than or equal to 1 and less than or equal to 65535. The default is 27545. The instance must be restarted for this parameter change to take effect.

watchdog.check_status_interval (integer)

Specify the interval between checking the attributes of a instance.

watchdog process immediately notifies the conmgr process if the attribute changes.

The unit is milliseconds. Specify a value equal to or more than 1 millisecond. The default is 1000 milliseconds. The instance must be restarted for this parameter change to take effect.
watchdog_max_hb_connections (integer)

Specify the maximum number of conmgr processes that connect to watchdog process.

The default is the value specified in max_connections of postgresql.conf.

There is no upper limit, but about 200 bytes of memory are consumed for 1 connection when PostgreSQL is started.

Note

Normally you do not need to consider, but if you have a heartbeat connection with a very large number of conmgr processes, it may violate on the maximum number of file descriptors (You can check it with -n of the ulimit command.) of the OS user limit. This is because the socket for the heartbeat connection consumes the file descriptor. Set the maximum number of file descriptors of the OS user limit to a value larger than the value calculated below from the max_files_per_process parameter value and watchdog_max_hb_connections parameter value in postgresql.conf.

```
max_files_per_process + watchdog_max_hb_connections x 2
```

2.2.2 Introducing the watchdog extension

Execute the CREATE EXTENSION statement with watchdog.

Example)

```
potgres=# CREATE EXTENSION watchdog;
CREATE EXTENSION
```

This allows you to see the pgx_stat_watchdog view for information about the watchdog process.

2.3 Removing Setup

No work is required on the client side.

On the server side, drop watchdog extension by DROP EXTENSION statement and remove it from shared_preload_libraries.

Example)

```
potgres=# DROP EXTENSION watchdog;
DROP EXTENSION
```
Chapter 3 Using from an Application

Describes how to use the Connection Manager from an application.

3.1 Connection Method

When connecting to the instance using ConnectionManager, specify the following values in the connection parameters of the application. Application connection parameters are parameters that specify the database IP address, host name, port number, etc., which are originally specified when connecting to the database from the application. For example, when using libpq, specify "localhost" for the host parameter and specify the port number on which the conmgr process listens for the port parameter.

Connection parameters not shown here are used directly by the instance in the second stage of the connection, connecting to the instance (connecting to an instance without the Connection Manager), and the conmgr process does not check or use it.

Connection destination address

Specify "localhost". Unix domain sockets are not allowed. It is possible to connect to a remote conmgr process, but it should not be used for other purposes expect such as testing. This is because there is no mechanism between the application and the conmgr process to detect the remote server down or the network link down, making the Connection Manager meaningless.

Port number

Specify the value specified for the port parameter in conmgr.conf.

Connection destination instance attributes

Follow the "Target server" in the application connection switch feature. Refer to "Taget server" in "Connection Information for the Application Connection Switch Feature" in the "Application Development Guide" for information on the target server in the application connection switch feature.

3.2 How to Detect Instance Errors

Only special if you are using libpq's asynchronous communication method. For additional discovery methods, refer to "Errors when an Application Connection Switch Occurs and Corresponding Actions" of the for each client driver in the "Application Development Guide". If the conmgr process goes down while accessing it, or if the conmgr process tries to establish a SQL connection while it is down, the same error is returned as if the instance went down.

3.3 How to Use in libpq

libpq provides very detailed communication control. Therefore, to detect a heartbeat error through the conmgr process, you may need to modify the existing application logic.

See

Refer to "libpq - C Library" in the PostgreSQL Documentation on functions described below.

3.3.1 How to Specify Multiple Connection Destinations

The host parameter or hostaddr parameter in the connection string not only specifies the destination of one conmgr process, but can also be a mixture of destinations of other conmgr processes and postmaster. In this case, the connections are tried in the order listed.

For example, if the connection string specifies conmgr1, conmgr2 in that order, and if conmgr1 does not know the server for the attribute specified in target_session_attrs parameter, it queries conmgr2 for the destination. And, for example, if postmaster1, conmgr1 is specified, it will attempt to connect directly to the database instance pointed to by postmaster1. If this fails, query conmgr1 for a connection.
3.3.2 Using the Asynchronous Connection Method

An asynchronous connection method is to use a function like PQconnectStart() instead of a function like PQconnectdb(). PQconnectStart() returns without synchronizing the completion of the connection to the database. The user application must then monitor the sockets returned by PQsocket() to be readable or writable, for example by using the poll() system call, according to the values required by the return value of PQconnectPoll().

With the Connection Manager, the socket returned by PQsocket() may change after a call to PQconnectPoll(), so be sure to reacquire the socket that you want to give to the poll() system call using PQsocket(). This behavior is similar to simply specifying multiple hosts in the connection string without using the Connection Manager.

3.3.3 Using an Asynchronous Communication Method

An asynchronous communication method is one in which the application returns control without waiting for a response from the database, and PQsetnonblocking() is used to asynchronize completion of transmission or completion of receipt of all results. Instead of using a function like PQexec(), use a function like PQsendQuery(). In this method, the user application monitors the socket that connects to the database returned by PQsocket(), for example, by using the poll() system call.

For example, if the link to the database goes down, simply monitoring the socket returned by PQsocket with the poll() system call will not detect it.

However, it is possible to detect the reception of database anomaly detection packets sent from the conmgr process, for example, by monitoring the reception of data on the socket (POLLIN) connecting to the conmgr process returned by PQcmSocket(). Once a reception is detected, the user application need not directly manipulate the packet. By calling something like PQgetResult() or PQconsumeInput() according to the existing application logic, it behaves as if the connection were disconnected. Refer to “Errors when an Application Connection Switch Occurs and Corresponding Actions” in the Application Development Guide on SQLSTATE returned, etc. If you are not using the Connection Manager, PQcmSocket() returns -1.

3.3.4 Behavior of PQhost() or PQhostaddr() or PQport()

PQhost(), PQhostaddr() or PQport() typically return a host parameter or hostaddr parameter or port parameter specified in the connection string by the user application. However, if you specify a connection destination for the conmgr process, the destination for the conmgr process you specify will be changed to the database connection destination information provided by the conmgr process before the connection is completed. This behavior is similar to simply specifying multiple hosts in the connection string without using the Connection Manager.

3.3.5 Behavior of PQstatus()

If you are using an asynchronous connection method, you can monitor the intermediate state of the connection to the database with PQstatus(). If you are using the Connection Manager, the enum value returned by PQstatus() is appended with the following:

```
CONNECTION_AWAITING_CMRESPONSE
/ * Waiting for a response from the conmgr process * /
```

3.3.6 PQcmSocket()

You can get a socket that leads to the conmgr process. It returns a value equal to or more than 0 for a valid socket, or -1 if you are not connected to the conmgr process.

```
int PQcmSocket(const PGconn *conn);
```
Appendix A  System Views

A.1  pgx_stat_watchdog

A row in this view corresponds to conmgr process, which is connected to watchdog process. Additional columns may be added in future versions.

Glossary

**Arbitration command**
A user exit (user command) called when an abnormality is detected using operating system/server heartbeat monitoring in database multiplexing mode.

**Arbitration server**
A dedicated server on which the Server Assistant program is installed.

**Archive log**
Contains the history of updates made to the database, and is used during recovery.

**Backup data storage destination**
The directory that stores the backup data.

**Client command**
A command that is executed from the client machine and used. Also known as a client application.

**Connection Manager**
The replication operation to continue without knowing where the application is connected.
The Connection Manager feature improves the availability.

**Data storage destination**
The directory that stores the database clusters.

**Database cluster**
The database storage area on the database storage disk. Database clusters are a collection of databases managed by an instance.

**Data masking**
A feature that can change the returned data for queries generated by applications, to prevent exposing actual data.

**Database multiplexing**
Mechanism in which a database is made redundant on multiple servers, by transferring transaction logs (WAL) via the network to enable application jobs to be continued.

**Database superuser**
A user defined in the database with access privileges for all database objects.

**Encoding**
Indicates the character set.

**Fencing**
A process that isolates a database server with an unstable status from the cluster system in database multiplexing mode. This process is implemented as a fencing command.

**Fencing command**
A user exit (user command) that implements fencing in database multiplexing mode.
Global Meta Cache

The Global Meta Cache feature caches the information about system catalogs in shared memory. The catalog meta cache on shared memory is called the Global Meta Cache (GMC).

Instance

A series of server processes for managing database clusters.

Instance administrator

The OS user account that owns the database cluster files and operates the database server processes.

Instance name

Indicates the instance name.

Local Meta Cache Limit

The ability to limit the size by removing the Local Meta Cache that has not been accessed for a long time. Local Meta Cache is a meta cache (system catalog and table definition information) held in local memory.

Masking policy

A method of changing data under specific conditions when it is returned for a query from an application. You can configure masking target, masking type, masking condition and masking format.

Mirrored transaction log

The log that mirrors the transaction log at the backup data storage destination.

Mirroring Controller arbitration process

A process that performs arbitration and fencing on the arbitration server.

Mirroring Controller monitoring process

A process that performs heartbeat monitoring of the Mirroring Controller process. If the Mirroring Controller process returns no response or is down, the Mirroring Controller monitoring process is restarted automatically.

Mirroring Controller process

A process that performs operating system/server and process heartbeat monitoring and disk abnormality monitoring between database servers. Additionally, the process issues arbitration requests to the arbitration server and executes arbitration commands.

Pgpool-II connection pooling

The connection pooling feature of Pgpool-II supported by FUJITSU Enterprise Postgres. This feature maintains the connection established with the database server and reuses that connection each time a new connection with the same properties (user name, database, and protocol version) arrives. By reducing the connection overhead for the database server, throughput of the whole system is improved.

Pgpool-II failover

The automatic failover feature of Pgpool-II supported by FUJITSU Enterprise Postgres. If any of the database servers crashes or can no longer be reached, this feature disconnects the server and continues operation on the remaining servers. The streaming replication feature of PostgreSQL is combined with Pgpool-II to achieve a high-availability system.

Pgpool-II load balancing

The load balancing feature of Pgpool-II supported by FUJITSU Enterprise Postgres. This feature distributes reference queries to multiple database servers, improving throughput of the whole system. The database multiplexing feature or PostgreSQL streaming replication feature is combined with Pgpool-II to reduce the load on the database server.
Pgpool-II server
A server for using the failover, connection pooling, and load balancing features of Pgpool-II. It is a dedicated server that has a server program installed for using these features.

Primary server
The server that processes the main database jobs during multiplexed database operation.

Server Assistant
A feature that objectively determines the status of database servers as a third party, and if necessary, isolates affected databases if the database servers are unable to accurately ascertain their mutual statuses in database multiplexing mode, such as due to a network error between database servers, or server instability.

Server Assistant program
A program to be installed on the arbitration server.

Server command
A command used on the database server. Also known as a server application.

Standby server
A server that generates a replicated database synchronized with the primary server, and that can run as an alternative server in case the primary server fails during multiplexed database operation.

State transition command
A user exit (user command) called when Mirroring Controller performs a state transition of a database server in database multiplexing mode. State transition commands include the post-switch command, pre-detach command, and post-attach command.

Transaction log
Contains the history of updates made to the database by transactions. Also known as the WAL (Write-Ahead Log).

Transaction log storage destination
The directory that stores the transaction log.

VCI (Vertical Clustered Index)
An index with columnar data structure suitable for aggregation.

WAL (Write-Ahead Log)
Has the same meaning as 'transaction log'.

WebAdmin program
A GUI-based program installed on a database server or a dedicated WebAdmin server, used to manage database instances.

WebAdmin server
By using the WebAdmin program on a different server to the database server, instances on multiple database servers can be managed from a dedicated WebAdmin server on which the WebAdmin program is installed.

Preface

Purpose of this document
This document is a command reference, and explains FUJITSU Enterprise Postgres commands and options with features expanded on from PostgreSQL.

Intended readers
This document is aimed at people who manage and operate FUJITSU Enterprise Postgres. Readers of this document are also assumed to have general knowledge of:
- PostgreSQL
- SQL
- Linux
- Windows

Structure of this document
This document is structured as follows:
Chapter 1 Command List and Specification Format
Lists commands and describes their specification format.
Chapter 2 Client Commands
Explains options not listed in "PostgreSQL Client Applications" in the PostgreSQL Documentation.
Chapter 3 Server Commands
Explains commands and options not listed in "PostgreSQL Server Applications" in the PostgreSQL Documentation.
Chapter 4 Mirroring Controller Commands
Explains the Mirroring Controller commands.
Chapter 5 Connection Manager Commands
Explains the Connection Manager commands.

How to read this document
Examples in this document are predominantly for UNIX/Linux.
For Windows, replace values (such as paths in the examples) as appropriate.

Export restrictions
If this document is to be exported or provided overseas, confirm legal requirements for the Foreign Exchange and Foreign Trade Act as well as other laws and regulations, including U.S. Export Administration Regulations, and follow the required procedures.

Issue date and version
Edition 1.0: April 2021

Chapter 1 Command List and Specification Format

This chapter lists commands and describes their specification format.

1.1 Command List

This chapter lists commands and options not explained in “PostgreSQL Client Applications” or in “PostgreSQL Server Applications” in the PostgreSQL Documentation.

1.1.1 Client Commands

The commands below have options not explained in “PostgreSQL Client Applications” in the PostgreSQL Documentation.

<table>
<thead>
<tr>
<th>Command</th>
<th>Functional overview</th>
</tr>
</thead>
<tbody>
<tr>
<td>pg_dumpall</td>
<td>Extract a PostgreSQL database cluster into a script file</td>
</tr>
</tbody>
</table>

The command below is not explained in “Client Applications” in the PostgreSQL Documentation.

<table>
<thead>
<tr>
<th>Command</th>
<th>Functional overview</th>
</tr>
</thead>
<tbody>
<tr>
<td>pgx_loader</td>
<td>Loads data from an external file into a PostgreSQL table.</td>
</tr>
</tbody>
</table>

1.1.2 Server Commands

The commands below have options not explained in “PostgreSQL Server Applications” in the PostgreSQL Documentation.

<table>
<thead>
<tr>
<th>Command</th>
<th>Functional overview</th>
</tr>
</thead>
<tbody>
<tr>
<td>pg_ctl</td>
<td>Initialize, start, stop, or control a PostgreSQL server</td>
</tr>
<tr>
<td>postgres</td>
<td>PostgreSQL database server</td>
</tr>
</tbody>
</table>

The commands below are not explained in “PostgreSQL Server Applications” in the PostgreSQL Documentation.

<table>
<thead>
<tr>
<th>Command</th>
<th>Functional overview</th>
</tr>
</thead>
<tbody>
<tr>
<td>pgx_dmpall</td>
<td>Backs up the data directory, tablespaces, and configuration files.</td>
</tr>
<tr>
<td>pgx_keystore</td>
<td>Manages keystore</td>
</tr>
<tr>
<td>pgx_rcvall</td>
<td>Recovers the data directory, tablespaces, and configuration files.</td>
</tr>
</tbody>
</table>

1.1.3 Mirroring Controller Commands

Mirroring Controller has the following commands:

<table>
<thead>
<tr>
<th>Command</th>
<th>Functional overview</th>
</tr>
</thead>
<tbody>
<tr>
<td>mc_arb</td>
<td>L  Start, stop and display the status of the Mirroring Controller arbitration process.</td>
</tr>
<tr>
<td></td>
<td>W  Start, stop and display the status of the Mirroring Controller arbitration process, or register and unregister as a Windows service.</td>
</tr>
</tbody>
</table>
### 1.1.4 Connection Manager Commands

Connection Manager has the following commands:

<table>
<thead>
<tr>
<th>Command</th>
<th>Functional overview</th>
</tr>
</thead>
<tbody>
<tr>
<td>cm_ctl</td>
<td>Start, stop or display the status of the conmgr process</td>
</tr>
</tbody>
</table>

### 1.2 Command Specification Format

The table below shows the command specification format.

<table>
<thead>
<tr>
<th>Item</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>[]</td>
<td>Indicates optional element.</td>
</tr>
<tr>
<td>...</td>
<td>Indicates that the item can be specified repeatedly.</td>
</tr>
</tbody>
</table>
Chapter 2 Client Commands

This chapter explains options not listed in "PostgreSQL Client Applications" in the PostgreSQL Documentation.

2.1 pg_dumpall

Name
pg_dumpall -- Extract a PostgreSQL database cluster into a script file

Synopsis
pg_dumpall [connectionOption...] [option...]

Options
--no-tablespace-encryption
Do not output commands to encrypt tablespaces. Running the generated SQL script will restore the originally encrypted data without being encrypted.

See
Refer to "pg_dumpall" in the PostgreSQL Documentation for details.

2.2 pgx_loader

Name
pgx_loader -- Loads data from a file into a PostgreSQL table.

Overview
pgx_loader load -c command [options...]
pgx_loader recovery -t table

Description
The pgx_loader command loads data from an external file into PostgreSQL tables, and commits or rolls back transactions prepared during data load.
In load mode, data is loaded at high speed by executing the COPY FROM command specified in command at a certain degree of parallelism. If load is completed successfully, the message below is output to the standard output.

LOAD count
Note: count is the number of rows loaded.

In recovery mode, commit or rollback of transactions prepared during data load is performed.

Options
-a
--echo-sql
Display the executed command in the standard output.
-c command
--copy-command=command
Specify the COPY FROM command to be executed. If STDIN is specified for the FROM clause, data will be loaded from the standard input. In this case, SQL superuser privileges (or having one of the roles pg_read_server_files or
pg_execute_server_program) are not required, because local user access privileges will be used for external files and external programs, instead of database server access privileges.

"binary" cannot be specified for the FORMAT option of the COPY FROM command specified in this option. Therefore, input files in binary format cannot be specified.

The FREEZE option cannot be specified for the COPY FROM command specified in this option.

See Refer to “COPY” in the PostgreSQL Documentation for information on the COPY FROM command.

---

\-j number-of-jobs
--jobs=number-of-jobs

Specify the number of background workers (parallel workers) that the COPY COMMAND should use to simultaneously perform data conversion, table creation, and index creation. This option can dramatically reduce the time for loading a large amount of data on instances that runs on multiple processor machines.

The optimal value depends on the server, client, and network configurations. The number of CPU cores and disk configuration also affect the optimal value. The number of CPU cores of the server is recommended as the initial value to try. Naturally, if a value that is too large is used, performance degradation will occur due to thrashing and context switching.

Specify a value from 2 to 128. The default is 2.

\-t table
--table=table

Complete the prepared transactions only for the specified table.

\-?  
--help

Show how to use pgx_loader command line arguments, and exit.

The command line options below control the database connection parameters.

\-d connstr
--dbname=connstr

Specify the database name to connect to.

If this option is not specified, the PGDATABASE environment variable will be used. If the environment variable is not set, your operating-system user name will be used.

\-h host
--host=host

Specify the host name of the machine the database server runs on. If the specified value starts with a slash, it will be used as the directory for a Unix domain socket.

If this option is not specified, the PGHOST environment variable will be used. If the environment variable is not set, it will be considered a Unix domain socket connection.

\-p port
--port=port

Specify the TCP port to be used by the server to monitor the connection, or extension of the local Unix domain socket file.

If this option is not specified, the PGPORT environment variable will be use. If the environment variables is not set, 27500 will be used.

\-U username
--username=username

User name for connection to the database.
-w
--no-password

Never prompt for the password. If the server requires password authentication but other means (such as a .pgpass file) are not available, the connection attempt will fail. This option can be useful in batch jobs, scripts, and so on, where no user is present to enter a password.

-W
--password

Force pgx_loader to prompt for the password before connecting to the database. This option is never essential, since pgx_loader will automatically prompt for the password if the server demands password authentication. However, pgx_loader will waste a connection attempt finding out if the server requires a password. In some cases it is worth specifying this option to avoid the extra connection attempt.

Diagnostics

load mode

0: Normal exit
Other than 0: Abnormal exit

recovery mode

0: There are no prepared transactions that must be completed
3: A prepared transaction was committed
4: A prepared transaction was rolled back
Other than the above: Abnormal exit

Note

The order of the table rows loaded by pgx_loader may not match the order of the file lines. This is because the file lines will have been inserted into the table in parallel, by multiple parallel workers.

Example

The example below loads the file /path/to/data.csv (2000 records) into table tbl using a degree of parallelism of 3.

```bash
$ pgx_loader load -j 3 -c "COPY tbl FROM '/path/to/data.csv' WITH CSV"
LOAD 2000
```

The example below reads the file /path/to/data.csv (2000 records) from the standard input and loads into table tbl using a degree of parallelism of 3.

```bash
$ pgx_loader load -j 3 -c "COPY tbl FROM STDIN WITH CSV" < /path/to/data.csv
LOAD 2000
```

The example below completes the transactions prepared for table tbl.

```bash
$ pgx_loader recovery -t tbl
```
Chapter 3 Server Commands

This chapter explains commands and options not listed in "PostgreSQL Server Applications" in the PostgreSQL Documentation.

3.1 pg_ctl

Name
pg_ctl -- Initialize, start, stop, or control a PostgreSQL server

Synopsis

Options
--keystore-passphrase
Prompt for the passphrase to open the keystore.

See
Refer to "pg_ctl" in the PostgreSQL Documentation for details.

3.2 pgx_dmpall

Name
pgx_dmpall - Backs up the data directory, tablespaces, and configuration files.

Synopsis
pgx_dmpall [option...]

Description
The pgx_dmpall command backs up the data directory, tablespaces, and configuration files. The backup data is stored in the directory specified by backup_destination parameter of postgresql.conf. The pgx_dmpall command also deletes archived Write Ahead Logs (WAL) that are no longer necessary for recovery when the backup completes successfully.

Options
-c
This option only backs up configuration files. The configuration files are as follows:
- postgresql.conf (postgresql.conf)
- File for host-based authentication (pg_hba.conf)
- Configuration file for ident authentication (pg_ident.conf)

If an external reference, such as 'include' in postgresql.conf, is set, the reference destination files are also backed up.
-C fast|spread
--checkpoint=fast|spread

Sets checkpoint mode to fast or spread (default).
If fast is specified, the checkpoint processing at the start of backup becomes quick, but the impact on performance of
running applications gets larger due to intense I/O. In spread mode, the impact on applications is smaller but the backup
takes longer, because the checkpoint is performed slowly.

-D datadir

Specify the data directory. If this option is omitted, the value of the environment variable PGDATA is used.

-f configFile

Specify the postgresql.conf configuration file. This option is set if the data directory and the configuration file set in the
'data_directory' parameter of the postgresql.conf file are running in separate directories.

-P tablespacesListFile
--tablespaces-list-file=tablespacesListFile

Specify the full path of the file containing the names of the tablespaces to be backed up using the copy command, using
less than 1024 bytes.

The file format is described below:

tablespaceName

Tablespaces not listed in the specified file are backed up to the backup storage directory. If this option is not specified,
all tablespaces are backed up using the copy command.

This option can be specified if the -Y option has been specified, and it is used to limit the tablespaces backed up using the
copy command.

-U username
--username=username

Specify the user name of the database superuser. This defaults to the name of the effective user running pgx_dmpall.

-Y copyCommandFile
--copy-command=copyCommandFile

Specify the full path of the file of the copy command for backup, using less than 1024 bytes. This option cannot be
specified together with the -c option.

-w
--no-password

Never issue a password prompt. If the server requires password authentication and a password is not available by other
means such as a .pgpass file, the connection attempt will fail. This option can be useful in batch jobs and scripts where
no user is present to enter a password.

-W
--password

Force pgx_dmpall to prompt for a password before connecting to a database.

This option is never essential, since pgx_dmpall will automatically prompt for a password if the server demands password
authentication. However, pgx_dmpall will waste a connection attempt finding out that the server wants a password. In
some cases it is worth typing -W to avoid the extra connection attempt.

--maintenance-db=dbname

Specifies the name of the database to connect to. If not specified, the postgres database will be used; if that does not exist,
template1 will be used.

Any database can be specified as long as it can be connected to.
--exclude-copy-cluster

Excludes a database cluster from backup via the copy command. This option can be specified if the -Y option has been specified. If this option is not specified, the database cluster will be backed up using the copy command.

Environment

PGDATA

Specify the data directory. You can overwrite using the -D option.

Diagnostics

0: Normal end
Other than 0: Abnormal end

Notes

This command can only be executed when the database server is running.
Execute this command as a PostgreSQL user account.
Do not update or delete files in the backup storage directory. Otherwise, you may not be able to recover the database.
Do not store other files in the backup storage directory.
This command uses one database connection. To establish a connection, this command uses the IPv4 loopback address 127.0.0.1 on Windows, and the UNIX domain socket on other operating systems. Therefore, permit these connections in pg_hba.conf.
This command cannot be executed on the standby server.

Example

In the following example, the data directory, tablespaces, and configuration files are backed up. At this time, stored WALs are no longer necessary because the backups are destroyed.

```bash
$ pg_dmpall
```

Related item

pg_dmpall

3.3 pgx_keystore

Name

pgx_keystore -- Manages keystore

Synopsis

pgx_keystore [option...] keystore_location

Description

pgx_keystore enables auto-open of a keystore.

Options

-`a`
--enable-auto-open

   Enables auto-open of a keystore. This allows the keystore to open automatically without entering the passphrase when the database server starts.
When auto-open is enabled, an obfuscated copy keystore.aks is created in the same directory where the keystore file keystore.ks is stored. To disable auto-open, delete keystore.aks.

```
-P passphrase
--passphrase=passphrase
```

Specify the passphrase to open the keystore. If this option is omitted, the prompt to enter the passphrase is displayed.

```
keystore_location
```

Specify the absolute or relative path of the keystore file.

**Diagnostics**

0: Normal exit

Other than 0: Abnormal exit

**Notes**

This command can be executed whether the database server is running or stopped. It does not connect to the database server.

**Example**

Enables auto-open of a keystore.

```
$ pgx_keystore -a /key/store/location/keystore.ks
```

### 3.4 pgx_rcvall

**Name**

pgx_rcvall - Recovers the data directory, tablespaces, and configuration files.

**Synopsis**

```
pgx_rcvall [option...]
```

**Description**

The pgx_rcvall command recovers the data directory, tablespaces, and configuration files using the data that was backed up with pgx_dmpall command and archived Write-Ahead-Log (WAL). If none of the options that indicate the recovery point is specified, all archived WAL are applied and the data will be recovered to the latest point.

**Options**

```
-B backupdir
-D datadir
-e targetTime
```

Specify the backup storage directory. If the data directory is damaged, this option cannot be omitted.

Specify the data directory. If this option is omitted, the value of the environment variable PGDATA is used.

Specify this option to recover the data as of the specified date and time.

```
targetTime
```

Specify the time at which the data is recovered. The format is as follows:

"YYYY-MM-DD HH:MM:SS"
This option displays a list of the backup data information in the backup storage directory that was obtained using the pgx_dmpall command. If the pgx_dmpall command was executed using the copy command (-Y option) for backup, the resources backed up using the copy command will also be listed. This cannot be specified together with -p, -e or -n option.

-n restorePoint
Specify this option to recover the data to the specified restore point. Restore points are created with SQL function pg_create_restore_point. If multiple restore points with the same names were created, the first one after the backup was taken is used for recovery. If the specified restore point does not exist, the recovery fails. This cannot be specified together with -e or -p option.

-p
Specify this option to recover the data as of the time when the last backup completed. This cannot be specified together with -e or -n option.

-x
Specify this option if you do not want to include transactions committed at the time specified in the -e option as part of the recovery.

-Y copyCommandFile
Specify the full path of the file of the copy command for recovery, using less than 1024 bytes. This option cannot be specified together with the -l option.

--keystore-passphrase
Prompt for the passphrase to open the keystore.

--view-results-of-copying
Output the backup information file that was written by the copy command executed via the pgx_dmpall command. This option cannot be specified together with the -l, -p, -e, -n, or -Y option.

Environment
PGDATA
Specify the data directory. You can overwrite using the -D option.

PGPORT
Specify the port number for connecting to the database.

PGUSER
Specify the user name of the database superuser. This defaults to the name of the effective user running pgx_dmpall.

Diagnosis
0: Normal exit
Other than 0: Abnormal exit

Backup data information
Date
Date the backup data was created using the pgx_dmpall command.

Dir
This is the name of the directory in the backup storage directory that is used to store the backup data.
Directory naming format: Time format (YYYY-MM-DD_HH-MM-SS)

Status
This is the status of the pgx_dmpall command backup data.
COMPLETE: Complete
INCOMPLETE: Incomplete

Resources backed up by the copy command

List of resources that were backed up by the copy command executed via the pgx_dmpall command.

If there are resources that were backed up by the copy command, then database clusters ('pg_data') or tablespace names will be listed, delimited by header and halfwidth comma.

Notes

This command can only be executed when the database server is stopped, except when it is executed with -l option.

Execute this command as a PostgreSQL user account.

Use backup data that was taken from the recovery target data directory.

Before executing this command, disconnect all application database connections. Additionally, do not connect to the database during recovery.

The configuration files are restored from those files that were taken by the last pgx_dmpall (including -c option).

This command connects to the database to determine whether the recovery has completed. So ensure that you set the port number with PGPORt environment variable in the environment where multiple instances exist.

Match the OS timezone setting when running pgx_dmpall/pgx_rcvall to the timezone specified by timezone parameter in postgresql.conf.

Otherwise, data might be recovered to an unexpected time when -e or -p is specified.

If you recover to a past point, a new timeline (history of database updates) begins at that point. That recovery point is the latest point in the new timeline when the recovery is completed. If you subsequently recover to the latest point, the database updates in the new timeline will be replayed.

Valid restore points are the ones that were created in the timeline where the backup had been taken. That means that if you recover to a past point, those restore points created thereafter are unavailable. Therefore, take a backup when you have restored the past data desired.

If the pgx_dmpall command was executed using the copy command (-Y option) for backup, it is necessary to execute this command using the copy command (-Y option) for recovery. However, because the list of resources (database cluster or tablespace) that were backed up using the copy command is recorded in the backup directory, there is no need to specify the target resources when executing this command. The -I option can be used to check the target resources for which a backup is retrieved using the copy command.

Example

In the following example, the data directory, tablespaces, and configuration files are recovered.

```
$ pgx_rcvall -B /home/pgsql/Backupdir
```

In the following example, the data directory and tablespaces are recovered at 10:00:00 on 01-05-2017. The configuration files are recovered at the point at which the last of the data is obtained.

```
$ pgx_rcvall -B /home/pgsql/Backupdir -e "2017-05-01 10:00:00"
```

In the following example, the data directory and tablespaces are recovered up to the time of restore point "before_match_20170510_1". The configuration files are restored from the latest backup.

```
$ pgx_rcvall -B /home/pgsql/Backupdir -n before_match_20170510_1
```

In the following example, the obtained backup data information in the backup storage directory is displayed in a list.

```
$ pgx_rcvall -l
```

Related item

pgx_dmpall
3.5 postgres

Name
postgres -- PostgreSQL database server

Synopsis
postgres [option...]

Options

-K
Prompt for the passphrase to open the keystore. This option works in single-user mode only, so you must also specify the --single option, as shown below:
postgres --single -K

See
Refer to "postgres" in the PostgreSQL Documentation for details.
Chapter 4 Mirroring Controller Commands

This chapter explains the Mirroring Controller commands.

4.1 mc_arb

Name

mc_arb - Start, stop, and display the status of the Mirroring Controller arbitration process

mc_arb - Start, stop, and display the status of the Mirroring Controller arbitration process, or register and unregister it as a Windows service

Overview

mc_arb start [-M mcdir] [-w| -W]

mc_arb stop [-M mcdir] [-e]

mc_arb status [-M mcdir]

mc_arb register [-M mcdir] [-w| -W] -P password [-S a[uto] | d[emand]]

mc_arb unregister [-M mcdir]

Description

mc_arb starts, stops, and displays the status of the Mirroring Controller arbitration process.

mc_arb starts, stops, and displays the status of the Mirroring Controller arbitration process, or registers and unregisters it as a Windows service.

The start mode starts the Mirroring Controller arbitration process.

The stop mode stops the Mirroring Controller arbitration process.

The status mode displays the connection status of the Mirroring Controller arbitration process with the Mirroring Controller processes of the primary server and standby server.

The register mode registers the Mirroring Controller arbitration process as a Windows service. The -w and -W options can be used to start/stop the Mirroring Controller arbitration process through the Windows service, and when it executes the mc_arb command, the specified option will take effect.

The unregister mode unregisters the Mirroring Controller arbitration process as a Windows service.

If the Mirroring Controller arbitration process has not been started on the server executing the command, stop mode and status mode will terminate with an error.

Additionally, if Mirroring Controller is forcibly stopped on the database server, it may take a few moments until the status mode displays the status of the server connection as offline.

This command can be executed by any user.

Execute this command as a user with administrator privileges (operating system user that belongs to the "Administrators" group).

Options

-e

Specify this option to forcibly stop the Mirroring Controller arbitration process on the active server.
Specify this option to stop the Mirroring Controller arbitration process but keep Mirroring Controller running (to stop both, first stop Mirroring Controller of the database server, and then the Mirroring Controller arbitration process). This option can also be specified to halt the arbitration process (by stopping the Mirroring Controller arbitration process) when the fencing command called by the arbitration process becomes unresponsive.

-M mcdir

Specify the Mirroring Controller arbitration process management directory.
ASCII characters can be specified in the directory path.
If this option is omitted, the value of the environment variable ARBCONTROLDIR is used.

-P password

For the register mode, specify the password for the user who executed the command.

-S a[uto] | d[emand]

Specify the start type for the Windows service to be registered. You can choose auto or demand as the start type by specifying the entire word or just its first letter. The default is auto.

-w

Waits for operations to finish.
This option is the default of start mode.
This option is the default of start mode and register mode.

-W

Does not wait for operations to finish.

Environment

ARBCONTROLDIR

Specify the Mirroring Controller arbitration process management directory.
ASCII characters can be specified in the directory path.
You can specify the -M option to override this value.

Diagnostics

0: Normal end
Other than 0: Abnormal end

Notes

If the Mirroring Controller arbitration process is forcibly stopped or communication between the command and the Mirroring Controller arbitration process is interrupted while the Mirroring Controller arbitration process is being stopped, a message that the command is being executed may be output and stopping may terminate in error, even though no other instances of the mc_arb command are being executed.
To solve this issue, ensure that other instances of the mc_arb command are not being executed before forcibly stopping the Mirroring Controller arbitration process.

Use the start mode and stop mode to start and stop the Windows service. Before being able to use these modes, use the register mode to register the Mirroring Controller arbitration process as a Windows service.
The mc_arb command must be executed from "Administrator: Command Prompt". Right-click [Command Prompt], and then select [Run as administrator] from the context menu to display the [Administrator: Command Prompt] window.

Example

Start the Mirroring Controller arbitration process.
$ mc_arb start -M /mcarb_dir/arbiter1

Start the Mirroring Controller arbitration process.

> mc_arb start -M D:\mcarb_dir\arbiter1

Display details of mc_arb status

4.2 mc_ctl

Name

mc_ctl - Start and stop Mirroring Controller, switch/disconnect the server, or display the server status.

mc_ctl - Start and stop Mirroring Controller, switch/disconnect the server, display the server status, or register and unregister as a Windows service.

Overview

mc_ctl status [-M mcdir] [--arbiter] [--local-server server_id]

mc_ctl detach [-M mcdir] [--no-fencing] [--local-server server_id]

mc_ctl enable-failover [-M mcdir] [--local-server server_id]

mc_ctl disable-failover [-M mcdir] [--local-server server_id]

          [-S a[u]to | d[emand]] [--async-connect-arbiter] [--local-server server_id]

mc_ctl unregister [-M mcdir] [--local-server server_id]

Description

mc_ctl starts and stops Mirroring Controller, switches/disconnects the server, or displays the server status.

mc_ctl starts and stops Mirroring Controller, switches/disconnects the server, displays the server status, or registers and unregisters as a Windows service.

The start mode starts Mirroring Controller. If the --mc-only option is omitted, the command starts a database instance.
The stop mode stops Mirroring Controller. If the --mc-only option is omitted, the database instance is stopped. If --mc-only option is not specified, database instance is also stopped. When executes on standby server without --mc-only, standby server will be detached from primary server.

The status mode displays the status of the servers, database instance processes, and disks monitored by Mirroring Controller. Additionally, if the --arbiter option is specified, Mirroring Controller arbitration process connection status is displayed.

The switch mode switches the primary server. When the server is switched, the database instance on the primary server stops, and the database instance on the standby server is upgraded to primary server and begins degrading operation. This mode can be executed on the primary server and standby server in an environment where the Mirroring Controller process can communicate with the Mirroring Controller process on the other server.

The detach mode forcibly disconnects the standby server. This mode is used to forcibly disconnect the other server when stopping of Mirroring Controller cannot be performed using stop mode (which requires login to the standby server). It can only be executed on the primary server.

The enable-failover mode enables automatic switching and disconnection.

The disable-failover mode disables automatic switching and disconnection.

The register mode registers Mirroring Controller as a Windows service. The -w, -W, -f, -F, --mc-only, --async-connect-arbiter, and --local-server options are used when Mirroring Controller is started and stopped as a Windows service. If the mc_ctl command is used to start and stop Mirroring Controller, the option specified in the command will be valid.

The unregister mode unregisters Mirroring Controller as a Windows service.

If Mirroring Controller has not been started on the server that executes the command, commands for any mode other than the start mode, and status mode.

Execute this command as an instance administrator.

If Mirroring Controller has not been started on the server that executes the command, commands for any mode other than the start mode, status mode, register mode, and unregister mode terminate with an error.

Execute this command as a user with the "Administrator" privilege (operating system user ID that belongs to the Administrator group).

Until you start Mirroring Controller of standby server after starting Mirroring Controller of the primary server, operation can be started with only the primary server. Standby server is incorporated when you start the Mirroring Controller of standby server, and you should be able to operate in the multiplexing configuration.

Options

-a
  Specify this option to stop Mirroring Controller on all servers.

-e
  Specify this option to forcibly stop Mirroring Controller on the active server.

-f
  Specify this option to enable automatic switching and disconnection of Mirroring Controller immediately after startup.

This option is the default of start mode.

This option is the default of start mode and register mode.

Specify this option to disable automatic switching and disconnection immediately after startup of Mirroring Controller.
--async-connect-arbiter

Specify this option to connect the Mirroring Controller start process asynchronously to the Mirroring Controller arbitration process. This option can be specified to forcibly start Mirroring Controller if the Mirroring Controller arbitration process is not started.

Specify this option if using the Mirroring Controller arbitration server.

--arbiter

Specify this option to display the connection status of the Mirroring Controller arbitration process. This option can be specified if using status mode.

Specify this option if using the Mirroring Controller arbitration server.

--local-server server_id

If you run a simulation build of the primary and standby servers in a single server (for system testing, for example), specify this option to identify the server to be operated.

For server_id, specify the server identifier specified in the network.conf file. ASCII characters other than single-byte space can be specified in the server identifier. The operations will be executed as if the user has logged in to server_id.

--mc-only

Specify this option to start and stop only Mirroring Controller processes. At the start mode, this option can be specified only while the database instance is running. If this option is omitted, the database instance is simultaneously started and stopped.

-M mcdir

Specify the Mirroring Controller management directory.

ASCII characters can be specified in the directory path.

If this option is omitted, the value of the environment variable MCCONTROLDIR is used.

--force

Switching with this option specified can only be specified on the standby server. This option is used to perform switching forcibly after performing fencing on the primary server if communication with the Mirroring Controller process of the other server is not possible (due to a network issue between database servers or unresponsive server, for example), thus preventing normal switching. However, if the --no-fencing option is specified, fencing will not be performed on the primary server.

--no-fencing

When switching or disconnection is executed with the --force option specified, fencing of the server to be degraded is circumvented. Therefore, it is necessary for the user to isolate the server to be degraded from the cluster system in advance.

-P password

For the register mode, specify the password for the user who executed the command.

-S a[uto] | d[emand]

Specify the start type for the Windows service to be registered. You can choose auto or demand as the start type by specifying the entire word or just its first letter. The default is auto.

-w

Waits for operations to finish.

This option is the default of start mode.

-W

This option is the default of start mode and register mode.

Does not wait for operations to finish.
Environment variable

MCCONTROLDIR

Specifies the Mirroring Controller management directory.

ASCII characters can be specified in the directory path.

You can specify the -M option to override this value.

Diagnostics

0: Normal end

Other: Abnormal end

Notes

The message under execution might be output though the mc_ctl command is not being executed and, besides, it terminate abnormally when the server is downed while processing execution of this command, an automatic switch, and an automatic separation, and the communication between a primary server and the standby server is cut off. Besides, restart Mirroring Controller to solve this problem after confirming that the mc_ctl command is not in progress. Afterwards, execute a necessary operation.

If a time-out error occurs when the mc_ctl command is in progress, the messages may be different from the processes. Take the actions described in the "Action" section of the message.

Automatic switching and disconnection by the enable-failover mode, the disable-failover mode, and the start mode can be enabled/disabled only while Mirroring Controller is running. Therefore, if you want to enable/disable automatic switching and disconnection on starting, specify the -f option or -F option each time you start Mirroring Controller.

Use the start mode and stop mode to start and stop the Windows service. To do this, use the register mode to register Mirroring Controller as a Windows service in advance.

In case of postgresql.conf has any incorrect parameter when this command is executed, this command may be abnormally terminated. If this is the case, re-execute it again after correct the parameter in postgresql.conf.

If the arbitration server of Mirroring Controller is used, connection with the arbitration server will be performed on startup even if startup using start mode is executed with the -F option specified, or if executed with --local-server specified.

The mc_ctl command must be executed from "Administrator: Command Prompt". Right-click [Command Prompt], and then select [Run as administrator] from the menu to display the [Administrator: Command Prompt] window.

For operation using an arbitration server, the amount of time spent attempting to connect with the arbitration server is calculated, so the Mirroring Controller startup time may take longer.

Example

To start Mirroring Controller:

$ mc_ctl start -M /mcdir/inst1

To start Mirroring Controller:

> mc_ctl start -M D:\mcdir\inst1

Display details of mc_ctl status

<table>
<thead>
<tr>

abnormal : Abnormal
unknown : Unknown (*1)
(6) DBMS process status
normal : Normal
abnormal (abnormal process name (*2)) : Abnormal
unknown : Unknown (*1)
(7) Disk status
normal : Normal
abnormal (abnormal disk type (*3)) : Abnormal
unknown : Unknown (*1)

*1: Displayed when Mirroring Controller is stop state, the management network is
abnormal, or Mirroring Controller has failed or is unresponsive.

*2: The names of the DBMS processes in which the abnormality was detected are output. The
name has the following meaning: However, if multiple DBMS process issues are detected,
only the DBMS for which the first issue was detected is displayed.
-postmaster: Process (postmaster) that accepts application connections
-wal_sender or wal_receiver: Process (WAL sender or WAL receiver) that sends and
receives transaction logs

*3: The types of disks where the abnormality was detected are output separated by a
comma. The type has the following meaning:
-data: Data storage disk
-tran_log: Transaction log storage disk
-tablespace: Tablespace storage disk

Display details of mc_ctl status (with the --arbiter option specified)

<table>
<thead>
<tr>
<th>arbiter_id</th>
<th>host</th>
<th>status</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1)</td>
<td>(2)</td>

</table>

(1) Arbitration server identifier
(2) Host name or IP address
(3) Mirroring Controller arbitration process connection status
online : Connected
offline : Disconnected (*1)

*1: When Mirroring Controller is stopped, connections to the Mirroring Controller
arbitration process cannot be established, so it will be displayed as "offline".
Chapter 5 Connection Manager Commands

This chapter explains the Connection Manager commands.

5.1 cm_ctl

Name

cm_ctl - Start, stop or display the status of the conmgr process

Synopsis

cm_ctl start [-D directory] [-W] [--complete] [-t seconds]

cm_ctl stop [-D directory] [-W] [-m {smart | fast | immediate}] [-t seconds]

cm_ctl status [-D directory] [-t seconds] [-i {all | instance | application}]

Description

The start mode starts the conmgr process. The command returns at least after the heartbeat monitoring connection is completed with the primary server's instance.

When --complete is specified, wait until all instances configured in conmgr.conf have completed their heartbeat monitoring connections. You can set a timeout for these waits. The default of timeout is 60 seconds. Can be changed using the -t option. If it times out, it simply gives up waiting and the conmgr process remains up.

The stop mode sends a signal to the conmgr process to shut down and wait until the process disappears.

The default of wait time is 60 seconds. Can be changed using the -t option. If it times out, it simply gives up waiting. There are three shutdown methods, "smart", "fast", and "immediate", specify with the -m option. The "smart" waits until all applications using the conmgr process run out of SQL connections before shutting down. The "fast" forces all applications using the conmgr process to disconnect from the conmgr process before shutting it down. As a result, the SQL connection for the application receives an error. The "immediate" terminates the conmgr process immediately. If nothing is specified, it stops in smart mode.

The status mode, if the conmgr process exists, queries the conmgr process for instance and application information known to the conmgr process, and display them to standard output along with the state of conmgr itself.

The -i option allows you to specify what information to query. The "instance" queries information about the instance; The "application" queries information about the application; The "all" queries information about both. conmgr's own information is always displayed. The default time to wait for a query to return is 60 seconds. Can be changed using the -t option.

Options

--complete

Wait until all instances configured in conmgr.conf have completed their heartbeat monitoring connections. If the When used with the -W option, the -W option takes precedence.

-D

-- directory=directory

Specify the directory where conmgr.conf is located. If omitted, it refers to the directory specified by the environment variable CMDATA. You cannot omit both.

-i {all | instance | application}

Specify the information to display the status.
--mode={smart | fast | immediate}

Specify the mode of shutdown. The default is smart.

-t seconds
--timeout=seconds

Specify how long to wait for the operation to complete. The unit is seconds. The default is 60 seconds.

-W
--no-wait

In start mode, cm_ctl command returns immediately after forking conmger process. In stop mode, the cm_ctl command returns without waiting for the process to disappear.

Diagnostics

start mode or stop mode

0: Normal end
2: Timeout occurred
3: Unable to access the specified directory
Other than the above: None of the above

status mode

0: Normal end
2: Timeout occurred
3: Unable to access the specified directory
4: conmger process does not exist
Other than the above: None of the above

Privileges

The conmger process cannot be started by the administrator(e.g. superuser(root) on Linux).

Example

Display details of start mode

The block of information that can be specified with the -i option is used as a unit. There is one blank line between the blocks and no blank lines within the blocks. It includes one or more spaces between columns and between data.

```
$ cm_ctl status -i all
conmger_status:
status pid
(1) (2)
ready 3456

instance_information:
addr port database_attr
(3) (4) (5)
192.0.2.100 27500 standby
192.0.2.110 27500 primary
192.0.2.120 27500 standby
192.0.2.130 27500 unknown

application_infomation:
addr port pid connected_time
(6) (7) (8) (9)
127.0.0.1 12345 5678 2020-01-15 02:03:04
```
1) Status of the conmgr process
   - starting: The process is starting its startup sequence but is not ready to accept
     connections from clients.
   - ready: Ready to accept connections from clients.
   - stopping: It has received an end instruction and is starting the stop sequence.
   - inactive: The conmgr process does not exist.

2) PID of the conmgr process
3) IP address of the instance
4) Port number the postmaster listens on
5) Status of the instance (primary | standby | unknown)
6) Connection source IP address for conmgr process
7) Connection source (ephemeral) port number for conmgr process
8) PID of the connection source
9) Date and time conmgr process connection
   - The ISO 8601 compliant date is followed by a blank, followed by the ISO 8601
     compliant second precision time.
   - This representation is a PostgreSQL string representation of type timestamp.
Message Guide
Preface

Purpose of this document
This document explains the messages output by FUJITSU Enterprise Postgres.

Intended readers
This document is intended for the following readers:
- Persons using FUJITSU Enterprise Postgres

Prerequisites
Knowledge of the following topics is required to read this document:
- A general understanding of computers
- Jobs
- PostgreSQL
- Linux
- Windows

Structure of this document
This document is structured as follows:
Chapter 1 Overview of Messages
This chapter explains the format in which messages are output.
Chapter 2 FUJITSU Enterprise Postgres Messages
This chapter explains messages output by FUJITSU Enterprise Postgres.
Chapter 3 Mirroring Controller Messages
This chapter explains messages output by Mirroring Controller.

Export restrictions
Exportation/release of this document may require necessary procedures in accordance with the regulations of your resident country and/or US export control laws.

Issue date and version
Edition 1.0: April 2021

Chapter 1 Overview of Messages

This chapter explains the format of messages.

1.1 Message Format

This section explains the format of messages.
- Output format
- Components

1.1.1 Output Format

The message output format is as follows:

Format of messages returned to an application

\[
\text{msgType: msgText (msgNumber)}
\]

Format of messages output to the server message log

\[
\text{SQLSTATE: date [processID]: [internalCode-1] user = userName, db = dbName, remote = clientIpAddress(portNumber) app = appName msgType: msgText (msgNumber)}
\]

See

Refer to "PostgreSQL Error Codes" under "Appendixes" in the PostgreSQL Documentation for information on SQLSTATE.

Note

- Notes on monitoring messages output to the server message log
  Use SQLSTATE to monitor server messages, noting the following:
  - Configuration method
    Refer to "Error Log Settings" under "Setup" in the Installation and Setup Guide for Server for details.
  - Notes
    - The user name, client IP address (port number), and application name may sometimes be blank.
    - Multiple message numbers may be output.
- Notes on monitoring messages returned to an application
  You can output SQLSTATE to a message to be returned to an application. The following explains how to configure the settings for outputting SQLSTATE and gives cautions to be observed when doing so.
  - How to configure the settings:
    - In the SET statement, set the log_error_verbosity parameter to VERBOSE.
    - For an application that uses the C language library, use the PQsetErrorVerbosity function to set message redundancy to PQERRORS_VERBOSE.
  - Cautions
    - SQLSTATE is output only to messages to be returned to applications that use the C language library.
- In some cases, *userName, clientIpAddress(portNumber), and applicationName* may be blank.
- Multiple message numbers may be output.
- If the email address "pgsql-bugs@postgresql.org" is output to the message and the cause of the error cannot be identified, contact Fujitsu technical support.

### Example

**Message output to the server message log**

```
3D000: 2017-07-10 19:41:05 JST [13899]: [1-1] user = fepuser,db = fep,remote = 127.0.0.1(51902) app = [unknown] FATAL:  database "fep" does not exist (10571)
```

### 1.1.2 Components

This section explains the components of a message.

#### Message type

The message type indicates the type of error denoted in the message.

The message type will be one of the following:

- **Information (INFO, NOTICE, LOG, DEBUG)**
  
  This message type denotes a notification from the system, not an error. There is no need to take action.

- **Warning (WARNING)**
  
  This message type denotes that no error occurred but confirmation or action is required by the user. Take the actions described in the "Action" section of the message.

- **Error (ERROR, FATAL, PANIC)**
  
  This message type denotes that an error has occurred. Take the actions described in the "Action" section of the message.

- **Supplementary information (DETAIL, HINT, QUERY, CONTEXT, LOCATION, STATEMENT)**
  
  This message type denotes supplementary information relating to the previous message. If the message was output in English, the message type will also be in English. (Detail, hint, query, context, location, statement)

#### Message text

The text of the message reports the status of the system or an error in the system.

The notation "@numeric character@" that appears in "Chapter 2 FUJITSU Enterprise Postgres Messages" indicates an embedded character string. A character string is output to a message that is actually output.

If a message locale other than ‘ja’ is specified, messages added by FUJITSU Enterprise Postgres will be output in English.

For other message locales, the messages are output in English.

#### Message number

The message number uniquely identifies each message. It is output as a string of five single-byte numeric characters. Use the message number that is output to find the explanation of the corresponding message in this document. The message numbers may change, so do not use them as keywords for monitoring.

No message number is assigned to messages output by a PL/pgSQL RAISE statement.

The message number is only output if the message locale is ‘ja’ or ‘en’. For other message locales, the message number is not output.
1.2 Mirroring Controller Message Format

This section explains the format of messages output by the Mirroring Controller.

Mirroring Controller messages are output to the following locations:

- System log
- Event log

Output format

`programName[processId]: msgType: msgText (msgNumber)`

For `programName`, use the value of the syslog_ident parameter or event_source parameter defined in the `serverIdentifier.conf` file.

The message types output by Mirroring Controller, their severity, and their corresponding value in the system log are shown in the table below.

Table 1.1 Message type, severity, and corresponding value in the system log

<table>
<thead>
<tr>
<th>Message type</th>
<th>Severity</th>
<th>Meaning</th>
<th>System log</th>
</tr>
</thead>
<tbody>
<tr>
<td>INFO</td>
<td>Information</td>
<td>Provides information not categorized as LOG or NOTICE.</td>
<td>INFO</td>
</tr>
<tr>
<td>LOG</td>
<td>Notice</td>
<td>Provides information recognized as a particularly important event in tracing the operation history. (Example: Automatic switch is complete)</td>
<td></td>
</tr>
<tr>
<td>NOTICE</td>
<td>Notice</td>
<td>Outputs information that takes into account the user instructions within the program in response to an executed or automatically executed process.</td>
<td>NOTICE</td>
</tr>
<tr>
<td>WARNING</td>
<td>Warning</td>
<td>Provides a warning, for example it will soon be impossible to maintain multiplexing capabilities.</td>
<td>WARNING</td>
</tr>
<tr>
<td>ERROR</td>
<td>Error</td>
<td>Reports that an error other than FATAL or PANIC has occurred.</td>
<td>ERROR</td>
</tr>
<tr>
<td>FATAL</td>
<td>Error</td>
<td>Reports that an error has been detected requiring system recovery in one of the multiplexed database systems. It also reports the content and cause of the error.</td>
<td>CRIT</td>
</tr>
<tr>
<td>PANIC</td>
<td>Error</td>
<td>Reports that an error has been detected requiring immediate system recovery in all multiplexed database systems. It also reports the content and cause of the error.</td>
<td>ALERT</td>
</tr>
</tbody>
</table>

The message types output by Mirroring Controller, their severity, and their corresponding value in the event log are shown in the table below.

Table 1.2 Message type, severity, and corresponding value in the event log

<table>
<thead>
<tr>
<th>Message type</th>
<th>Severity</th>
<th>Meaning</th>
<th>Event log</th>
</tr>
</thead>
<tbody>
<tr>
<td>INFO</td>
<td>Information</td>
<td>Provides information not categorized as LOG or NOTICE.</td>
<td>INFORMATIO N</td>
</tr>
<tr>
<td>Message type</td>
<td>Severity</td>
<td>Meaning</td>
<td>Event log</td>
</tr>
<tr>
<td>--------------</td>
<td>----------</td>
<td>---------</td>
<td>-----------</td>
</tr>
<tr>
<td>LOG</td>
<td></td>
<td>Provides information recognized as a particularly important event in tracing the operation history. (Example: Automatic switch is complete)</td>
<td></td>
</tr>
<tr>
<td>NOTICE</td>
<td>Notice</td>
<td>Outputs information that takes into account the user instructions within the program in response to an executed or automatically executed process.</td>
<td>WARNING</td>
</tr>
<tr>
<td>WARNING</td>
<td>Warning</td>
<td>Provides a warning, for example it will soon be impossible to maintain multiplexing capabilities.</td>
<td>WARNING</td>
</tr>
<tr>
<td>ERROR</td>
<td>Error</td>
<td>Reports that an error other than FATAL or PANIC has occurred.</td>
<td>ERROR</td>
</tr>
<tr>
<td>FATAL</td>
<td></td>
<td>Reports that an error has been detected requiring system recovery in one of the multiplexed database systems. It also reports the content and cause of the error.</td>
<td></td>
</tr>
<tr>
<td>PANIC</td>
<td></td>
<td>Reports that an error has been detected requiring immediate system recovery in all multiplexed database systems. It also reports the content and cause of the error.</td>
<td></td>
</tr>
</tbody>
</table>

The message severity has the following meanings:

- Information
  Informational status. A message that was reported by the system is displayed. No action is required.
- Notice
  Informational status, but a message that should be noted is displayed. If necessary, take the actions described in the "Action" section of the message.
- Warning
  No error has occurred, but the user is requested to check, and take action. Take the actions described in the "Action" section of the message.
- Error
  An error has occurred. Take the actions described in the "Action" section of the message.

**Output destination server**

Mirroring Controller messages are output by the database server. When using an arbitration server, Mirroring Controller messages are also output by the arbitration server.

- Messages with a message number that starts with "MCA" are output by the database server.
- Messages with a message number that starts with "MCR“ are output by the arbitration server.
Chapter 2 FUJITSU Enterprise Postgres Messages

This chapter explains messages output by FUJITSU Enterprise Postgres.

2.1 Message Numbers Beginning with 10000

2.1.1 10001

no Snowball stemmer available for language "@1@" and encoding "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.2 10002

multiple StopWords parameters

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.3 10003

multiple Language parameters

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.4 10004

unrecognized Snowball parameter: "@1@"

[Description]
An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.5 10005

missing Language parameter

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.6 10006

could not determine which collation to use for index expression

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.7 10007

old GIN indexes do not support whole-index scans nor searches for nulls

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.8 10008

index row size @1@ exceeds maximum @2@ for index "@3@"

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.9 10009

"@1@" is an index

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.10 10010

could not create archive status file "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.1.11 10011

could not write archive status file "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.1.12 10013

could not write to log file @1@ at offset @2@, length @3@: @4@

[Description]
There are the following cases:
- failed to write transaction log file
- failed to write transaction log file on backup data storage destination

[System Processing]
Processing will be aborted.
[Action]
Lack of storage space or malfunction of storage allocating the file shown in this message is considered.
If it's true, recover the database system according to "Actions when an Error Occurs" of "Operation Guide" or "Cluster Operation Guide (Database Multiplexing)".
If it's not true, identify the cause according to the informations in this message such as errno, and work around.
The following major causes are considered.
- the file has no permission or the permission has been changed
- power of the storage allocating the file has been turned off
- unmounted the storage allocating the file
- another process or human operated the file
- the storage allocating the file has crashed

2.1.13 10014

updated min recovery point to @1@/@2@ on timeline @3@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.1.14 10016

could not create file "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
delete user data stored in the database server to free up space on the disk.

2.1.15 10017

could not write to file "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
delete user data stored in the database server to free up space on the disk.
2.1.16 10018

could not fsync file "@1@": @2@
[Description]
   An error occurred during I/O processing in the database server.
[System Processing]
   Processing will be aborted.
[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.1.17 10026

could not read file "@1@": @2@
[Description]
   An error occurred during I/O processing in the database server.
[System Processing]
   Processing will be aborted.
[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.1.18 10027

could not remove file "@1@": @2@
[Description]
   The application or command terminated normally, but a warning was output.
[System Processing]
   Processing will continue.
[Action]
   Check the message text and confirm that the issue does not affect the expected outcome.

2.1.19 10028

archive file "@1@" has wrong size: @2@ instead of @3@
[Description]
   An error occurred during I/O processing in the database server.
[System Processing]
   Processing will be aborted.
[Action]
   To investigate the cause of the occurrence from the message, and remove cause.
restored log file "@1@" from archive

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.1.21 10030

could not restore file "@1@" from archive: @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.22 10032

could not open transaction log directory "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.23 10033

recycled write-ahead log file "@1@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.1.24 10034

removing write-ahead log file "@1@"
[Description]  
Terminated normally.

[System Processing]  
Continues processing.

[Action]  
No action required.

2.1.25 10035

could not rename file "@1@": @2@

[Description]  
An error occurred during I/O processing in the database server.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.1.26 10036

could not remove old transaction log file "@1@": @2@

[Description]  
An error occurred during I/O processing in the database server.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.1.27 10037

required WAL directory "@1@" does not exist

[Description]  
An error occurred during I/O processing in the database server.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.1.28 10038

creating missing WAL directory "@1@"

[Description]  
Terminated normally.
2.1.29 10039

**could not create missing directory "@1@": @2@**

**Description**

There was insufficient free space in the disk of the database server during execution of the application.

**System Processing**

Processing will be aborted.

**Action**

Delete user data stored in the database server to free up space on the disk.

2.1.30 10040

**removing WAL backup history file "@1@"**

**Description**

Terminated normally.

**System Processing**

Continues processing.

**Action**

No action required.

2.1.31 10043

**incorrect resource manager data checksum in record at @1@@2@**

**Description**

An error occurred during I/O processing in the database server.

**System Processing**

Processing will be aborted.

**Action**

To investigate the cause of the occurrence from the message, and remove cause.

2.1.32 10044

**invalid record offset at @1@@2@**

**Description**

An error occurred during I/O processing in the database server.

**System Processing**

Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.33 10045

contrecord is requested by @1@/@2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.34 10048

invalid record length at @1@/@2@: wanted @3@, got @4@

[Description]
Invalid record length was found on archive log or transaction log data.

[System Processing]
The following causes could be considered.
- if the log level is information(INFO, NOTICE, LOG, DEBUG)
  Continue processing.
- if the log level is error(ERROR, FATAL, PANIC)
  Processing will be aborted.

[Action]
If the log level is information(INFO, NOTICE, LOG, DEBUG), no action is required.
When the log level is error(ERROR, FATAL, PANIC), take either of the following actions.
- if this message is output during starting instance
  Please restore according to "Deal at the time of abnormality" of "Operation Guide" or "Cluster Operation Guide (Database Multiplexing)".
- if this message is output during recovering
  Cannot continue to recover with the current backup data because an archive log in the backup has an error.
  Recover from the other backup data.

2.1.35 10049

invalid resource manager ID @1@ at @2@/@3@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.36 10050

record with incorrect prev-link @1@/@2@ at @3@/@4@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.37 10051

record length @1@ at @2@/@3@ too long

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.38 10052

there is no contrecord flag at @1@/@2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.39 10053

invalid contrecord length @1@ at @2@/@3@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.1.40 10054
invalid magic number @1@ in log segment @2@, offset @3@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.41 10055
invalid info bits @1@ in log segment @2@, offset @3@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.42 10056
WAL file is from different database system: WAL file database system identifier is @1@, pg_control database system identifier is @2@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.43 10057
unexpected pageaddr @1@/@2@ in log segment @3@, offset @4@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.1.44 10058

 unexpectedly timeline ID @1@ in log segment @2@, offset @3@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.45 10059

 out-of-sequence timeline ID @1@ (after @2@) in log segment @3@, offset @4@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.46 10060

 syntax error in history file: @1@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.47 10061

 invalid data in history file: @1@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.48 10062
invalid data in history file "@1@"

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.49 10063

new timeline @1@ is not a child of database system timeline @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.50 10064

new target timeline is @1@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.1.51 10065

could not rename file "@1@" to "@2@": @3@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.52 10066

could not link file "@1@" to "@2@": @3@
The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.1.53 10073

database files are incompatible with server

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.54 10074

incorrect checksum in control file

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.1.55 10075

could not write bootstrap write-ahead log file: @1@

There was insufficient free space in the disk of the database server during execution of the application.

Processing will be aborted.

Delete user data stored in the database server to free up space on the disk.

2.1.56 10076

could not fsync bootstrap write-ahead log file: @1@

An error occurred during I/O processing in the database server.
2.1.57 10077

could not close bootstrap write-ahead log file: @1@

[Description]
An error occurred during I/O processing in the database server.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.58 10079

parameter "@1@" requires a Boolean value

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.59 10085

must specify restore_command when standby mode is not enabled

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.60 10086

recovery target timeline @1@ does not exist

[Description]
An error occurred during execution of the application or command.

[Action]
Processing will be aborted.
[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.1.61 10087

**archive recovery complete**

[Description]
  Terminated normally.

[System Processing]
  Continues processing.

[Action]
  No action required.

### 2.1.62 10088

**recovery stopping after commit of transaction @1@, time @2@**

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

### 2.1.63 10089

**recovery stopping before commit of transaction @1@, time @2@**

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

### 2.1.64 10090

**recovery stopping after abort of transaction @1@, time @2@**

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.
2.1.65 10091

recovery stopping before abort of transaction @1@, time @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.66 10092

recovery stopping at restore point @1@, time @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.1.67 10093

recovery has paused

[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

2.1.68 10095

recovery is in progress

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.1.69 10096

hot standby is not possible because @1@ = @2@ is a lower setting than on the master server (its value was @3@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.70 10097

WAL was generated with wal_level=minimal, data may be missing

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.1.71 10098

hot standby is not possible because wal_level was not set to "replica" or higher on the master server

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.1.72 10099

control file contains invalid checkpoint location

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.2 Message Numbers Beginning with 10100

2.2.1 10100
database system was shut down at @1@
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.2 10101
database system was shut down in recovery at @1@
[Description]
Displaying the date and time that the standby server is shut down last time.

[System Processing]
Continues processing.

[Action]
No action is required.

2.2.3 10102
database system shutdown was interrupted; last known up at @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.4 10103
database system was interrupted while in recovery at @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.2.5 10104

**database system was interrupted while in recovery at log time @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.6 10105

**database system was interrupted; last known up at @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.7 10106

**requested timeline @1@ is not a child of this server's history**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.8 10107

**entering standby mode**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.9 10108
starting point-in-time recovery to XID @1@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.10 10109

starting point-in-time recovery to @1@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.11 10110

starting point-in-time recovery to "@1@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.12 10111

starting archive recovery

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.13 10112

checkpoint record is at @1@/@2@
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.14 10113
could not find redo location referenced by checkpoint record
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.15 10114
could not locate required checkpoint record
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.16 10115
could not locate a valid checkpoint record
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.17 10116
using previous checkpoint record at @1@/@2@
[Description]
Terminated normally.
2.2.18 10121

**invalid next transaction ID**

[Description]
An error occurred during I/O processing in the database server.

[Action]
Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.2.19 10122

**invalid redo in checkpoint record**

[Description]
An error occurred during I/O processing in the database server.

System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.20 10123

**invalid redo record in shutdown checkpoint**

[Description]
An error occurred during I/O processing in the database server.

[Action]
Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.2.21 10124

**database system was not properly shut down; automatic recovery in progress**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.
[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.2.22 10125

**initializing for hot standby**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.23 10126

**redo starts at @1@/@2@**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.24 10127

**redo done at @1@/@2@**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.25 10128

**last completed transaction was at log time @1@**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.2.26 10129

**redo is not required**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.2.27 10130

**requested recovery stop point is before consistent recovery point**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.28 10131

**WAL ends before end of online backup**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.29 10132

**WAL ends before consistent recovery point**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.30 10133
selected new timeline ID: @1@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.31 10134

consistent recovery state reached at @1/@2@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.32 10135

invalid primary checkpoint link in control file

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.33 10136

invalid secondary checkpoint link in control file

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.34 10137

invalid checkpoint link in backup_label file
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.35 10138

invalid primary checkpoint record

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.36 10139

invalid secondary checkpoint record

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.37 10140

invalid checkpoint record

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.38 10141

invalid resource manager ID in primary checkpoint record

[Description]
An error occurred during I/O processing in the database server.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.39 10142
invalid resource manager ID in secondary checkpoint record

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.40 10143
invalid resource manager ID in checkpoint record

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.41 10144
invalid xl_info in primary checkpoint record

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.42 10145
invalid xl_info in secondary checkpoint record

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

### 2.2.43 10146

**invalid xl_info in checkpoint record**

#### Description
An error occurred during I/O processing in the database server.

#### System Processing
Processing will be aborted.

#### Action
To investigate the cause of the occurrence from the message, and remove cause.

### 2.2.44 10147

**invalid length of primary checkpoint record**

#### Description
An error occurred during I/O processing in the database server.

#### System Processing
Processing will be aborted.

#### Action
To investigate the cause of the occurrence from the message, and remove cause.

### 2.2.45 10148

**invalid length of secondary checkpoint record**

#### Description
An error occurred during I/O processing in the database server.

#### System Processing
Processing will be aborted.

#### Action
To investigate the cause of the occurrence from the message, and remove cause.

### 2.2.46 10149

**invalid length of checkpoint record**

#### Description
An error occurred during I/O processing in the database server.

#### System Processing
Processing will be aborted.

#### Action
To investigate the cause of the occurrence from the message, and remove cause.
2.2.47 10150

**shutting down**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.48 10151

database system is shut down

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.49 10152

concurrent write-ahead log activity while database system is shutting down

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.50 10153

skipping restartpoint, recovery has already ended

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.51 10154
skipping restartpoint, already performed at @1@/@2@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.52 10155

recovery restart point at @1@/@2@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.53 10156

restore point "@1@" created at @2@/@3@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.54 10157

unexpected timeline ID @1@ (after @2@) in checkpoint record

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.55 10158

unexpected timeline ID @1@ (should be @2@) in checkpoint record
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.56 10160

could not fsync write-through log file @1@: @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.57 10161

could not fdatasync file ”@1@”: @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.2.58 10163

recovery is not in progress

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.59 10164

WAL level not sufficient for making an online backup

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.60 10165
backup label too long (max \(@1@\) bytes)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.61 10166
a backup is already in progress

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.62 10167
could not stat file "\(@1@\)": \(@2@\)

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.2.63 10168
a backup is not in progress

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.64 10169

invalid data in file "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.65 10170

base backup done, waiting for required WAL segments to be archived

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.66 10171

still waiting for all required WAL segments to be archived (@1@ seconds elapsed)

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.2.67 10172

all required WAL segments have been archived

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.2.68 10173

**WAL archiving is not enabled; you must ensure that all required WAL segments are copied through other means to complete the backup**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.69 10176

**WAL level not sufficient for creating a restore point**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.70 10177

**value too long for restore point (maximum @1@ characters)**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.71 10179

**could not read from log segment @1@, offset @2@: @3@**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.2.72 10180

received promote request

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.73 10181

promote trigger file found: @1@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.74 10182

database is not accepting commands to avoid wraparound data loss in database "@1@"

[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

2.2.75 10183

database is not accepting commands to avoid wraparound data loss in database with OID @1@

[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.
2.2.76 10184

database "@1@" must be vacuumed within @2@ transactions

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.2.77 10185

database with OID @1@ must be vacuumed within @2@ transactions

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.2.78 10186

transaction ID wrap limit is @1@, limited by database with OID @2@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.2.79 10187

transaction identifier "@1@" is too long

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.80 10188
prepared transactions are disabled

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.81 10189

transaction identifier "@1@" is already in use

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.82 10190

maximum number of prepared transactions reached

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.83 10191

prepared transaction with identifier "@1@" is busy

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.2.84 10192

permission denied to finish prepared transaction
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.2.85 10193**

*prepared transaction belongs to another database*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.2.86 10194**

*prepared transaction with identifier "@1@" does not exist*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.2.87 10195**

*two-phase state file maximum length exceeded*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.3 Message Numbers Beginning with 10200**

**2.3.1 10205**

*could not recreate file "@1@": @2@*
An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.3.2 10209

removing future two-phase state file for transaction @1@

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.3.3 10210

corrupted two-phase state file for transaction @1@

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.3.4 10211

removing stale two-phase state file for transaction @1@

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.3.5 10212

recovering prepared transaction @1@ from shared memory

Terminated normally.
Continues processing.

No action required.

### 2.3.6 10213

**file "@1@" doesn't exist, reading as zeroes**

**Description**
The application or command terminated normally, but a warning was output.

**System Processing**
Processing will continue.

**Action**
Check the message text and confirm that the issue does not affect the expected outcome.

### 2.3.7 10214

could not access status of transaction @1@

**Description**
An error occurred during I/O processing in the database server.

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

### 2.3.8 10215

could not truncate directory "@1@": apparent wraparound

**Description**
The application or command terminated normally, but a warning was output.

**System Processing**
Processing will continue.

**Action**
Check the message text and confirm that the issue does not affect the expected outcome.

### 2.3.9 10216

**removing file "@1@"**

**Description**
Terminated normally.

**System Processing**
Continues processing.
[Action]
No action required.

2.3.10 10217

**cannot have more than 2^32-2 commands in a transaction**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.11 10218

**maximum number of committed subtransactions (@1@) exceeded**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.12 10220

**@1@ cannot run inside a transaction block**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.13 10221

**@1@ cannot run inside a subtransaction**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.3.14 10222

@1@ cannot be executed from a function or multi-command string

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.15 10223

@1@ can only be used in transaction blocks

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.16 10224

there is already a transaction in progress

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.3.17 10225

there is no transaction in progress

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.3.18 10226
no such savepoint
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.19 10227
cannot have more than $2^{32}-1$ subtransactions in a transaction
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.20 10228
index "@1@" is not a btree
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.3.21 10229
version mismatch in index "@1@": file version @2@, code version @3@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.3.22 10230
index "@1@" contains unexpected zero page at block @2@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.3.23 10231

index "@1@" contains corrupted page at block @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.3.24 10232

duplicate key value violates unique constraint "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.25 10233

failed to re-find tuple within index "@1@"

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.3.26 10234

row is too big: size @1@, maximum size @2@

[Description]
An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.3.27 10235**

```
"@1@" is not an index
```

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.3.28 10236**

```
"@1@" is a composite type
```

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.3.29 10237**

```
could not obtain lock on row in relation "@1@"
```

[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

**2.3.30 10238**

```
hash indexes do not support whole-index scans
```

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.31 10239

index "@1@" is not a hash index

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.3.32 10240

index "@1@" has wrong hash version

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.3.33 10241

out of overflow pages in hash index "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.34 10242

index row size @1@ exceeds hash maximum @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.35 10243

column "@1@" cannot be declared SETOF

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.36 10244

number of columns (@1@) exceeds limit (@2@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.37 10245

user-defined relation parameter types limit exceeded

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.38 10246

RESET must not include values for parameters

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.3.39 10247

unrecognized parameter namespace "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.40 10248

unrecognized parameter "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.41 10249

parameter "@1@" specified more than once

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.42 10250

invalid value for boolean option "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.43 10251
invalid value for integer option "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.44 10252

value @1@ out of bounds for option "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.45 10253

invalid value for floating point option "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.46 10254

unsupported format code: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.47 10255

number of index columns (@1@) exceeds limit (@2@)
<table>
<thead>
<tr>
<th>Code</th>
<th>Message</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.3.48 10256</td>
<td><strong>index row requires @1@ bytes, maximum size is @2@</strong></td>

<td><strong>picksplit method for column @1@ of index &quot;@2@&quot; failed</strong></td>
</tr>
<tr>
<td>2.3.50 10259</td>
<td><strong>index &quot;@1@&quot; contains an inner tuple marked as invalid</strong></td>
</tr>
<tr>
<td>2.3.51 10260</td>
<td><strong>aggregate @1@ needs to have compatible input type and transition type</strong></td>
</tr>
</tbody>
</table>
2.3.52 10261

**could not create exclusion constraint "@1@"**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.53 10262

**conflicting key value violates exclusion constraint "@1@"**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.54 10263

**RIGHT JOIN is only supported with merge-joinable join conditions**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.55 10264

**FULL JOIN is only supported with merge-joinable join conditions**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.56 10265

could not determine actual type of argument declared @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.57 10266

@1@ is not allowed in a SQL function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.58 10267

@1@ is not allowed in a non-volatile function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.59 10269

set-valued function called in context that cannot accept a set

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.3.60 10270

return type mismatch in function declared to return @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.61 10271

return type @1@ is not supported for SQL functions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.62 10272

cannot change sequence "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.63 10273

cannot change TOAST relation "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.64 10274
cannot insert into view "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.65 10275

cannot update view "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.66 10276

cannot copy from view "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.67 10278

cannot change relation "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.68 10279

cannot lock rows in sequence "@1@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.69 10280

cannot lock rows in TOAST relation "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.70 10281

cannot lock rows in view "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.71 10282

cannot lock rows in foreign table "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.72 10283

cannot lock rows in relation "@1@"

An error occurred during execution of the application or command.
[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.73 10284

null value in column "@1@" of relation "@2@" violates not-null constraint
[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.74 10285

new row for relation "@1@" violates check constraint "@2@"
[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.75 10286

could not serialize access due to concurrent update
[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.76 10287

ON COMMIT can only be used on temporary tables
[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.3.77 10288

**cannot create temporary table within security-restricted operation**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.3.78 10289

**could not rewind hash-join temporary file**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.3.79 10291

**could not read from hash-join temporary file: read only @1@ of @2@ bytes**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.3.80 10292

**relation ")@1@" does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.3.81 10293

cursor "@1@" is not a SELECT query

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.82 10294

cursor "@1@" is held from a previous transaction

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.83 10295

cursor "@1@" has multiple FOR UPDATE/SHARE references to table "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.84 10296

cursor "@1@" does not have a FOR UPDATE/SHARE reference to table "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.85 10297
**cursor "@1@" is not positioned on a row**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.86 10298

**cursor "@1@" is not a simply updatable scan of table "@2@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.3.87 10299

**type of parameter @1@ (@2@) does not match that when preparing the plan (@3@)**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4 Message Numbers Beginning with 10300

2.4.1 10300

**no value found for parameter @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.4.2 10301
more than one row returned by a subquery used as an expression

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.3 10302
frame starting offset must not be null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.4 10303
frame starting offset must not be negative

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.5 10304
frame ending offset must not be null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.6 10305
frame ending offset must not be negative
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.7 10306
transaction left non-empty SPI stack
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.4.8 10307
subtransaction left non-empty SPI stack
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.4.9 10308
cannot open multi-query plan as cursor
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.10 10309
cannot open @1@ query as cursor
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.11 10310

DECLARE SCROLL CURSOR ... FOR UPDATE/SHARE is not supported
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.12 10311

number of array dimensions (@1@) exceeds the maximum allowed (@2@)
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.13 10312

array subscript in assignment must not be null
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.14 10313

attribute @1@ has wrong type
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.15 10314

**table row type and query-specified row type do not match**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.16 10315

**cannot pass more than @1@ argument to a function**
**cannot pass more than @2@ arguments to a function**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.17 10317

**function returning setof record called in context that cannot accept type record**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.18 10318

**function return row and query-specified return row do not match**

[Description]
An error occurred during execution of the application or command.
2.4.19 10319

**table-function protocol for materialize mode was not followed**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.20 10320

**unrecognized table-function returnMode: @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.21 10322

**rows returned by function are not all of the same row type**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.22 10325

**cannot merge incompatible arrays**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.23 10326

**multidimensional arrays must have array expressions with matching dimensions**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.24 10328

**domain @1@ does not allow null values**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.25 10329

**value for domain @1@ violates check constraint "@2@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.26 10330

**aggregate function calls cannot be nested**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.4.27 10331

**window function calls cannot be nested**

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.28 10332

**target type is not an array**

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.29 10333

**ROW() column has type @1@ instead of type @2@**

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.30 10334

**could not identify a comparison function for type @1@**

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.
OFFSET must not be negative

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.32 10336

LIMIT must not be negative

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.33 10337

@1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.34 10338

could not find array type for data type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.35 10339

cannot assign to system column "@1@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

### 2.4.36 10340

**cannot set an array element to DEFAULT**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

### 2.4.37 10341

**cannot set a subfield to DEFAULT**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

### 2.4.38 10342

**column "@1@" is of type @2@ but default expression is of type @3@**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

### 2.4.39 10343

**row expansion via "*" is not supported here**

An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.40 10344

cannot assign to field "@1@" of column "@2@" because its type @3@ is not a composite type

Description

An error occurred during execution of the application or command.

2.4.41 10345

cannot assign to field "@1@" of column "@2@" because there is no such column in data type @3@

Description

An error occurred during execution of the application or command.

2.4.42 10346

array assignment requires type @1@ but expression is of type @2@

Description

An error occurred during execution of the application or command.

2.4.43 10347

column "@1@" is of type @2@ but expression is of type @3@

Description

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.44 10348

**cannot cast type @1@ to @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.45 10349

**column "@1@" of relation "@2@" does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.46 10350

**column name "@1@" specified more than once**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.47 10351

**column reference "@1@" is ambiguous**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.48 10352

**cross-database references are not implemented**: "@1@.@2@.@3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.49 10353

**improper qualified name (too many dotted names)**: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.50 10354

**SELECT * with no tables specified is not valid**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.51 10355

**there is no parameter $@1@$**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.4.52 10356

Inconsistent types deduced for parameter $@1@$

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.53 10357

Could not determine data type of parameter $@1@$

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.54 10358

Identifier "@1@" will be truncated to "@2@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.4.55 10363

Aggregate functions are not allowed in DEFAULT expressions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.56 10365
column name "@1@" appears more than once in USING clause

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.57 10366

common column name "@1@" appears more than once in left table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.58 10367

column "@1@" specified in USING clause does not exist in left table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.59 10368

common column name "@1@" appears more than once in right table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.60 10369

column "@1@" specified in USING clause does not exist in right table
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.61 10370

column alias list for "@1@" has too many entries

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.62 10371

tagument of @1@ must not contain variables

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.63 10372

aggregate functions are not allowed in @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.64 10374

@1@ "@2@" is ambiguous

An error occurred during execution of the application or command.
2.4.65 10375

non-integer constant in @1@

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.66 10376

@1@ position @2@ is not in select list

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.67 10377

window "@1@" is already defined

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.68 10378

schema "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.69 10379

2.4.73 10384

**SELECT DISTINCT ON expressions must match initial ORDER BY expressions**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.74 10385

"@1@" is not a valid operator name

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.75 10386

extension "@1@" already exists, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.4.76 10387

array of serial is not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.77 10388
@1@ will create implicit sequence "@2@" for serial column "@3@.@4@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.4.78 10389

conflicting NULL/NOT NULL declarations for column "@1@" of table "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.79 10390

multiple default values specified for column "@1@" of table "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.80 10391

referenced relation "@1@" is not a table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.81 10392

multiple primary keys for table "@1@" are not allowed
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.82 10393
cannot use an existing index in CREATE TABLE

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.83 10394
conversion "@1@" does not exist

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.84 10395
index "@1@" is already associated with a constraint

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.85 10396
index "@1@" does not belong to table "@2@"

An error occurred during execution of the application or command.
2.4.86 10397

index "@1@" is not valid

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.4.87 10399

"@1@" is not a unique index

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5 Message Numbers Beginning with 10400

2.5.1 10400

index "@1@" contains expressions

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.2 10401

"@1@" is a partial index

[Description]
An error occurred during execution of the application or command.
2.5.3 10402

"@1@" is a deferrable index
[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.4 10403

index "@1@" column number @2@ does not have default sorting behavior
[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.5 10404

column "@1@" named in key does not exist
[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.6 10405

column "@1@" appears twice in primary key constraint
[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.7 10406

column "@1@" appears twice in unique constraint

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.8 10408

index expressions and predicates can refer only to the table being indexed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.9 10409

rule WHERE condition cannot contain references to other relations

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.10 10412

rules with WHERE conditions can only have SELECT, INSERT, UPDATE, or DELETE actions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.5.11 10413

conditional UNION/INTERSECT/EXCEPT statements are not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.12 10414

ON SELECT rule cannot use OLD

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.13 10415

ON SELECT rule cannot use NEW

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.14 10416

ON INSERT rule cannot use OLD

[Description]
An error occurred during execution of the application or command.

[System Processing]
 Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.15 10417
ON DELETE rule cannot use NEW

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.16 10418
cannot refer to OLD within WITH query

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.17 10419
cannot refer to NEW within WITH query

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.18 10420
misplaced DEFERRABLE clause

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.19 10421
multiple DEFERRABLE/NOT DEFERRABLE clauses not allowed
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.20 10422

misplaced NOT DEFERRABLE clause

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.21 10423

constraint declared INITIALLY DEFERRED must be DEFERRABLE

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.22 10424

misplaced INITIALLY DEFERRED clause

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.23 10425

multiple INITIALLY IMMEDIATE/DEFERRED clauses not allowed

An error occurred during execution of the application or command.
[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.24 10426

misplaced INITIALLY IMMEDIATE clause

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.25 10427

collations are not supported by type @1@

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.26 10428

CREATE specifies a schema (@1@) different from the one being created (@2@)

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.27 10429

table reference "@1@" is ambiguous

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.28 10430

**table reference @1@ is ambiguous**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.29 10431

**table name "@1@" specified more than once**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.30 10432

**WITH query "@1@" has @2@ columns available but @3@ columns specified**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.31 10434

**relation "@1@.@2@" does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.5.32 10435

**type "@1@" does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.33 10436

**a column definition list is only allowed for functions returning "record"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.34 10437

**a column definition list is required for functions returning "record"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.35 10438

**function "@1@" in FROM has unsupported return type @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.36 10439
VALUES lists "@1@" have @2@ columns available but @3@ columns specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.37 10440

tables can have at most @1@ columns

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.38 10441

WITH query "@1@" does not have a RETURNING clause

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.39 10442

column @1@ of relation "@2@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.40 10443

invalid reference to FROM-clause entry for table "@1@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.41 10444

missing FROM-clause entry for table "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.42 10445

unrecognized role option "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.43 10446

current database cannot be renamed

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.44 10447

time zone interval must be HOUR or HOUR TO MINUTE

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.5.45 10449**

**MATCH PARTIAL not yet implemented**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.5.46 10451**

**CREATE ASSERTION is not yet implemented**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.5.47 10453**

**RECHECK is no longer required**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.5.48 10454**

**missing argument**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.49 10457

**number of columns does not match number of values**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.50 10458

**LIMIT #,# syntax is not supported**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.51 10459

**VALUES in FROM must have an alias**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.52 10460

**subquery in FROM must have an alias**

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.
2.5.53 10461

**precision for type float must be at least 1 bit**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.54 10462

**precision for type float must be less than 54 bits**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.55 10463

**UNIQUE predicate is not yet implemented**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.56 10464

**RANGE PRECEDING is only supported with UNBOUNDED**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
### RANGE FOLLOWING is only supported with UNBOUNDED

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

<table>
<thead>
<tr>
<th>2.5.58 10466</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>frame start cannot be UNBOUNDED FOLLOWING</strong></td>
</tr>
</tbody>
</table>
| [Description]
An error occurred during execution of the application or command. |
| [System Processing]
Processing will be aborted. |
| [Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly. |

<table>
<thead>
<tr>
<th>2.5.59 10467</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>frame starting from following row cannot end with current row</strong></td>
</tr>
</tbody>
</table>
| [Description]
An error occurred during execution of the application or command. |
| [System Processing]
Processing will be aborted. |
| [Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly. |

<table>
<thead>
<tr>
<th>2.5.60 10468</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>frame end cannot be UNBOUNDED PRECEDING</strong></td>
</tr>
</tbody>
</table>
| [Description]
An error occurred during execution of the application or command. |
| [System Processing]
Processing will be aborted. |
| [Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly. |

<table>
<thead>
<tr>
<th>2.5.61 10469</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>frame starting from current row cannot have preceding rows</strong></td>
</tr>
</tbody>
</table>
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.62 10470

Frame starting from following row cannot have preceding rows

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.63 10471

Type modifier cannot have parameter name

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.64 10472

Wrong number of parameters on left side of OVERLAPS expression

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.65 10473

Wrong number of parameters on right side of OVERLAPS expression

An error occurred during execution of the application or command.
[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.66 10474

**syntax error**

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.67 10475

**multiple ORDER BY clauses not allowed**

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.68 10476

**multiple OFFSET clauses not allowed**

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.69 10477

**multiple LIMIT clauses not allowed**

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.70 10478

**multiple WITH clauses not allowed**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.71 10479

**OUT and INOUT arguments aren't allowed in TABLE functions**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.72 10480

**multiple COLLATE clauses not allowed**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.73 10481

**operator does not exist: @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.5.74 10482

could not identify an ordering operator for type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.75 10483

could not identify an equality operator for type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.76 10484

operator requires run-time type coercion: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.77 10485

operator @1@ is not commutative

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
operator is only a shell: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.79 10487

op ANY/ALL (array) requires array on right side

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.80 10488

op ANY/ALL (array) requires operator to yield boolean

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.81 10489

op ANY/ALL (array) requires operator not to return a set

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.82 10490

column "@1@" does not exist
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.83 10491

column "@1@" not found in data type @2@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.84 10492

could not identify column "@1@" in record data type

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.85 10493

column notation .@1@ applied to type @2@, which is not a composite type

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.86 10494

function @1@ does not exist

An error occurred during execution of the application or command.
[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.87 10495

**NULLIF requires = operator to yield boolean**

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.5.88 10498

**subquery must return only one column**

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6 Message Numbers Beginning with 10500

2.6.1 10500

**subquery has too many columns**

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.2 10501

**subquery has too few columns**

[Description]
    An error occurred during execution of the application or command.
2.6.3 10502

cannot determine type of empty array

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.4 10503

could not determine polymorphic type @1@ because input has type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.5 10504

unnamed XML attribute value must be a column reference

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.6 10505

unnamed XML element value must be a column reference

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.7 10506

XML attribute name "@1@" appears more than once
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.8 10507

cannot cast XMLSERIALIZE result to @1@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.9 10508

unequal number of entries in row expressions
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.10 10509

cannot compare rows of zero length
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.6.11 10510

row comparison operator must yield type boolean, not type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.12 10511

row comparison operator must not return a set

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.13 10512

could not determine interpretation of row comparison operator @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.14 10513

IS DISTINCT FROM requires = operator to yield boolean

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.15 10515
VALUES lists must all be the same length

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.16 10520

INSERT has more expressions than target columns

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.17 10521

INSERT has more target columns than expressions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.18 10525

invalid UNION/INTERSECT/EXCEPT ORDER BY clause

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.19 10526

INTO is only allowed on first SELECT of UNION/INTERSECT/EXCEPT
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.20 10527

UNION/INTERSECT/EXCEPT member statement cannot refer to other relations of same query level

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.21 10528

each @1@ query must have the same number of columns

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.22 10535

cannot specify both SCROLL and NO SCROLL

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.23 10537

DECLARE CURSOR must not contain data-modifying statements in WITH
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.6.24 10538

**DECLARE CURSOR WITH HOLD ... @1@ is not supported**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.6.25 10539

**DECLARE INSENSITIVE CURSOR ... @1@ is not supported**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.6.26 10552

**aggregate function calls cannot contain window function calls**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.6.27 10558

**window functions are not allowed in JOIN conditions**

An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.28 10562

column "@1@.@2@" must appear in the GROUP BY clause or be used in an aggregate function

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.29 10563

subquery uses ungrouped column "@1@.@2@" from outer query

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.30 10564

parameter name "@1@" used more than once

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.31 10565

positional argument cannot follow named argument

[Description]
   An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.32 10566

@1(*) specified, but @2@ is not an aggregate function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.33 10567

DISTINCT specified, but @1@ is not an aggregate function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.34 10568

ORDER BY specified, but @1@ is not an aggregate function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.35 10569

OVER specified, but @1@ is not a window function nor an aggregate function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.36 10570

function @1@ is not unique

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.37 10571

database "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.38 10572

@1@(*) must be used to call a parameterless aggregate function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.39 10573

aggregates cannot return sets

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.6.40 10574

aggregates cannot use named arguments

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.41 10576

DISTINCT is not implemented for window functions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.42 10577

aggregate ORDER BY is not implemented for window functions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.43 10578

window functions cannot return sets

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
extension "@1@" does not exist
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.45 10582
aggregate @1@(*) does not exist
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.46 10583
server "@1@" does not exist
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.47 10584
function "@1@" is an aggregate function
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.48 10585
argument of @1@ must be a type name
2.6.49 10586

**argument of @1@ must not return a set**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.50 10587

**argument of @1@ must be type boolean, not type @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.51 10588

**@1@ types @2@ and @3@ cannot be matched**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.52 10589

**@1@ could not convert type @2@ to @3@**

[Description]
An error occurred during execution of the application or command.
2.6.53 10590

arguments declared "anycollection" are not all alike

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.54 10591

arguments declared "anyarray" are not all alike

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.55 10592

argument declared @1@ is not an array but type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.56 10593

argument declared @1@ is not consistent with argument declared @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.57 10595

**type matched to anynonarray is an array type:** @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.58 10596

**type matched to anyenum is not an enum type:** @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.59 10597

**recursive reference to query "@1@" must not appear within its non-recursive term**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.6.60 10598

**recursive reference to query "@1@" must not appear within a subquery**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.6.61 10599

recursive reference to query "@1@" must not appear within an outer join
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7 Message Numbers Beginning with 10600

2.7.1 10600

recursive reference to query "@1@" must not appear within INTERSECT
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.2 10601

recursive reference to query "@1@" must not appear within EXCEPT
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.3 10602

WITH query name "@1@" specified more than once
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.7.4 10604

**WITH clause containing a data-modifying statement must be at the top level**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.5 10605

**recursive query "@1@" column @2@ has type @3@ in non-recursive term but type @4@ overall**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.6 10606

**recursive query "@1@" column @2@ has collation "@3@" in non-recursive term but collation "@4@" overall**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.7 10607

**table "@1@" has @2@ columns available but @3@ columns specified**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.7.8 10608

**mutual recursion between WITH items is not implemented**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.9 10609

**recursive query "@1@" must not contain data-modifying statements**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.10 10610

**recursive query "@1@" does not have the form non-recursive-term UNION [ALL] recursive-term**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.11 10611

**ORDER BY in a recursive query is not implemented**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.7.12 10612

OFFSET in a recursive query is not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.13 10613

LIMIT in a recursive query is not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.14 10614

FOR UPDATE/SHARE in a recursive query is not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.15 10615

recursive reference to query "@1@" must not appear more than once

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.16 10616
unsafe use of string constant with Unicode escapes

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.17 10617

invalid Unicode escape

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.18 10618

unsafe use of \ in a string literal

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.19 10619

@1@ at end of input

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.20 10620

@1@ at or near "@2@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.21 10621

nonstandard use of ` in a string literal

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.22 10622

nonstandard use of \ in a string literal

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.23 10623

nonstandard use of escape in a string literal

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.7.24 10624

collation mismatch between implicit collations "@1@" and "@2@"

An error occurred during execution of the application or command.
[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.25 10625
collation mismatch between explicit collations "@1@" and "@2@"

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.26 10626
target lists can have at most @1@ entries

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.27 10627
cannot subscript type @1@ because it is not an array

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.28 10628
array subscript must have type integer

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.29 10629

array assignment to "@1@" requires type @2@ but expression is of type @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.30 10630

improper @1@TYPE reference (too few dotted names): @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.31 10631

improper @1@TYPE reference (too many dotted names): @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.32 10632

type reference @1@ converted to @2@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.7.33 10633

return type @1@ is only a shell

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.34 10634

type modifier cannot be specified for shell type "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.35 10635

type modifier is not allowed for type "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.36 10636

type modifiers must be simple constants or identifiers

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.37 10637
invalid type name "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.38 10638

canceling the wait for synchronous replication and terminating connection due to administrator command

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.7.39 10639

canceling wait for synchronous replication due to user request

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.7.40 10640

standby "@1@" now has synchronous standby priority @2@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.7.41 10642

could not connect to the primary server: @1@
[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.
Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
  a) If the COMMIT process is not executed after update, add the COMMIT process.
  b) If the total number of update records in a single transaction is high, split it into short transactions.
  c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.7.42 10643

could not receive database system identifier and timeline ID from the primary server: @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.7.43 10644

invalid response from primary server

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.7.44 10645
database system identifier differs between the primary and standby
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.45 10646

highest timeline @1@ of the primary is behind recovery timeline @2@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.7.46 10647
could not start WAL streaming: @1@
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.7.47 10651
could not receive data from WAL stream: @1@
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.7.48 10652
replication terminated by primary server
[Description]
Primary server has stopped.

[System Processing]
Processing will be aborted.

[Action]
No action is required.

2.7.49 10653
could not send data to WAL stream: @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.7.50 10655
base backup could not send data, aborting backup

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.7.51 10656
duplicate option "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.52 10658
could not stat file or directory "@1@": @2@

[Description]
The application or command terminated normally, but a warning was output.
[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

**2.7.53 10659**

**could not remove symbolic link "@1@"**: @2@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

**2.7.54 10660**

**skipping special file "@1@"**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

**2.7.55 10663**

**unexpected EOF on standby connection**

[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

**2.7.56 10664**

**invalid standby message type "@1@"**

[Description]
An error occurred during communication between the application and the database server.
[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.7.57 10667

**terminating walsender process due to replication timeout**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.7.58 10668

**standby "@1@" has now caught up with primary**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.7.59 10670

**requested WAL segment @1@ has already been removed**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.7.60 10672

**materialize mode required, but it is not allowed in this context**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.61 10673

**terminating walreceiver process due to administrator command**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.7.62 10674

**cannot continue WAL streaming, recovery has already ended**

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.7.63 10675

**authentication failed for user "@1@": host rejected**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.64 10677

**"trust" authentication failed for user "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.7.65 10678

**Ident authentication failed for user "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.66 10679

**Peer authentication failed for user "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.67 10680

**password authentication failed for user "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.68 10681

**GSSAPI authentication failed for user "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.69 10682
SSPI authentication failed for user "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.70 10683

PAM authentication failed for user "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.71 10684

LDAP authentication failed for user "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.72 10685

certificate authentication failed for user "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.73 10686

RADIUS authentication failed for user "@1@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.74 10687

authentication failed for user "@1@": invalid authentication method

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.75 10689

connection requires a valid client certificate

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.76 10690

pg_hba.conf rejects replication connection for host "@1@", user "@2@", @3@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.77 10691

pg_hba.conf rejects replication connection for host "@1@", user "@2@"

An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.78 10692

pg_hba.conf rejects connection for host "@1@", user "@2@", database "@3@", @4@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.79 10693

pg_hba.conf rejects connection for host "@1@", user "@2@", database "@3@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.80 10694

no pg_hba.conf entry for replication connection from host "@1@", user "@2@", @3@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.81 10695

no pg_hba.conf entry for replication connection from host "@1@", user "@2@"

An error occurred during execution of the application or command.

Processing will be aborted.
[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.82 10696

no pg_hba.conf entry for host "@1@", user "@2@", database "@3@", @4@

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.83 10697

no pg_hba.conf entry for host "@1@", user "@2@", database "@3@"

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.84 10698

MD5 authentication is not supported when "db_user_namespace" is enabled

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.7.85 10699

expected password response, got message type @1@

[Description]  
An error occurred during communication between the application and the database server.

[System Processing]  
Processing will be aborted.

[Action]  
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.
2.8 Message Numbers Beginning with 10700

2.8.1 10700

invalid password packet size

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8.2 10707

GSSAPI is not supported in protocol version 2

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.3 10708

out of memory

[Description]
There was insufficient free space in the server’s memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.8.4 10709

expected GSS response, got message type @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.
[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8.5 10710

SSPI is not supported in protocol version 2

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.6 10711

expected SSPI response, got message type @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8.7 10712

could not create socket for Ident connection: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.
Take the following actions:
- Eliminate the cause of the communication disconnection.
Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

### 2.8.8 10713

could not bind to local address "@1@": @2@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
  a) If the COMMIT process is not executed after update, add the COMMIT process.
  b) If the total number of update records in a single transaction is high, split it into short transactions.
  c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

### 2.8.9 10714

could not connect to Ident server at address "@1@", port @2@: @3@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.8.10 10715

could not send query to Ident server at address "@1@", port @2@: @3@
[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.8.11 10716

could not receive response from Ident server at address "@1@", port @2@: @3@
[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.
Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.

**2.8.12 10717**

invalidly formatted response from Ident server: "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.8.13 10718**

peer authentication is not supported on this platform

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.8.14 10719**

could not get peer credentials: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:

- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

### 2.8.15 10720

**could not look up local user ID @1@: @2@**

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.8.16 10721

**empty password returned by client**

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.8.17 10722

**error from underlying PAM layer: @1@**

**[Description]**

An error occurred.

**[System Processing]**

Processing will be aborted.

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.
2.8.18 10723

could not create PAM authenticator: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.19 10724

pam_set_item(PAM_USER) failed: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.20 10725

pam_set_item(PAM_CONV) failed: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.21 10726

pam_authenticate failed: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.22 10727
pam_acct_mgmt failed: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.23 10728
could not release PAM authenticator: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.24 10729
could not initialize LDAP: error code @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.25 10730
could not set LDAP protocol version: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.26 10731
could not load wldap32.dll
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.8.27 10732

could not load function _ldap_start_tls_sA in wldap32.dll

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.8.28 10733

could not start LDAP TLS session: @1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.8.29 10734

LDAP server not specified

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.30 10735

invalid character in user name for LDAP authentication

An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.31 10736

could not perform initial LDAP bind for ldapbinddn "@1@" on server "@2@": @3@

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.8.32 10737

could not search LDAP for filter "@1@" on server "@2@": @3@

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.8.33 10738

LDAP search for filter "@1@" on server "@2@" returned no entries.

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.34 10740

could not get dn for the first entry matching "@1@" on server "@2@": @3@

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.35 10741
could not unbind after searching for user "@1@" on server "@2@": @3@
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.36 10742
LDAP login failed for user "@1@" on server "@2@": @3@
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.37 10743
certificate authentication failed for user "@1@": client certificate contains no user name
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.38 10744
RADIUS server not specified
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.8.39 10745

RADIUS secret not specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.40 10746

could not translate RADIUS server name "@1@" to address: @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.41 10747

RADIUS authentication does not support passwords longer than @1@ characters

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.8.42 10748

could not generate random encryption vector

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.43 10749
could not perform MD5 encryption of password
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.44 10750
could not create RADIUS socket: @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.45 10751
could not bind local RADIUS socket: @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.46 10752
could not send RADIUS packet: @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.47 10753
timeout waiting for RADIUS response
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.8.48 10754

could not check status on RADIUS socket: @1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.8.49 10755

could not read RADIUS response: @1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.8.50 10756

RADIUS response from @1@ was sent from incorrect port: @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.8.51 10757

RADIUS response too short: @1@

An error occurred.
[System Processing]
    Processing will be aborted.

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.8.52 10759

**RADIUS response is to a different request: @1@ (should be @2@)**

[Description]
    An error occurred.

[System Processing]
    Processing will be aborted.

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.8.53 10760

**could not perform MD5 encryption of received packet**

[Description]
    An error occurred.

[System Processing]
    Processing will be aborted.

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.8.54 10761

**RADIUS response from @1@ has incorrect MD5 signature**

[Description]
    An error occurred.

[System Processing]
    Processing will be aborted.

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.8.55 10762

**RADIUS response from @1@ has invalid code (@2@) for user "@3@"**

[Description]
    An error occurred.

[System Processing]
    Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.56 10763

SSL error: @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8.57 10764

unrecognized SSL error code: @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8.58 10767

could not create SSL context: @1@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.59 10768

could not load server certificate file ":@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.8.60 10769

could not access private key file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.61 10770

private key file "@1@" has group or world access

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.62 10771

could not load private key file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.63 10772

check of private key failed: @1@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.64 10774
could not load root certificate file "@1@": @2@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.65 10776

could not load SSL certificate revocation list file "@1@": @2@
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.8.66 10777

could not initialize SSL connection: @1@
[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8.67 10778

could not set SSL socket: @1@
[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8.68 10779

could not accept SSL connection: @1@
[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8.69 10780

could not accept SSL connection: EOF detected

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8.70 10781

could not accept SSL connection: @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8.71 10782

SSL certificate's common name contains embedded null

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8.72 10783

SSL connection from "@1@"

[Description]
Terminated normally.
Continues processing.

No action required.

**2.8.73 10784**

`could not translate host name "@1@", service "@2@" to address: @3@`

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.8.74 10785**

`could not translate service "@1@" to address: @2@`

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.8.75 10786**

`could not bind to all requested addresses: MAXLISTEN (@1@) exceeded`

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.8.76 10787**

`could not create @1@ socket for address "@2@": @3@`

**Description**

The database server was disconnected during execution of the application.

**System Processing**

Processing will be aborted.
[Action]

Communication may have been disconnected for the following reasons:

- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:

- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.

b) If the total number of update records in a single transaction is high, split it into short transactions.

c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.8.77 10788

setsockopt(SO_REUSEADDR) failed for @1@ address "@2@": @3@

[Description]

The database server was disconnected during execution of the application.

[System Processing]

Processing will be aborted.

[Action]

Communication may have been disconnected for the following reasons:

- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:

- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.

b) If the total number of update records in a single transaction is high, split it into short transactions.

c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.8.78 10789

setsockopt(IPV6_V6ONLY) failed for @1@ address "@2@": @3@
[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
- If the COMMIT process is not executed after update, add the COMMIT process.
- If the total number of update records in a single transaction is high, split it into short transactions.
- If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.8.79 10790
could not bind @1@ address "@2@": @3@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
- If the COMMIT process is not executed after update, add the COMMIT process.
- If the total number of update records in a single transaction is high, split it into short transactions.
- If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.

### 2.8.80 10791

**could not listen on @1@ address ":@2@": @3@**

[Description]

The database server was disconnected during execution of the application.

[System Processing]

Processing will be aborted.

[Action]

Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

### 2.8.81 10792

**type @1@ does not exist**

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.8.82 10793

**could not set group of file ":@1@": @2@**

[Description]

An error occurred during I/O processing in the database server.

[System Processing]

Processing will be aborted.
2.8.83 10794

could not set permissions of file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.8.84 10795

could not accept new connection: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.8.85 10796

could not set socket to nonblocking mode: @1@

[Description]
An error occurred during communication between the application and the database server.
[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8.86 10798

could not receive data from client: @1@
[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.8.87 10799

unexpected EOF within message length word
[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.9 Message Numbers Beginning with 10800

2.9.1 10800

invalid message length
[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.9.2 10801

incomplete message from client
[Description]
An error occurred during communication between the application and the database server.
2.9.3 10802

could not send data to client: @1@

[Description]
An error occurred during communication between the application and the database server.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.9.4 10803

authentication file token too long, skipping: "@1@"

[Description]
The application or command terminated normally, but a warning was output.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.9.5 10804

could not open secondary authentication file "@@1@@" as "@2@@": @3@

[Description]
An error occurred during I/O processing in the database server.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.9.6 10806

authentication option "@1@" is only valid for authentication methods @2@

[Description]
An error occurred during I/O processing in the database server.

[Action]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.9.7 10807

authentication method "@1@" requires argument "@2@" to be set

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.9.8 10808

local connections are not supported by this build

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.9.9 10809

hostssl record cannot match because SSL is disabled

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.10 10810

hostssl record cannot match because SSL is not supported by this build

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.
2.9.11 10811

invalid connection type "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.12 10812

desktop before database specification

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.13 10813

desktop before role specification

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.14 10814

desktop before IP address specification

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.15 10815
invalid IP address "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.16 10816

specifying both host name and CIDR mask is invalid: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.17 10817

invalid CIDR mask in address "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.18 10818

end-of-line before netmask specification

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.19 10819

invalid IP mask "@1@": @2@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.20 10820

IP address and mask do not match
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.21 10821

end-of-line before authentication method
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.22 10822

invalid authentication method "@1@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.23 10823

invalid authentication method "@1@": not supported by this build
[Description]
An unexpected error occurred.
Processing will be aborted.

Contact Fujitsu technical support.

2.9.24 10825

gssapi authentication is not supported on local sockets

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.25 10826

peer authentication is only supported on local sockets

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.26 10827

cert authentication is only supported on hostssl connections

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.27 10828

authentication option not in name=value format: @1@

[Description]
An error occurred during execution of the application or command.

[Action]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.28 10829

clientcert can only be configured for "hostssl" rows

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.29 10830

client certificates can only be checked if a root certificate store is available

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.9.30 10831

clientcert can not be set to "no-verify" when using "cert" authentication

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.31 10832

invalid LDAP port number: "@1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.9.32 10833

**invalid RADIUS port number: "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.33 10834

**unrecognized authentication option name: "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.34 10835

**cannot use ldapbasedn, ldapbinddn, ldapbindpasswd, ldapsearchattribute, or ldapurl together with ldapprefix**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.35 10836

**authentication method "ldap" requires argument "ldapbasedn", "ldapprefix", or "ldapsuffix" to be set**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.9.36 10837

could not open configuration file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.9.37 10838

invalid regular expression "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.38 10839

regular expression match for "@1@" failed: @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.39 10840

regular expression "@1@" has no subexpressions as requested by backreference in "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.40 10841
missing entry in file "@1@" at end of line @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.41 10842

provided user name (@1@) and authenticated user name (@2@) do not match

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.42 10843

no match in usermap "@1@" for user "@2@" authenticated as "@3@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.43 10844

could not open server file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.9.44 10845

invalid large-object descriptor: @1@
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.45 10846

permission denied for large object @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.46 10847

large object descriptor @1@ was not opened for writing

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.47 10848

must be owner of large object @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.48 10849

must be superuser to use server-side lo_import()

An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.49 10850

could not read server file "@1@": @2@

[Description]
   An error occurred during I/O processing in the database server.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.9.50 10851

could not create server file "@1@": @2@

[Description]
   An error occurred during I/O processing in the database server.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.9.51 10852

must be superuser to use server-side lo_export()

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.52 10853

could not write server file "@1@": @2@

[Description]
   There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
   Processing will be aborted.
[Action]
Delete user data stored in the database server to free up space on the disk.

2.9.53 10854
could not write file "@1@": @2@
[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.9.54 10855
no data left in message
[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.9.55 10856
insufficient data left in message
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.56 10857
invalid string in message
[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.
2.9.57 10858

**invalid message format**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.9.58 10859

"@1@" is not a sequence

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.59 10861

cannot drop @1@ because it is required by the database system

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.60 10862

role @1@ was concurrently dropped

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.61 10863
tablescape @1@ was concurrently dropped

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.62 10864

database @1@ was concurrently dropped

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.63 10865

cannot drop objects owned by @1@ because they are required by the database system

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.64 10866

permission denied to create "@1@.@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.65 10867

joins can have at most @1@ columns
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.66 10868

column name "@1@" conflicts with a system column name

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.67 10869

column "@1@" specified more than once

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.68 10871

column "@1@" has pseudo-type @2@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.69 10872

composite type @1@ cannot be made a member of itself

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.70 10873

no collation was derived for column "@1@" with collatable type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.71 10874

relation "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.72 10875

type "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.73 10876

check constraint "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.74 10877

constraint "@1@" for relation "@2@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.75 10878

merging constraint "@1@" with inherited definition

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.9.76 10879

generation expression is not immutable

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.77 10881

cannot use subquery in DEFAULT expression

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.9.78 10882
aggregate functions are not allowed in index expressions
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.79 10883
aggregate functions are not allowed in transform expressions
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.80 10884
subfield "@1@" is of type @2@ but expression is of type @3@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.81 10885
only table "@1@" can be referenced in check constraint
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.82 10886
cannot use subquery in check constraint

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.83 10887
aggregate functions are not allowed in check constraints

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.84 10888
window functions are not allowed in check constraints

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.85 10889
unsupported ON COMMIT and foreign key combination

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.86 10890
cannot truncate a table referenced in a foreign key constraint
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.87 10891

**invalid type internal size @1@**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.88 10892

**alignment "@1@" is invalid for passed-by-value type of size @2@**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.89 10893

**internal size @1@ is invalid for passed-by-value type**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.90 10894

**alignment "@1@" is invalid for variable-length type**

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.91 10895

**fixed-size types must have storage**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.92 10896

**could not form array type name for type "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.93 10897

**cannot determine transition data type**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.94 10898

**return type of transition function @1@ is not @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.9.95 10899

**must not omit initial value when transition function is strict and transition type is not compatible with input type**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10 Message Numbers Beginning with 10900

2.10.1 10900

**cannot determine result data type**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.2 10901

**unsafe use of pseudo-type "internal"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.3 10902

**sort operator can only be specified for single-argument aggregates**

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.4 10903

function @1@ returns a set

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.5 10904

function @1@ requires run-time type coercion

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.6 10905

large object @1@ does not exist

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.7 10906

primary keys cannot be expressions

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.8 10907

user-defined indexes on system catalog tables are not supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.9 10908

concurrent index creation on system catalog tables is not supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.10 10909

shared indexes cannot be created after initdb

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.11 10910

building index "@1@" on table "@2@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.10.12 10911

**cannot reindex temporary tables of other sessions**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.13 10912

**invalid enum label "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.14 10913

"@1@" is not an existing enum label

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.15 10914

**ALTER TYPE ADD BEFORE/AFTER is incompatible with binary upgrade**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.16 10915
"@1@" is already an attribute of type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.17 10916

function "@1@" already exists with same argument types

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.18 10917

cannot change return type of existing function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.19 10918

cannot change name of input parameter "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.20 10919

cannot remove parameter defaults from existing function
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.21 10920

cannot change data type of existing parameter default value

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.22 10921

function "$@1@$" is not an aggregate function

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.23 10922

"$@1@$" is an aggregate function

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.24 10923

function "$@1@$" is a window function

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.25 10924

`function "@1@" is not a window function`

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.26 10925

`there is no built-in function named "@1@"`

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.27 10926

`SQL functions cannot return type @1@`

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.28 10927

`SQL functions cannot have arguments of type @1@`

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.29 10928
invalid fork name
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.30 10929
cannot drop @1@ because @2@ requires it
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.31 10930
drop auto-cascades to @1@
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.10.32 10931
cannot drop @1@ because other objects depend on it
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
cannot drop desired object(s) because other objects depend on them

Description
An error occurred during execution of the application or command.

System Processing
Processing will be aborted.

Action
Check the message text and confirm that the application is written correctly and the command is being used correctly.

constraint "@1@" for domain @2@ already exists

Description
An error occurred during execution of the application or command.

System Processing
Processing will be aborted.

Action
Check the message text and confirm that the application is written correctly and the command is being used correctly.

table "@1@" has multiple constraints named "@2@"

Description
An error occurred during execution of the application or command.

System Processing
Processing will be aborted.

Action
Check the message text and confirm that the application is written correctly and the command is being used correctly.

constraint "@1@" for table "@2@" does not exist

Description
An error occurred during execution of the application or command.

System Processing
Processing will be aborted.

Action
Check the message text and confirm that the application is written correctly and the command is being used correctly.
grant options can only be granted to roles

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.38 10938

no privileges were granted for column "@1@" of relation "@2@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.10.39 10939

no privileges were granted for "@1@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.10.40 10940

not all privileges were granted for column "@1@" of relation "@2@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.10.41 10941

not all privileges were granted for "@1@",
The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.10.42 10942

no privileges could be revoked for column "@1@" of relation "@2@"

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.10.43 10943

no privileges could be revoked for "@1@"

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.10.44 10944

not all privileges could be revoked for column "@1@" of relation "@2@"

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.10.45 10945

not all privileges could be revoked for "@1@"

The application or command terminated normally, but a warning was output.
[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.10.46 10946
invalid privilege type @1@ for relation

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.47 10947
invalid privilege type @1@ for sequence

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.48 10948
invalid privilege type @1@ for database

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.49 10949
invalid privilege type @1@ for domain

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.50 10950
invalid privilege type @1@ for function
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.51 10951
invalid privilege type @1@ for large object
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.52 10952
invalid privilege type @1@ for language
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.53 10953
invalid privilege type @1@ for schema
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.10.54 10954

**invalid privilege type @1@ for foreign-data wrapper**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.55 10955

**invalid privilege type @1@ for foreign server**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.56 10956

**column privileges are only valid for relations**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.57 10957

**conflicting or redundant options**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.58 10958
default privileges cannot be set for columns

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.59 10959

"@1@" is not a domain

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.60 10960

sequence "@1@" only supports USAGE, SELECT, and UPDATE privileges

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.10.61 10961

invalid privilege type @1@ for table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.62 10962

invalid privilege type @1@ for tablespace
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.10.63 10963**

`sequence "@1@" only supports SELECT column privileges`

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

**2.10.64 10964**

`language "@1@" is not trusted`

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.10.65 10965**

`unrecognized privilege type "@1@"`

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.10.66 10966**

`permission denied for column @1@`

An error occurred during execution of the application or command.
2.10.67 10967

permission denied for relation @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.68 10968

permission denied for sequence @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.69 10969

permission denied for database @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.70 10970

permission denied for function @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.71 10971

permission denied for operator @1@

Description:
An error occurred during execution of the application or command.

System Processing:
Processing will be aborted.

Action:
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.72 10972

permission denied for type @1@

Description:
An error occurred during execution of the application or command.

System Processing:
Processing will be aborted.

Action:
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.73 10973

permission denied for language @1@

Description:
An error occurred during execution of the application or command.

System Processing:
Processing will be aborted.

Action:
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.74 10974

permission denied for large object @1@

Description:
An error occurred during execution of the application or command.

System Processing:
Processing will be aborted.

Action:
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.10.75 10975

permission denied for schema @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.76 10976

permission denied for operator class @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.77 10977

permission denied for operator family @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.78 10978

permission denied for collation @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.79 10979
permission denied for conversion @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.80 10980

permission denied for tablespace @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.81 10981

permission denied for text search dictionary @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.82 10982

permission denied for text search configuration @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.83 10983

permission denied for foreign-data wrapper @1@
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.84 10984

permission denied for foreign server @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.85 10985

permission denied for extension @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.86 10986

must be owner of relation @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.87 10987

must be owner of sequence @1@

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.88 10988

must be owner of database @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.89 10989

must be owner of function @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.90 10990

must be owner of operator @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.91 10991

must be owner of type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
2.10.92 10992

**must be owner of language @1@**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.93 10993

**must be owner of large object @1@**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.94 10994

**must be owner of schema @1@**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.95 10995

**must be owner of operator class @1@**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.10.96 10996

must be owner of operator family @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.97 10997

must be owner of collation @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.98 10998

must be owner of conversion @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.10.99 10999

must be owner of tablespace @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.11 Message Numbers Beginning with 11000

2.11.1 11000

must be owner of text search dictionary @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.2 11001

must be owner of text search configuration @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.3 11002

must be owner of foreign-data wrapper @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.4 11003

must be owner of foreign server @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.11.5 11004

must be owner of extension @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.6 11005

permission denied for column "@1@" of relation "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.7 11007

attribute @1@ of relation with OID @2@ does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.8 11008

relation with OID @1@ does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.9 11009
database with OID @1@ does not exist
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.10 11010

function with OID @1@ does not exist
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.11 11011

language with OID @1@ does not exist
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.12 11012

schema with OID @1@ does not exist
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.13 11013

tablespace with OID @1@ does not exist
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.14 11014

foreign-data wrapper with OID @1@ does not exist

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.15 11015

foreign server with OID @1@ does not exist

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.16 11016

type with OID @1@ does not exist

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.17 11017

operator with OID @1@ does not exist

An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.18 11018

**operator class with OID @1@ does not exist**

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.19 11019

**operator family with OID @1@ does not exist**

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.20 11020

**text search dictionary with OID @1@ does not exist**

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.21 11021

**text search configuration with OID @1@ does not exist**

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.22 11022

**collation with OID @1@ does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.23 11023

**conversion with OID @1@ does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.24 11024

**extension with OID @1@ does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.25 11025

**conversion "@1@" already exists**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.11.26 11026

default conversion for @1@ to @2@ already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.27 11027

cross-database references are not implemented: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.28 11028

temporary tables cannot specify a schema name

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.29 11029

no schema has been selected to create in

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.30 11030
text search parser "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.31 11031

text search dictionary "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.32 11032

text search template "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.33 11033

text search configuration "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.34 11035

cannot move objects into or out of temporary schemas
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.35 11036

cannot move objects into or out of TOAST schema

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.36 11037

language "@1@" does not exist

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.37 11038

improper relation name (too many dotted names): @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.38 11039

collation "@1@" for encoding "@2@" does not exist

An error occurred during execution of the application or command.
[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.39 11040

cursor "@1@" does not exist

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.40 11041

permission denied to create temporary tables in database "@1@"

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.41 11042

cannot create temporary tables during recovery

[Description]
    An error occurred because execution is temporarily impossible.

[System Processing]
    Processing will be aborted.

[Action]
    Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

2.11.42 11045

"@1@" is not a table

[Description]
    An error occurred during execution of the application or command.
"@1@" is not a foreign table

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

must be owner of type @1@ or type @2@

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

must be superuser

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

must have CREATEROLE privilege

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.47 11050

schema "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.48 11051

@1@ is not a valid encoding name

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.49 11052

only binary operators can have commutators

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.50 11053

only binary operators can have join selectivity

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.11.51 11054

**only binary operators can merge join**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.52 11055

**only binary operators can hash**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.53 11056

**only boolean operators can have negators**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.54 11057

**only boolean operators can have restriction selectivity**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.55 11058
only boolean operators can have join selectivity

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.56 11059

only boolean operators can merge join

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.57 11060

only boolean operators can hash

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.58 11061

operator @1@ already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.59 11062

operator cannot be its own negator or sort operator
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.60 11063

cannot remove dependency on @1@ because it is a system object

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.61 11064

collation "@1@" for encoding "@2@" already exists

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.62 11065

collation "@1@" already exists

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.63 11066

cannot access temporary or unlogged relations during recovery

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.64 11068
could not implement GROUP BY

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.65 11069
could not implement DISTINCT

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.66 11070
could not implement window PARTITION BY

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.67 11071
could not implement window ORDER BY

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.68 11072

could not implement recursive UNION

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.69 11073

could not implement @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.70 11074

FULL JOIN is only supported with merge-joinable or hash-joinable join conditions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.71 11075

unexpected EOF on client connection

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.
2.11.72 11076

Invalid frontend message type @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.11.73 11077

Statement: @1@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.11.74 11078

Current transaction is aborted, commands ignored until end of transaction block

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.75 11079

Duration: @1@ ms

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.11.76 11080
**2.11.77 11081**

duration: @1@ ms statement: @2@

[Description]
   Terminated normally.

[System Processing]
   Continues processing.

[Action]
   No action required.

**2.11.78 11082**

cannot insert multiple commands into a prepared statement

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.11.79 11083**

duration: @1@ ms parse @2@: @3@

[Description]
   Terminated normally.

[System Processing]
   Continues processing.

[Action]
   No action required.

**2.11.80 11084**

bind @1@ to @2@
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.11.81 11085

prepared statement "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.82 11086

bind message has @1@ parameter formats but @2@ parameters

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.11.83 11087

bind message supplies @1@ parameters, but prepared statement "@2@" requires @3@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.11.84 11088

incorrect binary data format in bind parameter @1@

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.85 11089

duration: @1@ ms  bind @2@@3@@4@: @5@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.11.86 11090

table "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.87 11091

@1@ @2@@3@@4@: @5@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.11.88 11092

duration: @1@ ms  @2@ @3@@4@@5@: @6@

[Description]
Terminated normally.

[System Processing]
Continues processing.
[Action]
No action required.

2.11.89 11094

floating-point exception
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.11.90 11095

terminating autovacuum process due to administrator command
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.11.91 11096

terminating connection due to conflict with recovery
[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

2.11.92 11097

terminating connection due to administrator command
[Description]
Terminated normally.

[System Processing]
Continues processing.
[Action]
No action required.

2.11.93 11098
canceling authentication due to timeout

[Description]
Timeout occurred during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Check the following:
- If executing SQL that outputs a large volume of search results, add a conditional expression to filter the results further.
- If numerous SQLs are being simultaneously executed, reduce the number of simultaneously executed SQLs.
- If a large volume of data is to be updated in a single transaction, modify the SQL to reduce the volume of data to be updated in a single transaction.
- If executing a complex SQL, modify it to a simple SQL.
- Check if there are any problems in the network.
- Before conducting maintenance that involves the processing of a large volume of data, use the SET statement to temporarily increase the value of maintenance_work_mem.

2.11.94 11099
canceling statement due to statement timeout

[Description]
Timeout occurred during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Check the following:
- If executing SQL that outputs a large volume of search results, add a conditional expression to filter the results further.
- If numerous SQLs are being simultaneously executed, reduce the number of simultaneously executed SQLs.
- If a large volume of data is to be updated in a single transaction, modify the SQL to reduce the volume of data to be updated in a single transaction.
- If executing a complex SQL, modify it to a simple SQL.
- Check if there are any problems in the network.
- Before conducting maintenance that involves the processing of a large volume of data, use the SET statement to temporarily increase the value of maintenance_work_mem.

2.12 Message Numbers Beginning with 11100

2.12.1 11100
canceling autovacuum task

[Description]
Processing was canceled.

[System Processing]
Processing will be aborted.

[Action]
Check the message text.

2.12.2 11101

canceling statement due to conflict with recovery

[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

2.12.3 11102

canceling statement due to user request

[Description]
Processing was canceled.

[System Processing]
Processing will be aborted.

[Action]
Check the message text.

2.12.4 11103

stack depth limit exceeded

[Description]
The depth of the execution stack exceeded the allowable value during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
If executing a complex SQL, modify it to a simple SQL.

2.12.5 11104

--@1@ requires a value
[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.6 11105

-c @1@ requires a value

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.7 11107

@1@: invalid command-line arguments

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.8 11108

@1@: no database nor user name specified

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.9 11109

invalid CLOSE message subtype @1@

[Description]
   An error occurred during execution of the application or command.
[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.10 11110

**invalid DESCRIBE message subtype @1@**

[Description]

An error occurred during communication between the application and the database server.

[System Processing]

Processing will be aborted.

[Action]

Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.12.11 11111

**disconnection: session time: @1:@2:@3:@4@ user=@5@ database=@6@ host=@7:@8:@9@**

[Description]

An error occurred during communication between the application and the database server.

[System Processing]

Processing will be aborted.

[Action]

Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.12.12 11112

**permission denied: "@1@" is a system catalog**

[Description]

Terminated normally.

[System Processing]

Continues processing.

[Action]

No action required.

2.12.13 11113

**cannot execute @1@ in a read-only transaction**

[Description]

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.14 11114

cannot execute @1@ during recovery

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.15 11115

cannot execute @1@ within security-restricted operation

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.16 11116

must be superuser to do CHECKPOINT

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.17 11117

invalid argument size @1@ in function call message

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.
[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.12.18 11118

fastpath function call: ":@1@" (OID @2@)

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.12.19 11119

duration: @1@ ms fastpath function call: ":@2@" (OID @3@)

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.12.20 11120

function call message contains @1@ arguments but function requires @2@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.12.21 11121

function call message contains @1@ argument formats but @2@ arguments

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.
2.12.22 11122

**incorrect binary data format in function argument @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.23 11123

**bind message has @1@ result formats but query has @2@ columns**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.12.24 11124

**portal "@1@" cannot be run**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.25 11125

**cursor can only scan forward**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
could not open usermap file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.12.27 11127

unexpected delimiter

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.28 11128

unexpected end of line or lexeme

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.29 11129

unexpected end of line

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.30 11130

thesaurus sample word "@1@" isn't recognized by subdictionary (rule @2@)
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.31 11131

thesaurus sample word "@1@" is a stop word (rule @2@)

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.32 11132

thesaurus substitute word "@1@" is a stop word (rule @2@)

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.33 11133

thesaurus substitute word "@1@" isn't recognized by subdictionary (rule @2@)

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.34 11134

thesaurus substitute phrase is empty (rule @1@)

An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.35 11135

multiple DictFile parameters

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.36 11136

multiple Dictionary parameters

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.37 11137

unrecognized Thesaurus parameter: "@1@"

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.38 11138

missing DictFile parameter

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.39 11139

missing Dictionary parameter

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.40 11140

invalid text search configuration file name "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.41 11141

could not open statistics file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.12.42 11142

unrecognized headline parameter: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.12.43 11143

MinWords should be less than MaxWords

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.44 11144

MinWords should be positive

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.45 11145

ShortWord should be >= 0

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.46 11146

MaxFragments should be >= 0

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.47 11147
string is too long for tsvector (@1@ bytes, max @2@ bytes)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.48 11148

multiple Accept parameters

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.49 11149

unrecognized simple dictionary parameter: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.50 11150

could not open log file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.12.51 11151

invalid regular expression: @1@
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.52 11153
could not open synonym file "@1@": @2@

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.12.53 11154
Ispell dictionary supports only "default", "long", and "num" flag values

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.54 11155
affix file contains both old-style and new-style commands

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.55 11156
unrecognized synonym parameter: "@1@"

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.56 11157

missing Synonyms parameter

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.57 11158

could not open thesaurus file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.12.58 11159

word is too long to be indexed

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.12.59 11160

conversion from wchar_t to server encoding failed: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.60 11161
text search parser does not support headline creation
[Description]
An error occurred during execution of the application or command.

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.61 11162
multiple AffFile parameters
[Description]
An error occurred during execution of the application or command.

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.62 11163
unrecognized Ispell parameter: "@1@"
[Description]
An error occurred during execution of the application or command.

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.63 11164
missing AffFile parameter
[Description]
An error occurred during execution of the application or command.

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.12.64 11166

WAL streaming (max_wal_senders > 0) requires wal_level "replica" or "logical"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.65 11167

invalid list syntax in parameter "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.66 11168

could not create listen socket for "@1@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.12.67 11169

could not create any TCP/IP sockets

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.
could not create Unix-domain socket in directory "@1@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.12.69 11171

no socket created for listening

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.12.70 11172

could not create I/O completion port for child queue

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.12.71 11173

could not load pg_hba.conf

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.12.72 11174

@1@: could not locate matching postgres executable
An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.12.73 11175**

could not open directory "@1@": @2@

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

**2.12.74 11176**

directory "@1@" does not exist

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.12.75 11177**

could not read permissions of directory "@1@": @2@

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.12.76 11178**

specified data directory "@1@" is not a directory

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.77 11179

data directory "@1@" has wrong ownership

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.78 11180

data directory "@1@" has group or world access

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.79 11181

select() failed in postmaster: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.
Take the following actions:
- Eliminate the cause of the communication disconnection.
Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.

c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

   - If none of the above situations applies, perform the following:

   a) Confirm that the database server has not stopped.

   b) If the database server is starting or stopping, re-execute the command after the database server starts.

---

**2.12.80 11182**

**incomplete startup packet**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

---

**2.12.81 11183**

**invalid length of startup packet**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

---

**2.12.82 11184**

**failed to send GSSAPI negotiation response: @1@**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

---

**2.12.83 11185**

**unsupported frontend protocol @1@.@2@: server supports @3@.@0 to @4@.@5@**

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.84 11187

**invalid startup packet layout: expected terminator as last byte**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.12.85 11188

**no PostgreSQL user name specified in startup packet**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.12.86 11189

**the database system is starting up**

[Description]
The database system is starting up.

[System Processing]
Processing will be aborted.

[Action]
This message is output when the startup process or recovery process is operating normally. Restart any necessary the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

2.12.87 11190

**the database system is shutting down**

[Description]
The database system is shutting down.
Processing will be aborted.

This message is output when the stopping process is operating normally. Retry any necessary applications or commands after restarting the database system.

### 2.12.88 11191

**the database system is in recovery mode**

**Description**

An error occurred because execution is temporarily impossible.

**System Processing**

Processing will be aborted.

**Action**

Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

### 2.12.89 11192

**sorry, too many clients already**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.12.90 11193

**wrong key in cancel request for process @1@**

**Description**

An unexpected error occurred.

**System Processing**

Processing will be aborted.

**Action**

Contact Fujitsu technical support.

### 2.12.91 11194

**PID @1@ in cancel request did not match any process**

**Description**

An unexpected error occurred.
[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.12.92 11195
received SIGHUP, reloading configuration files

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.12.93 11196
@1@ was not reloaded

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.12.94 11197
received smart shutdown request

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.12.95 11198
received fast shutdown request

[Description]
Terminated normally.

[System Processing]
Continues processing.
[Action]
No action required.

2.12.96 11199

aborting any active transactions
[Description]
Rollback any active transactions because the database system is being requested to shut down.

[System Processing]
Continues processing.

[Action]
Retry any necessary applications or commands after restarting the database system.

2.13 Message Numbers Beginning with 11200

2.13.1 11200

received immediate shutdown request
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.13.2 11201

aborting startup due to startup process failure
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.3 11202

database system is ready to accept connections
[Description]
Terminated normally.

[System Processing]
Continues processing.
2.13.4 11203

**terminating any other active server processes**

**[Description]**
Terminated normally.

**[System Processing]**
Continues processing.

**[Action]**
No action required.

2.13.5 11204

@1@ (PID @2@) exited with exit code @3@

**[Description]**
Terminated normally.

**[System Processing]**
Continues processing.

**[Action]**
No action required.

2.13.6 11205

@1@ (PID @2@) was terminated by exception 0x@3@

**[Description]**
Terminated normally.

**[System Processing]**
Continues processing.

**[Action]**
No action required.

2.13.7 11207

@1@ (PID @2@) was terminated by signal @3@: @4@

**[Description]**
Terminated normally.

**[System Processing]**
Continues processing.

**[Action]**
No action required.
2.13.8 11208
@1@ (PID @2@) exited with unrecognized status @3@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.13.9 11209

abnormal database system shutdown

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.10 11210

all server processes terminated; reinitializing

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.11 11211

could not fork new process for connection: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.12 11212
connection received: host=@1@ port=@2@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.13.13 11213

connection received: host=@1@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.13.14 11214

could not execute server process "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.15 11215

database system is ready to accept read only connections

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.13.16 11216

could not fork startup process: @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.17 11217

could not fork background writer process: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.18 11218

could not fork WAL writer process: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.19 11219

could not fork WAL receiver process: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.20 11220

could not fork archiver: @1@

[Description]
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.21 11221

**could not duplicate socket @1@ for use in backend: error code @2@**

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.13.22 11224

**checkpoint request failed**

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.13.23 11225

**compacted fsync request queue from @1@ entries to @2@ entries**
[Description]  
Terminated normally.

[System Processing]  
Continues processing.

[Action]  
No action required.

2.13.24 11226

could not resolve "localhost": @1@

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.13.25 11227

trying another address for the statistics collector

[Description]  
The application or command terminated normally, but a warning was output.

[System Processing]  
Processing will continue.

[Action]  
Check the message text and confirm that the issue does not affect the expected outcome.

2.13.26 11228

could not create socket for statistics collector: @1@

[Description]  
The database server was disconnected during execution of the application.

[System Processing]  
Processing will be aborted.

[Action]  
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.
Take the following actions:
- Eliminate the cause of the communication disconnection.
Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.

b) If the total number of update records in a single transaction is high, split it into short transactions.

c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:

a) Confirm that the database server has not stopped.

b) If the database server is starting or stopping, re-execute the command after the database server starts.

### 2.13.27 11229

could not bind socket for statistics collector: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:

- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:

- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.

b) If the total number of update records in a single transaction is high, split it into short transactions.

c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:

a) Confirm that the database server has not stopped.

b) If the database server is starting or stopping, re-execute the command after the database server starts.

### 2.13.28 11230

could not get address of socket for statistics collector: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.

**2.13.29 11231**

could not connect socket for statistics collector: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.

**2.13.30 11232**

could not send test message on socket for statistics collector: @1@

[Description]
The database server was disconnected during execution of the application.
[System Processing]

Processing will be aborted.

[Action]

Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.

b) If the total number of update records in a single transaction is high, split it into short transactions.

c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:

  a) Confirm that the database server has not stopped.

  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.13.31 11233

select() failed in statistics collector: @1@

[Description]

The database server was disconnected during execution of the application.

[System Processing]

Processing will be aborted.

[Action]

Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.

b) If the total number of update records in a single transaction is high, split it into short transactions.

c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:

  a) Confirm that the database server has not stopped.

  b) If the database server is starting or stopping, re-execute the command after the database server starts.
2.13.32 11234

**test message did not get through on socket for statistics collector**

**[Description]**
An error occurred during communication between the application and the database server.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.13.33 11235

**could not receive test message on socket for statistics collector: @1@**

**[Description]**
The database server was disconnected during execution of the application.

**[System Processing]**
Processing will be aborted.

**[Action]**
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.13.34 11236

**incorrect test message transmission on socket for statistics collector**

**[Description]**
An unexpected error occurred.

**[System Processing]**
Processing will be aborted.
2.13.35 11237

could not set statistics collector socket to nonblocking mode: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.
Take the following actions:
- Eliminate the cause of the communication disconnection.
Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
  a) If the COMMIT process is not executed after update, add the COMMIT process.
  b) If the total number of update records in a single transaction is high, split it into short transactions.
  c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.13.36 11238

disabling statistics collector for lack of working socket

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.13.37 11239

could not fork statistics collector: @1@

[Description]
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.38 11241

unrecognized reset target: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.13.39 11243

could not read statistics message: @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.13.40 11244

could not open temporary statistics file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.41 11245

could not write temporary statistics file "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.
[Action]
Delete user data stored in the database server to free up space on the disk.

2.13.42 11246

could not close temporary statistics file "@1@": @2@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.43 11247
could not rename temporary statistics file "@1@" to "@2@": @3@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.44 11248
could not open dictionary file "@1@": @2@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.45 11249
corrupted statistics file "@1@"
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.13.46 11250

**database hash table corrupted during cleanup --- abort**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.47 11252

**could not read from logger pipe: @1@**

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
 a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.13.48 11253

**logger shutting down**

[Description]
Terminated normally.

[System Processing]
Continues processing.
[Action]
No action required.

2.13.49 11254

could not create pipe for syslog: @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.13.50 11255

could not fork system logger: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.51 11256

could not redirect stdout: @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.13.52 11257

could not redirect stderr: @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.
2.13.53 11258

could not open affix file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.54 11259

disabling automatic rotation (use SIGHUP to re-enable)

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.13.55 11260

could not fork process: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.56 11261

archive_mode enabled, yet archive_command is not set

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.13.57 11262
archiving write-ahead log file "@1@" failed too many times, will try again later

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.13.58 11263

archive command failed with exit code @1@

[Description]
An error occurred during executing the command specified by archive_command parameter at postgresql.conf.

[System Processing]
Processing will be aborted.

[Action]
Identify the cause according to the messages shown before this message and the return code shown in this message. And then work around if necessary.

2.13.59 11264

archive command was terminated by exception 0x@1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.13.60 11266

archive command was terminated by signal @1@: @2@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.13.61 11267

archive command exited with unrecognized status @1@
An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.13.62 11268

Archived write-ahead log file "@1@":

Terminated normally.

Continues processing.

No action required.

2.13.63 11269

Could not open archive status directory "@1@": @2@

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.13.64 11270

Could not fork autovacuum launcher process: @1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.13.65 11271

Autovacuum launcher started

Terminated normally.
2.13.66 11272

**autovacuum launcher shutting down**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.13.67 11273

**could not fork autovacuum worker process: @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.68 11274

**autovacuum: processing database "@1@"**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.13.69 11275

**autovacuum: dropping orphan temp table "@1@.@2@.@3@"**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.
[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.13.70 11276

autovacuum: found orphan temp table "@1@"."@2@" in database "@3@"

[Description]
Uncollected garbage of the temporary table was found during automatic vacuuming.

[System Processing]
Continues processing.

[Action]
No action required. The garbage of the temporary table will be collected automatically later.
If you want to collect it and obtain the storage space immediately,
drop the schema derived from @1 with the database user having superuser permission.

2.13.71 11277

autovacuum not started because of misconfiguration

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.13.72 11278

no empty local buffer available

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.13.73 11279

cannot cluster temporary tables of other sessions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.13.74 11280

**unexpected data beyond EOF in block @1@ of relation @2@**

**Description**

An error occurred during I/O processing in the database server.

**System Processing**

Processing will be aborted.

**Action**

To investigate the cause of the occurrence from the message, and remove cause.

### 2.13.75 11281

**Continues processing past damaged page headers.**

**Description**

The application or command terminated normally, but a warning was output.

**System Processing**

Processing will continue.

**Action**

Check the message text and confirm that the issue does not affect the expected outcome.

### 2.13.76 11283

**could not write block @1@ of @2@**

**Description**

The application or command terminated normally, but a warning was output.

**System Processing**

Processing will continue.

**Action**

Check the message text and confirm that the issue does not affect the expected outcome.

### 2.13.77 11284

**could not truncate file "@1@": @2@**

**Description**

The application or command terminated normally, but a warning was output.

**System Processing**

Processing will continue.

**Action**

Check the message text and confirm that the issue does not affect the expected outcome.
2.13.78 11285

**cannot extend file "@1@" beyond @2@ blocks**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.13.79 11287

could not extend file "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.13.80 11288

could not extend file "@1@": wrote only @2@ of @3@ bytes at block @4@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.13.81 11289

could not read block @1@ in file "@2@": @3@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.13.82 11290
could not read block @1@ in file "@2@": read only @3@ of @4@ bytes

Description
An error occurred during I/O processing in the database server.

System Processing
Processing will be aborted.

Action
To investigate the cause of the occurrence from the message, and remove cause.

2.13.83 11291

could not write block @1@ in file "@2@": @3@

Description
There was insufficient free space in the disk of the database server during execution of the application.

System Processing
Processing will be aborted.

Action
Delete user data stored in the database server to free up space on the disk.

2.13.84 11292

could not write block @1@ in file "@2@": wrote only @3@ of @4@ bytes

Description
There was insufficient free space in the disk of the database server during execution of the application.

System Processing
Processing will be aborted.

Action
Delete user data stored in the database server to free up space on the disk.

2.13.85 11293

could not truncate file "@1@" to @2@ blocks: it's only @3@ blocks now

Description
An error occurred during I/O processing in the database server.

System Processing
Processing will be aborted.

Action
To investigate the cause of the occurrence from the message, and remove cause.

2.13.86 11294

could not truncate file "@1@" to @2@ blocks: @3@
An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.13.87 11296

could not forward fsync request because request queue is full

Terminated normally.

Continues processing.

No action required.

2.13.88 11297

could not open file "@1@" (target block @2@): @3@

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.13.89 11298

could not seek to end of file "@1@": @2@

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.13.90 11299

memory for serializable conflict tracking is nearly exhausted

The application or command terminated normally, but a warning was output.
2.14 Message Numbers Beginning with 11300

2.14.1 11300

*not enough shared memory for data structure "@1@" (@2@ bytes requested)*

**Description**

There was insufficient free space in the database server's shared memory during execution of the application.

**System Processing**

Processing will be aborted.

**Action**

Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.14.2 11301

deferrable snapshot was unsafe; trying a new one

**Description**

The application or command terminated normally, but a warning was output.

**System Processing**

Processing will continue.

**Action**

Check the message text and confirm that the issue does not affect the expected outcome.

2.14.3 11302

*out of shared memory*

**Description**

There was insufficient free space in the database server's shared memory during execution of the application.

**System Processing**

Processing will be aborted.

**Action**

Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.
2.14.4 11303

could not serialize access due to read/write dependencies among transactions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.5 11304

deadlock detected

[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

2.14.6 11305

cannot acquire lock mode @1@ on database objects while recovery is in progress

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.7 11307

process @1@ avoided deadlock for @2@ on @3@ by rearranging queue order after @4@.@5@ ms

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.14.8 11308

process @1@ detected deadlock while waiting for @2@ on @3@ after @4@.@5@ ms

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.14.9 11309

process @1@ still waiting for @2@ on @3@ after @4@.@5@ ms

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.14.10 11310

process @1@ acquired @2@ on @3@ after @4@.@5@ ms

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.14.11 11311

process @1@ failed to acquire @2@ on @3@ after @4@.@5@ ms

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.14.12 11314
getrlimit failed: @1@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.14.13 11315

insufficient file descriptors available to start server process

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.14.14 11316

out of file descriptors: @1@; release and retry

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.14.15 11317

temporary file: path "@1@", size @2@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.14.16 11318

could not read directory "@1@": @2@
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.14.17 11320

could not create directory "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.14.18 11322

could not create ShmemIndex entry for data structure "@1@"

[Description]
There was insufficient free space in the database server's shared memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.14.19 11323

ShmemIndex entry size is wrong for data structure "@1@": expected @2@, actual @3@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.14.20 11324

requested shared memory size overflows size_t
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.14.21 11325**

*corrupted page pointers: lower = @1@, upper = @2@, special = @3@*

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.14.22 11326**

*corrupted line pointer: @1@*

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.14.23 11327**

*corrupted item lengths: total @1@, available space @2@*

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.14.24 11328**

*corrupted line pointer: offset = @1@, size = @2@*

An error occurred during I/O processing in the database server.
[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.14.25 11331

could not create unique index "@1@"

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.26 11332

could not find function "@1@" in file "@2@"

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.27 11333

could not access file "@1@": @2@

[Description]
  An error occurred during I/O processing in the database server.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.14.28 11334

could not load library "@1@": @2@

[Description]
  An error occurred during I/O processing in the database server.

[System Processing]
  Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.14.29 11335

**incompatible library "@1@": missing magic block**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.30 11336

**incompatible library "@1@": version mismatch**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.31 11337

**incompatible library "@1@": magic block mismatch**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.32 11338

**access to library "@1@" is not allowed**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.14.33 11339

invalid macro name in dynamic library path: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.34 11340

zero-length component in parameter "dynamic_library_path"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.35 11341

component in parameter "dynamic_library_path" is not an absolute path

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.36 11342

could not determine actual result type for function "@1@" declared to return type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.37 11343
number of aliases does not match number of columns

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.38 11344

no column alias was provided

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.39 11345

could not determine row description for function returning record

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.40 11346

internal function "@1@" is not in internal lookup table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.41 11347

unrecognized API version @1@ reported by info function "@2@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.42 11349

cached plan must not change result type

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.43 11350

"@1@" is not a type

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.44 11351

record type has not been registered

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.45 11352

@1@ is not an enum

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.46 11353

could not create relation-cache initialization file "@1@": @2@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.14.47 11354

cannot PREPARE a transaction that modified relation mapping

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.48 11355

could not open file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.14.49 11357

relation mapping file "@1@" contains invalid data

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.14.50 11358

relation mapping file "@1@" contains incorrect checksum

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.14.51 11359

could not write file "@1@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.14.52 11360

could not fsync file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.14.53 11361

could not close file "@1@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.14.54 11362

argument type @1@ is only a shell

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.55 11363

no binary input function available for type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.56 11364

no binary output function available for type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.57 11365

no input function available for type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.58 11366
no output function available for type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.59 11367

could not reopen file "@1@" as stderr: @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.14.60 11368

could not reopen file "@1@" as stdout: @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.14.61 11369

cursor "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.62 11370

closing existing cursor "@1@"
The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.14.63 11371

cannot drop active portal "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.64 11372

cannot PREPARE a transaction that has created a cursor WITH HOLD

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.65 11373

word is too long (@1@ bytes, max @2@ bytes)

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.66 11374

string is too long for tsvector (@1@ bytes, max @2@ bytes)

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.67 11375

**argument of ntile must be greater than zero**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.68 11376

**argument of nth_value must be greater than zero**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.69 11379

**integer out of range**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.70 11380

**argument must be empty or one-dimensional array**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.71 11381

cannot concatenate incompatible arrays

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.72 11382

invalid number of dimensions: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.73 11383

could not determine input data type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.74 11385

division by zero

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.14.75 11387

timestamp out of range

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.76 11391

invalid input syntax for type @1@: "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.14.77 11398

global tablespace never has databases

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.14.78 11399

@1@ is not a tablespace OID

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.15 Message Numbers Beginning with 11400

2.15.1 11400

`invalid input syntax for type @1@: "@2@`"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.2 11401

`syntax error in tsquery: "@1@`"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.3 11402

`syntax error in tsvector: "@1@`"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.4 11403

`there is no escaped character: "@1@`"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.15.5 11404

**wrong position info in tsvector: "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.6 11405

**sequence "@1@" does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.7 11406

**more than one function named "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.8 11407

**more than one operator named @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.9 11408
**too many arguments**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.15.10 11409**

**invalid name syntax**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.15.11 11410**

**expected a left parenthesis**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.15.12 11411**

**expected a right parenthesis**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.15.13 11412**

**expected a type name**
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.14 11413
improper type name

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.15 11414
invalid type modifier

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.16 11415
TIME(@1@)@2@ precision must not be negative

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.17 11416
TIME(@1@)@2@ precision reduced to maximum allowed, @3@

The application or command terminated normally, but a warning was output.
2.15.18 11417

date out of range: "@@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.19 11419

timestamp cannot be NaN

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.20 11420

timestamp(@1@) precision must be between @2@ and @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.21 11421

interval out of range

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.22 11422

invalid INTERVAL type modifier

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.23 11423

TIMESTAMP(@1@)@2@ precision must not be negative

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.24 11424

TIMESTAMP(@1@)@2@ precision reduced to maximum allowed, @3@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.15.25 11425

interval(@1@) precision must be between @2@ and @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.15.26 11426

**cannot subtract infinite timestamps**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.27 11427

**timestamp units "@1@" not supported**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.28 11428

**"time" units "@1@" not recognized**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.29 11429

**timestamp with time zone units "@1@" not supported**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.30 11430
"time with time zone" units "@1@" not recognized

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.31 11431

interval units "@1@" not supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.32 11432

timestamp units "@1@" not recognized

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.33 11434

time zone "@1@" not recognized

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.34 11435

interval time zone "@1@" must not include months or days
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.35 11436

step size cannot equal zero

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.36 11437

invalid input syntax for type @1@: "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.37 11438

value "@1@" is out of range for type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.38 11439

bigint out of range

[Description]
An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.39 11440

Smallint out of range

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.40 11441

OID out of range

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.41 11442

Input of anonymous composite types is not implemented

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.42 11443

Malformed record literal: "@1@"

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.43 11444

wrong number of columns: @1@, expected @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.44 11445

wrong data type: @1@, expected @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.45 11446

improper binary format in record column @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.46 11447

cannot compare dissimilar column types @1@ and @2@ at record column @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.15.47 11448

cannot compare record types with different numbers of columns

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.48 11449

int2vector has too many elements

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.49 11450

invalid int2vector data

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.50 11451

oidvector has too many elements

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.51 11452
invalid input syntax for type @1@: "@2@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.15.52 11453**

invalid cidr value: "@1@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.15.53 11454**

could not format inet value: @1@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.15.54 11455**

invalid address family in external "@1@" value
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.15.55 11456**

invalid bits in external "@1@" value
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.56 11457

invalid length in external "@1@" value

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.57 11458

invalid external "cidr" value

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.58 11459

invalid mask length: @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.59 11460

could not format cidr value: @1@

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.60 11461

cannot AND inet values of different sizes

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.61 11462

cannot OR inet values of different sizes

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.62 11463

input is out of range

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.63 11464

cannot subtract inet values of different sizes

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.64 11465

invalid Datum pointer

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.65 11466
dimension values cannot be null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.66 11467

"[" must introduce explicitly-specified array dimensions.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.67 11468

upper bound cannot be less than lower bound

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.15.68 11469

Array value must start with "{" or dimension information.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.69 11471

Specified array dimensions do not match array contents.

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.70 11472

malformed array literal: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.71 11473

array size exceeds the maximum allowed (@1@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.72 11474
Invalid array flags

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.73 11475

Wrong element type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.74 11476

Improper binary format in array element @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.75 11477

Slices of fixed-length arrays not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.76 11478

Wrong number of array subscripts
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.77 11479

array subscript out of range

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.78 11480

cannot assign null value to an element of a fixed-length array

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.79 11481

updates on slices of fixed-length arrays not implemented

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.80 11482

source array too small

An error occurred during execution of the application or command.
null array element not allowed in this context

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.82 11484
cannot compare arrays of different element types

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.83 11485
could not identify a hash function for type @1@

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.84 11486
dimension array or low bound array cannot be null

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.85 11487

**wrong range of array subscripts**

*Description*

An error occurred during execution of the application or command.

*System Processing*

Processing will be aborted.

*Action*

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.86 11489

**value out of range: overflow**

*Description*

An error occurred during execution of the application or command.

*System Processing*

Processing will be aborted.

*Action*

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.87 11490

**value out of range: underflow**

*Description*

An error occurred during execution of the application or command.

*System Processing*

Processing will be aborted.

*Action*

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.88 11491

**invalid input syntax for type @1@: "@2@"**

*Description*

An error occurred during execution of the application or command.

*System Processing*

Processing will be aborted.

*Action*

Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.15.89 11492

"@1@" is out of range for type real

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.90 11493

invalid input syntax for type @1@: "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.91 11494

"@1@" is out of range for type double precision

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.92 11495

cannot take square root of a negative number

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.93 11496
zero raised to a negative power is undefined

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.94 11497

cannot take logarithm of zero

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.15.95 11498

cannot take logarithm of a negative number

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.16 Message Numbers Beginning with 11500

2.16.1 11500

result is out of range

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.2 11501

count must be greater than zero

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.3 11502

operand, lower bound, and upper bound cannot be NaN

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.4 11503

lower and upper bounds must be finite

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.16.5 11504

**lower bound cannot equal upper bound**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.6 11505

**requested length too large**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.7 11506

**requested character too large**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.8 11507

**requested character too large for encoding: @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
null character not permitted

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.10 11509
typmod array must be type cstring[]

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.11 11510
typmod array must be one-dimensional

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.12 11511
typmod array must not contain nulls

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.13 11512
suppress_redundant_updates_trigger: must be called as trigger
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.16.14 11513**

*suppress_redundant_updates_trigger: must be called on update*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.16.15 11514**

*suppress_redundant_updates_trigger: must be called before update*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.16.16 11515**

*suppress_redundant_updates_trigger: must be called for each row*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.16.17 11517**

*value "@1@" is out of range for type @2@*

An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.18 11518

invalid oidvector data

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.19 11519

invalid line specification: must be two distinct points

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.20 11521

date/time field value out of range: '@1@'

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.21 11522

interval field value out of range: '@1@'

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.
2.16.22 11523

time zone displacement out of range: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.23 11524

unrecognized encoding: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.24 11525

invalid hexadecimal digit: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.25 11526

invalid hexadecimal data: odd number of digits

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.16.26 11527

**unexpected "=" while decoding base64 sequence**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.27 11528

**invalid symbol "@1@" while decoding base64 sequence**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.28 11529

**invalid base64 end sequence**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.29 11530

**invalid input syntax for type @1@: "@2@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.30 11531
ts_stat query must return one tsvector column

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.31 11532

tsvector column "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.32 11533

column "@1@" is not of tsvector type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.33 11534

configuration column "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.34 11535

column "@1@" is not of regconfig type
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.16.35 11536**

*configuration column "@1@" must not be null*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.16.36 11537**

*text search configuration name "@1@" must be schema-qualified*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.16.37 11538**

*column "@1@" is not of a character type*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.16.38 11539**

*ts_rewrite query must return two tsquery columns*

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.39 11540

encoding conversion from @1@ to ASCII not supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.40 11541

"@1@" is not a valid encoding name

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.41 11542

@1@ is not a valid encoding code

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.42 11543

insert or update on table "@1@" violates foreign key constraint "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
2.16.43 11544

function "@1@" was not called by trigger manager

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.44 11545

function "@1@" must be fired AFTER ROW

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.45 11546

function "@1@" must be fired for INSERT

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.46 11547

function "@1@" must be fired for UPDATE

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.16.47 11548

function "@1@" must be fired for INSERT or UPDATE
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.48 11549

function "@1@" must be fired for DELETE
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.49 11550

no pg_constraint entry for trigger "@1@" on table "@2@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.50 11551

referential integrity query on "@1@" from constraint "@2@" on "@3@" gave unexpected result
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.
2.16.51 11552
update or delete on table "@1@" violates foreign key constraint "@2@" on table "@3@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.52 11553
invalid input value for enum @1@: "@2@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.53 11554
invalid internal value for enum: @1@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.54 11555
could not determine actual enum type
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.55 11556
enum @1@ contains no values
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.56 11557
invalid format specification for an interval value
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.57 11558
"EEEE" must be the last pattern used
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.58 11559
"9" must be ahead of "PR"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.59 11560
"0" must be ahead of "PR"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.60 11561

multiple decimal points

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.61 11562

cannot use "V" and decimal point together

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.62 11563

cannot use "S" twice

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.63 11564

cannot use "S" and "PL"/"MI"/"SG"/"PR" together

An error occurred during execution of the application or command.
[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.64 11565
cannot use "S" and "MI" together

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.65 11566
cannot use "S" and "PL" together

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.66 11567
cannot use "S" and "SG" together

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.67 11568
cannot use "PR" and "S"/"PL"/"MI"/"SG" together

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.68 11569

**cannot use "EEEE" twice**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.69 11570

**"EEEE" is incompatible with other formats**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.70 11571

**"@1@" is not a view**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.71 11572

**could not determine which collation to use for regular expression**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.16.72 11573

could not determine which collation to use for @1@ function
[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.73 11574

could not determine which collation to use for @1@ function
[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.74 11575

invalid combination of date conventions
[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.75 11576

conflicting values for "@1@" field in formatting string
[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.76 11577
source string too short for "@1@" formatting field

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.77 11578

invalid argument for @1@: ":@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.78 11579

value for ":@1@" in source string is out of range

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.79 11581

invalid input string for "Y,YYY"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.80 11582

hour ":@1@" is invalid for the 12-hour clock
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.81 11584

cannot calculate day of year without year information

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.82 11585

"EEEE" not supported for input

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.83 11586

"RN" not supported for input

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.84 11587

could not open directory "@1@": @2@

An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.85 11588

_array of weight must be one-dimensional_

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.86 11589

_array of weight is too short_

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.87 11590

_array of weight must not contain nulls_

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.88 11591

_weight out of range_

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

2.16.93 11596

unsupported XML feature

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.94 11597

invalid encoding name "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.95 11598

invalid XML comment

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.16.96 11599

not an XML document

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.17 Message Numbers Beginning with 11600

2.17.1 11600

invalid XML processing instruction

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.2 11601

xmlvalidate is not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.3 11602

could not initialize XML library

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.17.4 11603

date out of range

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.17.5 11604
invalid query
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.6 11605
invalid array for XML namespace mapping
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.7 11606
empty XPath expression
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.8 11607
neither namespace name nor URI may be null
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.9 11608
could not register XML namespace with name "+1@" and URI "+2@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.10 11609
value "+1@" is out of range for type smallint
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.11 11610
value "+1@" is out of range for type @2@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.12 11611
value "+1@" is out of range for 8-bit integer
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.13 11612
getvector_in not implemented
2.17.14 11613

identifier too long

2.17.15 11615

no operand in tsquery: "@1@"

2.17.16 11616

value is too big in tsquery: "@1@"

2.17.17 11617

operand is too long in tsquery: "@1@"
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.18 11618

word is too long in tsquery: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.19 11619

text-search query doesn’t contain lexemes: "@1@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.17.20 11620

length for type @1@ must be at least 1

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.21 11621

length for type @1@ cannot exceed @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.22 11622

value too long for type character(@1@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.23 11623

value too long for type character varying(@1@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.24 11624

reference to parent directory ("..") not allowed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.25 11625

absolute path not allowed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.17.26 11626

**path must be in or below the current directory**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.27 11627

**could not open file "@1@" for writing: @2@**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.17.28 11628

**could not seek in file "@1@": @2@**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.17.29 11629

**must be superuser to read files**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.30 11630
requested length cannot be negative

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.31 11631

must be superuser to get file information

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.32 11632

must be superuser to get directory listings

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.33 11633

too many points requested

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.34 11639

invalid number of points in external "path" value
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.35 11641

invalid input syntax for type @1@: "@2@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.36 11642

function "dist_lb" not implemented

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.37 11643

function "close_lb" not implemented

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.38 11645

invalid input syntax for type @1@: "@2@"

An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.39 11646

invalid number of points in external "polygon" value

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.40 11647

function "poly_distance" not implemented

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.41 11648

function "path_center" not implemented

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.42 11649

open path cannot be converted to polygon

An error occurred during execution of the application or command.

Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.43 11650
invalid input syntax for type @1@: "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.44 11652
invalid radius in external "circle" value

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.45 11653
cannot convert circle with radius zero to polygon

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.46 11654
must request at least 2 points

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.17.47 11656
bit string length @1@ does not match type bit(@2@)
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.48 11657
"@1@" is not a valid binary digit
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.49 11658
"@1@" is not a valid hexadecimal digit
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.50 11659
invalid length in external bit string
[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.51 11660
bit string too long for type bit varying(@1@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.52 11661
	negative substring length not allowed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.53 11662
cannot AND bit strings of different sizes

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.54 11663
cannot OR bit strings of different sizes

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.55 11664
cannot XOR bit strings of different sizes
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.17.56 11665**

**bit index @1@ out of valid range (0..@2@)**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.17.57 11666**

**new bit must be 0 or 1**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.17.58 11667**

**unrecognized key word: "@1@"**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.17.59 11668**

**missing name**

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.60 11669

missing "=" sign

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.61 11670

invalid mode character: must be one of "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.62 11671

a name must follow the "/" sign

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.63 11672

defaulting grantor to user ID @1@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.
[Action]
  Check the message text and confirm that the issue does not affect the expected outcome.

**2.17.64 11673**

**ACL array contains wrong data type**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.17.65 11674**

**ACL arrays must be one-dimensional**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.17.66 11675**

**ACL arrays must not contain null values**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.17.67 11676**

**extra garbage at the end of the ACL specification**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.17.68 11677

grant options cannot be granted back to your own grantor

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.69 11678

dependent privileges exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.70 11679

aclinsert is no longer supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.71 11680

aclremove is no longer supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
unrecognized privilege type: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.73 11682

must be member of role "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.74 11683

view "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.75 11684

INTERVAL(@1@) precision must not be negative

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.76 11685

INTERVAL(@1@) precision reduced to maximum allowed, @2@
The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

### 2.17.77 11686

**timestamp out of range: "@1@"**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.17.78 11687

**cannot subtract infinite dates**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.17.79 11688

**date out of range for timestamp**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.17.80 11690

**time out of range**

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.81 11691

interval units "@1@" not recognized

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.82 11692

time zone displacement out of range

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.83 11693

timestamp with time zone units "@1@" not recognized

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.84 11695

"@1@" is not a composite type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.85 11696

invalid input syntax for type @1@: "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.86 11697

invalid octet value in "macaddr" value: "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.87 11698

could not determine which collation to use for @1@ function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.17.88 11699

could not convert string to UTF-16: error code @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.18 Message Numbers Beginning with 11700

2.18.1 11700
could not compare Unicode strings: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.2 11701
index @1@ out of valid range, 0..@2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.3 11702
field position must be greater than zero

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.4 11703
unrecognized format() type specifier "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

</table>
invalid multibyte character for locale

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.10 11710
could not determine which collation to use for ILIKE

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.11 11711
text-search query contains only stop words or doesn't contain lexemes, ignored

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.18.12 11714
invalid sign in external "numeric" value

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.13 11715
invalid digit in external "numeric" value
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.14 11716

**NUMERIC precision @1@ must be between 1 and @2@**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.15 11717

**NUMERIC scale @1@ must be between 0 and precision @2@**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.16 11718

**invalid NUMERIC type modifier**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.17 11719

**value overflows numeric format**

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.18 11720

cannot convert NaN to integer

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.19 11721

cannot convert NaN to bigint

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.20 11722

cannot convert NaN to smallint

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.21 11723

numeric field overflow

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.18.22 11725**

cannot accept a value of type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.18.23 11727**

cannot accept a value of type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.18.24 11728**

cannot accept a value of type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.18.25 11729**

cannot accept a value of type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.18.26 11730

cannot accept a value of type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.27 11731

cannot accept a value of type language_handler

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.28 11732

cannot display a value of type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.29 11733

cannot accept a value of type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.30 11734
cannot display a value of type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.31 11735

cannot accept a value of type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.32 11736

cannot display a value of type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.33 11737

cannot accept a value of type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.34 11738

cannot display a value of type @1@
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.18.35 11739**

*cannot accept a value of type @1@*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.18.36 11740**

*cannot display a value of type @1@*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.18.37 11741**

*cannot accept a value of type @1@*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.18.38 11742**

*cannot display a value of type @1@*

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.39 11743

cannot accept a value of a shell type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.40 11744

cannot display a value of type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.41 11745

cannot accept a value of type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.42 11746

"char" out of range

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.43 11747

LIKE pattern must not end with escape character

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.44 11750

function @1@ is not an aggregate

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.45 11751

rule "@1@" has unsupported event type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.46 11752

replication connection authorized: user=@1@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.18.47 11753

connection authorized: user=@1@ database=@2@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.18.48 11754

database "@1@" has disappeared from pg_database

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.49 11755

database "@1@" is not currently accepting connections

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.50 11756

permission denied for database "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.51 11757
too many connections for role "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.52 11758

database locale is incompatible with operating system

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.53 11759

no roles are defined in this database system

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.18.54 11760

new replication connections are not allowed during database shutdown

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.55 11761

must be superuser to connect during database shutdown
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.56 11762

must be superuser to connect in binary upgrade mode

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.57 11763

remaining connection slots are reserved for non-replication superuser connections

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.58 11765

template database "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.59 11766

database @1@ does not exist

[Description]
An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.60 11767

could not stat directory "@1@": @2@

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.18.61 11768

could not change directory to "@1@": @2@

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.18.62 11769

cannot set parameter "@1@" within security-restricted operation

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.63 11770

role "@1@" is not permitted to log in

An error occurred during execution of the application or command.

Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.18.71 11778
pre-existing shared memory block (key @1@, ID @2@) is still in use

[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

2.18.72 11779

could not remove old lock file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.18.73 11780

could not read lock file "@1@": @2@

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.18.74 11781

could not read from file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.18.75 11782

"@1@" is not a valid data directory

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.76 11784
Terminated normally.

Continues processing.

No action required.

2.18.77 11785

unexpected encoding ID @1@ for WIN character sets

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.18.78 11786

unexpected encoding ID @1@ for ISO 8859 character sets

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.18.79 11787

conversion between @1@ and @2@ is not supported

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.80 11788

default conversion function for encoding "@1@" to "@2@" does not exist
The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.18.81 11789

invalid source encoding name "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.82 11790

invalid destination encoding name "@1@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.83 11791

invalid byte value for encoding "@1@": 0x@2@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.84 11793

invalid byte sequence for encoding "@1@": @2@

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.85 11795

invalid encoding number: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.86 11796

unrecognized configuration parameter "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.87 11797

parameter "@1@" cannot be changed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.88 11798

parameter "@1@" cannot be changed without restarting the server

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.18.89 11799

Parameter "@1@" cannot be changed now

Description
An error occurred during execution of the application or command.

System Processing
Processing will be aborted.

Action
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19 Message Numbers Beginning with 11800

2.19.1 11800

Parameter "@1@" cannot be set after connection start

Description
An error occurred during execution of the application or command.

System Processing
Processing will be aborted.

Action
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.2 11801

Permission denied to set role "@1@"

Description
An error occurred during execution of the application or command.

System Processing
Processing will be aborted.

Action
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.3 11802

Cannot set parameter "@1@" within security-definer function

Description
An error occurred during execution of the application or command.

System Processing
Processing will be aborted.
[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.4 11803

invalid value for parameter "@1@": "@2@"

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.5 11804

@1@@2@@3@ is outside the valid range for parameter "@4@" (@5@ .. @6@)

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.6 11805

@1@ requires a numeric value

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.7 11806

@1@@2@@3@ is outside the valid range for parameter "@4@" (@5@ .. @6@)

[Description]

An error occurred during execution of the application or command.

[System Processing]

Processing will be aborted.

[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.19.8 11807

must be superuser or a member of pg_read_all_settings to examine "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.9 11808

SET @1@ takes only one argument

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.10 11809

SET requires parameter name

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.11 11810

attempt to redefine parameter "@1@"

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.19.12 11811
could not parse setting for parameter "@1@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.13 11812

invalid value for parameter "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.14 11813

invalid value for parameter "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.15 11814

parameter "@1@" removed from configuration file, reset to default

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.16 11815

parameter "@1@" changed to "@2@"
The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

**2.19.17 11816**

could not open configuration file "@1@": maximum nesting depth exceeded

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.18 11817**
syntax error in file "@1@" line @2@, near end of line

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.19 11818**
syntax error in file "@1@" line @2@, near token "@3@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.20 11819**
user mapping not found for "@1@"

An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.21 11820

foreign-data wrapper "@1@" has no handler

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.22 11821

invalid option "@1@"

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.23 11822

foreign-data wrapper "@1@" does not exist

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.24 11823

index "@1@" does not exist

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.25 11824

could not create shared memory segment: @1@

[Description]
There was insufficient free space in the database server's shared memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.19.26 11825

could not stat data directory "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.19.27 11826

could not create semaphore: error code @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.19.28 11827

could not lock semaphore: error code @1@

[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.
[Action]
   Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the
database server.

2.19.29 11828

could not unlock semaphore: error code @1@

[Description]
   An unexpected error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   Contact Fujitsu technical support.

2.19.30 11829

could not try-lock semaphore: error code @1@

[Description]
   An error occurred because execution is temporarily impossible.

[System Processing]
   Processing will be aborted.

[Action]
   Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the
database server.

2.19.31 11830

could not create semaphores: @1@

[Description]
   An unexpected error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   Contact Fujitsu technical support.

2.19.32 11832

pre-existing shared memory block is still in use

[Description]
   An error occurred during I/O processing in the database server.

[System Processing]
   Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.19.33 11833

oldest xmin is far in the past

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.34 11834

some databases have not been vacuumed in over 2 billion transactions

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.35 11835

skipping analyze of "@1@" --- lock not available

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.36 11836

skipping "@1@" --- only superuser can analyze it

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.19.37 11837

skipping "@1@" --- only superuser or database owner can analyze it

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.38 11838

skipping "@1@" --- only table or database owner can analyze it

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.39 11839

skipping "@1@" --- cannot analyze non-tables or special system tables

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.40 11840

operator class "@1@" does not exist for access method "@2@", skipping

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.41 11841
**operator family "@1@" does not exist for access method "@2@", skipping**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.42 11842**

**operator family "@1@" for access method "@2@" already exists**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.43 11843**

**access method "@1@" does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.44 11844**

**must be superuser to create an operator class**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.45 11845**

**invalid operator number @1@, must be between 1 and @2@**
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.46 11846**

*invalid procedure number @1@, must be between 1 and @2@*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.47 11847**

*storage type specified more than once*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.48 11848**

*storage type cannot be different from data type for access method "@1@"*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.49 11849**

*operator class "@1@" for access method "@2@" already exists*

An error occurred during execution of the application or command.
[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.50 11850

could not make operator class "@1@" be default for type @2@

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.51 11851

must be superuser to create an operator family

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.52 11852

must be superuser to alter an operator family

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.53 11853

operator argument types must be specified in ALTER OPERATOR FAMILY

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.54 11854
STORAGE cannot be specified in ALTER OPERATOR FAMILY
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.55 11855
one or two argument types must be specified
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.56 11856
index operators must be binary
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.57 11857
access method "@1@" does not support ordering operators
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.19.58 11858

**Index search operators must return boolean**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.59 11859

**Btree comparison procedures must have two arguments**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.60 11860

**Btree comparison procedures must return integer**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.61 11861

**Hash procedures must have one argument**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.62 11862
hash procedures must return integer

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.63 11863

associated data types must be specified for index support procedure

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.64 11864

procedure number @1@ for (@2@,@3@) appears more than once

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.65 11865

operator number @1@ for (@2@,@3@) appears more than once

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.66 11866

operator @1@(@2@,@3@) already exists in operator family "@4@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.67 11867**

*function @1@(@2@,@3@) already exists in operator family "@4@"*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.68 11868**

*operator @1@(@2@,@3@) does not exist in operator family "@4@"*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.69 11869**

*function @1@(@2@,@3@) does not exist in operator family "@4@"*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.19.70 11870**

*operator class "$1@" for access method "$2@" already exists in schema "$3@"*

An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.71 11871

operator family "@1@" for access method "@2@" already exists in schema "@3@"

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.72 11872

no security label providers have been loaded

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.73 11873

must specify provider when multiple security label providers have been loaded

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.74 11874

security label provider "@1@" is not loaded

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.19.75 11875

"@1@$ is not a table, view, materialized view, composite type, or foreign table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.76 11876

aggregate attribute "@1@$ not recognized

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.77 11877

parameter "lc_collate" must be specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.78 11878

database "@1@$ does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.19.79 11879

collation "@1@" for encoding "@2@" already exists in schema "@3@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.80 11880

function @1@ already exists in schema "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.81 11881

unrecognized value for EXPLAIN option "@1@": "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.82 11882

unrecognized EXPLAIN option "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.83 11883
EXPLAIN option WAL requires ANALYZE

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.84 11884

type "@1@" already exists in schema "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.85 11885

collation attribute "@1@" not recognized

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.86 11886

aggregate stype must be specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.87 11887

aggregate sfunc must be specified

[System Processing]
    Processing will continue.

[Action]
    Check the message text and confirm that the issue does not affect the expected outcome.

2.19.92 11892

collation "@1@" already exists in schema "@2@"

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.19.93 11894

vacuuming "@1@.@2@"

[Description]
    Terminated normally.

[System Processing]
    Continues processing.

[Action]
    No action required.

2.19.94 11896

"@1@": removed @2@ row versions in @3@ pages

[Description]
    Terminated normally.

[System Processing]
    Continues processing.

[Action]
    No action required.

2.19.95 11897

"@1@": found @2@ removable, @3@ nonremovable row versions in @4@ pages

[Description]
    The application or command terminated normally, but a warning was output.

[System Processing]
    Processing will continue.
[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.19.96 11898

"@1@": removed @2@ row versions in @3@ pages

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.19.97 11899

scanned index "@1@" to remove @2@ row versions

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.20 Message Numbers Beginning with 11900

2.20.1 11900

index "@1@" now contains @2@ row versions in @3@ pages

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.20.2 11901

"@1@": truncated @2@ to @3@ pages

[Description]
Terminated normally.

[System Processing]
Continues processing.
2.20.3 11902

**option "@1@" not found**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.4 11903

**option "@1@" provided more than once**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.5 11904

**permission denied to change owner of foreign-data wrapper "@1@"**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.6 11905

**function @1@ must return type @2@**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.20.7 11906

permission denied to create foreign-data wrapper "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.8 11907

foreign-data wrapper "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.9 11908

permission denied to alter foreign-data wrapper "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.10 11909

changing the foreign-data wrapper handler can change behavior of existing foreign tables

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.20.11 11910
changing the foreign-data wrapper validator can cause the options for dependent objects to become invalid

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.20.12 11912

foreign-data wrapper "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.20.13 11913

server "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.14 11914

type "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.20.15 11916

user mapping for "@1@" does not exist for server "@2@"
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

server "@1@" does not exist, skipping

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

user mapping for "@1@" does not exist for server "@2@", skipping

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

foreign table "@1@" does not exist

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

collation "@1@" does not exist, skipping

The application or command terminated normally, but a warning was output.
[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.20.20 11921
tablespace "@1@" does not exist
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.21 11922
conversion "@1@" does not exist, skipping
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.20.22 11923
constraint "@1@" does not exist
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.23 11924
schema "@1@" does not exist, skipping
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.
[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.20.24 11925

extension "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.20.25 11926

operator @1@ does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.20.26 11927

@1@ is not a domain

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.27 11929

table "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.20.28 11931

**only shared relations can be placed in pg_global tablespace**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.29 11933

**truncate cascades to table "@1@"**

**Description**
Terminated normally.

**System Processing**
Continues processing.

**Action**
No action required.

2.20.30 11934

**cannot vacuum temporary tables of other sessions**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.31 11935

**cannot inherit from temporary relation "@1@"**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.32 11936
relation "@1@" would be inherited from more than once

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.33 11937

merging multiple inherited definitions of column "@1@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.20.34 11938

inherited column "@1@" has a type conflict

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.35 11939

inherited column "@1@" has a collation conflict

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.36 11940

inherited column "@1@" has a storage parameter conflict
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.37 11941

merging column "@1@" with inherited definition

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.20.38 11942

column "@1@" has a type conflict

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.39 11943

column "@1@" has a collation conflict

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.40 11944

column "@1@" has a storage parameter conflict

[Description]
An error occurred during execution of the application or command.
2.20.41 11945

column "@1@" inherits conflicting default values

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.42 11946

check constraint name "@1@" appears multiple times but with different expressions

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.43 11947

cannot rename column of typed table

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.44 11948

"@1@" is not a table, view, materialized view, composite type, index, or foreign table

[Description]
An error occurred during execution of the application or command.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.20.45 11949

inherited column "@1@" must be renamed in child tables too

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.46 11950

cannot rename system column "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.47 11951

cannot rename inherited column "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.48 11952

column ")@1@" of relation ")@2@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
cannot @1@ "@2@" because it is being used by active queries in this session

[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

cannot @1@ "@2@" because it has pending trigger events

[Description]
An error occurred because execution is temporarily impossible.

[System Processing]
Processing will be aborted.

[Action]
Restart the application. If the same error occurs when you restart the application, to check if there are any problems in the database server.

type @1@ is not a composite type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

cannot rewrite system relation "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.20.53 11957

**cannot truncate temporary tables of other sessions**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.54 11958

**rewriting table "@1@"**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.20.55 11959

**verifying table "@1@"**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.20.56 11960

**column "@1@" of relation "@2@" contains null values**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.57 11961
check constraint "@1@" of relation "@2@" is violated by some row

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.58 11962

"@1@" is not a table, materialized view, or index

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.59 11963

"@1@" is not a table or view

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.60 11964

"@1@" is not a table or foreign table

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.61 11965

"@1@" is not a table, composite type, or foreign table
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.62 11966

"@1@" is of the wrong type

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.63 11967

cannot alter type "@1@" because it is the type of a typed table

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.64 11968

type @1@ is not a domain

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.65 11969

cannot add column to typed table

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.66 11970

child table "@1@" has different type for column "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.67 11971

child table "@1@" has different collation for column "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.68 11973

merging definition of column "@1@" for child "@2@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.20.69 11974

column must be added to child tables too

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.70 11975
cannot alter system column "@1@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.71 11976
column "@1@" is in a primary key
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.72 11977
statistics target @1@ is too low
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.73 11978
lowering statistics target to @1@
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.20.74 11979

Invalid storage type "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.75 11980

Column data type @1@ can only have storage PLAIN

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.76 11981

Cannot drop column from typed table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.77 11982

Column "@1@" of relation "@2@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.20.78 11983
cannot drop system column "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.79 11984
cannot drop inherited column "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.80 11985
ALTER TABLE / ADD CONSTRAINT USING INDEX will rename index "@1@" to "@2@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.20.81 11986
constraint must be added to child tables too

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.82 11987
inherited relation "@1@" is not a table or foreign table
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.20.83 11988**

`constraints on permanent tables may reference only permanent tables`

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.20.84 11989**

`constraints on unlogged tables may reference only permanent or unlogged tables`

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.20.85 11990**

`constraints on temporary tables may reference only temporary tables`

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.20.86 11991**

`number of referencing and referenced columns for foreign key disagree`

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.87 11992

foreign key constraint "@1@" cannot be implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.88 11993

constraint "@1@" of relation "@2@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.89 11994

column "@1@" referenced in foreign key constraint does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.90 11995

cannot have more than @1@ keys in a foreign key

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.91 11996

**cannot use a deferrable primary key for referenced table "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.92 11997

**there is no primary key for referenced table "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.93 11998

**cannot use a deferrable unique constraint for referenced table "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.20.94 11999

**there is no unique constraint matching given keys for referenced table "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.21 Message Numbers Beginning with 12000

2.21.1 12000
validating foreign key constraint "@1@"
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.21.2 12001
cannot drop inherited constraint "@1@" of relation "@2@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.3 12002
constraint "@1@" of domain "@2@" does not exist
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.4 12003
constraint "@1@" of relation "@2@" does not exist, skipping
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.21.5 12004

cannot alter column type of typed table
[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.6 12005

cannot alter inherited column "@1@"
[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.7 12007

cannot use subquery in index expression
[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.8 12010

column "@1@" cannot be cast automatically to type @2@
[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.9 12011
type of inherited column "@1@" must be changed in child tables too

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.10 12012
cannot alter type of column "@1@" twice

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.11 12013
default for column "@1@" cannot be cast automatically to type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.12 12014
cannot alter type of a column used by a view or rule

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.13 12015
cannot alter type of a column used in a trigger definition
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.14 12016
cannot change owner of index "@1@"
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.21.15 12017
cannot change owner of sequence "@1@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.16 12018
"@1@" is not a table, materialized view, index, or foreign table
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.17 12019
index "@1@" for table "@2@" does not exist
[Description]
An error occurred during execution of the application or command.
2.21.18 12020

cannot have multiple SET TABLESPACE subcommands

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.19 12021

"@1@" is not a table, view, materialized view, index, or TOAST table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.20 12022

cannot move system relation "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.21 12023

cannot rewrite temporary tables of other sessions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.22 12024

cannot change inheritance of typed table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.23 12025

circular inheritance not allowed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.24 12027

column "@1@" in child table must be marked NOT NULL

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.25 12028

child table is missing column "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.21.26 12029

child table "@1@" has different definition for check constraint "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.27 12030

child table is missing constraint "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.28 12031

relation "@1@" is not a parent of relation "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.29 12032

typed tables cannot inherit

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.30 12033
table is missing column "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.31 12034

2.21.32 12035

table "@1@" has different type for column "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.33 12036

table has extra column "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.34 12037

"@1@" is not a typed table
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.35 12038**

cannot move an owned sequence into another schema

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.36 12039**

conversion "@1@" already exists in schema "@2@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.37 12040**

unlogged sequences are not supported

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.38 12041**

nextval: reached maximum value of sequence "@1@" (@2@)

An error occurred during execution of the application or command.
2.21.39 12042

**nextval: reached minimum value of sequence "@1@" (@2@)**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.40 12043

**currval of sequence "@1@" is not yet defined in this session**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.41 12044

**lastval is not yet defined in this session**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.42 12045

**setval: value @1@ is out of bounds for sequence "@2@" (@3@..@4@)**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.43 12046

INCREMENT must not be zero

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.44 12047

MINVALUE (@1@) must be less than MAXVALUE (@2@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.45 12048

START value (@1@) cannot be less than MINVALUE (@2@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.46 12049

START value (@1@) cannot be greater than MAXVALUE (@2@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

</tbody>
</table>
sequence must have same owner as table it is linked to

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.52 12055

sequence must be in same schema as table it is linked to

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.53 12056

invalid cursor name: must not be empty

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.54 12057

utility statements cannot be prepared

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.55 12058

prepared statement is not a SELECT
An error occurred during execution of the application or command. Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.56 12059**

`wrong number of parameters for prepared statement "@1@"`

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.57 12060**

`cannot use subquery in EXECUTE parameter`

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.58 12061**

`aggregate functions are not allowed in EXECUTE parameters`

An error occurred during execution of the application or command.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.21.59 12062**

`window functions are not allowed in EXECUTE parameters`

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.60 12063

parameter $@1@ of type @2@ cannot be coerced to the expected type @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.61 12064

prepared statement "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.62 12065

unnamed prepared statement does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.63 12066

skipping vacuum of "@1@" --- lock not available

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.
Check the message text and confirm that the issue does not affect the expected outcome.

2.21.64 12067

skipping "@1@" --- only superuser can vacuum it

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.21.65 12068

skipping "@1@" --- only superuser or database owner can vacuum it

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.21.66 12069

skipping "@1@" --- only table or database owner can vacuum it

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.21.67 12070

skipping "@1@" --- cannot vacuum non-tables or special system tables

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.21.68 12071

analyzing "@1@.@2@" inheritance tree

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.21.69 12072

analyzing "@1@.@2@"

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.21.70 12073

automatic analyze of table "@1@.@2@.@3@" system usage: @4@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.21.71 12074

"@1@": scanned @2@ of @3@ pages, containing @4@ live rows and @5@ dead rows; @6@ rows in sample, @7@ estimated total rows

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.21.72 12075

cannot move temporary tables of other sessions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.73 12076

there is no previously clustered index for table "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.74 12077

cannot cluster a shared catalog

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.75 12078

cannot access temporary tables of other sessions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.76 12079
"@1@" is not an index for table "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.77 12080

cannot cluster on index "@1@" because access method does not support clustering

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.78 12081

cannot cluster on partial index "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.79 12082

cannot cluster on invalid index "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.80 12083

clustering "@1@.@2@" using index scan on "@3@"
Terminated normally.

Continues processing.

No action required.

2.21.81 12084

clustering "@1@.@2@" using sequential scan and sort

Terminated normally.

Continues processing.

No action required.

2.21.82 12086

invalid statement name: must not be empty

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.83 12088

SQL function cannot return shell type @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.84 12089

type "@1@" is only a shell

The application or command terminated normally, but a warning was output.
[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.21.85 12090

*type "$@1@$" is not yet defined*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.86 12091

*SQL function cannot accept shell type @1@*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.87 12092

*type @1@ is only a shell*

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.21.88 12093

*token type "$@1@$" does not exist*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.89 12094

functions cannot accept set arguments

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.90 12095

VARIADIC parameter must be the last input parameter

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.91 12096

VARIADIC parameter must be an array

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.92 12097

argument name "@1@" used more than once

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.21.93 12098

**only input parameters can have default values**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.21.94 12099

**cannot use table references in parameter default value**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22 Message Numbers Beginning with 12100

2.22.1 12103

**input parameters after one with a default value must also have defaults**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.2 12104

**no function body specified**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.22.3 12105

no language specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.4 12106

COST must be positive

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.5 12107

ROWS must be positive

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.6 12108

unrecognized function attribute "@1@" ignored

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.22.7 12109
**only one AS item needed for language "@1@"**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.8 12110**

**role "@1@" does not exist**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.9 12111**

**function result type must be @1@ because of OUT parameters**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.10 12112**

**function result type must be specified**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.11 12113**

**ROWS is not applicable when function does not return a set**
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.12 12114

**aggregate @1@(@2@) does not exist, skipping**

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.22.13 12116

**source data type @1@ is a pseudo-type**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.14 12117

**target data type @1@ is a pseudo-type**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.15 12118

**cast function must take one to three arguments**

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.16 12119

**argument of cast function must match or be binary-coercible from source data type**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.17 12120

**second argument of cast function must be type @1@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.18 12122

**return data type of cast function must match or be binary-coercible to target data type**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.19 12123

**cast function must not be volatile**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.20 12124

**cast function must not be an aggregate function**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.21 12125

**cast function must not be a window function**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.22 12126

**cast function must not return a set**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.23 12127

**must be superuser to create a cast WITHOUT FUNCTION**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
source and target data types are not physically compatible

Description
An error occurred during execution of the application or command.

System Processing
Processing will be aborted.

Action
Check the message text and confirm that the application is written correctly and the command is being used correctly.

composite data types are not binary-compatible

Description
An error occurred during execution of the application or command.

System Processing
Processing will be aborted.

Action
Check the message text and confirm that the application is written correctly and the command is being used correctly.

enum data types are not binary-compatible

Description
An error occurred during execution of the application or command.

System Processing
Processing will be aborted.

Action
Check the message text and confirm that the application is written correctly and the command is being used correctly.

array data types are not binary-compatible

Description
An error occurred during execution of the application or command.

System Processing
Processing will be aborted.

Action
Check the message text and confirm that the application is written correctly and the command is being used correctly.
domain data types must not be marked binary-compatible

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.29 12133

source data type and target data type are the same

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.30 12134

cast from type @1@ to type @2@ already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.31 12135

cast from type @1@ to type @2@ does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.22.32 12136

cast from type @1@ to type @2@ does not exist
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.33 12138

no inline code specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.34 12139

language "@1@" does not support inline code execution

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.35 12140

channel name cannot be empty

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.36 12141

channel name too long

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.37 12142

**payload string too long**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.38 12143

**cannot PREPARE a transaction that has executed LISTEN, UNLISTEN, or NOTIFY**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.39 12144

**too many notifications in the NOTIFY queue**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.40 12145

**NOTIFY queue is @1@@2@ full**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.
Check the message text and confirm that the issue does not affect the expected outcome.

2.22.41 12147

**must be superuser to create text search parsers**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.42 12148

**text search parser parameter "@1@" not recognized**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.43 12149

**text search parser start method is required**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.44 12150

**text search parser gettoken method is required**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.22.45 12151

**text search parser end method is required**

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.46 12152

**text search parser lextypes method is required**

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.47 12153

**must be superuser to rename @1@**

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.48 12154

**text search parser "@1@" does not exist, skipping**

**[Description]**

The application or command terminated normally, but a warning was output.

**[System Processing]**

Processing will continue.

**[Action]**

Check the message text and confirm that the issue does not affect the expected outcome.

2.22.49 12156
text search parser "@1@" already exists in schema "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.50 12157

text search template "@1@" does not accept options

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.51 12158

text search template is required

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.52 12159

text search dictionary "@1@" already exists in schema "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.53 12160

text search dictionary "@1@" does not exist, skipping
The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

**2.22.54 12161**

*must be superuser to create text search templates*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.55 12162**

*text search template parameter "@1@" not recognized*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.56 12163**

*text search template lexize method is required*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.57 12165**

*text search template "@1@" already exists in schema "@2@"*

An error occurred during execution of the application or command.
[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.58 12167

text search template "@1@" does not exist, skipping

[Description]
    The application or command terminated normally, but a warning was output.

[System Processing]
    Processing will continue.

[Action]
    Check the message text and confirm that the issue does not affect the expected outcome.

2.22.59 12168

text search configuration parameter "@1@" not recognized

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.60 12169

cannot specify both PARSER and COPY options

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.

[Action]
    Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.61 12170

text search parser is required

[Description]
    An error occurred during execution of the application or command.

[System Processing]
    Processing will be aborted.
2.22.62 12171

text search configuration "@1@" already exists in schema "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.63 12172

text search configuration "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.22.64 12174

mapping for token type "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.65 12175

mapping for token type "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.22.66 12176

**invalid parameter list format: "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.67 12177

**group "@1@" does not exist**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.68 12178

**invalid extension name: "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.69 12179

**invalid extension version name: "@1@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.70 12180
could not open extension control file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.22.71 12181

parameter "@1@" cannot be set in a secondary extension control file

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.72 12183

parameter "@1@" must be a list of extension names

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.73 12184

unrecognized parameter "@1@" in file "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.74 12185

parameter "schema" cannot be specified when "relocatable" is true
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.75 12186**

*transaction control statements are not allowed within an extension script*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.76 12187**

*permission denied to create extension "@1@"*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.77 12188**

*permission denied to update extension "@1@"*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.22.78 12189**

*extension "@1@" has no update path from version "@2@" to version "@3@"*

An error occurred during execution of the application or command.
Processing will be aborted.

**2.22.79 12190**

```
relation "@1@" already exists, skipping
```

**Description**
The application or command terminated normally, but a warning was output.

**System Processing**
Processing will continue.

**Action**
Check the message text and confirm that the issue does not affect the expected outcome.

```
2.22.80 12191
```

```
extension "@1@" already exists
```

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

```
2.22.81 12192
```

```
nested CREATE EXTENSION is not supported
```

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

```
2.22.82 12193
```

```
version to install must be specified
```

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.83 12195
extension "@1@" must be installed in schema "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.84 12196
required extension "@1@" is not installed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.22.85 12197
language "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.22.86 12198
OID @1@ does not refer to a table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.22.87 12199

**table "@1@" is not a member of the extension being created**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23 Message Numbers Beginning with 12200

2.23.1 12200

**extension "@1@" does not support SET SCHEMA**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.2 12201

**nested ALTER EXTENSION is not supported**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.3 12202

**version ",@1@" of extension ",@2@" is already installed**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.23.4 12203

@1@ is already a member of extension "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.5 12204

@1@ is not a member of extension "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.6 12209

must be superuser to create custom procedural language

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.7 12211

language "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.8 12212
relation "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.23.9 12213

unacceptable schema name "@1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.10 12214

sequence "@1@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.23.11 12215

source encoding "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.12 12216

destination encoding "@1@" does not exist
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.23.13 12217**

encoding conversion function @1@ must return type @2@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.23.14 12218**

view "@1@" does not exist, skipping

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

**2.23.15 12219**

relation "@1@" already exists in schema "@2@"

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.23.16 12220**

could not remove directory "@1@": @2@

An error occurred during I/O processing in the database server.
[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.23.17 12221

"@1@" exists but is not a directory

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.18 12222

permission denied to create tablespace "@1@"

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.19 12223

tablespace location cannot contain single quotes

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.20 12224

tablespace location must be an absolute path

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.21 12225

*tablespace location "@1@" is too long*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.22 12226

*unacceptable tablespace name "@1@"*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.23 12227

*tablespace "@1@" already exists*

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.24 12228

*tablespaces are not supported on this platform*

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.23.25 12229

**window "@1@" does not exist**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.26 12230

**index "@1@" does not exist, skipping**

**Description**
The application or command terminated normally, but a warning was output.

**System Processing**
Processing will continue.

**Action**
Check the message text and confirm that the issue does not affect the expected outcome.

2.23.27 12231

**tablespace "@1@" is not empty**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.28 12232

**aggregate @1@ does not exist**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.
could not set permissions on directory "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.23.30 12234

some useless files may be left behind in old database directory "@1@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.23.31 12235

directory "@1@" already in use as a tablespace

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.32 12236

could not create symbolic link "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.23.33 12237

could not read symbolic link "@1@": @2@
[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.23.34 12238

could not read directory "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.23.35 12239

"@1@" is a foreign table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.36 12240

"@1@" is a view

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.37 12241

TRUNCATE FOR EACH ROW triggers are not supported

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.38 12242

**INSTEAD OF triggers must be FOR EACH ROW**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.39 12243

**INSTEAD OF triggers cannot have WHEN conditions**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.40 12244

**INSTEAD OF triggers cannot have column lists**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.41 12245

**cannot use subquery in trigger WHEN condition**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.42 12246

aggregate functions are not allowed in trigger WHEN conditions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.43 12247

window functions are not allowed in trigger WHEN conditions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.44 12248

statement trigger's WHEN condition cannot reference column values

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.45 12249

INSERT trigger's WHEN condition cannot reference OLD values

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.23.46 12250

DELETE trigger’s WHEN condition cannot reference NEW values

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.47 12251

BEFORE trigger’s WHEN condition cannot reference NEW system columns

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.48 12254

trigger "@1@" for relation "@2@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.49 12257

trigger "@1@" for relation "@2@" does not exist, skipping

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.23.50 12258
trigger "@1@" for table "@2@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.51 12259

permission denied: "@1@" is a system trigger

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.52 12260

trigger function @1@ returned null value

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.53 12261

BEFORE STATEMENT trigger cannot return a value

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.54 12262

constraint "@1@" is not deferrable
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.23.55 12264**

**SYSID can no longer be specified**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.23.56 12265**

**invalid connection limit: @1@**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.23.57 12266**

**must be superuser to create superusers**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.23.58 12267**

**must be superuser to create replication users**

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.59 12268

permission denied to create database

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.60 12269

role name "@1@" is reserved

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.61 12270

role "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.62 12271

must be superuser to alter superusers

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.63 12272

**must be superuser to alter replication users**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.64 12273

**permission denied**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.65 12274

**permission denied to create role**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.66 12275

**tablespace "@1@" does not exist, skipping**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
current user cannot be dropped

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

session user cannot be dropped

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

must be superuser to drop superusers

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

role "@1@" cannot be dropped because some objects depend on it

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
session user cannot be renamed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.72 12281

current user cannot be renamed

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.73 12282

must be superuser to rename superusers

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.74 12283

permission denied to rename database

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.75 12284

MD5 password cleared because of role rename
The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

2.23.76 12285

**column names cannot be included in GRANT/REVOKE ROLE**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.77 12286

**permission denied to drop role**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.78 12287

**permission denied to drop objects**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.79 12288

**must have admin option on role "@1@"**

An error occurred during execution of the application or command.
must be superuser to set grantor

An error occurred during execution of the application or command.

role "@1@" is already a member of role "@2@"

Terminated normally.

role "@1@" is not a member of role "@2@"

The application or command terminated normally, but a warning was output.
[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.23.84 12293

**COPY BINARY is not supported to stdout or from stdin**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.23.85 12294

**could not write to COPY file: @1@**

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.23.86 12295

**connection lost during COPY to stdout**

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.23.87 12296

**could not read from COPY file: @1@**

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.23.88 12297

**COPY from stdin failed: @1@**

[Description]
Processing was canceled.

[System Processing]
Processing will be aborted.

[Action]
Check the message text.

2.23.89 12298

**unexpected message type 0x@1@ during COPY from stdin**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.23.90 12299

**must be superuser to COPY to or from a file**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24 Message Numbers Beginning with 12300

2.24.1 12300

COPY format "@1@" not recognized
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.2 12301

argument to option "@1@" must be a list of column names
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.3 12302

argument to option "@1@" must be a valid encoding name
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.4 12303

option "@1@" not recognized
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.
[Action]
Contact Fujitsu technical support.

2.24.5 12304

cannot specify DELIMITER in BINARY mode

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.6 12305

cannot specify NULL in BINARY mode

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.7 12306

COPY delimiter must be a single one-byte character

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.8 12307

COPY delimiter cannot be newline or carriage return

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
<table>

</tr>
</tbody>
</table>

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.
**COPY quote must be a single one-byte character**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.24.14 12313**

**COPY delimiter and quote must be different**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.24.15 12314**

**COPY escape available only in CSV mode**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.24.16 12315**

**COPY escape must be a single one-byte character**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.24.17 12316**

**COPY force quote available only in CSV mode**
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.24.18 12317**

**COPY force quote only available using COPY TO**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.24.19 12318**

**COPY force not null available only in CSV mode**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.24.20 12319**

**COPY force not null only available using COPY FROM**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.24.21 12320**

**COPY delimiter must not appear in the NULL specification**

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.22 12321

**CSV quote character must not appear in the NULL specification**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.23 12324

**COPY (SELECT INTO) is not supported**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.24 12325

**FORCE_QUOTE column "@1@" not referenced by COPY**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.25 12326

**FORCE_NOT_NULL column "@1@" not referenced by COPY**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.26 12327

cannot copy from sequence "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.27 12328

cannot copy from foreign table "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.28 12329

cannot copy to sequence "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.29 12330

cannot copy from non-table relation "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.24.30 12331

**relative path not allowed for COPY to file**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.31 12332

could not open file "@1@" for reading: @2@

**Description**
An error occurred during I/O processing in the database server.

**System Processing**
Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.

2.24.32 12333

"@1@" is a directory

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.33 12334

cannot copy to view "@1@"

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.34 12335
cannot copy to foreign table "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.35 12337

cannot copy to non-table relation "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.36 12338

COPY file signature not recognized

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.37 12339

invalid COPY file header (missing flags)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.38 12340

unrecognized critical flags in COPY file header

### 2.24.39 12341

**invalid COPY file header (missing length)**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.24.40 12342

**invalid COPY file header (wrong length)**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.24.41 12343

**extra data after last expected column**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.24.42 12347

**missing data for column "@1@"**

[Description]
An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.24.43 12348**

**Received copy data after EOF marker**

**Description**
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.24.44 12349**

**Row field count is @1@, expected @2@**

**Description**
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.24.45 12350**

**Literal carriage return found in data**

**Description**
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.24.46 12351**

**Unquoted carriage return found in data**

**Description**
An error occurred during execution of the application or command.

Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.47 12352

**literal newline found in data**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.48 12353

**unquoted newline found in data**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.49 12354

**end-of-copy marker does not match previous newline style**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.50 12355

**end-of-copy marker corrupt**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.24.51 12356

unterminated CSV quoted field

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.52 12357

unexpected EOF in COPY data

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.53 12358

invalid field size

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.54 12359

incorrect binary data format

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.55 12360
must specify at least one column

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.56 12361

cannot use more than @1@ columns in an index

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.57 12362

cannot create index on foreign table "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.58 12363

cannot create indexes on temporary tables of other sessions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.59 12364

substituting access method "gist" for obsolete method "rtree"
2.24.60 12365

`access method "@1@" does not support unique indexes`

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.61 12366

`access method "@1@" does not support multicolumn indexes`

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.62 12367

`access method "@1@" does not support exclusion constraints`

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.63 12368

`@1@ @2@ will create implicit index "@3@" for table "@4@"`

[Description]
Terminated normally.
[System Processing]
Continues processing.

[Action]
No action required.

2.24.64 12369
cannot use subquery in index predicate
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.65 12370
aggregate functions are not allowed in index predicates
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.66 12371
functions in index predicate must be marked IMMUTABLE
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.67 12372
cannot use subquery in transform expression
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.68 12374

*functions in index expression must be marked IMMUTABLE*

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.69 12375

*could not determine which collation to use for string comparison*

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.70 12376

*operator is not unique: @1@*

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.71 12377

*operator @1@ is not a member of operator family "@2@"*

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.
**2.24.72 12378**

**access method "@1@" does not support ASC/DESC options**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.24.73 12379**

**access method "@1@" does not support NULLS FIRST/LAST options**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.24.74 12380**

**data type @1@ has no default operator class for access method "@2@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.24.75 12381**

**operator class "@1@" does not accept data type @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.24.76 12382**
there are multiple default operator classes for data type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.77 12384

can only reindex the currently open database

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.78 12385

table "@1.@2@" was reindexed

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.24.79 12386

@1@ requires a parameter

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.80 12387

@1@ requires a Boolean value
<table>

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

[94x761]

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

[107x745] 2.24.81 12389  
**argument of @1@ must be a name**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

[107x706] 2.24.82 12391  
**@1@ requires an integer value**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

---

[107x684] 2.24.83 12393  
**LOCATION is not supported anymore**

The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

---

[107x667] 2.24.84 12396  
**permission denied to copy database "@1@"**

An error occurred during execution of the application or command.
2.24.85 12397

**invalid server encoding @1@**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.24.86 12399

**new encoding (@1@) is incompatible with the encoding of the template database (@2@)**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25 Message Numbers Beginning with 12400

2.25.1 12400

**new collation (@1@) is incompatible with the collation of the template database (@2@)**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.2 12401

**new LC_CTYPE (@1@) is incompatible with the LC_CTYPE of the template database (@2@)**

**Description**
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.3 12402

global cannot be used as default tablespace

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.4 12403

cannot assign new default tablespace "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.5 12404

database "@1@" already exists

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.6 12405

source database "@1@" is being accessed by other users

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.7 12406

**encoding "@1@" does not match locale "@2@"**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.8 12407

**role "@1@" does not exist, skipping**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.25.9 12408

**cannot drop a template database**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.10 12409

**cannot drop the currently open database**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.25.11 12410

**database "@1@" is being accessed by other users**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.12 12411

**permission denied to rename role**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.13 12412

**current database cannot be changed**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.14 12413

**cannot change the tablespace of the currently open database**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.15 12414
some relations of database "@1@" are already in tablespace "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.16 12415
permission denied to change owner of database

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.17 12417
SETOF type not allowed for operator argument

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.18 12418
operator attribute "@1@" not recognized

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.25.19 12419
operator procedure must be specified
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.20 12420

at least one of leftarg or rightarg must be specified

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.21 12421

restriction estimator function @1@ must return type @2@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.22 12422

join estimator function @1@ must return type

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.23 12424

must be superuser to create a base type

An error occurred during execution of the application or command.
Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.25.24 12425**

**type attribute "@1@" not recognized**

**Description**

The application or command terminated normally, but a warning was output.

**System Processing**

Processing will continue.

**Action**

Check the message text and confirm that the issue does not affect the expected outcome.

**2.25.25 12426**

**invalid type category "@1@": must be simple ASCII**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.25.26 12427**

**array element type cannot be @1@**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.25.27 12428**

**alignment "@1@" not recognized**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.25.28 12429

**storage "@1@" not recognized**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.25.29 12430

**type input function must be specified**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.25.30 12431

**type output function must be specified**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.25.31 12432

**type modifier output function is useless without a type modifier input function**

**Description**

An error occurred during execution of the application or command.

**System Processing**

Processing will be aborted.

**Action**

Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.25.32 12434

**type input function @1@ must return type @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.33 12436

**type output function @1@ must return type @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.34 12437

**type receive function @1@ must return type @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.35 12438

**type send function @1@ must return type @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.36 12439
"@1@" is not a number

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.37 12440

"@1@" is not a valid base type for a domain

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.38 12441

multiple default expressions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.39 12442

conflicting NULL/NOT NULL constraints

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.40 12443

unique constraints not possible for domains
<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.25.41</td>
<td>primary key constraints not possible for domains</td>
</tr>
<tr>
<td>2.25.42</td>
<td>exclusion constraints not possible for domains</td>

<tr>
<td>2.25.43</td>
<td>foreign key constraints not possible for domains</td>
</tr>
<tr>
<td>2.25.44</td>
<td>specifying constraint deferrability not supported for domains</td>
</tr>
</tbody>
</table>
[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.45 12450

typmod_in function @1@ must return type @2@
[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.46 12451

typmod_out function @1@ must return type @2@
[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.47 12452

type analyze function @1@ must return type @2@
[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.48 12453

column "@1@" of table "@2@" contains null values  
[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.49 12454

Column "@1@" of table "@2@" contains values that violate the new constraint

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.50 12456

cannot use table references in domain check constraint

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.51 12457

@1@ is a table's row type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.52 12458

cannot alter array type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.25.53 12460

could not obtain lock on relation "@1@.@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.54 12462

could not determine which collation to use for view column "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.55 12464

cannot drop columns from view

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.56 12465

cannot change name of view column "@1@" to "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
cannot change data type of view column "@1@" from @2@ to @3@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.58 12467
views must not contain SELECT INTO

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.59 12468
views must not contain data-modifying statements in WITH

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.60 12469
CREATE VIEW specifies more column names than columns

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.61 12470
view "@1@" will be a temporary view
Terminated normally.

Continues processing.

No action required.

2.25.62 12471

**views cannot be unlogged because they do not have storage**

*Description*

An error occurred during execution of the application or command.

*System Processing*

Processing will be aborted.

*Action*

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.63 12472

**rule "@1@" for relation "@2@" does not exist**

*Description*

An error occurred during execution of the application or command.

*System Processing*

Processing will be aborted.

*Action*

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.64 12473

**portal "@1@" does not exist**

*Description*

An error occurred during execution of the application or command.

*System Processing*

Processing will be aborted.

*Action*

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.65 12475

**rule "@1@" for relation "@2@" does not exist, skipping**

*Description*

The application or command terminated normally, but a warning was output.
[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.25.66 12476

WITH query name "@1@" appears in both a rule action and the query being rewritten

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.67 12477

cannot have RETURNING lists in multiple rules

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.68 12478

multiple assignments to same column "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.69 12479

infinite recursion detected in rules for relation "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.25.70 12480**

**DO INSTEAD NOTHING rules are not supported for data-modifying statements in WITH**

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.25.71 12481**

**conditional DO INSTEAD rules are not supported for data-modifying statements in WITH**

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.25.72 12482**

**DO ALSO rules are not supported for data-modifying statements in WITH**

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.25.73 12483**

**multi-statement DO INSTEAD rules are not supported for data-modifying statements in WITH**

**[Description]**

An error occurred during execution of the application or command.

**[System Processing]**

Processing will be aborted.

**[Action]**

Check the message text and confirm that the application is written correctly and the command is being used correctly.
cannot perform INSERT RETURNING on relation "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

cannot perform UPDATE RETURNING on relation "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

cannot perform DELETE RETURNING on relation "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

WITH cannot be used in a query that is rewritten by rules into multiple queries

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
conditional utility statements are not implemented
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.79 12489

WHERE CURRENT OF on a view is not implemented
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.80 12490

rule "@1@" for relation "@2@" already exists
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.81 12491

rule actions on OLD are not implemented
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.82 12492

rule actions on NEW are not implemented
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.83 12493

INSTEAD NOTHING rules on SELECT are not implemented

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.84 12494

multiple actions for rules on SELECT are not implemented

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.85 12495

rules on SELECT must have action INSTEAD SELECT

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.86 12496

rules on SELECT must not contain data-modifying statements in WITH

An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.87 12497

**event qualifications are not implemented for rules on SELECT**

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.88 12498

"@1@$" is already a view

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.25.89 12499

view rule for "@1@$" must be named "@2@$"

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26 Message Numbers Beginning with 12500

2.26.1 12500

could not convert table "@1@$" to a view because it is not empty

[Description]
  An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.2 12501

could not convert table "@1@" to a view because it has triggers
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.3 12502

could not convert table "@1@" to a view because it has indexes
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.4 12503

could not convert table "@1@" to a view because it has child tables
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.5 12504

cannot have multiple RETURNING lists in a rule
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.6 12505

**RETURNING lists are not supported in conditional rules**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.7 12506

**RETURNING lists are not supported in non-INSTEAD rules**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.8 12507

**SELECT rule’s target list has too many entries**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.9 12508

**RETURNING list has too many entries**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.26.10 12509

cannot convert relation containing dropped columns to view

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.11 12510

SELECT rule's target entry @1@ has different column name from column "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.12 12511

SELECT rule's target entry @1@ has different type from column "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.13 12512

RETURNING list's entry @1@ has different type from column "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.14 12513
<table>
<thead>
<tr>
<th>Error Number</th>
<th>Message</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.26.15 12514</td>

<td>RETURNING list's entry @1@ has different size from column &quot;@2@&quot;</td>
</tr>
<tr>
<td>2.26.17 12516</td>
<td>SELECT rule's target list has too few entries</td>
</tr>
<tr>
<td>2.26.18 12517</td>
<td>RETURNING list has too few entries</td>
</tr>
</tbody>
</table>
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.19 12518

Perl hash contains nonexistent column "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.20 12519

number of array dimensions (@1@) exceeds the maximum allowed (@2@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.21 12520

multidimensional arrays must have array expressions with matching dimensions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.22 12521

PL/Perl function must return reference to hash or array

[Description]
An error occurred during execution of the application or command.
[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.23 12522

$_TD->{new} does not exist

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.24 12523

$_TD->{new} is not a hash reference

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.25 12524

PL/Perl functions cannot return type @1@

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.26 12525

PL/Perl functions cannot accept type @1@

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.27 12526
didn't get a CODE reference from compiling function "@1@"
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.26.28 12527
set-valued function called in context that cannot accept a set
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.29 12528
set-returning PL/Perl function must return reference to array or use return_next
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.30 12529
function returning record called in context that cannot accept type record
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.26.31 12530

ignoring modified row in DELETE trigger

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.26.32 12531

result of PL/Perl trigger function must be undef, "SKIP", or "MODIFY"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.33 12533

trigger functions can only be called as triggers

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.34 12534

cannot use return_next in a non-SETOF function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.35 12535
SETOF-composite-returning PL/Perl function must call return_next with reference to hash

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.36 12536

PL/pgSQL functions cannot accept type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.37 12537

could not determine actual return type for polymorphic function "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.38 12538

trigger functions can only be called as triggers

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.39 12539

PL/pgSQL functions cannot return type @1@
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.26.40 12540**

*trigger functions cannot have declared arguments*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.26.41 12541**

*parameter name "@1@" used more than once*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.26.42 12542**

*column reference "@1@" is ambiguous*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.26.43 12543**

*record "@1@" has no field "@2@"*

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.44 12544

variable "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.45 12545

relation "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.46 12546

variable "@1@" has pseudo-type @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.47 12547

relation "@1@" is not a table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.48 12548

Type "@1@" is only a shell

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.49 12549

Unrecognized exception condition "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.50 12550

Could not determine actual argument type for polymorphic function "@1@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.51 12551

CONTINUE cannot be used outside a loop

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.26.52 12552

control reached end of function without RETURN

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.53 12553

set-valued function called in context that cannot accept a set

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.54 12554

control reached end of trigger procedure without RETURN

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.55 12555

trigger procedure cannot return a set

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.56 12556
variable "@1@" declared NOT NULL cannot default to NULL

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.57 12557
case not found

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.58 12558
lower bound of FOR loop cannot be null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.59 12559
upper bound of FOR loop cannot be null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.60 12560
BY value of FOR loop cannot be null
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.26.61 12561**

**BY value of FOR loop must be greater than zero**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.26.62 12562**

**cursor "@1@" already in use**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.26.63 12563**

**arguments given for cursor without arguments**

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.26.64 12564**

**arguments required for cursor**

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.65 12565

FOREACH expression must not be null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.66 12566

FOREACH expression must yield an array, not type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.67 12567

slice dimension (@1@) is out of the valid range 0..@2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.68 12568

FOREACH ... SLICE loop variable must be of an array type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.69 12569

FOREACH loop variable must not be of an array type

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.70 12570

cannot use RETURN NEXT in a non-SETOF function

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.71 12571

wrong result type supplied in RETURN NEXT

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.72 12572

record "@1@" is not assigned yet

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

</table>

too few parameters specified for RAISE

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.78 12578

too many parameters specified for RAISE

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.79 12579

RAISE statement option cannot be null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.80 12580

RAISE option already specified: @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.81 12581

cannot COPY to/from client in PL/pgSQL
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.82 12582

cannot begin/end transactions in PL/pgSQL

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.83 12583

INTO used with a command that cannot return data

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.84 12584

query returned no rows

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.85 12585

query returned more than one row

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.86 12586

query has no destination for result data

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.87 12587

query string argument of EXECUTE is null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.88 12588

EXECUTE of SELECT ... INTO is not implemented

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.89 12589

cursor variable "@1@" is null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.90 12590
cursor "@1@" does not exist

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.91 12591
relative or absolute cursor position is null

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.92 12592
null value cannot be assigned to variable "@1@" declared NOT NULL

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.93 12593
cannot assign non-composite value to a row variable

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.26.94 12594

*cannot assign non-composite value to a record variable*

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.95 12595

*number of array dimensions (@1@) exceeds the maximum allowed (@2@)*

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.96 12596

*subscribed object is not an array*

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.97 12597

*array subscript in assignment must not be null*

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.26.98 12598
query "@1@" did not return data

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27 Message Numbers Beginning with 12600

2.27.1 12600
row or record variable cannot be NOT NULL

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.2 12601
default value for row or record variable is not supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.3 12603
"@1@" is not a scalar variable

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.27.4 12604

**loop variable of loop over rows must be a record or row variable or list of scalar variables**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.5 12605

**cursor FOR loop must have only one target variable**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.6 12606

**cursor FOR loop must use a bound cursor variable**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.7 12607

**integer FOR loop must have only one target variable**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.8 12608
cannot specify REVERSE in query FOR loop

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.9 12609

loop variable of FOREACH must be a known variable or list of variables

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.10 12610

FETCH statement cannot return multiple rows

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.11 12611

cursor variable must be a simple variable

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.12 12612

variable "@1@" must be of type cursor or refcursor
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.13 12613

"@1@" is not a known variable

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.14 12614

missing "@1@" at end of SQL expression

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.15 12615

missing "@1@" at end of SQL statement

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.16 12616

RETURN cannot have a parameter in function returning set

An error occurred during execution of the application or command.
Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.27.17 12617**

**RETURN cannot have a parameter in function with OUT parameters**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.27.18 12618**

**RETURN cannot have a parameter in function returning void**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.27.19 12620**

**RETURN NEXT cannot have a parameter in function with OUT parameters**

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.27.20 12622**

"@1@" is declared CONSTANT

**Description**
An error occurred during execution of the application or command.

**System Processing**
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.21 12623

record or row variable cannot be part of multiple-item INTO list

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.22 12624

too many INTO variables specified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.23 12625

end label "@1@" specified for unlabeled block

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.24 12626

end label "@1@" differs from block's label "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.27.25 12627

cursor "@1@" has no arguments

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.26 12628

cursor "@1@" has arguments

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.27 12629

@1@ at end of input

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.28 12630

unexpected return value from trigger procedure

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.29 12631
PL/Python trigger function returned "MODIFY" in a DELETE trigger -- ignored

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.27.30 12632

TD["new"] deleted, cannot modify row

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.31 12633

TD["new"] is not a dictionary

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.32 12634

TD["new"] dictionary key at ordinal position @1@ is not a string

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.33 12635

key "@1@" found in TD["new"] does not exist as a column in the triggering row
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.34 12636

unsupported set function return mode

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.35 12637

returned object cannot be iterated

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.36 12638

PL/Python function with return type "void" did not return None

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.37 12639

forcibly aborting a subtransaction that has not been exited

The application or command terminated normally, but a warning was output.
[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.27.38 12640

function returning record called in context that cannot accept type record

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.39 12641

trigger functions can only be called as triggers

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.40 12642

PL/Python functions cannot return type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.41 12643

PL/Python functions cannot accept type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.27.42 12645**

`could not convert Python object into cstring: Python string representation appears to contain null bytes`

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.27.43 12646**

`key "@1@" not found in mapping`

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.27.44 12647**

`length of returned sequence did not match number of columns in row`

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.27.45 12648**

`attribute "@1@" does not exist in Python object`

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.46 12649

plpy.prepare: type name at ordinal position @1@ is not a string

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.47 12652

@1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.48 12653

@1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.27.49 12655

trigger functions can only be called as triggers

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.27.50 12656

PL/Tcl functions cannot return type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.28 Message Numbers Beginning with 12700

2.28.1 12704

function "@1@" does not exist

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.28.2 12725

operator @1@ is not a valid ordering operator

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.29 Message Numbers Beginning with 12900

2.29.1 12908

could not remove cache file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.29.2 12909

could not open tablespace directory "@1@": @2@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.30 Message Numbers Beginning with 13000

2.30.1 13092

too few arguments for format()
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.30.2 13094

null values cannot be formatted as an SQL identifier
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.31 Message Numbers Beginning with 13300

2.31.1 13359

online backup was canceled, recovery cannot continue
[Description]
An unexpected error occurred.

- 580 -
[System Processing]
  Processing will be aborted.

[Action]
  Contact Fujitsu technical support.

2.31.2 13362

**online backup mode canceled**

[Description]
Terminated normally.

[System Processing]
  Continues processing.

[Action]
  No action required.

2.31.3 13363

**online backup mode was not canceled**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
  Processing will continue.

[Action]
  Check the message text and confirm that the issue does not affect the expected outcome.

2.32 Message Numbers Beginning with 13400

2.32.1 13449

**cannot convert whole-row table reference**

[Description]
An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.32.2 13452

**cannot alter type "@1@" because column "@2.@3@" uses it**

[Description]
An error occurred during execution of the application or command.
**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.32.3 13453

cannot alter foreign table "@1@" because column "@2@.@3@" uses its row type

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.32.4 13454

cannot alter table "@1@" because column "@2@.@3@" uses its row type

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.32.5 13478

**[System Processing]**

**parameter **"lc_ctype"** must be specified**

**[Description]**
An error occurred during execution of the application or command.

**[System Processing]**
Processing will be aborted.

**[Action]**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

### 2.32.6 13481

**operator family "@1@" does not exist for access method "@2@"**

**[Description]**
The application or command terminated normally, but a warning was output.

**[System Processing]**
Processing will continue.
[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.32.7 13490

directories for tablespace @1@ could not be removed
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.32.8 13497

cannot drop extension "@1@" because it is being modified
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.32.9 13499

@1@ can only be called from an SQL script executed by CREATE EXTENSION
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.33 Message Numbers Beginning with 13500

2.33.1 13508

must be superuser to set schema of @1@
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.33.2 13580
cannot PREPARE while holding both session-level and transaction-level locks on the same object

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.33.3 13589
sending cancel to blocking autovacuum PID @1@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.33.4 13597
not enough elements in RWConflictPool to record a read/write conflict

[Description]
There was insufficient free space in the server's memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.33.5 13598
not enough elements in RWConflictPool to record a potential read/write conflict

[Description]
There was insufficient free space in the server's memory during execution of the application.
[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.34 Message Numbers Beginning with 13700

2.34.1 13761
cannot move extension "]1@\" into schema "]2@\" because the extension contains the schema

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.35 Message Numbers Beginning with 13800

2.35.1 13833
column @1@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.35.2 13860
symbolic link "]1@\" target is too long

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.35.3 13864

**unexpected message type "@1@"**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.35.4 13884

**could not create signal listener pipe for PID @1@: error code @2@**

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.36 Message Numbers Beginning with 13900

2.36.1 13922

**could not close handle to backend parameter variables: error code @1@**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.36.2 13941

**conflicting constraint properties**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.36.3 13943
@1@ constraints cannot be marked DEFERRABLE

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.36.4 13944
@1@ constraints cannot be marked NOT VALID

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.37 Message Numbers Beginning with 14000

2.37.1 14024
column name must be qualified

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.37.2 14028
cannot create relations in temporary schemas of other sessions

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.37.3 14029

cannot create temporary relation in non-temporary schema

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.37.4 14030

only temporary relations may be created in temporary schemas

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.37.5 14042

cannot reassign ownership of objects owned by @1@ because they are required by the database system

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.38 Message Numbers Beginning with 14100

2.38.1 14104

cannot convert Perl array to non-array type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.38.2 14105
cannot convert Perl hash to non-composite type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.39 Message Numbers Beginning with 14200

2.39.1 14211
PL/Tcl functions cannot accept type @1@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.39.2 14218
"@1@" is a table

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.39.3 14282
cannot add schema "@1@" to extension "@2@" because the schema contains the extension

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.39.4 14284

could not identify current directory: @1@
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.39.5 14285

invalid binary "@1@"
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.39.6 14286

could not read binary "@1@"
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.39.7 14287

could not find a "@1@" to execute
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.
2.39.8 14289

could not read symbolic link "@1@"

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.39.9 14290

child process exited with exit code @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.39.10 14291

child process was terminated by exception 0x@1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.39.11 14292

child process was terminated by signal @1@: @2@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.
child process exited with unrecognized status @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.39.13 14295

could not identify current directory: @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.39.14 14296

invalid binary "@1@"

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.39.15 14297

could not read binary "@1@"

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.39.16 14298

could not find a "@1@" to execute
An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.39.17 14299

could not change directory to "@1@": @2@

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.40 Message Numbers Beginning with 14300

2.40.1 14300

could not read symbolic link "@1@": @2@

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.40.2 14301

child process exited with exit code @1@

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.40.3 14302

child process was terminated by exception 0x@1@
An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

**2.40.4 14303**

`child process was terminated by signal @1@`

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

**2.40.5 14304**

`child process was terminated by signal @1@: @2@`

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

**2.40.6 14305**

`child process exited with unrecognized status @1@`

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

**2.40.7 14306**

`could not identify current directory: @1@`

An unexpected error occurred.
[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.8 14307
invalid binary "@1@"

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.9 14308
could not read binary "@1@"

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.10 14309
could not find a "@1@" to execute

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.11 14310
could not change directory to "@1@": @2@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.
[Action]
Contact Fujitsu technical support.

2.40.12 14311

could not read symbolic link "@1@": @2@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.13 14318

could not identify current directory: @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.14 14319

invalid binary "@1@"

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.15 14320

could not read binary "@1@"

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.
2.40.16 14321

could not find a "@1@" to execute
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.17 14322

could not change directory to "@1@": @2@
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.18 14323

could not read symbolic link "@1@": @2@
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.19 14324

child process exited with exit code @1@
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.20 14325
child process was terminated by exception 0x@1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.21 14326

child process was terminated by signal @1@: @2@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.22 14328

auto-open of the keystore has been enabled

[Description]
Enabled automatic opening of the keystore.

[System Processing]
Continues processing.

[Action]
No action required.

2.40.23 14329

could not identify current directory: @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.24 14330

invalid binary "@1@"
An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.40.25 14331

could not read binary "@1@"

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.40.26 14332

could not find a "@1@" to execute

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.40.27 14333

could not change directory to "@1@": @2@

An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

2.40.28 14334

could not read symbolic link "@1@": @2@

An unexpected error occurred.
2.40.29 14335

child process exited with exit code @1@

[Description]
An unexpected error occurred.

[Action]
Contact Fujitsu technical support.

2.40.30 14336

child process was terminated by exception 0x@1@

[Description]
An unexpected error occurred.

[Action]
Contact Fujitsu technical support.

2.40.31 14337

child process was terminated by signal @1@: @2@

[Description]
An unexpected error occurred.

[Action]
Contact Fujitsu technical support.

2.40.32 14339

@1@: no database directory specified and environment variable PGDATA unset

[Description]
An unexpected error occurred.

[Action]
Processing will be aborted.
[Action]
Contact Fujitsu technical support.

**2.40.33 14340**

could not identify current directory: @1@

Processing will be aborted.

[Action]
Contact Fujitsu technical support.

**2.40.35 14342**

could not read binary "@1@"

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

**2.40.36 14343**

could not find a "@1@" to execute

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.
2.40.37 14344

could not change directory to "@1@": @2@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.38 14345

could not read symbolic link  "@1@"

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.39 14346

child process exited with exit code @1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.40 14347

child process was terminated by exception 0x@1@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.41 14348
child process was terminated by signal @1@: @2@

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.40.42 14351

could not access directory for core file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.40.43 14352

path specified by configuration parameter "@1@" is invalid: "@2@"

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.40.44 14353

WAL archiving is not active

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.40.45 14354

could not set permissions on path specified by configuration parameter "@1@": "@2@": @3@
An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.40.46 14366

a failure has occurred while multiplexing transaction log files

An error occurred during I/O processing in the database server.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.40.47 14367

multiplexing of transaction log files has been stopped

Terminated normally.

Continues processing.

No action required.

2.40.48 14368

must be superuser to control WAL multiplexing

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.40.49 14369

WAL multiplexing is not configured

An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.40.50 14370**

**WAL multiplexing is already paused**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.40.51 14371**

**WAL multiplexing is not paused**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.40.52 14372**

**could not fork XLog multiplexer process: @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.40.53 14373**

**could not set junction for "@1@": @2@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.40.54 14374

could not set junction for "@1@": @2@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.40.55 14375

could not remove file or directory "@1@": @2@
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.40.56 14376

could not remove file "@1@": @2@
[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.40.57 14377

could not set junction for "@1@": @2@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.40.58 14378

could not get junction for "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.40.59 14379

could not open directory "@1@": @2@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.40.60 14380

could not read directory "@1@": @2@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.40.61 14381

could not stat file or directory "@1@": @2@

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.40.62 14384
could not determine encoding for locale "@1@": codeset is "@2@"
[Description]
   The application or command terminated normally, but a warning was output.
[System Processing]
   Processing will continue.
[Action]
   Check the message text and confirm that the issue does not affect the expected outcome.

2.40.63 14385

could not remove file or directory "@1@": @2@
[Description]
   The application or command terminated normally, but a warning was output.
[System Processing]
   Processing will continue.
[Action]
   Check the message text and confirm that the issue does not affect the expected outcome.

2.40.64 14388

@1@ at or near "@2@"
[Description]
   An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.
[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.40.65 14390

query "@1@" returned more than one row
[Description]
   An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.
[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.40.66 14391

query "@1@" is not a SELECT
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.40.67 14392

block label must be placed before DECLARE, not after

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.40.68 14393

collations are not supported by type @1@

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.40.69 14394

row or record variable cannot be CONSTANT

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.40.70 14395

cannot use serializable mode in a hot standby

An error occurred during execution of the application or command.
2.41 Message Numbers Beginning with 14400

2.41.1 14419

could not write lock file "@1@": @2@

[Description]
An error occurred during I/O processing in the database server.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.41.2 14421

Expected 1 tuple with 2 fields, got @1@ tuples with @2@ fields.

[Description]
An unexpected error occurred.

[Action]
Contact Fujitsu technical support.

2.41.3 14422

The primary's identifier is @1@, the standby's identifier is @2@.

[Description]
An error occurred during I/O processing in the database server.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.41.4 14423

The transaction has already committed locally, but might not have been replicated to the standby.
2.41.5 14424

**You can choose the collation by applying the COLLATE clause to one or both expressions.**

**Description**
Supplementary information was output.

**System Processing**
None.

**Action**
Refer to this message together with the message that was output immediately beforehand.

2.41.6 14425

**Query has too few columns.**

**Description**
Supplementary information was output.

**System Processing**
None.

**Action**
Refer to this message together with the message that was output immediately beforehand.

2.41.7 14426

**Cannot cast type @1@ to @2@ in column @3@.**

**Description**
Supplementary information was output.

**System Processing**
None.

**Action**
Refer to this message together with the message that was output immediately beforehand.

2.41.8 14427

**Query has too many columns.**

**Description**
Supplementary information was output.
2.41.9 14430

No aggregate function matches the given name and argument types. Perhaps you misplaced ORDER BY; ORDER BY must appear after all regular arguments of the aggregate.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.10 14431

No function matches the given name and argument types. You might need to add explicit type casts.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.11 14432

There is a WITH item named "@1@", but it cannot be referenced from this part of the query.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.12 14433

Use WITH RECURSIVE, or re-order the WITH items to remove forward references.

[Description]
Supplementary information was output.
[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.41.13 14434

**Perhaps you meant to reference the table alias "@1@".**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.41.14 14435

**There is an entry for table "@1@", but it cannot be referenced from this part of the query.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.41.15 14436

**String constants with Unicode escapes cannot be used when standard_conforming_strings is off.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.41.16 14437

**Unicode escapes must be \uXXXX or \UXXXXXXXX.**

[Description]
Supplementary information was output.
[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.17 14438
Use " " to write quotes in strings. \" is insecure in client-only encodings.
[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.18 14439
Use " " to write quotes in strings, or use the escape string syntax (E’...’).
[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.19 14440
Use the escape string syntax for backslashes, e.g., E\\\\.
[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.20 14441
Use the escape string syntax for escapes, e.g., E\r\n\n'.
[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.
[Action]
   Refer to this message together with the message that was output immediately beforehand.

2.41.21 14442

Cast the output of the non-recursive term to the correct type.

[Description]
   Supplementary information was output.

[System Processing]
   None.

[Action]
   Refer to this message together with the message that was output immediately beforehand.

2.41.22 14443

Use the COLLATE clause to set the collation of the non-recursive term.

[Description]
   Supplementary information was output.

[System Processing]
   None.

[Action]
   Refer to this message together with the message that was output immediately beforehand.

2.41.23 14444

Explicitly cast to the desired type, for example ARRAY[]::integer[].

[Description]
   Supplementary information was output.

[System Processing]
   None.

[Action]
   Refer to this message together with the message that was output immediately beforehand.

2.41.24 14445

Row comparison operators must be associated with btree operator families.

[Description]
   Supplementary information was output.

[System Processing]
   None.

[Action]
   Refer to this message together with the message that was output immediately beforehand.
2.41.25 14446

There are multiple equally-plausible candidates.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.26 14447

You will need to rewrite or cast the expression.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.27 14448

Use an explicit ordering operator or modify the query.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.28 14449

Could not choose a best candidate operator. You might need to add explicit type casts.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.29 14450
No operator matches the given name and argument type(s). You might need to add explicit type casts.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.30 14451

Aggregates with DISTINCT must be able to sort their inputs.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.31 14452

Constraint "$1$" contains a whole-row reference to table "$2$".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.32 14453

Index "$1$" contains a whole-row table reference.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.33 14454

Cannot create a primary key or unique constraint using such an index.
2.41.34 14455

Cannot create a non-deferrable constraint using a deferrable index.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.35 14456

Ordering operators must be "<" or ">" members of btree operator families.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.36 14457

Update your data type.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.37 14458

Use NONE to denote the missing argument of a unary operator.

[Description]
Supplementary information was output.
2.41.38 14459

Use separate LIMIT and OFFSET clauses.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.39 14460

For example, FROM (VALUES ...) [AS] foo.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.40 14461

For example, FROM (SELECT ...) [AS] foo.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.41 14463

The insertion source is a row expression containing the same number of columns expected by the INSERT. Did you accidentally use extra parentheses?

[Description]
Supplementary information was output.
2.41.42 14464

**Only result column names can be used, not expressions or functions.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.43 14465

**Add the expression/function to every SELECT, or move the UNION into a FROM clause.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.44 14466

**Scrollable cursors must be READ ONLY.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.45 14467

**Holdable cursors must be READ ONLY.**

[Description]
Supplementary information was output.

[System Processing]
None.
[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.46 14468

Insensitive cursors must be READ ONLY.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.47 14469

Valid options in this context are: @1@

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.48 14470

Specify OWNED BY table.column or OWNED BY NONE.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.49 14471

Extension names must not be empty.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
**2.41.50 14472**

*Extension names must not contain "--".*

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.41.51 14473**

*Extension names must not begin or end with ".-".*

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.41.52 14474**

*Extension names must not contain directory separator characters.*

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.41.53 14475**

*Version names must not be empty.*

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.41.54 14476**
Version names must not contain "--".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.41.55 14477**

Version names must not begin or end with "-".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.41.56 14478**

Version names must not contain directory separator characters.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.41.57 14479**

Must be superuser to create this extension.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.41.58 14480**

Must be superuser to update this extension.
Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.41.59 14481

@1@ is not in the extension's schema "@2@"

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.41.60 14482

Consider using tablespaces instead.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.41.61 14483

Use the same encoding as in the template database, or use template0 as template.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.41.62 14484

Use the same collation as in the template database, or use template0 as template.

Supplementary information was output.
2.41.63 14485

**Use the same LC_CTYPE as in the template database, or use template0 as template.**

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.64 14486

**There is a conflict because database "@1@" already has some tables in this tablespace.**

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.65 14487

**The chosen LC_CTYPE setting requires encoding "@1@".**

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.66 14488

**The chosen LC_COLLATE setting requires encoding "@1@".**

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.
You must move them back to the database’s default tablespace before using this command.

There are @1@ other session(s) and @2@ prepared transaction(s) using the database.

@1@ dead row versions cannot be removed yet.@2@.

The prefix "pg_" is reserved for system schemas.
2.41.71 14496

The server process with PID @1@ is among those with the oldest transactions.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.72 14497

The NOTIFY queue cannot be emptied until that process ends its current transaction.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.41.73 14498

Use the COLLATE clause to set the collation explicitly.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42 Message Numbers Beginning with 14500

2.42.1 14500

Anyone can COPY to stdout or from stdin. psql’s \copy command also works for anyone.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.42.2 14501

**Try the COPY (SELECT ...) TO variant.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.3 14502

**COPY @1@, line @2@, column @3@**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.4 14503

**COPY @1@, line @2@**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.5 14504

**COPY @1@, line @2@, column @3@: "@4@"**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.6 14505
COPY @1@, line @2@, column @3@: null input

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.7 14506

COPY @1@, line @2@: "@3@"

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.8 14507

Use "\r" to represent carriage return.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.9 14508

Use quoted CSV field to represent carriage return.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.10 14509

Use "\n" to represent newline.
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.11 14510

Use quoted CSV field to represent newline.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.12 14512

@1@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.13 14513

@1@ index row versions were removed. @2@ index pages have been deleted, @3@ are currently reusable. @4@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.14 14514

Operator class "@1@" already is the default.
Must be superuser to change owner of a foreign-data wrapper.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

The owner of a foreign-data wrapper must be a superuser.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

Must be superuser to create a foreign-data wrapper.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

Must be superuser to alter a foreign-data wrapper.

Supplementary information was output.
2.42.19 14520

Expected @1@ parameters but got @2@.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.20 14521

Close open transactions soon to avoid wraparound problems.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.21 14522

You might have already suffered transaction-wraparound data loss.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.22 14523

Must be superuser to create a tablespace.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.42.23 14524

The prefix "pg_" is reserved for system tablespaces.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.24 14525

Create this directory for the tablespace before restarting the server.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.25 14526

You can remove the directories manually if necessary.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.26 14528

You can alter type @1@, which will alter the array type as well.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.42.27 14529

**Tables cannot have INSTEAD OF triggers.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.28 14530

**Views cannot have row-level BEFORE or AFTER triggers.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.29 14531

**Views cannot have TRUNCATE triggers.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.30 14532

"@1@" versus "@2@"

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.31 14533
To resolve the conflict, specify a default explicitly.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.32 14534

Use ALTER TYPE instead.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.33 14535

Use ALTER ... CASCADE to alter the typed tables too.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.34 14536

Key columns "@1@" and "@2@" are of incompatible types: @3@ and @4@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.35 14537

@1@ depends on @2@
2.42.36 14538

Change the ownership of the index's table, instead.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.37 14539

Sequence "@1@" is linked to table "@2@".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.38 14540

"@1@" is already a child of "@2@".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.39 14541

Only commutative operators can be used in exclusion constraints.

[Description]
Supplementary information was output.
2.42.40 14542

The exclusion operator must be related to the index operator class for the constraint.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.41 14543

You must specify an operator class for the index or define a default operator class for the data type.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.42 14544

Creating a shell type definition.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.43 14545

Use CREATE LANGUAGE to load the language into the database.

[Description]
Supplementary information was output.
Use DROP AGGREGATE to drop aggregate functions.

2.42.44 14546

Key @1@ is duplicated.

2.42.45 14549

Perhaps you need a different "datestyle" setting.

2.42.46 14551

The operating system could not find any locale data for the locale name "@1@".

2.42.52 14557

**Unexpected end of input.**

**[Description]**
Supplementary information was output.

**[System Processing]**
None.

**[Action]**
Refer to this message together with the message that was output immediately beforehand.

2.42.53 14558

**Too many columns.**

**[Description]**
Supplementary information was output.

**[System Processing]**
None.

**[Action]**
Refer to this message together with the message that was output immediately beforehand.

2.42.54 14559

**Junk after right parenthesis.**

**[Description]**
Supplementary information was output.

**[System Processing]**
None.

**[Action]**
Refer to this message together with the message that was output immediately beforehand.

2.42.55 14560

**Intervals are not tied to specific calendar dates.**

**[Description]**
Supplementary information was output.

**[System Processing]**
None.

**[Action]**
Refer to this message together with the message that was output immediately beforehand.

2.42.56 14561
"EEEE" may only be used together with digit and decimal point patterns.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.57 14562

Do not mix Gregorian and ISO week date conventions in a formatting template.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.58 14563

This value contradicts a previous setting for the same field type.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.59 14564

Field requires @1@ characters, but only @2@ remain.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.60 14565

If your source string is not fixed-width, try using the "FM" modifier.
Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.42.61 14566

Field requires @1@ characters, but only @2@ could be parsed.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.42.62 14567

Value must be an integer.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.42.63 14568

Value must be in the range @1@ to @2@.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.42.64 14569

The given value did not match any of the allowed values for this field.

Supplementary information was output.
2.42.65 14570

*Use the 24-hour clock, or give an hour between 1 and 12.*

**Description**
Supplementary information was output.

**System Processing**
None.

**Action**
Refer to this message together with the message that was output immediately beforehand.

2.42.66 14571

*Escape string must be empty or one character.*

**Description**
Supplementary information was output.

**System Processing**
None.

**Action**
Refer to this message together with the message that was output immediately beforehand.

2.42.67 14572

*Value has bits set to right of mask.*

**Description**
Supplementary information was output.

**System Processing**
None.

**Action**
Refer to this message together with the message that was output immediately beforehand.

2.42.68 14573

*Target must be "archiver" or "bgwriter".*

**Description**
Supplementary information was output.

**System Processing**
None.
Identifier must be less than @1@ characters.

This functionality requires the server to be built with libxml support.

You need to rebuild PostgreSQL using --with-libxml.

XML processing instruction target name cannot be "@1@".
2.42.73 14578

**XML processing instruction cannot contain "?>".**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.74 14579

**libxml2 has incompatible char type: sizeof(char)=@1@, sizeof(xmlChar)=@2@.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.75 14580

**XML does not support infinite date values.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.76 14581

**XML does not support infinite timestamp values.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.77 14582
The array must be two-dimensional with length of the second axis equal to 2.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.78 14583

ACL key word must be "group" or "user".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.79 14584

A name must follow the "group" or "user" key word.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.80 14585

Use CASCADE to revoke them too.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.81 14586

Dimension array must be one dimensional.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.42.82 14587

**Lower bound of dimension array must be one.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.42.83 14588

**Low bound array has different size than dimensions array.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.42.84 14589

**MATCH FULL does not allow mixing of null and nonnull key values.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.42.85 14590

**Remove this referential integrity trigger and its mates, then do ALTER TABLE ADD CONSTRAINT.**
[Description]  
Supplementary information was output.

[System Processing]  
None.

[Action]  
Refer to this message together with the message that was output immediately beforehand.

2.42.86 14591

This is most likely due to a rule having rewritten the query.

[Description]  
Supplementary information was output.

[System Processing]  
None.

[Action]  
Refer to this message together with the message that was output immediately beforehand.

2.42.87 14593

Key (@1@)=(@2@) is not present in table "@3@".

[Description]  
Supplementary information was output.

[System Processing]  
None.

[Action]  
Refer to this message together with the message that was output immediately beforehand.

2.42.88 14594

Key (@1@)=(@2@) is still referenced from table "@3@".

[Description]  
Supplementary information was output.

[System Processing]  
None.

[Action]  
Refer to this message together with the message that was output immediately beforehand.

2.42.89 14595

A field with precision @1@, scale @2@ must round to an absolute value less than @3@@4@.

[Description]  
Supplementary information was output.
[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.90 14596

Arrays with element types @1@ and @2@ are not compatible for concatenation.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.91 14597

Arrays of @1@ and @2@ dimensions are not compatible for concatenation.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.92 14598

Arrays with differing element dimensions are not compatible for concatenation.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.42.93 14599

Arrays with differing dimensions are not compatible for concatenation.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.
### 2.43 Message Numbers Beginning with 14600

#### 2.43.1 14600

**Is another postgres (PID @1@) running in data directory "@2"?**

**[Description]**

Supplementary information was output.

**[System Processing]**

None.

**[Action]**

Refer to this message together with the message that was output immediately beforehand.

#### 2.43.2 14601

**Is another postmaster (PID @1@) running in data directory "@2"?**

**[Description]**

Supplementary information was output.

**[System Processing]**

None.

**[Action]**

Refer to this message together with the message that was output immediately beforehand.

#### 2.43.3 14602

**Is another postgres (PID @1@) using socket file "@2"?**

**[Description]**

Supplementary information was output.

**[System Processing]**

None.

**[Action]**

Refer to this message together with the message that was output immediately beforehand.

#### 2.43.4 14603

**Is another postmaster (PID @1@) using socket file "@2"?**

**[Description]**

Supplementary information was output.

**[System Processing]**

None.
2.43.5 14605

The file seems accidentally left over, but it could not be removed. Please remove the file by hand and try again.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.6 14606

File "@1@" is missing.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.7 14607

File "@1@" does not contain valid data.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.8 14608

You might need to initdb.

[Description]
Supplementary information was output.

[System Processing]
None.
Refer to this message together with the message that was output immediately beforehand.

2.43.9 14609

The data directory was initialized by PostgreSQL version @1@, which is not compatible with this version @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.10 14610

Specify an absolute path.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.11 14611

Set up WAL archiving when you configure "@1@" parameter.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.12 14612

Database OID @1@ now seems to belong to "@2@".

[Description]
Supplementary information was output.

[System Processing]
None.
2.43.13 14613

**User does not have CONNECT privilege.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.14 14614

**The database was initialized with LC_COLLATE "@1@", which is not recognized by setlocale().**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.15 14615

**Recreate the database with another locale or install the missing locale.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.16 14616

**The database was initialized with LC_CTYPE "@1@", which is not recognized by setlocale().**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.43.17 14617

You should immediately run CREATE USER "@1@" SUPERUSER;.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.18 14618

It seems to have just been dropped or renamed.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.19 14619

The database subdirectory "@1@" is missing.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.20 14620

String of @1@ bytes is too long for encoding conversion.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.21 14621
Continuing anyway, but there's something wrong.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.22 14622

Failed while creating memory context "@1@".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.23 14623

Failed on request of size @1@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.24 14624

Extension libraries are required to use the PG_MODULE_MAGIC macro.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.25 14625

Server is version @1@, library is version @2@.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.26 14627

You need an unconditional ON INSERT DO INSTEAD rule with a RETURNING clause.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.27 14628

You need an unconditional ON UPDATE DO INSTEAD rule with a RETURNING clause.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.28 14629

You need an unconditional ON DELETE DO INSTEAD rule with a RETURNING clause.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.29 14630

Use views or triggers instead.

[Description]
Supplementary information was output.
[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.30 14631

Use triggers instead.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.31 14632

Use views instead.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.32 14633

In particular, the table cannot be involved in any foreign key relationships.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.33 14634

Failed system call was shmget(key=@1@, size=@2@, 0@3@).

[Description]
Supplementary information was output.

[System Processing]
None.
Refer to this message together with the message that was output immediately beforehand.

### 2.43.34 14638

**Failed system call was CreateFileMapping(size=@1@, name=@2@).**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.43.35 14639

**Check if there are any old server processes still running, and terminate them.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.43.36 14640

**Failed system call was DuplicateHandle.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

### 2.43.37 14641

**Failed system call was MapViewOfFileEx.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.43.38 14642

Failed system call was semget(@1@, @2@, 0@3@).

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.39 14643

This error does *not* mean that you have run out of disk space. It occurs when either the system limit for the maximum number of semaphore sets (SEMMNI), or the system wide maximum number of semaphores (SEMMNS), would be exceeded. You need to raise the respective kernel parameter. Alternatively, reduce PostgreSQL's consumption of semaphores by reducing its max_connections parameter. The PostgreSQL documentation contains more information about configuring your system for PostgreSQL.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.40 14644

You possibly need to raise your kernel’s SEMVMX value to be at least @1@. Look into the PostgreSQL documentation for details.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.41 14645

Some of the datatypes only support hashing, while others only support sorting.

[Description]
Supplementary information was output.

[System Processing]
None.
**Window partitioning columns must be of sortable datatypes.**

**Description**

Supplementary information was output.

**System Processing**

None.

**Action**

Refer to this message together with the message that was output immediately beforehand.

---

**Window ordering columns must be of sortable datatypes.**

**Description**

Supplementary information was output.

**System Processing**

None.

**Action**

Refer to this message together with the message that was output immediately beforehand.

---

**SQL function ”@1@” during startup**

**Description**

Supplementary information was output.

**System Processing**

None.

**Action**

Refer to this message together with the message that was output immediately beforehand.

---

**All column datatypes must be hashable.**

**Description**

Supplementary information was output.

**System Processing**

None.

**Action**

Refer to this message together with the message that was output immediately beforehand.
2.43.46 14650

See server log for query details.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.47 14651

Client IP address resolved to "@1@", forward lookup matches.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.48 14652

Client IP address resolved to "@1@", forward lookup not checked.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.49 14653

Client IP address resolved to "@1@", forward lookup does not match.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
LDAP over SSL is not supported on this platform.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.51 14655

Is another postmaster already running on port @1@? If not, remove socket file “@2@” and retry.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.52 14656

Is another postmaster already running on port @1@? If not, wait a few seconds and retry.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.53 14657

Anyone can use the client-side lo_import() provided by libpq.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.54 14658

Anyone can use the client-side lo_export() provided by libpq.
2.43.55 14659

File must have permissions u=rw (0600) or less if owned by the database user, or permissions u=rw,g=r (0640) or less if owned by root.

2.43.56 14662

line @1@ of configuration file "@2@"

2.43.57 14663

Set ssl = on in postgresql.conf.

2.43.58 14664

Compile with --with-openssl to use SSL connections.
2.43.59 14666

Cannot enlarge string buffer containing @1@ bytes by @2@ more bytes.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.60 14667

Please REINDEX it.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.61 14668

Values larger than 1/3 of a buffer page cannot be indexed. Consider a function index of an MD5 hash of the value, or use full text indexing.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.62 14669

Key @1@ already exists.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.
Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.43.63 14670

This may be because of a non-immutable index expression.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.43.64 14671

To fix this, do REINDEX INDEX "@1@".

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.43.65 14672

This is caused by an incomplete page split at crash recovery before upgrading to PostgreSQL 9.1.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

2.43.66 14673

The index is not optimal. To optimize it, contact a developer, or try to use the column as the second one in the CREATE INDEX command.
Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

**2.43.67 14674**

Could not open file "@1@": @2@.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

**2.43.68 14675**

Could not seek in file "@1@" to offset @2@: @3@.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

**2.43.69 14676**

Could not read from file "@1@" at offset @2@: @3@.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

**2.43.70 14677**

Could not write to file "@1@" at offset @2@: @3@.

Supplementary information was output.
Could not fsync file "@1@": @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

Could not close file "@1@": @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

Set max_prepared_transactions to a nonzero value.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

Increase max_prepared_transactions (currently @1@).
[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.75 14682

Must be superuser or the user that prepared the transaction.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.76 14683

Connect to the database where the transaction was prepared to finish it.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.77 14687

Expected a numeric timeline ID.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.78 14688

Timeline IDs must be in increasing sequence.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.43.79 14689

**Timeline IDs must be less than child timeline’s ID.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.80 14690

**The database cluster was initialized with PG_CONTROL_VERSION @1@ (0x@2@), but the server was compiled with PG_CONTROL_VERSION @3@ (0x@4@).**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.81 14691

**This could be a problem of mismatched byte ordering. It looks like you need to initdb.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.82 14692

**The database cluster was initialized with PG_CONTROL_VERSION @1@, but the server was compiled with PG_CONTROL_VERSION @2@.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.43.83 14693

**It looks like you need to initdb.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.84 14694

**The database cluster was initialized with CATALOG_VERSION_NO @1@, but the server was compiled with CATALOG_VERSION_NO @2@.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.85 14695

**The database cluster was initialized with MAXALIGN @1@, but the server was compiled with MAXALIGN @2@.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.86 14696

**The database cluster appears to use a different floating-point number format than the server executable.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.43.87 14697

The database cluster was initialized with BLCKSZ @1@, but the server was compiled with BLCKSZ @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.88 14698

It looks like you need to recompile or initdb.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.43.89 14699

The database cluster was initialized with RELSEG_SIZE @1@, but the server was compiled with RELSEG_SIZE @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44 Message Numbers Beginning with 14700

2.44.1 14700

The database cluster was initialized with XLOG_BLCKSZ @1@, but the server was compiled with XLOG_BLCKSZ @2@.

[Description]
Supplementary information was output.

[System Processing]
None.
Refer to this message together with the message that was output immediately beforehand.

**2.44.2 14701**

The database cluster was initialized with `XLOG_SEG_SIZE @1@`, but the server was compiled with `XLOG_SEG_SIZE @2@`.

[Description]

Supplementary information was output.

[System Processing]

None.

[Action]

Refer to this message together with the message that was output immediately beforehand.

**2.44.3 14702**

The database cluster was initialized with `NAMEDATALEN @1@`, but the server was compiled with `NAMEDATALEN @2@`.

[Description]

Supplementary information was output.

[System Processing]

None.

[Action]

Refer to this message together with the message that was output immediately beforehand.

**2.44.4 14703**

The database cluster was initialized with `INDEX_MAX_KEYS @1@`, but the server was compiled with `INDEX_MAX_KEYS @2@`.

[Description]

Supplementary information was output.

[System Processing]

None.

[Action]

Refer to this message together with the message that was output immediately beforehand.

**2.44.5 14704**

The database cluster was initialized with `TOAST_MAX_CHUNK_SIZE @1@`, but the server was compiled with `TOAST_MAX_CHUNK_SIZE @2@`.

[Description]

Supplementary information was output.
2.44.6 14707
The database cluster was initialized without USE_FLOAT4_BYVAL but the server was compiled with USE_FLOAT4_BYVAL.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.7 14709
The database cluster was initialized without USE_FLOAT8_BYVAL but the server was compiled with USE_FLOAT8_BYVAL.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.8 14710
The database cluster was initialized with USE_FLOAT8_BYVAL but the server was compiled without USE_FLOAT8_BYVAL.

[Description]
Supplementary information was output.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.9 14711
The database server will regularly poll the pg_wal subdirectory to check for files placed there.

[Description]
Supplementary information was output.
2.44.10 14712

**Execute pg_wal_replay_resume() to continue.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.11 14713

**Recovery control functions can only be executed during recovery.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.12 14714

**This happens if you temporarily set wal_level=minimal without taking a new base backup.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.13 14715

**Either set wal_level to "replica" on the master, or turn off hot_standby here.**

[Description]
Supplementary information was output.

[System Processing]
None.
2.44.14 14716

This probably means that some data is corrupted and you will have to use the last backup for recovery.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.15 14717

If this has occurred more than once some data might be corrupted and you might need to choose an earlier recovery target.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.16 14718

If you are restoring from a backup, touch "@1@/recovery.signal" and add required recovery options. If you are not restoring from a backup, try removing the file "@2@/backup_label". Be careful: removing "@3@/backup_label" will result in a corrupt cluster if restoring from a backup.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.17 14719

Online backup started with pg_start_backup() must be ended with pg_stop_backup(), and all WAL up to that point must be available at recovery.

[Description]
Supplementary information was output.
WAL control functions cannot be executed during recovery.

Supplementary information was output.

Run pg_stop_backup() and try again.

Supplementary information was output.

If you're sure there is no backup in progress, remove file "@1@" and try again.

Supplementary information was output.
2.44.22 14724

Check that your archive_command is executing properly. pg_stop_backup can be canceled safely, but the database backup will not be usable without all the WAL segments.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.23 14727

WAL redo at @1@/@2@ for @3@

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.24 14731

To avoid a database shutdown, execute a database-wide VACUUM in that database. You might also need to commit or roll back old prepared transactions.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.25 14732

Values larger than a buffer page cannot be indexed.

[Description]
Supplementary information was output.

[System Processing]
None.
Refer to this message together with the message that was output immediately beforehand.

**2.44.26 14733**

*Valid values are between "@1@" and "@2@".*

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.44.27 14734**

*Valid values are between "@1@" and "@2@".*

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.44.28 14735**

*Returned type @1@ does not match expected type @2@ in column @3@.*

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.44.29 14736**

*Number of returned columns (@1@) does not match expected column count (@2@).*

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.44.30 14737

Attribute "@1@" of type @2@ does not match corresponding attribute of type @3@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.31 14738

Attribute "@1@" of type @2@ does not exist in type @3@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.32 14739

To enable inserting into the view, provide an INSTEAD OF INSERT trigger or an unconditional ON INSERT DO INSTEAD rule.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.33 14740

To enable updating the view, provide an INSTEAD OF UPDATE trigger or an unconditional ON UPDATE DO INSTEAD rule.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
To enable deleting from the view, provide an INSTEAD OF DELETE trigger or an unconditional ON DELETE DO INSTEAD rule.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

SQL function "@1@" statement @2@

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

SQL function "@1@" during inlining

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
**2.44.38 14745**

*Function’s final statement must be SELECT or INSERT/UPDATE/DELETE returning.*

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.44.39 14746**

*Final statement must return exactly one column.*

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.44.40 14747**

*Actual return type is @1@.*

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.44.41 14748**

*Final statement returns too many columns.*

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.44.42 14749**
**Final statement returns @1@ instead of @2@ at column @3@.**

**[Description]**
Supplementary information was output.

**[System Processing]**
None.

**[Action]**
Refer to this message together with the message that was output immediately beforehand.

---

**2.44.43 14750**

**Final statement returns too few columns.**

**[Description]**
Supplementary information was output.

**[System Processing]**
None.

**[Action]**
Refer to this message together with the message that was output immediately beforehand.

---

**2.44.44 14751**

**Input has too many columns.**

**[Description]**
Supplementary information was output.

**[System Processing]**
None.

**[Action]**
Refer to this message together with the message that was output immediately beforehand.

---

**2.44.45 14752**

**Table has type @1@ at ordinal position @2@, but query expects @3@.**

**[Description]**
Supplementary information was output.

**[System Processing]**
None.

**[Action]**
Refer to this message together with the message that was output immediately beforehand.

---

**2.44.46 14753**

**Query provides a value for a dropped column at ordinal position @1@.**

---
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.47 14754

Input has too few columns.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.48 14755

Check for missing "SPI_finish" calls.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.49 14756

SQL statement "@1@"

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.50 14757

Table has type @1@, but query expects @2@.

[Description]
Supplementary information was output.
2.44.51 14758

**Table row contains @1@ attribute, but query expects @2@.**

**Description**
Supplementary information was output.

**System Processing**
None.

**Action**
Refer to this message together with the message that was output immediately beforehand.

2.44.52 14759

**Physical storage mismatch on dropped attribute at ordinal position @1@.**

**Description**
Supplementary information was output.

**System Processing**
None.

**Action**
Refer to this message together with the message that was output immediately beforehand.

2.44.53 14760

**Returned row contains @1@ attribute, but query expects @2@.**

**Description**
Supplementary information was output.

**System Processing**
None.

**Action**
Refer to this message together with the message that was output immediately beforehand.

2.44.54 14761

**Returned type @1@ at ordinal position @2@, but query expects @3@.**

**Description**
Supplementary information was output.

**System Processing**
None.
[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.55 14762

Array with element type @1@ cannot be included in ARRAY construct with element type @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.56 14763

Key @1@ conflicts with key @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.57 14764

Key @1@ conflicts with existing key @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.58 14765

This has been seen to occur with buggy kernels; consider updating your system.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.44.59 14766

**Multiple failures --- write error might be permanent.**

**[Description]**
Supplementary information was output.

**[System Processing]**
None.

**[Action]**
Refer to this message together with the message that was output immediately beforehand.

2.44.60 14767

**writing block @1@ of relation @2@**

**[Description]**
Supplementary information was output.

**[System Processing]**
None.

**[Action]**
Refer to this message together with the message that was output immediately beforehand.

2.44.61 14768

**Only RowExclusiveLock or less can be acquired on database objects during recovery.**

**[Description]**
Supplementary information was output.

**[System Processing]**
None.

**[Action]**
Refer to this message together with the message that was output immediately beforehand.

2.44.62 14769

**You might need to increase max_locks_per_transaction.**

**[Description]**
Supplementary information was output.

**[System Processing]**
None.

**[Action]**
Refer to this message together with the message that was output immediately beforehand.

2.44.63 14771
You might need to run fewer transactions at a time or increase max_connections.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.64 14772

There might be an idle transaction or a forgotten prepared transaction causing this.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.65 14773

"default_transaction_isolation" is set to "serializable".
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.66 14774

You can use "SET default_transaction_isolation = 'repeatable read'" to change the default.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.67 14775

You might need to increase max_pred_locks_per_transaction.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.68 14776

The transaction might succeed if retried.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.69 14778

User transaction caused buffer deadlock with recovery.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.70 14779

System allows @1@, we need at least @2@.
[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.71 14782

Check free disk space.
[Description]
Supplementary information was output.
Consider increasing the configuration parameter "max_wal_size".

Consult recent messages in the server log for details.

This may indicate an incomplete PostgreSQL installation, or that the file "@1@" has been moved away from its proper location.

The server must be started by the user that owns the data directory.
Permissions should be u=rwx (0700).

See C include file "ntstatus.h" for a description of the hexadecimal value.

automatic vacuum of table "@1@.@2@.@3@"

automatic analyze of table "@1@.@2@.@3@"
Enable the "track_counts" option.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

The failed archive command was: @1@

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

Some of the transaction logs were lost that are necessary to recover the database completely.

Supplementary information was output.

None.

Refer to this message together with the message that was output immediately beforehand.

Fix the problem by referring to the messages prior to this one. Then take a full backup of the database.

Supplementary information was output.

None.
Refer to this message together with the message that was output immediately beforehand.

2.44.84 14795

line @1@ of configuration file "@2@": "@3@

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.85 14796

Words longer than @1@ characters are ignored.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.86 14797

Use "?" to represent a stop word within a sample phrase.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.44.87 14798

Declare it with SCROLL option to enable backward scan.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]

**abort reason: recovery conflict**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.3 14802

**User was holding shared buffer pin for too long.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.
2.45.4 14803

**User was holding a relation lock for too long.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.5 14804

**User was or might have been using tablespace that must be dropped.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.6 14805

**User query might have needed to see row versions that must be removed.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.7 14806

**User was connected to a database that must be dropped.**

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.8 14808
In a moment you should be able to reconnect to the database and repeat your command.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.9 14809

An invalid floating-point operation was signaled. This probably means an out-of-range result or an invalid operation, such as division by zero.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.10 14810

Increase the configuration parameter "max_stack_depth" (currently @1@kB), after ensuring the platform's stack depth limit is adequate.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.11 14811

Try "@1@ --help" for more information.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

Use RETURN NEXT or RETURN QUERY.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.60 14870

@1@in PL/Tcl function "@2@"

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.45.61 14871

could not translate host name "@1@" to address: @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.62 14873
out of memory

[Description]
There was insufficient free space in the client's memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- Modify the application to reduce memory usage.

2.45.63 14877

host name must be specified

[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]
Processing will be aborted.

[Action]
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.45.64 14881

GSSAPI continuation error

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.45.65 14882

duplicate GSS authentication request

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.45.66 14883

**GSSAPI name import error**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.45.67 14884

**SSPI continuation error**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.45.68 14885

**could not acquire SSPI credentials**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.69 14886

**SCM_CRED authentication method not supported**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.70 14887
Kerberos 4 authentication not supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.71 14888

Kerberos 5 authentication not supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.72 14889

GSSAPI authentication not supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.73 14890

SSPI authentication not supported

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.74 14891

Crypt authentication not supported
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.45.75 14892**

*authentication method @1@ not supported*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.45.76 14893**

*invalid sslmode value: "@1@"*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.45.77 14894**

*sslmode value "@1@" invalid when SSL support is not compiled in*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.45.78 14895**

*could not set socket to TCP no delay mode: @1@

An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.79 14896

could not connect to server: @1@ Is the server running locally and accepting connections on Unix domain socket "@2@"?

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.80 14897

could not connect to server: @1@ Is the server running on host "@2@" (@3@) and accepting TCP/IP connections on port @4@?

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.45.81 14898

could not connect to server: @1@ Is the server running on host "@2@" and accepting TCP/IP connections on port @3@?

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46 Message Numbers Beginning with 14900

2.46.1 14902

setsockopt(@1@) failed: @2@
[Description]  
An error occurred.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.46.2 14903  
**WSAioctl(SIO_KEEPALIVE_VALS) failed:** @1@i

[Description]  
An error occurred.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.46.3 14904  
**invalid port number: "@1@"**

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.4 14906  
**could not translate Unix-domain socket path "@1@" to address: @2@**

[Description]  
An error occurred during execution of the application or command.

[System Processing]  
Processing will be aborted.

[Action]  
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.5 14907  
**invalid connection state, probably indicative of memory corruption**

[Description]  
An unexpected error occurred.
[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

### 2.46.6 14908

could not create socket: @1@

[Description]
There was insufficient free space in the server's memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

### 2.46.7 14909

could not set socket to nonblocking mode: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.46.8 14910

could not set socket to close-on-exec mode: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.46.9 14911

keepalives parameter must be an integer

[Description]
An error occurred during execution of the application or command.
[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.10 14913

could not get socket error status: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.11 14914

could not get client address from socket: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.12 14915

requirepeer parameter is not supported on this platform

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.13 14916

could not get peer credentials: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.14 14918
requirepeer specifies "@1@", but actual peer user name is "@2@"
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.15 14919
could not send startup packet: @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.16 14921
unexpected message from server during startup
[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.46.17 14922
could not send SSL negotiation packet: @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.46.18 14923

server does not support SSL, but SSL was required

[Description]
An error occurred during execution of the application or command.

[Description]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.19 14924

received invalid response to SSL negotiation: @1@

[Description]
An error occurred during communication between the application and the database server.

[Description]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.46.20 14925

expected authentication request from server, but received @1@

[Description]
An error occurred during communication between the application and the database server.

[Description]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.46.21 14926

out of memory allocating GSSAPI buffer (@1@)

[Description]
There was insufficient free space in the client's memory during execution of the application.

[Description]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- Modify the application to reduce memory usage.
2.46.22 14927

**invalid connection state @1@, probably indicative of memory corruption**

[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.46.23 14928

**PGEventProc "@1@" failed during PGEVT_CONNRESET event**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.24 14929

**invalid LDAP URL "@1@": scheme must be ldap://**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.25 14930

**invalid LDAP URL "@1@": missing distinguished name**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.26 14931
invalid LDAP URL "@1@": must have exactly one attribute

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.27 14932

invalid LDAP URL "@1@": must have search scope (base/one/sub)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.28 14933

invalid LDAP URL "@1@": no filter

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.29 14934

invalid LDAP URL "@1@": invalid port number

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.30 14935

could not create LDAP structure
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.31 14936

lookup on LDAP server failed: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.32 14937

more than one entry found on LDAP lookup

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.33 14938

no entry found on LDAP lookup

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.34 14939

attribute has no values on LDAP lookup

[Description]
An error occurred during execution of the application or command.
**2.46.35 14940**

*missing "=" after "@1@" in connection info string*

**Description**
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

**System Processing**
Processing will be aborted.

**Action**
Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.46.36 14941**

*invalid connection option "@1@"*

**Description**
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

**System Processing**
Processing will be aborted.

**Action**
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

**2.46.37 14942**

*unterminated quoted string in connection info string*

**Description**
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

**System Processing**
Processing will be aborted.

**Action**
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

**2.46.38 14944**

*definition of service "@1@" not found*
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.39 14945

service file "@1@" not found

The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

Processing will be aborted.

Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.46.40 14946

line @1@ too long in service file "@2@"

The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

Processing will be aborted.

Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.46.41 14947

syntax error in service file "@1@", line @2@

The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

Processing will be aborted.

Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.
2.46.42 14948

connection pointer is NULL

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.43 14951

password retrieved from file "@1@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.46.44 14952

command string is a null pointer

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.45 14953

statement name is a null pointer

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.46 14954
function requires at least protocol version 3.0

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.47 14955

no connection to the server

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.48 14956

another command is already in progress

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.49 14957

length must be given for binary parameter

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.50 14958

unexpected asyncStatus: @1@
An unexpected error occurred.

Processing will be aborted.

Contact Fujitsu technical support.

**2.46.51 14959**

*PGEventProc "@1@" failed during PGEVT_RESULTCREATE event*

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.46.52 14960**

*COPY terminated by new PQexec*

Processing was canceled.

Processing will be aborted.

Check the message text.

**2.46.53 14961**

*COPY IN state must be terminated first*

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

**2.46.54 14962**

*COPY OUT state must be terminated first*

An error occurred during execution of the application or command.
[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.55 14963

PQexec not allowed during COPY BOTH

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.56 14964

no COPY in progress

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.57 14965

connection in wrong state

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.58 14966

invalid ExecStatusType code

[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.
[Action]

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.59 14967

column number @1@ is out of range 0..@2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.60 14968

row number @1@ is out of range 0..@2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.61 14969

parameter number @1@ is out of range 0..@2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.62 14970

could not interpret result from server: @1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.
2.46.63 14971

**incomplete multibyte character**

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.46.64 14972

**cannot determine OID of function lo_truncate**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.65 14973

**cannot determine OID of function lo_create**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.66 14974

**could not open file "@1@": @2@**

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.67 14975
could not read from file "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.68 14976

could not write to file "@1@": @2@

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.69 14977

query to initialize large object functions did not return data

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.70 14978

cannot determine OID of function lo_open

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.71 14979

cannot determine OID of function lo_close
An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.72 14980

cannot determine OID of function lo_creat

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.73 14981

cannot determine OID of function lo_unlink

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.74 14982

cannot determine OID of function lo_lseek

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.75 14983

cannot determine OID of function lo_tell

An error occurred during execution of the application or command.
[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.76 14984

cannot determine OID of function loread

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.77 14985

cannot determine OID of function lowrite

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.78 14986

integer of size @1@ not supported by pqGetInt

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.

[Action]
   Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.79 14987

integer of size @1@ not supported by pqPutInt

[Description]
   An error occurred during execution of the application or command.

[System Processing]
   Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.80 14988

connection not open
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.46.81 14989

server closed the connection unexpectedly This probably means the server terminated abnormally before or while processing the request.
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.82 14990

timeout expired
[Description]
Timeout occurred during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Check the following:
- If executing SQL that outputs a large volume of search results, add a conditional expression to filter the results further.
- If numerous SQLs are being simultaneously executed, reduce the number of simultaneously executed SQLs.
- If a large volume of data is to be updated in a single transaction, modify the SQL to reduce the volume of data to be updated in a single transaction.
- If executing a complex SQL, modify it to a simple SQL.
- Check if there are any problems in the network.
- Before conducting maintenance that involves the processing of a large volume of data, use the SET statement to temporarily increase the value of maintenance_work_mem.
2.46.83 14991

invalid socket
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.84 14992

select() failed: @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.46.85 14993

invalid setenv state @1@, probably indicative of memory corruption
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.46.86 14994

invalid state @1@, probably indicative of memory corruption
[Description]
An unexpected error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.46.87 14995
message type 0x@1@ arrived from server while idle
[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.46.88 14996
unexpected character @1@ following empty query response ("I" message)
[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.46.89 14997
server sent data ("D" message) without prior row description ("T" message)
[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.46.90 14998
server sent binary data ("B" message) without prior row description ("T" message)
[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.46.91 14999
unexpected response from server; first received character was "@1@"
An error occurred during communication between the application and the database server.

Processing will be aborted.

Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

### 2.47 Message Numbers Beginning with 15000

#### 2.47.1 15000

**out of memory for query result**

There was insufficient free space in the client's memory during execution of the application.

Processing will be aborted.

Estimate memory usage and take the following action:
- Modify the application to reduce memory usage.

#### 2.47.2 15001

**lost synchronization with server, resetting connection**

The database server was disconnected during execution of the application.

Processing will be aborted.

Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.

b) If the total number of update records in a single transaction is high, split it into short transactions.

c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.47.3 15002

protocol error: id=0x@1@

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.47.4 15003

server sent data ("D" message) without prior row description ("T" message)

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.47.5 15004

message contents do not agree with length in message type "@1@"

[Description]
An error occurred during communication between the application and the database server.

[System Processing]
Processing will be aborted.

[Action]
Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.47.6 15005

lost synchronization with server: got message type "@1@", length @2@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:

- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

  a) If the COMMIT process is not executed after update, add the COMMIT process.
  b) If the total number of update records in a single transaction is high, split it into short transactions.
  c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

  - If none of the above situations applies, perform the following:
    a) Confirm that the database server has not stopped.
    b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.47.7 15006

**unexpected field count in "D" message**

[Description]

An error occurred during communication between the application and the database server.

[System Processing]

Processing will be aborted.

[Action]

Check if there are any problems in the network, eliminate the cause of any error and re-execute the command.

2.47.8 15007

**PQgetline: not doing text COPY OUT**

[Description]

The application or command terminated normally, but a warning was output.

[System Processing]

Processing will continue.

[Action]

Check the message text and confirm that the issue does not affect the expected outcome.

2.47.9 15008

**could not establish SSL connection: @1@**

[Description]

The database server was disconnected during execution of the application.

[System Processing]

Processing will be aborted.

[Action]

Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:
  a) Confirm that the database server has not stopped.
  b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.47.10 15009

SSL SYSCALL error: @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.11 15010

SSL SYSCALL error: EOF detected
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.12 15011

SSL error: @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.47.13 15012

SSL connection has been closed unexpectedly

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.
Take the following actions:
- Eliminate the cause of the communication disconnection.
Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.
a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
- If none of the above situations applies, perform the following:
a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.47.14 15013

unrecognized SSL error code: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.15 15014

could not receive data from server: @1@

[Description]
The database server was disconnected during execution of the application.
[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
- If none of the above situations applies, perform the following:
a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.

2.47.16 15015

could not send data to server: @1@

[Description]
The database server was disconnected during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Communication may have been disconnected for the following reasons:
- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:
- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.
b) If the total number of update records in a single transaction is high, split it into short transactions.
c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.
- If none of the above situations applies, perform the following:
a) Confirm that the database server has not stopped.
b) If the database server is starting or stopping, re-execute the command after the database server starts.
**2.47.17 15016**

**could not get server's host name from server certificate**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.47.18 15017**

**SSL certificate's name contains embedded null**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.47.19 15018**

**host name must be specified for a verified SSL connection**

[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]
Processing will be aborted.

[Action]
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

**2.47.20 15019**

**server certificate for "@1@" does not match host name "@2@"**

[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]
Processing will be aborted.
[Action]

Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.47.21 15020

could not create SSL context: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.22 15021

could not open certificate file "@1@": @2@

[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]
Processing will be aborted.

[Action]
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.47.23 15022

could not read certificate file "@1@": @2@

[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]
Processing will be aborted.

[Action]
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.47.24 15023

could not load SSL engine "@1@": @2@

[Description]
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.25 15024
could not initialize SSL engine "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.26 15025
could not read private SSL key "@1@" from engine "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.27 15026
could not load private SSL key "@1@" from engine "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.28 15027
certificate present, but not private key file "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

**2.47.29 15028**

*private key file "@1@" has group or world access; permissions should be u=rw (0600) or less*

**Description**

The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

**System Processing**

Processing will be aborted.

**Action**

Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

**2.47.30 15029**

*could not load private key file "@1@": @2@

**Description**

The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

**System Processing**

Processing will be aborted.

**Action**

Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

**2.47.31 15030**

*certificate does not match private key file "@1@": @2@

**Description**

The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

**System Processing**

Processing will be aborted.

**Action**

Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

**2.47.32 15031**

*could not read root certificate file "@1@": @2@
[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]
Processing will be aborted.

[Action]
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.47.33 15033
could not get home directory to locate root certificate fileEither provide the file or change sslmode to disable server certificate verification.

[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]
Processing will be aborted.

[Action]
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.47.34 15034
root certificate file "@1@" does not existEither provide the file or change sslmode to disable server certificate verification.

[Description]
The operating environment such as the status of the connection definition file and the connection method specification is abnormal.

[System Processing]
Processing will be aborted.

[Action]
Confirm that the operating environment such as the status of the connection definition file and the connection method specification is normal.

2.47.35 15035
certificate could not be obtained: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.47.36 15036

**no SSL error reported**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.37 15037

**SSL error code @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.38 15038

**@1@: vacuuming database "@2@"**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.47.39 15042

**skipped creating .ready file for multiplexed transaction log file "@1@"**

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.
2.47.40 15043

skipped recycling multiplexed transaction log file "@1@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.47.41 15044

skipped removing multiplexed transaction log file "@1@"

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.47.42 15045

no data found on line @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.43 15046

out of memory on line @1@

[Description]
There was insufficient free space in the server's memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.
2.47.44 15047

Unsupported type "@1@" on line @2@  
[Description]  
An error occurred.  
[System Processing]  
Processing will be aborted.  
[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.47.45 15048

too many arguments on line @1@  
[Description]  
An error occurred.  
[System Processing]  
Processing will be aborted.  
[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.47.46 15049

too few arguments on line @1@  
[Description]  
An error occurred.  
[System Processing]  
Processing will be aborted.  
[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.47.47 15050

Invalid input syntax for type int: "@1@", on line @2@  
[Description]  
An error occurred.  
[System Processing]  
Processing will be aborted.  
[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.47.48 15051
invalid input syntax for type unsigned int: "@1@", on line @2@

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.47.49 15052

invalid input syntax for floating-point type: "@1@", on line @2@

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.47.50 15053

invalid syntax for type boolean: "@1@", on line @2@

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.47.51 15054

could not convert boolean value: size mismatch, on line @1@

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.47.52 15055

empty query on line @1@
null value without indicator on line @1@

variable does not have an array type on line @1@

data read from server is not an array on line @1@

inserting an array of variables is not supported on line @1@
2.47.57 15060
connection "@1@" does not exist on line @2@
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.58 15061
not connected to connection "@1@" on line @2@
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.59 15062
invalid statement name "@1@" on line @2@
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.60 15063
descriptor "@1@" not found on line @2@
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.47.61 15064
descriptor index out of range on line @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.62 15065
unrecognized descriptor item "@1@" on line @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.63 15066
variable does not have a numeric type on line @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.64 15067
variable does not have a character type on line @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.47.65 15068

error in transaction processing on line @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.66 15069

could not connect to database "@1@" on line @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.67 15070

SQL error @1@ on line @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.68 15071

the connection to the server was lost

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.69 15072
empty message text
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.70 15074

SP-GiST inner tuple size @1@ exceeds maximum @2@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.71 15075

backup_label contains data inconsistent with control file
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.72 15076

WAL generated with full_page_writes=off was replayed since last restartpoint
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.73 15077

the standby was promoted during online backup
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.74 15078

WAL generated with full_page_writes=off was replayed during online backup

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.75 15080

cannot set privileges of array types

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.76 15081

drop cascades to @1@ other object
drop cascades to @2@ other objects

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.47.77 15082

constraint "@1@" conflicts with non-inherited constraint on relation "@2@"
2.47.78 15083

**DROP INDEX CONCURRENTLY must be first action in transaction**

- Description
  - An error occurred.

- System Processing
  - Processing will be aborted.

- Action
  - To investigate the cause of the occurrence from the message, and remove cause.

2.47.79 15085

**domain @1@ has multiple constraints named "@2@"**

- Description
  - An error occurred.

- System Processing
  - Processing will be aborted.

- Action
  - To investigate the cause of the occurrence from the message, and remove cause.

2.47.80 15086

**functions cannot have more than @1@ argument functions cannot have more than @2@ arguments**

- Description
  - An error occurred.

- System Processing
  - Processing will be aborted.

- Action
  - To investigate the cause of the occurrence from the message, and remove cause.

2.47.81 15087

**skipping "@1@" --- cannot analyze this foreign table**
The application or command terminated normally, but a warning was output.

Processing will continue.

Check the message text and confirm that the issue does not affect the expected outcome.

**2.47.82 15088**

*could not convert row type*

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.47.84 15090**

*EXPLAIN option TIMING requires ANALYZE*

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.47.85 15091**

*only superuser can define a leakproof function*

An error occurred.
[System Processing]
    Processing will be aborted.

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.47.86 15092

**cast will be ignored because the source data type is a domain**

[Description]
    An error occurred.

[System Processing]
    Processing will be aborted.

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.47.87 15093

**cast will be ignored because the target data type is a domain**

[Description]
    An error occurred.

[System Processing]
    Processing will be aborted.

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.47.88 15094

**btree sort support procedures must accept type "internal"**

[Description]
    An error occurred.

[System Processing]
    Processing will be aborted.

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.47.89 15095

**btree sort support procedures must return void**

[Description]
    An error occurred.

[System Processing]
    Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.90 15096

Use DROP TABLE to remove a table.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.91 15097

Use DROP SEQUENCE to remove a sequence.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.92 15098

Use DROP VIEW to remove a view.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.47.93 15099

Use DROP INDEX to remove an index.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.48 Message Numbers Beginning with 15100

2.48.1 15100

Use DROP TYPE to remove a type.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.2 15101

Use DROP FOREIGN TABLE to remove a foreign table.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.3 15102

DROP INDEX CONCURRENTLY does not support dropping multiple objects

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.4 15103

DROP INDEX CONCURRENTLY does not support CASCADE

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.48.5 15104

cannot inherit from temporary relation of another session

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.6 15105

constraints on temporary tables must involve temporary tables of this session

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.7 15106

constraint must be validated on child tables too

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.8 15107

cannot inherit to temporary relation of another session

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.9 15108
constraint "@1@" conflicts with non-inherited constraint on child table "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.10 15112

@1@ constraints cannot be marked NO INHERIT

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.11 15113

Type attribute "subtype" is required

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.12 15114

Range collation specified but subtype does not support collation

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.13 15115

Range canonical function @1@ must be immutable
2.48.14 15116

range subtype diff function @1@ must return type @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.48.15 15117

range subtype diff function @1@ must be immutable

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.48.16 15118

constraint "@1@" of domain "@2@" does not exist, skipping

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.48.17 15119

"@1@": suspending truncate due to conflicting lock request

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.18 15120
cannot set transaction read-write mode inside a read-only transaction
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.19 15121
transaction read-write mode must be set before any query
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.20 15122
cannot set transaction read-write mode during recovery
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.21 15123
SET TRANSACTION ISOLATION LEVEL must be called before any query
[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.22 15124

SET TRANSACTION ISOLATION LEVEL must not be called in a subtransaction

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.23 15125

SET TRANSACTION [NOT] DEFERRABLE cannot be called within a subtransaction

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.24 15126

SET TRANSACTION [NOT] DEFERRABLE must be called before any query

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.25 15127

cannot delete from view "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.48.26 15128

GLOBAL is deprecated in temporary table creation

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.27 15129

duplicate trigger events specified

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.48.28 15130

unrecognized configuration parameter "@1@" in file "@2@" line @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.29 15131

configuration file "@1@" contains errors

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.30 15132
configuration file "@1@" contains errors; unaffected changes were applied

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.31 15133

configuration file "@1@" contains errors; no changes were applied

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.32 15134

too many syntax errors found, abandoning file "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.33 15135

accepting GSS security context failed

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.34 15136

retrieving GSS user name failed
2.48.35 15137

could not acquire SSPI credentials

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.36 15138

could not accept SSPI security context

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.37 15139

could not get token from SSPI security context

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.38 15140

multiple values in ident field

[Description]
Terminated normally.
2.48.39 15141

multiple values specified for connection type

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.48.40 15142

multiple values specified for host address

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.48.41 15143

multiple values specified for netmask

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.48.42 15144

multiple values specified for authentication type

[Description]
Terminated normally.

[System Processing]
Continues processing.
2.48.43 15145

Ident, peer, gssapi, sspi, and cert

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.48.44 15146

gssapi and sspi

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.48.45 15147

Configuration file "@1@" contains no entries

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.46 15148

Unix-domain socket path "@1@" is too long (maximum @2@ bytes)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.48.47 15149

@1@: WSAStartup failed: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.48 15150

@1@: real and effective user IDs must match

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.49 15151

could not look up effective user ID @1@: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.50 15153

too many range table entries

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.51 15154
SELECT ... INTO is not allowed here

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.52 15155

arguments declared "anyrange" are not all alike

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.53 15156

argument declared @1@ is not consistent with argument declared @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.54 15157

could not load dbghelp.dll, cannot write crash dump

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.55 15158

could not load required functions in dbghelp.dll, cannot write crash dump
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.48.56 15159

could not open crash dump file "@1@" for writing: error code @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.48.57 15160

could not write crash dump to file "@1@": error code @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.48.58 15161

could not check access token membership: error code @1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.48.59 15162

could not get SID for Administrators group: error code @1@

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.60 15163
could not get SID for PowerUsers group: error code @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.61 15164
could not create signal listener pipe: error code @1@; retrying

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.62 15166
@1@: superuser_reserved_connections must be less than max_connections

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.63 15167
@1@: max_wal_senders must be less than max_connections

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.48.64 15168

@1@: invalid datetoken tables, please fix

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.65 15169

@1@: could not change permissions of external PID file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.66 15170

@1@: could not write external PID file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.67 15171

could not fork new process for connection:

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.48.68 15172

could not read exit code for process

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.69 15173

could not post child completion status

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.70 15174

could not write to log file: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.71 15175

invalid streaming start location

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.72 15176
unterminated quoted string

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.73 15177

unexpected WAL file size "@1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.74 15178

unterminated bit string literal

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.75 15179

unterminated hexadecimal string literal

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.76 15180

invalid Unicode surrogate pair
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.48.77 15181

terminated dollar-quoted string

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.48.78 15182

zero-length delimited identifier

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.48.79 15183

terminated quoted identifier

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.48.80 15184

Unicode escape values cannot be used for code point values above 007F when the server encoding is not UTF8
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.48.81 15185

invalid Unicode escape value

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.48.82 15186

invalid Unicode escape character

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.48.83 15187

temporary file size exceeds temp_file_limit (@1@kB)

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.48.84 15188

a snapshot-importing transaction must not be READ ONLY DEFERRABLE

An error occurred.
Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.48.85 15189**

**could not import the requested snapshot**

**Description**

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.48.86 15190**

**connection to client lost**

**Description**

The database server was disconnected during execution of the application.

Processing will be aborted.

Communication may have been disconnected for the following reasons:

- An error occurred in the communication line (TCP/IP etc.)
- The database server terminated abnormally.

Take the following actions:

- Eliminate the cause of the communication disconnection.

Examine the application and check whether the transaction for implementing update is a long transaction. Judge whether it is a long transaction from the following viewpoints and modify the application.

a) If the COMMIT process is not executed after update, add the COMMIT process.

b) If the total number of update records in a single transaction is high, split it into short transactions.

c) If search was conducted for a long period of time after update, execute COMMIT after update or review the search SQL statement.

- If none of the above situations applies, perform the following:

a) Confirm that the database server has not stopped.

b) If the database server is starting or stopping, re-execute the command after the database server starts.

**2.48.87 15191**

**invalid command-line argument for server process: @1@**
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.88 15194

range constructor flags argument must not be null

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.89 15195

result of range difference would not be contiguous

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.90 15196

result of range union would not be contiguous

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.91 15197

range lower bound must be less than or equal to range upper bound

[Description]
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.92 15198

invalid range bound flags
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.48.93 15199

could not set up XML error handler
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49 Message Numbers Beginning with 15200

2.49.1 15200

keystore_location is not supported by this build
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.2 15201

keystore location is not configured
[Description]
An error occurred.
2.49.3 15202

could not encrypt or decrypt data because the keystore is not open

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.4 15203

keystore is already open

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.5 15204

passphrase is too short or too long

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.6 15205

passphrase-based key derivation failed: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.49.7 15206

*a new master encryption key has been set*

[Description]

Terminated normally.

[System Processing]

Continues processing.

[Action]

No action required.

2.49.8 15207

*passphrase of the keystore has been changed*

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.49.9 15208

*encryption or decryption of data in tablespace @1@ failed: @2@*

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.49.10 15209

*encryption or decryption of data failed: @1@*

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
2.49.11 15210

could not open keystore "@1@": necessary master encryption key does not exist in the keystore

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.12 15211

decryption of the auto-open keystore "@1@" failed: error code = @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.13 15212

encryption of the auto-open keystore "@1@" failed: error code = @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.14 15213

keystore "@1@" is corrupted: size = @2@ bytes, expected size = @3@ bytes

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.49.15 15214
could not open keystore "@1@": passphrase is wrong, or the auto-open keystore was created by another computer or user

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.16 15215
keystore "@1@" is corrupted: invalid CRC

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.17 15216
encryption or decryption of the keystore "@1@" failed: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.18 15217
character with byte sequence @1@ in encoding "@2@" has no equivalent in encoding "@3@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.49.19 15218

Enables the planner's use of sequential-scan plans.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.20 15219

Enables the planner's use of index-scan plans.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.21 15220

Enables the planner's use of index-only-scan plans.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.22 15221

Enables the planner's use of bitmap-scan plans.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.23 15222
Enables the planner's use of TID scan plans.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.24 15223

Enables the planner's use of explicit sort steps.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.25 15224

Enables the planner's use of hashed aggregation plans.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.26 15225

Enables the planner's use of materialization.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.27 15226

Enables the planner's use of nested-loop join plans.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.28 15227

Enables the planner's use of merge join plans.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.29 15228

Enables the planner's use of hash join plans.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.30 15229

Enables genetic query optimization.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.31 15230

Shows whether the current user is a superuser.

[Description]
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.32 15231

Enables advertising the server via Bonjour.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.33 15232

Enables SSL connections.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.34 15233

Forces synchronization of updates to disk.
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.35 15235

Writes full pages to WAL when first modified after a checkpoint.
[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

**2.49.36 15236**

Logs each checkpoint.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.49.37 15237**

Logs each successful connection.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.49.38 15238**

Logs end of a session, including duration.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.49.39 15239**

Shows whether the running server has assertion checks enabled.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.49.40 15240

**Terminate session on any error.**

**[Description]**
An error occurred.

**[System Processing]**
Processing will be aborted.

**[Action]**
To investigate the cause of the occurrence from the message, and remove cause.

2.49.41 15241

**Restarts all server processes on WAL multiplexing errors.**

**[Description]**
An error occurred.

**[System Processing]**
Processing will be aborted.

**[Action]**
To investigate the cause of the occurrence from the message, and remove cause.

2.49.42 15242

**Enables fast WAL multiplexing.**

**[Description]**
Terminated normally.

**[System Processing]**
Continues processing.

**[Action]**
No action required.

2.49.43 15243

**Enables encryption of temporary files used in large queries.**

**[Description]**
Terminated normally.

**[System Processing]**
Continues processing.

**[Action]**
No action required.
Reinitialize server after backend crash.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.45 15245

Logs the duration of each completed SQL statement.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.46 15246

Logs each query's parse tree.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.47 15247

Logs each query's rewritten parse tree.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.48 15248

Logs each query's execution plan.
Terminated normally.

Continues processing.

No action required.

2.49.49 15249

Indents parse and plan tree displays.

Terminated normally.

Continues processing.

No action required.

2.49.50 15250

Writes parser performance statistics to the server log.

Terminated normally.

Continues processing.

No action required.

2.49.51 15251

Writes planner performance statistics to the server log.

Terminated normally.

Continues processing.

No action required.

2.49.52 15252

Writes executor performance statistics to the server log.

Terminated normally.
Continues processing.

No action required.

**2.49.53 15253**

**Writes cumulative performance statistics to the server log.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

**2.49.54 15255**

**Collects information about executing commands.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

**2.49.55 15256**

**Collects statistics on database activity.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

**2.49.56 15257**

**Collects timing statistics for database I/O activity.**

[Description]
Terminated normally.

[System Processing]
Continues processing.
Updates the process title to show the active SQL command.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

Starts the autovacuum subprocess.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

Generates debugging output for LISTEN and NOTIFY.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

Logs long lock waits.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.
2.49.61 15262

Logs the host name in the connection logs.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.62 15264

Chooses the algorithm for encrypting passwords.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.63 15265

Treats "expr=NULL" as "expr IS NULL".

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.64 15266

Enables per-database user names.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.65 15268
Sets the default read-only status of new transactions.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.66 15269

Sets the current transaction's read-only status.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.67 15270

Sets the default deferrable status of new transactions.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.68 15271

Whether to defer a read-only serializable transaction until it can be executed with no possible serialization failures.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.69 15272

Check function bodies during CREATE FUNCTION.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.70 15273

Enable input of NULL elements in arrays.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.71 15275

Start a subprocess to capture stderr output and/or csvlogs into log files.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.72 15276

Truncate existing log files of same name during log rotation.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.73 15277

Emit information about resource usage in sorting.

[Description]
Terminated normally.
2.49.74 15278

Generate debugging output for synchronized scanning.

[Description]
Terminated normally.

[Action]
No action required.

2.49.75 15279

Enable bounded sorting using heap sort.

[Description]
Terminated normally.

[Action]
No action required.

2.49.76 15280

Emit WAL-related debugging output.

[Description]
Terminated normally.

[Action]
No action required.

2.49.77 15281

Datetimes are integer based.

[Description]
Terminated normally.

[Action]
Continues processing.
2.49.78 15282

Sets whether Kerberos and GSSAPI user names should be treated as case-insensitive.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.79 15283

Warn about backslash escapes in ordinary string literals.

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.49.80 15284

Causes '...' strings to treat backslashes literally.

[Description]
The application or command terminated normally, but a warning was output.

[System Processing]
Processing will continue.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.49.81 15285

Enable synchronized sequential scans.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.49.82 15286

Allows archiving of WAL files using archive_command.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.83 15287

Allows connections and queries during recovery.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.84 15288

Allows feedback from a hot standby to the primary that will avoid query conflicts.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.85 15289

Allows modifications of the structure of system tables.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.86 15290
Disables reading from system indexes.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.87 15291

 Enables backward compatibility mode for privilege checks on large objects.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.88 15292

When generating SQL fragments, quote all identifiers.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.89 15293

Forces a switch to the next WAL file if a new file has not been started within N seconds.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.49.90 15294

Waits N seconds on connection startup after authentication.
2.49.91 15295

Sets the default statistics target.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.92 15296

Sets the FROM-list size beyond which subqueries are not collapsed.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.93 15297

Sets the FROM-list size beyond which JOIN constructs are not flattened.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.49.94 15298

Sets the threshold of FROM items beyond which GEQO is used.

[Description]
Terminated normally.
Continues processing.

No action required.

2.49.95 15299

**GEQO: effort is used to set the default for other GEQO parameters.**

[Description]
- Terminated normally.

Continues processing.

No action required.

2.50 Message Numbers Beginning with 15300

2.50.1 15300

**GEQO: number of individuals in the population.**

[Description]
- Terminated normally.

Continues processing.

No action required.

2.50.2 15301

**GEQO: number of iterations of the algorithm.**

[Description]
- Terminated normally.

Continues processing.

No action required.

2.50.3 15302

Sets the time to wait on a lock before checking for deadlock.

[Description]
- Terminated normally.
2.50.4 15303

Sets the maximum delay before canceling queries when a hot standby server is processing archived WAL data.

[Description]
Terminated normally.

[Action]
No action required.

2.50.5 15304

Sets the maximum delay before canceling queries when a hot standby server is processing streamed WAL data.

[Description]
Terminated normally.

[Action]
No action required.

2.50.6 15305

Sets the maximum interval between WAL receiver status reports to the sending server

[Description]
Terminated normally.

[Action]
No action required.

2.50.7 15306

Sets the maximum number of concurrent connections.

[Description]
Terminated normally.
Continues processing.

No action required.

2.50.8 15307

Sets the number of connection slots reserved for superusers.

Terminated normally.

Continues processing.

No action required.

2.50.9 15308

Sets the number of shared memory buffers used by the server.

Terminated normally.

Continues processing.

No action required.

2.50.10 15309

Sets the maximum number of temporary buffers used by each session.

Terminated normally.

Continues processing.

No action required.

2.50.11 15310

Sets the TCP port the server listens on.

Terminated normally.

Continues processing.
Set the access permissions of the Unix-domain socket.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

Set the maximum memory to be used for query workspaces.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

Set the maximum memory to be used for maintenance operations.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.
2.50.16 15315

**Sets the maximum stack depth, in kilobytes.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.17 15316

**Limits the total size of all temporary files used by each process.**

[Description]
There was insufficient free space in the disk of the database server during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Delete user data stored in the database server to free up space on the disk.

2.50.18 15317

**Vacuum cost for a page found in the buffer cache.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.19 15318

**Vacuum cost for a page not found in the buffer cache.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.20 15319
Vacuum cost for a page dirtied by vacuum.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.21 15320

Vacuum cost amount available before napping.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.22 15321

Vacuum cost delay in milliseconds.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.23 15322

Vacuum cost delay in milliseconds, for autovacuum.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.24 15323

Vacuum cost amount available before napping, for autovacuum.
2.50.25 15324

Sets the maximum number of simultaneously open files for each server process.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.26 15325

Sets the maximum number of simultaneously prepared transactions.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.27 15326

Sets the maximum allowed duration of any statement.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.28 15327

Minimum age at which VACUUM should freeze a table row.

[Description]
Terminated normally.
2.50.29 15328

**Age at which VACUUM should scan whole table to freeze tuples.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.30 15329

**Number of transactions by which VACUUM and HOT cleanup should be deferred, if any.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.31 15330

**Sets the maximum number of locks per transaction.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.32 15331

**Sets the maximum number of predicate locks per transaction.**

[Description]
Terminated normally.

[System Processing]
Continues processing.
[Action]
No action required.

2.50.33 15332

Sets the maximum allowed time to complete client authentication.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.34 15333

Waits N seconds on connection startup before authentication.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.35 15334

Sets the size of WAL files held for standby servers.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.36 15336

Sets the maximum time between automatic WAL checkpoints.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.50.37 15337

**Enables warnings if checkpoint segments are filled more frequently than this.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.38 15338

**Sets the number of disk-page buffers in shared memory for WAL.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.39 15339

**Time between WAL flushes performed in the WAL writer.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.40 15340

**Sets the maximum number of simultaneously running WAL sender processes.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.41 15341
Sets the maximum time to wait for WAL replication.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.42 15342

Sets the delay in microseconds between transaction commit and flushing WAL to disk.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.43 15343

Sets the minimum concurrent open transactions before performing commit_delay.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.44 15344

Sets the number of digits displayed for floating-point values.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.45 15345

Sets the minimum execution time above which all statements will be logged.
Terminated normally.

Continues processing.

No action required.

---

**2.50.46 15346**

Sets the minimum execution time above which autovacuum actions will be logged.

Terminated normally.

Continues processing.

No action required.

---

**2.50.47 15347**

Background writer sleep time between rounds.

Terminated normally.

Continues processing.

No action required.

---

**2.50.48 15348**

Background writer maximum number of LRU pages to flush per round.

Terminated normally.

Continues processing.

No action required.

---

**2.50.49 15349**

Number of simultaneous requests that can be handled efficiently by the disk subsystem.

Terminated normally.
[System Processing]
Continues processing.

[Action]
No action required.

2.50.50 15350

Automatic log file rotation will occur after N minutes.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.51 15351

Automatic log file rotation will occur after N kilobytes.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.52 15352

Shows the maximum number of function arguments.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.53 15353

Shows the maximum number of index keys.

[Description]
Terminated normally.

[System Processing]
Continues processing.
[Action]
No action required.

2.50.54 15354

Shows the maximum identifier length.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.55 15355

Shows the size of a disk block.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.56 15356

Shows the number of pages per disk file.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.57 15357

Shows the block size in the write ahead log.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.50.58 15358

**Shows the number of pages per write ahead log segment.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.59 15359

**Time to sleep between autovacuum runs.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.60 15360

**Minimum number of tuple updates or deletes prior to vacuum.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.61 15361

**Minimum number of tuple inserts, updates, or deletes prior to analyze.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.62 15362
Age at which to autovacuum a table to prevent transaction ID wraparound.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.63 15363

Sets the maximum number of simultaneously running autovacuum worker processes.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.64 15364

Time between issuing TCP keepalives.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.65 15365

Time between TCP keepalive retransmits.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.66 15366

SSL renegotiation is no longer supported; this can only be 0.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.67 15367

Maximum number of TCP keepalive retransmits.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.68 15368

Sets the maximum allowed result for exact search by GIN.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.69 15369

Sets the planner’s assumption about the size of the disk cache.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.70 15370

Shows the server version as an integer.

[Description]
Terminated normally.
2.50.71 15371

Log the use of temporary files larger than this number of kilobytes.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.72 15372

Sets the size reserved for pg_stat_activity.query, in bytes.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.73 15373

Sets the planner’s estimate of the cost of a sequentially fetched disk page.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.74 15374

Sets the planner’s estimate of the cost of a nonsequentially fetched disk page.

[Description]
Terminated normally.

[System Processing]
Continues processing.
2.50.75 15375

**Sets the planner's estimate of the cost of processing each tuple (row).**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.76 15376

**Sets the planner's estimate of the cost of processing each index entry during an index scan.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.77 15377

**Sets the planner's estimate of the cost of processing each operator or function call.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.78 15378

**Sets the planner's estimate of the fraction of a cursor's rows that will be retrieved.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.50.79 15379

**GEQO: selective pressure within the population.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.80 15380

**GEQO: seed for random path selection.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.81 15381

**Multiple of the average buffer usage to free per round.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.82 15382

**Sets the seed for random-number generation.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.83 15383
Number of tuple updates or deletes prior to vacuum as a fraction of reltuples.

[Description] Terminated normally.

[System Processing] Continues processing.

[Action] No action required.

2.50.84 15384

Number of tuple inserts, updates, or deletes prior to analyze as a fraction of reltuples.

[Description] Terminated normally.

[System Processing] Continues processing.

[Action] No action required.

2.50.85 15385

Time spent flushing dirty buffers during checkpoint, as fraction of checkpoint interval.

[Description] Terminated normally.

[System Processing] Continues processing.

[Action] No action required.

2.50.86 15386

Sets the shell command that will be called to archive a WAL file.

[Description] Terminated normally.

[System Processing] Continues processing.

[Action] No action required.

2.50.87 15387

Sets the client's character set encoding.
[Description]
   Terminated normally.

[System Processing]
   Continues processing.

[Action]
   No action required.

2.50.88 15388

Controls information prefixed to each log line.

[Description]
   Terminated normally.

[System Processing]
   Continues processing.

[Action]
   No action required.

2.50.89 15389

Sets the time zone to use in log messages.

[Description]
   Terminated normally.

[System Processing]
   Continues processing.

[Action]
   No action required.

2.50.90 15390

Sets the display format for date and time values.

[Description]
   Terminated normally.

[System Processing]
   Continues processing.

[Action]
   No action required.

2.50.91 15391

Sets the default tablespace to create tables and indexes in.

[Description]
   Terminated normally.
2.50.92 15392

Sets the tablespace(s) to use for temporary tables and sort files.

[Description]
Terminated normally.

[Action]
No action required.

2.50.93 15393

Sets the path for dynamically loadable modules.

[Description]
Terminated normally.

[Action]
No action required.

2.50.94 15394

Sets the location of the Kerberos server key file.

[Description]
Terminated normally.

[Action]
No action required.

2.50.95 15396

Sets the Bonjour service name.

[Description]
Terminated normally.

[Action]
No action required.
2.50.96 15397

**Shows the collation order locale.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.97 15398

**Shows the character classification and case conversion locale.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.50.98 15399

**Sets the language in which messages are displayed.**

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51 Message Numbers Beginning with 15400

2.51.1 15400

**Sets the locale for formatting monetary amounts.**

[Description]
Terminated normally.

[System Processing]
Continues processing.
[Action]
No action required.

2.51.2 15401

Sets the locale for formatting numbers.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.3 15402

Sets the locale for formatting date and time values.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.4 15403

Lists shared libraries to preload into server.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.5 15404

Lists shared libraries to preload into each backend.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.51.6 15405

Sets the schema search order for names that are not schema-qualified.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.7 15406

Sets the server (database) character set encoding.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.8 15407

Shows the server version.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.9 15408

Sets the current role.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.10 15409
Sets the session user name.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.11 15410

Sets the destination for server log output.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.12 15411

Sets the destination directory for log files.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.13 15412

Sets the file name pattern for log files.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.14 15413

Sets the program name used to identify PostgreSQL messages in syslog.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.15 15414

Sets the application name used to identify PostgreSQL messages in the event log.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.16 15415

Sets the time zone for displaying and interpreting time stamps.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.17 15416

Selects a file of time zone abbreviations.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.18 15417

Sets the current transaction’s isolation level.

[Description]
Terminated normally.
Sets the owning group of the Unix-domain socket.

**Description**
- Terminated normally.

**System Processing**
- Continues processing.

**Action**
- No action required.

---

Sets the directories where Unix-domain sockets will be created.

**Description**
- Terminated normally.

**System Processing**
- Continues processing.

**Action**
- No action required.

---

Sets the host name or IP address(es) to listen to.

**Description**
- Terminated normally.

**System Processing**
- Continues processing.

**Action**
- No action required.

---

Sets the server's data directory.

**Description**
- Terminated normally.

**System Processing**
- Continues processing.
No action required.

2.51.23 15422
Sets the server's backup directory.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.24 15423
Sets the directory where multiplexed transaction log files are stored.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.25 15424
Sets the directory where server's core files are dumped.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.26 15425
Sets the location where the keystore is stored
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.51.27 15426

Sets the server's main configuration file.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

2.51.28 15427

Sets the server's "hba" configuration file.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

2.51.29 15428

Sets the server's "ident" configuration file.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

2.51.30 15429

Writes the postmaster PID to the specified file.
[Description]
Terminated normally.
[System Processing]
Continues processing.
[Action]
No action required.

2.51.31 15430
Location of the SSL server certificate file.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.32 15431

Location of the SSL server private key file.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.33 15432

Location of the SSL certificate authority file.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.34 15433

Location of the SSL certificate revocation list file.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.35 15434

Writes temporary statistics files to the specified directory.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.36 15435

Number of synchronous standbys and list of names of potential synchronous ones.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.37 15436

Sets default text search configuration.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.38 15437

Sets the list of allowed SSL ciphers.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.39 15438

Sets the application name to be reported in statistics and logs.

[Description]
Terminated normally.
2.51.40 15439

Sets whether "\\" is allowed in string literals.

[Description]
Terminated normally.

[Action]
No action required.

2.51.41 15440

Sets the output format for bytea.

[Description]
Terminated normally.

[Action]
No action required.

2.51.42 15441

Sets the message levels that are sent to the client.

[Description]
Terminated normally.

[Action]
No action required.

2.51.43 15442

Enables the planner to use constraints to optimize queries.

[Description]
Terminated normally.

[Action]
No action required.
2.51.44 15443

Sets the transaction isolation level of each new transaction.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.45 15444

Sets the display format for interval values.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.46 15445

Sets the verbosity of logged messages.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.47 15446

Sets the message levels that are logged.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
2.51.48 15447

Causes all statements generating error at or above this level to be logged.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.49 15448

Sets the type of statements logged.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.50 15449

Sets the syslog "facility" to be used when syslog enabled.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.51 15450

Sets the session's behavior for triggers and rewrite rules.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.
Sets the current transaction's synchronization level.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.53 15452

Enables logging of recovery-related debugging information.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.54 15453

Collects function-level statistics on database activity.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.55 15454

Set the level of information written to the WAL.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.56 15455

Selects the method used for forcing WAL updates to disk.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.57 15456

Sets how binary values are to be encoded in XML.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.58 15457

Sets whether XML data in implicit parsing and serialization operations is to be considered as
documents or content fragments.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.59 15458

Sets what to dump in core files.

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.60 15459

Selects the algorithm for encrypting tablespaces.
[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.51.61 15460
@1@: could not access the server configuration file "@2@": @3@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.62 15461
SET LOCAL TRANSACTION SNAPSHOT is not implemented
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.63 15464
Bonjour is not supported by this build
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.64 15465
SSL is not supported by this build
[Description]
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.65 15466

internal error: unrecognized run-time parameter type

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.66 15467

time zone abbreviation "@1@" is too long (maximum @2@ characters) in time zone file "@3@", line @4@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.67 15468

invalid number for time zone offset in time zone file "@1@", line @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.68 15469

time zone offset @1@ is out of range in time zone file "@2@", line @3@

[Description]
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.69 15470

**missing time zone abbreviation in time zone file "@1@", line @2@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.70 15471

**missing time zone offset in time zone file "@1@", line @2@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.71 15473

**invalid syntax in time zone file "@1@", line @2@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.72 15474

**time zone abbreviation "@1@" is multiply defined**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.
2.51.77 15479

cannot export a snapshot from a subtransaction

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.78 15480

invalid snapshot data in file "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.79 15481

@1@ must be called before any query

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.80 15482

a snapshot-importing transaction must have isolation level SERIALIZABLE or REPEATABLE READ

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.51.81 15483

invalid snapshot identifier: "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.82 15484

a serializable transaction cannot import a snapshot from a non-serializable transaction

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.83 15485

a non-read-only serializable transaction cannot import a snapshot from a read-only transaction

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.84 15486

cannot import a snapshot from a different database

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.51.85 15487

out of memory

[Description]
There was insufficient free space in the server’s memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.51.86 15488

could not open file "@1@" for reading: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.87 15489

could not open file "@1@" for writing: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.88 15490

could not write file "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.51.89 15491

could not execute command "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.90 15492

removing data directory "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.91 15493

failed to remove data directory

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.92 15494

removing contents of data directory "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.51.93 15495
failed to remove contents of data directory

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52 Message Numbers Beginning with 15500

2.52.1 15500
data directory "@1@" not removed at user's request

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.2 15503
user name lookup failure: error code @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.3 15504
"@1@" is not a valid server encoding name

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.52.4 15505

could not create directory "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.5 15506

file "@1@" does not exist

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.6 15507

could not access file "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.7 15508

file "@1@" is not a regular file

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.8 15509
Passwords didn't match.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.9 15510

could not read password from file "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.10 15515
could not write to child process: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.11 15516
ok

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.52.12 15517
failed to restore old locale "@1@"
<table>
<thead>
<tr>

</tbody>
</table>
[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.52.17 15528

must specify a password for the superuser to enable @1@ authentication

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.52.18 15529

too many command-line arguments (first is "@1@")

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.52.19 15530

password prompt and password file cannot be specified together

[Description]

An error occurred.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.52.20 15533

The program "postgres" is needed by @1@ but was not found in the same directory as 
"@2@". Check your installation.

[Description]

An error occurred.
[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.52.21 15534

The program "postgres" was found by "@1@"but was not the same version as @2@. Check your installation.

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.52.22 15535

input file location must be an absolute path

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.52.23 15536

could not find suitable encoding for locale "@1@"

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.52.24 15537

locale "@1@" requires unsupported encoding "@2@"

[Description]
   An error occurred.
[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

**2.52.25 15538**

*could not find suitable text search configuration for locale "@1@"*

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

**2.52.26 15539**

*suitable text search configuration for locale "@1@" is unknown*

[Description]
  The application or command terminated normally, but a warning was output.

[System Processing]
  Processing will continue.

[Action]
  Check the message text and confirm that the issue does not affect the expected outcome.

**2.52.27 15540**

*specified text search configuration "@1@" might not match locale "@2@"*

[Description]
  The application or command terminated normally, but a warning was output.

[System Processing]
  Processing will continue.

[Action]
  Check the message text and confirm that the issue does not affect the expected outcome.

**2.52.28 15541**

*The default text search configuration will be set to "@1@".*

[Description]
  Terminated normally.

[System Processing]
  Continues processing.
[Action]
No action required.

2.52.29 15542
directory "@1@" exists but is not empty
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.30 15543
could not access directory "@1@": @2@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.31 15544
WAL directory location must be an absolute path
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.32 15545
could not create symbolic link "@1@": @2@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.52.33 15546

Symlinks are not supported on this platform

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.34 15547

could not read from ready pipe: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.35 15548

could not parse write-ahead log location "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.36 15549

could not create pipe for background process: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.37 15550
could not create background process: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.38 15551

could not create background thread: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.39 15552

could not create directory "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.40 15553
directory "@1@" exists but is not empty

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.41 15554
could not access directory "@1@": @2@
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

could not close file ": @1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.53 15569

could not read COPY data: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
invalid tar block header size: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

could not set permissions on directory "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

could not create symbolic link from "@1@" to "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

unrecognized link indicator "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.58 15576
could not set permissions on file "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.59 15577

COPY stream ended before last file was finished

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.60 15578

could not send replication command "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.61 15579

could not identify system: got @1@ rows and @2@ fields, expected @3@ rows and @4@ or more fields

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.52.62 15580

could not initiate base backup: @1@
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.52.63 15581

no data returned from server

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.52.64 15582

could not get backup header: @1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.52.65 15584

can only write single tablespace to stdout, database has @1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.52.66 15585

starting background WAL receiver

An error occurred.
[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.52.67 15586

could not get write-ahead log end position from server: @1@

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.52.68 15587

no write-ahead log end position returned from server

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.52.69 15588

final receive failed: @1@

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.52.70 15589

could not send command to background pipe: @1@

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

### 2.52.71 15590

**could not wait for child process: @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.52.72 15591

**child @1@ died, expected @2@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.52.73 15594

**could not wait for child thread: @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.52.74 15595

**could not get child thread exit status: @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.52.75 15596

**child thread exited with error @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

2.52.76 15597

**invalid output format "@1@", must be "plain" or "tar"**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

2.52.77 15599

**invalid compression level "@1@"**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

2.53 Message Numbers Beginning with 15600

2.53.1 15600

**invalid checkpoint argument "@1@", must be "fast" or "spread"**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.53.2 15601
invalid status interval "@1@"
[Description]
   An error occurred.
[System Processing]
   Processing will be aborted.
[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.53.3 15602
too many command-line arguments (first is "@1@")
[Description]
   An error occurred.
[System Processing]
   Processing will be aborted.
[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.53.4 15603
no target directory specified
[Description]
   An error occurred.
[System Processing]
   Processing will be aborted.
[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.53.5 15604
only tar mode backups can be compressed
[Description]
   An error occurred.
[System Processing]
   Processing will be aborted.
[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.53.6 15606
this build does not support compression

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.7 15607

finished segment at @1@/@2@ (timeline @3@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.8 15608

received interrupt signal, exiting

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.9 15609

could not open directory "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.10 15611

could not stat file "@1@": @2@
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.53.11 15612

segment file "@1@" has incorrect size @2@, skipping

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.53.12 15613

starting log streaming at @1@/@2@ (timeline @3@)

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.53.13 15614

invalid port number "@1@"

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.53.14 15615

disconnected

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.15 15616

disconnected; waiting @1@ seconds to try again
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.16 15617

could not open existing write-ahead log file "@1@": @2@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.17 15619

write-ahead log file "@1@" has @2@ byte, should be 0 or @3@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.18 15622

could not determine seek position in file "@1@": @2@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.53.19 15623

could not fsync file "@@": @@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.20 15625

not renaming "@@@", segment is not complete

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.21 15626

system identifier does not match between base backup and streaming connection

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.22 15628

could not send feedback packet: @@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.53.23 15629

**select() failed: @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.24 15630

could not receive data from WAL stream: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.25 15632

unrecognized streaming header: "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.26 15633

streaming header too small: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.27 15634
received write-ahead log record for offset @1@ with no file open

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.28 15635

got WAL data offset @1@, expected @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.29 15636

could not write @1@ bytes to WAL file "@2@": @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.30 15637

unexpected termination of replication stream: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.31 15638

replication stream was terminated before stop point
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

@1@: could not write promote signal file "@2@": @3@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.53.64 15682

@1@: could not send promote signal (PID: @2@): @3@

An error occurred.

Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.65 15683

@1@: could not send signal @2@ (PID: @3@): @4@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.66 15684

@1@: could not find own program executable

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.67 15685

@1@: could not find postgres program executable

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.68 15686

@1@: could not open service manager

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.53.69 15687

@1@: service "@2@" already registered

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.70 15688

@1@: could not register service "@2@": error code @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.71 15689

@1@: service "@2@" not registered

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.72 15690

@1@: could not open service "@2@": error code @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.73 15691
@1@: could not unregister service "@2@": error code @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.74 15692

Timed out waiting for server startup

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.75 15693

@1@: could not start service "@2@": error code @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.76 15695

@1@: could not open process token: error code @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.77 15696

@1@: could not allocate SIDs: error code @2@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.78 15697

@1@: could not create restricted token: error code @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.53.79 15699

@1@: unrecognized shutdown mode "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54 Message Numbers Beginning with 15700

2.54.1 15700

@1@: unrecognized signal name "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.2 15701

@1@: unrecognized start type "@2@"
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.54.3 15702

@1@: could not determine the data directory using command "@2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.54.4 15703

@1@: -S option not supported on this platform

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.54.5 15704

@1@: too many command-line arguments (first is "@2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.54.6 15705

@1@: missing arguments for kill mode

An error occurred.
[System Processing]
    Processing will be aborted.

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.54.7 15706

@1@: unrecognized operation mode "@2@"
[Description]
    An error occurred.

[System Processing]
    Processing will be aborted.

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.54.8 15707

@1@: no operation specified
[Description]
    An error occurred.

[System Processing]
    Processing will be aborted.

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.54.9 15708

child process exited with unrecognized status @1@
[Description]
    An error occurred.

[System Processing]
    Processing will be aborted.

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.54.10 15709

failed sanity check, parent OID @1@ of table "@2@" (OID @3@) not found
[Description]
    An error occurred.

[System Processing]
    Processing will be aborted.

**Action**
To investigate the cause of the occurrence from the message, and remove cause.
2.54.15 15714

**could not initialize compression library: @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.16 15715

**could not close compression stream: @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.17 15716

**could not compress data: @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.18 15718

**could not uncompress data: @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.19 15719
could not close compression library: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.20 15720

cannot duplicate null pointer (internal error)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.21 15721

@1@: unrecognized section name: "@2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.22 15722

out of on_exit_nicely slots

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.23 15723

could not close output file: @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.24 15725

unexpected section code @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.25 15726

parallel restore is not supported with this archive file format

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.26 15727

parallel restore is not supported with archives made by pre-8.0 pg_dump

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.27 15728

cannot restore from compressed archive (compression not supported in this installation)

[Description]
An error occurred.
2.54.28 15729

**connecting to database for restore**

[Description]
Terminated normally.

[Action]
No action required.

2.54.29 15730

**direct database connections are not supported in pre-1.3 archives**

[Description]
An error occurred.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.30 15731

**warning from original dump file: @1@**

[Description]
The application or command terminated normally, but a warning was output.

[Action]
Check the message text and confirm that the issue does not affect the expected outcome.

2.54.31 15732

**internal error -- WriteData cannot be called outside the context of a DataDumper routine**

[Description]
An error occurred.

[Action]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.54.32 15733

large-object output not supported in chosen format

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.33 15734

restored @1@ large object

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.34 15736

could not create large object @1@: @2@

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.54.35 15737

could not open large object @1@: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.54.36 15738

could not open TOC file "@1@": @2@
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.37 15740

could not find entry for ID @1@
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.38 15741

could not close TOC file: @1@
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.39 15742

could not open output file "@1@": @2@
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.40 15743
could not open output file: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.41 15744

wrote @1@ byte of large object data (result = @2@)

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.54.42 15746

could not write to large object (result: @1@, expected: @2@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.43 15748

while INITIALIZING:

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.44 15749

while PROCESSING TOC:
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.54.45 15750**

while FINALIZING:

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.54.46 15751**

from TOC entry @1@; @2@ @3@ @4@ @5@ @6@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.54.47 15752**

bad dumpId

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.54.48 15753**

bad table dumpId for TABLE DATA item

An error occurred.
[System Processing]
    Processing will be aborted.

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.54.49 15754

unexpected data offset flag @1@

[Description]
    An error occurred.

[System Processing]
    Processing will be aborted.

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.54.50 15755

file offset in dump file is too large

[Description]
    An error occurred.

[System Processing]
    Processing will be aborted.

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.54.51 15757

directory name too long: "@1@"

[Description]
    An error occurred.

[System Processing]
    Processing will be aborted.

[Action]
    To investigate the cause of the occurrence from the message, and remove cause.

2.54.52 15758

directory "@1@" does not appear to be a valid archive ("toc.dat" does not exist)

[Description]
    An error occurred.

[System Processing]
    Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.54.53 15759

could not open input file "@1@": @2@

Description
An error occurred.

System Processing
Processing will be aborted.

Action
To investigate the cause of the occurrence from the message, and remove cause.

2.54.54 15760

could not open input file: @1@

Description
An error occurred.

System Processing
Processing will be aborted.

Action
To investigate the cause of the occurrence from the message, and remove cause.

2.54.55 15761

could not read input file: @1@

Description
An error occurred.

System Processing
Processing will be aborted.

Action
To investigate the cause of the occurrence from the message, and remove cause.

2.54.56 15762

input file is too short (read @1@, expected 5)

Description
An error occurred.

System Processing
Processing will be aborted.

Action
To investigate the cause of the occurrence from the message, and remove cause.
2.54.57 15763

**input file appears to be a text format dump. Please use psql.**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.58 15764

**input file does not appear to be a valid archive (too short?)**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.59 15765

**input file does not appear to be a valid archive**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.60 15766

**could not close input file: @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.61 15767
unrecognized file format "@1@"
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.62 15768
entry ID @1@ out of range -- perhaps a corrupt TOC
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.63 15770
unrecognized encoding "@1@"
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.64 15771
invalid ENCODING item: @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.65 15772
invalid STDSTRINGS item: @1@
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.54.66 15773

could not set session user to "@1@": @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.54.67 15775

could not set search_path to "@1@": @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.54.68 15776

could not set default_tablespace to @1@: @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.54.69 15779

did not find magic string in file header

An error occurred.
[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.54.70 15780

unsupported version (@1.@2@) in file header

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.54.71 15781

sanity check on integer size (@1@) failed

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.54.72 15783

expected format (@1@) differs from format found in file (@2@)

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.54.73 15786

a worker process died unexpectedly

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.54.74 15787

**Processing missed item @1@ @2@ @3@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.75 15789

**Could not create worker process: @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.76 15793

**Worker process failed: exit code @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.77 15795

**Table "@1@" could not be created, will not restore its data**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.54.78 15796

Invalid OID for large object

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.79 15797

Unrecognized data block type (@1@) while searching archive

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.54.80 15798

Error during file seek: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55 Message Numbers Beginning with 15800

2.55.1 15800

Could not find block ID @1@ in archive -- possibly due to out-of-order restore request, which cannot be handled due to non-seekable input file

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.55.2 15801

could not find block ID @1@ in archive -- possibly corrupt archive

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.3 15802

found unexpected block ID (@1@) when reading data -- expected @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.4 15803

unrecognized data block type @1@ while restoring archive

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.5 15804

could not read from input file: end of file

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.55.6 15805

**could not read from input file: @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.7 15807

**could not close archive file: @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.8 15808

**can only reopen input archives**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.9 15809

**parallel restore from standard input is not supported**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.10 15810
parallel restore from non-seekable file is not supported

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.11 15811
could not determine seek position in archive file: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.12 15812
could not set seek position in archive file: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.13 15814
@1@: could not parse server version "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.14 15815
could not get server_version from libpq
2.55.15 15816
aborting because of server version mismatch

2.55.16 15817
could not connect to database

2.55.17 15820
already connected to a database

2.55.18 15821
could not connect to database
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.19 15822

connection to database "@1@" failed: @2@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.20 15823

query failed: @1@
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.21 15824

query was: @1@
[Description]

2.55.44 15848

could not find file "$@1@" in archive

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.45 15849

could not generate temporary file name: $@1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.46 15850

could not open temporary file

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.47 15851

could not close tar member

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.55.48 15856
invalid OID for large object (@1@)
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.49 15858
could not close temporary file: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.50 15859
actual file length (@1@) does not match expected (@2@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.51 15861
could not find header for file "@1@" in tar archive

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.52 15863

- 919 -
restoring data out of order is not supported in this archive format: "@1@" is required, but comes before "@2@" in the archive file.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.53 15864

incomplete tar header found (@1@ byte)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.54 15867

corrupt tar header found in @1@ (expected @2@, computed @3@) file position @4@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.55 15868

@1@: too many command-line arguments (first is "@2@")

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.56 15870

no matching schemas were found
An error occurred.

**could not find parent extension for @1@**

**Description**
An error occurred.

[System Processing]
Processing will be aborted.
2.55.65 15881

**schema with OID @1@ does not exist**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.66 15889

**failed sanity check, parent table with OID @1@ of sequence with OID @2@ not found**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.67 15890

**query produced null referenced table name for foreign key trigger "@1@" on table "@2@" (OID of table: @3@)**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.68 15891

**invalid column numbering in table "@1@"**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.69 15892

invalid adnum value @1@ for table "@2@"
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.70 15893

expected @1@ check constraint on table "@2@" but found @3@
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.55.71 15895

(The system catalogs might be corrupted.)
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56 Message Numbers Beginning with 15900

2.56.1 15902

unrecognized provolatile value for function "@1@"
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.56.2 15907**

could not parse default ACL list (@1@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.56.3 15908**

could not parse GRANT ACL list (@1@) or REVOKE ACL list (@2@) for object "@3@" (@4@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.56.4 15909**

query to obtain definition of view "@1@" returned no data

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.56.5 15910**

query to obtain definition of view "@1@" returned more than one definition

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.56.6 15911

**definition of view "@1@" appears to be empty (length zero)**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.7 15912

**invalid column number @1@ for table "@2@"**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.8 15913

**missing index for constraint "@1@"**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.9 15914

**unrecognized constraint type: @1@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**Description**

An error occurred.

**System Processing**

Processing will be aborted.

**Action**

To investigate the cause of the occurrence from the message, and remove cause.
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

---

2.56.65 15983

could not read file "@1@": @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

---

2.56.66 15984

could not write to file "@1@": @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

---

2.56.67 15985

could not fsync file "@1@": @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

---

2.56.68 15986

could not close file "@1@": @2@

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.69 15987

*could not find own program executable*

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.70 15988

*invalid checkpoint argument "@1@", must be "fast" or "spread"*

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.71 15989

*invalid argument @1@*

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.72 15990

*option @1@ conflicts with option @2@*

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.73 15991

the configured database storage directory differs from the data_directory parameter

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.74 15992

an invalid value was specified for the option -@1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.75 15993

backup data "@1@" is lost

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.76 15994

cannot be run as root

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.56.77 15995

invalid option --@1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.78 15996

invalid option -@1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.79 15997

backup of the database has not yet been performed, or an incorrect backup storage directory was specified

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.56.80 15998

the database storage directory and the $PGDATA environment variable have not been specified

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.56.81 15999

option @1@ is necessary for option @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57 Message Numbers Beginning with 16000

2.57.1 16000

the requested recovery point is earlier than the date and time that the backup finished

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.2 16001

the specified backup does not exist

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.3 16002

the directory "@1@" for the tablespace with OID "@2@" does not exist

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.57.4 16003

the specified backup storage directory "@1@" is not correct

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.5 16004

the specified database storage directory is not correct

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.6 16005

the token in the file "pg_hba.conf" is too long and will be skipped: "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.7 16006

the directory "@1@" for storing WAL does not exist

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.8 16007
"@1@" is being executed by another user

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.9 16008

the "@1@" parameter was not found

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.10 16009

could not find the configuration file "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.11 16010

could not open the configuration file "@1@": maximum nesting depth exceeded

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.12 16011

the PID file "@1@" does not exist
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.13 16012

the server is running

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.14 16013

the server is not running

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.15 16014

caught signal @1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.16 16015

failed to build the absolute path "@1@"

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.17 16016

failed to check the completion of archiving WAL files

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.18 16017

failed to connect to the database

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.19 16018

failed to get the database OID: @1@ (@2@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.20 16019

failed to remove old backup data

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.57.21 16020

failed to restore the database storage directory "@1@"

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.57.22 16021

failed to restore the tablespace directory "@1@"

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.57.23 16022

retried backup @1@ times, but failed

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.57.24 16023

SQL command failed (@1@)

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.
2.57.25 16024
the database with OID @1@ was created during backup
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.26 16025
backup control function "@1@" failed
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.27 16026
command failed: "@1@"
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.28 16027
could not close the file "@1@": @2@ (errno=@3@)
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.29 16028
could not close the PID file "@@": @@ (errno=@@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.30 16029

could not create the directory "@@": @@ (errno=@@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.31 16030

could not create the file "@@": @@ (errno=@@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.32 16031

could not create the PID file "@@": @@ (errno=@@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.33 16032

could not create the symbolic link "@@": @@ (errno=@@)
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.34 16033

could not identify the current directory: @1@ (errno=@2@)

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.35 16034

could not open the directory "@1@": @2@ (errno=@3@)

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.36 16035

could not open the file "@1@": @2@ (errno=@3@)

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.37 16036

could not open the PID file "@1@": @2@ (errno=@3@)

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.38 16037

could not read the file "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.39 16038

could not read the PID file "@1@": @2@ (errno=@3@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.40 16039

could not read the symbolic link "@1@": @2@ (errno=@3@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.41 16040

could not remove the file "@1@": @2@ (errno=@3@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.57.42 16041

could not remove the PID file ":@1@": @2@ (errno=@3@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.43 16042

could not rename the directory "@1@" to "@2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.44 16043

could not rename the file "@1@" to "@2": @3@ (errno=@4@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.45 16044

could not write the file "@1@": @2@ (errno=@3@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.57.46 16045

could not write the PID file "@1@": @2@ (errno=@3@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.47 16046

failed to find the internal file "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.48 16047

failed to parse the internal file "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.49 16048

failed to parse the internal file: "@1@" (@2@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.50 16049
failed to parse the configuration file "@1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.51 16050

failed to remove archived transaction log files

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.52 16051

failed to replace the contents of the pg_wal directory

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.53 16052

failed to restore the configuration files

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.54 16053

invalid data in the PID file "@1@"
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.55 16055

cannot find the server process (PID: @1@)

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.56 16056

an error occurred during recovery

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.57 16057

could not remove the directory "@1@": @2@ (errno=@3@)

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.58 16058

target "@1@" mismatch (internal error)

An error occurred.
Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.59 16059

the program "@1@" is needed by @2@ but was not found in the same directory as "@3@"

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.60 16060

the program "@1@" was found in "@2@" but was not the same version as @3@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.61 16061

failed to get port number (internal error)

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.62 16062

backup of configuration files completed successfully

Terminated normally.

Continues processing.
2.57.63 16063

backup of database and configuration files completed successfully

[Description]
Terminated normally.

[System Processing]
Continues processing.

[Action]
No action required.

2.57.64 16064

Confirm that the specified directory is correct. If it is correct, the backup data may be corrupted. Copy the backup data to the backup storage directory from backup media.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.65 16065

Check the installation.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.66 16066

Continue the backup.

[Description]
Terminated normally.

[System Processing]
Continues processing.
No action required.

**2.57.67 16067**

Create an empty directory "@1@" on which the database administrator has full permissions, and retry.

**[Description]**

An error occurred.

**[System Processing]**

Processing will be aborted.

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

**2.57.68 16068**

Create an empty directory "@1@" on which the database administrator has full permissions.

**[Description]**

An error occurred.

**[System Processing]**

Processing will be aborted.

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

**2.57.69 16069**

Recover the corrupt resource.

**[Description]**

An error occurred.

**[System Processing]**

Processing will be aborted.

**[Action]**

To investigate the cause of the occurrence from the message, and remove cause.

**2.57.70 16070**

Is the server running?

**[Description]**

An error occurred.

**[System Processing]**

Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.71 16071

Please check whether the backup data exists or is not in the backup storage directory.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.72 16072

Please decrease the length of the path and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.73 16073

Please decrease the number of digits and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.74 16074

Please log in as the user that owns the server process.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.57.75 16075

Please remove the cause of the error, and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.76 16076

Please set the database storage directory "@1@" to -D option, and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.77 16077

Please set the recovery point to be after the date and time that the backup finished, and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.78 16078

Please set the backup storage directory to the 'backup_destination' parameter and restart the server.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.57.79 16079

Please specify the database storage directory as "@1@" and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.80 16080

Please specify the database storage directory correctly and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.81 16081

Please specify the port number correctly and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.82 16082

Please specify an integer greater than 0, and try again.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.83 16083
Please specify an integer greater than 0, or the 'all' keyword, and retry.
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.84 16084

Please specify an integer greater than or equal to 0, and retry.
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.85 16085

Please specify the backup storage directory correctly and retry.
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.86 16086

Please specify the time stamp using the correct length and retry.
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.87 16087

Please start the server and retry.

To investigate the cause of the occurrence from the message, and remove cause.

2.57.92 16092

Specify the backup storage directory with the -B option, and retry.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.93 16093

Refer to "@1@ --help" for more information.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.94 16094

Retry after the other process terminates.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.57.95 16095

Failed to identify backup data.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

**2.57.96 16096**

**restore point name is too long (maximum @1@ bytes)**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.57.97 16097**

**Try "@1@ --help" for more information.**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.57.98 16098**

**keystore location is not specified**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.57.99 16099**

**too many command-line arguments (first is "@1@")**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.58 Message Numbers Beginning with 16100

2.58.1 16100

no operation is specified

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.2 16101

could not open file "@1@": @2@ (errno=@3@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.3 16102

could not read file "@1@": @2@ (errno=@3@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.4 16103

keystore "@1@" is corrupted: size = @2@ bytes, expected size = @3@ bytes

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.58.5 16104

file "@1@" is not a keystore

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.6 16105

key is too long

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.7 16106

key is wrong

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.8 16107

passphrase-based key derivation failed: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.9 16108
decryption of the keystore failed: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.10 16109
decryption of the keystore failed: passphrase is wrong

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.11 16110
keystore "@1@" is corrupted: invalid CRC

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.12 16111
encryption of the keystore failed: error code = @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.13 16112
encryption of the keystore failed: @1@
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.14 16113

could not create file "@1@": @2@ (errno=@3@)

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.15 16114

could not write file "@1@": @2@ (errno=@3@)

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.16 16115

child process exited with unrecognized status @1@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.17 16117

invalid command \@1@

An error occurred.
[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

**2.58.18 16118**

\@1@: extra argument "@2@" ignored

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

**2.58.19 16119**

could not get home directory for user ID @1@: @2@

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

**2.58.20 16120**

\@1@: could not change directory to "@2@": @3@

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

**2.58.21 16121**

You are currently not connected to a database.

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.58.22 16122

no query buffer

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.23 16123

@1@: invalid encoding name or conversion procedure not found

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.24 16124

\@1@: missing required argument

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.25 16125

Passwords didn't match.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.58.26 16128

out of memory

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.27 16129

\@1@: environment variable name must not contain "="

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.28 16130

The server (version @1@) does not support showing function source.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.29 16131

function name is required

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.30 16132
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.31 16137

environment variable PSQL_EDITOR_LINENUMBER_ARG must be set to specify a line number

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.32 16138

could not start editor "@1@"

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.33 16139

could not start /bin/sh

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.34 16140

could not locate temporary directory: @1@
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.58.35 16141**

could not open temporary file "@1@": @2@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.58.36 16142**

\pset: allowed formats are aligned, asciidoc, csv, html, latex, latex-longtable, troff-ms, unaligned, wrapped

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.58.37 16143**

\pset: allowed line styles are ascii, old-ascii, unicode

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.58.38 16144**

\pset: unknown option: @1@
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.39 16145

\!: failed

An error occurred.

Cannot duplicate null pointer (internal error)

An error occurred.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.40 16146

Connection to server was lost

An error occurred.

Failed.

Supplementary information was output.

2.58.42 16148
None.

Refer to this message together with the message that was output immediately beforehand.

2.58.43 16149

unexpected PQresultStatus: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.44 16150

The server (version @1@) does not support savepoints for ON_ERROR_ROLLBACK.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.45 16151

unexpected transaction status (@1@)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.46 16152

\copy: arguments required

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.47 16153

\copy: parse error at "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.48 16154

\copy: parse error at end of line

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.49 16155

@1@: cannot copy from/to a directory

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.50 16156

could not write COPY data: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
Enter data to be copied followed by a newline. End with a backslash and a period on a line by itself, or an EOF signal.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.58.52 16159**

aborted because of read failure

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.58.53 16160**

The server (version @1@) does not support tablespaces.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.58.54 16161**

\df only takes [antwS+] as options

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.58.55 16162

\df does not take a "w" option with server version @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.56 16163

The server (version @1@) does not support altering default privileges.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.57 16164

Did not find any relation named "@1@".

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.58 16165

Did not find any relation with OID @1@.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.59 16166
The server (version @1@) does not support per-database role settings.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.60 16167

Did not find any settings for role "@1@".

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.61 16168

Did not find any settings.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.62 16169

Did not find any relation named "@1@".

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.63 16170

Did not find any relations.
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.58.64 16171**

*The server (version @1@) does not support collations.*

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.58.65 16172**

*The server (version @1@) does not support full text search.*

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.58.66 16173**

*Did not find any text search configuration named "@1@".*

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.58.67 16174**

*The server (version @1@) does not support foreign-data wrappers.*

[Description]
An error occurred.
2.58.68 16175

The server (version @1@) does not support foreign servers.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.69 16176

The server (version @1@) does not support user mappings.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.70 16177

The server (version @1@) does not support foreign tables.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.71 16178

The server (version @1@) does not support extensions.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.58.72 16179

Did not find any extension named "@1@".

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.73 16180

Did not find any extensions.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.74 16181

user name lookup failure: error code @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.75 16182

could not read from input file: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.58.76 16183

could not save history to file "@1@": @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.77 16184

history is not supported by this installation

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.78 16185

@1@: not connected to a database

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.79 16186

@1@: current transaction is aborted

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.80 16187
@1@: unknown transaction status

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.81 16188

Cannot add header to table content: column count of @1@ exceeded.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.82 16189

Cannot add cell to table content: total cell count of @1@ exceeded.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.83 16190

Invalid output format (internal error): @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.58.84 16191

Skipping recursive expansion of variable "@1@"
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.85 16192

Unterminated quoted string

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.86 16193

@1@: out of memory

There was insufficient free space in the server’s memory during execution of the application.

Processing will be aborted.

Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.58.87 16194

Cannot escape without active connection

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.58.88 16195

Could not open log file "@1@": @2@
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.58.89 16196**

could not set printing parameter "@1@"

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.58.90 16197**

\@1@: could not read value for variable

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.58.91 16199**

eextra command-line argument "@1@" ignored

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.59 Message Numbers Beginning with 16200**

**2.59.1 16200**
tab completion query failed: @1@Query was:@2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.2 16201

unrecognized value "@1@" for "@2@"Available values are: @3@.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.3 16202

Try "@1@ --help" for more information.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.4 16203

too many command-line arguments (first is "@1@")

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.5 16204

cannot cluster all databases and a specific one at the same time
**2.59.6 16205**

**cannot cluster specific table(s) in all databases**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.59.7 16206**

**clustering of table "@1@" in database "@2@" failed: @3@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.59.8 16207**

**clustering of database "@1@" failed: @2@**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.59.9 16208**

**@1@: clustering database "@2@"**

[Description]
An error occurred.
2.59.10 16213

could not connect to database @1@: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.11 16214

query failed: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.12 16215

cannot duplicate null pointer (internal error)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.13 16216

out of memory

[Description]
There was insufficient free space in the server's memory during execution of the application.

[System Processing]
Processing will be aborted.
[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.59.14 16217

[Description]

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.15 16218

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.16 16219

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.17 16220

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.59.18 16221

"@1@" is not a valid encoding name

[Description]  
An error occurred.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.59.19 16222

database creation failed: @1@

[Description]  
An error occurred.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.59.20 16223

comment creation failed (database was created): @1@

[Description]  
An error occurred.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.

2.59.21 16228

Passwords didn't match.

[Description]  
An error occurred.

[System Processing]  
Processing will be aborted.

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.
2.59.22 16229

password encryption failed: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.23 16230

creation of new role failed: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.24 16231

missing required argument database name

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.25 16232

Database "@1@" will be permanently removed.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.26 16233
database removal failed: @1@
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.27 16236

missing required argument role name
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.28 16237

Role "@1@" will be permanently removed.
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.29 16238

removal of role "@1@" failed: @2@
[Description]
An error occurred.
[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.30 16239

cannot reindex all databases and a specific one at the same time
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.31 16240

cannot reindex all databases and system catalogs at the same time

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.32 16241

cannot reindex specific table(s) in all databases

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.33 16242

cannot reindex specific index(es) in all databases

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.34 16243

cannot reindex specific table(s) and system catalogs at the same time

An error occurred.
Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.59.35 16244**

cannot reindex specific index(es) and system catalogs at the same time

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.59.36 16245**

reindexing of table "@1@" in database "@2@" failed: @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.59.37 16246**

reindexing of index "@1@" in database "@2@" failed: @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.59.38 16247**

reindexing of database "@1@" failed: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.59.39 16248

@1@: reindexing database "@2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.40 16250

cannot use the "@1@" option when performing only analyze

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.41 16252

cannot vacuum all databases and a specific one at the same time

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.42 16253

cannot vacuum specific table(s) in all databases

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.59.43 16254

vacuuming of table "@1@" in database "@2@" failed: @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.44 16255

vacuuming of database "@1@" failed: @2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.45 16256

SQL error: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.46 16257

variable "@1@" must have a numeric type

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.47 16258
descriptor "@1@" does not exist

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.48 16259

descriptor header item "@1@" does not exist

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.49 16260

nullable is always 1

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.50 16261

key_member is always 0

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.51 16262

descriptor item "@1@" is not implemented
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.52 16263

descriptor item "@1@" cannot be set

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.53 16264

@1@: could not open file "@2@": @3@

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.54 16265

Try "@1@ --help" for more information.

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.59.55 16266

@1@: parser debug support (-d) not available

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.56 16268

@1@: no input files specified
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.57 16269

cursor "@1@" has been declared but not opened
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.58 16270

could not remove output file "@1@"
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.59 16272

invalid bit string literal
[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

<table>

</tbody>
</table>

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.59.64 16277

**unterminated quoted identifier**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.65 16278

**missing identifier in EXEC SQL UNDEF command**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.66 16279

**missing matching "EXEC SQL IFDEF" / "EXEC SQL IFNDEF"**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.67 16280

**missing "EXEC SQL ENDIF;"**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.68 16281
more than one EXEC SQL ELSE
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.69 16282
unmatched EXEC SQL ENDIF
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.70 16283
too many nested EXEC SQL IFDEF conditions
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.71 16284
missing identifier in EXEC SQL IFDEF command
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.59.72 16285
missing identifier in EXEC SQL DEFINE command
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.59.73 16286**

`syntax error in EXEC SQL INCLUDE command`

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.59.74 16287**

`internal error: unreachable state; If the cause of errors cannot be found, contact the Fujitsu Systems Engineer (SE).`

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause. If the cause of errors cannot be found, contact the Fujitsu Systems Engineer (SE).

**2.59.75 16288**

`Error: include path "@1@/@2@" is too long on line @3@, skipping`

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.59.76 16289**

`could not open include file "@1@" on line @2@`
2.59.77 16290

cursor "@1@" does not exist

2.59.78 16291

initializer not allowed in type definition

2.59.79 16292

type name "string" is reserved in Informix mode

2.59.80 16293

type "@1@" is already defined
[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.59.81 16294

**multidimensional arrays for simple data types are not supported**

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.59.82 16295

**AT option not allowed in CLOSE DATABASE statement**

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.59.83 16296

**AT option not allowed in CONNECT statement**

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.59.84 16297

**AT option not allowed in DISCONNECT statement**

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.59.85 16298

**AT option not allowed in SET CONNECTION statement**

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.59.86 16299

**AT option not allowed in TYPE statement**

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.60 Message Numbers Beginning with 16300

2.60.1 16300

**AT option not allowed in VAR statement**

[Description]

An error occurred.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.60.2 16301

**AT option not allowed in WHenever statement**

[Description]

An error occurred.

[System Processing]

Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.60.3 16302

unsupported feature will be passed to server

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.4 16303

SHOW ALL is not implemented

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.5 16304

COPY FROM STDIN is not implemented

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.6 16308

using variable "@1@" in different declare statements is not supported

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.60.7 16309

cursor "@1@" is already defined

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.8 16310

no longer supported LIMIT #,# syntax passed to server

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.9 16311

subquery in FROM must have an alias

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.10 16312

CREATE TABLE AS cannot specify INTO

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

</tbody>
</table>
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.16 16318

invalid connection type: @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.17 16319

expected "@" or ":/", found "@1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.18 16320

invalid data type

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.19 16321

incomplete statement

[Description]
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.20 16322

unrecognized token "@1@"
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.21 16323

only data types numeric and decimal have precision/scale argument
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.22 16324

interval specification not allowed here
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.23 16325

too many levels in nested structure/union definition
[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

### 2.60.24 16326

**pointers to varchar are not implemented**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.60.25 16327

**using unsupported DESCRIBE statement**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.60.26 16328

**initializer not allowed in EXEC SQL VAR command**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.60.27 16329

**arrays of indicators are not allowed on input**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.60.28 16330

@1@ at or near "@2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.29 16331

out of memory

[Description]
There was insufficient free space in the server's memory during execution of the application.

[System Processing]
Processing will be aborted.

[Action]
Estimate memory usage and take the following action:
- If the number of simultaneous connections from client applications is high, reduce it.
- If the number of simultaneous SQL executions is high, reduce it.

2.60.30 16332

unrecognized variable type code @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.31 16333

variable "@1@" is hidden by a local variable of a different type

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.60.32 16334

variable "@1@" is hidden by a local variable

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.60.33 16335

indicator variable "@1@" is hidden by a local variable of a different type

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.60.34 16336

indicator variable "@1@" is hidden by a local variable

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.60.35 16337

indicator for array/pointer has to be array/pointer

[Description]
   An error occurred.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

2.60.36 16338
nested arrays are not supported (except strings)

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.37 16339

indicator for struct has to be a struct

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.38 16340

indicator for simple data type has to be simple

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.39 16341

unrecognized descriptor item code @1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.40 16342

incorrectly formed variable "@1@"
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.60.41 16343**

`variable "@1@" is not a pointer`

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.60.42 16344**

`variable "@1@" is not a pointer to a structure or a union`

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.60.43 16345**

`variable "@1@" is neither a structure nor a union`

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.60.44 16346**

`variable "@1@" is not an array`

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.45 16347

variable "@1@" is not declared

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.46 16348

indicator variable must have an integer type

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.47 16349

unrecognized data type name "@1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.48 16350

multidimensional arrays are not supported

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

**2.60.49 16351**

**multilevel pointers (more than 2 levels) are not supported; found @1@ level**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.60.50 16353**

**pointer to pointer is not supported for this data type**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.60.51 16354**

**multidimensional arrays for structures are not supported**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.60.52 16355**

**invalid URI propagated to internal parser routine: "@1@"**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
end of string reached when looking for matching "}" in IPv6 host address in URI: "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

IPv6 host address may not be empty in URI: "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

unexpected character "@1@" at position @2@ in URI (expected ":" or "/"): "@3@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

extra key/value separator "=" in URI query parameter: "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
missing key/value separator "=" in URI query parameter: "@1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.58 16361

invalid URI query parameter: "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.59 16362

invalid percent-encoded token: "@1@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.60 16363

forbidden value @1@00 in percent-encoded value: "@2@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.61 16364

insufficient data in "T" message
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.60.62 16365

extraneous data in "T" message

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.60.63 16366

insufficient data in "D" message

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.60.64 16367

extraneous data in "D" message

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.60.65 16368

at character @1@

An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.66 16369

unrecognized socket error: 0x@1@/@2@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.67 16370

If true, trusted and untrusted Perl code will be compiled in strict mode.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.68 16371

Perl initialization code to execute when a Perl interpreter is initialized.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.69 16372

Perl initialization code to execute once when plperl is first used.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.70 16373

Perl initialization code to execute once when plperlu is first used.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.71 16374

duplicate declaration

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.72 16375

diagnostics item @1@ is not allowed in GET STACKED DIAGNOSTICS

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.73 16376

diagnostics item @1@ is not allowed in GET CURRENT DIAGNOSTICS

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.60.74 16377

unrecognized GET DIAGNOSTICS item

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.75 16378

unexpected end of function definition

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.76 16379

syntax error

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.77 16380

invalid SQLSTATE code

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.78 16381
syntax error, expected "FOR"
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.79 16382

mismatched parentheses
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.80 16383

missing expression
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.81 16384

missing SQL statement
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.82 16385

incomplete data type declaration
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.60.83 16386**

missing data type declaration

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.60.84 16387**

INTO specified more than once

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.60.85 16388**

generated FROM or IN

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.60.86 16389**

cursor "@1@" has no argument named "@2@"

An error occurred.
2.60.87 16390

value for parameter "@1@" of cursor "@2@" specified more than once

[Description]
An error occurred.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.88 16391

unrecognized RAISE statement option

[Description]
An error occurred.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.89 16392

syntax error, expected "="

[Description]
An error occurred.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.90 16393

during initialization of execution state

[Description]
An error occurred.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
To investigate the cause of the occurrence from the message, and remove cause.

2.60.91 16394

while storing call arguments into local variables

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.92 16395
during function entry

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.93 16396

while casting return value to function's return type

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.94 16397

returned record type does not match expected record type

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.60.95 16398

during function exit

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.60.96 16399

returned row structure does not match the structure of the triggering table

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61 Message Numbers Beginning with 16400

2.61.1 16400

during statement block local variable initialization

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.2 16401

during statement block entry

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.61.3 16402

during statement block exit  
[Description]  
An error occurred.  

[System Processing]  
Processing will be aborted.  

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.  

2.61.4 16403  
during exception cleanup  
[Description]  
An error occurred.  

[System Processing]  
Processing will be aborted.  

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.  

2.61.5 16404  
structure of query does not match function result type  
[Description]  
An error occurred.  

[System Processing]  
Processing will be aborted.  

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.  

2.61.6 16405  
query "@1@" returned @2@ column  
query "@3@" returned @4@ columns  
[Description]  
An error occurred.  

[System Processing]  
Processing will be aborted.  

[Action]  
To investigate the cause of the occurrence from the message, and remove cause.
2.61.7 16406

Sets handling of conflicts between PL/pgSQL variable names and table column names.

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.8 16407

plpy.cursor expected a query or a plan

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.9 16408

plpy.cursor takes a sequence as its second argument

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.10 16409

could not execute plan

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.11 16410
Expected sequence of @1@ argument, got @2@: @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.61.12 16412

**iterating a closed cursor**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.61.13 16413

**iterating a cursor in an aborted subtransaction**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.61.14 16414

**fetch from a closed cursor**

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

### 2.61.15 16415

**closing a cursor in an aborted subtransaction**
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.16 16416

`error fetching next item from iterator`

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.17 16417

`PyList_SetItem() failed, while setting up arguments`

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.18 16418

`PyDict_SetItemString() failed, while setting up arguments`

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.19 16419

`could not create new dictionary while building trigger arguments`

[Description]
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.20 16420

untrapped error in initialization

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.21 16421

could not import "__main__" module

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.22 16422

could not create globals

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.23 16424

could not import "plpy" module

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.24 16425

could not add the spiexceptions module

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.25 16427

could not generate SPI exceptions

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.26 16428

could not unpack arguments in plpy.elog

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.27 16429

could not parse error message in plpy.elog

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.61.28 16430

could not compile PL/Python function "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.29 16431

could not compile anonymous PL/Python code block

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.30 16432

command did not produce a result set

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.31 16433

second argument of plpy.prepare must be a sequence

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.32 16434
plpy.execute expected a query or a plan
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.33 16435

plpy.execute takes a sequence as its second argument
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.34 16437

this subtransaction has already been entered
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.35 16438

this subtransaction has already been exited
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.36 16439

this subtransaction has not been entered
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.61.37 16440**

**there is no subtransaction to exit from**

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.61.38 16441**

**could not create new dictionary**

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.61.39 16443**

**could not create bytes representation of Python object**

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

**2.61.40 16444**

**could not create string representation of Python object**

An error occurred.
[[System Processing]]

Processing will be aborted.

[[Action]]

To investigate the cause of the occurrence from the message, and remove cause.

### 2.61.41 16445

```return value of function with array return type is not a Python sequence```

[[Description]]

An error occurred.

[[System Processing]]

Processing will be aborted.

[[Action]]

To investigate the cause of the occurrence from the message, and remove cause.

### 2.61.42 16446

```could not extract bytes from encoded string```

[[Description]]

An error occurred.

[[System Processing]]

Processing will be aborted.

[[Action]]

To investigate the cause of the occurrence from the message, and remove cause.

### 2.61.43 16447

```The name: @1@ is invalid.```

[[Description]]

An error occurred.

[[System Processing]]

Processing will be aborted.

[[Action]]

To investigate the cause of the occurrence from the message, and remove cause.

### 2.61.44 16448

```";" is not permitted in COBOL```

[[Description]]

An error occurred.

[[System Processing]]

Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.45 16449

"END-EXEC" is not permitted in C
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.46 16450

missing "EXEC SQL ENDIF END-EXEC."
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.47 16451

debug line with EXEC SQL is not permitted
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.48 16452

SQL string literal cannot continue multiline by COBOL syntax
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

</table>
could not open temporary file "@1@" for continue line

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.54 16458

FILLER or implicit FILLER is not available in EXEC SQL TYPE statement

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.55 16459

VALUE clause is not available in EXEC SQL TYPE statement

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.56 16460

REDEFINES clause is not available in EXEC SQL TYPE statement

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.57 16461

FILLER or implicit FILLER is not available in EXEC SQL VAR statement
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.58 16462

VALUE clause is not available in EXEC SQL VAR statement

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.59 16463

syntax error in WHENEVER statement

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.60 16464

FILLER or implicit FILLER is not available in TYPEDEF statement

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.61 16465

VALUE clause is not available in TYPEDEF statement

[Description]
An error occurred.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.62 16466
REDEFINES clause is not available in TYPEDEF statement

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.63 16467
FILLER or implicit FILLER can use only for elementary item in group item

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.64 16468
USAGE clause is not available for group item name

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.65 16469
SIGN clause is not available for group item name

[Description]
An error occurred.

[System Processing]
Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause.

2.61.66 16470

VALUE clause is not available for group item name

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.67 16471

greater than one USAGE clause

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.68 16472

more than one OCCURS clause

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.69 16473

more than one VALUE clause

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.61.70 16474

more than one SIGN clause

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.71 16475

more than one REDEFINES clause

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.72 16476

syntax error at or near "@1@"

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.73 16477

length of varchar type is not assined

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.74 16478
invalid NULL is set

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.61.75 16479

you can not be set to more than 1024 bytes of the string

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
Contact Fujitsu technical support.

2.61.76 16480

group item is too deep

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.77 16481

multidimensional array is not supported

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.61.78 16482

syntax is not available
An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.61.79 16483

There is a character code that can not be determined

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.61.80 16484

The number of variables reached the max number 1000000

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.61.81 16485

Host array variable is needed when using FOR ARRAY_SIZE

An error occurred.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.61.82 16486

Unsupported datatype found at FOR statement

An error occurred.
[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.61.83 16487

FOR value should be positive integer

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.61.84 16488

SELECT..INTO returns too many rows on line @1@

[Description]
  An error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  To investigate the cause of the occurrence from the message, and remove cause.

2.61.85 16491

@1@ failed

[Description]
  Aborted the processing of this operation because an error occurred.

[System Processing]
  Processing will be aborted.

[Action]
  Identify the cause according to the messages shown before this message, and then work around if necessary.

2.61.86 16492

CREATE TRIGGER will create implicit function "@1@"."@2@"() for TRIGGER "@3@" on TABLE "@4@"

[Description]
  Terminated normally.
Continues processing.

No action required.

2.61.87 16493

The cursor is invalid on line @1@

An error occurred during execution of the command.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.61.88 16494

Constraint trigger "@1@" for relation "@2@" cannot be replaced with non-constraint trigger

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.61.89 16495

Trigger "@1@" for relation "@2@" cannot be replaced with constraint trigger

An error occurred during execution of the application or command.

Processing will be aborted.

Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.61.90 16497

unterminated /*+ comment for hint of pg_hint_plan

An unterminated /*+ comment for hint of pg_hint_plan is detected.

Processing will be aborted.
[Action]
  Terminate /*+ comment for hint of pg_hint_plan.

2.61.91 16498

trigger created with EXECUTE PROCEDURE cannot be replaced by DO block
[Description]
  Trigger created with EXECUTE PROCEDURE cannot be replaced by DO block.

[System Processing]
  Processing is aborted.

[Action]
  Please redefine it after deleting the trigger.

2.61.92 16499

trigger created with DO block cannot be replaced by EXECUTE PROCEDURE
[Description]
  Trigger created with DO block cannot be replaced by EXECUTE PROCEDURE.

[System Processing]
  Processing is aborted.

[Action]
  Please redefine it after deleting the trigger.

2.62 Message Numbers Beginning with 16500

2.62.1 16500

the connection is not the same as the connection in DECLARE STATEMENT, on line @1@
[Description]
  The connection is not the same as the connection in DECLARE STATEMENT, on line @1@

[System Processing]
  Processing is aborted.

[Action]
  Please do not specify the connection when you use SQL statement identifier declared with DECLARE STATEMENT.

2.62.2 16501

cannot copy window "@1@" because it has a frame clause
[Description]
  An error occurred during execution of the application or command.

[System Processing]
  Processing will be aborted.
[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.62.3 16502
could not find any WAL files
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.62.4 16503
exceeded maxAllocatedDescs (@1@) while trying to open file "@2@"
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.62.5 16504
exceeded maxAllocatedDescs (@1@) while trying to open directory "@2@"
[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.62.6 16505
tsquery is too large
[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.
2.62.7 16506

bit string length exceeds the maximum allowed (@1@)

[Description]
An error occurred during execution of the application or command.

[System Processing]
Processing will be aborted.

[Action]
Check the message text and confirm that the application is written correctly and the command is being used correctly.

2.62.8 16507

error occurred before error message processing is available

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.62.9 16508

language validation function @1@ called for language @2@ instead of @3@

[Description]
An error occurred.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.62.10 16510

The sslservercertcn "@1@" could not be verified

[Description]
value of sslservercertcn is different from common name in the server certificate.

[System Processing]
Processing is aborted.

[Action]
Set SSL certificate's common name to sslservercertcn.

2.62.11 16511
@1@: must be superuser to run this command

[Description]
Must be superuser to run this command.

[System Processing]
Processing will be aborted.

[Action]
Re-execute the command by the superuser.

2.62.12 16512

@1@: must be database super user to run this command

[Description]
Must be database super user to run this command.

[System Processing]
Processing will be aborted.

[Action]
Re-execute the command by the database super user.

2.62.13 16513

@1@: no subcommand specified

[Description]
No subcommand specified.

[System Processing]
Processing will be aborted.

[Action]
Check the command-line, and re-execute the command with correct options or operands.

2.62.14 16514

@1@: unrecognized subcommand "@2@"

[Description]
Unknown subcommand is specified.

[System Processing]
Processing will be aborted.

[Action]
Check the command-line, and re-execute the command with correct subcommand.

2.62.15 16515

@1@: too many command-line arguments (first is "@2@")
Too many command-line arguments.

Processing will be aborted.

Check the command-line, and re-execute the command with correct options or operands.

@1@: argument to an option "@2@" must be a list of port numbers

Argument to the option must be a list of port numbers.

Specify multiple port number, separated by commas argument to an option, and re-execute the command. Specify a number from 1024 to 32767 for the port number.

@1@: invalid argument for an option "@2@"

Invalid argument for an option.

Check the options specified in command-line, and re-execute the command with correct operands.

@1@: option "@2@" is required

The indispensable option is not specified.

Check the command-line, and re-execute the command with correct options or confirm the indispensable option is being used correctly.

@1@: requires an option "@2@" or setting the "@3@" environment variable
[Description]
Requires an option or setting the environment variable.

[System Processing]
Processing will be aborted.

[Action]
Check the command-line, and re-execute the command with correct options. Or, set a correct value to the environment variable, and re-execute the command.

2.62.20 16520

@1@: successfully completed

[Description]
Command successfully completed.

[System Processing]
Continues processing.

[Action]
No action required.

2.62.21 16521

@1@: user "@2@" does not exist

[Description]
The user is not registered into OS.

[System Processing]
Processing will be aborted.

[Action]
Register the user into OS, and re-execute the command. Or, re-execute the command which specified the registered user.

2.62.22 16522

@1@: data directory "@2@" does not exist

[Description]
The data directory does not exist.

[System Processing]
Processing will be aborted.

[Action]
Confirm that an option "--cluster-standbynode" is being used correctly. Or, check the command-line, and re-execute the command with existing data directory.

2.62.23 16523

@1@: "@2@" is not a valid data directory
The data directory is not valid.

Processing will be aborted.

Check the command-line, and re-execute the command with valid data directory.

2.62.24 16524

@1@: database cluster is not stopped

Database cluster is not stopped.

Processing will be aborted.

Stop the database cluster, and re-execute the command.

2.62.25 16525

@1@: domain root "@2@" already exists

The domain root already exists.

Processing will be aborted.

Check the command-line, and re-execute the command with correct domain root.

2.62.26 16526

@1@: could not create directory "@2@"

Could not create the directory.

Processing will be aborted.

Check the following and eliminate the cause of errors, and re-execute the command.
   - the state of a disk and file system to creating the directory
   - permission of the upper directory of specified directory

2.62.27 16527

@1@: start of PL/extJava has timed out : @2@
Timed out waiting for start of PL/extJava.

Processing will be aborted.

Re-execute the command after the load on the system has decreased.

---

@1@: stop of PL/extJava has timed out : @2@

Timed out waiting for stop of PL/extJava.

Processing will be aborted.

Re-execute the command after the load on the system has decreased.

---

@1@: port number "@2@" is already in use

The port number is already in use.

Processing will be aborted.

Re-execute the command with a port number which is not used in other processes.

---

@1@: domain name can only be specified "domain1"

Domain name can only be specified "domain1".

Processing will be aborted.

Check the command-line, and re-execute the command with correct domain name.

---

@1@: domain "@2@" has already been created

The domain has already been created.
<table>
<thead>
<tr>
<th>Error Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.62.32 16532</td>
<td>@1@: domain &quot;@2@&quot; has not been created. The domain has not been created.</td>
</tr>
<tr>
<td>2.62.33 16533</td>
<td>@1@: permission denied to update file &quot;@2@&quot; Permission denied to update the file.</td>

<td>2.62.34 16534</td>
<td>@1@: container for database &quot;@2@&quot; does not exist Container for database does not exist.</td>
</tr>
<tr>
<td>2.62.35 16535</td>
<td>@1@: container for database &quot;@2@&quot; already exists Container for database already exists.</td>
</tr>
</tbody>
</table>
[Action]
Check the command-line, and re-execute the command with correct database name.

2.62.36 16536

@1@: command error occurred

[Description]
Internal command error occurred.

[System Processing]
Processing will be aborted.

[Action]
Fix the problem by referring to the messages prior to this one.

2.62.37 16537

@1@: the domain was not able to be deleted because there was a container

[Description]
The domain was not able to be deleted because the domain have a container.

[System Processing]
Processing will be aborted.

[Action]
Delete all containers on the domain, and re-execute the command. Or, re-execute the command with "--force" option.

2.62.38 16538

@1@: could not access the data directory

[Description]
Could not access the data directory.

[System Processing]
Processing will be aborted.

[Action]
Confirm that an option "--cluster-standbynode" is being used correctly. Or, specify database super user in "--dbadminuser" option and re-execute the command.

2.62.39 16539

@1@: server instance "@2@" does not exist

[Description]
Server instance does not exist.

[System Processing]
Processing will be aborted.
Check the command-line, and re-execute the command with correct server instance.

2.62.40 16540

@1@: specified database name "@2@" does not follow the naming rules

[Description]
Specified database name does not follow the naming rules.

[System Processing]
Processing will be aborted.

[Action]
Check the command-line, and re-execute the command with correct database name.

2.62.41 16541

@1@: all the server instances of the container cannot be deleted

[Description]
All the server instances of the container cannot be deleted.

[System Processing]
Processing will be aborted.

[Action]
Check the command-line, and re-execute the command with correct database name.

2.62.42 16542

@1@: the mount does the shared-file system of the domain root or the data directory

[Description]
A command executing node is not a standby node.

[System Processing]
Processing will be aborted.

[Action]
Execute the command on standby node.

2.62.43 16543

@1@: cannot execute this subcommand on standby node

[Description]
Cannot execute this subcommand on standby node.

[System Processing]
Processing will be aborted.

[Action]
Execute the command on primary node.
2.62.44 16544

@1@: cannot execute this command concurrently

[Description]
Cannot execute this command concurrently.

[System Processing]
Processing will be aborted.

[Action]
Re-execute the command after a command executing was finished.

2.62.45 16545

@1@: domain root "@2@" does not exist

[Description]
Domain root does not exist.

[System Processing]
Processing will be aborted.

[Action]
Confirm that the shared-file system of the domain root is mounted. Or, restore domain root from backup and re-execute the command.

2.62.46 16546

parameter "@1@" necessary for the PL/extJava environment was not set

[Description]
PL/extJava environment was not set.

[System Processing]
Processing will be aborted.

[Action]
Set the PL/extJava environment.

2.62.47 16547

mismatched parentheses

[Description]
Missing parenthesis '(' or ')' in Java function definition.

[System Processing]
Processing will be aborted.

[Action]
Check the definition of Java function.
2.62.48 16548

invalid format specification for Java function

[Description]
Invalid format specification for Java function.

[System Processing]
Processing will be aborted.

[Action]
Check the definition of Java function.
Java function definition format is [package].[class].[method].

2.62.49 16549

Java function cannot return type @1@

[Description]
The specified data type is not supported as Java function.

[System Processing]
Processing will be aborted.

[Action]
Check the data type of return value.

2.62.50 16550

Java function cannot accept type @1@

[Description]
The specified data type is not supported as Java function arguments.

[System Processing]
Processing will be aborted.

[Action]
Check the data type of arguments value.

2.62.51 16551

could not execute the Java function at the application server: HTTP status code @1@ details: "@2@"

[Description]
The application server could not execute the Java function.

[System Processing]
Processing will be aborted.

[Action]
Check the Java function of registered in application server.
Check the details.
- The classpath is not found. (plextjava_lib_dir=%s2)
  %s2: directory
  The directory that stores the Java function is not in the application server. Check the directory and register the Java function.
- The return type is different. (%s3)
  %s3: data type
  The return value of the Java function is not corresponding to the CREATE FUNCTION definition. Check the data type of Java function.
- The method is not found. (%s4)
  %s4: data type
  The Java function to which the data type is corresponding is not found. Check the data type of Java function.
- The class is not found. (%s5)
  %s5: class name
  The Java function to which the class name is corresponding is not found. Check the class name of Java function.
- The method is not static modifier. (%s6)
  %s6: Java function name
  The Java function is not defined by "Static". Check the Java function definition.
- The class is not found. (%s7)
  %s7: Java function name
  The Java function is not defined by "Public". Check the Java function definition.
- Java application throws exception (%s8).
  %s8: exception
  The exception was generated by the Java function. Check the Java function definition.
- no message
The following causes are thought.
- There is a possibility that the container is not made. Make the container in application server.
a) There is a possibility where the number of server instances is insufficient. Add server instance (JavaVM) to the application server.
b) There is a possibility that memory shortage occurs. Check the Java application.
c) There is a possibility that the time-out is generated. Check the Java application.
d) There is a possibility that abnormality occurs by the application server. Check the following logs.
- Event log (For Windows(R))/system log (For Solaris/Linux).
- Server log of container
- JavaVM log of container
- Trace log of Web server
- Internal log of Web server

2.62.52 16552
could not connect to application server: @1@
[Description]
  Could not connect to application server.
[System Processing]
  Processing will be aborted.

[Action]
  Check the plextjava.http_port parameter in postgresql.conf.

2.62.53 16553

could not create socket for application server connection: @1@

[Description]
  Could not create socket.

[System Processing]
  Processing will be aborted.

[Action]
  There is possible where an open number of files that can be used with the system is insufficient. Please confirm the total of the file that can be used with the system.

2.62.54 16554

could not send data to application server: @1@

[Description]
  The application server was disconnected during execution of the Java function.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message of application server.

2.62.55 16555

could not receive data from application server

[Description]
  The application server was disconnected during execution of the Java function.

[System Processing]
  Processing will be aborted.

[Action]
  Check the message of application server.

2.62.56 16556

could not receive data from application server: @1@

[Description]
  The application server was disconnected during execution of the Java function.
[System Processing]
Processing will be aborted.

[Action]
Check the message of application server.

2.62.57 16563

@1@: at least one option of "@2@" must be specified
[Description]
Must specify at least one option.

[System Processing]
Processing will be aborted.

[Action]
Check the command-line, and re-execute the command with correct options.

2.62.58 16574

@1@: could not write directory "@2@"
[Description]
Could not write the directory.

[System Processing]
Processing will be aborted.

[Action]
Check that the disk of the directory has free space, and check that the abnormalities of the disk have not occurred.

2.62.59 16575

@1@: cannot execute with "@2@" option in primary server
[Description]
Do not specify the option to execute the command in primary server.

[System Processing]
Processing will be aborted.

[Action]
Check the command-line, and re-execute the command with correct options.
Restore it because PL/extJava environment may be corrupted when the server is member nodes of the cluster.

2.62.60 16576

@1@: specify "@2@" option in standby server
[Description]
Specify the option to execute the command in standby server.
[System Processing]
Processing will be aborted.

[Action]
Check the command-line, and re-execute the command with correct options.
Restore it because PL/extJava environment may be corrupted when the server is member nodes of the cluster.

**2.62.61 16577**

Could not translate client host name "@1@" to IP address: @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.62.62 16578**

Could not resolve client IP address to a host name: @1@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.62.63 16579**

SELECT target entry is named "@1@".

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

**2.62.64 16580**

SELECT target entry has type @1@, but column has type @2@.

[Description]
Supplementary information was output.
2.62.65 16581

RETURNING list entry has type @1@, but column has type @2@.

[Description]
Supplementary information was output.

[System Processing]
None.

[Action]
Refer to this message together with the message that was output immediately beforehand.

2.62.66 16582

pg_largeobject entry for OID @1@, page @2@ has invalid data field size @3@.

[Description]
An error occurred during I/O processing in the database server.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.62.67 16583

could not close directory "@1@": @2@.

[Description]
Terminated normally but a warning was output.

[System Processing]
Continues processing.

[Action]
Check the message text and confirm that the event indicated in supplementary information reported by the system is a planned event.

2.62.68 16584

could not create shared memory segment "@1@": @2@.

[Description]
Could not create shared memory segment.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.62.69 16585**

*could not open shared memory segment "@1@": @2@
[Description]
Could not open shared memory segment.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.62.70 16586**

*could not map shared memory segment "@1@": @2@
[Description]
Could not map shared memory segment.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.62.71 16587**

*could not unmap shared memory segment "@1@": @2@
[Description]
Could not unmap shared memory segment.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.62.72 16588**

*could not remove shared memory segment "@1@": @2@
[Description]
Could not remove shared memory segment.

[System Processing]
Processing will be aborted.
2.62.73 16589

**background worker "@1@"**: must attach to shared memory in order to request a database connection

[Description]

Could not register background worker.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause

2.62.74 16590

**background worker "@1@"**: cannot request database access if starting at postmaster start

[Description]

Could not register background worker.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause

2.62.75 16591

**background worker "@1@"**: invalid restart interval

[Description]

Could not register background worker.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause

2.62.76 16592

**terminating background worker "@1@" due to administrator command**

[Description]

Could not register background worker.

[System Processing]

Processing will be aborted.
To investigate the cause of the occurrence from the message, and remove cause

2.62.77 16596

dynamic shared memory control segment is not valid

[Description]

dynamic shared memory control segment is not valid.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause

2.62.78 16597

too many dynamic shared memory segments

[Description]

Too many dynamic shared memory segments exist.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause

2.62.79 16599

could not stat shared memory segment "@1@": @2@

[Description]

Could not get details about dynamic shared memory segment.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause

2.63 Message Numbers Beginning with 16600

2.63.1 16600

could not resize shared memory segment "@1@" to @2@ bytes: @3@

[Description]

Could not resize shared memory segment.

[System Processing]

Processing will be aborted.
[Action]
To investigate the cause of the occurrence from the message, and remove cause

2.63.2 16601
could not get shared memory segment: @1@
[Description]
Could not get shared memory segment.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause

2.63.3 16604
cannot add more timeout reasons
[Description]
cannot add more timeout reasons

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause

2.63.4 16606
aborting because lock on relation "@1@"."@2@" is not available
[Description]
Aborting because lock on relation is not available.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.5 16607
affix file contains both old-style and new-style commands
[Description]
Affix file contains commands in both old and new format.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.63.6 16608

**aggregate cannot accept shell type @1@**

[Description]
aggregate cannot accept shell type.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.7 16609

**aggregate functions are not allowed in a recursive query's recursive term**

[Description]
aggregate functions are not allowed in a recursive query's recursive term.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.8 16610

**aggregate functions are not allowed in check constraints**

[Description]
aggregate functions are not allowed in check constraints.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.9 16611

**aggregate functions are not allowed in DEFAULT expression**

[Description]
aggregate functions are not allowed in DEFAULT expressions.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.10 16612
aggregate functions are not allowed in EXECUTE parameters

[Description]
aggregate functions are not allowed in EXECUTE parameter.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.11 16613
aggregate functions are not allowed in FROM clause of their own query level

[Description]
Should only be possible in a LATERAL subquery. aggregate functions are not allowed in FROM clause of their own query level.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.12 16614
aggregate functions are not allowed in functions in FROM

[Description]
aggregate functions are not allowed in functions in FROM.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.13 16615
aggregate functions are not allowed in index expression

[Description]
aggregate functions are not allowed in index expression.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.14 16616
aggregate functions are not allowed in index predicates
aggregate functions are not allowed in index predicates.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.15 16617

aggregate functions are not allowed in JOIN conditions

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.16 16618

aggregate functions are not allowed in @1@

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.17 16620

aggregate functions are not allowed in trigger WHEN conditions

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.18 16621

aggregate functions are not allowed in window RANGE
aggregate functions are not allowed in window RANGE.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.19 16622

aggregate functions are not allowed in window ROWS

[Description]
aggregate functions are not allowed in window ROWS.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.20 16623

aggregate mfinalfunc must not be specified without mstype

[Description]
aggregate mfinalfunc must not be specified without mstype.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.21 16624

aggregate minitcond must not be specified without mstype

[Description]
aggregate minitcond must not be specified without mstype.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.22 16625

aggregate minvfunc must be specified when mstype is specified
aggregate minvfunc must be specified when mstype is specified. If mtransType is given, mtransfuncName and minvtransfuncName must be as well; if not, then none of the moving-aggregate options should have been given.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

---

**2.63.23 16626**

**aggregate minvfunc must not be specified without mstype**

aggregate minvfunc must not be specified without mstype. If mtransType is given, mtransfuncName and minvtransfuncName must be as well; if not, then none of the moving-aggregate options should have been given.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

---

**2.63.24 16627**

**aggregate msfunc must be specified when mstype is specified**

aggregate msfunc must be specified when mstype is specified. If mtransType is given, mtransfuncName and minvtransfuncName must be as well; if not, then none of the moving-aggregate options should have been given.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

---

**2.63.25 16628**

**aggregate msfunc must not be specified without mstype**

aggregate msfunc must not be specified without mstype. If mtransType is given, mtransfuncName and minvtransfuncName must be as well; if not, then none of the moving-aggregate options should have been given.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

---

**2.63.26 16629**
**aggregate msspace must not be specified without mstype**

[Description]
aggregate msspace must not be specified without mstype. If mtransType is given, mtransfuncName and
minvtransfuncName must be as well; if not, then none of the moving-aggregate options should have been given.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.63.27 16630**

**aggregates cannot accept set arguments**

[Description]
aggregates cannot accept set arguments.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.63.28 16631**

**aggregates cannot have more than @1@ argument**

[Description]
aggregates cannot have more than 99 argument. Aggregates can have at most FUNC_MAX_ARGS-1 args, else the
transfn and/or finalfn will be unrepresentable in pg_proc. We must check now to protect fixed-size arrays here and
possibly in called functions.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

---

**2.63.29 16632**

**aggregates cannot have output arguments**

[Description]
aggregates cannot have output arguments.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.
2.63.30 16633

A hypothetical-set aggregate must have direct arguments matching its aggregated arguments

[Description]
A hypothetical-set aggregate must have direct arguments matching its aggregated arguments.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.31 16634

All connection parameters must be supplied because no database connection exists

[Description]
All connection parameters must be supplied because no database connection exists. We don't know the supplied connection parameters and don't want to connect to the wrong database by using defaults, so require all parameters to be specified.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.32 16635

All replication slots are in use

[Description]
All replication slots are in use.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

2.63.33 16636

An aggregate with DISTINCT must have at least one argument

[Description]
An aggregate with DISTINCT must have at least one argument. Returning an empty list would cause the parsed Query to look like it didn't have DISTINCT, with results that would probably surprise the user. Note: this case is presently impossible for aggregates because of grammar restrictions, but we check anyway.

[System Processing]
Processing will be aborted.
[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.63.34 16637

an ordered-set aggregate with a VARIADIC direct argument must have one VARIADIC aggregated argument of the same data type

[Description]

an ordered-set aggregate with a VARIADIC direct argument must have one VARIADIC aggregated argument of the same data type.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.63.35 16638

argument declared "anyrange" is not a range type but type @1@

[Description]

argument declared \"anyrange\" is not a range type but type format type of range_type.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.63.36 16639

argument list must have even number of elements

[Description]

argument list must have even number of elements.

[System Processing]

Processing will be aborted.

[Action]

To investigate the cause of the occurrence from the message, and remove cause.

2.63.37 16640

argument of lo_read exceeds integer range

[Description]

argument of lo_read exceeds integer range. Long ago, somebody thought it'd be a good idea to declare this function as taking size_t ... but the underlying backend function only accepts a signed int32 length. So throw error if the given value overflows int32.
[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.63.38 16641**

**argument of lo_truncate exceeds integer range**

**[Description]**
argument of lo_truncate exceeds integer range. Long ago, somebody thought it'd be a good idea to declare this function as taking size_t ... but the underlying backend function only accepts a signed int32 length. So throw error if the given value overflows int32. (A possible alternative is to automatically redirect the call to lo_truncate64; but if the caller wanted to rely on that backend function being available, he could have called lo_truncate64 for himself.)

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.63.39 16642**

**argument of lo_write exceeds integer range**

**[Description]**
argument of lo_write exceeds integer range. Long ago, somebody thought it'd be a good idea to declare this function as taking size_t ... but the underlying backend function only accepts a signed int32 length. So throw error if the given value overflows int32.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.63.40 16643**

**argument of @1@ must be an array of objects**

**[Description]**
argument of funcname must be an array of objects.

[System Processing]
Processing will be aborted.

[Action]
To investigate the cause of the occurrence from the message, and remove cause.

**2.63.41 16644**

**Array contents must start with "{}"**
<table>
<thead>
<tr>
<th>Code</th>
<th>Message Description</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.63.42 16645</td>
<td>Array contents must start with {&quot;,&quot; intuit dimensions from brace structure -- it better match what we were given.</td>
<td>Processing will be aborted. To investigate the cause of the occurrence from the message, and remove cause.</td>
</tr>
<tr>
<td>2.63.43 16646</td>
<td>Array must be one-dimensional.</td>
<td>Processing will be aborted. To investigate the cause of the occurrence from the message, and remove cause.</td>

<td>2.63.46 16649</td>
<td>Array must not contain nulls.</td>
<td>Processing will be aborted. To investigate the cause of the occurrence from the message, and remove cause.</td>
</tr>
</tbody>
</table>
[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

### 2.63.46 16649

**Array value must start with "{" or dimension information**

[Description]
   Array value must start with "/" or dimension information. No array dimensions, so intuit dimensions from brace structure.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

### 2.63.47 16650

**authentication file line too long**

[Description]
   authentication file line too long. Line too long!

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

### 2.63.48 16651

**a variadic ordered-set aggregate must use VARIADIC type ANY**

[Description]
   A variadic ordered-set aggregate must use VARIADIC type ANY. An ordered-set aggregate that is VARIADIC must be VARIADIC ANY. In principle we could support regular variadic types, but it would make things much more complicated because we'd have to assemble the correct subsets of arguments into array values. Since no standard aggregates have use for such a case, we aren't bothering for now.

[System Processing]
   Processing will be aborted.

[Action]
   To investigate the cause of the occurrence from the message, and remove cause.

### 2.63.49 16652

**a worker process died unexpectedly**
a worker process died unexpectedly.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.

2.63.50 16653

canceling statement due to lock timeout

canceling statement due to lock timeout. If LOCK_TIMEOUT and STATEMENT_TIMEOUT indicators are both set, we prefer to report the former; but be sure to clear both.

Processing will be aborted.

To investigate the cause of the occurrence from the message, and remove cause.
