

FUJITSU Enterprise Postgres 13 for Kubernetes

Reference

Preface

Purpose of this document

This document is a reference, and explains parameter.

Intended readers

This document is aimed at people who manage and operate.

Readers of this document are also assumed to have general knowledge of:

- Linux
- Kubernetes
- Containers
- Operators

Structure of this document

This document is structured as follows:

[Chapter 1 Custom Resource Parameters](#)

Explains the parameter.

[Appendix A Default Metrics Queries](#)

Explains the Default Metrics Queries

[Appendix B Default Alert Rules](#)

Explains the Default Alert Rules

Abbreviations

The following abbreviations are used in this manual:

Full Name	Abbreviations
FUJITSU Software Enterprise Postgres for Kubernetes FUJITSU Software Enterprise Postgres	FEP or FUJITSU Enterprise Postgres
Transparent Data Encryption	TDE
Custom Resource	CR
Custom Resource Definition	CRD
Persistent Volume	PV

Trademarks

- Linux is a registered trademark or trademark of Mr. Linus Torvalds in the U.S. and other countries.
- Red Hat and all Red Hat-based trademarks and logos are trademarks or registered trademarks of Red Hat, Inc. in the United States and other countries.
- S/390 is a registered trademark of International Business Machines Corporation ("IBM") in the U.S. and other countries.

Other product and company names mentioned in this manual are the trademarks or registered trademarks of their respective owners.

Export restrictions

If this document is to be exported or provided overseas, confirm legal requirements for the Foreign Exchange and Foreign Trade Act as well as other laws and regulations, including U.S. Export Administration Regulations, and follow the required procedures.

Chapter 1 Custom Resource Parameters

This chapter explains the parameter.

1.1 FEPCluster Parameter

Equivalent Kubernetes command: `kubectl apply -f FEPClusterCR.yaml`

This operation will create a FEPCluster with supplied information in FEPClusterCR.yaml.

Initial configuration and subsequent changes to FEP Cluster are done through FEP Cluster CR.

Field	Default	Details
metadata.name	new-fep	Name for the Cluster. FEP server container will use this value for Patroni scope. e.g. new-fep
spec.fep.autoPodRestart	<omitted>	Optional This parameter affects the behaviour when value(s) of CPU, memory and/or image for FEP and/or optional Backup container are updated in FEPCluster CR. If it is NOT defined and set to True, operator will automatically create an action CR to make values effective by restarting all pods in an orderly fashion to minimise outage. If it is set to False, automatic restart of PoDs will NOT happen. To make the changes effective, user must restart pods by creating action CR with type 'pod_restart' and arguments 'ALL'
spec.fep.customAnnotation.allDeployments	{ } (*)	Contents under this are optional. User can remove { } and add multiple key-value pairs. All of these pair will be added to annotations of FEP statefulSet and FEP Pods. If left at default, no annotation is added to Pods and statefulSets
spec.fep.image.image	<omitted>	FEP server container image to be used quay.io/fujitsu/fujitsu-enterprise-postgres-13-server:ubi8-13-0.0 It is optional. Image line is omitted by default. In such a case, it will pick up URL of image from operator container environment. If you specify the image, Operator will take that image to deploy fep container
spec.fep.image.pullPolicy	IfNotPresent	
spec.fep.mcSpec.limits	cpu: 500m memory: 700Mi	

Field	Default	Details
spec.fep.mcSpec.requests	cpu: 200m memory: 512Mi	
spec.fep.sysExtraLogging	false	To turn extra debugging on, set value to true It can be turned on/off at any time
spec.fep.instances	1	Number of nodes in the cluster, including both Master and Replicas. In Example CR, it is kept at 1 for certification. However, user can change it to 3 for 1 master and 2 replicas.
spec.fep.servicePort	27500	TCP port for FEP master service
spec.fep.syncMode	off	Replication Mode: off - async replication on - sync replication
spec.fep.forceSsl	true	Controls that the communication to the server should only be via SSL. Changes are reflected in pg_hba.conf
spec.fep.monitoring		This is an Optional section. This defines whether monitoring enabled(true) or disabled(false) , MTLs enabled or disabled & Basic authentication enabled or not
spec.fep.monitoring.enable	false	If set true, the operator will create FEPEXporter with given spec
spec.fep.monitoring.fepExporter		This is Optional section. Exporter spec section applied only if enable: true
spec.fep.monitoring.fepExporter.authSecret		This is Optional section. Base Authentication secret to provide username & encrypted password of user
spec.fep.monitoring.fepExporter.authSecret.secretName	(created by user)	Mandatory Name of secret that contains username and password
spec.fep.monitoring.fepExporter.authSecret.userKey	(created by user)	Mandatory Key of username in specified secret
spec.fep.monitoring.fepExporter.authSecret.passwordKey	(created by user)	Mandatory Key of password in specified secret
spec.fep.monitoring.fepExporter.tls		This is optional section. FEPEXporter MTLs specs. Mandatory if tls specs defined for Prometheus specs
spec.fep.monitoring.fepExporter.tls.certificateName	(created by user)	Mandatory.This points to Kubernetes TLS secret that contains the certificate of FepExporter. Prometheus will use this for certificate authentication. The certificate itself is stored in the key tls.crt.

Field	Default	Details
spec.fep.monitoring.fepExporter.tls.caName	(created by user)	Mandatory This points to Kubernetes configmap that contains additional CA the client use to verify a server certificate. The CA is stored in the key ca.crt.
spec.fep.monitoring.prometheus		This is Optional section. Prometheus specs are mandatory if tls specs defined for FEPEXporter
spec.fep.monitoring.prometheus.tls		Prometheus MTLS specs
spec.fep.monitoring.prometheus.tls.certificateName	(created by user)	This is an Optional parameter. These points to Kubernetes TLS secret that contains the certificate of Prometheus. FEPEXporter will use this for certificate authentication. The certificate itself is stored in the key tls.crt.
spec.fep.monitoring.prometheus.tls.caName	(created by user)	This is an Optional parameter. This point to Kubernetes configmap that contains additional CA the client use to verify a server certificate. The CA is stored in the key ca.crt.
spec.fep.podAntiAffinity	false	Defines that all the pods should not run on same worker node
spec.fep.podDisruptionBudget	false	Allows to maintain minimum number of pods of an application even when some nodes are voluntarily drained for say, maintenance
spec.fep.replicationSlots		List of Patroni permanent replication slots.
spec.fep.replicationSlots.demo_subscription1		The 'demo_subscription1' is the slot name. This name cannot be same as any pod name (e.g., new-fep-sts-01) in the cluster. Otherwise, the slot will not be created.
spec.fep.replicationSlots.type	logical	Must be 'logical' for logical replication
spec.fep.replicationSlots.database	postgres	Specify the database name for logical replication
spec.fep.replicationSlots.plugin	pgoutput	FEP supports 'pgoutput' by default.
spec.fep.usePodName		Optional Setting this key to true will make internal POD communication, both Patroni and Postgres to use hostname, instead of IP address. This is important for TLS as the hostname of the POD is predictable and can be used to create Server Certificate, whereas IP address is unpredictable and cannot be used to create Certificate. There is no negative effect setting this key to true even if TLS (i.e. Server Certificate) is not used.
spec.fep.patroni.tls.certificateName	(created by user)	Optional This point to Kubernetes TLS secret that

Field	Default	Details
		contains the certificate for Patroni. The certificate itself is stored in the key tls.crt. This field is optional. When this key is set, the Operator will ignore the value in systemCertificates
spec.fep.patroni.tls.caName	(created by user)	Optional This points to Kubernetes configmap that contains additional CA for Patroni to verify client. The CA is stored in the key ca.crt. This field is optional.
spec.fep.postgres.tls.certificateName	(created by user)	Optional This points to Kubernetes TLS secret that contains the certificate for Postgres. The certificate itself is stored in the key tls.crt. This field is optional. When this key is set, Operator will ignore the value in systemCertificates
spec.fep.postgres.tls.caName	(created by user)	Optional This point to Kubernetes configmap that contains additional CA for Postgres to verify client. The CA is stored in the key ca.crt. This field is optional.
spec.fep.postgres.tls.privateKeyPassword	(created by user)	Optional This points to Kubernetes secret that contains the password for the above private key. This field is optional.
spec.fepChildCrVal.customCertificates		Optional This is an optional parameter, which comprises of the parameters mentioned below. It is an array of elements to define certificates. Used to setup SSL connection between publisher and subscriber clusters for logical replication
spec.fepChildCrVal.customCertificates.userName		Optional This should be the username of the publisher database. When this parameter is specified, an empty folder is created under FEP Server Container- /tmp/custom_certs/<username>. The custom certificates are mounted in this empty folder. However, if this parameter is not specified, the section is ignored and folder is not created; hence the certificates are not mounted without it.
spec.fepChildCrVal.customCertificates.certificateName	(created by user)	Optional This points to Kubernetes TLS secret that contains the custom certificate. The certificate itself is stored in the key tls.crt.
spec.fepChildCrVal.customCertificates.caName	(created by user)	Optional This points to Kubernetes configmap

Field	Default	Details
		that contains CA certificate to verify server. The CA is stored in the key ca.crt.
spec.fepChildCrVal.backup		Optional This section is defined to enable febackup sidecar for cluster backup feature.
spec.fepChildCrVal.backup.image.image	<omitted>	FEP backup container image to be used quay.io/fujitsu/fujitsu-enterprise-postgres-13-backup:ubi8-13-0.0 It is optional. Image line is omitted by default. In such a case, it will pick up URL of image from operator container environment. If you specify the image, Operator will take that image to deploy backup container
spec.fepChildCrVal.backup.image.pullPolicy	IfNotPresent	
spec.fepChildCrVal.backup.mcSpec.limits	cpu: 0.2 memory: "300Mi"	
spec.fepChildCrVal.backup.mcSpec.requests	cpu: 0.1 memory: "200Mi"	
spec.fepChildCrVal.backup.pgbackrestParams	[global] repo1-retention-full=7 repo1-retention-full-type=time log-path=/database/log/backup	" " When nothing is specified, and the parameter set in pgbackrest.conf is described from the line below.
spec.fepChildCrVal.backup.schedule.num	0	Number of schedules to set The maximum number of backup schedules is 5.
spec.fepChildCrVal.backup.scheduleN.schedule	" "	Backup schedule in cron format. The date and time is UTC time.
spec.fepChildCrVal.backup.scheduleN.type	" "	full: Perform a full backup (Back up the contents of the database cluster). incr – Perform an incremental backup (Back up only the database cluster files that were changed to the last backup migration).
spec.fepChildCrVal.customPgAudit	[output] logger = 'auditlog' log_directory = '/database/log/audit' log_truncate_on_rotation = on log_filename = 'pgaudit-%a.log' log_rotation_age = 1d log_rotation_size = 0	PgAudit file content

Field	Default	Details
	[rule]	
spec.fepChildCrVal.customPgHba	# define pg_hba custom rules here to be merged with default rules. # TYPE DATABASE USER ADDRESS METHOD	Entries to be inserted into pg_hba.conf
spec.fepChildCrVal.customPgParams	# define custom postgresql.conf parameters below to override defaults. # Current values are as per default FEP deployment shared_preload_libraries='pgx_datamasking.pg_prewarm.pg_stat_statements' session_preload_libraries='pg_prewarm' max_prepared_transactions = 100 max_worker_processes = 30 max_connections = 100 work_mem = 1MB maintenance_work_mem = 12MB shared_buffers = 128MB effective_cache_size = 384MB checkpoint_completion_target = 0.8 # tcp parameters tcp_keepalives_idle = 30 tcp_keepalives_interval = 10 tcp_keepalives_count = 3 # logging parameters in default fep installation # if log volume is not defined, log_directory should be # changed to '/database/userdata/data/log' log_directory = '/database/log' log_filename = 'logfile-%a.log' log_file_mode = 0600 log_truncate_on_rotation = on log_rotation_age = 1d log_rotation_size = 0 log_checkpoints = on log_line_prefix = '%e %t [%p]: [%l-1] user=%u,db=%d,app=%a,client=%h' log_lock_waits = on log_autovacuum_min_duration = 60s logging_collector = on	Postgres configuration in postgresql.conf

Field	Default	Details
	<pre> pgaudit.config_file=/opt/app-root/src/ pgaudit-cfg/pgaudit.conf log_replication_commands = on log_min_messages = WARNING log_destination = stderr # wal_archive parameters in default fep installation archive_mode = on archive_command = 'pgbackrest -- stanza=backupstanza --config=/ database/userdata/pgbackrest.conf archive-push %p' wal_level = replica max_wal_senders = 12 wal_keep_segments = 64 track_activities = on track_counts = on </pre>	
spec.fepChildCrVal.storage.dataVol		Mandatory volume
spec.fepChildCrVal.storage.dataVol.size	2Gi (**)	Size of data volume. Data volume must be specified
spec.fepChildCrVal.storage.dataVol.storageClass	<omitted> (*)	StorageClass for data volume: When this line is omitted, the PV created will use default storage class in the Kubernetes cluster
spec.fepChildCrVal.storage.dataVol.accessModes	<omitted> (*)	accessModes for data volume: Specified as an array of accessModes e.g. [ReadWriteMany] If omitted, it will be treated as [ReadWriteOnce]
spec.fepChildCrVal.storage.walVol		Mandatory volume
spec.fepChildCrVal.storage.walVol.size	1200Mi (**)	Size of WAL volume. WAL volume must be specified
spec.fepChildCrVal.storage.walVol.storageClass	<omitted> (*)	StorageClass for WAL volume: When this line is omitted, the PV created will use default storage class in the Kubernetes cluster
spec.fepChildCrVal.storage.walVol.accessModes	<omitted> (*)	accessModes for WAL volume: Specified as an array of accessModes e.g. [ReadWriteMany] If omitted, it will be treated as [ReadWriteOnce]
spec.fepChildCrVal.storage.tablespaceVol		Optional volume

Field	Default	Details
spec.fepChildCrVal.storage.tablespaceVol.size	512Mi (**)	Size of tablespace volume. This volume is optional and can be omitted
spec.fepChildCrVal.storage.tablespaceVol.storageClass	<omitted> (*)	StorageClass for tablespace volume: When this line is omitted, the PV created will use default storage class in the Kubernetes cluster
spec.fepChildCrVal.storage.tablespaceVol.accessModes	<omitted> (*)	accessModes for tablespace volume: Specified as an array of accessModes e.g. [ReadWriteMany] If omitted, it will be treated as [ReadWriteOnce]
spec.fepChildCrVal.storage.archivewalVol		Mandatory if backup section is defined. Optional otherwise
spec.fepChildCrVal.storage.archivewalVol.size	1Gi (**)	Size of archivewal volume. This volume is optional and can be omitted
spec.fepChildCrVal.storage.archivewalVol.storageClass	<omitted> (*)	StorageClass for Archived WAL volume: When this line is omitted, the PV created will use default storage class in the Kubernetes cluster When the number of instance is more than 1 and backup is not done on S3, both archivewalVol and backupVol must be hosted on Shared storage such as NFS with respective storageClass
spec.fepChildCrVal.storage.archivewalVol.accessModes	<omitted> (*)	accessModes for Archived WAL volume: Specified as an array of accessModes e.g. [ReadWriteMany] If omitted, it will be treated as [ReadWriteOnce] When the number of instance is more than 1 and backup is not done on S3, both archivewalVol and backupVol must be hosted on Shared storage such as NFS with accessMode set to [ReadWriteMany]
spec.fepChildCrVal.storage.logVol		Optional volume
spec.fepChildCrVal.storage.logVol.size	1Gi (**)	Size of log volume. This volume is optional and can be omitted
spec.fepChildCrVal.storage.logVol.storageClass	<omitted> (*)	StorageClass for log volume:

Field	Default	Details
		When this line is omitted, the PV created will use default storage class in the Kubernetes cluster
spec.fepChildCrVal.storage.logVol.accessModes	<omitted> (*)	accessModes for log volume: Specified as an array of accessModes e.g. [ReadWriteMany] If omitted, it will be treated as [ReadWriteOnce]
spec.fepChildCrVal.storage.backupVol		Mandatory if backup section is defined. Optional otherwise
spec.fepChildCrVal.storage.backupVolume.size	2Gi (* *)	Size of backup volume. This volume is optional and can be omitted
spec.fepChildCrVal.storage.backupVolume.storageClass	<omitted> (*)	StorageClass for backup volume: When this line is omitted, the PV created will use default storage class in the Kubernetes cluster When the number of instance is more than 1 and backup is not done on S3, both archivalVol and backupVol must be hosted on Shared storage such as NFS with respective storageClass
spec.fepChildCrVal.storage.backupVolume.accessModes	<omitted> (*)	accessModes for backup volume: Specified as an array of accessModes e.g. [ReadWriteMany] If omitted, it will be treated as [ReadWriteOnce] When the number of instance is more than 1 and backup is not done on S3, both archivalVol and backupVol must be hosted on Shared storage such as NFS with accessMode set to [ReadWriteMany]
spec.fepChildCrVal.sysUsers.pgAdminPassword	admin-password	Password for user "postgres" Available character types Alphanumeric characters (A-Z, a-z), numbers (0-9), symbols (~! @ # \$^ & * () - = < > , . ? ; : / +)
spec.fepChildCrVal.sysUsers.pgdb	mydb (*)	Database to be created during provisioning Available character types Alphanumeric characters (A-Z, a-z), numbers (0-9), and underscores (_) However, you cannot start with a number.

Field	Default	Details
		Upper case letters are treated as lower case letters. Maximum string length 63 characters
spec.fepChildCrVal.sysUsers.pguser	mydbuser (*)	Database user to be created during provisioning Available character types Alphanumeric characters (A-Z, a-z), numbers (0 -9), and underscores (_) However, you cannot start with a number. Upper case letters are treated as lower case letters. Maximum string length 63 characters
spec.fepChildCrVal.sysUsers.pgpassword	mydbpassword	Password for database user pguser Available character types Alphanumeric characters (A-Z, a-z), numbers (0 -9), symbols (~! @ # \$^ & * () - = < > , . ? ; : /+)
spec.fepChildCrVal.sysUsers.pgrepluser	repluser (*)	Database user for replication Available character types Alphanumeric characters (A-Z, a-z), numbers (0 -9), and underscores (_) However, you cannot start with a number. Maximum string length 63 characters
spec.fepChildCrVal.sysUsers.pgreplpassword	repluserpwd	Password for database user repluser Available character types Alphanumeric characters (A-Z, a-z), numbers (0 -9), symbols (~! @ # \$^ & * () - = < > , . ? ; : /+)
spec.fepChildCrVal.sysUsers.tdepassword	tde-password	TDE keystore passphrase
spec.fepChildCrVal.sysUsers.pgRewindUser	rewind_user	Database user for Rewind Available character types Alphanumeric characters (A-Z, a-z), numbers (0 -9), and underscores (_) However, you cannot start with a number. Maximum string length 63 characters

Field	Default	Details
spec.fepChildCrVal.sysUsers.pgRewindUserPassword	rewind_password	<p>Password for database user rewinduser</p> <p>Available character types</p> <p>Alphanumeric characters (A-Z, a-z), numbers (0-9), symbols (~! @ # \$^ & * () - = < > , . ? ; : /+)</p>
spec.fepChildCrVal.sysUsers.pgMetricsUser		<p>Optional</p> <p>user for FEPEXporter connection. Can be defined afterwards</p> <p>Available character types</p> <p>Alphanumeric characters (A-Z, a-z), numbers (0-9), and underscores (_)</p> <p>However, you cannot start with a number.</p> <p>Upper case letters are treated as lower case letters.</p> <p>Maximum string length</p> <p>63 characters</p>
spec.fepChildCrVal.sysUsers.pgMetricsUserPassword		<p>Optional</p> <p>Password for metrics user. Can be defined afterwards</p> <p>Available character types</p> <p>Alphanumeric characters (A-Z, a-z), numbers (0-9), symbols (~! @ # \$^ & * () - = < > , . ? ; : /+)</p>
spec.fepChildCrVal.sysUsers.pgAdminTls.certificateName		<p>This points to Kubernetes TLS secret that contains the certificate of Postgres user "postgres". Patroni will use this for certificate authentication. The certificate itself is stored in the key tls.crt. This field is optional.</p>
spec.fepChildCrVal.sysUsers.pgAdminTls.caName		<p>This points to Kubernetes configmap that contains additional CA the client use to verify a server certificate. The CA is stored in the key ca.crt. This field is optional.</p>
spec.fepChildCrVal.sysUsers.pgAdminTls.sslMode	prefer	<p>Specify the type of TLS negotiation with the server.</p> <ul style="list-style-type: none"> - disable - allow - prefer - require - verify-ca - verify-full
spec.fepChildCrVal.sysUsers.pgreplUserTls.certificateName		<p>This points to Kubernetes TLS secret that contains the certificate of Postgres</p>

Field	Default	Details
		user "repluser". Patroni will use this for certificate authentication. The certificate itself is stored in the key tls.crt. This field is optional.
spec.fepChildCrVal.sysUsers.pgreplUserTls.caName		This points to Kubernetes configmap that contains additional CA the client use to verify a server certificate. The CA is stored in the key ca.crt. This field is optional.
spec.fepChildCrVal.sysUsers.pgreplUserTls.sslMode	prefer	Specify the type of TLS negotiation with the server. <ul style="list-style-type: none"> - disable - allow - prefer - require - verify-ca - verify-full
spec.fepChildCrVal.sysUsers.pgRewindUserTls.certificateName		This points to Kubernetes TLS secret that contains the certificate of Postgres user "rewinduser". Patroni will use this for certificate authentication. The certificate itself is stored in the key tls.crt. This field is optional.
spec.fepChildCrVal.sysUsers.pgRewindUserTls.caName		This points to Kubernetes configmap that contains additional CA the client use to verify a server certificate. The CA is stored in the key ca.crt. This field is optional.
spec.fepChildCrVal.sysUsers.pgRewindUserTls.sslMode	prefer	Specify the type of TLS negotiation with the server. <ul style="list-style-type: none"> - disable - allow - prefer - require - verify-ca - verify-full
spec.fepChildCrVal.sysUsers.pgMetricsUserTls.certificateName		Optional This points to Kubernetes TLS secret that contains the certificate of Postgres user defined by pgMetricsUser. FEPEXporter will use this for certificate authentication. The certificate itself is stored in the key tls.crt.
spec.fepChildCrVal.sysUsers.pgMetricsUserTls.caName		Optional This points to Kubernetes configmap that contains additional CA the client

Field	Default	Details
		use to verify a server certificate. The CA is stored in the key ca.crt.
spec.fepChildCrVal.sysUsers.pgMetric sUserTls.sslMode	prefer	Optional Specify the type of TLS negotiation when FEPEXporter connects to FEP server. <ul style="list-style-type: none"> - disable - allow - prefer - require - verify-ca - verify-full
spec.fepChildCrVal.systemCertificates. key		Use spec.fep.postgres.tls specification instead.
spec.fepChildCrVal.systemCertificates. crt		Use spec.fep.postgres.tls specification instead.
spec.fepChildCrVal.systemCertificates. cacrt		Use spec.fep.postgres.tls specification instead.
spec.fepChildCrVal.autoscale.scaleout. policy	off	[cpu_utilization/off]
spec.fepChildCrVal.autoscale.scaleout. threshold	40	Threshold (Average of all replicas) Must be an integer. The unit is %.
spec.fepChildCrVal.autoscale.limits.m axReplicas	2	Maximum number of replicas (0 to 15) (Value out of range) Do not perform auto scale-out

Note

- (*) - These parameters can be specified only at creation time and should not be changed. Any change to these parameters will be ignored and will not have any effect on FEP cluster functioning.
- (**) - The storage volumes size can be increased provided underlying storage supports the operation. Optional volumes can be specified only at initial FEP cluster creation. If an optional volume is added later, operator will ignore it and no action will be taken.
- User should do or remove unsupported CR changes manually.
- spec.fep.postgres.tls CR specification should be used instead of spec.fepChildCrVal.systemCertificates. The lateral spec can still be used, however spec.fep.postgres.tls gives better flexibility to control MTLS access of the cluster.
- Either spec.fep.postgres.tls specification (old specification) or spec.fepChildCrVal.systemCertificates should be used. They should not be used interchangeable.
- Server certificate specified under spec.fep.postgres.tls can be rotated by changing the secret and executing reload (e.g. using FEPACTION); however for others specified in the CR, it is required to do restart of the PoDs

While in running state - following value will dynamically appear in the FEPCluster to reflect the cluster status

Field name	Details
status.fepStatus.fepClusterReady	Will be true or false to reflect if the whole cluster is ready. Kubernetes cluster information is fetched to check number of instances 'READY' & 'RUNNING' is equal to number of Configured instances.

Note

"fepClusterReady" flag will be set at first FEPCluster creation time only. fepClusterReady flag does not participate in the next reconciliation loop)

1.2 Custom Resource Parameters

This section explains the Custom Resource Parameters.

1.2.1 FEPCluster Custom Resource Parameters

Category	Details
CRD Name	FEPCluster
Definition	<pre> apiVersion: apiextensions.k8s.io/v1 kind: CustomResourceDefinition metadata: name: FEPClusters.fep.fujitsu.io spec: group: fep.fujitsu.io names: kind: FEPCluster listKind: FEPClusterList plural: fepclusters singular: fepcluster shortNames: - fac scope: Namespaced conversion: strategy: None versions: - name: v2 served: true storage: true schema: openAPIV3Schema: description: FEPCluster is the Schema for the fepclusters API properties: apiVersion: description: 'APIVersion defines the versioned schema of this representation of an object. Servers should convert recognized schemas to the latest internal value, and may reject unrecognized values. It should also be noted that all the passwords / passphrase and certificates will be masked after the creation of the CR. This includes

- Also, initial pgAdminPassword: admin-password
- pgpassword: mydbpassword
- pgreplpassword: repluserpwd
- tdeppassphrase: tde-passphrase
- pgRewindPassword: rewind_password (Optional - if defined)
- pgMetricsPassword: metrics_password (Optional - if defined)
- certificate.key
- certificate.crt
- certificate.cacrt

Values of child CRs at the time of initial deployment of cluster, are stored in FEPCluster under fepChildCrVals, e.g. for Server certificates, Configuration of FEP, User details.

All fields for FEPCluster CR and its child CRs should be managed through FEPCluster CR only. Operator will reflect the changes to respective child CR to be processed. The fields that not allowed to change will not be reflected from parent to child CR and hence will not have any affect.

1.2.2 FEP Cluster Configuration

Configuration of all aspects of FEP Cluster is done through FEPCluster CR only.

All fields for FEPCluster CR and its child CRs should be managed through FEPCluster CR only. Operator will reflect the changes to respective child CR to be processed. The fields that not allowed to change will not be reflected from parent to child CR and hence will not have any affect. Refer to "1.1 FEPCluster Parameter" for details.

All child CRs are marked as internal objects in RedHat OCP and will not appear on console. However, it can be checked on command line using oc or kubectl commands.

Following table shows Child CRs of FEPCluster CR and respective sections in parent CR related to given child CR.

Configuration changes are made in these sections will update allowable fields only in corresponding child CR.

Child CR Name	Relevant sections in FEP Cluster CR
FEPBackup	spec.fepChildCrVal.backup
FEPcert	spec.fepChildCrVal.systemCertificates
FEPConfig	spec.fepChildCrVal.customPgAudit spec.fepChildCrVal.customPgHba spec.fepChildCrVal.customPgParams
FEPUser	spec.fepChildCrVal.sysUsers
FEPVolume	spec.fepChildCrVal.storage

1.2.3 FEPConfig Child Custom Resource Parameters

Field	Default	Details
metadata.name	<same-as-in-FEPCluster>	This value is inherited from parent FEPCluster CR
metadata.namespace	<same-as-in-FEPCluster>	This value is inherited from parent FEPCluster CR
spec.customPgAudit	All line specified in spec.fepChildCrVal.customPg Audit of FEPCluster CR	Audit rules can be updated in this section. Requires restart. Note: initial values inherited once only at start. Changes to FEPConfig directly
spec.customPgHba	All line specified in spec.fepChildCrVal.customPg Hba of FEPCluster CR	pg_hba rules can be added in this section Note: Inherited once at start. Changes to FEPConfig directly
spec.customPgParams	All line specified in spec.fepChildCrVal.customPg Params of FEPCluster CR	All postgres parameters are listed here to overwrite defaults. Note: Inherited once at start. Changes to FEPConfig directly
spec.replicationSlots		Optional: Details of replication slots if defined in FEPCluster

Example of FEPConfig CR created

```

apiVersion: fep.fujitsu.io/v1
kind: FEPConfig
metadata:
  name: new-fep-19ncfg
  namespace: cfg-expt
spec:
  sysExtraLogging: false
  customPgAudit: |
    # define pg audit custom params here to override defaults.

```

```

# if log volume is not defined, log_directory should be
# changed to '/database/userdata/data/log'
[output]
logger = 'auditlog'
log_directory = '/database/log/audit'
log_truncate_on_rotation = on
log_filename = 'pgaudit-%a.log'
log_rotation_age = 1d
log_rotation_size = 0
[rule]

archive_mode = on
wal_level = replica
max_wal_senders = 10
wal_keep_segments = 64
wal_sender_timeout = 60s
track_activities = on
track_counts = on

```

1.2.4 FEPUser Child Custom Resource Parameters

Field	Default	Details
metadata.name	<same-as-in-FEPCluster>	This value is inherited from parent FEPCluster CR
metadata.namespace	<same-as-in-FEPCluster>	This value is inherited from parent FEPCluster CR
spec.pgAdminPassword	spec.fepChildCrVal.users.pgAdminPassword of FEPCluster CR	postgres superuser password. Masked once secret is created/changed Note: initial values inherited once only at start. Changes to FEPUser directly
spec.pgdb	spec.fepChildCrVal.users.pgdb of FEPCluster CR	Name of a user database Note: Created once only at start. Cannot be changed
spec.pgpassword	spec.fepChildCrVal.users.pgpassword of FEPCluster CR	Password for superuser for user database pgdb. Masked once secret is created/changed Note: initial values inherited once only at start. Changes to FEPUser directly
spec.pguser	spec.fepChildCrVal.users.pguser of FEPCluster CR	Name of a user database Note: Created once only at start. Cannot be changed
spec.pgrepluser	spec.fepChildCrVal.users.pgrepluser of FEPCluster CR	Name of a database user for replication
spec.pgreplpassword	spec.fepChildCrVal.users.pgreplpassword of FEPCluster CR	Password for pgrepluser
spec.tdepassphrase	spec.fepChildCrVal.users.tdepassphrase of FEPCluster CR	Passphrase for encrypting/decrypting keystore file which contains the TDE encryption key
spec.pgRewindUser	rewind_user	Database user for Rewind
spec.pgRewindUserPassword	rewind_password	Password for database user rewinduser
spec.pgMetricsUser	spec.fepChildCrVal.sysUsers.pgMetricsUser	Optional See details in FEPCluster CR
spec.pgMetricsPassword	spec.fepChildCrVal.sysUsers.pgMetricsPassword	Optional See details in FEPCluster CR
spec.pgAdminTls	spec.fepChildCrVal.sysUsers.pgAdminTls	Optional section See details in FEPCluster CR
spec.pgrepluserTls	spec.fepChildCrVal.sysUsers.pgrepluserTls	Optional section See details in FEPCluster CR
spec.pgRewindUserTls	spec.fepChildCrVal.sysUsers.pgRewindUserTls	Optional section See details in FEPCluster CR
spec.pgMetricsUserTls	spec.fepChildCrVal.sysUsers.pgMetricsUserTls	Optional section See details in FEPCluster CR

Example of FEPUser CR created

```
apiVersion: fep.fujitsu.io/v1
kind: FEPUser
metadata:
  name: new-fep-19n
  namespace: testswatiproject
spec:
  pgAdminPassword: '*****'
  pgdb: mydb
  pgpassword: '*****'
  pgreplpassword: '*****'
  pgrepluser: repluser
  pguser: mydbuser
  tdepassphrase: '*****'
  sysExtraLogging: false
  pgRewindUser: rewind_user
  pgRewindUserPassword: rewind_password
  pgAdminTls:
    certificateName: admin-client-certs-secret
    caName: admin-ssl-rootcert-configmap
    sslMode: prefer
  pgrepluserTls:
    certificateName: repluser-client-certs-secret
    caName: repluser-ca-name-configmap
    sslMode: prefer
  pgRewindUserTls:
    certificateName: rewinduser-client-certs-secret
    caName: rewinduser-ca-name-configmap
    sslMode: prefer
```

Note

- Password and Passphrase are masked in output from CR. The original values can still be found in the respective Kubernetes secrets and configmaps.
- TDE is enabled by default with given tdepassphrase and must have a value.
- TDE is enabled by using the key tdepassphrase with the desired passphrase. Do not remove this key once TDE is enabled. Otherwise, the database may go into a crash loop. If the Cluster is running on Async Replication and a failover/switchover occurred during the crash loop, there could be data lost. The team is looking at preventing the deletion of this passphrase from Operator even if customer tries to remove it in customer resource.
- Database users and their passwords managed by the FEPUser CR should not be changed in the SQL interface. Inconsistencies with the information managed by the operator can cause problems with operator operation. If you make changes in the SQL interface, use the SQL interface again to restore the original state.

1.2.5 FEPVolume Child Custom Resource Parameters

1.2.5.1 Create Volumes

Volumes for the cluster nodes(pods) are initially created in accordance with the values set in `fepChildCrVal`' storage section of the parent FEPCluster CR.

The parent FEPCluster CR creates a child FEPVolume CR with the respective startup values and the relevant controller(FEPColume Controller) takes care of creating the required volumes.

Note

- After you create the FEPCluster for the first time, you cannot add new volumes later or modify the storageClass or accessModes.

- You can resize the initially created volume only if the underlying storageClass supports dynamic resizing.

Below is the schema of the FEPVolume CR:

Field	Mandatory	Sub-Field	Default	Description
archivewalVol	No	size	1Gi	Volume size of the archive log. Refer to "Estimating Database Disk Space Requirements" in the FUJITSU Enterprise Postgres Installation and Setup Guide for Server to help you design the size.
		storageClass	Defaults to platform default if omitted	SC is only set at start
		accessModes	Defaults to ReadWriteOnce if omitted	Access mode is only set at start
backupVol	No	size	2Gi	Volume size of the backup. Estimate based on the following formula: (full backup generations + incr backup generations + 1) * dataVol size
		storageClass	Defaults to platform default if omitted	SC is only set at start
		accessModes	Defaults to ReadWriteOnce if omitted	Access mode is only set at start
dataVol	Yes	size	2Gi	Volume size of the data. Refer to "Estimating Database Disk Space Requirements" in the FUJITSU Enterprise Postgres Installation and Setup Guide for Server and base the design on table/index size.
		storageClass	Defaults to platform default if omitted	SC is only set at start
		accessModes	Defaults to ReadWriteOnce if omitted	Access mode is only set at start
logVol	No	size	1Gi	Volume size of the log. If you change the log output level (default: WARNING), measure the actual amount of log output in a test environment.
		storageClass	Defaults to platform default if omitted	SC is only set at start
		accessModes	Defaults to ReadWriteOnce if omitted	Access mode is only set at start
tablespaceVol	No	size	512Mi	Volume size of the tablespace. When using tablespaces, as with dataVol, you should refer to "Estimating Database Disk Space Requirements" in the FUJITSU

Field	Mandatory	Sub-Field	Default	Description
				Enterprise Postgres Installation and Setup Guide for Server for information on sizing.
		storageClass	Defaults to platform default if omitted	SC is only set at start
		accessModes	Defaults to ReadWriteOnce if omitted	Access mode is only set at start
walVol	Yes	size	1200Mi	Volume size of the transaction log. Refer to "Estimating Database Disk Space Requirements" in the FUJITSU Enterprise Postgres Installation and Setup Guide for Server to help you design the size. Note that the default value for max_wal_size is 1 GB.
		storageClass	Defaults to platform default if omitted	SC is only set at start
		accessModes	Defaults to ReadWriteOnce if omitted	Access mode is only set at start

The 'accessMode' is been incorporated for the inclusion of pgBadger layer later. Giving it a shared volume capability will allow pgBadger Container to read logs from multiple server instance (master / replica) and expose it via a WebServer.

1.2.5.2 Delete Volumes

Equivalent Kubernetes command: `kubectl delete FEPVolume <cr_name>`

This operation will remove all the PVCs and possibly PVs depending on the default reclaimPolicy of the storageclass used per volume.

With right backup and restore integration by customer, they may not need volumes to be persisted.

Note

Do not delete this CR unless the Cluster has been removed.

Example of FEPVolume CR created

```

apiVersion: fep.fujitsu.io/v1
kind: FEPVolume
metadata:
  name: new-fep-19n
  namespace: testswatiproject
spec:
  archivewalVol:
    size: 1Gi
  backupVol:
    size: 2Gi
  dataVol:
    size: 2Gi
  logVol:
    size: 1Gi
  tablespaceVol:
    size: 512Mi
  walVol:
    size: 1Gi
  selectedVolList:

```

```

- name: data
- name: tablespace
- name: wal
- name: log
sysExtraLogging: false

```

1.2.6 FEPCert Child Custom Resource Parameters

1.2.6.1 Create/ Update Certificates

Certificate secret for the FEP cluster is initially created in accordance with the values set in `fepChildCrVal`' `certs` section of the parent FEPCluster CR.

Below is the schema of the FEPCert CR:

Field	Default	Description
<code>cacrt</code>	Defaults to dummy self signed crt from parent FEPCluster CR	Can be replaced with customer's own CA cert
<code>crt</code>	Defaults to dummy self signed crt from parent FEPCluster CR	Can be replaced with customer's own trusted cert
<code>key</code>	Defaults to dummy key from parent FEPCluster CR	Can be replaced with customer's own key

By default, Operator will create Kubernetes secrets to store the CA Cert, Server Cert and Key file. These files are exposed under the mount point `/fep-certs` in the container. The default FEPCluster template will also set the following postgres parameters in `postgresql.conf`.

```

ssl = on
ssl_cert_file = '/fep-certs/fep.crt'
ssl_key_file = '/fep-certs/fep.key'
ssl_ca_file = '/fep-certs/ca.crt'

```

It should also be possible to change the certificates by end user, by changing ALL `key`, `crt` and `cacrt`. However, user will need to restart the cluster to let change take effect.

1.2.6.2 Delete Certificates

Equivalent Kubernetes command: `kubectl delete FEPCert <cr_name>`

This operation will remove the secret containing the TLS Certificates and keys for the cluster.

Below is an example CR for certificates to be used by FEP server container

```

apiVersion: fep.fujitsu.io/v1
kind: FEPCert
metadata:
  name: new-fep
  namespace: ansible-operator-poc
spec:

This approach of specifying FEPCerts is getting deprecated. Should follow Secrets as referred in section to configure Certs for Server, Patroni and Users.

1.2.7 FEPBackup Child Custom Resource Parameters

Field	Default	Details
apiVersion	fep.fujitsu.io/v1	Fixed
kind	FEPBackup	Fixed
metadata.name	<clustername>	Enter the CR name.
spec.pgbackrestParams	" "	" " It is fixed, and the parameter set in pgbackrest.conf is described from the line below.
spec.schedule.num	Integer	Number of schedules to set The maximum number of backup schedules is 5.
spec.scheduleN.schedule	-	Write the date and time of the Nth schedule in cron format. The date and time is UTC time.
spec.scheduleN.type	full/incr	full: Perform a full backup (Back up the contents of the database cluster). incr – Perform an incremental backup (Back up only the database cluster files that were changed to the last backup migration).
spec.preScript	" "	This parameter must specify a default value.
spec.postScript	" "	This parameter must specify a default value.

Example of FEPBackup CR created

```
apiVersion: fep.fujitsu.io/v1
kind: FEPBackup
metadata:
  name: fepcluster-backup
spec:
  schedule:
    num : 2
  schedule1:
    schedule : "0 0 1 * *"
    type : "full"
  schedule2:
    schedule : "0 0 1-6 * *"
    type : "incr"
  preScript: " "
  postScript: " "
  pgbackrestParams: |
    # define custom pgbackrest.conf parameters below to override defaults.
    [global]
    rep1-retention-full = 30
    rep1-retention-full-type = time
  ...
```

1.2.8 FEPRestore Custom Resource Parameters

Field	Default	Details
apiVersion	fep.fujitsu.io/v1	Fixed
kind	FEPRestore	Fixed
metadata.name	-	Enter the CR name.
spec.image	<current-released-image>	FEP restore container image to be used quay.io/fujitsu/fujitsu-enterprise-postgres-13-restore:ubi8-13-0.0 It is optional. Image is left blank by default. In such a case, it will pick up URL of image from operator container environment. If you specify the image, Operator will take that image to deploy container
spec.imagePullPolicy	IfNotPresent	
spec.mcSpec.limits	cpu: 0.2 memory: "300Mi"	
spec.mcSpec.requests	cpu: 0.1 memory: "200Mi"	
spec.fromFEPcluster	<from_clustername>	The name of the FEPcluster from which to restore
spec.toFEPcluster	<to_clustername>	Name of the FEPcluster to restore to The exact restore destination volume is retrieved from FEPcluster
spec.restoretype	latest/PITR	latest - Restore Latest State PITR - Date-Time Restore
spec.restoredate	-	If spec.restoretype is PITR, specify the day of PITR (UTC) in YYYY-MM-DD format Be sure to use single quotes. Example) '2020-11-25'
spec.restoretime	-	If spec.restoretype is PITR, specifies the PITR time (UTC) in HH: MM: SS format Be sure to use single quotes. Example) '02:50:43'

Example of FEPRestore CR created

```

apiVersion: fep.fujitsu.io/v1
kind: FEPRestore
metadata:
  name: feprestore
spec:
  mcSpec:
    limits:
      cpu: 200m
      memory: 300Mi
    requests:
      cpu: 100m
      memory: 200Mi
  fromFEPcluster: fepcluster1

```

```

toFEPcluster: fepcluster2
restoretype: latest
imagePullPolicy: IfNotPresent

```

Example of Point-In-Time-Recovery using FEPRestore CR

```

apiVersion: fep.fujitsu.io/v1
kind: FEPRestore
metadata:
  name: feprestore
spec:
  mcSpec:
    limits:
      cpu: 300m
      memory: 700Mi
    requests:
      cpu: 200m
      memory: 512Mi
  fromFEPcluster: fepclusterA
  toFEPcluster: fepclusterB
  restoretype: PITR
  restoredate: 2020-11-25
  restoretime: 02:50:43
  imagePullPolicy: IfNotPresent

```

1.2.9 FEPPgpool2 Custom Resource Parameters

Equivalent Kubernetes command: `kubectl create FEPPgpool2`

This operation will create a PGPool2 with supplied information.

Field	Default	Details
apiVersion	fep.fujitsu.io/v1	Fixed
kind	FEPPgpool2	Fixed
metadata.name	-	List the name of the FEP Pgpool2 container.
metadata.namespace	-	Specify the namespace of the environment where you want to deploy the operator.
spec.image	<current-released-image>	FEPPgpool2 container image to be used quay.io/fujitsu/fujitsu-enterprise-postgres-13-pgpool2:ubi8-13-0.0 It is optional. Image is left blank by default. In such a case, it will pick up URL of image from operator container environment. If you specify the image, Operator will take that image to deploy container.
spec.count	2	List the number of FEP Pgpool2 containers to create.
spec.serviceport	9999	Describes the TCP port for connecting to the FEP Pgpool2 container.
spec.statusport	9898	Identifies the TCP port for connecting to the PCP process.
spec.limits.cpu	400m	List the number of CPUs (restriction) to allocate to resources.limits.cpu.

Field	Default	Details
spec.limits.memory	512Mi	Specifies the memory size (restriction) to allocate to resources.limits.memory.
spec.requests.cpu	200m	List the number of CPUs (request) to allocate to resources.requests.cpu.
spec.requests.memory	256Mi	Specifies the memory size (request) to allocate to resources.requests.memory
spec.fepclustername	new-fep	Enter the FEPCluster name to connect to.
spec.customhba		If you want to use pool_hba.conf, describe what pool_hba.conf should contain from the line below.
spec.customparams	listen_addresses = '*' pcp_listen_addresses = '*' num_init_children = 32 reserved_connections = 0 enable_pool_hba = off allow_clear_text_frontend_auth = off authentication_timeout = 80 backend_weight0 = 1 backend_weight1 = 1 backend_flag0 = 'ALWAYS_PRIMARY' backend_flag1 = 'DISALLOW_TO_FAILOVER' connection_cache = on max_pool = 4 listen_backlog_multiplier = 2 serialize_accept = off child_life_time = 300 client_idle_limit = 0 child_max_connections = 0 connection_life_time = 0 reset_query_list = 'ABORT; DISCARD ALL' client_min_messages = info log_min_messages = debug1 log_statement = on log_per_node_statement = on log_client_messages = on log_hostname = on log_connections = on	" " and the Pgpool-II parameters. Refer to " Pgpool-II parameters " for detail.

Field	Default	Details
	log_line_prefix = '%t: pid %p: ' load_balance_mode = on ignore_leading_white_space = on white_function_list = " black_function_list = 'currval,lastval,nextval,setval' black_query_pattern_list = " database_redirect_preference_list = " app_name_redirect_preference_list = " allow_sql_comments = off disable_load_balance_on_write = 'transaction' statement_level_load_balance = on sr_check_period = 0 sr_check_user = 'postgres' delay_threshold = 0 log_standby_delay = 'none' ssl = on ssl_ciphers = 'HIGH:MEDIUM:+3DES:!aNULL' ssl_prefer_server_ciphers = off ssl_ecdh_curve = 'prime256v1' ssl_dh_params_file = " relcache_expire = 0 relcache_size = 256 check_temp_table = catalog check_unlogged_table = on enable_shared_relcache = on relcache_query_target = primary wd_port0 = 9000	
spec.custompcp	" "	If you use the pcp command, " " and the contents of pcp.conf from the line below.
spec.customsslkey	" "	If you want to do it, " " and the Beethoven key content in the line below.
spec.customsslcert	" "	If you want to do it, " " and the contents of the public x 509 certificate from the line below.

Field	Default	Details
spec.customsslcert	" "	If you want to do it, " " and the following lines describe the contents of the CA root certificate in PEM format.
spec.customlogsize	100 Mi	Specifies the persistent volume size for log output.
spec.storageclassname		Specifies the storage class for log output.

Pgpool-II parameters

The parameters that can be specified are shown in the table below. For details on the parameters, refer to the Pgpool-II manual.

Category	Parameter name (Specified format)	Restart required after change
Connection settings	listen_addresses (string)	Y
	pcp_listen_addresses (string)	Y
	num_init_children (integer)	Y
	reserved_connections (integer)	Y
Authentication settings	enable_pool_hba (boolean)	
	allow_clear_text_frontend_auth (boolean)	
	authentication_timeout (integer)	
Backend settings	backend_weight0 (floating point)	
	backend_weight1 (floating point)	
	backend_flag0	
	backend_flag1	
Connection pooling	connection_cache (boolean)	Y
	max_pool (integer)	Y
	listen_backlog_multiplier (integer)	Y
	serialize_accept (boolean)	Y
	child_life_time (integer)	Y
	client_idle_limit (integer)	
	child_max_connections (integer)	Y
	connection_life_time (integer)	Y
reset_query_list (string)		
Error reporting and log acquisition	client_min_messages (enum)	
	log_min_messages (enum)	
	log_statement (boolean)	
	log_per_node_statement (boolean)	
	log_client_messages (boolean)	
	log_hostname (boolean)	
	log_connections (boolean)	
	log_error_verbosity (enum)	
log_line_prefix (string)		
Load sharing settings	load_balance_mode (boolean)	Y
	ignore_leading_white_space (boolean)	

Category	Parameter name (Specified format)	Restart required after change
	white_function_list (string)	
	black_function_list (string)	
	black_query_pattern_list (string)	
	database_redirect_preference_list (string)	
	app_name_redirect_preference_list (string)	
	allow_sql_comments (boolean)	
	disable_load_balance_on_write (string)	Y
	statement_level_load_balance (boolean)	
Health check	connect_timeout (integer)	
Streaming replication check	sr_check_period (integer)	
	sr_check_user (string)	
	sr_check_password (string)	
	sr_check_database (string)	
	delay_threshold (integer)	
	log_standby_delay (string)	
Secure Socket Layer (SSL)	ssl (boolean)	Y
	ssl_ciphers (string)	Y
	ssl_prefer_server_ciphers (boolean)	Y
	ssl_ecdh_curve (string)	Y
	ssl_dh_params_file (string)	Y
Other parameters	relcache_expire (integer)	Y
	relcache_size (integer)	Y
	enable_shared_relcache (boolean)	Y
	relcache_query_target (enum)	
	check_temp_table (enum)	
	check_unlogged_table (boolean)	

1.2.10 FEPAAction Custom Resource Parameters

Specify parameters in the format described below.

Custom resource spec	Change effect
.spec.targetClusterName	Must specify target FEP Cluster name within namespace mentioned in metadata.
.spec.targetPgpool2Name	Must specify target FEPPgpool2 name within namespace mentioned in metadata when using pgpool2_restart.
.spec.fepAction.type	Must specify action type. Supported action types are: restart pod_restart reload list

Custom resource spec	Change effect
	switchover failover pgpool2_restart
.spec.fepAction.args	Must specify arguments needed for given action. For details of args corresponding to each action refer to " 1.2.10.1 FEPAction Specific Operation Details ".
.spec.sysExtraLogging	To turn extra debugging on, set value to true. It can be turned on/off at any time.

After execution of FEPAction CR, status is reflected in fepStatus field that is dynamically inserted in current FEPAction CR as needed. fepStatus field used for FEPAction CR are described here

fepStatus (with possible values)	Remarks
fepActionStatus:	fepStatus is inserted at the top of FEPAction CR
fepActionCondition: Success Failure	This flag is inserted in fepAction CR to reflect success or failure of requested action
fepActionResult: > "details"	The result contains verbose details corresponding to the specific action been executed. Should be noted that it is either plain text of HTTP output.
processedTimestamp: <time stamp>	Denotes time of action execution by the Operator

```

apiVersion: fep.fujitsu.io/v1
kind: FEPAction
fepActionStatus:
  fepActionCondition: Success
metadata:
  name: new-fep-reload-action
  namespace: myns
spec:
  fepAction:
    args:
      - new-fep-sts-0
      - new-fep-sts-1
    type: reload
  sysExtraLogging: false
  targetClusterName: new-fep

```

Note

Please do not use the FEPAction to perform a switchover or restart while executing backup. Failed to get the backup.

1.2.10.1 FEPAction Specific Operation Details

Action type - reload

The reload action will manually reload the FEP database on the targeted FEPCluster.

“reload” action type expects users to specify the name of individual FEP pods that they want to run the database reload operation on. They specify that in the args section under the FEPAction CR spec as below :

```

spec:
  fepAction:
    args:

```

```
- nf-131851-sts-0
- nf-131851-sts-1
type: reload
targetClusterName: nf-131851
```

Action type - restart

The restart action will manually restart the FEP database on the targeted FEPCluster.

“restart” action type expects users to specify the name of individual FEP pods that they want to run the database restart operation on. They specify that in the args section under the FEPACTION CR spec as below:

```
spec:
  fepAction:
    args:
      - nf-131851-sts-0
      - nf-131851-sts-1
    type: restart
  targetClusterName: nf-131851
```

Action type - pod_restart

The pod_restart action will restart specified list of POD for given target cluster. User can specify key word ‘ALL’ under ‘args’ section to restart all pods in target cluster. Alternatively, user can give the list of pods to be started in target cluster. User should either give ALL or the list of the pods.

This action restarts the replica pods first. Once all replicas have been restarted, it switches over the mastership to one of the replica before restarting old master pod. If it is a single node cluster, master will be restarted in its current state. This action is automatically created to restart pods when image or machine specs are changed for fep or backup container depending on autoPodRestart flag in FEPCluster CR (see more details in FEPCluster CR section):

```
spec:
  fepAction:
    args:
      - nf-131851-sts-0
      - nf-131851-sts-1
    type: pod_restart
  targetClusterName: nf-131851
```

Action type - list

The list action will return the status of the targeted FEPCluster.

“list” action type expects users to specify just the target cluster name to list the details of the same. Looks like below:

```
spec:
  fepAction:
    type: list
  targetClusterName: nf-131851
```

Action type - switchover

The switchover action performs a manually switchover of the current leader/primary database from one pod to another pod of the targeted FEPCluster.

“switchover” action type expects users to specify the name of the current leader/primary pod that they want to switchover from. They specify that in the args section under the FEPACTION CR spec as below:

```
spec:
  fepAction:
    args:
      - nf-131851-sts-2
    type: switchover
  targetClusterName: nf-131851
```

Here, nf-131851-sts-2 is the current primary.

Action type - failover

The failover action performs a manually failover of the current primary database from one pod to another pod of the targeted FEPCluster. The difference between switchover and failover is that, switchover expects the primary database is running at the time whereas failover can force switchover of primary role from a non-responding pod to another pod. Note that failover is a disruptive action and may cause data lost.

“failover” action type expects users to specify the names of the candidate pods that they want to failover to. They specify that in the args section under the FEPACTION CR spec as below:

```
spec:
  fepAction:
    args:
      - nf-131851-sts-1
      - nf-131851-sts-2
    type: failover
  targetClusterName: nf-131851
```

Here, nf-131851-sts-1 and nf-131851-2 are the candidate pods to failover to. In this example, the current primary pod would be nf-131851-sts-0.

Action type - pgpool2_restart

“pgpool2_restart” action type expects users to specify the name of individual FEPPgpool2 resource that they want to restart operation on. They specify that in the targetPgpool2Name section under the FEPACTION CR spec as below:

```
spec:
  fepAction:
    type: pgpool2_restart
  targetPgpool2Name: nf-131851-pgpool2
```

1.2.11 FEPEXporter Custom Resource

Field	Default	Details
apiVersion	fep.fujitsu.io/v1	Mandatory as it is
kind	FEPEXporter	Mandatory as it is
metadata.name	fep-monitor	Name of FEPEXporter CR - must be unique in namespace
metadata.namespace	fep-ns	Namespace - OCP populates it as current
spec.prometheus		Optional Prometheus MTLS spec section
spec.prometheus.tls		
spec.prometheus.tls.certificateName		Optional This points to Kubernetes TLS secret that contains the certificate of Prometheus ServiceMonitor. FEPEXporter will use this for certificate authentication. The certificate itself is stored in the key tls.crt.
spec.prometheus.tls.caName		Optional This points to Kubernetes configmap that contains additional CA the client use to verify a server certificate. The CA is stored in the key ca.crt.
spec.fepExporter.		Exporter spec section
spec.fepExporter.authSecret		Optional

Field	Default	Details
		Base Authentication secret to provide username & encrypted password of user
spec.fepExporter.authSecret.secretName		Secret name
spec.fepExporter.authSecret.usernameKey		Key of username in specified secret
spec.fepExporter.authSecret.passwordKey		Key of password in specified secret
spec.fepExporter.tls		FEPEXporter MTLS specs
spec.fepExporter.tls.certificateName		Optional This points to Kubernetes TLS secret that contains the certificate of FepExporter. Prometheus will use this for certificate authentication. The certificate itself is stored in the key tls.crt.
spec.fepExporter.tls.caName		Optional This points to Kubernetes configmap that contains additional CA the client use to verify a server certificate. The CA is stored in the key ca.crt.
spec.fepExporter.disableDefaultQueries	false	Optional Not defined or set to false => Create default queries Defined and set to true => Do not create default queries.
spec.fepExporter.disableDefaultAlertRules	false	Optional Not defined or set to false => Create default alert rules Defined and set to true => Do not create default alert rules. If Default queries are disabled => Do not create default alert rule.
spec.fepExporter.exporterLogLevel	error	Set logging level: one of debug, info, warn, error
spec.fepExporter.fepClusterList		Array of FEPCluster to monitor
spec.fepExporter.image.image		quay.io/fujitsu/fujitsu-enterprise-postgres-13-exporter:ubi8-13-0.0 Optional If not specified; image name is picked up from operator environment variable
spec.fepExporter.image.pullPolicy	IfNotPresent	Always or IfNotPresent
spec.fepExporter.mcSpec.limits	cpu: 500m memory: 700Mi	Max CPU allocated to exporter container Max memory allocated to exporter container
spec.fepExporter.mcSpec.requests	cpu: 200m memory: 512Mi	CPU allocation at start for exporter container memory allocation at start for exporter container
spec.fepExporter.scrapeInterval	30s	Optional This parameter may be specified to change statistics scraping frequency. If specified, Prometheus will poll FEPEXporter at given interval.

Field	Default	Details
		CHANGE THIS PARAMETER ONLY IF REALLY REQUIRED
spec.fepExporter.scrapeTimeout	30s	Optional This parameter may be specified to change statistics scraping timeout. If specified, Prometheus will wait for FEPEXporter for maximum this given period to return statistics. CHANGE THIS PARAMETER ONLY IF REALLY REQUIRED
spec.fepExporter.sysExtraLogging	true	To turn on extra debugging messages for operator, set value to true <i>It can be turned on/off at any time</i>
spec.fepExporter.restartRequired	false	True: To restart FEPEXporter, when there is any change found in CR or FEPCluster False: Will not restart FEPEXporter
spec.fepExporter.userCustomQueries		Optional Section Example user's custom query to extract additional metrics.

```
usr_example:
  query: "SELECT EXTRACT(EPOCH FROM (now() - pg_last_xact_replay_timestamp())) as lag"
  master: true
  metrics:
    - lag:
      usage: "GAUGE"
      description: "Replication lag behind master in seconds"
```

1.2.12 FEPAutoscale Custom Resource

When FEPClusterCR is defined, FEPAutoscaleCR is defined.

The parameters are as follows:.

Configuration changes are made in FEPClusterCR.

Field	Default	Details
apiVersion	fep.fujitsu.io/v1	Fixed
kind	FEPAutoscale	Fixed
metadata.name	Same as FEPClusterCR	Fixed
metadata.namespace	Same as FEPClusterCR	Fixed
spec.scaleout.policy	Do not perform auto scale-out	[cpu_utilization]
spec.scaleout.threshold	40	Threshold (Average of all replicas) Must be an integer. The unit is %.
spec.limits.maxReplicas	2	Maximum number of replicas (0 to 15) (Value out of range) Do not perform auto scale-out

Appendix A Default Metrics Queries

```
